Office of the Auditor General of Ontario

Annual Report

2023

Office of the Auditor General of Ontario

To the Honourable Speaker of the Legislative Assembly

In my capacity as the Acting Auditor General, I am pleased to submit to you the *2023 Annual Report* of the Office of the Auditor General of Ontario to lay before the Assembly in accordance with the provisions of section 12 of the *Auditor General Act*.

Nick Stavropoulos, CPA, CA, LPA
Acting Auditor General

December 2023
Toronto, Ontario

Introduction

Nick Stavropoulos
Acting Auditor General of Ontario

Each year, the Office of the Auditor General of Ontario undertakes value-for-money audits to assess the economy, efficiency and effectiveness of public programs and services delivered by ministries, agencies and the broader public sector. Through this work we provide these entities and the Legislative Assembly with fact-based information along with practical recommendations for improvements. By reporting on our work to the Legislature, our Office contributes to collective efforts to continuously improve the public and broader public sectors while helping to hold organizations accountable for the programs and monies they manage.

In deciding which areas to audit each year, our Office takes a risk-based approach considering a number of factors, such as revenues or expenditures at stake, emerging risks, key issues affecting Ontarians, risks to public safety, and risks to achieving intended outcomes.

This year's Annual Report contains 12 value-for-money audits covering a wide range of public-sector activities. It also includes a report on the Public Accounts of Ontario, a report on how ministries are meeting their obligations under the *Environmental Bill of Rights, 1993*, and a review of government advertising. Additionally, the Annual Report contains our follow-up reviews on the implementation of the recommendations from a number of our previous audits, and our continuous follow-up work on audits completed in the years 2016 through 2020. We also followed up on the recommendations from five recent reports by the Standing Committee on Public Accounts.

Acknowledgements

It takes a great deal of hard work and effort to perform the research, audit, writing and administrative support work required to produce an Annual Report of this size and scope.

I extend my personal thanks to our senior management group and the rest of our professional and dedicated team, our excellent panel of external advisors, and the various subject-matter experts who shared with us their knowledge and advice during the past year.

I would also like to recognize the work of Bonnie Lysyk, Ontario's 13th Auditor General, who completed her 10-year term in September. I also thank Susan Klein, who served as Assistant Auditor General before she retired this past year after more than 34 years of service to this Office, and Chris Krishnamurthy for his eight years of service as Director of Finance, who also retired this year.

On behalf of our Office, I would also like to express my gratitude to the many people in the public sector, including the deputy ministers and their teams, and leaders of the agencies and broader-public-sector

organizations we audited, whose hard work and co-operation assisted us in the completion of this Annual Report.

Lastly, I want to thank the members of the Standing Committee on Public Accounts, an all-party committee of the Legislature, for their support and for their dedicated work in examining the way government spends taxpayer money and delivers programs for the benefit of all Ontarians.

We look forward to continuing to serve the Legislative Assembly and, through it, the citizens of Ontario.

Sincerely,

Nick Stavropoulos, CPA, CA, LPA
Acting Auditor General of Ontario

The Public Accounts of the Province of Ontario

1.0 Summary

Based on our audit work, we have concluded that the Province's consolidated financial statements for 2022/23 are fairly presented and free of material errors. Again, this year, the audit opinion on the Province's consolidated financial statements is unqualified.

Items of note from our audit of the Province's consolidated financial statements and other financial statement work conducted this past year are as follows:

- We are required to report on certain government reporting deadlines under the *Fiscal Sustainability, Transparency and Accountability Act, 2019* (Act). The government has met all reporting deadlines as of November 15, 2023. The Province is required under the Act to include in its debt burden reduction strategy specific objectives regarding the projected provincial net-debt-to-gross-domestic-product ratio as well as a progress report on actions supporting the implementation of the strategy from the prior year's budget. The Province has not met the second requirement.
- Key audit matters were included in the Auditor General's Independent Auditor's Report for the first time for the year ended March 31, 2023. Key audit matters are items that, based on the auditor's professional judgment, are of the most significance to the audit of the financial statements, and are required to be included in the auditor's report for publicly listed entities.
- In 2022/23, the Province implemented the new asset retirement obligation public-sector accounting standard. The Province identified that this primarily relates to asbestos within buildings it owns. During the audit, we and the expert we engaged observed that asbestos data was not available for a high percentage of buildings. With the implementation of PS 3280, *Asset Retirement Obligations*, the Province is required to assess if an asset retirement obligation exists and a liability should be recognized. Therefore, the Province should know whether asbestos exists or potentially exists in the buildings it owns.
- In 2022/23, iGaming Ontario launched the new regulated market for Internet gaming in Ontario. iGaming Ontario entered into operating agreements with 46 operators working as agents on behalf of iGaming Ontario and the Province. In this report, we provide an update on the developments in Internet gaming in Ontario. Our Office conducted an audit of iGaming Ontario's 2022/23 financial statements where we issued an unqualified opinion.
- In response to the COVID-19 pandemic, the Province established a procurement process for personal protective equipment (PPE). As part of our audit of the Province's consolidated financial statements, we identified accounting

risks relating to the manual tracking and completeness of these supplies, as well as issues with expiration dates and inconsistent inventory accounting policies between the responsible ministries. As of March 31, 2023, the Province held a significant inventory of PPE at an inventory cost of $1.6 billion, and $400 million in PPE had been written off during the year.

- The Province's growing debt burden also remains a concern this year, as it has been since we first raised the issue in 2011. This year, as in the past, we focus on the critical implications of the growing debt for the Province's finances. Holding a high level of debt with rising interest rates increases the risk that future funding available for programs could be negatively impacted. We maintain the view that the government should provide legislators and the public with long-term targets for addressing Ontario's current and projected debt levels.

This chapter contains four recommendations, consisting of seven actions, to address our observations.

2.0 Background

Ontario's Public Accounts are key financial documents issued annually by the government. For the fiscal year ended March 31, 2023, the Public Accounts were prepared under the direction of the Minister of Finance, as required by the *Financial Administration Act*, and the President of the Treasury Board. The Public Accounts consist of the Province's Annual Report, including the Province's consolidated financial statements and financial statement discussion and analysis; the Auditor General's Independent Auditor's Report on the consolidated financial statements; and two supplementary volumes of additional financial information.

The government is ultimately responsible for preparing the consolidated financial statements for the Province of Ontario and ensuring that this information, including many amounts based on estimates and judgment, is presented fairly. The Deputy Minister of Finance, the Deputy Minister of Treasury Board Secretariat and the Comptroller General, with support from the Office of the Provincial Controller Division, are responsible for ensuring that an effective system of internal controls, with supporting procedures, is in place to authorize transactions, safeguard assets and maintain proper records.

Our Office, under the *Auditor General Act*, is responsible for the annual audit of these consolidated financial statements. The objective of our audit is to obtain reasonable assurance that the statements are free of material misstatements—that is, free of significant errors or omissions. The Auditor General's Independent Auditor's Report is included in the Province's Annual Report.

The Province's 2022/23 Annual Report also contains a Financial Statement Discussion and Analysis section that provides additional information regarding the Province's financial condition and fiscal results for the year ended March 31, 2023. Providing such information is intended to enhance the fiscal accountability of the government to both the Legislative Assembly and the public.

The two supplementary volumes of the Public Accounts consist of the following:

- **Ministry Statements and Schedules**—unaudited statements from all ministries and a number of schedules providing details of the Province's revenue and expenses, its debts and other liabilities, its loans and investments, and other financial information; and
- **Detailed Schedule of Payments**—unaudited detailed schedules of ministry payments to vendors and transfer-payment recipients.

The Province also provides a website (**ontario.ca/page/financial-statements-government-organizations-and-business-enterprises-2022-23**) with links to the websites for individual financial statements of government organizations, trusts under administration, government business enterprises and other government organizations.

Our Office reviews the information in the Province's Annual Report, and in the Ministry Statements and Schedules of the Public Accounts, for consistency with

the information presented in the Province's consolidated financial statements.

The *Financial Administration Act* requires that, except in extraordinary circumstances, the government deliver its Annual Report to the Lieutenant Governor in Council within 180 days of the end of the fiscal year. The two supplementary volumes must be submitted to the Lieutenant Governor in Council within 240 days of the end of the fiscal year. Upon receiving these documents, the Lieutenant Governor in Council must lay them before the Legislative Assembly or, if the Assembly is not in session, make the information public and then lay it before the Assembly within 10 days of the time it resumes sitting.

This year, the deadline for submission was September 27, 2023. The government released the Province's 2022/23 Annual Report and Consolidated Financial Statements, along with the two Public Accounts supplementary volumes, on September 27, 2023, meeting the legislated deadline.

The Auditor General's audit opinion, contained in the Independent Auditor's Report, on the Province's consolidated financial statements was unqualified for the sixth consecutive year. An unqualified opinion means that the consolidated financial statements are free from material errors. An unqualified opinion in the public sector should be considered just as seriously as a qualified audit opinion. **Section 3.0** discusses the unqualified audit opinion on the Province's consolidated financial statements.

3.0 The Province's 2022/23 Consolidated Financial Statements

3.1 Auditor's Responsibilities

As the legislature's independent auditor of the Province's consolidated financial statements, the Auditor General aims to express an opinion on whether the consolidated financial statements are free of material misstatements and are prepared in accordance with Canadian Public Sector Accounting Standards (PSAS) so that they give a true and fair view of the financial position and operating results of the Province. It is this independence, combined with the professional obligation to comply with established Canadian Auditing Standards (CAS) and related ethical requirements, which allows the Auditor General to issue an opinion that provides users with confidence in the Province's consolidated financial statements.

To enable the Auditor General to form an opinion, our Office collects sufficient appropriate audit evidence and evaluates it to determine whether the consolidated financial statements are free of material misstatements. This includes assessing the government's preferred accounting treatment over certain transactions and investigating the appropriateness of those treatments under Canadian PSAS.

An assessment of what is material (significant) and immaterial (insignificant) is based primarily on our professional judgment. In making this assessment, we seek to answer the following question: "Is this error, misstatement or omission significant enough that it could affect decisions made by users of the Province's consolidated financial statements?" If the answer is yes, then we consider the error, misstatement or omission to be material.

To help us make this assessment, we determine a materiality threshold. This year, as in past years, and consistent with most other provincial legislated auditors, we set our threshold at 0.5% of the greater of government expenses or revenue for the year.

Our audit is conducted on the premise that management has acknowledged certain responsibilities that are essential to the conduct of the audit in accordance with CAS. These responsibilities are discussed below.

3.2 Management's Responsibilities

The auditor's report distinguishes between the responsibilities of management, those charged with governance, and those of the auditor with respect to a financial statement audit. Management is responsible for the preparation of the financial statements in accordance with Canadian PSAS. The auditor examines the financial statements in order to express an opinion as to whether the financial statements have

been prepared in accordance with Canadian PSAS. The division of responsibility between management and the auditor is fundamental and preserves the auditor's independence, a cornerstone of the auditor's report.

In addition to preparing the financial statements and having the relevant internal controls, management is also required to provide the auditor with all information relevant to the preparation of the financial statements, additional information that the auditor may request, and unrestricted access to individuals within the entity who the auditor determines are necessary to communicate with to obtain audit evidence. The CAS are clear on these requirements, and the completion of these is formally communicated to the auditor in the form of a signed management representation letter at the end of the audit.

When a transaction occurs, it is management's responsibility to identify the applicable accounting standards, determine the implications of the standards for the transaction, decide on an accounting policy and ensure that the financial statements present the transaction in accordance with the applicable financial reporting framework (for example, Canadian PSAS for governments). The auditor must also be proficient in the applicable financial reporting framework in order to form an independent opinion on the financial statements, and may perform similar procedures in identifying the applicable standards and understanding the implications of the standards for the accounting transaction. However, unlike management, the auditor does not select an accounting policy or the bookkeeping entries for the organization. These decisions are in the hands of management—in Ontario's case, the Treasury Board Secretariat and the Ministry of Finance, both with support from the Comptroller General and the Provincial Controller.

When there are disagreements between an auditor and management on the application or adequacy of accounting policies, the auditor must assess the materiality or significance of the issue to the overall financial statements in forming the audit opinion. If the issue is material, it would result in a qualified opinion in which the auditor concludes that the financial statements are fairly presented except for the items described in the basis for the qualification. Again, this distinguishes the role of management from that of the auditor such that management prepares the financial statements, and the auditor independently examines the financial statements to express an opinion about them.

The Office of the Auditor General of Ontario may make suggestions about the consolidated financial statements, but this does not alter management's responsibility for the financial statements. Similarly, the government may seek external advice on accounting treatments of certain transactions. In these situations, the government still has the ultimate responsibility for the decisions made, and the use of external advisors does not diminish, change or substitute the government's accountability as the preparer of the Province's consolidated financial statements.

3.3 Responsibilities of Those Charged with Governance

The auditor's report also distinguishes the roles and responsibilities of those charged with governance from those of management. Those charged with governance have ultimate financial oversight. In a company, this is usually the board of directors. In the Province, this is the Treasury Board.

The Treasury Board ensures that management has established and maintains internal controls over the financial reporting process, oversees management's processes for identifying and mitigating risks, and reinforces management's efforts to create a culture of ethical behaviour in the ministries and provincial organizations.

3.4 The Independent Auditor's Report

The Independent Auditor's Report, which is issued at the conclusion of an audit engagement, comprises:

- an opinion paragraph containing an expression of opinion on the consolidated financial statements and a reference to the applicable financial reporting framework (for example, Public Sector Accounting Standards) used to prepare the financial statements;

- a basis for opinion paragraph that explains that the audit was conducted in accordance with Canadian generally accepted auditing standards;
- a section titled "Key Audit Matters" that describes the areas of most significance to the audit—refer to **Section 3.6** for further discussion;
- a section titled "Other Accompanying Information" that explains the responsibility of management and those charged with governance for including other information (the Province prepares other information such as the financial statement discussion and analysis) and the auditor's responsibilities for reading the other information. This section includes the auditor's conclusion about whether the other information is materially consistent with the financial statements or the knowledge obtained in the audit;
- a description of the responsibility of management and those charged with governance for the proper preparation and oversight of the financial statements in accordance with the applicable financial reporting framework;
- a description of the auditor's responsibility to express an opinion on the consolidated financial statements, a conclusion on the appropriateness of management's use of the "going concern" basis of accounting, and the scope of the audit; and
- additional paragraphs describing the group audit engagement (an audit with more than one component) and communication with those charged with governance, and an explicit statement that the auditor is independent of the Province and has fulfilled the auditor's other relevant ethical responsibilities.

The Independent Auditor's Report may also include:

- an "Emphasis of Matter" paragraph that refers to a matter appropriately presented or disclosed in the financial statements that, in the auditor's judgment, is of such importance that it is fundamental to users' understanding of the financial statements (for example, it might highlight uncertainty relating to the future outcome of exceptional litigation); and
- an "Other Matter" paragraph that refers to a matter other than those presented or disclosed in the financial statements that, in the auditor's judgment, is relevant to users' understanding of the audit, the auditor's responsibilities or the auditor's report. (For example, it might explain that the financial statements of the prior period were audited by a predecessor auditor.)

3.5 The Significance of an Unqualified Audit Opinion

The Independent Auditor's Report is the way the auditor communicates their opinion to the users of the financial statements as to whether the financial statements of an entity are presented fairly. After the audit of the financial statements is completed, the auditor can sign one of four possible opinions:

- **Unqualified, or clean, opinion:** The financial statements present fairly, in all material respects, the financial position and results of the entity.
- **Qualified opinion:** The financial statements contain one or more material misstatements or omissions.
- **Adverse opinion:** The financial statements do not fairly present the financial position, results of operations and changes in financial position, as per generally accepted accounting principles.
- **No opinion or disclaimer of opinion:** It is not possible to give an opinion on the financial statements because, for example, key records of the entity were destroyed and thus unavailable for examination.

An unqualified audit opinion indicates the financial statements are reliable. The importance of an unqualified opinion should not be understated. When an auditor issues a qualified opinion, they are expressing concern about the entity's compliance with the accounting standards issued by the standard setter (for example, the Public Sector Accounting Board),

or about the auditor's ability to obtain sufficient and appropriate information on the financial statements. An audit qualification is generally a rare occurrence.

For the sixth year in a row, the Auditor General has issued an unqualified opinion on the Province's consolidated financial statements. The consolidated financial statements can be relied on to fairly and accurately present the Province's fiscal results for the year ended March 31, 2023, in all material respects.

3.6 Key Audit Matters

Key audit matters are items that, based on the auditor's professional judgment, are of the most significance to the audit of the financial statements. The inclusion of key audit matters in the auditor's reports is now required for all publicly listed entities for financial years ending on or after December 15, 2022. The Province is considered a listed entity, and therefore, the Auditor General reported key audit matters within the Independent Auditor's Report as part of the consolidated financial statements for the year ended March 31, 2023.

Key audit matters include:

- areas identified as significant risks or involving significant management or auditor judgment;
- areas in which the auditor encountered significant difficulty, for instance, in obtaining sufficient and appropriate audit evidence; and
- circumstances that required a modification to the auditor's planned audit approach, including as a result of a significant deficiency in internal control.

We have historically communicated key audit matters arising from our audit of the Province's consolidated financial statements in this chapter of our annual report, and during the audit process we have communicated them to those charged with governance.

Key audit matters reported in the Independent Auditor's Report for the March 31, 2023 consolidated financial statements included the following:

- personal income tax;
- corporations tax;
- pension and other employee future benefits;
- contaminated sites liabilities;
- asset retirement obligations;
- contingent liabilities associated with the court decision relating to the *Protecting a Sustainable Public Sector for Future Generations Act, 2019*;
- iGaming Ontario; and
- financial instruments and foreign currency translation.

See **Appendix 1**, which reproduces the Independent Auditor's Report, for a description of each key audit matter and the audit work performed on each.

3.7 The 2022/23 Audit Opinion

The *Auditor General Act* requires that we report annually on the results of our examination of the Province's consolidated financial statements. The Independent Auditor's Report to the Legislative Assembly on the Province's consolidated financial statements for the year ended March 31, 2023 is reproduced in **Appendix 1.**

4.0 The *Fiscal Sustainability, Transparency and Accountability Act, 2019*

We are required to report annually on the Premier's and the Minister of Finance's compliance with the *Fiscal Sustainability Transparency and Accountability Act, 2019* (Act). The Auditor General has determined that the communication of the Minister's compliance with the Act will be through this report.

Under this Act, the government is required to:

- develop a debt burden reduction strategy, including setting out net debt-to-gross-domestic-product (GDP) objectives and plans for reducing the debt burden;
- incorporate sustainability into the Province's fiscal policies;
- release the annual budget by March 31 each year, except for years in which a general election takes place, to allow a new government

additional time to develop its first Multi-Year Fiscal Plan;
- provide a rationale for running deficits in the introductory section of the annual budget;
- impose monetary penalties on the Premier and the Minister of Finance (Minister) for missing reporting deadlines as required in the Act; and
- post a public statement to explain the rationale for any missed public reporting deadlines, and the revised deadline by which the affected report will be released.

Figure 1 shows the reports that are subject to the financial penalty and public statement requirements.

Figure 2 shows that, as of November 15, 2023, the Premier and the Minister had complied with all requirements of the Act.

The Act includes requirements that the budget must include certain components, such as a debt burden reduction strategy and a recovery plan (**Appendix 2** describes the recovery plan). We provide additional commentary on the debt burden reduction strategy in **Section 10** of this report. The debt burden reduction strategy as per the Act must include specific objectives regarding the projected net-debt-to-GDP ratio. As well, it must include a progress report on actions supporting the implementation of the debt burden reduction strategy included in the latest budget. The Province has not met the second requirement. In other words, the Province has not formally documented a long-term debt strategy, explained how it determined the net-debt-to-GDP target, or clearly demonstrated how debt will be managed.

In our follow-up report on the 2021 Public Accounts of the Province of Ontario in our *2023 Annual Report* (**Chapter 1, Section 1.01**), the Province indicated that it will not be implementing our recommendation relating to this issue and will continue to report on its debt burden reduction strategy as required by the *Fiscal Sustainability, Transparency and Accountability Act, 2019*. See **Section 10.6** in this report for more details.

Appendix 2 shows the requirements of the Act and whether they have been met by the documents issued by the Province in 2023.

5.0 Asset Retirement Obligations

5.1 Background

The Public Sector Accounting Board introduced a new accounting standard, PS 3280, *Asset Retirement Obligations* (PS 3280), which became effective for the Province on April 1, 2022. This standard provides guidance on reporting of liabilities arising from legal obligations associated with the retirement of tangible capital assets (for example, removal of asbestos in buildings, closure of landfill sites, and decommissioning of power-generating facilities). A legal obligation can result from agreements or contracts, legislation of another government, a government's own legislation, or a promise that imposes a reasonable expectation of performance upon the person or entity that has made the promise (that is, the legal doctrine of promissory estoppel). The Province has legal

Q1 2023	Jul 14, 2022 (Statistics Canada release date: May 31, 2023)	Jul 13, 2023	Yes
Q2 2023	Oct 15, 2023 (Statistics Canada release date: Sep 1, 2023)	Oct 13, 2023	Yes

obligations to retire certain tangible capital assets. As of March 31, 2023, this liability was estimated to be $4.1 billion ($3.8 billion in 2022).

5.2 Asbestos in Buildings

During our annual audit of the Public Accounts for the year ended March 31, 2023, we identified that the largest portion of asset retirement obligations within the Province resulted from asbestos in buildings owned by the Province (86% as of March 31, 2023). Asbestos is the common name given to several fibrous minerals that can be used to make products strong, long-lasting and fire-resistant. Before 1990, asbestos was mainly used for insulating buildings and homes against cold weather and noise, and for fireproofing. However, breathing in asbestos fibres can cause health complications, including lung cancer. As a result, a regulation was put in place in 1985 (O. Reg. 654/85), which was later replaced in 2007 by Ontario Regulation 278/05 Designated Substance—Asbestos on Construction Projects and in Buildings and Repair Operations (O. Reg. 278/05). This is discussed further in **Section 5.2.1.**

In order to estimate its asset retirement obligations, the Province developed two cost-measurement models. Model 1 was developed for buildings with known quantities of asbestos requiring future abatement. Model 2 was developed for buildings with unknown asbestos quantities or no existing asbestos data. Model 2 relies on aggregated known asbestos data from Model 1 buildings and extrapolates average abatement costs based on building size, age and category. Where better information is not available, all ministries, as well as consolidated agencies and broader-public-sector entities (BPS) have used Model 1 and Model 2 to estimate the asset retirement obligations associated with their buildings. To assess the completeness and accuracy of the asset retirement obligation estimates, we independently engaged an environmental engineer to assist with the technical assessment of the models and the reasonability of the assumptions, inputs and rates used.

In addition, we performed tests of details on a sample of properties to assess the completeness and accuracy of the liability balance for asset retirement obligations included in the consolidated financial statements.

5.2.1 Ontario Regulation 278/05 Designated Substances

During the audit, we and the expert we engaged observed that asbestos data was not available for a high percentage of buildings. With the implementation of PS 3280, the Province is required to assess if an asset retirement obligation exists and a liability should be recognized. Therefore, the Province should know whether asbestos exists or potentially exists in the buildings it owns.

Under O. Reg. 278/05, if the owner of a building knows or ought reasonably to know that asbestos-containing material has been used in a building for any purpose related to the building, including insulation, fireproofing and ceiling tiles, the owner is required to prepare and keep on the premises a record containing this information, inspect the material mentioned in the record at regular intervals in order to determine its condition, and to update the record at least once every 12 months.

An example of one type of record commonly obtained is referred to as a management-level asbestos survey. These types of surveys differ from a pre-construction, pre-renovation or project-specific asbestos survey, as management-level surveys are generally non-destructive (that is, they require observation only) and are primarily intended to identify and characterize accessible asbestos that needs to be managed to prevent disturbance and, thus, occupant or worker exposure.

By design, Model 1 produces more precise and accurate estimates since it relies on asbestos survey data gathered for individual buildings. The lack of asbestos data for a large portion of buildings owned by the Province precludes the use of Model 1, and increases reliance on Model 2, which introduces more estimation uncertainty into the consolidated financial statements. Gathering additional asbestos data to increase the proportion of buildings using Model 1 would help make the asset retirement obligations estimate more precise and accurate.

5.2.2 Consistency of Information

As part of our audit, we tested supporting documents used as volume inputs into Model 1. Each building was categorized into one of four regions (Central [Greater Toronto Area], East, North and Southwest). We noted inconsistences between the different regions in reporting information on the types of building materials that contained asbestos. For example, buildings in the North, Central and Southwest regions did not consistently include estimates for exterior building materials. These inconsistencies in data reduce the comparability of buildings in different regions, which can skew the asset retirement obligation estimate if a ministry has buildings concentrated in one particular region.

RECOMMENDATION 1

To increase the precision and accuracy of the Province's asset retirement obligation estimate, we recommend that the Office of the Provincial Controller Division work with the affected ministries to:

- develop standardized information requirements that must be present in the records (for example, management-level asbestos surveys), that would contain the required information in order to use Model 1; and
- collect and maintain these records for all provincially owned buildings with known or suspected asbestos within a reasonable time frame not exceeding five years.

OFFICE OF THE PROVINCIAL CONTROLLER DIVISION RESPONSE

The Office of the Provincial Controller Division agrees with the recommendation of the Auditor General and will work with impacted ministries and Infrastructure Ontario to:

- increase the consistency and functionality of asbestos records (including management-level

asbestos surveys) to improve their use in financial reporting, while maintaining their primary purpose within the Province's Asbestos Management Program; and
- identify all provincially owned buildings that have known or suspected asbestos that creates financially material asset retirement obligations, in order to estimate the related liability using Model 1.

6.0 Financial Instruments

The Province adopted the following new Canadian Public Sector Accounting Standards (PSAS) in its consolidated financial statements for the year ended March 31, 2023:

- PS 1201, *Financial Statement Presentation*;
- PS 2601, *Foreign Currency Translation*; and
- PS 3450, *Financial Instruments*.

These new accounting standards established standards on the recognition, measurement and disclosure of financial instruments and the presentation of associated gains and losses in the Province's consolidated financial statements.

Figure 3 shows a summary of the financial statement impact of adopting these standards on the Province's 2022/23 consolidated financial statements.

6.1 Financial Statement Presentation

PS 1201, *Financial Statement Presentation*, introduces a new statement called the statement of remeasurement gains and losses, which reports the changes in the values of financial assets and financial liabilities arising from their remeasurement at their current exchange rates and/or fair values (referred to as "remeasurement gains or losses").

The statement of remeasurement gains and losses presents a reconciliation of the following items:

- the accumulated remeasurement gains and losses at the beginning of the period;
- remeasurement gains and losses during the period, distinguishing between:
  (1) amounts arising during the period; and
  (2) amounts reclassified during the period to the statement of operations;

Figure 3: Financial Statement Impact of the Adoption of PS 3450, PS 2601 and PS 1201 ($ billion)

Recognition of derivative liabilities at fair value	(1.3)	(6.1)	(7.4)
Derecognition of unamortized gains relating to derivatives past their settlement or expiration date	0.1	–	0.1
Total	**(3.4)**	**2.0**	**(1.4)**

- any other comprehensive income that arises when a government includes the results of government business enterprises (GBEs) and business partnerships in its consolidated financial statements; and
- the accumulated remeasurement gains and losses at the end of the period.

As of March 31, 2023, the Province's consolidated statement of remeasurement gains and losses included amounts pertaining to certain portfolio investments, derivative assets and liabilities, foreign currency transactions, other comprehensive income relating to GBEs, and the Ontario Nuclear Funds.

The Province previously recorded other comprehensive income or losses from GBEs directly to its consolidated statement of accumulated deficit. Under PS 1201, the Province is required to record other comprehensive income from GBEs in its consolidated statement of remeasurement gains and losses. As a result, on April 1, 2022, the Province reclassified $3.5 billion in gains from the opening accumulated deficit to the opening balance of remeasurement gains and losses.

6.2 Foreign Currency Translation

Effective April 1, 2022, the Province adopted PS 2601, *Foreign Currency Translation*, which establishes the standards on how to account for and report transactions that are denominated in a foreign currency in government financial statements. In accordance with the transitional provisions, the Province adopted PS 2601 prospectively from the date of adoption and did not restate its 2021/22 comparative figures.

The Province's foreign currency transactions primarily consist of debt denominated in foreign currencies and derivatives, such as forward foreign exchange contracts and currency swaps. Changes in the foreign exchange rate between the transaction date and the Province's fiscal year-end give rise to exchange gains and losses that must be accounted for in the consolidated financial statements. Previously, the Province recognized all exchange gains and losses that arose prior to settlement in its consolidated statement of operations.

Under the new standard, the Province must recognize exchange gains and losses that arise prior to settlement in its consolidated statement of remeasurement gains and losses, unless the Province makes a specific election. Under paragraph PS 2601.19A, the Province may make an irrevocable election at the initial recognition of a financial instrument to recognize exchange gains and losses in its consolidated statement of operations. This election may only be made on an instrument-by-instrument basis.

On April 1, 2022, the Province used the election under paragraph PS 2601.19A for economically hedged groups of financial instruments where the underlying item is hedged by a series of shorter-term derivatives. This resulted in a $1.3 billion gain to the Province's opening accumulated operating deficit relating to unrealized exchange gains or losses that were previously deferred and amortized. For all other financial instruments where the election was not taken, the Province recorded $2 billion in gains to the opening balance of remeasurement gains and losses.

6.3 Financial Instruments

Effective April 1, 2022, the Province adopted PS 3450, *Financial Instruments*, which establishes the standards on how to account for and report financial instruments. In accordance with the transitional provisions, the Province adopted PS 3450 prospectively from the date of adoption and did not restate its 2021/22 comparative figures.

The Province's financial instruments include accounts receivables and payables, loans receivable, portfolio investments, debt, and derivatives such as currency swaps and foreign-exchange forward contracts. Under the new standard, the Province must record all financial instruments using one of two measurement categories: (1) fair value or (2) cost or amortized cost.

6.3.1 Fair Value Category

PS 3450 requires the Province to record equity instruments that are quoted in an active market, such as publicly traded shares of a private-sector corporation, and derivative assets and liabilities, at their fair value.

Except for the exchange gain or loss component of the change in fair value when the paragraph PS 2601.19A election is made, changes in the fair value of these financial instruments are recorded annually as remeasurement gains or losses in the Province's consolidated statement of remeasurement gains and losses. Accumulated remeasurement gains or losses are reversed from the consolidated statement of remeasurement gains and losses and reclassified to the consolidated statement of operations upon derecognition of these instruments.

The Province typically enters into derivative contracts as a tool to manage economic risks (for example, changes in interest rates or foreign exchange rates) related to its debt issuances. Previously, the Province did not recognize unrealized gains or losses for derivatives in its consolidated statement of financial position. In essence, derivatives were recorded at a carrying amount of nil, but their fair values were disclosed in the notes to the consolidated financial statements. Upon settlement or expiration of derivatives, the Province deferred and amortized the gains or losses on the derivatives over the remaining life of the debt issuance for which an economic risk was being managed.

On April 1, 2022, the Province recognized derivative assets of $2.6 billion, which was recorded as a gain to the opening balance of remeasurement gains and losses. The Province also recorded derivative liabilities of $7.4 billion, of which $6.1 billion was recorded as a loss to the opening balance of remeasurement gains and losses and $1.3 billion was recorded as a loss to the opening accumulated operating deficit where the Province made the election under PS 2601.19A. Lastly, the Province recorded a $0.1 billion gain to the opening accumulated operating deficit for unamortized gains or losses relating to derivative transactions past their settlement or expiration date.

6.3.2 Cost or Amortized Cost Category

Under PS 3450, financial instruments that are not recorded at fair value are instead recorded at cost or amortized cost. For example, the Province's debt is measured at amortized cost. The definition of amortized cost under PS 3450 requires the Province to use the effective interest rate method to amortize the difference between the initial amount and the maturity amount (commonly referred to as premiums or discounts) and to record interest expense. Previously, the Province used the straight-line method to amortize premiums or discounts and to record interest expense on its debt. This change did not result in a financial statement impact on the date of adoption (April 1, 2022) due to the prospective adoption of PS 3450.

7.0 iGaming Ontario

7.1 Background

In April 2019, the government of Ontario announced plans to establish a new market for Internet gambling (Internet gaming). The new model involves private gaming operators (operators) participating in a regulated market where they operate Internet gaming websites on behalf of iGaming Ontario, a newly created provincial agency.

iGaming Ontario is a board-governed agency that was established on July 6, 2021 as a legal subsidiary of the Alcohol and Gaming Commission of Ontario (AGCO). The AGCO is a regulatory board-governed agency of the Province of Ontario that reports to the Ministry of the Attorney General, and is responsible for regulating Internet gaming in Ontario. The AGCO is also responsible for overseeing iGaming Ontario's conduct and management of Internet gaming.

Under Ontario Regulation 722/21: Lottery Subsidiary—iGaming Ontario, iGaming Ontario's principal objects are to:

- develop, undertake and organize prescribed online lottery schemes;

- promote responsible online gaming; and
- conduct and manage prescribed online lottery schemes in accordance with the *Criminal Code of Canada and the Gaming Control Act, 1992*.

7.2 Relationship between iGaming Ontario and Operators

iGaming Ontario's business model involves offering Internet games through a network of operators who provide their games to players in Ontario. To participate in Ontario's new Internet gaming market, each operator must register with the AGCO and execute an operating agreement with iGaming Ontario.

Under the operating agreement, iGaming Ontario appoints each operator as its agent solely to operate websites that offer, on behalf of iGaming Ontario, Internet games to players in Ontario. Operators' key responsibilities as agents for iGaming Ontario include:

- accepting wagers on Internet games offered on their websites;
- paying all winnings to players; and
- remitting all wagers less winnings to iGaming Ontario.

iGaming Ontario's gaming revenue comprises wagers less winnings and eligible deductions. Eligible deductions are amounts claimed by operators for cashable payments to players derived from wagering promotional play funds (such as free bets or bonuses) up to a limit specified by iGaming Ontario. iGaming Ontario pays an amount equal to 80% of the gaming revenue it earns to each operator as compensation for operating its websites and offering Internet games to players in Ontario.

7.3 Launch of the New Market for Internet Gaming and iGaming Ontario's 2022/23 Financial Results

On April 4, 2022, iGaming Ontario launched the new market for Internet gaming in Ontario. On this date, 12 operators began offering Internet games on their websites to players in Ontario. **Figure 4** summarizes the major categories of gaming products offered by iGaming Ontario's operators.

For the fiscal year ended March 31, 2023, iGaming Ontario had executed operating agreements with 46 operators. In its first year of market operations, iGaming Ontario earned gaming revenues of $1.3 billion, which is composed of $35.6 billion in wagers collected by operators from players, less $34.3 billion in winnings paid to players and eligible deductions. Refer to **Figure 5** for a breakdown of iGaming Ontario's gaming revenue by major gaming product category for the 2022/23 fiscal year.

iGaming Ontario's most significant expense was payments to operators of $1 billion, which is deducted from gaming revenue in iGaming Ontario's 2022/23 financial statements to arrive at net gaming

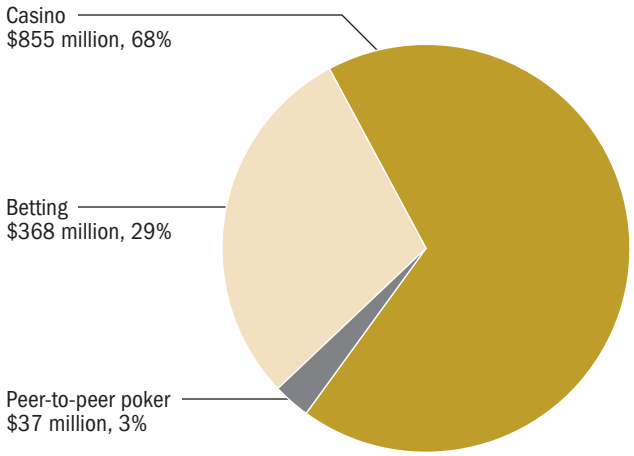

Figure 4: Major Categories of Gaming Products Offered by iGaming Ontario's Operators

Source of data: iGaming Ontario 2022/23 audited financial statements

Gaming Product	Description
Casino	Slots, live and computer-based table games, and peer-to-peer bingo
Betting	Betting on sports and esports, as well as proposition and novelty bets
Peer-to-peer poker	Cash games and tournaments where players play against each other

Figure 5: Breakdown of iGaming Ontario's Gaming Revenue by Category, 2022/23

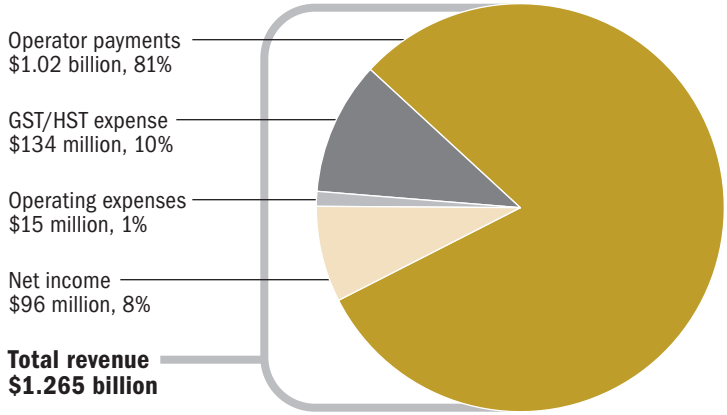
Source of data: iGaming Ontario March 31, 2023 audited financial statements

revenues of $240 million. iGaming Ontario's other expenses totalled $149 million—most of which relates to GST/HST expenses ($134 million). As shown in **Figure 6**, iGaming Ontario's net income in 2022/23 was $96 million, which is about 8% of iGaming Ontario's gaming revenue.

On April 5, 2023, iGaming Ontario was directed by the Ministry of Finance and the Ministry of Indigenous Affairs to make monthly revenue-sharing payments to the Ontario First Nations Limited Partnership (OFNLP). The first monthly payment of $1.4 million was made in April 2023, and payments will continue to be made monthly until March 31, 2024, unless agreed to otherwise by iGaming Ontario and the OFNLP. At the time of our audit, iGaming Ontario, the Ministry of Finance and the Ministry of the Attorney General were in discussions with the OFNLP to negotiate a separate revenue-sharing agreement with respect to iGaming Ontario's gaming revenues.

7.4 Audit of iGaming Ontario's 2022/23 Financial Statements

Our Office completed an audit of iGaming Ontario's fiscal 2022/23 financial statements in August 2023. During the audit, we initially encountered challenges in obtaining timely information and co-ordinating with operators' auditors to audit the gaming revenues remitted to iGaming Ontario and reported in its financial statements.



As the principal in wagering transactions with players, iGaming Ontario relies on operators to report the gross amounts of wagers collected by each operator from players less player winnings and eligible deductions. Under their operating agreements, operators are required to submit this financial information to iGaming Ontario in the form of schedules audited by an external auditor. Given that the financial information in these audited schedules forms part of iGaming Ontario's financial statements, it is critical that our Office be able to rely on the audit evidence obtained by operators' auditors for the purposes of our audit.

Our audit expended significant time and resources to co-ordinate with 46 operator auditors located in 10 international jurisdictions. While some operators are physically located in Canada, the majority of operators are headquartered outside of Canada in nine different international jurisdictions.

We ultimately received the financial information required from operators and their auditors and issued an unqualified opinion on iGaming Ontario's 2022/23 financial statements. Our independent auditor's report included an emphasis of matter paragraph to draw users' attention to the Mohawk Council of Kahnawa:ke's notice of application, which challenges the legality of Ontario's Internet gaming framework. This matter is also included in note 11a (Contingent Liabilities) to the Province's 2022/23 consolidated financial statements and is incorporated by reference in the key audit matter on iGaming Ontario.

Figure 6: Distribution of iGaming Ontario's Revenue, 2022/23

Source of data: iGaming Ontario March 31, 2023 audited financial statements

Note: Total revenue of $1.265 billion comprises $1.26 billion in gaming revenue and $5 million in interest income earned on bank account balances.

iGaming Ontario's management is in the process of enhancing their procedures to obtain timely audited financial information from their operators. We will work with iGaming Ontario's management and the operators' auditors to ensure that the public receives transparent and timely information on iGaming Ontario's audited financial results.

8.0 Personal Protective Equipment Inventory

The Province procured additional personal protective equipment (PPE) in response to the COVID-19 pandemic. PPE includes medical equipment, masks, face shields, face coverings, gloves, ventilators, beds, swabs, protective gowns, cleaning supplies and other equipment. This PPE was either procured by the Province or received from the federal government. The government of Ontario assigned the responsibility of purchasing PPE for the Province to the Ministry of Health and the Ministry of Public and Business Service Delivery. The Province recorded $1.56 billion of PPE as an asset in its consolidated financial statements for the year ended March 31, 2023.

A significant amount of time and effort was spent by the ministries to quantify and value the PPE to ensure that the PPE was recorded properly, and by our Office to audit the balances for the fiscal year ended March 31, 2023.

As in prior years, we identified accounting risks over the tracking and completeness of these supplies. The Province has been tracking the purchases of provincial PPE for accounting purposes through manual spreadsheets, a process that is prone to human error and can result in inaccuracies.

During our audit work, we found that the reports used to track PPE were not able to differentiate the transfer of PPE between warehouses from the inbound shipments of newly acquired PPE into the system, which could result in inaccuracies in recording quantities of PPE held during the year. Furthermore, we also found that the report of outbound shipments did not agree with other PPE reports provided to us. This weakness in internal controls over the transfer of products between warehouses leaves the Province susceptible to inventory theft that could be difficult to detect. Nevertheless, we found that the amounts recorded as of the fiscal year end were accurate, as a result of the Province's performance of inventory counts.

To address these risks, we separately tested opening inventory, purchases and valuation of ending inventory. We also reconciled quantities from the warehouses to provincial records and performed inventory counts at a sample of locations that stored PPE.

Although quantities were generally accurate, we identified significant variances in expiration dates between the warehouse inventory lists and the PPE that was in storage. For example, inventory expiration dates for many of the samples tested did not match the expiration dates on the actual product. This was primarily driven by inventory standard procedures adopted by warehouse operators managing the Ministry of Health PPE:

- The date the PPE was received was used as a proxy for the manufacturing date, and five years were added to establish the expiration date if an expiration date was not present on the PPE. This procedure was primarily performed during the initial months of the COVID-19 pandemic when a significant amount of PPE was being purchased or received from the federal government. During our inventory counts, we noted that five years were not added consistently; sometimes only three or four years were added.
- If an item received in multiple boxes had a range of expiry dates, then the latest date was chosen for the warehouse inventory record, increasing the risk of shipping out expired items.

As well, the expiry dates for some products were extended.

Finally, we found multiple instances of manual input errors where the expiration dates had been incorrectly input in the warehouse inventory system.

We also noted several inconsistences between ministries' recognition and accounting of PPE and their operational policies. For example, the Ministry

of Health recorded items such as thermometers as expenses, whereas the Ministry of Public and Business Service Delivery recorded them as inventory assets. We also identified that the Ministry of Public and Business Service Delivery considered PPE expired 90 days before its actual expiration dates and removed it from active inventory, while the Ministry of Health chose 15 to 30 days as its standard. This could result in the same type of PPE with the identical expiry date being recorded as expired by one ministry but designated as active inventory by the other ministry.

We noted that $400 million worth of PPE was written off during 2022/23 due to expiration, obsolescence and damage. This represents an increase of over 500% when compared to the prior year. As we recommended in our *2022 Annual Report*, given that the Province holds a significant amount of PPE, it would be prudent to establish a process through which the inventory is actively monitored and distributed to key stakeholders in need, such as hospitals, prior to its expiration date.

RECOMMENDATION 2

Given the value of PPE inventory maintained by the Province, we recommend that the Ministry of Health, the Ministry of Public and Business Service Delivery and Treasury Board Secretariat implement an appropriate integrated perpetual inventory control system for PPE that integrates the Ministry of Health's and Ministry of Public and Business Service Delivery's warehouse inventories of PPE in quantity and value.

RECOMMENDATION 3

Pending the implementation of an integrated perpetual inventory control system for the Province's PPE supply, in the interim, we recommend that the Office of the Provincial Controller Division work with the Ministry of Health, and the Ministry of Public and Business Service Delivery, and Treasury Board Secretariat to put into effect an inventory system that, at a minimum:

- tracks both the quantity and value of inventory held and transferred;
- reconciles inbound and outbound inventory transfers between warehouses for both quantities and inventory costs; and
- is operated by warehouse and bookkeeping staff for the Ministry of Health and the Ministry of Public and Business Service Delivery that are trained to adequately use and reconcile the system.

RECOMMENDATION 4

We recommend that the Ministry of Health and the Ministry of Public and Business Service Delivery implement consistent inventory policies between the two ministries on expiry dates, frequency of inventory counts and naming conventions for PPE products held and that move between the ministries.

MINISTRY OF HEALTH, MINISTRY OF PUBLIC AND BUSINESS SERVICE DELIVERY, TREASURY BOARD SECRETARIAT, AND OFFICE OF THE PROVINCIAL CONTROLLER DIVISION RESPONSE TO THE RECOMMENDATIONS

The Ministries of Health, Public and Business Service Delivery, and Treasury Board Secretariat agree with the Auditor General's recommendations for the Province to implement and maintain sustainable systems, standards and adequate internal controls over the provincial Personal Protective Equipment (PPE) and Critical Supplies and Equipment (CSE) inventory. The government has established Supply Ontario as the Province's supply chain agency, and its accountability includes the ongoing management of Ontario's PPE/CSE stockpile. To date, significant progress to transition this function from the Ministry of Public and Business Service Delivery and the Ministry of Health to the agency has been made, with the transfer of Supply Chain Ontario from the Ministry of Public

and Business Service Delivery to Supply Ontario on July 31, 2023. This included the management and oversight of the PPE/CSE program. Effective April 1, 2024, financial reporting and accounting for the operating asset and expenses for the provincial PPE/CSE inventory will be transferred to Supply Ontario. At that point, the inventory will no longer be segregated, and accordingly it will be reported on a consolidated basis. Supply Ontario will continue to build capabilities and systems to support accounting and reporting for the Province's stockpile.

9.0 Entities That Were to Be Consolidated into the Public Accounts of Ontario in the 2022/23 Fiscal Year

In the normal course of our annual audit of the consolidated financial statements of the Province and our value-for-money work, we may identify accounting entities that need to be assessed for potential accounting consolidation into the Public Accounts of Ontario. In each case, we work with the Office of the Provincial Controller Division and the responsible ministry to perform control and accounting classification assessments in accordance with Canadian Public Sector Accounting Standards. In the past fiscal year ended March 31, 2023, the following entities were to be consolidated by the Province and reported as part of the Public Accounts.

9.1 Non-Indigenous Children's Aid Societies

As reported in our *2022 Annual Report* (and in prior years), we found that the non-Indigenous Children's Aid Societies were controlled by the government, and recommended that their financial results be consolidated into the Public Accounts. The Ministry of Children, Community and Social Services concluded that Children's Aid Societies were controlled by the Province, except for the Indigenous Societies. The Office of the Provincial Controller Division agreed with that conclusion. The Ministry of Children, Community and Social Services consolidated the 37 non-Indigenous Societies, and their financial information was included in the Public Accounts as of March 31, 2023. Approximately $80 million in net assets and $77 million in annual surplus were added to the Province's consolidated statement of financial position and consolidated statement of operations, respectively.

9.2 Ontario School Boards' Insurance Exchange (OSBIE)

In our *2022 Annual Report*, we highlighted the anticipated consolidation of the Ontario School Board Insurance Exchange (OSBIE) into the Province's 2022/23 consolidated financial statements. This overall consolidation of OSBIE was agreed to by the Ministry of Education, Office of the Provincial Controller Division, Ministry of Finance, and in turn the Comptroller General and the President of the Treasury Board, the Deputy Minister and the Minister of Finance.

During our audit work, we found that OSBIE's financial results have not yet been consolidated into the Province's 2022/23 consolidated financial statements. In our follow-up report on the 2021 Financial Reporting of School Boards in Ontario in our *2023 Annual Report* (**Chapter 1**, **Section 1.06**), we noted that the financial information to enable the consolidation of OSBIE by school boards—and ultimately the Province—is not yet available. The Ministry of Education is working with OSBIE to supply the financial information for school boards to proportionately consolidate their share of OSBIE's results as part of their 2023/24 fiscal year financial statements, which will be reported in the consolidated financial statements of the Province for the year ending March 31, 2025.

The consolidation of OSBIE will add approximately $112 million of net assets to the consolidated statement of financial position of the Province, based on OSBIE's 2022 audited financial statements.

9.3 Motor Vehicle Accident Claims Fund

The Motor Vehicle Accident Claims Fund (MVACF) is a fund administered by the Ministry of Public and Business Service Delivery (Ministry) that earns a fee of $15 on the issuance or renewal of each driver's five-year licence. The MVACF provides compensation for eligible losses resulting from automobile accidents involving uninsured or unidentified drivers when no insurance coverage is available. In the past, the Province had not consolidated the MVACF, but had reported the MVACF as a trust under administration in the notes to the consolidated financial statements. Our Office performed an independent analysis and determined that the MVACF is a government component (that is, a fund) within the Ministry and does not meet the definition of a trust under administration. The Office of the Provincial Controller Division agreed with our conclusion. In 2022/23, the MVACF was consolidated into the Ministry of Public and Business Services Delivery.

10.0 Ontario's Debt Burden

We have consistently commented in previous Annual Reports on Ontario's growing debt burden, attributable to Ontario's large deficits and its spending on capital assets such as infrastructure. As part of the commitments made by the Province to combat COVID-19, the Province continued to incur additional debt in 2022/23.

We noted that the Province has relied on historically low interest rates to keep its debt-servicing costs relatively stable, but the debt itself, measured as net debt, continues to grow each year to $449.3 billion by 2025/26, as illustrated in **Figure 7**. Total debt is expected to increase from $421.8 billion to $431 billion in 2023/24 and then decrease to $426 billion in 2024/25 and $426.3 billion in 2025/26. The Province projects that the accumulated deficit will also increase over the short term. The three measures of debt are defined as follows:

- *Total debt* is the amount of borrowed money the government owes to external parties, and consists of bonds issued in public capital markets, non-public debt, treasury bills and US commercial paper. Total debt provides the broadest measure of a government's debt load.
- *Net debt* is the difference between the government's total liabilities and its financial assets. Liabilities consist of all amounts the government owes to external parties, including total debt, accounts payable, pension and retirement obligations, and transfer-payment obligations. Financial assets are those that theoretically can be used to pay off liabilities or finance future operations, and include cash, accounts receivable, temporary investments and investments in government business enterprises. Net debt provides a measure of the amount of future revenues required to pay for past government transactions and events.
- *Accumulated deficit* represents the sum of all past annual deficits and surpluses of the government. Accumulated deficit can also be derived by deducting the value of the government's non-financial assets, such as its tangible capital assets, from its net debt.

10.1 Debt Issuances

As part of the Province's borrowing program, it issues debt in both domestic and international markets. Debt issued in the domestic market comprises Canadian dollar medium-term notes (including Canadian dollar Green Bonds) and treasury bills. International issuances include US dollar bonds, US commercial paper, euro medium-term notes in various currencies, and Australian issues.

The Ontario Green Bond program consists of debt securities where the proceeds from bond issuances are used to fund projects with specific environmental benefits in accordance with the Ontario Green Bond Framework, which sets out the types of projects that may be eligible for proceeds from Green Bonds. Our Office audits the Schedule of Use of Green Bond

Figure 7: Total Debt, Net Debt and Accumulated Deficit, 2016/17–2025/26 ($ million)

Source of data: Province of Ontario March 31, 2023 Consolidated Financial Statements, 2023 Ontario Economic Outlook and Fiscal Review, and Ministry of Finance

	Actual							Estimated

Total debt	325,128	337,411	354,264	372,790	405,012	425,863	421,799	430,972	425,924	426,267
Net debt	314,077	323,068	337,623	352,382	372,501	382,842	400,484	416,079	435,672	449,289
Accumulated deficit	205,939	208,257	215,770	224,814	238,231	238,160	246,804	252,416	257,763	257,269

1. Net debt and accumulated deficit for the 2017/18 to 2020/21 fiscal years were recast in the 2023 Ontario Economic Outlook and Fiscal Review to reflect the consolidation of the Pension Benefits Guarantee Fund.
2. March 31, 2023 Province of Ontario Consolidated Financial Statements. Total debt, net debt and accumulated deficit were restated due to the implementation of PS 3280 *Asset Retirement Obligations*.
3. Net debt and accumulated deficit include the reserve, as reported in the 2023 Ontario Economic Outlook and Fiscal Review.
4. Estimate of total debt is based on the total debt reported in the 2023 Ontario Budget, adjusted for the change in the funding requirement reported in the 2023 Ontario Economic Outlook and Fiscal Review compared to the 2023 Ontario Budget.
5. Total debt assumes a reduction of the same amount of holdings of Ontario bonds and treasury bills as 2022/23.
6. Total debt assumes the same amount of net unamortized discounts and premiums as 2022/23.

Proceeds, which tracks on a cash basis the use of funds generated by the issuance of Green Bonds for the selected projects approved under the Ontario Green Bond Framework.

We review the Province's Form 18-K Annual Report, filed annually with the United States Securities and Exchange Commission, which includes the Province's Annual Report and the consolidated financial statements.

We also review certain offering documents for foreign bond issuance programs, such as new US shelf registration statements, which are filed by the Province periodically, the annual euro medium-term note program offering circular, and any new offering documents that include or incorporate by reference the Independent Auditor's Report.

10.2 Main Contributors to the Increase in Net Debt

The Province's net debt has been growing over many years. This growth is attributable to its annual operating deficits, along with its expenditures on capital assets such as buildings and other infrastructure and equipment, whether acquired directly or through public-private partnerships. This extends to assets acquired for the government or its consolidated organizations, such as public hospitals, as illustrated in **Figure 8.**

Based on the 2023 budget, the Province projects deficits to continue until 2023/24 and return to a surplus in 2024/25. In the 2023 Fall Economic Statement, the Province revised the projected surplus/deficit for the medium term, from a deficit of $1.3 billion to $5.6 billion for 2023/24, a surplus of $0.2 billion to a deficit of $5.3 billion for 2024/25, and a surplus of $4.4 billion to $0.5 billion for 2025/26. When deficits are sustained over time, the government will need to borrow more money in order to finance its operations, which increases the net debt.

Based on the 2023 budget, the Province projects net debt to continue increasing in the medium term to 2025/26. Compared to the 2023 budget, the 2023 Fall Economic Statement revised the projected net debt, increasing the net debt by $9.7 billion to $416.1 billion for 2023/24, by $15.3 billion to $435.7 billion for 2024/25, and by $19.4 billion to $449.3 billion in 2025/26.

In the 2023 Fall Economic Statement, the Province presents three alternative economic growth scenarios, which have been revised from the amounts initially reported in the 2023 budget, that could impact the amount of long-term debt borrowing required. We have used these alternative scenarios for the projections in **Figures 9**, and **11–13**. Under the planning projection, the Province estimates it will need to borrow $37 billion and will have an annual surplus of $0.5 billion by 2025/26. Under the faster growth

1. Restated for the net pension assets and the Fair Hydro Plan for 2016/17 to 2017/18 and for the consolidation of the Pension Benefits Guarantee Fund for 2017/18 to 2020/21, and adjustment to opening net debt for receivables of corporations tax and other revenue adjustments in 2019/20.
2. Includes expenditures on government-owned and broader-public-sector land, buildings, machinery and equipment, and infrastructure assets capitalized during the year, less annual amortization and net gains reported on sale of government-owned and broader-public-sector tangible capital assets for 2016/17 to 2022/23.
3. Unrealized fair value losses/(gains) on the Ontario Nuclear Funds Agreement (ONFA) funds held by Ontario Power Generation Inc., other comprehensive income and International Financial Reporting Standards adjustments from government business enterprises, and prepaid expenses and other non-financial assets.
4. Restated due to the implementation of PS 3280 *Asset Retirement Obligations*.
5. Net debt and deficit/(surplus) includes the reserve, as reported in the 2023 Ontario Budget.

scenario, it will require $27 billion in long-term borrowings ($10 billion less than the planning projection) and will incur an annual surplus of $10.5 billion by 2025/26. Under the slower growth scenario, it will require $45.8 billion in long-term borrowings ($8.8 billion more than the planning projection) and will incur an annual deficit of $8.3 billion by 2025/26.

In the last 10 years, Ontario's net debt has increased by 54.1%, from $260 billion at the end of 2012/13 to $400.5 billion at the end of 2022/23. It is expected to increase by an additional $48.8 billion, or 12.2%, in the next three years, resulting in an overall increase of 72.8%. It is estimated that the net debt will be $449.3 billion by 2025/26.

To put this in perspective, the amount of net debt owed by each resident of Ontario on behalf of the government will have increased from about $19,413 per person at the beginning of 2013/14 to about $27,168 per person in 2025/26. In other words, it would cost every Ontarian $27,168 to eliminate the Province's net debt in 2025/26. As of March 31, 2023, the amount of net debt owed by each resident of Ontario was $26,195.

10.3 Ontario's Ratio of Net Debt to Gross Domestic Product

A key indicator of the government's ability to carry its debt is the level of debt relative to the size of the economy, or more specifically to the market value of goods and services produced by the economy (known as the gross domestic product, or GDP). This ratio of net-debt-to-GDP measures the relationship between a government's obligations and its capacity to raise the funds needed to meet them. It is an indicator of the burden of government debt on the provincial economy.

If the amount of debt that must be repaid relative to the value of the GDP is rising—in other words, if the ratio is rising—it means the government's net debt is growing faster than the provincial economy and is becoming an increasing burden.

Figure 9 shows the Province's net-debt-to-GDP ratio. Prior to the 2008/09 recession, this ratio remained fairly constant between 26% and 28%. However, it has been trending upward since then, reflecting factors such as significantly increased borrowing to fund annual deficits and infrastructure spending. Ontario's net-debt-to-GDP ratio rose from 26.6% before the 2008/09 recession to 43% in 2020/21, and decreased to 38.3% in 2022/23 as a result of strong economic growth and tax revenues. In the 2023 Fall Economic Statement, the Province projects Ontario's net debt will increase by $48.8 billion over the next three years and the net-debt-to-GDP ratio will increase to 38.7%. Compared to the projections in the 2023 budget, which projected it to reach 36.9% by 2025/26, the revised net-debt-to-GDP ratio is expected to remain fairly constant over the next three years at an average of approximately 38.7%.

We noted in our previous Annual Reports that many experts believe when a jurisdiction's net-debt-to-GDP ratio rises above 60%, that jurisdiction's fiscal health is at risk and is vulnerable to unexpected economic shocks.

We also noted that it is an oversimplification to rely on just one measure to assess a government's borrowing capacity, because that measure does not consider that government's share of federal and municipal debts. In Ontario's case, if the Province's share of those debts was included in its indebtedness calculations, the net debt would be considerably higher. However, consistent with debt-measurement methodologies used by most jurisdictions, we have focused throughout our analysis predominantly on the provincial government's direct net debt.

Figure 10 shows the net debt of Ontario compared to that of other provinces and the federal government, along with their respective net-debt-to-GDP ratios for the 2021/22 and 2022/23 fiscal years. For the year ended March 31, 2023, Ontario had one of the highest net-debt-to-GDP ratios compared to other Canadian jurisdictions that had issued their financial information. The latest 2022/23 financial information for Quebec was not yet available as at November 15, 2023.

10.4 Other Measures Used to Assess Government Debt Levels

10.4.1 Ratio of Net Debt to Total Annual Revenues

Another useful measure of government debt is net debt as a percentage of total annual revenue, an indicator of how much time it would take to eliminate the

* As 2022/23 data was not available, the most recent projected data was used.

debt if the Province spent all of its revenues only on debt repayment. For instance, a percentage of 250% indicates that it would take 2.5 years to eliminate the provincial debt if all revenues were devoted exclusively to it.

As shown in **Figure 11**, this percentage declined from about 162% in 2005/06 to about 146% in 2007/08, reflecting the fact that the Province's net debt grew at a slower pace than the annual provincial revenue. Since then, the percentage has increased steadily. In 2022/23, the percentage increased by 0.8% to 207.6% compared to the prior year. However, as reported in the 2023 Fall Economic Statement, the percentage is expected to increase to 210.8% in 2024/25 and then decrease to 204.2% in 2025/26. The decrease in this ratio in 2025/26 is due to projected annual revenue growing faster than the Province's net debt burden.

10.4.2 Ratio of Interest Expense to Revenue

Interest expense is the cost of servicing total debt. Increases in interest expense can directly affect the quantity and quality of programs and services that the government can provide; the higher the proportion of government revenues used to pay interest costs on past borrowings, the lower the proportion available for spending in other areas. In the 2023 Fall Economic Statement, the government forecasts that in 2023/24 it will spend $13.4 billion in interest payments to service the Province's debt.

The interest-expense-to-revenue ratio illustrates the extent to which servicing past borrowings takes a greater or lesser share of total revenues.

As **Figure 12** shows, the actual interest-expense-to-revenue ratio held steady at around 9% from 2010/11 to 2014/15. This is due to historically low and steady interest rates during those years. In 2016/17, the government began consolidating the broader public sector (organizations such as colleges, hospitals and school boards) on a line-by-line basis, which increased both interest expense and revenue reported in the Province's consolidated financial statements. The ratio declined to 6.4% in 2022/23 due to the strong tax revenue growth, and is projected to be 6.9% in 2025/26. This means approximately 6.9 cents of every dollar in government revenue will go toward paying interest on debt by 2025/26.

The debt exposes the Province to further risks, the most significant being interest-rate risk. If interest rates increase, the government will have considerably less flexibility to provide public services, such as health

care and education, because a higher proportion of revenues will be required to pay interest on the Province's outstanding debt. More money will go toward interest expense, contributing to increasing the annual deficit.

Interest rates were at record low levels before the 2021/22 fiscal year, enabling the government to keep its annual interest expense relatively steady even as its total borrowing has increased significantly. Interest rates remained relatively unchanged for the majority of the 2021/22 fiscal year until March 2022 when the prime rate increased from 2.45% to 2.70%; it further increased to 7.20% as of September 2023. Government of Canada 10-year bond yields ranged from 2.76% to 3.37% during the 2022/23 fiscal year. Bond yields continued to increase, from 2.80% at the start of 2022/23 to 3.57% as of August 2023, and are projected to be 3.2% in 2026. The prime rate and bond yields are anticipated to hold steady to 2024, as the Organisation for Economic Co-operation and Development (OECD, an intergovernmental organization with 38 member countries) expects the Bank of Canada to maintain its policy interest rate at the current level. Changes in the policy interest rate will influence the prime rate and bond yields.

As we noted in our Office's previous Annual Reports, the government mitigated its interest-rate

risk to some extent by increasing the weighted average term of its annual borrowings in order to take advantage of the low rates in those years. Over the next three years the government has projected earning revenues at a faster rate than the increase in the rate of net debt but at a slower rate than the increase in the rate of interest expense. In the 2023/24 fiscal year, year-over-year revenues are projected to increase by 4.6% ($8.9 billion), while net debt is projected to grow by 3.9% ($15.6 billion). Interest expense is projected to increase by 8.6% ($1.1 billion). By the 2025/26 fiscal year, revenues are projected to grow by 14.1% ($27.1 billion), the net debt by 12.2% ($48.8 billion) and interest expense by 22.4% ($2.8 billion), when compared with the 2022/23 fiscal year.

The ratio of interest expense to revenue is expected to increase from 6.4% in 2022/23 to 6.9% in the near future, with the estimates of net debt, interest and revenues reported in the 2023 Fall Economic Statement. As interest rates have climbed significantly during 2022/23 and, according to the OECD, are expected to sustain current levels until target inflation is reached, more interest will be paid on the accumulated debt relative to prior years. This means that the government will have less flexibility to respond to changing economic circumstances until the Province's debt burden is reduced. Past governments' borrowing and debt-servicing decisions mean that a growing portion of revenues will not be available for other current and future government programs.

10.4.3 Ratio of Debt Maturities to Net Debt

When debt (such as treasury bills or bonds) matures, the Province must either settle or roll over the debt. Typically, the Province will choose to roll over the debt, which involves settling the maturing debt by issuing new debt. An increase in the amount of debt maturities, particularly relative to the existing net debt, indicates that the Province will need to issue more debt with potentially unfavourable interest rates. The expected sustained levels of current interest rates in the medium term projected by the OECD will increase the pressure on this ratio. Increases in interest expense can affect the quality and quantity of programs and services provided by governments. Significant amounts of debt maturing at or around the same time also represents a risk, though remote, of defaulting, if the Province is unable to issue new debt on account of economic or other circumstances.

In the 2022 budget, the Province introduced a new debt measure, debt maturities to net debt, that represents the ratio of long-term debt maturing in the year as a percentage of net debt in that year. A lower ratio would generally indicate that the Province is rolling over debt at a slower pace and a higher capacity to service its debts. A planned upper limit of 10% was set in prior years based on consultation with underwriters, economists, the academic community and credit rating agencies. It has since been removed, as the Province indicated that it does not effectively supplement the other measures.

10.5 Consequences of High Indebtedness

Our commentary in prior years highlighted the consequences the Province might face if carrying a large debt load—and the same observations continue to be relevant this year. They include the following:

- **Debt-servicing costs cut into funding for other programs:** As debt grows, so do interest costs. As interest costs consume a greater proportion of government resources, there is less to spend on other things. To put this "crowding-out" effect into perspective, interest expense is currently the Province's fourth-largest annual expenditure behind health, education, and children's and social services. As shown in **Figure 13**, because interest rates have been at historic lows in the last few years, actual interest-expense-to-total-expense percentages have ranged from 6.2% to 7.7% in the last five years. In the 2023 budget, the Province forecasts that interest expense will increase to $15.1 billion by 2025/26, resulting in a projected interest-expense-to-total-expense percentage of 6.9%.

In the 2023 Fall Economic Statement, this was revised to $15.2 billion and 7%, due to an increase in the anticipated amount of financing needed from what was previously budgeted.

- **Greater vulnerability to interest rate increases:** Ontario has been able to keep its annual interest expense relatively steady, even as its total borrowing has increased significantly. For example, it was paying an average effective interest rate of about 8.4% in 1999/2000, but that dropped to 3.2% in 2022/23. However, as interest rates rise, the government will have considerably less flexibility in providing public services because it will have to devote more revenue to making interest payments.
- **Credit-rating downgrades could lead to higher borrowing costs:** Prepared by specialized agencies, credit ratings assess a government's creditworthiness based largely on its capacity to generate revenue to service its debt. The four main credit-rating agencies in Ontario are Moody's Investors Service (Moody's), Standard and Poor's Global Ratings (S&P), DBRS Morningstar (DBRS), and Fitch Ratings (Fitch). To assign a rating, agencies consider such factors as a government's economic resources and prospects, industrial and institutional strengths, financial health, financial management and debt management practices, liquidity, access to capital, and susceptibility to major risks.

Figure 14 shows Ontario's credit ratings for the last five years. In 2018, Moody's downgraded its rating for Ontario's debt from Aa2 to Aa3, and Fitch revised its rating outlook from stable to negative—both assessments indicate the Province's increased credit risk. In 2019, Fitch revised its rating outlook to stable. The four main agencies' ratings and outlooks remained unchanged from 2019 to 2022. In 2023, Moody's, S&P and DBRS assessed improved outlooks, moving the outlook on the credit rating from stable to positive in light of the improved fiscal performance and outlook, and lower debt burden. However, the credit rating remains the same.

A credit rating can affect the cost of future borrowing, with a lower rating indicating that an agency believes there is a relatively higher risk that a government will default on its debt. Generally, investors will lend to that government only in return for a greater risk premium in the form of higher interest rates. A significant rating downgrade could also shrink the potential market for a government's debt, because some investors will not hold debt below a certain rating.

10.6 Debt Burden Reduction Strategy

In the 2019 budget, the government introduced the *Fiscal Sustainability, Transparency and Accountability Act, 2019* (Act). The Act includes a requirement for the Minister of Finance to set out an annual debt burden reduction strategy in the annual budget (**Appendix 2**). This strategy requires the Province to consider its net-debt-to-GDP ratio in its plans for reducing the debt burden and to monitor its progress. In this budget, the Province set the target to reduce the net debt by 2022/23 to less than 40.8%, and has updated this ratio's target each year as part of the budget. In the 2022 budget, the Province also introduced targets for its net-debt-to-revenue and interest on debt-to-revenue ratios as part of its debt burden reduction strategy. In the 2023 budget, the Province stated that it was on the path to balance three years earlier than projected and lowered the targets for all three ratios compared to the 2022 budget. The net-debt-to-GDP target was lowered from 42% to 40%, the net-debt-to-revenue was lowered from 250% to 200%, and the interest on debt-to-revenue was lowered from 8% to 7.5%. Since the targets were introduced, the Province has not outlined specific details on how it planned to manage Ontario's growing debt burden, such as setting evidence-based debt sustainability targets, and has not communicated a strategy to reduce its debt over the long term. In the 2023 Fall Economic Statement, the Province projected it will not achieve the net-debt-to-revenue target in the medium term, noting only that the ratio will be monitored leading up to the 2024 budget.

The government, legislators and the public need to be mindful of Ontario's debt level and the relationship of net debt to GDP and revenue, and the relationship between interest on debt to revenue.

In our report The Public Accounts of the Province of Ontario, which was included in our *2021 Annual Report*, we recommended the Province implement a debt reduction strategy (which focuses on the reduction of the Province's debt balance) and provide additional information on how it sets its debt burden targets (in 2021 only the net-debt-to-GDP ratio had a target) and details of how it will meet its objectives. The debt burden reduction strategy included in the 2023 budget has not been fully implemented due to the following reasons:

- the Province has not formally documented, publicly communicated, and implemented a long-term debt reduction strategy;
- the 2023 budget did not clearly explain how the net-debt-to-GDP target of 40% was determined; and
- the Province has not clearly demonstrated how debt will be managed (for example, by prioritizing investments, making trade-offs or delaying other investments).

In our follow-up report on the 2021 Public Accounts of the Province of Ontario in our *2023 Annual Report* (**Chapter 1**, **Section 1.01**), the Province has decided

it will not implement the recommendation to formally document, publicly communicate and implement a long-term debt reduction strategy as part of its debt burden reduction strategy. We continue to support the implementation of this recommendation. As well, the Province has not explained how the net-debt-to-GDP target was determined in the 2023 budget or the 2023 Fall Economic Statement, nor how the actions taken by the Province during the year have impacted the debt burden reduction strategy.

10.7 Final Thoughts on Ontario's Debt Burden

Ultimately, decisions about how much debt the Province should carry, and the strategies to pay down that debt, are questions of government policy and thus the sole prerogative of the government.

Government debt has been described as a burden on future generations, especially debt used to finance annual operating deficits (in contrast to debt used to finance infrastructure, which is more likely to leave behind tangible capital assets that benefit future generations). With the net debt increases expected over the medium term, sustained higher interest rates, and a net-debt-to-GDP ratio projected to average 38.7% over the next three years, the government will need to consider how it will implement its debt burden reduction strategy going forward.

11.0 Canadian Public Sector Accounting Updates

Canadian Public Sector Accounting Standards (PSAS) continue to be the most appropriate standards for the Province to use in preparing its consolidated financial statements. Following Canadian PSAS ensures that information provided by the government about the annual deficit or surplus is fair, consistent and comparable to previous years, allowing legislators and the public to assess the government's management and stewardship of the public purse.

The Public Sector Accounting Board (PSAB) is responsible for developing and issuing new Canadian PSAS or amendments to existing accounting standards. New standards or amendments can have a significant impact on the Province's consolidated financial statements and Ontario's provincial budget, which is prepared on the same basis. In the following sections, we discuss the upcoming changes to Canadian PSAS and PSAB's Employee Benefits project.

11.1 Upcoming Changes to Canadian Public Sector Accounting Standards

11.1.1 Revenue

In June 2018, PSAB approved a new standard on the recognition, measurement and presentation of revenues. The new standard, PS 3400, *Revenue*, addresses revenues that arise in the public sector but fall outside the scope of PS 3410, *Government Transfers*, and PS 3510, *Tax Revenues*. Specifically, the standard differentiates between revenue arising from transactions with a payor that include performance obligations ("exchange transactions") and those that do not ("non-exchange transactions").

PS 3400, *Revenue*, is effective for the fiscal years beginning on or after April 1, 2023, although earlier adoption is permitted. Upon adoption, the Province has the option of applying this standard retroactively or prospectively.

Revenues from exchange transactions are recognized as or when a public-sector entity satisfies a performance obligation by providing promised goods or services to a payor. Performance obligations may be satisfied at a point in time or over a period of time, depending on which method best depicts the transfer of goods or services to the payor. Examples of exchange transactions include driver and vehicle registration fees, which will be affected by the new standard.

Revenues from non-exchange transactions, such as fines or penalties, are recognized when a public-sector entity has the authority to claim or retain an inflow of economic resources or an event that gives rise to an asset. For example, in the case of a parking ticket, the

date of an alleged infraction may not necessarily be the past event because the fine or penalty may not be enforceable until a future date, such as the date of a court decision.

The Office of the Provincial Controller Division is working with our Office, ministries and governmental agencies to adopt the new standard for the Province's consolidated financial statements beginning on April 1, 2023.

11.1.2 Purchased Intangible Assets

In September 2020, PSAB approved a new guideline on the recognition of purchased intangibles acquired through an exchange transaction. The new guideline, Public Sector Guideline 8, *Purchased Intangibles*, was approved in November 2020, in conjunction with narrow-scope amendments to PS 1000, *Financial Statement Concepts*, which removed the recognition prohibition on purchased intangibles.

The first-time recognition of purchased intangibles will be a significant change for the public sector, and may result in an increase in the Province's total reported assets and annual amortization expense.

The Office of the Provincial Controller Division is working with our Office, ministries and governmental agencies to adopt the new guideline for the Province's consolidated financial statements beginning on April 1, 2023.

11.1.3 Public-Private Partnerships

In our 2019 and 2020 Annual Reports, we discussed public-private partnerships (P3), an alternative financing and procurement model for infrastructure projects that allows public-sector entities to transfer project risks to private-sector entities. Under the P3 model, project sponsors in the public sector—such as provincial ministries, agencies, or broader-public-sector entities such as hospitals and colleges—establish the scope and purpose of the project, while the project's construction is financed and carried out by the private sector. Payments for most projects are made either when the projects are substantially completed or at regular agreed-upon intervals. In some cases, the private sector will also be responsible for the maintenance and/or operation of a project for up to 30 years after its completion.

PSAB approved a new standard, PS 3160, *Public Private Partnerships*, in December 2020 that provides guidance on the recognition, measurement, presentation and disclosure of P3s. The standard is effective for the fiscal years beginning on or after April 1, 2023.

Under the new standard, a public-sector entity recognizes an infrastructure asset when the public-sector entity controls the purpose and use of the infrastructure, access to the future economic benefits and risks of the infrastructure, and any significant residual interest in the infrastructure. Upon recognition of an infrastructure asset, a liability is recognized equal to that asset, less any amounts previously paid to the private-sector partner.

The Office of the Provincial Controller Division is currently in the process of assessing what impact the new standard may have on the Province's existing accounting policy for P3s.

11.1.4 The Conceptual Framework for Financial Reporting to the Public Sector

In December 2022, PSAB issued its new Conceptual Framework for Financial Reporting in the Public Sector (the "Conceptual Framework"), which replaces the conceptual aspects of PS 1000, *Financial Statement Concepts*, and PS 1100, *Financial Statement Objectives*.

The Conceptual Framework is a coherent set of interrelated concepts underlying PSAB's accounting and financial reporting standards. It also serves as the foundation for PSAB's development of new standards on which preparers and auditors of financial statements apply their professional judgment.

The Conceptual Framework includes:

- characteristics of public-sector entities;
- objective of financial reporting;
- primary users of financial reporting and their expectations;
- role of financial statements;

- foundations and objectives of financial statements;
- qualitative characteristics of information in financial statements and related considerations;
- definitions of elements;
- criteria of general recognition and derecognition; and
- concepts of general measurement and presentation.

The Conceptual Framework builds on the previous framework by retaining and providing additional guidance and clarity on existing concepts, such as recognition and measurement, and introducing new concepts. Some of the key features and differences in the Conceptual Framework include:

- introducing the term "service capacity," which is an entity's capacity to serve the public and underlies the measurement of financial position and performance;
- adding the concept of control, which is the basis for associating economic resources with the reporting entity, and the connection with the powers and rights of some public-sector entities;
- distinguishing between financial and non-financial liabilities and excluding non-financial liabilities from the calculation of net financial assets or net financial liabilities (formerly known as "net debt");
- removing conservatism as a qualitative characteristic of financial statements and including a focus on neutrality as a component of faithful representation;
- adding general derecognition criteria and guidance, which mirrors the revised general recognition criteria;
- expanding the discussion on how the longevity of governments affects the going concern assumption; and
- relocating recognition prohibitions relating to developed or non-purchased intangibles, Crown lands and natural resources, and art and historic treasures from the Conceptual Framework to PS 1202, *Financial Statement Presentation*.

The Conceptual Framework will be effective for the fiscal years beginning on or after April 1, 2026, with earlier adoption permitted.

11.1.5 PS 1202, *Financial Statement Presentation*

In October 2023, PSAB issued PS 1202, *Financial Statement Presentation* (the "Reporting Model"), which replaced PS 1201, *Financial Statement Presentation*, and a series of consequential amendments to various standards in the Public Sector Accounting Handbook.

Some of the key features and differences in the new Reporting Model include:

- adding guidance on the applicability of the going concern assumption that builds on the discussion in the new Conceptual Framework;
- presenting separately financial and non-financial liabilities, consistent with the changes in the Conceptual Framework;
- relocating the calculation of the net financial liabilities or net financial assets indicator, from the statement of financial position to its own statement;
- adding a third component of net assets or net liabilities called "accumulated other";
- adding a statement of changes in net assets or net liabilities, which includes a reconciliation of each component of net assets or net liabilities (for example, accumulated surplus or deficit, accumulated remeasurement gains and losses, and accumulated other);
- permitting the presentation of an amended budget for comparison with actual results only when there is an election or when the majority of the governing body of a government organization has been newly elected or appointed; and
- providing guidance in various appendices in the form of application guidance, decision trees, illustrative examples and illustrative financial statements.

The Reporting Model and the related consequential amendments will be effective for fiscal years beginning

on or after April 1, 2026. Earlier adoption is permitted only if the Conceptual Framework is also adopted at the same time. Prior period amounts need to be restated to conform to the presentation requirements for comparative financial information in Section PS 1202.

11.2 Employee Benefit Project

In July 2021, PSAB released its first exposure draft for comment in which it proposes to issue a new standard, PS 3251, *Employee Benefits*, that would replace the existing Sections PS 3250, *Retirement Benefits*, and PS 3255, *Post-employment, Compensated Absences and Termination Benefits*. This exposure draft outlines the proposed principles for the first of several phases of PSAB's revised employee benefits standard. If approved, the new standard would become effective for the fiscal years beginning on or after April 1, 2026, and would require retroactive application.

In this first release, PSAB focused its efforts on the topics of deferral provisions and discount rates guidance, which we discuss below.

11.2.1 Use of Deferral Provisions for Actuarial Gains and Losses

The new standard, PS 3251, accounts for actuarial gains and losses differently from the existing Sections PS 3250 and PS 3255 in that these amounts will no longer follow a deferral and amortization approach. Instead, revaluations of the net defined benefit liability (asset), which include actuarial gains and losses, are recognized immediately on the statement of financial position within the asset and "accumulated other"—a new component of net assets (liabilities) proposed by PSAB in its exposure draft for PS 1202, *Financial Statement Presentation*. For greater clarity, revaluations of the asset are not reclassified to the surplus or deficit in subsequent periods.

This immediate recognition of actuarial gains and losses would have a significant impact on the Province's consolidated financial statements. As of March 31, 2023, the Province reported about $24.6 billion of unrecognized net actuarial gains related to its employee pension plans and other employee future benefits. Under the proposed standard, the Province would recognize this entire amount as a decrease in liabilities and accumulated deficit within its consolidated statement of financial position. In addition, the Province would no longer defer and amortize future actuarial gains and losses in its consolidated statement of operations.

While we support the immediate recognition of actuarial gains and losses on the statement of financial position, we do not agree with the use of the proposed "accumulated other" category to record the revaluations of net defined benefit liabilities (assets). By using this approach, revaluations will not be reported in the statement of operations and are not reclassified from "accumulated other" to the surplus or deficit in subsequent periods. In other words, this allows public sector entities to bypass the annual surplus or deficit by directly recognizing gains and losses in net assets or liabilities. In our view, this presentation compromises the transparency and faithful representation of an entity's annual financial performance.

11.2.2 Discount Rate Guidance

In its exposure draft, PSAB proposes that a public-sector entity would assess the funding status of a post-employment benefit plan to determine the appropriate discount rate. Under the proposed standard, plans fall under one of three funding statuses: fully funded, partially funded, or unfunded.

Public-sector entities would use a discount rate based on the expected market-based return on plan assets for fully funded plans (that is, where the balance of plan assets is actuarially projected to be greater than or equal to the benefit payments expected to fulfill the obligations for all subsequent reporting periods). In contrast, the rate used to discount unfunded plans is determined by reference to the market yields of provincial government bonds. This proposed discount rate guidance is consistent with the Province's existing practices of discounting its funded and unfunded postemployment benefit plans.

With respect to partially funded plans, public-sector entities would use a single discount rate that reflects both a fully funded rate—for years where the balance

of plan assets is projected to be sufficient to cover projected benefit payments—and an unfunded rate for all other periods beyond the funded period. This proposed approach adds complexity and requires professional judgment in determining what rate to use.

As we stated in our response to PSAB's exposure draft on discount rate guidance, we believe that the market yield of high-quality debt instruments is the most appropriate basis for determining the discount rate. The market yield is based on verifiable, observable third-party data, effectively reducing subjectivity and facilitating comparability among public-sector entities' post-employment benefit plans. With that being said, we are generally supportive of PSAB providing additional discount rate guidance to reduce the variability in practice.

PSAB is currently deliberating the feedback it received on its first Employee Benefits exposure draft. We will continue to monitor the development of standards impacting the accounting for employment benefits.

12.0 Statutory Matters

Under section 12 of the *Auditor General Act*, the Auditor General is required to report on any Special Warrants and Treasury Board Orders issued during the year. In addition, section 91 of the *Legislative Assembly Act* requires that the Auditor General report on any transfers of money between items within the same vote in the Estimates of the Office of the Assembly.

12.1 Legislative Approval of Expenditures

Shortly after presenting its budget, which must be tabled by March 31 to meet the deadline included in the *Fiscal Sustainability, Transparency and Accountability Act, 2019* as described in **Section 4.0** of this report, the government tables detailed Expenditure Estimates (referred to as Main Estimates). Typically, the Main Estimates are tabled in the Legislative Assembly in April or May, outlining, on a program-by-program basis (referred to as vote and item), each ministry's planned spending. Relevant standing committees (per the Standing Orders of the Legislative Assembly of Ontario, Standing Order 113(b)) review selected ministry estimates and report on their review to the Legislature. The Standing Committee on Procedure and House Affairs is responsible for deciding at the beginning of each Parliament, or more frequently, if necessary, which ministries' estimates will be assigned for consideration and potential review to which of six committees: Finance and Economic Affairs; Heritage, Infrastructure and Cultural Policy; Interior; Justice Policy; Procedure and House Affairs; or Social Policy.

Following reports by the committees, Orders for Concurrence for each of the estimates selected by the committees are debated in the Legislature for a maximum of two hours before being voted on. The estimates of those ministries that are not selected are deemed to be passed by the committees, reported to the Legislature, and approved by the Legislature. Once the estimates are tabled for the ministries, the Main Estimates for the legislative offices are typically tabled. This generally occurs in the months of November or December, but it can take place up to March 31 of the following year.

After the Orders for Concurrence are approved, the Legislature still needs to provide its final approval for legal spending authority by approving a Supply Act, which stipulates the amounts that can be spent by ministries and legislative offices, as detailed in the estimates. Once the Supply Act is approved, the expenditures it authorizes are considered to be Voted Appropriations. The *Supply Act, 2023*, which pertained to the fiscal year ended March 31, 2023, received royal assent on March 22, 2023.

Since the Supply Act does not receive royal assent until after the start of the fiscal year—and sometimes even after the related fiscal year is over—the government usually requires interim spending authority prior to its passage. For the 2022/23 fiscal year, the Legislature passed two acts allowing interim appropriations—the *Interim Appropriation for 2022–2023 Act, 2021* (Interim Act) and the *Supplementary Interim Appropriation for 2022–2023 Act, 2022*

(Supplementary Act). These two acts received royal assent on December 9, 2021, and December 8, 2022, respectively. Both acts were made effective as of April 1, 2022, and provided the government with sufficient authority to allow it to incur expenditures from April 1, 2022, to when the *Supply Act, 2023* received royal assent on March 22, 2023.

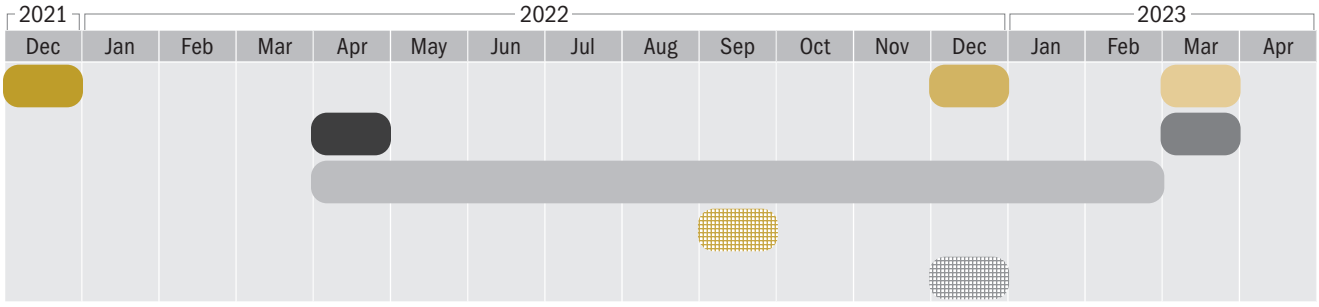
Figure 15 shows the timelines for the legislative approvals for the 2022/23 expenditures.

Figure 16 shows the total amounts authorized.

Because the legal spending authority under the Interim Act and the Supplementary Act was intended to be temporary, both were repealed when the *Supply Act, 2023* received royal assent. The *Supply Act, 2023* decreased authorized public-service investments from $5.595 billion to $5.568 billion, and increased total authorized expenditures of the legislative offices from $298 million to $311 million.

Where it is necessary to seek the Legislature's approval for additional expenditures after the tabling of the Main Estimates, Supplementary Estimates may be tabled. There were no Supplementary Estimates tabled in 2022/23.

12.2 Special Warrants



If the Legislature is not in session, section 1.0.7 of the *Financial Administration Act* allows for the issuance of Special Warrants that authorize expenditures for which there is no appropriation by the Legislature or for which the appropriation is insufficient. Special Warrants are authorized by Orders-in-Council and approved by the Lieutenant Governor on the recommendation of the government. No Special Warrants were issued for the fiscal year ended March 31, 2023.

12.3 Treasury Board Orders

Section 1.0.8 of the *Financial Administration Act* allows the Treasury Board to make an order authorizing expenditures to supplement the amount of any voted appropriation that is expected to be insufficient to carry out the purpose for which it was made. The order may be made only if the amount of the increase is offset by a corresponding reduction of expenditures to be incurred from other voted appropriations not fully spent in the fiscal year. The order may be made at any time before the government closes the books for the fiscal year. The government considers the books to

Figure 15: Timeline for the Legislative Approvals for the 2022/23 Expenditures

Prepared by the Office of the Auditor General of Ontario

- *Interim Appropriation for 2022–2023 Act, 2021* receives royal assent.
- 2022 Ontario Budget is tabled.
- *Interim Appropriation for 2022–2023 Act, 2021* and *Supplementary Interim Appropriation for 2022–2023 Act, 2022* are effective.
- Expenditure estimates (referred to as "Main Estimates") for ministries are tabled in the Legislative Assembly.
- Main Estimates for the Legislative offices are tabled.
- *Supplementary Interim Appropriation for 2022–2023 Act, 2022* receives royal assent.
- *Supply Act, 2023* receives royal assent.
- 2023 Ontario Budget is tabled.

Figure 16: Total Amounts Authorized by Appropriation and by the *Supply Act, 2023* for 2022/23 ($ million)

Source of data: *Interim Appropriation for 2022–2023 Act*, *Supplementary Interim Appropriation for 2022–2023 Act*, and *Supply Act, 2023*

Appropriation Type	*Interim Appropriation for 2022–2023 Act, 2021*	*Supplementary Interim Appropriation for 2022–2023 Act, 2022*	Total Interim Appropriation	*Supply Act, 2023**
Expenses of the public service	164,884	10,948	175,832	175,832
Investments of the public service	5,595	–	5,595	5,568
Expenses of the legislative offices	284	14	298	311
Total	**170,763**	**10,962**	**181,725**	**181,710**

* Amounts may not add due to rounding.

be closed when any final adjustments arising from our audit have been made and the Public Accounts have been published and tabled in the Legislature.

Even though the *Treasury Board Act, 1991* was repealed in 2009, a provision equivalent to the subsection 5(4) was retained and enacted as subsection 1.0.4(5) of the *Financial Administration Act* in 2009. This provision allows the Treasury Board to delegate any of its duties or functions to any member of the Executive Council or to any public servant employed under the *Public Service of Ontario Act, 2006*. Such delegations continue to be in effect until replaced by a new delegation. Since 2006, the Treasury Board has delegated its authority for issuing Treasury Board Orders to ministers to make transfers between programs within their ministries, and to the Chair of the Treasury Board for making Treasury Board Orders that result in program transfers between ministries as well as those orders that result in supplementary appropriations offset from contingency funds.

Figure 17 summarizes the total value of Treasury Board Orders issued for the past five fiscal years.

Figure 18 summarizes Treasury Board Orders for the fiscal year ended March 31, 2023, by month of issue.

According to the Standing Orders of the Legislative Assembly, Treasury Board Orders are to be posted online in *The Ontario Gazette*, together with explanatory information. Orders issued for the 2022/23 fiscal year are expected to be published in *The Ontario Gazette* in December 2023. **Exhibit 4** of this report shows a detailed listing of 2022/23 Treasury Board Orders, including the amounts authorized and expended.

12.4 Transfers Authorized by the Board of Internal Economy

When the Board of Internal Economy authorizes the transfer of money from one item of the Estimates of the Office of the Assembly to another item within the same vote, section 91 of the *Legislative Assembly Act* requires that we make special mention of the transfer(s) in our Annual Report. No transfers were made with respect to the 2022/23 estimates.

12.5 Uncollectible Accounts

Under section 5 of the *Financial Administration Act*, the Lieutenant Governor in Council, on the recommendation of the Minister of Finance, may authorize an Order-in-Council to delete from the accounts any amounts due to the Crown that are the subject of a settlement or deemed uncollectible. The amounts deleted from the accounts during any fiscal year are to be reported in the Public Accounts.

In the 2022/23 fiscal year, receivables of $197 million due to the Crown from individuals and non-government organizations were written off. (The comparable amount in 2021/22 was $657 million.) The write-offs in the 2022/23 fiscal year primarily related to the following:

- $13.7 million for Business Property Tax Rebate Grant program payments ($nil in 2021/22)

Figure 17: Total Value of Treasury Board Orders Issued, 2018/19–2022/23 ($ billion)

Source of data: Treasury Board

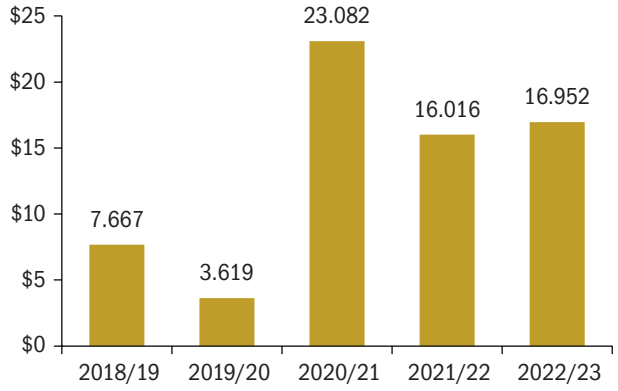


Figure 18: Total Value of Treasury Board Orders by Month, 2022/23

Source of data: Treasury Board

Month of Issue	Treasury Board Orders (#)	Authorized ($ million)
Apr 2022–Feb 2023	62	12,828
Mar 2023	27	1,509
Apr 2023	0	–
May 2023	0	–
Jun 2023	2	1,324
Jul 2023	2	1,292
Total	**93**	**16,952**

Note: Numbers may not add up due to rounding.

- $9.4 million for uncollectible Victim Fine Surcharges ($191.1 million in 2021/22)
- $4.7 million for Ontario Small Business Support Grant Program payments ($210.3 million in 2021/22)
- $1.6 million for Energy Cost Rebate Grant program payments ($nil in 2021/22)
- $52.7 million for student loans ($42.4 million in 2021/22)
- $47.8 million for Ontario Disability Support Program receivables, outstanding five or more years ($23.4 million in 2021/22)
- $46.8 million for bankrupt/insolvent entities with unpaid tax amounts ($65.2 million in 2021/22)
- $8 million for cost recovery (forest fires) ($3.3 million in 2021/22)
- $5.9 million for Criminal Code fines ($13 million in 2021/22)
- $4.4 million for the Motor Vehicle Accident Claims Fund ($2.1 million in 2021/22)

The remaining $1.8 million relates to various ministry write-offs ($4.8 million in 2021/22).

The Ministry Statements and Schedules of the 2022/23 Public Accounts summarizes the write-offs by ministry. Under the accounting policies followed in the preparation of the Province's consolidated financial statements, a provision for doubtful accounts is recorded against accounts receivable balances. Most of the write-offs had already been expensed in the government's consolidated financial statements. However, the actual write-off in the accounts required Order-in-Council approval.

The Province's consolidated financial statements include allowances for doubtful accounts of $1.7 billion (the 2021/22 allowance was $1.6 billion).

Appendix 1: Independent Auditor's Report

Office of the Auditor General of Ontario
Bureau de la vérificatrice générale de l'Ontario

INDEPENDENT AUDITOR'S REPORT

To the Members of the Legislative Assembly of the Province of Ontario

Opinion

I have audited the accompanying Consolidated Financial Statements of the Province of Ontario, which comprise the Consolidated Statement of Financial Position as at March 31, 2023, and the Consolidated Statements of Operations, Change in Net Debt, Change in Accumulated Operating Deficit, Remeasurement Gains and Losses and Cash Flow for the year then ended, and notes to the Consolidated Financial Statements, including a summary of significant accounting policies.

In my opinion, the accompanying Consolidated Financial Statements present fairly, in all material respects, the consolidated financial position of the Province of Ontario as at March 31, 2023, and the consolidated results of its operations, the consolidated changes in its net debt, the consolidated change in its accumulated operating deficit, the consolidated remeasurement gains and losses and its consolidated cash flows for the year then ended in accordance with Canadian public sector accounting standards.

Basis for Opinion

I conducted my audit in accordance with Canadian generally accepted auditing standards. My responsibilities under those standards are further described in the Auditor's Responsibility for the Audit of the Consolidated Financial Statements section of this report. I am independent of the Province of Ontario in accordance with the ethical requirements that are relevant to my audit of the Consolidated Financial Statements in Canada, and I have fulfilled my other ethical responsibilities in accordance with these requirements. I believe that the audit evidence I have obtained is sufficient and appropriate to provide a basis for my opinion.

www.auditor.on.ca

Key audit matters are those matters that, in my professional judgment, were of most significance in my audit of the Consolidated Financial Statements of the Province of Ontario for the year ended March 31, 2023.

These matters were addressed in the context of my audit of the Consolidated Financial Statements as a whole, and in forming my opinion thereon, and I do not provide a separate opinion on these matters.

The Key Audit Matters are as follows:

Key Audit Matter	Audit Work to Address
Personal Income Tax	
Personal Income Tax has been identified as a key audit matter because of the magnitude of this revenue and because the estimate is complex and includes several inputs and assumptions. Personal Income Tax is the Province of Ontario's largest revenue stream, providing approximately $44.2 billion (2022 – $46.8 billion) in revenue in 2022-23. Note 1d (Measurement Uncertainty) provides disclosure on measurement uncertainty related to personal income tax revenues. Personal Income Tax revenue in a fiscal year is derived from the Ministry of Finance's estimates of personal income taxes from two calendar years. For the fiscal year ended March 31, 2023, the Province of Ontario records nine months of revenue from the calendar year 2022 and the first three months of revenue from calendar year 2023. However, tax assessments for the 2022 calendar year will not be finalized until December 2023, and 2023 tax assessments will not be finalized until December 2024. As a result, precise revenue figures cannot be determined until 21 months after the fiscal year-end date. As a result, the Ministry of Finance estimates these revenues based on the best information available.	Audit work to address this key audit matter included: • assessing the appropriateness of the method used to make the estimates; • performing a retrospective review to assess the accuracy of prior year estimates; • testing the completeness and accuracy of underlying data and management's calculations; • evaluating the sufficiency of the measurement uncertainty disclosures in the Consolidated Financial Statements; and • engaging an econometric specialist to assist with the evaluation of the Ministry of Finance's personal income tax estimation model.
Corporations Tax	
Corporations Tax has been identified as a key audit matter because of the magnitude of this revenue and because the estimate is complex and includes several inputs and assumptions. Corporations Tax is a large revenue stream, providing approximately $27.8 billion (2022 – $25.2 billion) in revenue in 2022-23. Note 1d (Measurement Uncertainty) provides disclosure on measurement uncertainty related to Corporations Tax revenue. Corporations Tax revenue is based on tax returns assessed by the Canada Revenue Agency (CRA) up to June 30, 2023 and includes estimates of corporate income tax from two calendar years. For the fiscal year ended March 31, 2023, the Province of Ontario records nine months of revenue from the calendar year 2022 and the first three months of revenue from calendar year 2023. Corporations' tax assessments for the 2022 calendar year will not be finalized until December 2023, and the 2023 tax assessments will not be available until December 2024. This means precise revenue figures cannot be determined until 21 months after the fiscal year-end date. As a result, the Ontario Ministry of Finance estimates these revenues based on the best available information.	Audit work to address this key audit matter included: • assessing the appropriateness of the method used to determine the Corporations Tax estimate; • performing a retroactive review to assess the accuracy of prior year estimates; • testing the completeness and accuracy of underlying data and management's calculations; • developing a range estimate to compare to the Ministry of Finance's estimate; • evaluating the sufficiency of the measurement uncertainty disclosures in the Consolidated Financial Statements; and • engaging an econometric specialist to assist with the evaluation of the Ministry of Finance's corporations tax model.

Pension and Other Employee Future Benefits	
The Province of Ontario sponsors several pension plans, both as sole and joint sponsor. In addition, the Province reports in its Consolidated Financial Statements pension benefits for employees in the hospital and colleges sectors. The estimated plan assets and accrued benefit obligations of these plans exceed $14.1 billion (2022 – $14.4 billion). Information related to Pension and Other Employee Future Benefits are disclosed in notes 1d (Measurement Uncertainty) and 6 (Pensions and Other Employee Future Benefits). The Province of Ontario relies on third-party actuarial specialists to estimate the accrued benefit obligation and other information for financial statement note disclosures. These calculations rely on management's best estimate for significant economic and demographic assumptions. Plan assets are valued at market-related value for funded plans. Market-related value is based on the fair value of plan assets reported in the pension plans' financial statements over the last five years. Where observable market data is not available for investments, fair value estimates requiring significant management judgment are used.	Audit work to address this key audit matter included: • assessing pension plan auditors' work over the reliability of the market-related value of plan assets used in the estimates, as well as their work over the plan member data provided by management to an actuarial expert for preparing the estimate of pension obligations; • assessing the qualifications of management's actuarial experts; • obtaining an understanding of the assumptions and methods used by these experts in determining the accrued benefit obligation for pension benefits and the appropriateness of the assumptions and methods used and testing the underlying employee data used in the valuation of the accrued benefit obligation; and • working with an independent actuarial expert to assess management's significant economic and demographic assumptions.
Contaminated Sites Liabilities	
Activities in the natural resources sector may lead to contamination of sites that exceeds environmental standards. When the Province has either taken over responsibility for remediation for sites or is directly responsible for sites, an estimate of the expected costs is prepared and recorded as liabilities on the consolidated statement of financial position. As at March 31, 2023, this remediation liability is estimated to be $1.9 billion (2022 – $1.8 billion). The nature of the liability and the challenges around its estimation are discussed in notes 1d (Measurement Uncertainty), 7 (Other Liabilities) and 11a (Contingent Liabilities). The estimate for contaminated sites liabilities is complex and includes several inputs and assumptions and, as such, has been identified as a key audit matter.	Audit work to address this key audit matter included: • testing the completeness and accuracy of the Province's contaminated sites inventory along with supporting information; • developing a range of estimates to assess the reasonability of key assumptions supporting the estimate; and • engaging an independent specialist with expertise in environmental contamination remediation to assess the reasonableness of the Province's estimation methods.

Asset Retirement Obligations

The estimate for asset retirement obligations is complex and includes several inputs and assumptions and, as such, has been identified as a key audit matter.

The Public Sector Accounting Board introduced a new accounting standard, *PS 3280, Asset Retirement Obligations*, that provides guidance on reporting of liabilities arising from legal obligations associated with the retirement of tangible capital assets. This standard became effective for the Province on April 1, 2022. The Province has legal obligations to retire certain tangible capital assets. As at March 31, 2023, this liability is estimated to be $4.1 billion (2022 – $3.8 billion). The Province adopted the standard using the modified retroactive method with restatement of 2021-22 balances as shown in note 17 (Accounting Changes and Reclassifications).

The nature of the liability and the challenges around its estimation are discussed in notes 1d (Measurement Uncertainty), 1f (Changes in Accounting Policy by Adopting New Standards), and 7 (Other Liabilities).

Audit work to address this key audit matter included:

- assessing the completeness and accuracy of tangible capital assets with legal obligations for asset retirement;
- evaluating the appropriateness of valuation methods used to estimate the obligations;
- verifying the completeness and accuracy of the information considered in the estimation process;
- testing the accuracy of management's calculations by developing a range of estimates to assess the reasonability of key assumptions supporting the estimates; and
- engaging an independent environmental specialist with expertise in asset retirement obligations.

Contingent Liabilities Associated with the Court Decision Related to the Protecting a Sustainable Public Sector for Future Generations Act, 2019

The estimates for the contingent liabilities associated with the court decision related to the *Protecting a Sustainable Public Sector for Future Generations Act, 2019* are complex and include several inputs and assumptions and, as such, have been identified as a key audit matter. As at March 31, 2023, this liability is estimated to be $2.5 billion.

The nature of the liabilities and the challenges around its estimation are discussed in notes 1d (Measurement Uncertainty), and 11a (Contingent Liabilities).

Audit work to address this key audit matter included:

- reviewing legal claims assessments;
- evaluating management's calculations and assumptions for estimating the liabilities;
- assessing the completeness of the liabilities and the underlying data; and
- evaluating a sample of agreements and memoranda of understanding supporting the measurement of the liability.

iGaming Ontario

iGaming Ontario's launch of the regulated Internet gaming market in Ontario was a significant event during the year and, as such, has been identified as a key audit matter.

The Province has consolidated iGaming Ontario as a government business enterprise as described in Schedule 9 (Government Business Enterprises). Additional details about iGaming Ontario are discussed in note 11a (Contingent Liabilities).

Audit work to address this key audit matter included:

- assessing the completeness and accuracy of the single line consolidation;
- performing tests to verify that gross gaming revenue agrees to audited revenues reported and remitted by iGaming Ontario operators;
- reviewing legal claims assessments;
- evaluating management's calculations and assumptions for estimating the liabilities;
- assessing the completeness of the liabilities; and
- performing substantive procedures.

Financial Instruments and Foreign Currency Translation	
The Province adopted new accounting standards for financial instruments and foreign currency translation in *PS 1201, Financial Statement Presentation, PS 2601, Foreign Currency Translation* and *PS 3450, Financial Instruments*. These standards are implemented on a prospective basis as of April 1, 2022. The adoption of the standards resulted in the addition of derivative assets and liabilities, recognized at fair value. Previously, derivative transactions were only recorded upon settlement. In addition, portfolio investments managed on a fair value basis are recognized at fair value. Previously, these investments were recorded at cost. Unrealized foreign currency gains and losses and unrealized gains and losses on investments and derivatives are recorded in the new consolidated statement of remeasurement gains and losses. Previously, these transactions were recorded in the consolidated statement of operations or in the notes to the consolidated financial statement for items such as the notional and fair value of derivatives. The Province is recognizing debt at amortized cost and uses the effective interest method, which requires the Province to recognize unamortized discounts, premiums and transaction costs as part of the amortized cost. Previously, the Province recognized debt at amortized cost and used the straight-line method to record interest. Finally, additional quantitative and qualitative information is disclosed in note 3 (Derivatives and Risk Management) to the consolidated financial statements about the nature and extent of risks associated with portfolio investments, loans, debt and derivatives. The disclosures for financial instruments and foreign currency translation are discussed in notes 1f (Change in Accounting Policy by Adopting New Standards), 2 (Debt), 3 (Derivatives and Risk Management), 8 (Investments), Schedule 5 (Accounts Payable and Accrued Liabilities) and Schedule 6 (Accounts Receivable).	Audit work to address this key audit matter included: • examining the opening and closing balances for the consolidated remeasurement gains and losses and the calculation of unrealized gains and losses on translation of foreign debt, valuation of derivatives and portfolio investments; • evaluating the Province's processes for valuing and disclosing derivatives and embedded derivatives on the consolidated statement of financial position; • verifying the existence, completeness and accuracy of derivative contracts and debt issuances; • evaluating and assessing inputs used in valuation calculations, assessing discount rates and counterparty balances; • reviewing the appropriateness and accuracy of quantitative and qualitative disclosures of the nature and extent of risks associated with debt, derivatives and portfolio investments; and • verifying the appropriate implementation of the standards' transitional provisions by management.

Other Accompanying Information

The Government of Ontario is responsible for the information in the 2022-23 Public Accounts of Ontario Annual Report.

My opinion on the Consolidated Financial Statements does not cover the other information accompanying the Consolidated Financial Statements and I do not express any form of assurance conclusion thereon.

In connection with my audit of the Consolidated Financial Statements, my responsibility is to read the other information and, in doing so, consider whether the other information is materially inconsistent with the Consolidated Financial Statements or my knowledge obtained during the audit, or otherwise appears to be materially misstated.

If, based on the work I have performed on this other information, I conclude that there is a material

misstatement of this other information, I am required to report that fact in this auditor's report. I have nothing to report in this regard.

Responsibilities of Management and Those Charged with Governance for the Consolidated Financial Statements

Management is responsible for the preparation and fair presentation of these Consolidated Financial Statements in accordance with Canadian public sector accounting standards, and for such internal controls as management determines is necessary to enable the preparation of Consolidated Financial Statements that are free from material misstatement, whether due to fraud or error.

In preparing the Consolidated Financial Statements, management is responsible for assessing the Province of Ontario's ability to continue as a going concern, disclosing, as applicable, matters relating to going concern and using the going concern basis of accounting unless the Government either intends to cease operations, or has no realistic alternative but to do so.

Those charged with governance are responsible for overseeing the Province of Ontario's financial reporting process.

Auditor's Responsibility for the Audit of the Consolidated Financial Statements

My objectives are to obtain reasonable assurance about whether the Consolidated Financial Statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes my opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with Canadian generally accepted auditing standards will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these Consolidated Financial Statements.

As part of an audit in accordance with Canadian generally accepted auditing standards, I exercise professional judgment and maintain professional skepticism throughout the audit. I also:

- Identify and assess the risks of material misstatement of the Consolidated Financial Statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for my opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Province of Ontario's internal control.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by management.
- Conclude on the appropriateness of management's use of the going concern basis of accounting and based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Province

of Ontario's ability to continue as a going concern. If I conclude that a material uncertainty exists, I am required to draw attention in my auditor's report to the related disclosures in the Consolidated Financial Statements or, if such disclosures are inadequate, to modify my opinion. My conclusions are based on the audit evidence obtained up to the date of my auditor's report. However, future events or conditions could cause the Province of Ontario to cease to continue as a going concern.

- Evaluate the overall presentation, structure and content of the Consolidated Financial Statements, including the disclosures, and whether the Consolidated Financial Statements represent the underlying transactions and events in a manner that achieves fair presentation.

The audit of the Consolidated Financial Statements is a group audit engagement. As such, I also obtain sufficient appropriate audit evidence regarding the financial information of the entities or business activities within the group to express an opinion on the Consolidated Financial Statements. I am responsible for the direction, supervision and performance of the group audit and I remain solely responsible for my audit opinion.

I communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control identified during the audit.

I also provide those charged with governance with a statement that I have complied with relevant ethical requirements regarding independence, and to communicate with them all relationships and other matters that may reasonably be thought to bear on my independence, and where applicable, related safeguards.

From the matters communicated with those charged with governance, I determine those matters that were of most significance in the audit of the financial statements of the current period and are therefore the key audit matters. I describe these matters in my auditor's report unless law or regulation precludes public disclosure about the matter or when, in extremely rare circumstances, we determine that a matter should not be communicated in our report because the adverse consequences of doing so would reasonably be expected to outweigh the public interest benefits of such communication.

Toronto, Ontario
August 29, 2023

Bonnie Lysyk, MBA, FCPA, FCA, LPA
Auditor General

Appendix 2: Budget Requirements under the *Fiscal Sustainability, Transparency and Accountability Act, 2019*

Prepared by the Office of the Auditor General of Ontario

Act Requirement	Met Requirement	Did Not Meet Requirement	If Not Met, How and Why
Balanced budget[1] 3 (1) For each fiscal year, the Executive Council shall plan for a balanced budget.		✓	2022 Budget is not balanced in the medium term (see **Exception, extraordinary circumstances** below).
Exception, extraordinary circumstances (2) Despite subsection (1), if, as a result of extraordinary circumstances, the Executive Council determines that it is consistent with the principles governing Ontario's fiscal policy for the Province to have a deficit for one or more fiscal years, the Executive Council may plan accordingly, in which case the following requirements must be met:			The Province has assessed the ongoing economic uncertainty related to elevated inflation, supply chain challenges and rising interest rates as extraordinary circumstances.
1. The introductory summary of the budget must include the rationale for the Executive Council's determination.	✓		
2. If the multi-year fiscal plan included in the budget does not project a balanced budget for the last fiscal year in the plan period, the budget must include a recovery plan that meets the requirements of section 8.	✓		
Annual budget[2] 4 (1) On or before March 31 of each fiscal year, the Minister shall lay before the Legislative Assembly and release a budget in respect of the following fiscal year commencing on April 1.	✓		
Contents of the budget 5 The budget required by section 4 must include the following information:			
1. An introductory summary of the key fiscal, economic and debt information contained in the budget.	✓		
2. The macroeconomic forecasts and assumptions used to prepare the budget.	✓		
3. A multi-year fiscal plan that meets the requirements of section 6.	✓		
4. A comprehensive discussion of the risks that, in the Minister's opinion, may have a material impact on the economy or the public sector during the period of the plan.	✓		
5. A description of the intended effects of the plan on the Province.	✓		
6. Information about the projected ratio of provincial net debt to Ontario's gross domestic product for the period of the plan.	✓		

Act Requirement	Met Requirement	Did Not Meet Requirement	If Not Met, How and Why
Multi-year fiscal plan 6 (1) A multi-year fiscal plan must meet the requirements set out in this section.	✓		
Period of the fiscal plan (2) The fiscal plan must address the fiscal year of the budget and the following two fiscal years, and it may address a longer period.	✓		
Contents of the fiscal plan (3) The fiscal plan must include the following information:			
1. An estimate of Ontario's revenues and expenses for the period of the plan, including estimates of the major components of the revenues and expenses.	✓		
2. The forecasts and assumptions used to prepare the revenue and expense estimates for the period of the plan.	✓		
3. A reserve to provide for unexpected adverse changes in revenues and expenses, in whole or in part, and the details of the reserve.	✓		
4. A comprehensive discussion of the risks that, in the Minister's opinion, may have a material impact on the economy or the public sector during the period of the plan.	✓		
5. A description of the intended effects of the plan on the Province.	✓		
6. Information about the projected ratio of provincial net debt to Ontario's gross domestic product for the period of the plan.	✓		
Debt burden reduction strategy 7 (1) A debt burden reduction strategy must meet the requirements set out in this section.		✓	See explanation below.
Contents of the strategy (2) The debt burden reduction strategy must include the following information:			
1. Ontario's specific objectives for the projected ratio of provincial net debt to Ontario's gross domestic product.	✓		
2. A progress report on supporting actions and the implementation of the debt burden reduction strategy included in the last budget.		✓	Debt burden reduction strategy not fully implemented due to the Province not formally documenting a long-term debt strategy, not explaining how it determined the net-debt-to-GDP target of 37.8%, and not clearly demonstrating how debt will be managed.

Act Requirement	Met Requirement	Did Not Meet Requirement	If Not Met, How and Why
Recovery plan 8 (1) A recovery plan must meet the requirements set out in this section.	✓		
Period of the recovery plan (2) The recovery plan must address the period from the first fiscal year after the end of the current multi-year fiscal plan to the projected fiscal year in which the budget will be balanced.	✓		
Contents of the recovery plan (3) The recovery plan must be consistent with the principles governing Ontario's fiscal policy and must include the following information:			
1. The projected fiscal year in which the budget will be balanced.	✓		
2. An estimate of Ontario's revenues and expenses for the period of the plan, including estimates of the major components of the revenues and expenses.	✓		
3. The forecasts and assumptions used to prepare the revenue and expense estimates for the period of the plan.	✓		
4. A reserve to provide for unexpected adverse changes in revenues and expenses, in whole or in part, and the details of the reserve.	✓		
5. Information about the projected ratio of provincial net debt to Ontario's gross domestic product for the period of the plan.	✓		
Mid-year review 9 On or before November 15 of each fiscal year, the Minister shall release a mid-year review that includes the following information:			
1. An introductory summary of the key fiscal, economic and debt information contained in the review.	✓		
2. Updated information about Ontario's revenues and expenses for the current fiscal year or a longer period, including updated information about the major components of the revenues and expenses.	✓		
3. Information about the estimated cost of expenditures that are made through the tax system.	✓		

Act Requirement	Met Requirement	Did Not Meet Requirement	If Not Met, How and Why
4. For the purpose of pre-budget consultations with the public:			
i. A description of the key issues that, in the Minister's opinion, should be addressed in the next budget.	✓		
ii. Details about how to participate in the pre-budget consultations.	✓		
Interim updates about revenues and expenses 10 On or before August 15 and on or before February 15 of each fiscal year, the Minister shall release updated information about Ontario's revenues and expenses for the current fiscal year, including updated information about the major components of the revenues and expenses.	✓		
Quarterly information about Ontario's economic accounts 11 Within 45 days after Statistics Canada publishes quarterly national income and expenditure accounts, the Minister shall release Ontario's economic accounts for the same quarter.	✓		
Long-range assessment of economic and fiscal environment 12 (1) Within two years after the most recent general election, as defined in section 1 of the *Election Act*, the Minister shall release a long-range assessment of Ontario's economic and fiscal environment.	✓		
Contents of assessment (2) The long-range assessment must include the following information:			
1. A description of anticipated changes in the economy and in population demographics during the following 20 years.	✓		
2. A description of the potential impact of these changes on the public sector and on Ontario's fiscal policy during that period.	✓		
3. An analysis of key issues of fiscal policy that, in the Minister's opinion, are likely to affect the long-term sustainability of the economy and of the public sector.	✓		

Note: If the Minister does not meet a deadline under this Act, the Minister shall release a statement on or before the deadline explaining why the deadline was not met and set a new deadline. In addition, the Minister shall pay into the Consolidated Revenue Fund a penalty equal to 10% of the annual salary payable to the Minister under subsection 3(1) of the *Executive Council Act*, and the Premier shall pay into the Consolidated Revenue Fund a penalty equal to 10% of the annual salary payable to the Premier under subsection 3(1) and (2) of the *Executive Council Act*. The payments are required within 30 days of the deadline that was not met, and cannot be paid or reimbursed from the Consolidated Revenue Fund.

1. A balanced budget means, for a fiscal year, a budget in which the sum of expenses and a reserve does not exceed revenues.
2. This does not apply if a general election, as defined in the *Election Act*, has occurred in the fiscal year.

Exhibit 1: Accounts Audited by the Auditor General

1. Agencies, Government Organizations and Offices of the Legislature whose accounts are audited by the Auditor General

Exhibit 4: Treasury Board Orders

Under subsection 12(2)(e) of the *Auditor General Act*, the Auditor General is required to annually report all orders of the Treasury Board made to authorize payments in excess of appropriations, stating the date of each order, the amount authorized and the amount expended. These are outlined in the following table. Although ministries may track expenditures related to these orders in more detail by creating accounts at the sub-vote and item level, this schedule summarizes such expenditures at the vote and item level.

Ministry	Date of Order	Authorized ($)	Expended ($)
Agriculture, Food and Rural Affairs	Mar 9, 2023	25,000,000	17,635,991
		25,000,000	**17,635,991**
Attorney General	Oct 24, 2022	3,926,500	3,926,500

Ministry of Transportation

Driver Training and Examination

Summary

Ensuring that novice drivers receive appropriate and effective training and testing before they get a driver's licence is a crucial step in keeping Ontario's roads safe. Under the *Highway Traffic Act*, the Ministry of Transportation (Ministry) is responsible for protecting the public by restricting the privilege of driving to those who demonstrate that they have the necessary knowledge, skills and experience to drive safely.

There were over 11.1 million licensed drivers in Ontario as of December 2022, with 95% of them holding a G-class passenger vehicle licence to drive a car, van or a small truck. To obtain a G-class licence, the Ministry's Graduated Licensing System requires novice drivers to pass a vision test, a written test, a city road test and a highway road test. There also are two one-year wait periods built into the system: one between the written and city road test and the other between the city and highway road tests.

The Ministry oversees the network of licensed Beginner Driver Education training schools and testing facilities in the province. As of September 2023, there were 844 Ministry-licensed driving schools offering Beginner Driver Education training programs and more than 6,700 licensed driving instructors. Under an agreement with the Ministry, a contractor (Plenary) provides driver examination services through a subcontractor (Serco) at 56 DriveTest Centres and 36 satellite locations across the province.

Our audit found that practices in the provincial driver examination program were limiting the Ministry's ability to assess novice drivers prior to granting them driving privileges. Certain groups of novice drivers, such as those from urban areas who chose to take their road exams in rural or suburban test centres, or less-experienced drivers from other countries, had higher collision rates after licensing than their peers—indicating that the driver examination program may not be effectively testing their ability to drive safely on Ontario's roads.

In addition, we found that the Ministry provided limited oversight of driving schools and instructors, which meant it may not have been aware of some questionable training or business practices at the schools that could have undermined the integrity of driver examinations. These practices included training students on the specific routes used in road tests, and non-compliance with standards in the delivery of the Ministry's Beginner Driver Education training program, such as shortening in-car training hours.

We also found that the Ministry's oversight of the driver examination service provider was ineffective and inefficient in improving the quality of service it provided. Even though certain costs, such as extending operation hours, were the responsibility of the service provider, the Ministry paid for these costs to attempt to improve the services. Nonetheless, in 2023 the Ministry awarded a new contract to the same service provider, through a non-competitive process, to continue providing service for two more years with an optional extension for an additional year.

Our significant observations include:

Driver Examinations

- **Novice drivers from urban areas who took road tests at rural or suburban test centres had collision rates 16% to 27% higher than other novice drivers.** For example, between January 2022 and March 2023, novice drivers from Brampton who took their road tests at a DriveTest Centre outside Brampton had a collision rate that was 22% higher than their peers who took their tests in Brampton (3.8% versus 3.1%). Because rural and suburban testing centres often used less challenging road test routes, many novice urban drivers may not have been adequately tested in conditions that mirror their typical daily driving conditions. Although a significant number of urban drivers took their road tests at rural or suburban DriveTest Centres, the Ministry did not monitor this or related data, such as road test pass rates, to determine the root causes of the disparate collision rates and their potential impact on road safety.
- **The Ministry reduced the number of requirements needed to pass the highway road test without a full review and formal evaluation of road safety impacts.** Responding to a request from the Minister of Transportation to deal with the backlog of road tests that had accumulated as a result of the COVID-19 pandemic, in January 2022 the Ministry eliminated testing of certain manoeuvres required for the G (highway) road test without seeking formal approval from the Cabinet Office. Even though the backlog was cleared in fall 2022, the Ministry kept the reduced G (highway) road test for almost two years longer than originally planned without conducting proper policy analysis and evaluation of the road safety implications.
- **Less-experienced drivers from countries without driver's licence exchange agreements with Ontario had a significantly higher collision rate (6.31%) compared to the average rate of newly licensed G-class drivers (3.60%).** Drivers who hold a licence from a country without a licence exchange agreement with Ontario and have less than two years of driving experience are considered novice drivers. However, unlike other novice drivers in Ontario, these drivers are not required to wait for a 12-month period before taking their G2 (city) road test, meaning that they had less time to practice their driving skills in Ontario prior to taking the road test.

Driver Training

- **Drivers who shortened their G1 supervised driving period were involved in more collisions.** The Ministry allows novice drivers who complete the optional Beginner Driver Education program to choose to shorten the 12-month wait period to take the G2 (city) road test by as many as four months. However, we found that between 2013 and 2022 these drivers had collision rates that were on average 30% higher than drivers who completed the Beginner Driver Education program but did not shorten their wait period (4.8% compared with 3.7%). This indicates that allowing drivers to shorten their supervised driving period may be counter to the program's objective of putting safer drivers on the road.
- **The Ministry provided limited guidance on, and oversight of, novice driver training.** The only guidance the Ministry has provided for novice drivers is through the requirements of the Beginner Driver Education course, which is not mandatory. That lack of guidance has provided opportunities for unregulated driving services to proliferate. During our audit, we identified

questionable driver-training practices, such as driving instructors "route training" their students on the specific streets and manoeuvres tested during driver exams. Focusing primarily on route training rather than teaching comprehensive driving skills may undermine the integrity of the driving examination process.

- **The Ministry did not effectively oversee the schools that provide Beginner Driver Education training programs and their instructors.** The Ministry's oversight program focused primarily on documentation reviews during compliance audits, making it difficult for Ministry staff to gain insights into the schools' day-to-day operations. In addition, the Ministry did not consistently follow up with driving schools to confirm they had addressed violations that had been noted during the compliance audits. During our audit, we engaged a firm to make so-called mystery shopping visits to 14 driving schools and found that 11 of the schools allowed the mystery shoppers to shorten, or even abandon, their in-car training and still issued them a Beginner Driver Education certificate.

Driver Examination Contract Management and Oversight

- **The Ministry's contract management and oversight functions were ineffective in improving service quality.** Data showed that the driver examination services offered by Plenary/Serco experienced numerous performance failures over the 10-year contract period that began in 2013. Many of these persistent issues were not addressed even after the Ministry attempted to hold the service provider accountable. We also noted that performance measures used to oversee the service provider were relaxed.
- **The Ministry paid additional funds to maintain service levels that were the responsibility of Plenary/Serco.** We found a pattern of Plenary/Serco not meeting customer wait time targets prior to the COVID-19 pandemic and the Ministry paying for changes to improve service even though, under its contract with the Ministry, costs and risks related to providing driver examination services were Plenary's responsibility. The Ministry estimated that between November 2017 and September 2023 it paid Plenary/Serco about $19.2 million to extend operating hours to respond to growing customer demands. Also, the Ministry paid $1.2 million (in 2018) for the establishment of a DriveTest Centre, as well as ongoing operational costs totalling $15 million as of September 2023.
- **The Ministry awarded a new contract to Plenary without competition.** Despite issues of poor performance and disputes over penalties, the Ministry awarded a new contract to Plenary without competition. The Ministry did not start the work on procuring this contract until 2021, and subsequently determined that it did not have enough time for an open competition.

Monitoring High-Risk Licensed Drivers

- **The Ministry rarely requires drivers with repeat driving suspensions to take retraining courses.** Our analysis found that the fatal collision rate in 2022 for drivers who received two or more suspensions in the previous year was six times higher than the general driver population. However, other than drivers who are suspended for impaired driving (alcohol- or drug-related), the Ministry may only require drivers to complete retraining courses after they are convicted in court of dangerous driving behaviours, such as stunt racing or careless driving causing bodily harm. This limited requirement resulted in only about 120 drivers completing the Ministry's retraining courses in 2022, which represents only about 5% of the

over 2,500 drivers who received two or more suspensions in the same year.

- **Elderly drivers' ability to drive safely has not been effectively assessed.** The Ministry assesses the driving skills of drivers aged 80 and older primarily through a cognitive test that requires them to draw the face of a clock for a specific time of the day. This test does not specifically examine a person's motor functions and co-ordination, concentration, spatial perception or reaction time. Our analysis of Ministry data indicated that elderly drivers who passed this test were more likely than the general driving population to have caused the collisions they were involved in, and the average rate of fatal collisions in this group was nearly double that of the general driver population.
- **The Ministry could do more to assess whether drivers were physically or mentally fit to drive.** The *Highway Traffic Act* requires healthcare providers to report to the Ministry patients with specified medical conditions that may make it dangerous for them to drive. Despite the importance of this program, we found the Ministry did not systematically reach out to medical practitioners to increase awareness of the need to report these medical conditions. We also found that the Ministry did not always document its decision to reverse suspensions of drivers who had been found to be medically unfit to drive.

Driver Licensing Identification Requirements

- **The Ministry overrode its own proof of identification requirements without providing a rationale.** To prevent fraud and identity theft, the Ministry's policy requires Ontario driver's licence applicants to show valid government identification documents. However, our review found that since 2019, the Ministry made over 1,000 exceptions, authorizing the use of expired or substandard IDs during the driver's licence application process, and it did so without using consistent standards or documenting the rationale.

Measuring Program Effectiveness

- **The Ministry did not incorporate key data in determining the effectiveness of its road safety programs.** The 2020 Ontario road safety annual report indicated that for more than two decades the Ministry has measured road safety by calculating the number of collision-related fatalities for every 10,000 licensed drivers. Because the province has the lowest fatality rate in North America, the Ministry concluded that Ontario ranked first in road safety. However, the Ministry did not include other key indicators, such as total collision rates, when it assessed, measured and reported key road safety trends in the province, or compared Ontario to other jurisdictions. Although extensive data is available from various Ministry and Serco IT systems, the Ministry did not effectively utilize the data to provide insights into the performance of its driver training and examination programs.

Overall Conclusion

Our audit concluded that the Ministry of Transportation did not have effective evidence-based driver examination programs to evaluate and test novice drivers thoroughly and consistently.

The Ministry did not provide effective oversight of novice driver training and driver examination service providers to ensure desired service outcomes with due regard to economy. Ministry oversight of driving schools and instructors was limited. It does not regulate driver training services outside of the optional Beginner Driver Education program, curbing its ability to identify and/or deter substandard training practices within the industry. In addition, the Ministry's monitoring programs were not designed to proactively identify drivers with repeat suspensions or high-risk medical conditions, impeding the effectiveness of these programs to maximize road safety in Ontario.

Moreover, the Ministry's contract oversight of the driver examination service provider has not been effective in improving driver examination service levels.

In addition, the Ministry paid additional funds to the service provider despite persistent performance issues.

We also found that the performance measures that the Ministry used to evaluate road safety programs, including driver training and examination programs, were incomplete. As such, they did not provide the Ministry and the public with the most relevant and accurate evaluations of Ministry programs.

This report contains 18 recommendations, with 44 action items, to address our audit findings.

MINISTRY OVERALL RESPONSE

The Ministry of Transportation appreciates the work of the Auditor General and welcomes recommendations that help improve driver training and examination programs.

Ontario has the safest roads in North America. We look forward to sharing our continued progress to ensure our roads remain this way.

The recommendations build upon the Ministry's ongoing work to continuously improve transportation safety for all users through policy enhancements, more program oversight, third-party contract management, and the use of business intelligence tools.

The Ministry has started an evaluation of its Graduated Licensing System. In addition to the initiatives already under way as part of this evaluation, we will include the recommendations that were put forward. The evaluation will include the review of the pass rate variance between DriveTest Centres, road safety impacts of the modified G test, effectiveness of the Beginner Driver Education program, and impacts of drivers from both reciprocal and non-reciprocal jurisdictions. We will continue to review best practices of other jurisdictions and the scientific literature, and seek input from stakeholder and service delivery partners.

To enhance program oversight of driving schools and driver examination, the Ministry will undertake initiatives that will ensure the continued safety of road users. We will continue to pursue more oversight of licensed driving schools through an escalating sanctions model. The Ministry recognizes the importance of compliance oversight and will take further steps to implement risk-based audits of operational processes and will look at best practices across jurisdictions to continue to improve delivery of driver examination services.

The Ministry looks forward to working with our partners to review its policies and procedures to introduce countermeasures against high-risk driving, explore enhanced medical reporting requirements, enhance road safety for senior drivers, improve ID escalation processes to prevent fraud, and continue the expansion of our digital transformation.

2.0 Background

2.1 Overview

Pursuant to the *Highway Traffic Act*, the Ministry of Transportation (Ministry) is responsible for protecting the public by ensuring that the privilege of driving is only granted to, and retained by, drivers who understand the rules of the road and can demonstrate they can drive safely. Full driving privileges are granted to novice drivers only after they acquire experience and develop or improve safe driving skills under controlled conditions.

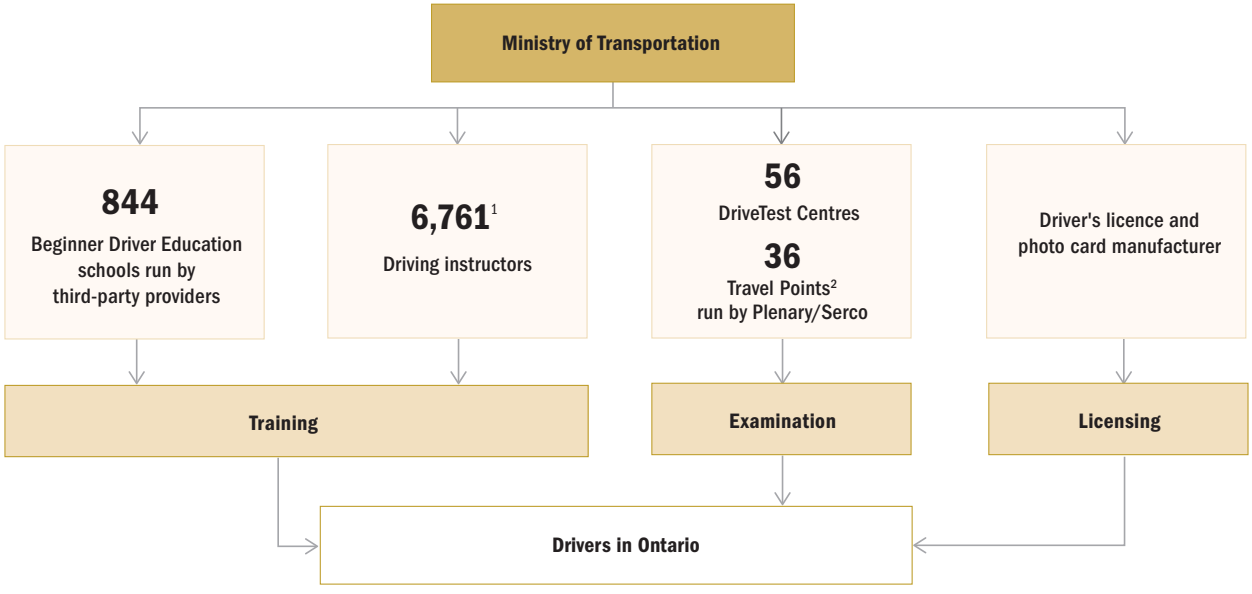
The Ministry's Transportation Safety Division (see **Appendix 1**) is mandated to develop and manage all transportation safety programs, compliance and operational policies, legislation, and regulations under provincial jurisdiction. The Division is responsible for researching, evaluating and developing driver and road safety programs, as well as post-licensing activities such as applying demerit points and suspending licences because of driving penalties or for medical reasons.

Since 2003, the Ministry has been using a service delivery system that largely relies on third-party

contractors (see **Figure 1**) to carry out driver training, examination and licensing services. The Ministry's Oversight and Agency Governance Division (see **Appendix 1**) oversees third-party service providers, develops relationships with contractors and manages contracts.

2.2 Driver Training, Examination and Post-Licensing Programs

2.2.1 Beginner Driver Education Program



As of December 2022, there were over 11.1 million licensed drivers in Ontario; over 95% of those drivers held a G-class passenger vehicle licence. To obtain a G-class licence, the Ministry does not require mandatory training for novice drivers prior to driver examination. Instead, the Ministry encourages students to complete a Beginner Driver Education training program to help them become safe and responsible drivers. Historically, about 40% of novice drivers have completed the Beginner Driver Education training. In 2022, for example, about 160,000 (out of about 400,000) newly licensed drivers completed the training.

Beginner Driver Education is offered through Ministry-licensed driving schools. These licensed schools must meet the Ministry's standards by providing 40 hours of driving instruction that covers:

- a minimum of 10 hours of in-vehicle training delivered by a licensed instructor, with no more than two students per instructor;
- at least 20 hours of instruction, either in person or online, with a maximum of 40 students for in-person classes or 15 students for virtual classes; and
- 10 hours of flexible instruction time that can be used for additional vehicle and/or classroom/online instruction or driving simulation instruction.

Figure 1: Driver Training, Examination and Licensing Service Delivery Structure

Prepared by the Office of the Auditor General of Ontario

1. Of the 6,761 licensed driving instructors, 1,234 are not affiliated with a Beginner Driver Education school.
2. Travel Points are pop-up DriveTest Centres designed to offer service periodically to a smaller community from a shared, locally well-known facility, such as a community centre or town hall.

Licensed driving schools can use a selection of Ministry-approved, third-party-developed curricula. The completion of the Beginner Driver Education course is recorded in the Ministry's driver's licence database, and graduates can choose to shorten the 12-month wait period—during which G1 drivers must be supervised by a fully licensed driver—by as many as four months. Novice drivers who complete the training course may also be eligible for potential insurance premium discounts.

Driving School and Instructor Oversight

The Ministry has contracted third-party auditing firms to conduct compliance audits of licensed driving schools. Between January 2017 and March 2023, the Ministry and the contracted third-party auditors completed over 1,300 compliance audits of licensed driving schools. The Ministry typically scheduled compliance audits every three to five years for each driving school, depending on the number of non-compliance items noted in previous audits. The Ministry paused these audits during the COVID-19 pandemic period, but they resumed in summer 2022.

These compliance audits typically noted administrative issues such as incomplete student attendance logs or missing insurance documents. In addition, from 2018 to 2020, the Ministry hired investigators to conduct 33 unannounced mystery shops of licensed driving schools to further investigate previously identified instances of non-compliance.

Regulation 473/07 under the *Highway Traffic Act* sets requirements for licensed instructors. The requirements include the completion of a basic driving instructor course, possession of a valid Ontario driver's licence (full G-class) with over four years of driving experience in Ontario or other jurisdictions, no demerit points, and a satisfactory criminal record check. Ontario's more than 6,700 licensed driving instructors can teach both the in-car and in-class/online components of the Ministry's Beginner Driver Education course after completing the Ministry-approved in-class driving instructor's course. About 80% of licensed driving instructors are affiliated with a driving school. The Ministry can revoke a driving instructor's licence when, for example, the instructor accumulates more than three demerit points or is charged with a criminal offence. These violations are automatically flagged by the Ministry's information system.

2.2.2 Driver Examination for G-Class Licences

Under 2013 and 2023 agreements with the Ministry, a service provider (Plenary) provides driver examination services through a subcontractor (Serco). Throughout this report, the term Plenary (or service provider) refers to the legal entity that has the driver examination contract with the Ministry. The term Serco (or subcontractor) refers to the operator of the driver examination services. Plenary/Serco is used to represent the combined operations of the two.

There are 56 DriveTest Centres and 36 satellite locations (also called Travel Points) across the province. (See **Appendix 2** for a full list of DriveTest Centres and Travel Points, with service volume statistics and pass rates.) In 2022, Serco conducted 1.17 million knowledge tests and 1.34 million road tests in Ontario. On average, about 73% of drivers pass the G (highway) road test, a percentage that has been generally consistent over the past five years. The road test pass rates vary considerably across DriveTest Centres. For example, in 2022 the G (highway) road test pass rates ranged from 57% in Brampton to 89% in Owen Sound.

Graduated Licensing System

In 1994, Ontario introduced the Graduated Licensing System, which comprises two road tests. With this system, novice drivers have five years to gradually gain the driving knowledge and experience required for the full G-class (passenger vehicle) licence. For both Classes G1 and G2, regulations set the rules and restrictions that driver's licence holders must comply with to help reduce risk and accidents, as shown in **Figure 2**.

To obtain a G1 class licence, an individual must be at least 16 years old and pass a vision test and a knowledge test. To obtain a G2 class licence, an individual with a G1 class license must pass the G2 road test—also referred to as the city test—which focuses on basic driving skills. During the roughly 20-minute city test, driver examiners assess the novice driver's ability to navigate residential streets using basic skills including making turns, handling curves and making lane changes, navigating intersections, parallel parking, and making roadside stops and three-point turns. To obtain a G class licence, an individual with a G2 class licence must pass the G road test, which is also referred to as the highway test. During the 30-minute G (highway) road test, examiners assess the driver's ability to drive on major roads and expressways, including merging on and off, maintaining appropriate speed and space, and signalling, in addition to the basic driving skills tested during the city test.

Reduced G (Highway) Road Test

During the COVID-19 pandemic, DriveTest Centres were closed and passenger road tests (city and highway) were cancelled. When DriveTest Centres reopened in July 2021, there was a backlog of more than 500,000 novice drivers waiting to take road tests. In January 2022, the Ministry reduced the length of the G (highway) road test by eliminating the testing of what it considered redundant and/or low-risk driving manoeuvres, which are outlined in **Figure 3**. In June 2022, the Ministry announced that it would extend the reduced G (highway) road test "until further notice." While the backlog of road tests was cleared by October 2022, the full G (highway) road test had not been reinstated by the end of our audit.

Figure 2: Classes Within the Graduated Licensing System in Ontario

Prepared by the Office of the Auditor General of Ontario

Class	Requirements	Driving Restrictions	Wait Period	Fee ($)
G1	Pass vision test and knowledge test	· Must drive supervised by a fully licensed driver who has at least four years of driving experience; · must maintain a zero-blood-alcohol level; · must not drive between midnight and 5 a.m.; and · must not drive on highways, unless accompanied by a licensed driving instructor.	A Class G1 driver's licence holder can attempt the G2 road test after a wait time of 12 months. This wait time can be reduced to eight months if the novice driver completes a Ministry-approved Beginner Driver Education program.	16.00
G2	Pass G2 (city) road test	Must maintain a zero-blood-alcohol level and must not drive between midnight and 5 a.m.	A Class G2 driver's licence holder can attempt the G road test after a wait time of 12 months.	53.75
G	Pass G (highway) road test	Full driving privileges	n/a	91.25

Figure 3: G (Highway) Road Test Manoeuvres

Prepared by the Office of the Auditor General of Ontario

	Original Test (2017–2021)	Reduced Test (Since Jan. 2022)
Right turns	4	2
Left turns	4	2
Stop intersections	2	1
Through intersections	2	1
Curves	2	1
Roadside stop	1	0
Parallel park	1	0
Three-point turn	1	0
Business sections	2	1
Lane changes in each business section	2	2*
Residential sections	2	0
Expressway sections	2	2
Lane changes in each expressway section	2	2

* Two lane changes in the one business section.

Figure 4: Distribution of Money Collected From the Issuance of Driver's Licences

Prepared by the Office of the Auditor General of Ontario

Breakdown of Money Collected (per transaction)	Amount ($)	%
Plenary revenue	45	50
Ministry of Transportation revenue	30	33
Motor Vehicle Accident Claim Fund*	15	17
Total	**90**	**100**

* The Fund provides coverage in accidents where there is no insured automobile involved or determinable (e.g., an uninsured driver or a pedestrian involved in a hit and run).

Driver Examination Contracts Involving Plenary and Serco

In 2003, the Ministry reached a 10-year agreement with Serco to deliver driver examination services. Serco made a one-time payment of $114 million to the Ministry for the contract. Serco also paid $200,000 a month to fund audit and compliance activities to be carried out by the Ministry.

Following the completion of the 2003–2013 agreement, the Ministry carried out a competitive procurement and selected Plenary as the service provider. Plenary subcontracted Serco to continue to deliver driver examination services in Ontario for another 10 years (2013–2023). In return for exclusive rights to provide driver examination services, Plenary paid the government $75 million upfront, along with concession payments of approximately $1.2 million per month for the 10-year period, and made a final payment of $10 million at the end of the contract period (September 2023). At the outset of the contract, the Province expected its total revenues from Plenary to be approximately $207 million. Serco expected its total revenue to be approximately $500 million. **Figure 4** illustrates the breakdown of the revenue distribution between the Ministry and Plenary based on the example of a five-year licensing transaction fee of $90.

Before this contract ended on September 2, 2023, the Ministry reached a new agreement with Plenary for two years, with a possible extension of one additional year, as well as a transition period of up to another year. Plenary paid approximately $7.67 million to the government as a concession payment.

The Ministry's ongoing costs to administer the driver training and examination program are about $40 to $45 million annually, about 90% of which, on average, is offset by revenues from the concession payments and licence transaction fees.

Driver Examination Contract Oversight

In the September 2013 contract with Plenary, the Ministry defined 14 key performance indicators to help monitor the service provider's performance. The September 2023 contract contained two additional indicators (see **Appendix 3**). Plenary is responsible for self-monitoring and self-reporting all performance failures against the key performance indicators. The

Ministry also conducts compliance reviews of the key performance indicators, including examinations based on the volume of transactions, previous error rates and types of information (for example, 100% review of medical and vision reports). During these transaction reviews, Ministry staff examine scanned copies of identification documents (IDs) and related documents used by Serco to ensure accuracy, such as the name and birth date of the licence applicant.

The contract also requires Plenary/Serco to rectify errors within 10 business days. In cases of more serious issues, for example an injury to the public or an employee, the Ministry can require Plenary/Serco to carry out a root cause analysis.

The contract imposes penalties for performance failures, with added remedies for repeat performance failures. Plenary/Serco and Ministry representatives carry out monthly reconciliations to determine the final penalty amounts (see **Appendix 4**).

2.2.3 Cross-Jurisdictional Information Sharing and Exchange

Ontario has reciprocal driver's licence exchange agreements with all Canadian provinces and territories, as well as with 15 other countries, including the United States, Australia, Germany, Japan, South Korea and Taiwan. Drivers with more than two years of driving experience from these jurisdictions can apply to exchange their licence for an Ontario licence. They are only required to undergo the vision test; they do not have to take either the knowledge or road tests.

Drivers from countries that do not have a reciprocal exchange agreement with Ontario, such as China or India, are designated as novice drivers and are required to go through Ontario's Graduated Licensing System. However, the first 12-month wait period (described in **Figure 2**) can be waived if drivers can show a valid driver licence from their home country with an accompanying translation. If a driver can show a driver's licence with at least two years of documented driving history, along with an original letter from the relevant country's embassy, consulate or high commissioner's office, or from the jurisdiction that originally issued the licence validating the authenticity of the licence, they can bypass the G2 (city) road test, and take the G (highway) road test without completing the second 12-month wait period.

2.3 Proof of Identity Requirements to Obtain an Ontario Driver's Licence

To prevent fraud and identity theft, a driver's licence applicant is required to present originals of at least one government-issued ID showing proof of legal name and date of birth, prior to taking the knowledge test. Accepted identity documents include passports (Canadian or foreign), Permanent Resident Card, Record of Landing, Confirmation of Permanent Residence and temporary immigration documents (IMM 1442). Serco staff have been trained to detect fake and/or substandard documents, and are instructed not to accept documents that do not meet the Ministry's standards.

2.4 Post-Licensing Monitoring of High-Risk Drivers

Demerit Points and Penalties

The demerit point system is intended to hold drivers accountable for their actions and the quality of their driving. Demerit points are added to a driver's licence when a driver is convicted of violating traffic laws. The demerit points from a driving infraction or conviction stay on a driver's record for two years and might result in a suspension of driving privileges for 30 days if a driver accumulates 15 demerit points. The demerit point system does not capture all driving-related offences, as some severe offences are addressed through the *Criminal Code of Canada*.

The Ministry's Driver Improvement Office administers different remedial training and re-examination depending on the type of driving offence:

- Drivers with two suspensions related to impaired driving are required to complete a program delivered by the Centre for Addiction and Mental Health that educates participants on how to

separate alcohol/drugs and driving through lecture-style learning and skills development.

- Drivers convicted of careless driving, including causing bodily harm or death, or stunt racing, are required to take a Driver Improvement Course, offered at some driving schools, consisting of a one-hour in-vehicle driving component and six hours of in-class lessons. Failure to complete the course results in licence cancellation.

Under the *Highway Traffic Act*, drivers involved in a collision could be subject to re-examination, including vision screening and knowledge and road tests. The drivers might also be required to attend an interview with a Ministry's Driver Improvement Counsellor. Interview requirements vary according to the age and medical condition of the driver, as well as the number and types of collisions. The Ministry identifies drivers who have been involved in three or more collisions in a two-year period—with indications of improper driver actions in at least two collisions—as collision repeaters, and requires them to undertake a re-examination and an interview. Not completing the re-examination and/or attending the scheduled interview results in licence cancellation.

Elderly Drivers

Drivers aged 80 and over, representing about 3% of all drivers, are required to renew their G-class licence every two years. To be eligible for this renewal, drivers 80 and over are required to complete a vision test, watch a senior driver education video and attend a Senior Driver Group Education session. During these sessions, the Ministry tests seniors' cognitive abilities using a clock-drawing exercise. This test is intended to examine drivers for potential cognitive decline and whether their ability to drive safely may be impaired.

Medical Standards for Driver Licensing

A regulation under the *Highway Traffic Act* requires drivers to meet the medical standards for physical and mental conditions outlined in the Canadian Council of Motor Transport Administrators' Medical Standards for Drivers. The regulation requires physicians, nurse practitioners and optometrists to report patients with specified medical conditions to the Ministry. These specified conditions include diabetes, seizures or other neurological conditions, visual impairment and other conditions that would significantly impair an individual's ability to drive safely. Police officers and a driver's relatives may also report a suspected medical condition to the Ministry.

The Ministry's Medical Review Office reviews over 280,000 cases annually to determine whether or not to suspend driver's licences. Some drivers are assessed multiple times. If the decision is to suspend a licence, the Medical Review Office notifies the driver about their suspension, as well as the conditions that the individual needs to meet to reinstate their licence. Annually, about 33,000 drivers are suspended from driving for medical reasons.

2.5 Information Systems

The Driver Licensing and Control System is the Ministry's primary database. It contains information on drivers in Ontario such as their driver's licence class, personal information and medical conditions, fees charged for services, and number of collisions.

As a mainframe system, the Driver Licensing and Control System centrally stores information that can be accessed through multiple user-facing applications such as the Ministry-built Beginner Driver Education application and the Serco-built Driver Examination application. ServiceOntario also accesses the Driver Licensing and Control System when renewing driver's licences.

2.6 Ontario Road Safety Annual Report

The Ministry prepares and publishes the Ontario Road Safety Annual Report (ORSAR) to provide insight about established and emerging trends in road safety

in Ontario. This report also supports the Ministry's own road safety research, program development and performance measurement. The Ministry draws information from various sources to produce this annual report, including collision information from police services and other organizations in the justice and health sectors.

Key highlights from the most recent ORSAR (2020) include:

- The fatality rate was 0.5 per 10,000 licensed drivers. This was ranked among the five lowest fatality rates in North America.
- There were 147,756 reportable collisions and 268,559 vehicles involved in collisions.
- 498 collisions were fatal (resulting in 530 fatalities), and 23,371 collisions resulted in personal injury.
- 4,184 collisions resulted in hospital admission, with a total of 43,053 days spent in hospital due to injuries.
- 123,887 collisions resulted in property damage.

The 2020 statistics showed a 9% lower fatality rate and a 30% reduction in the number of collisions resulting in injury when compared with the 2019 report. However, the declines might have been attributable to pandemic-related disruptions.

3.0 Audit Objective and Scope

The objective of our audit was to assess whether the Ministry of Transportation has effective systems and processes in place to:

- design and equitably deliver evidence-based driver training and examination programs so that driver's licences are only granted to, and retained by, those persons who have demonstrated that they drive safely;
- achieve desired service outcomes with due regard to efficiency and economy; and
- monitor and report publicly on the performance of driver training and examination programs.

Our Office conducted a Value-For-Money Audit on Commercial Vehicle Safety and Enforcement in 2019, which included an assessment of commercial vehicle drivers' training and examination programs. As such, our audit scope focused on G-class passenger vehicle drivers and excluded commercial vehicle classes. In planning for our work, we identified the audit criteria (**Appendix 5**) we would use to address our audit objective. These criteria were established based on a review of applicable legislation, policies and procedures, internal and external studies, and best practices in other jurisdictions. Senior management at the Ministry reviewed and agreed with the suitability of our objectives and associated criteria.

We conducted our audit between January 2023 and October 2023. We obtained written representation from the Ministry that, effective November 20, 2023, it had provided us with all the information it was aware of that could significantly affect the findings or the conclusion of this report.

In performing our audit work, we met with staff from various Ministry branches responsible for driver training and examination oversight, procurement, licensing, research and policy development. Our audit work was conducted primarily at the Ministry's office in Toronto. The majority of our document reviews covered the most recent five years. We reviewed relevant research and best practices from Ontario and other Canadian provinces, as well as foreign jurisdictions (such as Australia).

We conducted the following additional work at the Ministry:

- reviewed policies and legislation relevant to driver training, examination and licensing;
- examined data in the Driver Licensing and Control System and analyzed trends and correlations of driver training, examination, medical records, suspensions and collision records;

- reviewed the Ministry's contract arrangement and oversight activities of the service provider, including Plenary/Serco; and
- reviewed reports of compliance audits conducted on driving schools and Plenary/Serco.

We interviewed key stakeholders, such as the Ontario Provincial Police, Ontario Medical Association, Ontario Safety League and Insurance Bureau of Canada, for input on road safety trends.

We also conducted unannounced visits to 10 DriveTest Centres (Mississauga, Toronto Downsview, Brampton, Toronto Metro East, Oshawa, Thunder Bay, Ottawa Canotek, London, Lindsay and Guelph). During the visits, we observed the facilities, interviewed key staff, reviewed documents and shadowed a sample of road tests. We considered a variety of factors in selecting the sites to visit, including geographic location, size and transaction volume of the location, pass rate, and performance results.

In addition, we hired a professional firm to carry out mystery shopping at 14 licensed driving schools across the province.

Finally, we reviewed the relevant audit reports issued by the province's Internal Audit Division to inform our audit work.

We conducted our work and reported on the results of our examination in accordance with the applicable Canadian Standards on Assurance Engagements—Direct Engagements issued by the Auditing and Assurance Standards Board of the Chartered Professional Accountants of Canada. This included obtaining a reasonable level of assurance.

The Office of the Auditor General of Ontario applies Canadian Standards on Quality Management and, as a result, maintains a comprehensive system of quality management that includes documented policies and procedures with respect to compliance with rules of professional conduct, professional standards, and applicable legal and regulatory requirements.

We have complied with the independence and other ethical requirements of the Code of Professional Conduct of the Chartered Professional Accountants of Ontario, which are founded on fundamental principles of integrity, objectivity, professional competence and due care, confidentiality, and professional behaviour.

4.0 Detailed Audit Observations

4.1 Driver Examinations

4.1.1 Novice Drivers from Urban Areas Who Took Road Tests at Rural or Suburban DriveTest Centres Were Involved in More Collisions

Our audit found a pattern of novice drivers from urban areas choosing to take their G2 (city) and G (highway) road tests at rural or suburban DriveTest Centres that in many cases have less complex road test routes and higher pass rates. We also found that these novice drivers were involved in more collisions when compared to novice drivers who took their road tests at the DriveTest Centre closest to where they lived. Despite noting this trend, the Ministry has not analyzed why this is happening, its impact on road safety or whether controls should be put in place to encourage novice drivers to take road tests in the areas where they live, work or study, and will likely be doing most of their driving.

In 2022, the Guelph DriveTest Centre administered over 56,000 road tests (city and highway), while the Brampton DriveTest Centre administered about 49,000 road tests (see **Appendix 2**). However, as per the 2021 Census, Guelph has approximately one-fifth of the population of Brampton, meaning that there was a disproportionately high number of people taking road tests in Guelph compared to Brampton.

We identified six rural or suburban DriveTest Centres, including Guelph, that experienced high volumes of road tests and analyzed the registered home addresses of novice drivers who attempted G2 (city) and G (highway) road tests there. We found that for

Figure 5: Analysis of Select DriveTest Centres With High Volumes of Road Tests, January 2022–March 2023

Prepared by the Office of the Auditor General of Ontario

DriveTest Centre (Region)	Road Test Drivers' Home Addresses (Top Three Only)[1]	Distance (km)[2]	% of Drivers Taking Road Test at this Centre
Clinton (North)	London	75	31
	Brampton	178	7
	Kitchener	110	3
Peterborough (North)	Scarborough	115	22
	Peterborough	0	14
	Toronto	140	9
Orangeville (East)	Brampton	38	42
	Mississauga	48	9
	Woodbridge (Vaughan)	52	4
Lindsay (East)	Scarborough	108	14
	North York	124	11
	Toronto	134	10
Guelph (West)	Brampton	71	34
	Guelph	0	14
	Mississauga	70	10
Simcoe (West)	Hamilton Areas (Hamilton, Ancaster and Stoney Creek)	64	14
	Brantford	42	12
	Brampton	135	9

1. See **Appendix 6** for detailed breakdown of drivers' home addresses for each of the six DriveTest Centres.
2. Distances between the rural DriveTest Centre location and the urban DriveTest Centre location nearest to the novice driver's home address.

road tests conducted between January 2022 and March 2023, all six DriveTest Centres had significantly higher volumes of novice drivers from urban areas compared to novice drivers who lived nearby or in rural areas. For example, **Figure 5** and **Appendix 6** (which includes a more detailed breakdown) show that 42% of drivers who took their road tests at the Orangeville DriveTest Centre were from Brampton (compared with only 2% who were from Orangeville).

Further, we analyzed collision rates among newly licensed G and G2 drivers from four urban areas (Scarborough, Brampton, Windsor and Ottawa) covering various geographic regions where a high proportion of drivers completed their road tests at a rural or suburban DriveTest Centre. We found that the collision rates within 15 months after receiving a driver's licence were between 16% and 27% higher among novice drivers from urban areas who chose to travel for their road tests to areas that were more rural or suburban (see **Figure 6**). The analysis shows that, for example, novice drivers from Brampton who took their road tests at a DriveTest Centre outside Brampton had a collision rate that was 22% higher than their peers who took their tests in Brampton (3.8% compared with 3.1%). Similarly, the collision rate was 27% higher for novice drivers from Scarborough who took their road tests at a DriveTest Centre outside Scarborough (3.8% compared with 2.9%).

See **Appendix 7** for further detailed collision rates based on road test locations for novice drivers living in Scarborough, Brampton, Windsor and Ottawa.

Figure 6: Collision Rates for Novice Drivers from Select Cities, January 2022–March 2023

Prepared by the Office of the Auditor General of Ontario

Drivers' Home Location	Where Road Test Completed[1]	# of Drivers Who Passed Road Test	# of Drivers Involved in a Collision	Collision Rate (%)	Difference of Collision Rates (%)
Scarborough[2]	Scarborough	16,873	496	2.9	**27**
	Outside Scarborough	32,881	1,237	3.8	
Brampton	Brampton	23,337	721	3.1	**22**
	Outside Brampton	72,320	2,727	3.8	
Windsor	Windsor	11,546	330	2.9	**20**
	Outside Windsor	7,657	263	3.4	
Ottawa	Ottawa	21,941	543	2.5	**16**
	Outside Ottawa	3,888	113	2.9	

1. See **Appendix 7** for further details on collision rates by road test location.
2. Toronto Port Union DriveTest Centre is considered the home location for Scarborough.

Some Rural and Suburban DriveTest Centres Have Less Complex Road Test Routes

We selected a sample of 10 DriveTest Centres for review and compared road manoeuvres tested at each site and the average length of the road tests. We found that, for example, due to the absence of 400-series highways at some rural and suburban areas, the Ministry had to use city road manoeuvres to replace highway manoeuvres as testing requirements at these DriveTest Centres. That may limit the Ministry's ability to fully assess the knowledge and skills of novice drivers from urban areas at these sites since they were not tested on road conditions similar to those they would have been more likely to encounter near their homes.

Specifically, for the Lindsay, Peterborough, Simcoe and Guelph DriveTest Centres, the Ministry approved highway testing on provincial routes with an average speed limit of 70 kilometres per hour, which is 30 kilometres per hour slower than the speed limit on 400-series highways. In addition, certain highway-related manoeuvres were modified based on local highway conditions. For example, both the Guelph and Lindsay DriveTest Centres tested drivers' ability to merge onto highways using right turns at traffic lights and tested highway lane changes on city roads. Both modifications lowered the complexity of the manoeuvres.

We also observed less traffic on test routes at rural and suburban DriveTest Centres, which means the novice drivers would have had less traffic to navigate around those sites and fewer opportunities to make mistakes.

Finally, the average length of the reduced G (highway) routes was seven kilometres at the Guelph and Lindsay DriveTest Centres (rural), and 14 kilometres at the Toronto Downsview and Brampton DriveTest Centres (urban).

Slower traffic conditions combined with simpler road tests may not provide sufficient testing for novice drivers from urban areas who, once licensed, are more likely to use 400-series highways and face more complex traffic conditions. The Ministry does not proactively review DriveTest Centres' road test routes to identify inconsistencies between the tests, or assess their adequacy, unless requested by Serco.

Some Rural and Suburban DriveTest Centres Had Higher Pass Rates

We found that road test pass rates varied among DriveTest Centres, as shown in **Appendix 2**. In 2022, DriveTest Centres in urban areas, such as Toronto Downsview, Toronto Etobicoke, Brampton and Mississauga, had pass rates that were lower than DriveTest Centres in rural or suburban areas, such as Peterborough, Lindsay and Simcoe. We noticed that this information was available on non-government Internet sites and may, therefore, have influenced novice drivers when they chose the DriveTest Centre for their road test.

In addition, we found that factors other than pass rates—such as lighter traffic conditions—might have influenced novice drivers' choice of DriveTest Centres. For example, between January 2022 and March 2023, over 1,000 novice drivers from the Greater Toronto Area travelled over 500 kilometres to the Hawksbury DriveTest Centre for their road tests, bypassing the Belleville DriveTest Centre, which had a higher pass rate. Similarly, despite the high pass rate at the London DriveTest Centre, we found that 31%, or over 4,000, of the novice drivers who attempted their road tests at the Clinton DriveTest Centre were from London (see **Appendix 6**).

Although Serco's leadership could not definitively explain why these novice drivers chose alternate DriveTest Centres, they noted that both the Belleville and London DriveTest Centres were surrounded by major highways with busier traffic conditions, while Hawksbury and Clinton were in less-populated regions.

Serco has repeatedly received complaints from local communities, such as Guelph, regarding heavier traffic volume created by novice drivers taking road tests around the DriveTest Centre. When Serco brought these concerns to the Ministry's attention, the Ministry did not act. The Ministry speculated that the higher traffic volumes at certain sites may be the result of novice drivers living away from their registered home addresses for work or school, but the Ministry had not collected data to support this assertion.

RECOMMENDATION 1

So that driver examinations effectively assess whether novice drivers are sufficiently prepared to drive safely on Ontario's roads, we recommend that the Ministry of Transportation:

- assess the impact on road safety of novice drivers from urban areas taking their road tests at rural and suburban DriveTest Centres; and
- based on that assessment, identify and put in place reasonable restrictions that prohibit urban novice drivers from taking their road test at a DriveTest Centre outside of where they live, work or study.

MINISTRY RESPONSE

The Ministry of Transportation appreciates the work of the Auditor General. In response to the Auditor General's recommendation, and as part of its ongoing program evaluation of its Graduated Licensing System, the Ministry will conduct an updated assessment of the road safety impact of variances in post-licensing collision rates and pass rates between DriveTest Centres.

Based on the findings, the Ministry will take appropriate action to ensure an effective and efficient examination program that promotes safe driving behaviours.

4.1.2 Ministry Reduced the Requirements for the G (Highway) Road Test Without a Full Review and Formal Evaluation of Road Safety Impacts

As described in **Section 2.2.2**, the Ministry reduced the requirements for the G (highway) road test in 2022 to help manage the road test backlog created by COVID-19 pandemic-related closures and restrictions. We learned that the Ministry kept the reduced G (highway) road test in place for almost eight times longer (or two years as of September 2023) than originally planned, even though the backlog was cleared in fall 2022.

The decisions to reduce the requirements for the G (highway) road test, and to retain those reductions after the backlog was cleared, were made without the support of proper policy analysis and evaluation of road safety implications.

In September 2020, the Ministry made a Treasury Board submission for funding of 84 additional driver examiner positions to help reduce the backlog of 500,000 passenger road tests. At the time, the Ministry did not consider reducing the requirements for the G (highway) road test to be a viable solution as it noted that "policy changes would require extensive policy analysis, including determining whether these policy changes would have impacts on road safety." Despite its assessment, the Ministry later reduced the requirements of the G (highway) road test in response to the Minister's request to reduce the road test backlog, but without conducting extensive policy analysis or seeking formal approval from the Cabinet Office. Initially, the reduced G (highway) road test was put in place as a temporary measure from January 2022 to March 2022. However, in June 2022, the Ministry announced that the reduced G (highway) road test would be extended until further notice. As of September 2023, the Ministry had no plan to resume the full G (highway) road test, even though it had successfully cleared the backlog in 2022.

To justify extending the reduced G (highway) road test in June 2022, the Ministry evaluated the road safety impact of the modification by analyzing changes in the pass/fail rates of the reduced G (highway) road test and the at-fault collision rate of newly licensed G-class drivers. The Ministry reported that "the evaluation did not conclude that the modified road test produced higher risk to road safety." However, we found the following issues with the Ministry's evaluation.

Approximately 54,000 Drivers from Other Countries Were Not Tested for Important Driving Manoeuvres

Drivers from countries that do not have a reciprocal driver's licence exchange agreement with Ontario have to go through the Graduated Licensing System. These drivers can bypass the G2 (city) road test if they can show an authenticated driver's licence from their home country and evidence that they have over two years of driving experience. However, even though the driver may have driving experience gained in the previous country where they lived, these countries may have different traffic laws and driving practices than Ontario.

Through the full G (highway) road test, drivers from other countries would have been tested on all city and highway manoeuvres. With the reduced G (highway) road test in place from January 2022 to March 2023, 54,000 drivers from other countries were only tested on their ability to navigate highways (see **Figure 3**), not residential streets. Important skills, such as parallel parking, three-point turns, and driving in proximity to pedestrians, were not consistently assessed. Since there was no systematic policy analysis prior to reducing the requirements for the G (highway) road test, the Ministry did not have the opportunity to consider the impacts on drivers from other countries who do not have a reciprocal driver's licence exchange agreement with Ontario.

Ministry Assessed the Reduced Highway Road Test Using an Ineffective Measure

The Ministry's evaluation noted a generally consistent pass rate of approximately 71% under both the full and reduced G (highway) road tests, which supported its conclusion that the "reduced G (highway) road test performs as well as the full G (highway) road test." However, we found that there may have been other reasons why the pass rates did not change after the introduction of the reduced road tests.

Serco, which closely monitors road test pass rates, had a 65% to 75% pass rate target for all driver examiners. Supervisors told us that driver examiners with an average weekly pass rate that deviated noticeably from the average (typically 15% higher or lower) would be subject to a performance review. As such, there was an incentive for examiners to achieve consistent pass rates. For instance, based on Serco's policy, a driver examiner with an average pass rate of 90% in one month would be subject to a review and a one-on-one conversation with their supervisor in the following

month. If a driver examiner continued to get these results, they could be subjected to further performance management and coaching actions, such as retraining and shadowing.

There Was Limited Data Available to Assess Impact on Road Safety

The Ministry performed its evaluation of the reduced G (highway) road test in June 2022, which was only six months after it was implemented. Although the evaluation noted a 30% increase in the at-fault collision rate among novice drivers who passed the reduced G (highway) road test (2.4%) compared to novice drivers who passed the full G (highway) road test (1.8%), the Ministry concluded that "the differences are not statistically significant and the number of collisions were too few to draw meaningful conclusions." This difference in at-fault collision rates could have been an important indicator in evaluating impacts on road safety, yet not enough time had passed to support any conclusions.

At the time of our audit in 2023, there was still only limited data on collision rates for novice drivers who passed the reduced G (highway) road test in 2022.

RECOMMENDATION 2

To understand the full impact of the reduced G (highway) road test and make evidence-based decisions about the reduced test, we recommend that the Ministry of Transportation:

- conduct a thorough policy analysis of the impact of the reduced G (highway) road test, including the impact related to drivers from countries with no reciprocal driver's licence exchange agreement with Ontario;
- track and compare the collision rates of drivers who pass the reduced G (highway) road test to those who passed the full G (highway) road test over a sufficient period of time to determine if it increases road safety risk; and
- based on these analyses, determine whether it is appropriate to continue to use the reduced G (highway) road test.

MINISTRY RESPONSE

The Ministry of Transportation agrees with this recommendation. Once sufficient road test and collision data is available, the Ministry will evaluate road safety impacts of the modified G test, as part of the broader evaluation of Ontario's Graduated Licensing System. The review will assess the most effective methods of examining driver competencies and identify potential improvements to Ontario's road-testing programs.

As per the recommendation, the evaluation of the modified G test will analyze the impacts on different sub-groups in the driver population, such as drivers from jurisdictions without a reciprocal licence agreement with Ontario. Based on the outcome of the comprehensive driver examination review, the Ministry will determine whether the modified road test should continue to test all drivers for full licensure or if there is an alternative option that is more appropriate. The Ministry will further review its current policies and procedures regarding foreign driver licence exchanges to ensure proper procedures are being documented and adopted while also ensuring continued alignment with the Canadian Council of Motor Transport Administrators' guidelines where applicable.

4.1.3 Novice Drivers Can Repeat the Knowledge Test as Many Times as Necessary in One Sitting to Pass

The Ministry does not require a wait period after applicants fail their knowledge test. An opportunity to retake the test can be arranged immediately after the applicant pays an additional $16 exam fee. As the Ministry's multiple-choice exam question bank only

has a limited number of questions (approximately 250 questions), many novice drivers choose to repeat the test as many times as needed during one visit to a DriveTest Centre, limiting their opportunity to take the time necessary to learn the rules of the road. Ontario is the only province in Canada that does not have a rule in place regarding a wait period (see **Appendix 8**). For instance, British Columbia requires a seven-day wait period to retake the knowledge test, Quebec requires a 28-day wait period, and Saskatchewan and Alberta limit individuals to one knowledge test a day.

Our data analytics showed that between January 1, 2018 and March 31, 2023, over 1.9 million novice drivers passed the Ministry's knowledge test. We found almost 10% (190,000) of them passed the test with more than three failed attempts within one visit, while 1% (19,000) took the test more than five times. Allowing unlimited and immediate chances to rewrite the knowledge test defeats the purpose of the test as novice drivers can use the exam to "study" the answers to the multiple-choice questions while (re)taking the test, rather than learning the rules of the road in Ontario.

RECOMMENDATION 3

To encourage novice drivers to study the rules of the road more effectively prior to attempting the G1 knowledge test, we recommend that the Ministry of Transportation review best practices in other jurisdictions, such as Quebec and British Columbia, and determine whether it should introduce a wait period before an individual can retake the test or limit the number of tests that can be taken in a single day.

MINISTRY RESPONSE

The Ministry of Transportation will review practices of other leading road safety jurisdictions to determine whether implementing further policies regarding a wait period between knowledge test attempts or a maximum number of daily attempts would produce a road safety benefit.

The Ministry will seek input from stakeholder and service delivery partners, and will consider policy enhancements that balance road safety, customer experience, and operational feasibility.

4.2 Driver Training

4.2.1 Drivers Allowed to Shorten Their G1 Supervised Driving Period Were Involved in More Collisions

The Ministry allows novice drivers who successfully complete the optional Beginner Driver Education program to choose to shorten their G1 supervised driving period and take the G2 (city) road test up to four months earlier, giving them "a time discount" (see **Section 2.2.1**). However, our audit found that the collision rates of novice drivers who completed the Beginner Driver Education program and opted to take the time discount were higher than those who did not take the time discount.

As shown in **Figure 7**, in each of the 10 years from 2013 to 2022 (where data was available), drivers who took the time discount were involved in more collisions. On average, 4.8% of the G2 drivers who completed the Beginner Driver Education and took the time discount were involved in collisions. This rate is 30% higher than the collision rate (3.7%) of G2 drivers who completed the Beginner Driver Education but waited the full 12 months before taking the G2 (city) road test. In addition, the 4.8% collision rate of drivers who took the time discount was nearly 78% higher than the 2.7% collision rate of drivers who did not take the Beginner Driver Education training and therefore were not eligible for the time discount. The differences in these collision rates indicate that allowing drivers to shorten their supervised driving period may be counter to the objective of the Beginner Driver Education program, which is to put safer drivers on the road.

Figure 7: Collision Rates (%) for G2 Drivers, by Beginner Driver Education Completion Status, 2013–2022[1]

Source of data: Ministry of Transportation

	No Beginner Driver Education	Beginner Driver Education	
		Under 12-Month Wait Period	12-Month Wait Period

1. Includes collisions for drivers who obtained their G2 licence through Ontario's Graduated Licensing System. The collisions were caused by the driver or others.
2. During parts of 2020 and 2021, road test examinations were paused due to lockdowns related to the COVID-19 pandemic, disrupting the ability of novice drivers who completed the Beginner Driver Education training to take the G2 road test.
3. More drivers than usual received a G2 licence in 2022 when road tests resumed.

Ministry's Assessment of Beginner Driver Education Program Inconclusive

In an analysis completed in 2016, the Ministry identified that novice drivers who took the Beginner Driver Education program and the time discount tended to drive longer distances on a monthly basis than drivers who did not take the time discount and, as a result, would have had a greater chance of being involved in a collision. After adjusting for this exposure rate, fatal and serious injury collision rates were similar for all three novice driver groups during the second year of driving. However, the Ministry's study did not explain why the fatal and serious injury collision rates were higher for novice drivers who took the Beginner Driver Education program and the time discount in the first year after they obtained their G2 licence.

In 2014, the Ministry provided funding to the Traffic Injury Research Foundation—a Canadian independent, not-for-profit road safety institute—to conduct a survey of about 1,000 young drivers in Ontario. The Foundation's report showed that drivers who took the Beginner Driver Education training and shortened the supervised driving period showed a 35% to 65% higher likelihood of risk-taking behaviour than drivers who did not shorten the supervised driving period. These behaviours include speeding, texting while driving and following another car too closely.

While the two studies provided key insights that explained the trend of higher collision rates in novice drivers who took the Beginner Driver Education time discount, the Ministry did not identify the root causes of such higher collision rates and did not continue to monitor and analyze this trend after 2016. The Ministry told us that it planned to complete a review of Ontario's driver licensing process in the summer of 2024 to assess the impact of these research findings and introduce potential enhancements to the Beginner Driver Education program.

Incentives given to Beginner Driver Education graduates vary across other Canadian provinces (see **Appendix 8**). For example, in Quebec, a driver with a learner's permit, which is equivalent to Ontario's G1 licence, cannot shorten the 12-month supervised driving period. Saskatchewan also does not allow the supervised driving period to be shortened.

4.2.2 Ministry Provided Limited Guidance Regarding Necessary Driving Practices for New Drivers Compared to Other Jurisdictions

The Ministry has not determined a recommended number of hours that a novice driver should practise driving in order to acquire the necessary driving knowledge and skills to become a safe driver in Ontario, nor has it provided such guidance to novice drivers who choose not to complete the optional Beginner Driver Education program. Furthermore, the Ministry has not assessed whether the 10 hours of driving practice included in the curriculum of the optional Beginner Driver Education training is sufficient.

Unlike Ontario, British Columbia recommends 60 hours of supervised driving practice before scheduling

a road test (see **Appendix 8**). Quebec requires novice drivers of any age to complete a standardized road safety education program, which consists of 24 hours of theoretical learning and 15 hours of in-car training. The course covers topics such as sharing the road, risky behaviour, fatigue and distractions.

When we asked why the Ministry did not make the Beginner Driver Education training mandatory so that there would be more consistency related to driving practice requirements, the Ministry told us that, in its view, making the training mandatory might undermine the role and responsibility of parents in teaching safe driving skills to their children.

While social support systems, such as parents, can help novice drivers gain driving experience with their local traffic conditions, this training may not be as comprehensive as the Ministry-approved Beginner Driving Education curricula. Moreover, novice drivers who do not have a social support system in Canada, such as less experienced drivers from other countries (approximately 25% of novice drivers in 2022) as described in **Section 4.3**, would benefit from clear guidance from the Ministry.

RECOMMENDATION 4

So that novice drivers are better prepared to drive safely on Ontario's roads, we recommend that the Ministry of Transportation:

- review and identify opportunities to enhance the effectiveness of the Beginner Driver Education program (program) for novice drivers, including the sufficiency of the existing minimum number of driving practice hours;
- based on leading practices in other jurisdictions, reassess the time discount provision that allows novice drivers to shorten the supervised driving period after the completion of the program;
- based on its review of these areas, implement necessary changes to improve the program; and
- subsequent to making changes to the program, determine whether all novice drivers should be required to complete the program.

MINISTRY RESPONSE

The Ministry of Transportation will review the effectiveness of Beginner Driver Education (BDE) to improve road safety.

In addition to road safety considerations, the Ministry will also review other factors such as financial, personal, equity impacts as well as best practices from other jurisdictions in determining the appropriateness of a mandatory BDE program for novice drivers.

Following the review, opportunities for improvement will be assessed and implemented.

4.2.3 Unregulated Driver Training Services May Undermine the Integrity of Driver Examinations

Other than overseeing the Beginner Driver Education program, the Ministry does not regulate any other fee-based services offered by driving schools and instructors (licensed or unlicensed). These services include in-car driving practice charged by the hour, and road test route training and appointment booking. Such unregulated training services do not teach the full Beginner Driver Education program curriculum. Instead, such services may primarily focus on preparing driving students to pass the road tests, and thus may not effectively train a novice driver. In general, these kinds of driving training services may be more economical and offer more flexibility when compared to the Beginner Driver Education program, which may make them more appealing to some novice drivers. In addition, the Ministry does not regulate or monitor the business practices of unlicensed driving instructors, so it may not be aware of the full extent of the unregulated training services in the province.

Through Internet and classified ad searches, we identified driving lessons advertised for as low as $20 for the first lesson, as well as a wide range of training packages ranging from less than $400 to nearly $2,500 for a premium course. We also found that some of the advertised training services offered the Beginner Driver Education and "guaranteed" that the student would pass their road test. The Ministry does not assess

the reasonableness of the large disparity in prices among training packages, or the appropriateness of these advertisements.

During our visits to DriveTest Centres, we learned of some questionable practices concerning driver training that may undermine the integrity of the driving examination process:

- Some driving instructors follow driver examiners on road tests to learn the specific exam routes and manoeuvres tested so they can "route train" their students instead of concentrating primarily on having them practise driving in realistic traffic conditions. By focusing on teaching students to pass the road tests rather than teaching the comprehensive skill set required for safe driving, these instructors are able to reduce the cost of and time needed for driver training.
- On a social media service, we found over 15 video recordings of actual road tests at some Ontario DriveTest Centres, including Mississauga, Oakville, Oshawa and Newmarket. These videos were posted by individuals who marketed themselves as driving instructors and were made available to the public.

Although it has no enforcement power, Serco has issued warning letters to driving instructors it identified as engaging in route training near DriveTest Centres. In some municipalities, such as Brampton, municipal bylaw officers patrolled test routes and issued fines to driving instructors who lingered around exam routes. However, the Ministry does not govern or oversee which routes driving instructors use to train their students, something it views as a consumer-protection matter.

Regarding monitoring the safety of licensed driving instructors, the Ministry uses its licensing system to automatically revoke an instructor's licence if, for example, an instructor accumulates more than three demerit points on their driver's licence or is convicted of a criminal offence. Between 2018 and 2022, the Ministry's system revoked, on average, about 40 driving instructors' licences annually. In contrast, the Ministry uses a manual process to monitor licensed instructors' delivery of the Beginner Driver Education program. In addition, complaints against instructors are followed up only as part of Ministry compliance audits and mystery shops of driving schools (see **Section 4.2.4**). While the Ministry can revoke a driving instructor's licence for not meeting the Beginner Driver Education requirements (such as the minimum 10 hours of in-car training), the Ministry has only revoked one instructor's licence, on average, for this reason annually.

RECOMMENDATION 5

So that novice drivers are well prepared to drive safely on Ontario roads, and to protect the integrity of the Ministry's driver examination process, we recommend that the Ministry of Transportation:

- review the types of driver training services available in the marketplace (including the practice of route training) and assess their impact on novice drivers and on the integrity of the driver examination process;
- based on that assessment, propose regulatory changes to prohibit driver training services that compromise the Ministry's ability to assess the driving skills of novice drivers through the Ministry examination process; and
- implement monitoring and enforcement tools to deter prohibited driver training services.

MINISTRY RESPONSE

The Ministry of Transportation will assess the types and extent of driver training services in the market place as part of its ongoing evaluation of Beginner Driver Education and Graduated Licensing System programs, and propose changes when necessary.

4.2.4 Weak Oversight of Beginner Driver Education Driving Schools

Ministry Did Not Follow Up on Findings from Audits of Driving Schools to Ensure Violations Were Rectified

The Ministry's compliance audits assess Beginner Driver Education schools' compliance with Ministry policies. The audits are administrative in nature, focusing on reviewing a driving school's records, such as logs of in-class and in-car lessons, employment contracts with driving instructors, and insurance documents.

Between January 2017 and March 2023, the Ministry and its contractors performed 1,379 compliance audits at 1,045 driving schools. Of these audit reports, 134 noted over 10 violations of Ministry policies, and 11 audits noted over 25 violations, such as employing unlicensed driving instructors.

We reviewed a sample of 30 audit reports of driving schools completed between November 2016 and March 2023 that had over 10 violations, as well as the Ministry's follow-up actions on the audits' findings. We found that the Ministry suspended enrolment of students at just two of the schools with a high number of violations. The Ministry assessed the remaining 28 driving schools as having passed their audits after the driving schools described in an email how they had addressed each violation. Within a year of the compliance audits, the Ministry conducted mystery shopping visits at only three of the 28 driving schools as an additional measure to examine potentially questionable practices. For the remaining 25 driving schools, the Ministry did not conduct any follow-up audits to assess whether the remediation actions described by the schools had rectified the issues identified in the audit reports.

At the time of our audit, the Ministry did not have a policy to determine what kind of follow-up actions were necessary to address violations reported through compliance audits. The Ministry was developing a form that staff could use to document the results of compliance audits and track driving schools' remediation actions for issues identified. The Ministry told us that it was testing out a standardized approach that escalates enforcement sanctions against driving schools with serious instances of non-compliance, but a formal plan and project timeline had yet to be established.

Driving Schools Issued Beginner Driver Education Certificates without Students Completing the Training

Although the mystery shopping visits conducted by the Ministry (described in **Section 2.2.1**) found multiple violations, the Ministry conducted just 33 mystery shopping visits from 2018 to 2020 at the over 1,000 licensed driving school locations. These 33 mystery shops noted that over half of the driving schools allowed the mystery shoppers to shorten or even fully abandon their training, but the schools still issued Beginner Driver Education certificates. Acting on the findings of these mystery shops, the Ministry revoked licences for five of the 33 driving schools.

As the Ministry has not performed mystery shops since the beginning of 2020, we engaged a firm to conduct mystery shops at 14 high-risk driving schools across the province. We found that 11 of the 14 mystery shop investigators received Beginner Driver Education certificates from the driving schools with less than the required 10 hours of in-car training. Of the 11 cases:

- four of the investigators were able to abandon in-car training after less than one hour of in-car training; and
- five of the investigators completed between one and 3.5 hours of in-car training.

The results of the mystery shops also noted that of the 14 cases:

- three of the investigators indicated that their instructors trained them, or offered to train them, on exam routes; and
- eight of the investigators were offered additional services by the driving instructors, such as transportation to a suburban DriveTest Centre, use of the instructor's vehicle for the exam, and road test bookings for additional fees.

We asked the Ministry why it conducted so few mystery shops and why it had not conducted any mystery shops since the restrictions of the COVID-19

pandemic were lifted. The Ministry noted that from its perspective, even though mystery shops delivered insights into the day-to-day operations and practices of the driving schools, mystery shops were expensive to carry out (around $5,000 per engagement). The Ministry used mystery shops when it noted a high number of violations in compliance audits, recurring complaints or an indication of potential fraud. However, we found that by directly engaging a mystery shopping firm, we were able to reduce the price per mystery shop significantly.

RECOMMENDATION 6

To strengthen the oversight of driving schools, we recommend that the Ministry of Transportation:

- develop and implement a formal policy to require timely on-site follow-ups at driving schools where audits identified either serious or a high number of compliance violations to assess if the violations have been resolved;
- develop and implement a strategy for routinely conducting cost-effective mystery shops on driving schools that it identifies as high-risk; and
- regularly document and assess progress reported through follow-ups with driving schools to direct the Ministry's future oversight and enforcement actions.

MINISTRY RESPONSE

The Ministry of Transportation agrees with the Auditor General's recommendations and commits to strengthening the oversight of licenced driving schools. The Ministry has initiated the development of an escalating sanctions model, which will include a policy for timely on-site follow-ups at driving schools with either serious or a high number of compliance violations.

The Ministry will explore strategies to conduct cost-effective quality assessment of driving schools identified as high-risk. The Ministry will document and assess its progress and analyze these findings for inclusion into future oversight processes.

4.3 Graduated Licensing System May Not Adequately Prepare Less-Experienced Drivers from Other Countries to Drive in Ontario

Between January 2022 and March 2023, about 133,000 drivers who received an Ontario G-class licence had a driver's licence from a country with which Ontario did not have a driver's licence exchange agreement. These drivers represented about one-quarter of newly licensed drivers in Ontario. Depending on their previous driving experience, the Ministry allows different exceptions to the Graduated Licensing System exam requirements.

For drivers who had at least two years of driving experience from other countries (about 54,000 or roughly 40% of the total), the Ministry allowed them to waive both wait periods (described in **Figure 2**) and take only the reduced G (highway) road test. Our analysis found that this group had a lower collision rate (2.89%) compared to the average collision rate of newly licensed G-class drivers in Ontario (3.60%).

However, for those drivers who had less than two years of driving experience from other countries (about 78,000 or roughly 60%), the Ministry required them to pass both the G2 (city) and G (highway) road tests. Unlike other novice drivers in Ontario, less-experienced drivers from other countries were not required to wait for a 12-month period before taking their G2 road tests. We found that after passing both the G2 (city) and G (highway) road tests, these less-experienced drivers from other countries had a significantly higher collision rate (6.31%) when compared to the average collision rate of newly licensed G-class drivers in Ontario (3.60%).

The higher collision rate among less-experienced drivers from other countries indicated that the Ministry's driver training and examination programs could be strengthened to better prepare these drivers for Ontario's traffic rules and driving conditions. Waiving the first 12-month wait period between the G1 (knowledge) test and the G2 (city) road test (see **Section 2.2.3**) meant that those drivers had less time to practice their driving skills on Ontario roads,

potentially limiting the effectiveness of the Graduated Licensing System. Even though the driver may have driving experience from their own country, these countries may have different traffic laws and driving practices than Ontario.

Ontario was consistent with other Canadian provinces we benchmarked in allowing drivers from other countries to waive the required wait periods in their novice driver examination systems (see **Appendix 8**).

RECOMMENDATION 7

To better prepare novice drivers from other countries for driving in Ontario, we recommend that the Ministry of Transportation:

- research whether drivers from other countries have unique challenges that may contribute to their involvement in a higher proportion of collisions;
- reassess the impact of waiving the 12-month wait period between the G1 (knowledge) and G2 (city) road test; and
- based on the results of Ministry research and reassessment, make necessary changes to the training and examination programs.

MINISTRY RESPONSE

The Ministry of Transportation will examine the road safety outcomes of drivers from other reciprocal and non-reciprocal jurisdictions as part of the broader review of Ontario's Graduated Licensing System. The analysis will determine the difference in road safety risk between new drivers with driving experience from other jurisdictions and drivers originally licensed in Ontario and identify opportunities for improvements accordingly.

Drawing from the findings of this review, the Ministry will determine any appropriate actions to the driver training curriculum and the licensing process for individuals with prior driving experience from other jurisdictions. The Ministry will create, and put into effect any training programs, policies, and documentation to address these identified needs in alignment with requirements defined by the Canadian Council of Motor Transport Administrators.

4.4 Monitoring High-Risk Licensed Drivers

4.4.1 Ministry Rarely Requires Drivers with Repeat Driving Suspensions to Take Retraining Courses

The Ministry's approach to deterring dangerous driving is to penalize drivers for various offences by suspending licences and issuing fines and demerit points (see **Appendix 9**). Penalties increase in severity for repeat offences. However, the Ministry does not identify drivers who may be of higher risk to cause collisions based on a history of repeat driving offences and suspensions and require them to take retraining courses.

Our analysis of Ministry's collision data showed that drivers were significantly and consistently more likely to be involved in fatal collisions if they had received two or more suspensions in the previous year (see **Figure 8**). For example, in 2022 drivers who received two or more suspensions in the previous year had a fatal collision rate six times higher (3.4 per 10,000 drivers) than the general driver population (0.53 per 10,000 drivers).

Figure 8: Fatal Collision Rate of Drivers With Multiple Suspensions

Prepared by the Office of the Auditor General of Ontario

	Fatality Rate per 10,000 Drivers	
Year	All Drivers	Drivers with Two or More Suspensions in the Previous Year
2019	0.55	5.0
2020	0.50	4.0
2021*	0.52	10.4
2022*	0.53	3.4

* Fatality rate is based on preliminary data.

The Ministry may require retraining courses for drivers only after they are convicted in court of serious offences, such as stunt racing, failure to stop for police, or careless driving causing bodily harm. The Ministry's policy—which is that only drivers with a conviction are required to attend retraining courses—may be limiting the number of high-risk drivers with multiple driving suspensions from attending these courses. For example, in 2022, over 2,500 drivers received two or more suspensions for offences not related to alcohol or drug use, such as dangerous driving or racing. However, the Ministry ultimately required only about 5%, or 120, of such drivers to complete courses on driver improvement or defensive driving.

In contrast, the Ministry requires drivers with two suspensions related to alcohol or drug use in the past 10 years to complete a remedial program on how to separate alcohol/drugs and driving, regardless of whether the drivers were convicted by the courts. This broader requirement likely contributes to the comparatively high number of drivers who complete the remedial program: 8,500 drivers in 2022.

While the Ministry's existing penalty-oriented regime of suspensions can deter dangerous driving behaviours, the likelihood of drivers with a history of dangerous driving causing a fatal collision may be reduced by proactively providing remedial measures for these drivers or retraining them. Our research into the practices of other jurisdictions found that retraining programs were commonly required and/or ordered after recurring suspensions in provinces including British Columbia, Saskatchewan, Quebec, Newfoundland and Labrador, New Brunswick and Prince Edward Island. In Alberta, retraining programs may be taken to reduce demerit points; this serves as an incentive for drivers to voluntarily participate in early intervention of high-risk driving behaviours (see **Appendix 8**).

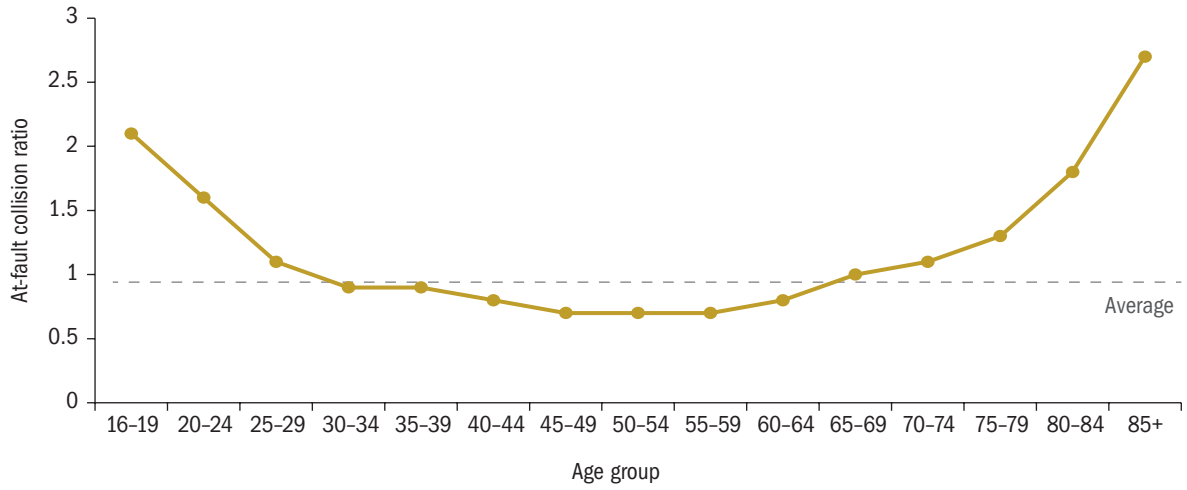
RECOMMENDATION 8

To encourage road safety and provide early remedial measures for drivers with a history of repeat driving offences and suspensions, we recommend that the Ministry of Transportation:

- routinely identify drivers with a record of repeat driving offences and suspensions who Ministry data indicates are at increased likelihood to cause a collision; and
- expand the criteria for requiring drivers to complete remediation and retraining to include these drivers.

MINISTRY RESPONSE

As part of an ongoing driver record comparison study, the Ministry is conducting jurisdictional research and a review of the scientific literature around effective countermeasures against high-risk driving, including driver retraining. Results of this work will be used to determine whether driver retraining should play a greater role in Ontario's demerit point system, and if so, what this training should include.



4.4.2 Elderly Drivers' Ability to Drive Safely Not Effectively Assessed

Analysis performed by the Ministry indicated that elderly people have a higher likelihood of causing a collision (see the at-fault collision risk ratio in **Figure 9**). Despite this analysis, the Ministry did not specifically test the driving skills of drivers 80 and older, but instead centred its assessment on a cognitive test that required the drivers to draw a clock (see **Section 2.4**).

Our own analysis indicated that although drivers 80 and older who passed the clock-drawing test generally had a lower collision rate than the general driving population, they were significantly more likely to have

Figure 9: At-Fault Collision Risk Ratio, by Driver Age, 2018

Source of data: Ministry of Transportation

caused the collisions they were involved in (54% at-fault collisions) than the general driver population (42% at-fault collisions). Moreover, about 0.4% of collisions involving drivers who passed the clock-drawing test were fatal, which was nearly double the average rate among the general driver population (about 0.2%). This analysis was based on data from 2018 and 2019, as the Ministry paused the clock-drawing test between March 2020 and May 2022.

The clock-drawing test primarily assesses cognitive decline—which is associated with an increased risk of collision—and accounts for about 40% of medical suspensions for drivers 80 and older. However, the test does not examine motor function and co-ordination, concentration, hearing ability, and spatial perception and reaction time. The Ministry's own 2020 research indicated that over a third of elderly drivers who passed the clock-drawing test could not pass the Ministry's road tests. The research also recommended the introduction of an enhanced road test for elderly drivers, which could combine the driving manoeuvres of a standard highway test with additional scoring to test cognitive abilities related to safe driving. At the time of our audit, the Ministry was considering introducing this enhanced road test in 2026.

We noted that the Australian state of New South Wales requires a medical assessment by a doctor every year for drivers 75 and older. This state also requires drivers 85 and older to take a road test every two years or to downgrade to a modified licence, which only allows driving within a local area to access services such as community activities, medical appointments and shopping. British Columbia, Alberta, Quebec and Newfoundland and Labrador also require medical assessments for elderly drivers.

RECOMMENDATION 9

To enhance road safety for the growing number of elderly drivers, we recommend the Ministry of Transportation review and adopt best practices from other jurisdictions, such as:

- re-examining elderly drivers' driving skills; and
- requiring regular medical assessments for all drivers 80 and older.

MINISTRY RESPONSE

The Ministry of Transportation agrees road safety for senior drivers is important. The Ministry is dedicated to effectively assessing elderly drivers' fitness to drive and ensuring that senior driver's licence renewal procedures are based on up-to-date research evidence and jurisdictional best practices.

4.4.3 Reporting of Drivers Who May Be Medically Unfit to Drive Could Be Improved

Medical conditions that impair a driver's ability to co-ordinate sight, attention and agility increase collision risk, while a driver's sudden incapacitation due to an acute condition such as seizure or heart attack can lead to fatal crashes.

The Ministry's Medical Review Office reviews over 280,000 cases annually and suspends about 33,000 driver's licenses due to a medical condition, as noted in **Section 2.4**. The Ministry's September 2020 study estimated that over a 10-year period (2005–2014), 1,200 collisions were prevented as a result of the Ministry's reviews and medical suspensions.

However, the Ministry's Medical Review Office told us that under-reporting of medical conditions may occur, as health-care providers may be hesitant to report their clients as unfit to drive. The Ministry's study noted common causes of collisions include seizures, dementia, loss of consciousness, sleep apnea and visual impairment.

The Ministry was unable to quantify the number of unreported cases. We attempted to compare the number of diagnoses recorded in the Ministry of Health's databases to the number of cases received by the Ministry of Transportation, but found that neither the Ministry of Health nor the Canadian Institute for Health Information could provide reliable statistics regarding the number of reportable diagnoses.

Nevertheless, the Ministry does not have a program to routinely reach out to medical practitioners to increase awareness of the need to report medical conditions that make it dangerous for a person to drive. The Ministry told us that it had previously presented such information to various medical community groups. The Ministry also distributed an informational brochure on the topic but the brochure was no longer being circulated, and it has not been updated since 2018.

RECOMMENDATION 10

For more complete and timely identification, assessment and suspension of drivers with high medical risks, we recommend that the Ministry of Transportation periodically conduct educational and outreach initiatives to increase awareness among doctors, nurses and optometrists to report patients for medical assessment.

MINISTRY RESPONSE

The Ministry of Transportation appreciates the work of the Auditor General and welcomes the recommendations to improve the Driver Medical Program.

The Ministry will continually review its relationship with the medical community to collaborate on opportunities for educational and outreach initiatives to increase awareness and achieve better outcomes.

4.4.4 Supporting Evidence for Ministry's Medical Suspension Decisions Not Always Complete

Decisions about whether an individual is fit to drive can have life-altering consequences. While drivers with dangerous medical conditions may be at an increased road safety risk, unnecessary suspensions may unduly limit their personal mobility and livelihood. The Ministry's Medical Review Office is responsible for accurately assessing the information provided and suspending drivers who they determine are unsafe to drive. We found that while the assessments generally complied with the Ministry's medical review policy, the Ministry could improve the quality of information it asked health-care professionals to provide, as well as its own documentation of its rationale to suspend or not suspend a driver's licence.

We reviewed a sample of initial assessments and subsequent reassessments of suspended drivers (some of whom were reinstated). We found that in eight of the 30 assessments we reviewed, although the doctors submitted the required form to the Ministry, the doctors did not provide details to support their claims that the drivers' endangering medical conditions had become stable and the drivers' suspensions should be lifted. These supporting details could include medical history and prognosis, test results, proof of completion of a treatment program or other evidence showing that the cause of the medical condition had been effectively addressed. Such information could be useful in informing the Ministry's assessment of the likelihood that the driver will cause a collision due to their medical condition.

In addition, in about 13% of the assessments we reviewed, we could not determine if the Ministry's decisions were reasonable and in accordance with the Ministry's policy, as staff were not required to document their decision-making process and the assessments' rationale was not evident from the content of the forms submitted by doctors. For example, in one instance, in order to reverse an earlier suspension, the Ministry requested lab results to support the opinion that the medical issue had been resolved. However, after eight days and without receiving the lab results, the Ministry reversed the suspension without a documented rationale for doing so.

Moreover, the Ministry also did not have a quality-assurance program to routinely review assessments completed by staff, to check that assessments were complete and appropriately supported, and to identify potential improvements in the efficiency of the process.

RECOMMENDATION 11

To help ensure that decisions to suspend driver's licences are based on all medically relevant information, and that the suspension decisions are consistent and adequately supported, we recommend that the Ministry of Transportation:

- redesign the forms doctors use to provide condition-specific medical information to the Ministry to include all necessary information, such as test or treatment results;
- require medical assessors to consistently document their rationale for decisions related to complex driving suspensions and reinstatements; and
- implement a quality-assurance process to routinely review the completeness and appropriateness of medical assessments.

MINISTRY RESPONSE

The Ministry of Transportation is exploring further requirements to its medical reporting to include supporting assessment methods/tests.

Quality assurance is an important component of ensuring that the Ministry is delivering on the intended goals of its program. We are continuously improving training, audit and quality metrics and will continue to focus on those areas, including ensuring the completeness and appropriateness of medical assessments, and that medical assessors document their rationale for their decisions.

4.5 Driver Examination Services Contract Management and Oversight

4.5.1 Ministry's Contract Administration Was Ineffective, and Failed to Improve Driver Examination Services for Ontarians

We found that the Ministry's processes and contractual tools to improve performance were not effective in facilitating changes from Plenary/Serco to improve customer service over the 10-year contract with Plenary.

Ministry records, from 2013 to March 2023, showed a consistent failure to improve service levels over time, which was reflected in the amount of Plenary/Serco's self-reported performance penalties over this period (see **Figure 10**). The Ministry preliminarily assessed additional performance penalties of $35.5 million between 2013 and 2018. Prior to 2020, the Ministry had challenges collecting Ministry-assessed performance

penalties (see discussion below). Between 2020 and 2022, the Ministry waived the assessed penalties during the COVID-19 pandemic. Moreover, the Ministry's records show that Plenary/Serco did not monitor Drive-Test Centre wait times for inside/counter services as required by the contract. This meant that neither the Ministry nor Plenary/Serco had accurate information on inside/counter wait times until the Ministry pressed for proper monitoring.

As of September 2023, when the 10-year contract term ended, the Ministry's assessment was that Plenary had not fully fulfilled 15 deliverables in the 2013 contract. These deliverables represented services that the Ministry paid for and was of the view that it had not received. Some of these deliverables were to have been implemented between 2013 and 2015 (see **Figure 11**).

Figure 10: Performance Penalties Self-Reported and Paid by Plenary, 2013/14–2022/23 ($ 000)

Source of Data: Ministry of Transportation

Fiscal Year	Performance Penalty Self-Reported	Performance Penalty Paid
2013/14*	165.1	165.1
2014/15	763.6	763.6
2015/16	989.3	989.3
2016/17	683.3	683.3
2017/18	977.4	977.4
2018/19	835.9	835.9
2019/20	1,148.1	1,148.1
2020/21	2,169.0	-
2021/22	21,203.0	24.0
2022/23	7,466.3	663.8
Total	**36,401.1**	**6,250.5**

Note: This figure does not include the Ministry's additional penalty assessments or the mediated settlement paid by Plenary in 2019.

* Because the contract with Plenary started in September 2013, fiscal year 2013/14 covers only the six-month period from September 2013 to March 2014.

Ministry Faced Significant Challenges in Holding Service Provider Accountable

The 10-year contract included various mechanisms, or levers, designed to ensure the effective delivery of services. These included penalties payable by Plenary/Serco for not meeting key performance indicators. However, Plenary/Serco and the Ministry were consistently in disagreement over the amount of performance penalties owing. Due to persistent service issues and disagreements over interpretation of the contract, the Ministry initiated a formal dispute in 2014, only one year into the contract. After lengthy negotiations, and amid other contractual issues, the Ministry and Plenary/Serco reached a mediated settlement in the dispute in 2019.

Figure 11: 2013–2023 Contracted Items Not Delivered by Plenary/Serco Based on the Ministry's Assessment, as of August 2023

Source of data: Ministry of Transportation

Immediate Service Delivery Improvements	Customer Experience/ Customer Care Improvements	Operational Efficiency Opportunities
1. Customer queue notifications	1. Plain language test feedback	1. Knowledge test system administration
2. Appointment scheduling for inside services	2. Enhanced fraud detection	2. KPI 9 tracking mechanism
3. Online customer service functions	3. System will allow scalability and flexibility required to add new products and services	3. Command centre
4. Mobile Travel Point		4. Performance monitoring
5. Online block booking function		5. Road test GPS tracking
		6. Road test route programming
		7. Escrow agreement in form acceptable to Ministry

Figure 12: Documentation Errors No Longer Resulting in Performance Penalties, Revised Contract

Source of data: Ministry of Transportation

Errors	
· Signature on application does not match identification	· Auto transmission incorrectly recorded
· Failed test results not recorded on application	· Date on scoresheet
· Ontario Photo Card number not recorded	· Highway declaration errors
· Height transcribed incorrectly on scoresheet	· Previous number of tests not recorded on scoresheet
· Office use sections of forms incomplete or incorrect	· Type of vehicle or plate number not recorded
· Vision results recorded on application under wrong panel	

Although the Ministry was able to recoup a portion of the performance penalties owing, the settlement also resulted in a reduction in the self-auditing and verification required to be carried out by Plenary/Serco. For example, with the settlement, the number of transactions that required Serco's secondary check went from 100% to 5% of all routine transactions. This reduction in verification lowered costs for Serco. Further, the settlement agreement also reduced the type of performance failures for which the Ministry could charge penalties. This included documentation errors (under key performance indicator 4 in **Figure 12**). **Appendix 3** shows how performance indicators were relaxed over time.

Service Provider Bypassed Appropriate Contract Channels to Influence Ministry Decision-Making

Although the Ministry had contracted with Plenary to deliver driver examination services, and Serco was a subcontractor to Plenary, Serco was successful in reaching outside its subcontract with Plenary to communicate directly with the Ministry. For example, Serco submitted numerous requests and proposals directly to the Ministry, such as requests for additional funds or reductions to services offered. Allowing Serco to work outside the terms of the contract and official project agreement channels weakened the Ministry's ability to rely on and effectively enforce the terms of the contract.

RECOMMENDATION 12

To better motivate the service provider to improve service rather than incur penalties, and to hold the service provider accountable for contract deliverables, we recommend that the Ministry of Transportation:

- design and implement performance measures that incorporate effective penalties for performance failures, including delays in contract deliverables;
- collect an upfront contingency deposit for performance penalties based on historical records; and
- design and implement incentives (in addition to penalties) to promote compliance and appropriate responses from the service provider.

MINISTRY RESPONSE

The Ministry of Transportation recognizes the importance of effective key performance indicators and contract provisions to ensure improved delivery of driver examination services contracted to third parties.

The Ministry is undertaking an analysis to determine the future contracting model for the delivery of driver examination services. The use of modern contract management practices and effective key performance indicators, as well as meaningful

penalties and incentives, will be key considerations for the accountability structures for service delivery and in meeting customer expectations.

RECOMMENDATION 13

To promote effective contract management and relations between the Ministry of Transportation and its service provider, and to avoid undermining the contractual position of the Ministry, we recommend that the Ministry ensure that communications with contractors use appropriate contract channels.

MINISTRY RESPONSE

Recognizing the complexity of the service delivery agreement for driver examination services, the Ministry of Transportation agrees to take steps to ensure an understanding of the contract channels that should be leveraged by Ministry stakeholders when communicating with the service provider.

4.5.2 Ministry's Compliance Audits of Driver Examination Services Were Inconsistent and Incomplete

We found that the Ministry did not consistently evaluate the driver examination services provided by Plenary/Serco. We also found that the evaluations did not include the actual road tests—a crucial element. As described in **Section 2.2.2**, Plenary/Serco was responsible for quality assurance, self-monitoring and reporting all performance failures for 14 performance indicators (see **Appendix 3**). The contract specified that Plenary/Serco was to provide monthly compliance reports to the Ministry, reporting performance failures identified by its own quality-assurance processes.

To ensure that Plenary/Serco's self-auditing, quality-control and continuous-improvement processes were effective, the Ministry carried out its own compliance examinations and site audits. Ministry staff informed us that, historically, the site audits involved auditing road test score sheets; however, this stopped due to Plenary/Serco's transition to digital score sheets and the use of automated validation tools. The Ministry's site visits also did not include direct observation of road tests ("check-rides") to confirm these were delivered according to Ministry standards. This meant that this centrally important facet of licensing was not reviewed by the Ministry.

Our audit examined a sample of the Ministry's reviews of Plenary/Serco's documents and found that the Ministry shifted its audit focus. For example, the Ministry had seen an increased error rate in medical reports for commercial drivers since the beginning of 2023. Therefore, the Ministry decided to pause the examination of novice driver applications and focus its resources on verifying 100% of the medical reports for commercial drivers submitted by Plenary/Serco. We did not see evidence of formal audit planning and risk assessment that provided a clear rationale for this degree of concentration. While risk-based prioritization can increase efficiency, it needs to result from careful risk analysis and ensure adequate coverage.

RECOMMENDATION 14

To better monitor and report on the driver examination service provider's compliance and performance, we recommend that the Ministry of Transportation strengthen its audit function by implementing a program of risk-based audits to examine all key operational processes of driver examination services, including road tests.

MINISTRY RESPONSE

The Ministry of Transportation agrees with this recommendation and has started a review of its practices to strengthen compliance oversight. The Ministry will also examine cost-effective methods to implement risk-based audits of key operational processes of driver examination services.

4.5.3 Ministry Paid Additional Funds to Maintain Service Levels That Were the Responsibility of the Service Provider

Overall, based on the Ministry's records, we found a pattern of Plenary/Serco not providing adequate service and the Ministry paying for changes to improve service even though under its contract with the Ministry, costs and risks related to providing driver examination services were Plenary's responsibility.

Plenary/Serco was unable to meet customer wait time targets prior to the COVID-19 pandemic. According to Ministry documentation, Plenary/Serco "refused to open a new location despite their demand analysis indicating it was needed." As a result, in 2018 the Ministry paid $1.2 million for the construction of the Mississauga DriveTest Centre, and $4 million per year in operational costs, to reduce customer wait times (see **Appendix 10** for timeline). The total operating cost as of September 2023 was about $15 million. Moreover, between November 2017 and September 2023, the Ministry subsidized Plenary/Serco to increase operating hours at various DriveTest Centres to meet growing needs. The Ministry estimated that it paid about $19.2 million in total subsidies during this period.

In addition, the Ministry estimated that COVID-19 pandemic relief provided to Plenary totalled about $35 million. This included paying for:

- recruiting and training additional driver examiners;
- extending service hours at DriveTest Centres and for passenger road testing;
- opening nine temporary road test centres; and
- personal protective equipment and labour costs.

RECOMMENDATION 15

To provide for better accountability of funds provided to third parties for driver examination services to Ontarians, we recommend that the Ministry of Transportation:

- administer contracts such that risks and costs are allocated between the parties in accordance with contractual terms; and
- conduct thorough reviews on all relief, subsidization or reimbursement requests from service providers and render decisions that are consistent with the Ministry's contractual obligations.

MINISTRY RESPONSE

The Ministry of Transportation agrees with the recommended actions and has taken steps to make sure that vendor requests or other changes to the driver examination services contract are evaluated in terms of risk and cost allocation.

Moving forward, the Ministry will implement an assessment process to inform decision-making on relief, subsidization, or reimbursement requests.

4.5.4 Ministry Awarded New Contract to the Service Provider Despite Poor Performance and Issues of Concern

Despite issues of poor performance and disputes over penalties, the Ministry signed a new contract with Plenary in September 2023. The contract was for two years, with a possible one-year extension and up to a possible further year for a transition period. The Ministry was evaluating how it will deliver driver examination services once the term of this contract ends.

Non-Competitive Procurement for New Contract

We found that the Ministry failed to carry out a competitive procurement for post-2023 driver examination services. Similar to the negotiation of the 2013–2023 contract, the Ministry worked with Infrastructure Ontario to evaluate options past the contract end date of September 2, 2023. In May 2021, the Ministry met with stakeholders from across the province and related sectors. This process was led by the Parliamentary

Assistant to the Minister of Transportation with assistance from political staff from the Minister's Office and Ministry staff.

In August 2021, the Ministry considered it had a two-year transition window beginning in September 2021. The Ministry recommended proceeding with the assistance of Infrastructure Ontario and a consulting firm. Seeking to determine the extent of interest from potential service delivery partners, the Ministry contracted the consulting firm to carry out a market sounding in October 2021. Despite the stated intention of gauging the interest of potential future service delivery providers, we found that very few potential service delivery partners expressed interest (this was attributed by the participants to the small number of service providers active in the industry). However, the consultations did include incumbents Plenary and Serco. As this firm was also Plenary's auditor, we inquired if the Ministry had asked how the firm managed potential conflicts of interest. However, the Ministry had no record of doing so.

By the fall of 2021, the Ministry determined that there was not sufficient time to conduct a competitive procurement that could deliver service improvements that would meet customer expectations before the end of the 2013–2023 contract. In response, the Ministry decided to pursue a two-stage approach. The first stage was negotiating a new contract (bridging contract) with Plenary for two years (to September 2025), with an optional extension for an additional year (into 2026). The second stage involved a more extensive evaluation of service delivery options.

After proceeding with its two-stage plan, the Ministry decided the bridging contract would not be reached through a competitive procurement and sought an exemption from government policies that require competitive procurement. When we asked the Ministry why the procurement had begun so late as to preclude a competitive process, Ministry staff said that the COVID-19 pandemic had disrupted early progress in 2020. However, they also noted that all senior management from that period had retired so the Ministry did not have full information about reasons for the delay. We found documentation indicating the Ministry intended to begin work on a transition as early as 2018.

With the exception of Alberta, all other Canadian provinces deliver driver examination services through government divisions or Crown corporations (see **Appendix 8**), which provide governments greater control over quality of services. In Alberta, driver examination services for commercial licences are also delivered by a government division.

Agreement in Principle 2023–2025/2026 Does Not Include an Improved Performance Framework

The Ministry and Plenary reached an agreement in principle for the bridging contract in December 2022. They signed the agreement for the bridging contract on July 31, 2023, with the contract to take effect September 2, 2023. However, we found that the Ministry did not negotiate an improved performance framework for the bridging contract with Plenary.

The Ministry recognized that performance indicators in its 2013–2023 contract with Plenary were not effective in improving service. We compared the key performance indicators from the 2013–2023 contract with the agreement in principle and the bridging contract (see **Appendix 3**) and found that the indicators were largely unchanged and, in some cases, relaxed. Further, we found that penalty amounts for performance failures were, with a few exceptions, unchanged in the new contract (see **Appendix 4**). We also found that the agreement in principle and bridging contract continued to reflect the same issues that we identified in the previous contract, including penalties being waived for certain performance failures.

RECOMMENDATION 16

To provide for more effective oversight of driver examination service providers, and to provide Ontarians with better quality of service, we recommend that the Ministry of Transportation:

- ensure adequate lead time to comply with government policies on procurement when contracting with a service provider;
- consider past performance in negotiating future contracts;
- compare its experience relative to other Canadian provinces to identify best practices in structuring driver examination services; and
- use independent research to immediately evaluate the costs and benefits of various options for an examination service delivery partnership.

MINISTRY RESPONSE

The Ministry of Transportation agrees with the recommendation and is currently reviewing the driver examination services delivery model and will comply with procurement policy requirements.

4.6 Ministry Overrode Its Own Proof of Identification Requirements When Issuing Driver's Licences

Our review found that, since 2019, the Ministry authorized the use of expired or substandard IDs when issuing Ontario driver's licences in over 1,000 so-called special circumstances approvals. While some of these approvals were made for unique and extenuating circumstances, most were allowed to proceed without consistent standards or a documented rationale, compromising the fraud-prevention controls in place for the Province and potentially allowing individuals to fraudulently obtain an official government-issued ID in Ontario.

For applicants who were experiencing extenuating circumstances, Serco, ServiceOntario or the applicant could escalate the licensing requests to the Ministry for further review to determine if an exception could be made. (Case 1 in **Figure 13** illustrates one such case escalated to the Ministry under extenuating circumstances.) Some applicants also may choose to escalate through their local Member of Provincial Parliament (MPP). The Ministry's Driver and Vehicle Services Branch receives these escalations regularly, and the Ministry's Policy Office reviews these escalations for approval. If approved, these cases are given to Serco DriveTest Centres for processing.

Due to inadequacies in its own tracking process, the Ministry did not know how many escalations were received in total, or the escalation channels used. After reviewing a sample of 30 exceptions that were made, we found the following issues:

- **There were no internal guidelines or documented rationale for approving or denying exception requests.** The Ministry has a policy on ID requirements for Ontario driver's licence applicants. The policy is publicly available on the Ministry's website and describes a list of primary and secondary proof of identification documents that can be used. However, the Ministry has no written standards for its staff when reviewing extenuating circumstances and making exceptions to ID requirements. For all samples we reviewed, the IDs provided varied from case to case, and the Ministry did not have criteria for type, number or quality of documents. The Ministry staff told us the approval depended on whether they could ascertain that the applicant had presented their true identity using the ID provided; however, they could not explain how this was done. In addition, the Ministry used emails to keep records of escalations received. For all samples we reviewed, there was no evidence of consistent review steps or clear reasons for allowing the exceptions. In 20 of the 30 cases we reviewed, there were no circumstances provided except for a simple "request for exceptions" (for example, see Case 2 in **Figure 13**). In another 23% (seven out of 30) cases, the circumstances provided were not "extenuating," such as Case 3 in **Figure 13**. Details of the extenuating circumstances were provided in only 10% (three out of 30) of the cases reviewed, as illustrated in Case 1 of **Figure 13**.

Figure 13: Examples of ID Exception Requests Made to the Ministry

Prepared by the Office of the Auditor General of Ontario

Extenuating Circumstances	No Extenuating Circumstances
CASE 1: In October 2020, the applicant travelled to Ontario for a family emergency from a foreign country. The COVID-19 pandemic occurred and the applicant became the primary caregiver to three grandchildren. In May 2021, the applicant was told to obtain an Ontario driver's licence if they wanted to continue to drive; however, their foreign driver's licence had expired. The applicant renewed their foreign driver's licence remotely, but it took time for the documents to be mailed to Canada. The applicant indicated that they needed a means of transportation to take care of the grandchildren. The applicant had a photocopy of their new foreign driver's licence with driver abstract, a valid passport and a valid Ontario health card. The Ministry granted the applicant the ability to exchange their foreign licence for an Ontario driver's licence.	**CASE 2:** The applicant's Canadian passport expired over two years earlier, but they possessed a valid Ontario health card, a Canadian citizenship certificate (not accepted by policy) and a foreign birth certificate through email. The Ministry staff emailed: "This one is from the Minister's Office, so can we make an exception?" The applicant was approved for an Ontario driver's licence. **CASE 3:** The applicant stated that their passport expired over 10 years earlier and they needed a form of identification to work and support their family. The applicant escalated the request through their MPP's office and the Ministry staff approved the applicant for an Ontario Photo Card. However, the MPP's office later indicated that the individual would not accept an Ontario Photo Card and demanded a driver's licence. The Ministry approved this request.

- **There was little or no verification of the validity of the presented documents.** Our sample review showed that all cases were reviewed electronically and there was no evidence that Ministry staff attempted to make a physical verification of the presented IDs or arrange an in-person interview with the applicants themselves. Ministry staff indicated that Serco staff should examine the documents and verify the person at the appointment to issue the driver's licence. However, we found that none of the sample exception approval emails stated the application was "approved pending further verification," but instead told Serco staff it was "approved and please make arrangements." We confirmed this with Serco, which told us that Serco staff most likely would not verify the documents again since the Ministry had already "approved" the person for a driver's licence.
- **Requests from MPPs were more likely to be approved.** We found that 40% (12 out of 30) of the escalations we reviewed were received from MPPs' offices. We noticed that in the emails, Ministry staff consistently included the MPP's name and position to raise the urgency of the requests, as shown in Case 2 in **Figure 13**. Ministry staff told us that they generally approved these requests to avoid further escalations from the MPP's office. When we asked the Ministry for an example of an escalation from an MPP's office that was denied, it could not provide one.

Without consistent guidelines and a documented review process, these exceptions overrode the Ministry's own proof-of-identify controls and compromised the fraud-detection abilities of both the Ministry and Serco. Furthermore, they exposed the Province to further fraud risks as a driver's licence is considered a government-issued ID that can be used as a proof of identification for other applications, such as for a Canadian passport and/or to obtain Ontario Health Insurance Plan coverage.

RECOMMENDATION 17

To better prevent fraud and identify theft, we recommend that the Ministry of Transportation:

- develop internal guidelines and formal procedures to evaluate and document the extenuating circumstances for ID escalations;
- educate Serco and ServiceOntario staff on these guidelines and procedures; and
- put in place a process to monitor that these guidelines and procedures are followed.

MINISTRY RESPONSE

The Ministry accepts this recommendation and is currently in the process of developing internal guidelines and formal procedures to evaluate and document extenuating circumstances for ID escalations.

The Ministry will collaborate and communicate the guidelines and procedures with partners and stakeholders to ensure that the process for escalation is being implemented in a consistent manner.

The Ministry will develop a process to monitor requests for escalations, including a periodic review of the documents being accepted.

4.7 Ministry Did Not Incorporate Key Safety Data When Determining the Effectiveness of Its Road Safety Programs

The Ontario Road Safety Annual Report 2020 indicated that, for more than two decades, the Ministry has measured road safety in Ontario by calculating the number of collision-related fatalities for every 10,000 licensed drivers. Based on statistics that show Ontario has the lowest fatality rate in North America, and that rate has been falling, the Ministry reported that Ontario ranked first in road safety. However, the Ministry did not include other road safety data in assessing safety on Ontario's roads, such as total collision rates.

Ontario At-Fault Collision Insurance Claims Have Steadily Increased in the Past 10 Years

We analyzed data from the General Insurance Statistical Agency, a not-for-profit statistical agent for nine participating insurance regulatory authorities across Canada (Alberta, New Brunswick, Newfoundland and Labrador, the Northwest Territories, Nova Scotia, Nunavut, Ontario, Prince Edward Island, and the Yukon). Our analysis showed a steady increase in at-fault collision claims in Ontario from 2012 to 2019 (see **Figure 14**). The General Insurance Statistical Agency noted that the reduction in the reported claim counts in 2020 and 2021 could largely be attributed to a reduction in traffic levels as a result of the COVID-19 pandemic. In 2022, when all COVID-19 pandemic-related restrictions were removed, both the overall driving insurance claim counts and claim counts per 100 vehicles increased significantly (over 30%).

Figure 14 also compares Ontario drivers' insurance claims for at-fault collisions per 100 vehicles to the same data from Alberta and the Atlantic provinces from 2018 to 2022. Notably, Ontario's insurance claims for at-fault collision per 100 vehicles surpassed Alberta and the Atlantic provinces for the first time in 2022. By excluding at-fault collision rates, the Ministry's evaluation of the effectiveness of its road safety programs could be incomplete.

Ministry's Data Analytic Capability Could Be Improved to Measure Impact on Road Safety

During our audit, we learned that the Ministry does not routinely leverage data from sources outside its own information systems (see **Section 2.5**) to measure program outcomes, including the impact of policy changes. For example, the Ministry does not effectively utilize information from Serco's system to provide insights into the performance of its driver examination program. Many of our data requests, such as matching drivers' addresses with where road tests were taken, were not performed by the Ministry. Furthermore, the Ministry's various information systems were not interfaced to

Figure 14: Comparison of Annual Insurance Claims Made for At-Fault Collisions

Source of data: General Insurance Statistical Agency

	Ontario				
Year	Claim Count	Claims per 100 Vehicles	Year-over-Year Growth of Claims per 100 Vehicles (%)	Alberta Claims per 100 Vehicles	Atlantic Provinces Claims per 100 Vehicles
2012	116,289	2.55	-	-	-
2013	128,382	2.77	9	-	-
2014	137,531	2.90	5	-	-
2015	142,221	2.91	0	-	-
2016	150,511	2.99	3	-	-
2017	157,989	3.10	-	-	-
2018	168,399	3.26	5	4.32	3.17
2019	174,391	3.32	2	4.23	3.14
2020	109,568	2.08	(37)	2.77	2.32
2021	107,849	2.03	(2)	2.67	2.34
2022	145,262	2.70	33	2.45	2.54

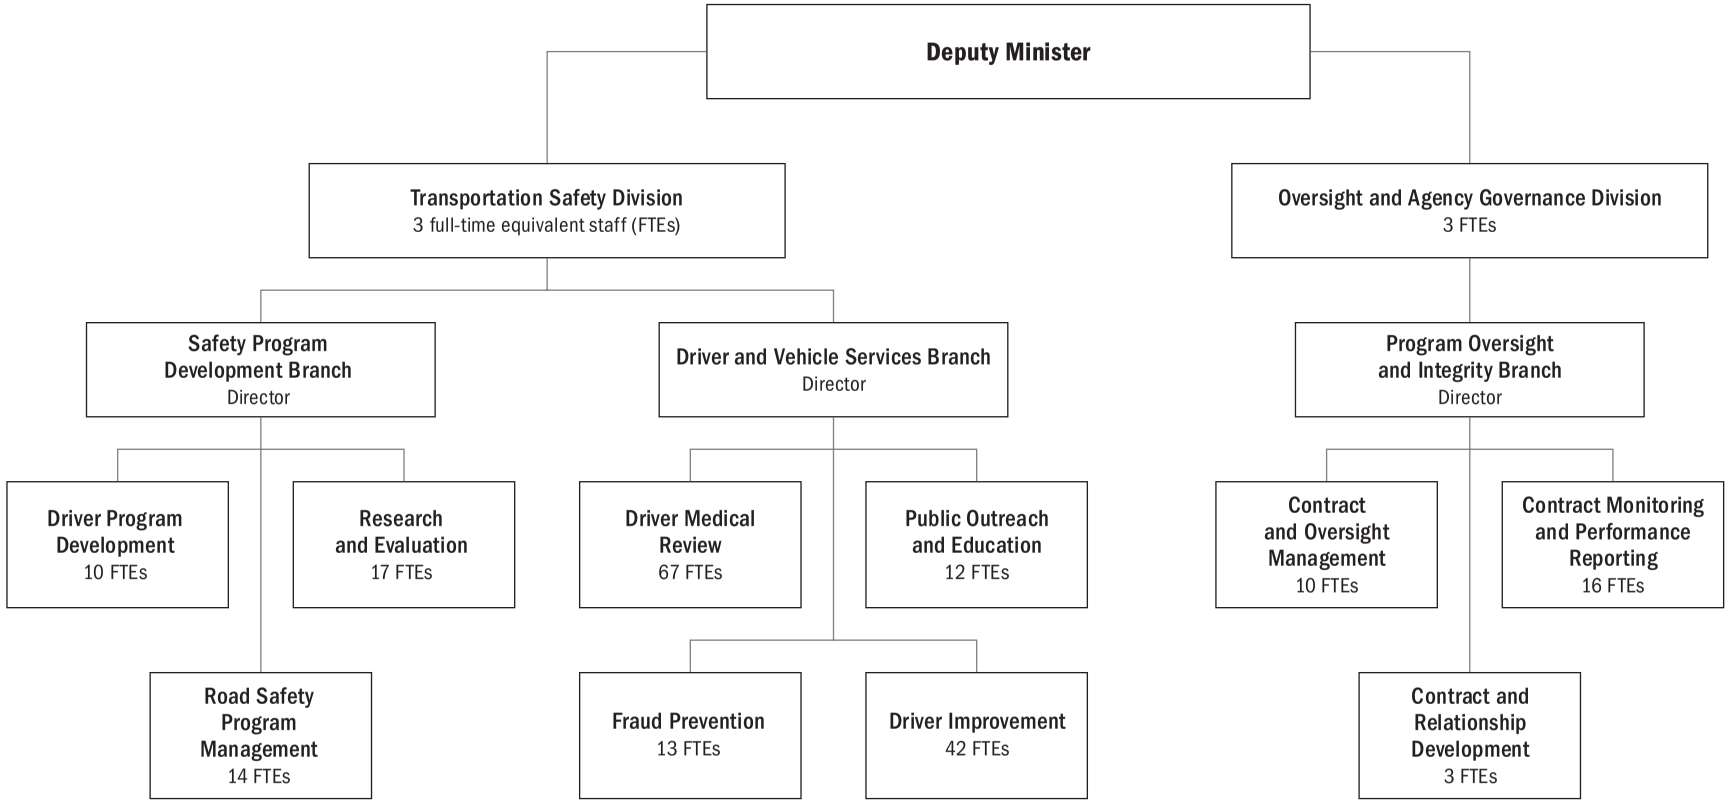
make it easy to join data from different functions, including the driver examination service provider.

In April 2020, the Ministry established a Digital Information Management Analytics initiative to enable Ministry staff to access and use information from driver licensing, collisions, commercial carrier and driver training datasets. As of March 2023, the business intelligence tool contained data from the past eight years, but it did not contain any driver examination data because that data was stored by the service provider and had not been accessed by the Ministry. Similarly, the driver medical review database and part of the collision database were not connected to the main database.

The initiative had planned to centralize a substantial portion of the driver examination, medical and collisions databases, but details regarding the timing and scope of these updates had not been finalized at the completion of our audit.

RECOMMENDATION 18

To measure the effectiveness of its driver training and examination programs on a timely basis, we recommend that the Ministry of Transportation:



- expand the use of business intelligence tools to conduct additional analytics that leverage data from related information systems, linking driver information to the driver examination, collisions and driver medical databases;
- establish a comprehensive set of road safety indicators, including those related to collision rates, based on the objectives of its driver training and examination programs; and
- monitor its driver training and examination programs using these indicators, and report on the results annually.

MINISTRY RESPONSE

The Ministry of Transportation agrees with the principles of this recommendation. The Ministry has several ongoing multi-year digital transformation initiatives focused on expanding the use of business intelligence tools to support policy and program enhancements. Over the coming years, the Ministry also plans to enhance its capacity to monitor and measure the effectiveness of driver training and examination programs using appropriate road safety indicators, and report the results regularly.

Windsor	13,635	74	9,981	71	63,683
Woodstock	6,077	61	4,770	60	12,804

Note: ServiceOntario also delivers some driver examination services (knowledge tests only) at its College Park location.

* Offsite locations are temporary examination locations providing road tests as an initiative to address the driver examination backlog. These locations did not offer the G1 Knowledge Test.

Appendix 3: Key Performance Indicators and Changes, 2013–2023

Source of data: Ministry of Transportation

	2013–23 Contract with Plenary	Example of non-compliance	2013–23 Contract with Plenary, after 2019 settlement	Agreement in Principle with Plenary for 2023–25 (with option to 2026)	2023–25 (with option to 2026) Contract with Plenary
1	Submit Monthly Compliance Reports to the Ministry	Compliance report incomplete or submitted more than five days after month-end	No change	No change	No change
2	Respond to additional information requests from the Ministry	Respond to the Ministry's formal information request in more than five business days	No change	No change	No change
3	Driver examiner and customer service agents comply with training requirements e.g., driver examiner every three years	Driver examiner not completing refresher training within required time	(e.g., driver examiner every four years)	No change	No change
4	Driver examinations are processed and recorded correctly, including verification step for all	Misspelled customer name	Secondary verification step required for 100% of certain higher-risk transactions and 5% of all other transactions	Secondary verification step required for 100% of certain higher-risk transactions Requirement for statistical sampling of accuracy for transactions that are not 100% verified	No change
5	Errors corrected within three business days	Misspelled customer name not corrected	Errors corrected within 10 business days	No change	No change
6	Report notifiable incidents, such as serious accidents, to the Ministry within two hours	An injury to a member of the public or an employee not reported within two hours	No change	Multiple notification time frames for different types of incidents. (e.g., on-site media within one hour, incidents resulting in injuries by end of day)	No change

	2013–23 Contract with Plenary	Example of non-compliance	2013–23 Contract with Plenary, after 2019 settlement	Agreement in Principle with Plenary for 2023–25 (with option to 2026)	2023–25 (with option to 2026) Contract with Plenary
7	Enquiries and complaints are tracked and resolved within specified time frames	General enquiry (not requiring consultation with Ministry) not resolved within three business days	No change	Adjustments to time frame for response and resolution of enquiries. 100% of general enquiries will be responded to and resolved within two business days, compared to three previously. Complex enquiries and complaints will be resolved within five business days, compared to three previously	No change
8	Telephone calls are handled within specified service levels	80% of calls do not exceed 30 second wait time	No change	Reduction in the number of specific service requirements (from 12 to 4)	No change
9	Customers are offered road test appointments within 42 days	Customers offered appointments more than 42 days after requested	No change	No change	No change
10	Communications protocols for public disclosure and media releases are followed	Providing information to the media without prior consent	No change	No change	No change
11	Each month, the customer satisfaction rating exceeds 85%	Customer satisfaction rating less than 85%	No change	Measurement will be twice per year instead of monthly	For this KPI only, licence applicants who respond to a customer satisfaction survey immediately after a failed road test are excluded from the rating
12	80% of customers wait for less than 45 minutes in line	Fewer than 80% of customers served within the time frame	80% of customers wait for less than 45 minutes in line at large driving exam centres, and 30 minutes at small centres	No change	Excludes scheduled appointments for long transactions at specific sites
13	Plenary complies with all provisions of its contract with the Ministry	Road tests delayed or cancelled due to inadequate staffing	No change	No change	No change

	2013–23 Contract with Plenary	Example of non-compliance	2013–23 Contract with Plenary, after 2019 settlement	Agreement in Principle with Plenary for 2023–25 (with option to 2026)	2023–25 (with option to 2026) Contract with Plenary
14	Driver examination centres comply with hours of operations requirements	Examination centre not open or open but not delivering services	No change	No general requirement. Adds specific element: Travel Point visits cancelled must be rescheduled within 30 days	No general requirement regarding compliance with hours of operations requirements (but note that these are set in a separate contract schedule to which KPI 13 applies)
15	Not in the 2013–23 contract*			Where Plenary cancels a road test, it will use "commercially reasonable efforts" to reschedule the test within one day The rescheduled test must be within 14 days following the date that Plenary successfully contacts the applicant	No change
16	Not in the 2013–23 contract				Specific centres implementing appointment scheduling for long transactions shall have availability within 21 days of request

Gray shade represents changes to indicator.

* After the 2019 settlement, a temporary KPI 15 was added to require Plenary to implement a cumulative wait time solution by November 1, 2019. The KPI was removed in the Agreement in Principle with Plenary for 2023–25.

Appendix 4: Changes to KPI Performance Penalties

Prepared by the Office of the Auditor General of Ontario

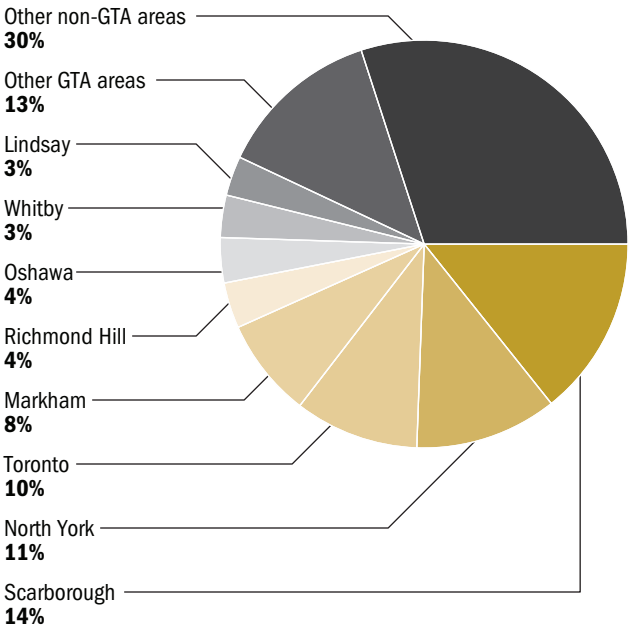
	Key Performance Indicator	KPI penalty in 2013–23 Contract[1]	KPI penalty in 2013–23 Contract after 2019 Settlement[1]	KPI penalty in Agreement in Principle[1]	KPI penalty in 2023–25 (with option to 2026) Contract with Plenary[1]
1	Submit Monthly Compliance Reports to the Ministry	$5,000/month $230/day	$5,000/month $230/day	$5,000/month $230/day	$5,000/month $230/day
2	Respond to additional information requests from the Ministry	$2,650/month $70/day	$2,650/month $70/day	$2,650/month $70/day	$2,650/month $70/day
3	Driver examiner and customer service agents comply with training requirements	$2,545/month	$2,545/month	$2,545/month	$2,545/month
4	Driver examinations are processed and recorded correctly[2]	$10/transaction	$8/transaction (applied to fewer transactions)	$8/transaction	$8/transaction
5	Errors corrected	$2,975/month (corrections within 3 days)	$2,975/month (corrections within 10 days)	$2,975/month	$2,975/month
6	Report notifiable incidents, such as serious accidents, to the Ministry within two hours	$7,030/month for failure to provide notification (within 2 hours) $6,770/month for failure to provide root cause analysis $6,770/month for failure to implement solution	$7,030/month for failure to provide notification (by end of day) $6,770/month for failure to provide root cause analysis $6,770/month for failure to implement solution	$7,030/month for failure to provide notification $6,770/month for failure to provide root cause analysis $6,770/month for failure to implement solution	$7,030/month for failure to provide notification $6,770/month for failure to provide root cause analysis $6,770/month for failure to implement solution
7	Enquiries and complaints are tracked and resolved within specified time frames	$1,500/month to $2,975/month for specific failures per service points	$1,500/month to $2,975/month for specific failures per service points	$1,500/month to $2,975/month for specific failures per service points	$1,500/month to $2,975/month for specific failures per service points
8	Telephone calls are handled within specified service levels	$1,500/month to $2,975/month for each specific failure	$2,975/month for each specific failure	$2,975/month for each specific failure (fewer failure categories)	$2,975/month for each specific failure

	Key Performance Indicator	KPI penalty in 2013–23 Contract[1]	KPI penalty in 2013–23 Contract after 2019 Settlement[1]	KPI penalty in Agreement in Principle[1]	KPI penalty in 2023–25 (with option to 2026) Contract with Plenary[1]
9	Customers are offered road test appointments within 42 days	$10,415/month, applied each month for each site	$10,415/month, applied each month for each site	Applied each month for each site and each road test class • First instance: $50 • Second instance: $250 • Third instance: $1,125 • Fourth instance: $1,750	Applied each month for each site and each road test class • First instance: $50 • Second instance: $250 • Third instance: $1,125 • Fourth instance: $1,750
10	Communications protocols for public disclosure and media releases are followed	$45/month	$45/month	$45/month	$45/month
11	Customer satisfaction rating exceeds 85%	$2,010/month (measured monthly)	$2,010/month (measured twice per year)	$2,010/month	$2,010/month
12	80% of customers wait for less than 45 minutes in line at large driving exam centres, and 30 minutes at small centres	$325/month applied each month for each DTC for each day where wait exceeded	$750/month for large DTC; $400/month for small DTC Per applicant penalties from $1 to $3.75 depending on length of wait	$750/month for large DTC; $400/month for small DTC Per applicant penalties from $1 to $3.75 depending on length of wait	$750/month for large DTC; $400/month for small DTC Per applicant penalties from $1 to $3.75 depending on length of wait
13	Plenary complies with all provisions of its contract with the Ministry	$255/month applied each month for each performance failure	$255	$255	$255
14	Driver examination centres comply with hours of operations requirements	$3,500/day	$3,500/day	$3,500/day	$3,500/day
15	Rescheduling of cancelled road tests[3]	Not required	Not required	$100–150/month for each performance failure	$100–150/month for each performance failure
16	Specific centres implementing appointment scheduling for long transactions must have availability within 21 days of request	Not required	Not required	Not required	First instance: $100 Second instance: $150 Third instance: $250 Fourth instance: $500

Gray shade represents changes to indicator.

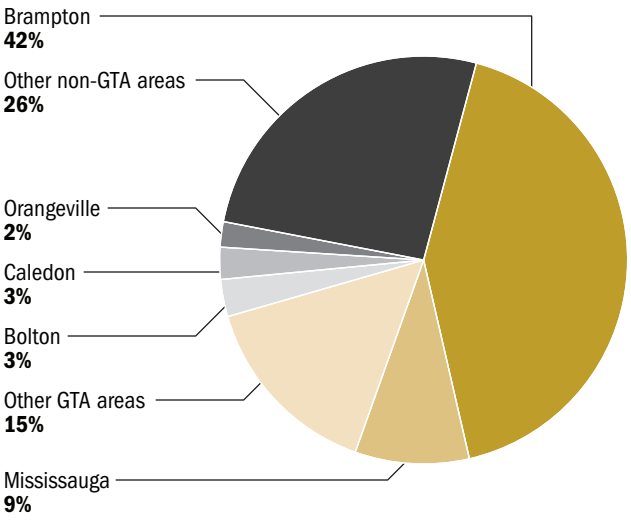
1. Performance penalty calculations are subject to contractual maximums, and penalty charges were waived during periods of the 2013-23 contract.
2. There are no performance penalties applicable to certain categories of transactions, including a signature on an application that does not match identification, failed test results not recorded, and Ontario Photo Card number not recorded.
3. After the 2019 settlement, a temporary KPI 15 was added to require Plenary to implement a cumulative wait time solution by November 1, 2019. The KPI was removed in the Agreement in Principle with Plenary for 2023–25.

Appendix 5: Audit Criteria



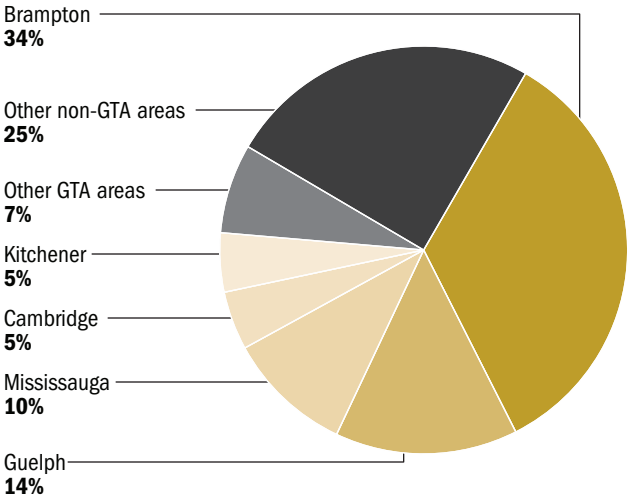
Prepared by the Office of the Auditor General of Ontario

1. Beginner driver training, examination and related program requirements are evaluated and updated by Ministry of Transportation based on evidence to support continuous improvement of road safety.
2. The Ministry is effective in identifying high-risk drivers (e.g., with medical concerns or unsafe driving behaviours) so that only qualified individuals receive a valid licence and/or continue driving in Ontario.
3. The Ministry is effective in overseeing service providers in providing driver examination in accordance with relevant legislations, regulations, policies, contract terms and best practices.
4. The Ministry is effective in managing and exercising its contractual rights with due regard to efficiency and economy.
5. The Ministry is effective in approving and overseeing licensed driving schools and instructors in accordance with relevant legislations, regulations, policies and best practices.
6. Management information systems should provide timely, accurate and relevant information to enable the Ministry to effectively administer the driver training and examination functions, as well as support management decision-making.
7. Appropriate and reasonable performance measures and targets are established and monitored, and compared against actual results to evaluate whether driver training and examination services were provided efficiently and effectively. Results are publicly reported and corrective actions are taken in a timely manner when issues are identified.

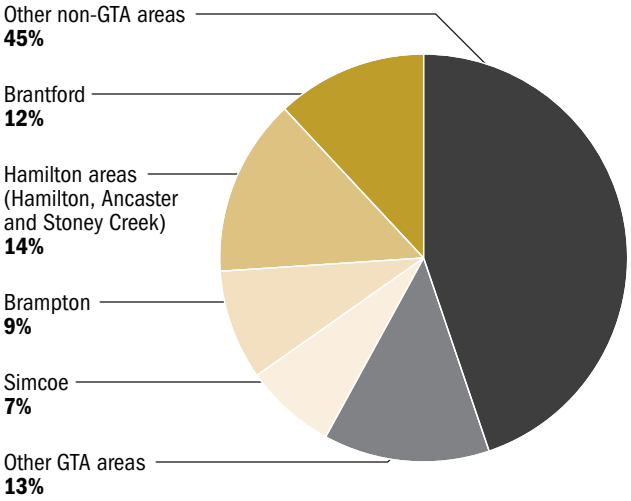


Appendix 6: Home Addresses of Drivers Who Took Road Test at Six Rural DriveTest Centres, January 2022–March 2023

Prepared by the Office of the Auditor General of Ontario

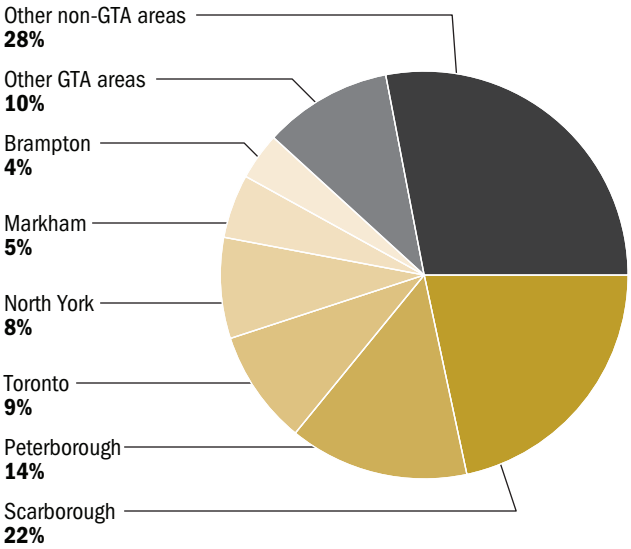


Lindsay DriveTest Centre

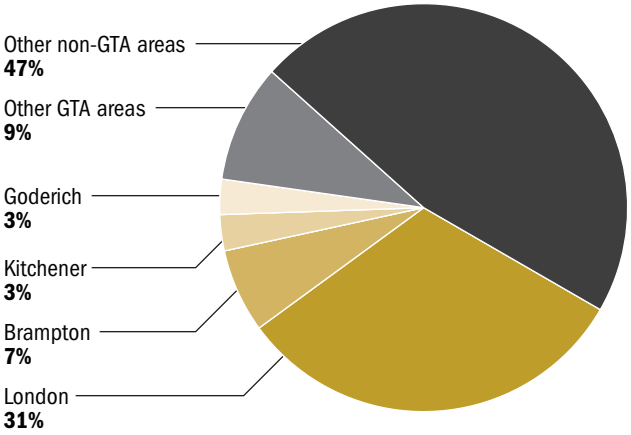


Orangeville DriveTest Centre

Guelph DriveTest Centre*



Simcoe DriveTest Centre



* Includes drivers who completed road test at a temporary location established to clear the COVID-19-related backlog.

Peterborough DriveTest Centre

Clinton DriveTest Centre

Appendix 7: Collision Rates for Novice Drivers Living in Select Cities, by DriveTest Centre Location, January 2022–March 2023

Prepared by the Office of the Auditor General of Ontario

DriveTest Centre Where Road Test Completed	Number of Drivers Who Took Road Test[1]	%	Drivers Involved in a Collision After Road Test[5]

Appendix 8: Cross-Jurisdictional Scan of Driver Training and Examination Programs in Canada

Prepared by the Office of the Auditor General of Ontario

Criteria	Ontario	British Columbia	Alberta	Saskatchewan	Manitoba*	Quebec	Newfoundland	New Brunswick	Nova Scotia*	Prince Edward Island
Fatalities per 100,000 licensed drivers (2021)	5.1	7.9	8.2	10.4	8.1	5.9	8.9	12.1	9.8	13.9
Graduated Licensing Process	Yes – 1 knowledge test and 2 road tests over min. 2 years	Yes – 1 knowledge test and 2 road tests over min. 3 years	Yes – 1 knowledge test and 1 road test over min. 3 years	Yes – 1 knowledge test and 1 road test over min. 2.25 years	Yes – 1 knowledge test and 1 road test over min. 2 years	Yes – 1 knowledge test and 1 road test over min. 3 years	Yes – 1 knowledge test and 1 road test over min. 2 years	Yes – 1 knowledge test and 1 road test over min. 2 years	Yes – 1 knowledge test and 1 road test	Yes – 1 knowledge test and 1 road test over min. 3 years
Licensing process for drivers from countries with no license exchange	Knowledge test and highway road test with no wait period (with foreign driving history of 2+ years)	Knowledge test and highway road test with no wait period (with out-of-province driving history of 2+ years)	Knowledge test and road test with no wait period (with foreign driving history of 2+ years)	Knowledge test and road test with shortened wait period (with foreign driving history of 9+ months)	Knowledge test and road test with wait period potentially shortened	Knowledge test and road test with wait period shortened by the duration of foreign driving history (up to 2 years)	Knowledge test and road test with no wait period reduction	Knowledge test and road test with no wait period (with foreign driving history of 2+ years)	Information not publicly available	Knowledge test and road test within 120 days
Novice drivers can shorten the supervised driving period by taking an approved training course	Yes – can shorten the 12-month G1 supervised driving period by up to 4 months	Yes – can shorten the 24-month novice stage by 6 months	Yes – can shorten the 24-month probationary period by up to 6 months	No – cannot shorten 9-month learner period or 6-month novice period	Information not publicly available	No – cannot shorten supervised 12-month novice driving period	Yes – can shorten the 12-month supervised driving period by 4 months	Yes – can shorten the 12-month supervised driving period by 4 months, but not the 2-year full licensing process	Yes – can shorten the 6-month supervised driving period by 3 months	Yes – can shorten the 12-month supervised period by 3 months
Mandatory driver training course	No – government-approved training course is optional	No – government-approved training course is optional	No – government-approved training course is optional	Yes – course is required	Information not publicly available	Yes – course is required	No – government-approved training course is optional	No – government-approved training course is optional	Information not publicly available	Yes – course is required
Instruction time requirements of government-approved driver training course	20 hrs in-class 10 hrs in-car 10 hrs flexible	16 hrs in-class 12 hrs in-car	15 hrs in-class 10 hrs in-car	30 hrs in-class 6 hrs in-car	Information not publicly available	24 hrs in-class 15 hrs in-car	25 hrs in-class 10 hrs in-car (or 12 hrs for manual transmission)	25 hrs in-class 10 hrs in-car	25 hrs in-class 10 hrs in-car	25 hrs in-class 10 hrs in-car 6 hrs observation
Driving practice guidelines (outside formal driver training course)	None	Min. 60 hrs driving practice recommended	None	Min. 72 hrs driving practice recommended	Information not publicly available	Min. 50 hrs driving practice with guide suggested	None	None	Information not publicly available	None

Criteria	Ontario	British Columbia	Alberta	Saskatchewan	Manitoba*	Quebec	Newfoundland	New Brunswick	Nova Scotia*	Prince Edward Island
Oversight of driver training providers	Compliance audits, mystery shops	Inspections and audits	Compliance audits	Inspections	Information not publicly available	Inspections	Audits (in-class and in-car)	Inspections, re-qualification every 3 years	Inspections and audits	Inspections
Knowledge test	Can fail and retake knowledge test multiple times in the same day	Can retake the test after 1 week	Can retake the test only once per day	Can retake the test only once per day	Novice drivers can retake the test after 1 week	Can retake the test only once per 28 days	Can retake the test once daily up to 5 days; then 7-day wait period applies	Can retake the test only twice per week	Can retake the test only once per day in person, or multiple times online	Can retake the test after 1 week
City drivers can take road tests in rural areas	Yes	Yes	Yes	Road tests in smaller centres are locals-only	Information not publicly available	Yes	Yes	No	Yes	No – road tests taken at nearest testing centre
Length of road test	City test 20 min., Highway test 30 min.	35 min. for each of two road tests	Single road test 45 min.	Single road test 20 min.	Information not publicly available	Single road test	Single road test 30 min.	Single road test 20 min.	Single road test 30 min.	Single road test 60 min.
Measurement of the quality of driver exams	Accuracy of the pass/fail scoring of road tests not measured	Pass/fail rate of road tests and knowledge tests monitored	Review of road test scoring compliance, and "check-rides" by registrar	Accuracy of the pass/fail scoring of road tests not measured	Information not publicly available	Assessments of compliance with driving school registration conditions	Accuracy of the pass/fail scoring of road tests not measured	Pass/fail rates, review of testing processes to ensure consistency by examiners	Information not publicly available	Sample of newly licensed drivers re-examined by Ministry to assess driving skill
Medical reports	Only commercial vehicle drivers proactively submit medical report every 3–5 years (annually if over 65)	Every driver required to submit medical report at age 80 and after	Every driver required to submit medical report at age 75 and after	Only commercial vehicle drivers proactively submit medical report every 3–5 years (annually if over 66)	Information not publicly available	Every driver required to submit medical report at age 80 and after	Every driver required to submit medical report at age 75 and after	Only commercial vehicle drivers required to submit medical report upon initial licensing and at each renewal	Only commercial vehicle drivers proactively submit medical report every 5 years (annually if 65 and over)	Only commercial vehicle drivers proactively submit medical report every 3–5 years (annually if over 65)
Age of elderly drivers	80	80	No specific age	No specific age	Information not publicly available	75	75	No specific age	65	No specific age
For elderly drivers, road test or functional assessment of driving ability?	If driver can draw a clock, no road test required	Medical assessment required	Medical assessment required	No required assessment	Information not publicly available	Medical assessment required	Medical assessment required	No required assessment	Information not publicly available	No required assessment, but a driver refresher course is offered

Criteria	Ontario	British Columbia	Alberta	Saskatchewan	Manitoba*	Quebec	Newfoundland	New Brunswick	Nova Scotia*	Prince Edward Island
Interventions for drivers with suspensions	Retraining programs not required for drivers suspended for driving offences	Superintendent can request drivers with poor driving record to complete retraining or retesting	Retraining not required, but may be taken to reduce demerit points	Retraining programs required after recurrent suspensions	Information not publicly available	Retraining programs required after recurrent suspensions	Retraining program required	Re-examination or retraining may be required after recurrent offences; appeal processes available	Information not publicly available	Retraining program required
Who delivers road test examinations	Private contractor	Crown corporation	Privately contracted driver examiners	Crown corporation	Crown corporation	Crown corporation	Government division	Government division	Government division	Government division
Oversight of driver examination providers	Contractor self-assessment, Ministry site visits	Regular assessments and required participation in quality assurance program	Direct monitoring, audits, record inspections	Annual evaluations with direct monitoring every 2 years	Information not publicly available	Direct monitoring and training of driver examiners	Direct monitoring and training of driver examiners	Direct monitoring of driver examiners and, if required, audits	Information not publicly available	Sample of newly licensed drivers re-examined by Ministry to assess driving skill

* Descriptions of practices in Manitoba and Nova Scotia are based on information readily available publicly.

Appendix 9: Suspensions and Other Penalties, Based on the *Highway Traffic Act*

Source of data: Ministry of Transportation

Offence	Mandatory vs Court-Ordered Suspension	Suspension Duration	Demerit Points[1]	Driver Improvement Course	Imprisonment	Fine[2] ($)
G1 novice driver offences[3]	Mandatory	30 days for first offence; 90 days for second; licence cancellation for third offence	n/a	No	No	Up to 500
Young driver – breach of licensing condition	Mandatory	30 days	n/a	No	No	Up to 500
Drive while under suspension	Mandatory	Six months	n/a	No	Up to six months	Up to 5,000
Distracted driving	Mandatory	Three days for first offence; seven days for second; 30 days for third and subsequent offences within five years[3]	Three for first offence; six for second and subsequent offences	No	No	Up to 3,000
Exceeding speed limit 50 km/h or more	Court-ordered	Up to 30 days for first offence; 60 days for second; one year for third offence within five years	Six	No	n/a	9.75/km over the speed limit[4]
Careless driving	Court-ordered	Up to two years	Six	No	Up to six months	Up to 2,000
Careless driving causing bodily harm or death[5]	Court-ordered	Up to five years	Six	Yes	Up to two years	Up to 50,000
Street racing/stunt driving	Court-ordered	One to three years for first offence; three to 10 years for second; up to life for third and subsequent offences within 10 years	Six	Yes	Up to six months	Up to 10,000

Offence	Mandatory vs Court-Ordered Suspension	Suspension Duration	Demerit Points[1]	Driver Improvement Course	Imprisonment	Fine[2] ($)
Failing to remain	Court-ordered	Up to two years	Seven	No	Up to six months	Up to 2,000
Escape by flight	Mandatory, with duration court-ordered	Five years	n/a	No	14 days to six months	Up to 20,000

1. Demerit points remain on a driver's record for two years. Once 15 points accumulate, a driver is suspended for 30 days.
2. Additional fees and penalties apply for most offences and administrative suspensions: a licence reinstatement fee of $281 and administrative penalty of up to $450 ($550 for alcohol or drug impairment administrative suspensions).
3. Suspensions for G1 licence holders escalate for distracted driving, breach of novice licensing conditions (e.g., zero blood alcohol concentration/drugs, driving without accompanying driver or between midnight and 5 a.m., passenger restrictions) or for being convicted of any offence that would have resulted in four or more demerit points. Suspensions escalate to a 30-day suspension for the first offence, 90 days for the second offence, and the licence is cancelled for the third offence.
4. Speeding fine doubles if the offence occurred in a community safety zone or construction zone.
5. Careless driving causing bodily harm or death is subject to penalties, remedial courses and licence suspension under the *Highway Traffic Act*. Convictions for criminal offences, such as dangerous operation of a vehicle causing bodily harm, failure to stop for police, or impaired driving, can result in penalties under the *Criminal Code of Canada*, and driving suspensions under the *Highway Traffic Act* ranging from one year for a first offence to a lifetime suspension for multiple offences. Alcohol- and drug-related administrative suspensions imposed at the roadside will lead to monetary penalties and to a requirement to complete a remedial education/treatment program.

Appendix 10: Timeline of Serco and Plenary Contracts for Driver Examination Services in Ontario

Source of data: Ministry of Transportation

Date	Event
2003 to 2013	
	Ministry contracts with Serco for driver testing.
2013	
Sep 1	Ministry contracts with Plenary for driver testing. Plenary subcontracts Serco as the service provider.
2014	
Apr to Jul	Ministry issues formal notices of dispute to Plenary due to service shortcomings. Negotiations extend until adjudicator-facilitated mediation in 2019.
2018	
Sep 17	Opening of DriveTest Centre in Mississauga. The Ministry, not Plenary/Serco, is responsible for construction and ongoing operating expenses.
2019	
Aug 31	Settlement of contract dispute through adjudicator-led negotiated settlement with Plenary and Serco.
2020	
Mar 23	Closure of all DriveTest Centres and Travel Points due to COVID-19.
Jun 18	Resumption agreement. The Ministry agrees to set off approximately $2.9 million in Plenary/Serco Covid-19 related costs against the equivalent amount of performance penalties due to the Ministry. Plenary/Serco agrees they will not seek costs beyond those agreed to in the resumption agreement. Performance penalty relief ends May 31, 2021.
Jun 22	Reopening of DriveTest Centres and Travel Points.
Aug	Serco seeks additional reduction of transaction verifications to offset further claimed losses.
2021	
Jan	Proposals from Plenary/Serco and response from Ministry regarding further performance penalty relief.
May	Consultations with sector led by Parliamentary Assistant to the Minister of Transportation.
Jun 14	Resumption of passenger vehicle road testing.
Jun	Performance penalty relief extended to March 31, 2022 for most key performance indicators.
Summer/ fall	The Ministry subsidizes opening of additional temporary locations, increased weekend service and overtime.
Aug	Deployment of an additional 84 examiners; on-boarding costs (e.g., recruitment, hiring, training) paid by the Ministry
Nov	Market sounding report by consulting firm.
Dec	Deployment of an additional 167 examiners; on-boarding costs (e.g., recruitment, hiring, training) paid by the Ministry.
2022	
Apr 1	Treasury Board/Management Board of Cabinet approves negotiation mandate for the Ministry to contract with Plenary for a two-year contract with possible further extension of one year.
May 3	Ministry accepts dispute settlement proposal from Plenary. Agreement to extend penalty relief to December 2022 and cap maximum amounts for various penalties.
Dec 23	Agreement in Principle signed by Ministry with Plenary for bridging contract (two-year extension with possible one further year).
2023	
Jul 31	Ministry signs bridging contract with Plenary.
Sep 2	2013-2023 contract with Plenary ends.

Ministry of Health

Emergency Departments

1.0 Summary

Emergency departments are a crucial part of Ontario's health-care system, providing medical treatment for urgent and emergent illnesses and injuries 24 hours a day, 365 days a year. The facilities, sometimes referred to as emergency rooms, are largely overseen and funded by the Ministry of Health (Ministry) and Ontario Health, the Crown agency charged with integrating health-care services between organizations. Patients can seek care at any of Ontario's 163 emergency departments at any time by either entering by their own means or calling for an ambulance. The fully accessible nature of emergency departments can make it challenging for hospitals to anticipate patient inflows with any certainty. And while emergency departments are meant to treat urgent and emergent health-care issues, managing patient flows and planning appropriate staffing levels are made more complicated because patients also may choose to use them when they cannot access care in a timely manner at another setting, such as their primary care provider or a walk-in clinic. In addition to these inherent and constant challenges, funding issues and staffing shortages exacerbated by the COVID-19 pandemic have put further strain on Ontario's emergency-department system.

We found that while patients requiring immediate life-saving care are able to access the system in a timely manner, emergency departments have otherwise often struggled to provide timely and high-quality care, with patients having to wait on average two hours just to be assessed by a physician. Some emergency department patients who require an inpatient bed have had to wait more than 24 hours, and many continue to be treated in emergency department hallways when space is not available. Strains in the system and long wait times have resulted in delayed or missed diagnoses, leading to patients returning to the emergency department in worse health.

Some of our significant findings include:

Emergency Department Closures

- **There were over 200 temporary emergency department closures in the past year due in part to a lack of a comprehensive province-wide strategy to maintain staffing levels.** Unplanned closures of emergency departments were very rare before 2019/20. However, between July 2022 and June 2023 there were 203 temporary emergency department closures in Ontario, involving 23 hospitals primarily located in rural or remote areas, largely related to a nursing shortage and other staffing challenges. We found that there was no comprehensive province-wide and centralized strategy to help hospitals maintain nurse staffing levels to avoid closures or to reduce the duration of the closure. Instead, the Ministry and Ontario Health generally relied on hospitals to manage these situations independently, typically by closing their emergency department or using more-expensive agency staff where possible. These closures create risks to patients'

health that increase in proportion to the time needed to travel to the next nearest emergency department.

- **Rural and remote hospitals relied heavily on an emergency department locum program to avoid closures even though the program was intended to be used as a temporary solution.** In 2006, in an effort to avert highly disruptive emergency department closures due to the unavailability of physicians, the Ministry created the Emergency Department Locum Program (Locum Program), which aimed to provide urgent coverage as an interim measure of last resort to hospitals facing significant challenges filling emergency department shifts. While the Locum Program has been a strong resource for hospitals facing physician shortages, many hospitals have had to increase their reliance on the program to keep emergency departments open. In 2018/19, the Locum Program provided approximately 27,400 hours of coverage, which more than doubled to over 60,200 hours in 2022/23. During the same period, the cost of running the Locum Program increased by about 108%, from about $5.7 million in 2018/19 to over $11.8 million in 2022/23. Ontario Health estimates that the Locum Program helped to avert over 400 emergency department closures in 2022/23.

Emergency Department Wait Times

- **Wait times to see a physician spiked and varied significantly from region to region.** While wait times to see a physician were relatively stable prior to 2020, there was a significant increase following the COVID-19 pandemic. Patients waited an average of 118 minutes after being triaged to receive their physician initial assessment in emergency departments in 2022/23, approximately 30 minutes longer than the wait time in 2013/14. Patients in the 90th percentile (the longest wait time after the top 10% of wait times are removed) waited up to 257 minutes (or more than four hours) in 2022/23, up from 183 minutes in 2013/14. We also noted that the average wait time for a physician initial assessment varied widely by region and by hospital. For example, patients living in the Champlain region waited 169 minutes, or more than twice as long as patients living in the Central region, where average wait times were 79 minutes. As a result of long wait times for a physician initial assessment, we found that some patients chose to leave an emergency department without being seen by a doctor. In 2022/23, the average left-without-being-seen rate was 5.3%, although some hospitals had higher rates. For example, one hospital had about 14% of patients leave the emergency department without being seen. The wait time for a physician initial assessment at this hospital was approximately 175 minutes (or almost three hours), one of the longest wait times among emergency departments.
- **Unnecessary emergency department visits contributed to long wait times and high costs to the health-care system.** Lower-acuity patients, specifically less urgent or non-urgent cases, accounted for approximately 23% (or 1.29 million) of all emergency department visits in 2022/23. Some of these patients, such as those experiencing a sore throat or cold, did not require emergency care but chose to visit the emergency department because it was the only immediate option available or they had no primary care provider. A 2014 study by the Canadian Institute for Health Information (CIHI), an independent, not-for-profit national organization, noted that one in five emergency department visits could have been treated in a doctor's office or clinic. However, according to a 2019 health-care experience survey completed by the Ministry, only 41% of Ontarians were able to get an appointment with their primary care provider on the same or next day. Emergency department care comes at a significant cost to the health-care system as a whole—the direct cost of an emergency department visit in Ontario

was approximately $165 per visit, almost three times higher than the cost of alternative options like primary care, which cost about $56 per visit.

- **Medical directives, which help reduce the time patients spend in emergency departments, were not used consistently across hospitals.** Medical directives are orders that emergency department physicians have developed to help nurses and other hospital clinicians begin the process of assessing patients and performing certain procedures (such as ordering blood tests) before the physician initial assessment. Empowering nurses and other hospital clinicians to act before patients can be seen by a doctor allows certain basic emergency department testing and procedures to be completed more quickly and efficiently, leading to safer care and better patient flow. However, we noted significant variations in the use of medical directives at the hospital sites we visited. There also was no formal province-wide system for hospitals to share best practices on the use of medical directives.
- **Emergency department patients sometimes had to wait more than 24 hours for an inpatient bed.** In 2022/23, patients waited an average of 13 hours for an inpatient bed, a significant increase from the approximately eight hours they had to wait 10 years earlier. Patients in the 90th percentile waited as many as 35 hours for an inpatient bed, up from about 21 hours in 2013/14. We also noted significant differences across regions and hospitals. On average, patients waited at emergency departments for an inpatient bed for about nine to 19 hours in 2022/23 depending on which region they lived in, a significant increase from the five to 13 hours one year earlier. The long wait times were partly the result of the overall lack of inpatient beds in Ontario hospitals and the backlog of patients who did not require hospital-level care but were waiting for rooms elsewhere in the health-care system. Lengthy wait times have helped maintain high numbers of so-called hallway patients, who have to be seen and treated in emergency department hallways until beds become available.

Quality of Emergency Department Care

- **Strains in the system and long wait times at emergency departments resulted in delayed or missed diagnoses, leading to patients making return visits in poorer health.** To identify areas for quality improvement, in 2016 Ontario Health introduced the Emergency Department Return Visit Quality Program (Quality Program), which requires participating hospitals to report why Ontarians return to the emergency department shortly after their initial visit. We noted that there were 274 return visits with a sentinel (severe and significant) diagnosis in 2022; of these incidents, the hospitals identified a quality issue or adverse event had occurred in 104 cases. The most common causes of adverse events included patient mismanagement (for example, lack of reassessment of patients), a delayed or missed diagnosis, or an unsafe discharge decision. We also noted numerous examples of long wait times contributing to poor outcomes, including a case when a patient making a return visit to the emergency department required emergency surgery, and another when a returning patient was admitted to the critical care unit.

Staffing Shortages

- **Significant staffing shortages reduced access to timely emergency care.** We noted multiple reasons for high staff turnover at emergency departments, especially among nurses. Factors included the higher pay and flexibility offered by private staffing agencies, as well as the introduction in 2019 of Bill 124, which limited annual wage increases for many employed professionals (including nurses) to 1% for three years. Since the Ministry and Ontario Health had never collected and tracked information on staffing shortages and vacancies across emergency

departments, we requested that information from a select number of emergency departments and noted that all of them experienced a significant increase in nursing vacancy rates between 2019/20 and 2022/23. For example, one emergency department's vacancy rate of full-time registered nurses increased from 6% to 26% in that time frame, and the rate for part-time registered nurses rose from 23% to 51%.

- **Worsening staffing shortages have forced hospitals to hire agency nurses at significantly higher hourly rates than permanent staff.** There has been no legislation that caps the amount for-profit staffing agencies can charge to hospitals. We noted that these agency nurses were paid significantly more than hospitals' full-time permanent nurses. For example, agency nurses that hold the position of registered nurse working in an emergency department could get paid more than $75 an hour, compared with about $35 to $50 an hour for full-time permanent nurses employed by a hospital. The greater job flexibility and higher pay of agency nurses have resulted in some permanent nurses leaving hospitals. Furthermore, collective agreements with nursing staff limit the ability of hospitals to move nursing staff between units, forcing hospitals to rely on agency nurses even more to address their nursing shortages. The Ministry and Ontario Health did not track agency staff costs and instead relied on hospitals to manage their own budgets and make decisions related to agency staffing. We reviewed data on agency nurse spending across the hospitals we visited and found that in 2022/23, one hospital spent about $8 million on agency nurses in the emergency department, compared with $2.4 million in 2021/22, and less than $1 million in 2019/20.
- **Inconsistencies and flaws in the physician payment structure could impact the timeliness and oversight of emergency department care.** The majority of emergency department physicians were compensated through an alternative funding arrangement (AFA), while some used a fee-for-service (FFS) model to bill the Ontario Health Insurance Plan directly. Under the AFA, there is typically a base funding component, which is essentially a salary divided among the physicians. We found that there had been a lack of oversight of pay and performance of individual physicians who were part of an AFA and the Ministry does not review information on the funding provided to each physician or the volume of patients seen by each physician. We also noted that the FFS model appeared to incentivize physicians to see more patients in order to receive payment, which in turn resulted in shorter patient wait times. For example, even though only 15% of emergency departments used the FFS model, three of the top five hospitals with the shortest physician initial assessment wait times were using an FFS model while all five of the worst-performing hospitals were on an AFA. We also noted that one of the hospitals indicated it had relatively shorter wait times to see a physician as a result of process improvements, which were easier to implement under an FFS model.

Oversight of Emergency Department Performance and Funding

- **Hospitals continued to get funding for a program that has had mixed results in improving patient flow through emergency departments.** The Ministry created the Pay for Results (P4R) program in 2008 to incentivize hospitals to improve patient flow through the emergency department. We reviewed historical data and found that in the early years of the P4R program, some key performance indicators showed a reduction in wait times, helping patients move more quickly through their emergency department visits. However, we found that performance deteriorated leading up to the December 2018–November 2019 period, the most recent full-year results before

the COVID-19 pandemic. Of the five indicators related to wait times that use historical performance as a benchmark, a significant number of hospitals had a worse performance in 2019 than when they first joined the P4R program. For example, in almost half of the 74 hospitals participating in the program as of 2019, admitted patients spent longer overall in the emergency department and there was a longer wait time for an inpatient bed. Despite this, hospitals with worsening performances continued to receive funding through the program.

Emergency Department Diversion Practices and Virtual Urgent Care

- **Unique diversion practices that have helped some emergency departments handle patient flows more efficiently were often not shared with other hospitals.** We noted that some hospitals have developed practices to help divert patients away from the emergency department to a more appropriate setting within the hospital to receive care. These practices—which include using a rapid assessment zone for low-acuity patients that could be located outside of the emergency department—expedite and improve care for the patient involved while freeing up space and resources for others in the emergency department. While these practices have shown success, we noted that hospitals often did not share best practices province-wide. What's more, the Ministry and Ontario Health also did not have a framework in place to track, evaluate and encourage the use of these effective strategies.
- **A virtual urgent care pilot program has had some early successes, but subsequent changes to the program may result in worse outcomes if not managed effectively.** In 2020, the Ministry approved approximately $4 million in one-time funding to support a regionally co-ordinated a virtual urgent care program, sometimes referred to as virtual emergency department. The program was created to support patients who had concerns about visiting an emergency department during the COVID-19 pandemic, as well as to divert lower-acuity patients away from the emergency department. In 2022/23, patients made over 50,000 virtual urgent care visits, compared with less than 20,000 visits in 2021/22. Ontario Health informed us that it planned to integrate some of the initiatives in the virtual urgent care pilot program into the provincial Health811 call services, through which patients are able to connect with a registered nurse 24 hours a day. However, we noted that some hospitals had concerns that this centralized model may not be as effective as virtual urgent care programs managed directly by hospitals. For instance, a virtual urgent care program managed by a hospital would be able to refer a patient directly for blood tests or diagnostic imaging in one of their facilities, while a patient using a centralized model who is advised to see an emergency physician might have to restart the triage process from the beginning upon arrival at the emergency department.

This report contains 14 recommendations, consisting of 23 action items, to address our audit findings.

Overall Conclusion

Our audit concluded that the Ministry of Health and Ontario Health, in conjunction with hospitals, do not have fully effective systems and processes to oversee the delivery of care at emergency departments, or to manage resources efficiently, to help ensure emergency care that is timely and meets all patient needs. While the sickest patients are able to access and receive emergency department care on a timely basis, more needs to be done to address the risks associated with long wait times and increasing patient length of stay. Furthermore, while the Ministry and Ontario Health do measure areas of emergency department performance, more oversight and assessment are necessary to ensure

hospitals are meeting intended objectives of initiatives, such as those funded through the P4R program. We also concluded that while improvements have been made in the triaging of patients through the use and implementation of eCTAS, some emergency departments over-triage patients consistently, and hospitals need to do more to safely admit, discharge and/or transfer patients to other appropriate care settings in a timely manner.

While wait times to be assessed by a physician were relatively stable from 2013/14 to 2019/20, there has been a spike following the COVID-19 pandemic and patients face increasingly long wait times, sometimes in excess of four hours. This has prompted more patients to leave the emergency department without being seen, which may have contributed to worse health outcomes. In addition, some emergency department patients need to wait in hallways, sometimes for more than 24 hours, to be moved to an inpatient bed due to a shortage of beds and the presence of so-called alternate level of care patients, who cannot be moved out of hospital beds because spots in more appropriate alternative care settings are not available.

Further, we found that many small and rural hospitals have had to rely on the Province's Emergency Department Locum Program to stay open, helping to avoid more than 400 emergency department closures in 2022/23. Despite the program, which was only meant to provide hospitals with temporary relief, there were 203 temporary emergency departments closures due to staffing challenges, primarily because of a shortage of nurses. We also found that hospitals are spending millions of dollars on agency nurses at significantly higher hourly rates when they cannot address staffing shortages through internal resources.

While up to one in five emergency department patients treated and discharged in Ontario could have been treated in a doctor's office or clinic, we found that there have been insufficient efforts to try to divert or transfer patients to more appropriate care facilities. And in cases where hospitals did identify best practices to redirect patients, this information was not being effectively tracked by the Ministry and Ontario Health or shared with other hospitals across the province.

OVERALL MINISTRY RESPONSE

The Ministry of Health (Ministry) thanks the Office of the Auditor General of Ontario for their work and sharing the report on their value-for-money audit of Emergency Departments. Ontario hospitals and emergency departments were at the forefront of the health sector's response to COVID-19 and the COVID-19 pandemic, and its unprecedented challenges have had a lasting impact on the province's health-care system. Throughout the pandemic's waves, hospital emergency departments supported the COVID-19 response, stepping up to meet new and evolving demands amid historic health human resource shortages that impacted the entire health-care system.

The Ministry acknowledges the difficult position hospitals and emergency departments were in and appreciates the role they played in supporting the health-care system response, both locally and provincially. Hospitals provided high-quality patient care throughout the pandemic response, and the effect of the unprecedented global crisis continues to put strain on the delivery of care in emergency departments. The government remains steadfast in its commitment to protect the health and safety of all Ontarians and has worked closely with Ontario Health and hospitals to implement new programs and enhance existing supports to ensure the people of Ontario have access to high-quality emergency care, when and where it is needed. Initiatives like the Emergency Department Peer-to-Peer Program will ensure health-care providers across the province are supported and feel confident in delivering care to some of the most at-risk populations in Ontario's rural, remote and Northern communities. Enhancements to the Pay for Results program will ensure the busiest emergency departments are pushed to continually improve on their performance and that small-volume sites have access to supports that incentivize better performance and the continued delivery of high-quality care.

The Ministry remains engaged with Ontario Health on strategies to support Ontario's emergency departments and ensure that hospitals across the province are able to keep their emergency departments open and able to serve all those seeking emergency care. The Ministry is committed to continue working closely with Ontario Health and Ontario's hospitals to review the findings and recommendations within the report and drive improvements where able. The Ministry also will commit to applying learnings more broadly across the entire health-care system to inform and strengthen guidelines of current and future programs/strategies to support the delivery of high-quality care.

The Ministry recognizes the Ontario Medical Association (OMA) as the exclusive representative of physicians practising in Ontario. Under the OMA Representation Rights and Joint Negotiation and Dispute Resolution Agreement, the Ministry is required to consult the OMA to seek its advice about significant health-care policy and system issues that affect physicians. Further, changes related to physician compensation, including activities and accountabilities under non-fee-for-service agreements, are subject to the negotiation process between the parties set out in the Binding Arbitration Framework.

OVERALL ONTARIO HEALTH RESPONSE

Ontario Health thanks the Office of the Auditor General of Ontario for sharing the value-for-money audit of Emergency Departments.

Ontario Health recognizes the enormous strain on emergency departments, observing increased challenges in patient complexity, and multifactorial impacts of health system capacity challenges that impact emergency department patient flow. High-quality and safe patient care is a priority.

In partnership with the Ministry of Health, Ontario Health works diligently with the emergency department community to ensure that programs dedicated to improving quality and safety in the emergency departments are implemented and shared across the sector. Ontario Health's commitment to supporting patient care, the needs of our clinical teams/staff and access to resources is our priority.

Ontario Health commends recent new programs announced by the Ministry to support emergency departments, such as the Pay for Results (P4R) expansion, the Emergency Department Peer-to-Peer program, as well as a focus on emergency department nursing education and retention. These programs and resources ensure Ontario Health's ability to move forward with emergency department system strategy, capacity and access.

Ontario Health also has implemented innovative strategies to support patients in Ontario with initiatives such as Health811, expansion of P4R and the Peer-to-Peer program to provide system supports. Ontario Health remains committed to ensuring hospitals and regions are supported to reduce the risk of closures and impacts on communities.

Ontario Health is committed to working closely with the Ministry, hospitals and emergency department leaders to ensure that recommendations brought forward from the audit will be implemented, where feasible, to continually address the challenges emergency departments are facing in Ontario.

2.0 Background

2.1 Overview

The province's emergency departments provide medical treatment for illnesses and injuries 24 hours a day. Patients can seek care at any of Ontario's 163 emergency departments—sometimes referred to as emergency rooms—by arriving by their own means or calling an ambulance. While emergency departments are meant to treat urgent and emergency health-care issues, people also may choose to visit emergency

departments when they cannot access care in a timely manner at another setting, such as a primary care practitioner's office or a walk-in clinic.

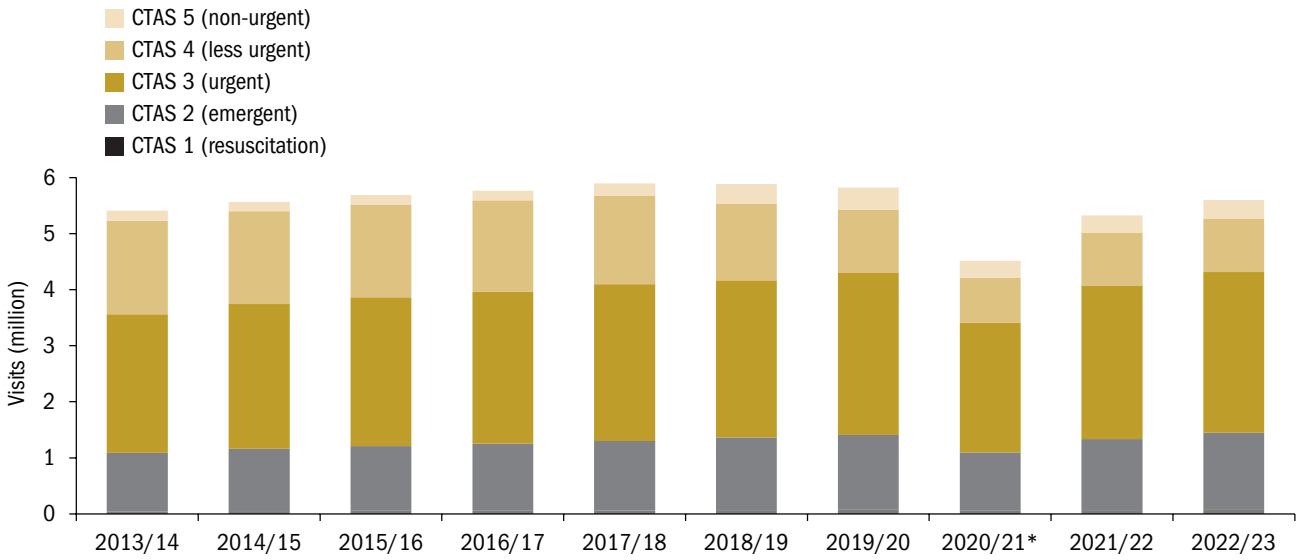
Figure 1 shows that the annual number of emergency department visits in Ontario over the last 10 years has been relatively stable at approximately 5 to 6 million visits. Because Ontario's population is projected to increase from approximately 15.1 million people in 2022 to over 17 million people within the next 10 years, the volume of emergency department visits is expected to continue to rise.

Figure 2 shows the most common reasons for emergency department visits as well as the volume of visits for the top 10 diagnosis groupings. Of the approximately 5.6 million emergency department visits in 2022/23, these top 10 groupings accounted for 4.9 million visits (or about 88%).

2.2 Patient Flow in Emergency Department

Patient flow through an emergency department involves a number of steps. **Figure 3** shows the typical patient journey when visiting an emergency department, while each step in the process is discussed in further detail below.

2.2.1 Triage



Upon arrival at the emergency department, patients are triaged, which is the process of assessing a patient's acuity level based on the five-level Canadian Triage and Acuity Scale (CTAS). The triage level assigned to a patient, typically by a nurse, determines their priority of being seen and treated. **Figure 4** shows the percentage of emergency department visits by CTAS level in 2022/23.

2.2.2 Physician Initial Assessment

After being triaged, all patients, except those assessed at CTAS 1 (requiring immediate resuscitation), have to wait for a physician assessment. Patients with a relatively higher-acuity level (CTAS 2 or 3) typically wait less time than those with a CTAS level of 4 or 5. Across Ontario, patients waited on average about two hours

Figure 1: Number of Emergency Department Visits by Canadian Triage and Acuity Scale (CTAS), 2013/14–2022/23

Source of data: Ontario Health

Note: This chart is based on data from emergency departments in Ontario that reported information centrally to databases or systems such as the National Ambulatory Care Reporting System.

* In 2020/21, the number of emergency department visits temporarily dropped during the COVID-19 pandemic to about 4.5 million when fewer patients with less urgent needs sought emergency care. The number of visits rebounded to about 5.3 million in 2021/22.

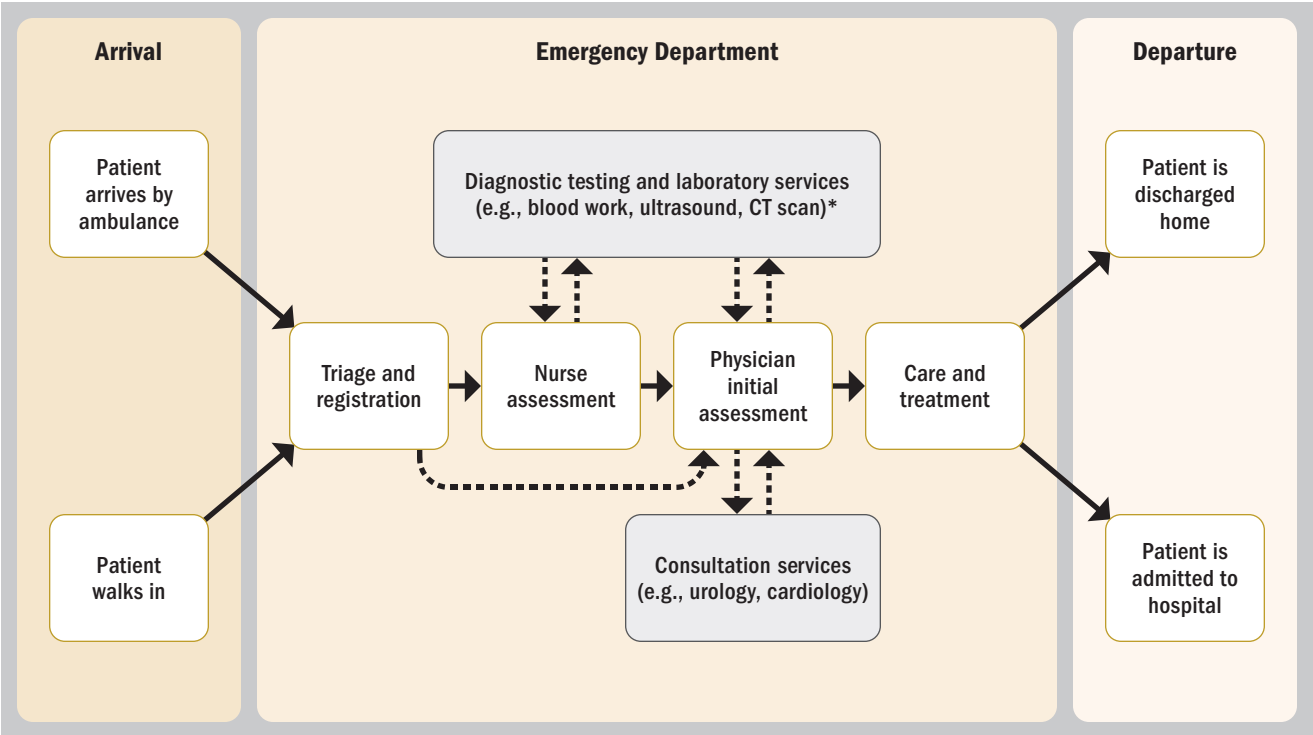


Figure 2: Top 10 Diagnosis Groupings of Emergency Department Visits, Ontario

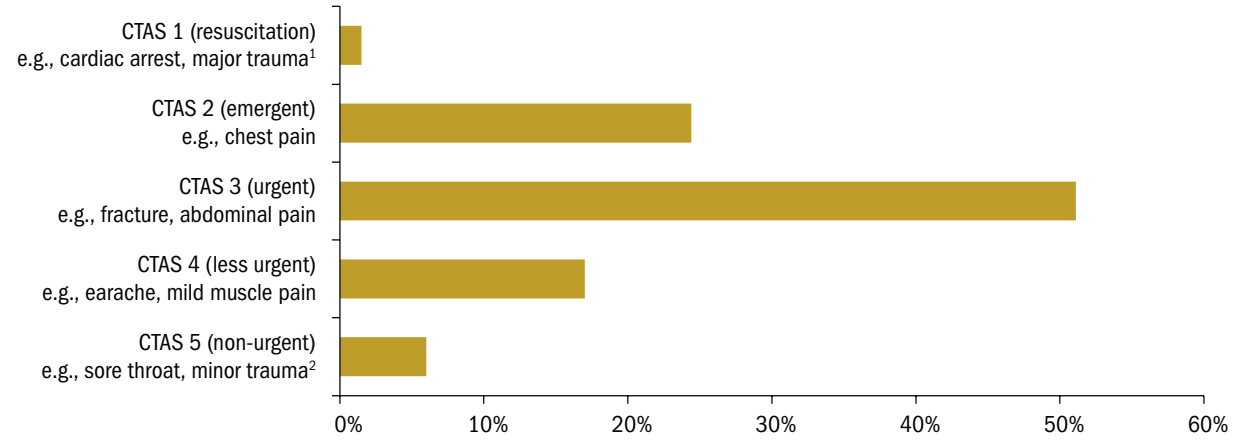
Source of data: Canadian Institute for Health Information

Diagnosis Group	Examples	# of Emergency Department Visits, 2022/23
1. **Symptoms, signs and abnormal clinical and laboratory findings**	Abdominal and pelvic pain, pain in throat and chest, headache, nausea and vomiting	1,306,458
2. **Injury, poisoning and other consequences of external factors**	Open wounds, fractures, poisoning	1,200,126
3. **Respiratory system**	Asthma, pneumonia, bronchitis	532,338
4. **Musculoskeletal system and connective tissue**	Joint disorders, gout, arthritis	339,026
5. **Digestive system**	Intestinal disorders, appendicitis, hernias	315,110
6. **Genitourinary system**	Acute renal failure, urinary system disorders	284,829
7. **Infectious and parasitic diseases**	Diarrhea, herpes, warts	250,796
8. **Mental, behavioural and neurodevelopmental disorders**	Alcohol use, anxiety disorder, opioid use	239,564
9. **Factors influencing health status and contact with health services**	Surgical and orthopaedic follow-up care, counselling	221,316
10. **Circulatory system**	Hypertension, heart attack, cardiac arrest and stroke	211,063
Total		**4,900,626**

Figure 3: Patient Flow through an Emergency Department



Prepared by Office of the Auditor General of Ontario

* While waiting for a physician initial assessment, a nurse may request early testing (such as blood work) if the hospital utilizes medical directives, which allow nurses to initiate certain procedures for patients presenting specific symptoms, as discussed in **Section 4.2.3.**

Figure 4: Percentage of Emergency Department Visits by Canadian Triage and Acuity Scale (CTAS), 2022/23

Prepared by Office of the Auditor General of Ontario

1. Examples of major traumas include falls, motor vehicle accidents, head or spine injuries, and stabbings.
2. Examples of minor traumas include skin lacerations, sprains, muscle strains, scrapes and abrasions.

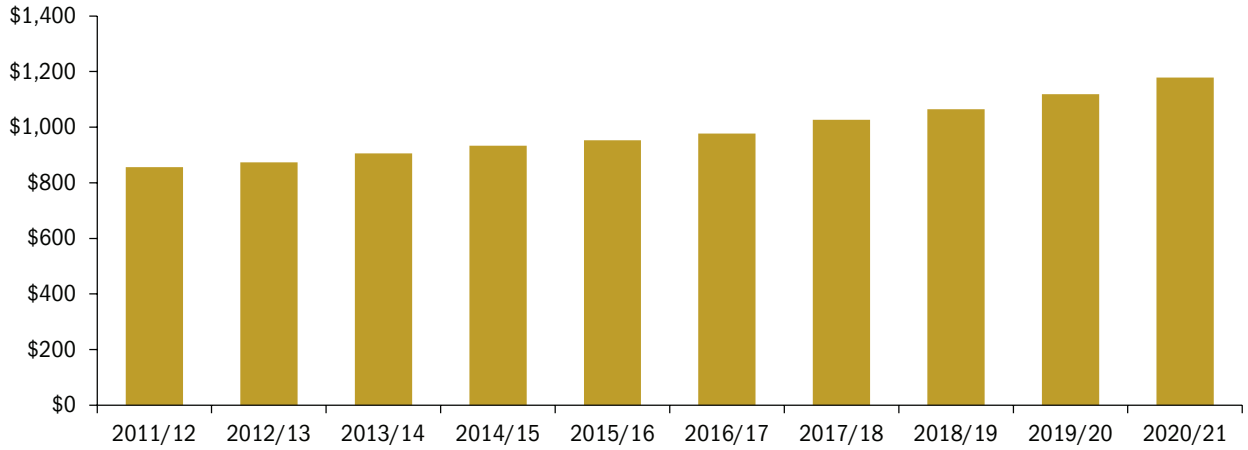
for an initial physician assessment, but wait times varied significantly between hospitals and regions, as discussed further in **Section 4.2.1**.

While patients wait for a physician initial assessment, nurses may begin treatment, such as prescribing medication and ordering diagnostic testing (such as blood tests), if the hospital uses medical directives that allow nurses to initiate certain procedures before a physician assessment, as discussed in **Section 4.2.3**. Wait times may be extended if patients require further testing (for example, an ultrasound or CT scan).

2.2.3 Inpatient Admission

After being assessed and treated by a physician in an emergency department, patients may be admitted to hospital for ongoing care and/or health monitoring. In Ontario, these patients typically have to wait in the emergency department for an average of nine to 19 hours until an inpatient bed is available, during which time they may become so-called hallway patients if the emergency department is overcrowded (see **Section 4.2.4**).

2.3 Emergency Department Funding and Spending



Approximately 60% of the Ministry's funding to hospitals is non-targeted global funding to support core programs and services, including the operation of emergency departments. Global funding is a base (or fixed) amount of annual funding for hospitals to deliver health-care services and cover operating expenses. Each hospital's management has discretion in how to use and allocate its global funding.

In addition to the global base funding, hospitals also may receive targeted funding by participating in performance- and activity-based initiatives or programs for emergency departments, for example, the Pay for Results, or P4R, program (see **Section 4.6**). Such targeted funding, which was approximately $93 million in 2022/23, is minimal compared to the costs of running an emergency department. As of July 2023, 75 mid-sized and large hospitals received this funding. In July 2023, the Ministry announced changes to the P4R program that would expand eligibility, as discussed further in **Section 4.6.1**.

According to the Canadian Institute for Health Information (CIHI), which collects information directly from hospitals that report data into the National Ambulatory Care Reporting System (NACRS), emergency

Figure 5: Emergency Department Spending in Ontario, 2011/12–2020/21 ($ million)

Source of data: Canadian Institute for Health Information

Note: 2020/21 is the latest data available.

department spending in Ontario has been consistently increasing since 2011/12, from $857 million in that year to approximately $1.18 billion in 2020/21 (the most recent year available), as seen in **Figure 5**.

The direct cost of an emergency department visit in Ontario was, on average, approximately $165 per patient in 2019/20, a significant increase from $107 reported in 2005/06. This amount excludes compensation for physicians working in emergency departments, most of whom are paid through alternative funding arrangements, or through a fee-for-service method.

- **Alternative Funding Arrangements:** These are contracts between the Ministry and physician groups that vary from one hospital to another and often involve the Ontario Medical Association, which represents the province's physicians. The contracts have provisions that specify the amount that physicians will receive and the related service levels (i.e., emergency department volumes) that need to be provided. In some cases, contracts can include key performance goals, such as improving patient access and satisfaction. We discuss alternative funding arrangements in **Section 4.5.4**.
- **Fee-for-Service (FFS):** In the FFS model, physicians do not receive compensation directly from the hospital for services provided to patients and instead bill the Ontario Health Insurance Plan (OHIP) based on a set fee for each service provided to a patient. These fees are determined by a schedule of benefits that is part of the *Health Insurance Act*.

3.0 Audit Objective and Scope

Our audit objective was to assess whether the Ministry of Health (Ministry) and Ontario Health, in conjunction with hospitals, have effective systems and processes in place to:

- oversee that the delivery of care at emergency departments is timely and meets patient needs;
- manage resources for emergency departments efficiently to provide continuous availability of emergency care; and
- measure, assess and publicly report the performance and effectiveness of emergency departments on a regular basis.

In addition, our audit assessed whether emergency departments at selected hospitals have effective procedures and systems in place to:

- triage and assess patients appropriately based on their needs in a timely manner and in accordance with applicable standards and requirements; and

- safely admit, discharge, and/or transfer patients to the appropriate units for further care (such as a fracture clinic and for mental-health care) when necessary in a timely manner.

In planning for our work, we identified the audit criteria (see **Appendix 1**) we would use to address our audit objective. These criteria were established based on a review of applicable legislation, policies and procedures, internal and external studies, and best practices. Senior management at the Ministry and Ontario Health reviewed and agreed with the suitability of our objectives and associated criteria.

We conducted our audit between January 2023 and September 2023. We obtained written representation from the Ministry and Ontario Health senior management that, effective November 20, 2023, they had provided us with all the information they were aware of that could significantly affect the findings or the conclusion of this report.

In arriving at the audit conclusion, we performed the following work at the Ministry and Ontario Health:

- interviewed management and staff responsible for managing and overseeing the delivery of emergency department services in Ontario;
- reviewed applicable policies, guidelines, legislation, reports and briefing notes related to emergency departments;
- reviewed strategic plans and related performance measure targets and results;
- reviewed funding structures and methodologies;
- obtained and analyzed various emergency department data, including number of visits, triage counts and levels, wait times and staffing counts; and
- reviewed initiatives and programs such as the Emergency Department Locum Program to help hospitals cover physician shortages, and the Pay for Results program to support innovation and practices that improve patient flow.

We also conducted site visits at the following hospital emergency departments, where we toured the emergency department, met with senior management and front-line staff responsible for the delivery of emergency department care, including physicians and nurses, and reviewed information and files related to patient safety and critical events, patient satisfaction, health human resources, and performance measures:

- Children's Hospital of Eastern Ontario (CHEO);
- Mount Sinai Hospital;
- The Hospital for Sick Children (SickKids);
- William Osler Health System (Brampton Civic Hospital and Etobicoke General Hospital); and
- Windsor Regional Hospital (Metropolitan campus and Ouellette campus)

Furthermore, we met with staff from the following hospitals to discuss specific initiatives and/or challenges faced in delivering emergency department care:

- Haliburton Highlands Health Services regarding their staffing challenges, use of the Emergency Department Locum Program and the permanent closure of their Minden Hospital emergency department on June 1, 2023;
- University Health Network and Sunnybrook Health Sciences Centre regarding their virtual emergency department initiative;
- William Osler Health System regarding its urgent care centre and virtual emergency department initiative; and
- Anson General Hospital regarding its use of the Emergency Department Locum Program to cover ongoing physician shortages.

We also met with staff from the following paramedic groups to discuss patient triage and ambulance offloading challenges at emergency departments:

- Peel Regional Paramedic Services;
- Toronto Paramedic Services;
- Essex-Windsor Emergency Medical Services; and
- Ottawa Paramedic Service.

Throughout our audit, we met with and reviewed information from various stakeholders to better understand the challenges of delivering high-quality and timely emergency care:

- Institute of Clinical Evaluative Sciences, a community of research, data and clinical experts who lead research in various areas of Ontario's healthcare system, including emergency department care;

- Canadian Association of Emergency Physicians, a national advocate for emergency medicine physicians; and
- Ontario Nurses' Association, a union representing approximately 68,000 nurses and health-care professionals who work in a variety of settings, including hospital emergency departments.

We conducted our work and reported on the results of our examination in accordance with the applicable Canadian Standards on Assurance Engagements—Direct Engagements issued by the Auditing and Assurance Standards Board of the Chartered Professional Accountants of Canada. This included obtaining a reasonable level of assurance.

The Office of the Auditor General of Ontario applies the Canadian Standards on Quality Management and, as a result, maintains a comprehensive quality control system that includes documented policies and procedures with respect to compliance with rules of professional conduct, professional standards and applicable legal and regulatory requirements.

We have complied with the independence and other ethical requirements of the Code of Professional Conduct of the Chartered Professional Accountants of Ontario, which are founded on fundamental principles of integrity, objectivity, professional competence and due care, confidentiality and professional behaviour.

4.0 Detailed Audit Observations

4.1 No Comprehensive Provincial Strategy Was in Place to Prevent Emergency Department Closures

4.1.1 There Were 203 Temporary Emergency Department Closures in the Past Year Due in Part to the Lack of a Comprehensive Strategy to Maintain Staffing Levels

Before 2019/20, unplanned closures of emergency departments were rare. However, between July 2022 and June 2023, 203 emergency departments in Ontario, involving 23 hospitals, closed temporarily, most in rural or remote areas. **Appendix 2** lists the hospitals that experienced a temporary emergency department closure and the total hours they were closed.

We found that most closures were for a period of 14 hours or less, typically from the evening until the following morning. Most hospitals indicated they closed their emergency department because of staffing challenges, particularly a shortage of nurses (see **Section 4.5**), and that some of these closures could have been prevented if more staff resources were available.

While many closures were short, we noted that some hospitals had to close their emergency department repeatedly. Some closures lasted for a longer period. For example, in 2022, South Bruce Grey Health Centre's Chesley site closed its emergency department for 57 days, and Glengarry Memorial Hospital closed its emergency department daily from 6 p.m. to 8 a.m. for 15 days.

According to provincial protocols and policies, when a hospital identifies an anticipated or unanticipated emergency department closure, it is required to notify Ontario Health, which in turn informs the Ministry. In addition, hospitals have to develop a patient management plan to mitigate risks to patient care while the emergency department is closed, for example by working with paramedic groups to send patients to a nearby hospital and having diversion policies to direct patients to other health-care options. However, prior to June 2023, even when the Ministry and Ontario Health learned of a pending emergency department closure, we found that there was no comprehensive province-wide and centralized mechanism or strategy in place to provide support to try to avoid the closure or to reduce its duration. (The one exception is when the closure can be addressed through the Emergency Department Locum Program, discussed further in **Section 4.1.2**.) Instead, the Ministry and Ontario Health relied on hospitals to manage these situations independently, typically by closing down their emergency department or using agency staff if possible (discussed further in **Section 4.5.3**). In June 2023, Ontario Health implemented an updated emergency department closure

policy to begin proactively identifying and addressing ongoing risks of further closures and working with hospitals to determine if there are ways to prevent or reduce closures.

Most of the emergency department closures occurred in smaller or remote communities, where the emergency department is the only viable option for local patients to access urgent care. Closures in rural or remote areas create risks to patients' health that increase in proportion to travel times to the next nearest emergency department. We noted that for the hospitals that had to close temporarily from July 2022 to June 2023 (see **Appendix 2)**, the next closest hospital was typically 30 to 45 minutes away, and in one case, North of Superior Healthcare Group's McCausland Hospital, the next closest emergency department was over an hour away.

RECOMMENDATION 1

To help ensure the stability and continuity of emergency department services across Ontario, especially in smaller or remote communities, we recommend that the Ministry of Health, in collaboration with Ontario Health and hospitals, evolve and regularly update a strategy or action plan to prevent emergency department closures through mechanisms and initiatives including supporting local communities in training and retaining their health-care workforce as well as building capacity in primary and community services.

MINISTRY RESPONSE

The Ministry of Health (Ministry) acknowledges the Office of the Auditor General of Ontario's recommendation to evolve and regularly update a strategy or action plan to prevent emergency department closures through mechanisms and initiatives. On February 2, 2023, the Government of Ontario announced Your Health: A Plan for Connected and Convenient Care, its plan to provide people with a better health-care experience. As part of the broader Health Human Resources Strategy, the Ministry has been working with Ontario Health to develop a strategic focus on supporting service delivery in emergency departments.

Further, part of this announcement included an investment to create up to 18 interprofessional primary care teams. This will help bridge the gap in accessing interprofessional primary care for vulnerable, marginalized and unattached patients to ensure they are able to connect to care where and when they need it. This investment of $60 million over two years, beginning in 2023/24, also will sustain direct service delivery in existing interprofessional primary care teams that are experiencing increased operating costs.

The Ministry recognizes the Ontario Medical Association (OMA) as the exclusive representative of physicians practising in Ontario. Under the OMA Representation Rights and Joint Negotiation and Dispute Resolution Agreement, the Ministry is required to consult the OMA to seek its advice about significant health-care policy and system issues that affect physicians. Further, changes related to physician compensation, including activities and accountabilities under non-fee-for-service agreements, are subject to the negotiations process between the parties set out in the Binding Arbitration Framework.

4.1.2 Rural and Remote Hospitals Have Been Relying Heavily on the Emergency Department Locum Program to Avoid Closures Even Though the Program Was Intended to Be Used as a Temporary Solution

To remain open, each emergency department must have at least one physician available. In 2006, in an effort to avert emergency department closures due to physician unavailability, the Ministry created the Emergency Department Locum Program (Locum Program). The goal of the program was to provide urgent locum coverage on an interim basis to hospitals facing significant challenges covering emergency department shifts. Since the introduction of the Locum Program in 2006, only four unplanned emergency department

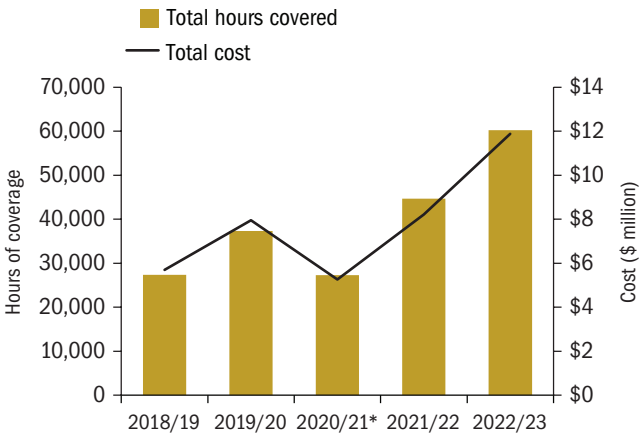
closures were a result of physician unavailability, while the majority of the 203 closures noted in **Section 4.1.1** were caused by a shortage of nursing staff.

As of August 2023, the Locum Program had approximately 274 physicians travelling to work at emergency departments struggling to maintain physician staffing levels. To be eligible to work in the program, emergency department physicians must be actively working in an emergency department in Ontario and cannot take shifts through the Locum Program that overlap with their regular work commitments. These physicians are paid a premium hourly rate directly from the Locum Program (in addition to what the requesting hospital pays for physician coverage), and also may receive compensation for time spent travelling to and from rural and remote sites.

Figure 6 shows the Locum Program's hours of coverage and costs over the past five years. In 2018/19, the program provided approximately 27,400 hours of coverage, which more than doubled to over 60,200 hours in 2022/23. During the same period, the cost of running the Locum Program increased by about 125% to over $9.1 million.

Generally, the hospitals that have been requesting support through the Locum Program are smaller rural and remote hospitals. In discussions with administrators at these hospitals, we found that a primary reason for their increased use of the Locum Program has been higher rates of local physicians retiring or leaving the community in the last couple of years. That has forced hospitals to rely on the Locum Program to fill longer-term physician vacancies even though the program was intended to be used as a temporary measure.

We noted that some hospitals have become particularly reliant on the Locum Program to run their emergency departments. For example, 12 hospitals requested and received at least 500 hours of coverage through the program in each of the last five years, and two of these hospitals had over 1,000 hours of coverage in each of those years. Furthermore, in 2022/23 the top 10 hospitals using the Locum Program all requested and received at least 2,500 hours of physician coverage, as seen in **Figure 7**.



We reached out to hospitals that were regular and significant users of the Locum Program, such as Anson General Hospital, a small northern hospital in Iroquois Falls that received almost 5,000 hours of coverage through the Locum Program in 2022/23. The hospital administrators informed us that without that coverage, they would have had to shut down their emergency department frequently because they otherwise would have had no physician available.

As seen in **Figure 8**, Ontario Health estimates that the Locum Program has helped to avert over 800 emergency department closures over the last five years, with over 400 of those closures averted in 2022/23.

While the Locum Program has been a strong resource in helping hospitals avoid emergency department closures, relying on this temporary program is not necessarily a sustainable option for running an emergency department. For example, as noted in **Figure 7**, Haliburton Highlands Health Services (HHHS) has been significantly reliant on the Locum Program to operate its emergency departments at its two sites (Haliburton and Minden). In the last five years, the Locum Program provided HHHS with approximately 11,500 hours of physician coverage, including almost 4,000 hours in each of 2019/20 and 2022/23. Despite its reliance on the Locum Program, HHHS still had to

Figure 6: Emergency Department Locum Program—Hours of Coverage and Cost, 2018/19–2022/23

Source of data: Ontario Health

* In 2020/21, both hours of coverage and cost decreased because the number of emergency department visits temporarily dropped due to the COVID-19 pandemic.

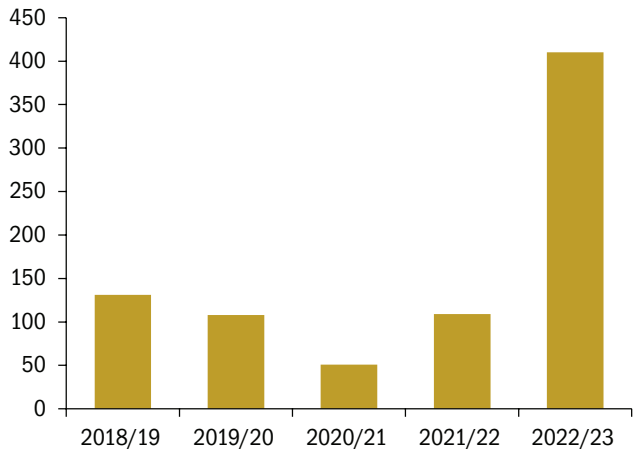


Figure 7: Top 10 Hospital Users of the Emergency Department Locum Program, 2022/23

Source of data: Ontario Health

Region	Hospital	Hours Requested	Hours Covered	% of Requested Hours Covered
North East	1. Anson General Hospital	4,981	4,873	98%
East	2. Deep River and District Hospital	6,124	4,504	74%
East	3. Haliburton Highlands Health Services (Haliburton and Minden sites)	5,476	3,936	72%
East	4. St. Francis Memorial Hospital	6,286	3,841	61%
North East	5. Notre-Dame Hospital	4,120	3,652	89%
West	6. Tillsonburg District Memorial Hospital	4,426	3,058	69%
North West	7. Sioux Lookout Meno Ya Win Health Centre	4,929	2,892	59%
East	8. North Hastings Hospital	4,211	2,855	68%
North East	9. Sensenbrenner Hospital	3,349	2,681	80%
West	10. Grey Bruce Health Services (Lion's Head site)	3,185	2,633	83%

Figure 8: Number of Emergency Department Closures Averted Through Locum Program, 2018/19–2022/23*

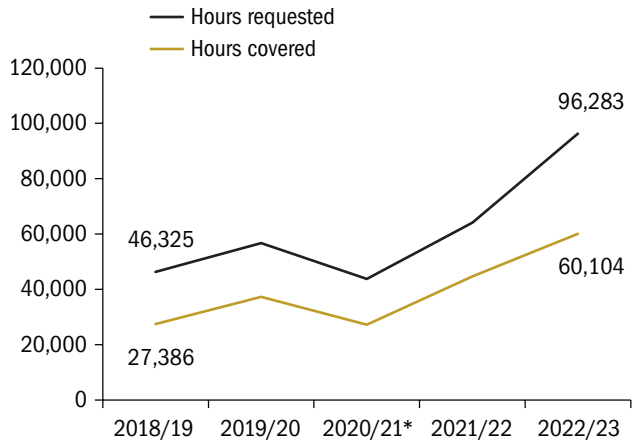
* Based on the number of times the Emergency Department Locum Program was able to fill a physician shift to keep an emergency department open.

permanently shut its Minden emergency department on June 1, 2023 due to ongoing challenges with hiring and retaining physicians and nurses, and then consolidate staffing resources at its primary Haliburton site. We met with HHHS administrators and noted that even with the consolidation of its two emergency departments, HHHS expects to continue using the Locum Program to cover unfilled shifts.

4.1.3 The Locum Program Cannot Keep Pace with Hospital Demand



In addition to reviewing the hours covered by the Locum Program, we reviewed how well the Locum Program was able to keep up with hospital requests over the last five years. As seen in **Figure 9**, while hospitals requested over 96,000 hours of support from the Locum Program in 2022/23, the program was only able to cover approximately 60,000 hours.

Ontario Health informed us that due to an overall shortage of emergency department physicians, the Locum Program prioritizes hospitals with the most urgent needs, and considers requests from hospitals in northern communities before those in the south. In all cases, the Locum Program can only be used to fill vacant positions at emergency departments, not increase the number of overall physician positions.

When the Locum Program could not keep pace with requests, hospitals often had to reach out to Health Force (formerly the HealthForceOntario Marketing and Recruitment Agency), which is part of Ontario Health, or nearby hospitals and clinics to fill emergency department shifts and avoid closures. However, like the Locum Program, this coverage only provides temporary help and is therefore not sustainable. Hospitals told us

Figure 9: Hours Requested and Hours Covered by Emergency Department Locum Program, 2018/19–2022/23

Source of data: Ontario Health

* Both hours requested and covered decreased in 2020/21 because the number of emergency department visits temporarily dropped during the COVID-19 pandemic as fewer patients with less-urgent needs sought emergency care.

there will continue to be significant risks of closure if physicians do not start filling permanent positions in rural and remote communities.

RECOMMENDATION 2

To enable consistent and reliable access to emergency department physician care across Ontario and prevent future emergency department closures due to physician staffing, we recommend that the Ministry of Health, in collaboration with Ontario Health and hospitals:

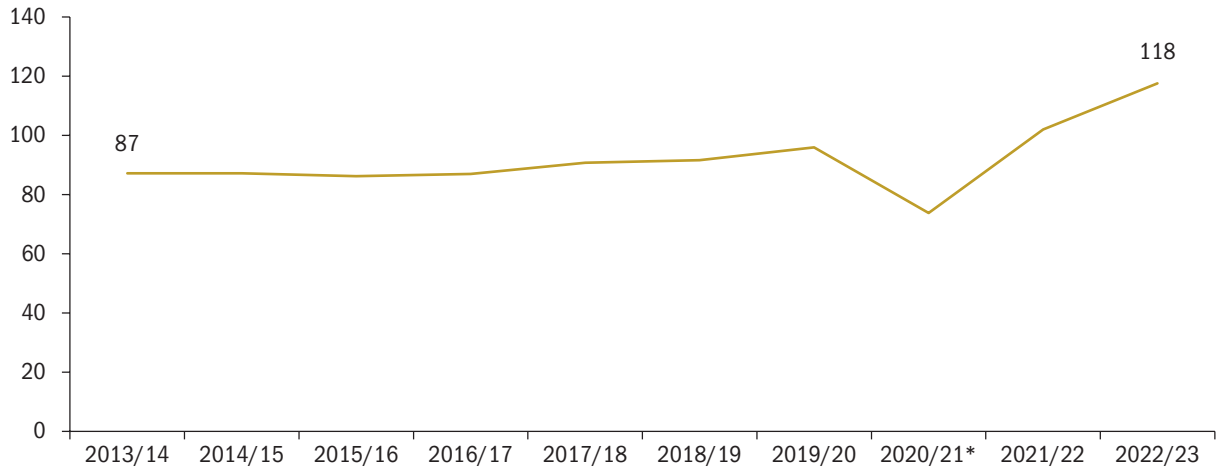
- conduct a comprehensive review of the usage of the Emergency Department Locum Program to identify systemic issues with physician staffing across the province and develop a go-forward strategy; and
- implement mechanisms to incentivize physicians to take permanent roles in rural and remote emergency departments.

MINISTRY RESPONSE

The Ministry of Health (Ministry) acknowledges the Office of the Auditor General of Ontario's recommendation to review the Emergency Department Locum Program.

The Ministry recognizes the Ontario Medical Association (OMA) as the exclusive representative of physicians practising in Ontario. Under the OMA Representation Rights and Joint Negotiation and Dispute Resolution Agreement, the Ministry is required to consult the OMA to seek its advice about significant health-care policy and system issues that affect physicians. Further, changes related to physician compensation, including activities and accountabilities under non-fee-for-service agreements, are subject to the negotiations process between the parties set out in the Binding Arbitration Framework.

4.2 Wait Times for Emergency Care Have Gotten Longer



4.2.1 Wait Times to See a Physician Generally Increased, but Varied Significantly Across Ontario

Timely access to a physician assessment is critical in the delivery of high-quality patient care. A patient's first comprehensive assessment by a doctor helps determine what next steps are required, such as further testing, prescribing medication, or administering care. According to an Ontario study by the Institute for Clinical Evaluative Sciences, patients facing longer wait times for a physician initial assessment have a higher likelihood of needing inpatient admission to a hospital. The study also found that there was a slightly higher risk of death for each additional hour a patient waited in the emergency department.

Our review of wait-time data noted that the average wait times to see a physician were relatively stable prior to the COVID-19 pandemic, but have increased

Figure 10: Average Wait Time for a Physician Initial Assessment, 2013/14–2022/23 (minutes)

Source of data: Ontario Health

Note: This chart shows the average wait time for a physician initial assessment for all patients at different acuity levels (CTAS 1 to CTAS 5).

* The average wait time for an initial physician assessment declined in 2020/21 as the COVID-19 pandemic discouraged patients with less urgent symptoms from visiting the emergency department.

significantly since then. We noted that high-acuity patients (CTAS 1, as discussed in **Section 2.2**) were typically able to see a physician in less than 30 minutes. However, in 2022/23 patients waited an average of 118 minutes (or almost two hours) after being triaged to receive their physician initial assessment, as seen in **Figure 10**. This compares with approximately 87 minutes in 2013/14, which is about 30 minutes longer than 10 years earlier. We also reviewed the 90th percentile wait time (the longest wait time after the top 10% of wait times are removed) and found that patients waited up to 257 minutes (or almost four and a half hours) to be seen by a physician in 2022/23, up from 183 minutes (or about three hours) in 2013/14.

Furthermore, the average wait time for an initial assessment by a physician varied widely by region and by hospital (see **Figure 11**). For example, patients living in the Champlain region waited more than twice as long to receive their physician initial assessment compared to patients living in the Central and Central West regions.

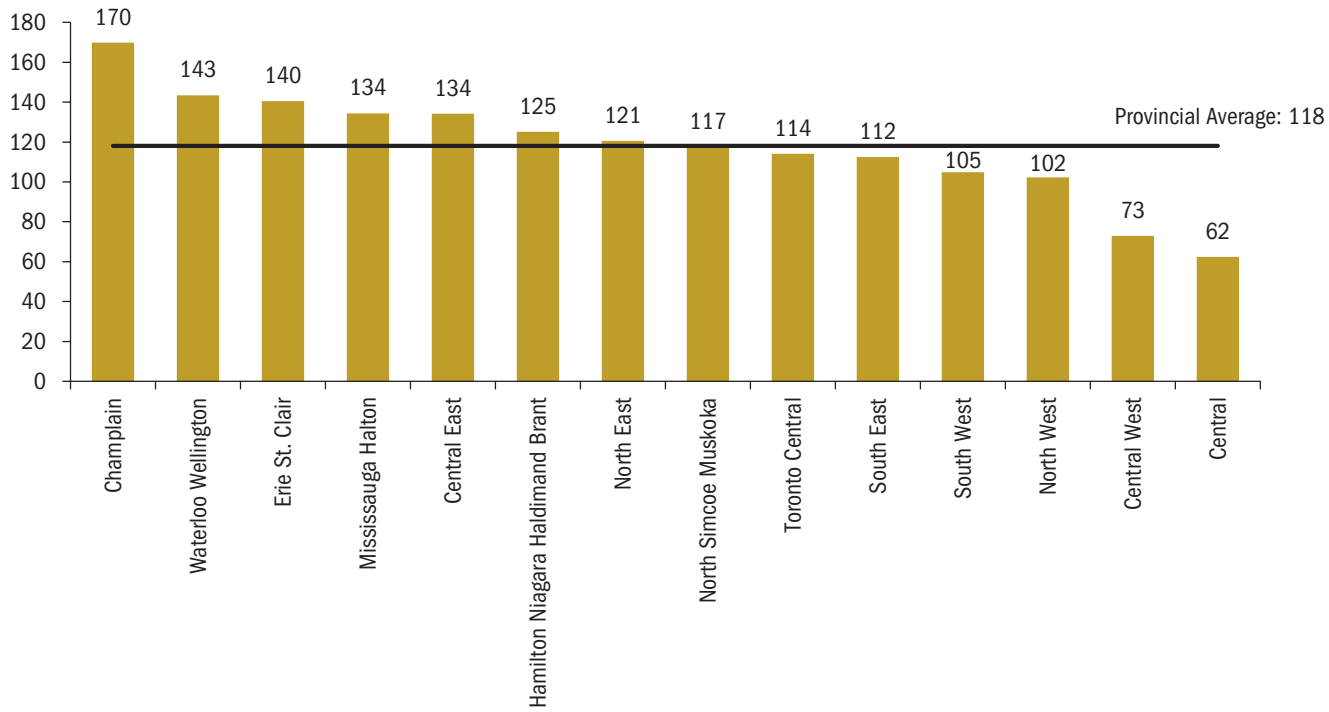


Figure 12 shows the average wait time for a physician initial assessment across the hospitals we visited during our audit, while **Appendix 3** shows the wait time across all of Ontario's emergency departments. Again, we noted significant variations of access to emergency care by hospital, with patients visiting Windsor Regional Hospital's Metropolitan campus waiting an average of 247 minutes (or over four hours) for a physician assessment—which was more than five times longer than the average 45-minute wait at William Osler Health System's Etobicoke General Hospital emergency department.

In speaking with administrators from Windsor Regional Hospital, we noted that one of the key reasons for their long wait times to see a physician was the lack of available primary care in the region, specifically in the evenings and on weekends. This resulted in patients using the emergency department for symptoms that would typically be treated in a primary care setting or to access diagnostic imaging. Furthermore, we found that physician payment structures may also impact the ability of patients to receive a physician assessment on a timely basis, as discussed further in **Section 4.5.4**.

As a result of the lengthening wait times, we found that the so-called left-without-being-seen rate increased as patients chose to leave an emergency

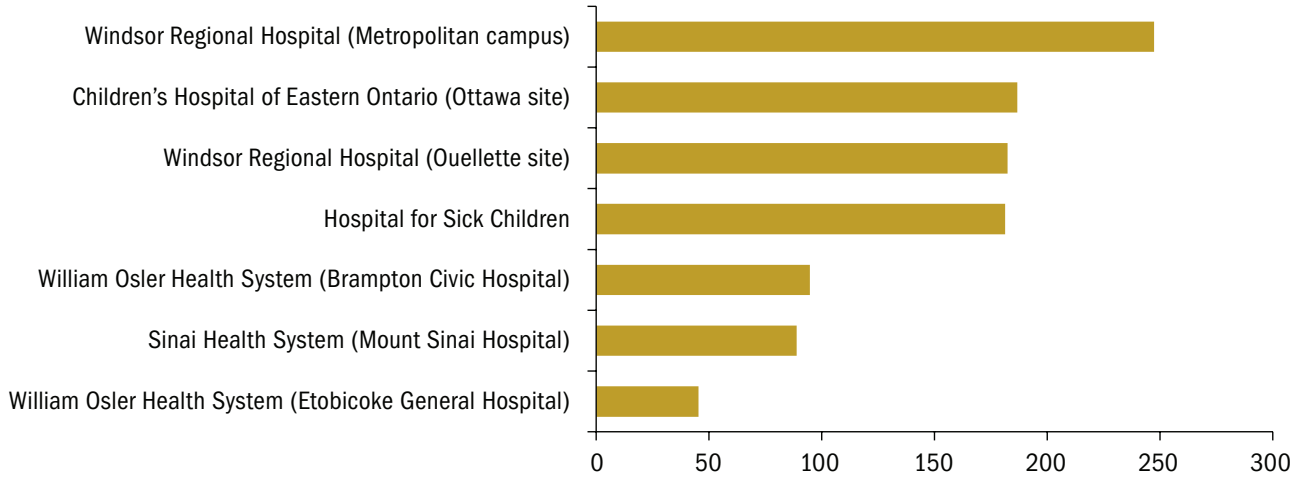
Figure 11: Average Wait Time for Physician Initial Assessment by Sub-region, 2022/23 (minutes)

Source of data: Ontario Health

Note: Regions correspond to the boundaries of the Province's 14 Local Health Integration Networks (LHINs). While the Ontario government merged the LHINs into five Ontario Health regions in December 2019, Ontario Health has continued to report regional wait-time data by LHIN.

Figure 12: Average Wait Time for a Physician Initial Assessment by Selected Hospitals, 2022/23 (minutes)

Source of data: Ontario Health



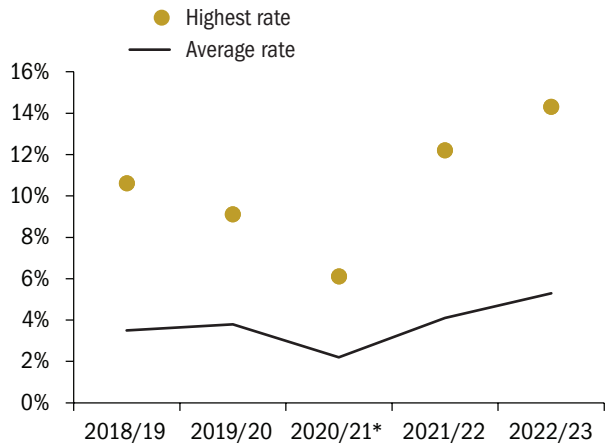


Figure 13: Percentage of People Who Left the Emergency Department without Being Seen, 2018/19–2022/23

Source of data: Ontario Health

Note: "Highest rate" means the emergency department in Ontario with the highest percentage of people who left without being seen.

* In 2020/21, both the average and highest rates of people who left the emergency department without being seen decreased as patient visits dropped due to the COVID-19 pandemic.

department without seeing a physician. As shown in **Figure 13**:

- The average left-without-being-seen rate increased from 3.5% in 2018/19 to 5.3% in 2022/23.
- Significantly long wait times to be assessed by a physician was the key contributing factor to higher left-without-being-seen rates. For example, in 2022/23 one hospital had 14.3% of patients leaving the emergency department without being seen, almost three times higher than the average province-wide rate. The wait time for a physician initial assessment at this hospital was approximately 175 minutes (or almost three hours), one of the longest wait times among hospitals.

While some of these patients chose to leave because they no longer required emergency care or decided to seek care elsewhere (for example, at their primary care provider), some patients who did require emergency care decided to leave because of long wait times and returned to the emergency department in a worse condition (see **Section 4.3.1**).

4.2.2 Unnecessary Emergency Department Visits Contributed to Long Wait Times and High Care Costs

The emergency department is typically the only option for high-acuity patients who need urgent and comprehensive care. Low-acuity patients may also choose to visit an emergency department if they have no other timely option and still want to be seen as soon as possible. Emergency departments will often safely delay care for these patients until higher-acuity patients are seen.

We noted that lower-acuity patients, specifically those assigned a CTAS 4 (less urgent) or CTAS 5 (non-urgent) level by a triage nurse, accounted for about 23% (or 1.29 million) of all emergency department visits in 2022/23, as seen in **Figure 1**. Some of these patients, such as those experiencing a sore throat or cold, chose to visit the emergency department because it was the only option available at the time. Furthermore, emergency departments do not typically refer patients to more appropriate care settings until after they have assessed and treated the patients in the emergency department, although we did note some hospitals had patient diversion practices in place for specific patient populations (see **Section 4.7.1**).

We also noted that the independent, not-for-profit Canadian Institute for Health Information (CIHI) conducted a study in 2014 that found that in cases where emergency department patients were treated and discharged, one in five could have been treated in a doctor's office or a clinic. Some of the common issues among these patients related to colds, sore throats and ear infections. These unnecessary visits to emergency departments have continued to impact the ability of hospitals to provide timely care to other patients.

Hospital staff and emergency department physicians that we spoke with indicated that some lower-acuity patients choose to visit the emergency department to access physician care because their own primary care provider may not be available in the evenings or weekends, or they cannot get any appointment on a timely basis. For example, Windsor Regional Hospital informed us that they had many patients who chose to visit an emergency department instead of

waiting to get an appointment with their family doctor or to avoid taking time off from work. According to the most recent health-care survey completed by the Ministry in 2019, only 41% of Ontarians were able to get an appointment with their primary care provider on the same or next day.

While patients need to have unrestricted access to emergency departments when they feel they need emergency care, it would be prudent for the Ministry and Ontario Health to determine the underlying reasons why lower-acuity patients are visiting the emergency department rather than other health-care settings (for example, primary care or walk-in clinics) and then identify ways to divert those patients to those alternative care options. This will help emergency departments focus on assessing and treating sicker patients, and help reduce overall costs in the health-care system since emergency department care comes at a significant cost. According to recent data from the CIHI, the direct cost of an emergency department visit in Ontario was approximately $165 (as noted in **Section 2.3**), almost three times higher than alternative options like primary care, which cost about $56 per visit.

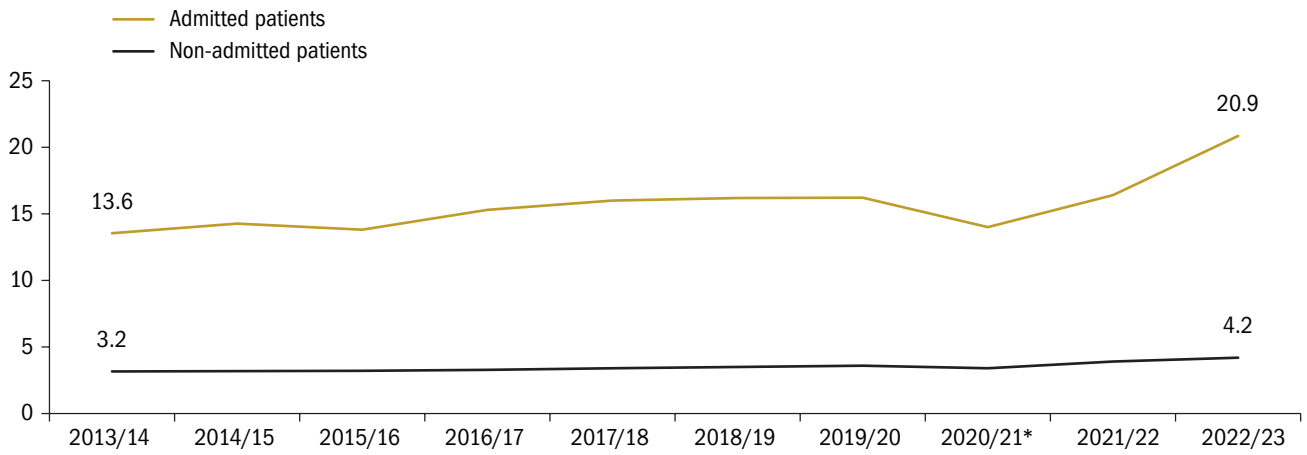
RECOMMENDATION 3

To offer equitable and timely access to emergency department care for patients who require it, we recommend that the Ministry of Health, in collaboration with Ontario Health, work with hospitals to identify and address challenges, such as the lack of timely access to primary care and lack of awareness of other health-care options, to help ensure lower-acuity patients receive care in the most appropriate care setting.

MINISTRY RESPONSE

The Ministry of Health (Ministry) acknowledges the Office of the Auditor General of Ontario's recommendation to work with hospitals to identify and address challenges to help ensure that lower-acuity patients receive care in the most appropriate care setting. On February 2, 2023, the government of Ontario announced Your Health: A Plan for Connected and Convenient Care, its plan to provide people with a better health-care experience. Part of this announcement included an investment to create up to 18 interprofessional primary care teams. The Ministry will use this investment to help address the Office of the Auditor General of Ontario's recommendation by bridging the gap in accessing interprofessional primary care for vulnerable, marginalized and unattached patients to ensure they are able to connect to care where and when they need it. This investment of $60 million over two years, beginning in 2023/24, will also sustain direct service delivery in existing interprofessional primary care teams that are experiencing increased operating costs.

The Ministry recognizes the Ontario Medical Association (OMA) as the exclusive representative of physicians practising in Ontario. Under the OMA Representation Rights and Joint Negotiation and Dispute Resolution Agreement, the Ministry is required to consult the OMA to seek its advice about significant health-care policy and system issues that affect physicians.



4.2.3 Medical Directives That Help Reduce the Time Patients Spend in Emergency Departments Were Not Used Consistently across Hospitals

Patients, regardless of whether they have to be admitted to the hospital or can be discharged after their emergency department visit, have had to spend significantly more time in the emergency department than they did prior to the COVID-19 pandemic. **Figure 14** shows the average time a patient spent in an emergency department for each visit over the last 10 years (2013/14–2022/23), from the time they were triaged by a nurse to when they left the emergency department. We found that:

- Patients who did not need to be admitted to an inpatient unit spent an average of 4.2 hours in an emergency department in 2022/23, over 30% more than the average 3.2 hours in 2013/14.

Figure 14: Average Time Spent in the Emergency Department, 2013/14–2022/23 (hours)

Source of data: Ontario Health

* The average time patients had to spend in emergency departments dipped temporarily in 2020/21 as the number of visits decreased during the COVID-19 pandemic.

- Patients requiring inpatient admission spent an average of almost 21 hours in the emergency department in 2022/23, or 50% more time than the average 14 hours in 2013/14. (Wait times for inpatient admission are discussed further in **Section 4.2.4**.)

While some of the time spent waiting in an emergency department is unavoidable (for example, waiting for blood tests or diagnostic imaging results), we found that hospitals do not have or use medical directives consistently to help speed up patient care.

Medical directives, which are developed by a hospital's emergency department physicians, authorize nurses and other hospital clinicians (such as physician assistants) to begin the process of assessing patients and performing certain procedures before their physician initial assessment. Common examples include ordering blood tests or imaging and administering pain control medication. For example, a hospital may have a medical directive that indicates that patients presenting with cardiac chest pain should be given specific medication and sent for blood tests while patients who experienced an acute injury, such as a fall, in the previous 48 hours should be sent for an x-ray at the time of triage.

Empowering nurses and other hospital clinicians to act before the physician initial assessment allows certain basic emergency department testing and procedures to be completed more quickly and efficiently, leading to better patient flow as well as improved patient care because physicians can administer treatment quicker.

Based on our review of medical directives at the emergency departments we visited, we noted significant variations in their use. For example:

- While all of the sites had medical directives, the number of directives in use ranged from nine to 37 depending on hospital, with some sites using the directives to address more specific conditions such as low blood sugar level.
- While data on the use of medical directives is not tracked centrally at hospitals, we noted that some may be using the directives more frequently to initiate care. For example, one hospital indicated that medical directives were used to begin providing patient care for about 50% of emergency department visits.

While medical directives are not always applicable (such as in cases where a physician assessment is needed for a patient with multiple symptoms), there is no formal province-wide system to share best practices on the use of medical directives among hospitals to reduce the amount of time that patients spend in an emergency department.

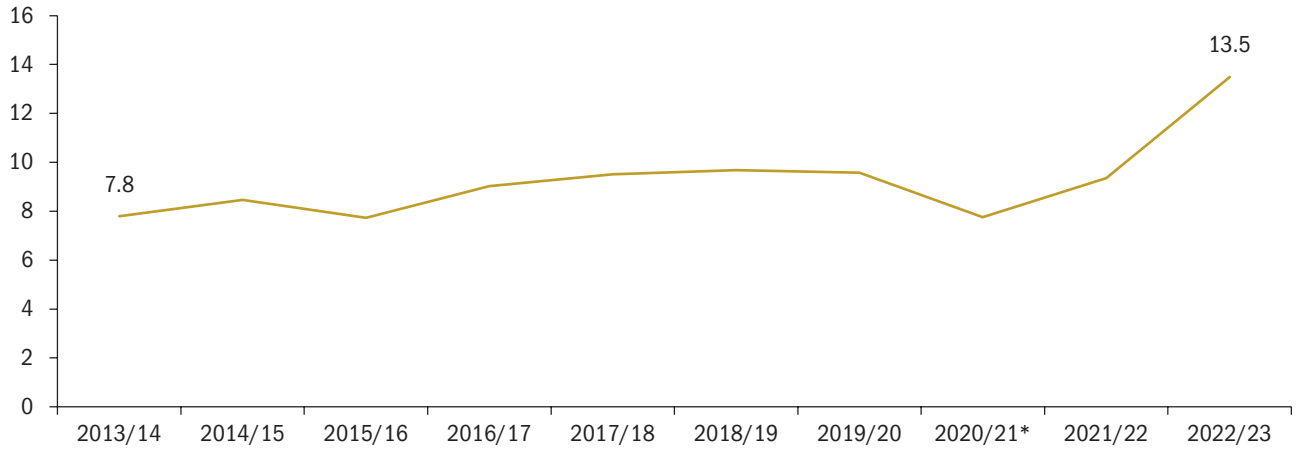
RECOMMENDATION 4

To reduce the amount of time that patients spend in an emergency department, we recommend that Ontario Health, in collaboration with hospitals and emergency department physicians:

- review existing practices and usage of medical directives across hospitals; and
- develop and regularly update a set of standard medical directives that have shown success for hospital use when possible.

ONTARIO HEALTH RESPONSE

Ontario Health acknowledges the Office of the Auditor General of Ontario's recommendation to work with hospitals and emergency departments to review existing practices and usage of medical directives and develop standard medical directives that have shown success. Ontario Health will continue to support sites interested in implementing medical directives where this resource is identified as an effective strategy for emergency department operations and flow performance.



4.2.4 Emergency Patients Sometimes Had to Wait More than 24 Hours for an Inpatient Bed

Most patients who visit an emergency department are discharged the same day. However, some patients are admitted and transferred from the emergency department to an inpatient unit at the hospital for continuous monitoring or longer-term treatment. About 650,000 patients, representing 12% of all emergency department visits, required an inpatient admission in 2022/23 (compared with about 568,000 patients admitted in 2013/14).

As seen in **Figure 15**, in 2022/23 patients waited an average of 13 hours for an inpatient bed, a significant increase from the approximately eight to 10 hours they waited prior to the COVID-19 pandemic. When considering the 90th percentile wait time (the longest wait time after the top 10% are removed), patients waited 35 hours for an inpatient bed, compared with about 21 hours in 2013/14. Aside from the added strain this puts on patients and anyone accompanying them, the presence of people waiting for beds negatively affects the ability of the emergency department staff to focus on incoming patients.

Figure 15: Average Wait Time for Inpatient Bed in Ontario, 2013/14–2022/23 (hours)

Source of data: Ontario Health

* Wait times for an inpatient bed fell in 2020/21 as fewer patients visited the emergency department during the COVID-19 pandemic.

Figure 16: Average Wait Time for Inpatient Bed in Ontario by Sub-region, 2021/22–2022/23 (hours)

Source of data: Ontario Health

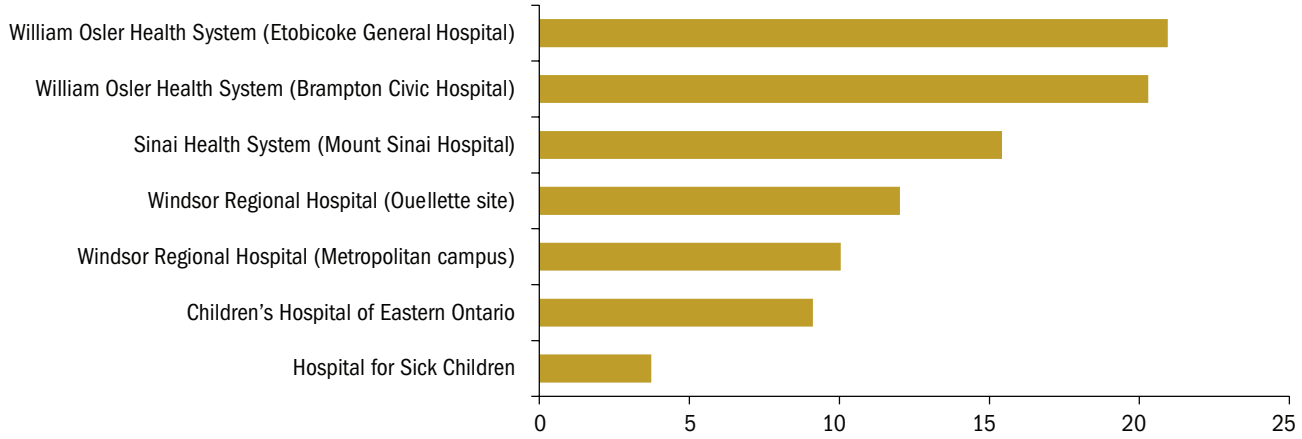
Region	Average Wait Time			Longest Wait Time
	2021/22	2022/23	Change	2022/23
Central West	13.0	18.8	5.8	20.8
Central East	12.4	18.9	6.5	24.4
Hamilton Niagara Haldimand Brant	12.0	15.8	3.8	44.4
Central	10.9	15.1	4.2	20.4
Mississauga Halton	10.8	21.3	10.6	28.1
Toronto Central	9.3	12.7	3.4	23.3
Champlain	9.1	10.9	1.9	32.5
North West	8.9	10.3	1.3	11.4
North Simcoe Muskoka	8.6	11.7	3.1	14.5
North East	7.8	9.9	2.1	13.8
Waterloo Wellington	7.1	12.3	5.3	15.4
South East	6.7	9.3	2.6	13.9
South West	5.8	8.8	2.9	25.1
Erie St. Clair	4.9	9.1	4.2	12.0

Note: Regions in this table correspond to the boundaries of the 14 Local Health Integration Networks (LHINs). While the Ontario government merged the 14 LHINs into five Ontario Health regions in December 2019, regional wait-time data has continued to be reported by LHIN.

We also noted significant differences in wait times for an inpatient bed across regions and hospitals. As shown in **Figure 16**:

- Patients' wait times in emergency departments for an inpatient bed ranged from about nine to 21 hours, on average, in 2022/23, depending on where in the province they lived. This was a significant increase from five to 13 hours in 2021/22. During this time, patients could be taking up an emergency assessment room or waiting in a wheeled stretcher in a hallway.
- The wait times varied widely by hospital. For example, while the average wait time for an inpatient bed in the Hamilton Niagara Haldimand Brant region was 15.8 hours in 2022/23, some emergency department patients in the region had to wait almost 44 hours.

As seen in **Figure 17**, the wait times for an inpatient bed across the hospitals we visited ranged from 10 to 21 hours for general hospitals and 3.7 to 9.2 hours for pediatric hospitals.



Lack of Inpatient Beds and Hallway Patients

One factor contributing to long wait times for inpatient beds is the lack of available hospital beds in Canada relative to the population. In 2021, Canada had 2.55 hospital beds per 1,000 people, placing it eighth among the 38 countries in the Organisation for Economic Co-operation and Development (OECD). In comparison, France, Germany and Poland had more than double Canada's rate with 5.5 beds per 1,000 people. The OECD does not report information on a provincial level, but Ontario is estimated to be at or lower than the Canadian average.

The long wait time for inpatient beds has been a long-standing issue in Ontario. The Premier's Council on Improving Healthcare and Ending Hallway Medicine, created by the Province in 2018, said in its January 2019 report that hallway health care was a significant problem in Ontario. The report found that on any given day, there were at least 1,000 patients receiving health care in hospital hallways, including in emergency departments.

Figure 17: Average Wait Time for an Inpatient Bed at Selected Hospitals in Ontario, 2022/23 (hours)

Prepared by Office of the Auditor General of Ontario

Based on our analysis of current data and observations at some of the emergency departments we visited, the issue of "hallway patients" continues to be a challenge, creating a significant risk to the general public because it decreases the space in which emergency department staff can treat new patients. The overcrowding also creates added stress for staff, patients and their families. A review of crowding in emergency departments published in 2018 in *PLOS ONE*, an international research journal, noted that crowding is generally associated with poorer patient outcomes.

During our site visits to emergency departments, we found that staff had to keep patients on wheeled stretchers as they waited for an inpatient bed. For example, during our visit to William Osler Health System's Brampton Civic Hospital, we noted a significant number of elderly patients being treated in tight hallways while ambulance paramedics struggled to bring in additional patients. On the day of our tour, we noted that 46 patients were stuck in the emergency department, receiving care in hallways or assessment rooms, because of a lack of available inpatient hospital beds. Since emergency department staff continued to be responsible for these patients, their ability to treat new patients in a timely manner was impacted.

Alternate Level of Care Patients

Another contributing factor to the long wait times for inpatient beds is the relatively high number of patients classified as alternate level of care (ALC). These patients are in a hospital bed but do not require hospital-level care and could be seen and treated elsewhere if space was available in a more appropriate facility, for example, a long-term care home. In our 2010 audit Discharge of Hospital Patients, we noted that ALC patients accounted for approximately 16% of the total number of days patients were hospitalized in Ontario. In comparison, the ALC rate in Ontario hospitals was approximately 15% in 2022/23, indicating a very slight improvement in reducing the impacts of ALC patients on inpatient admissions in the last 13 years.

RECOMMENDATION 5

To improve patient flow within emergency departments and reduce wait times for inpatient beds, we recommend that the Ministry of Health work with Ontario Health and hospitals to expand the capacity of inpatient beds and increase the availability of community resources to reduce the need to treat patients in hallways, and speed up the transfer of inpatients to more appropriate facilities.

MINISTRY RESPONSE

The Ministry of Health (Ministry) acknowledges the Office of the Auditor General of Ontario's recommendation to expand the capacity of inpatient beds and increase the availability of community

resources to reduce the need to treat patients in hallways, and speed up the transfer of inpatients to more appropriate facilities.

The Ministry remains committed to working with Ontario Health to support the hospital sector and to improve access to the right level of care for patients. In 2023/24, Ontario invested up to $1.5 billion in funding to support the continued operation of over 3,500 acute, post-acute and critical-care beds. The Ministry worked closely with Ontario Health to support bedded capacity planning linked to this investment to ensure that the right mix of acute and post-acute beds were provided where they are most needed and would be responsive to patient-care needs. This enables patient flow, provides access to the right level of care in the appropriate care setting, and bolsters the hospital sectors' ability to respond to arising pressures or increasing demand for services, which will help reduce the need to treat patients in hallways.

In 2022/23, the Ministry began funding Ontario Health to implement various alternate level of care (ALC) and patient flow initiatives targeting a reduction in the ALC rate. The initiatives span five categories: capacity maximization, admission avoidance, discharge supports, the development of local strategies, and home and community care. The Ministry has provided Ontario Health, as system administrators, the flexibility within these initiatives to direct funding where it is most impactful and is responsive to the evolving needs of the health system as a whole. The ALC initiatives are focused on providing the right level of care in the right setting and supporting different sectors of the health system to work in cohesion for the benefit of the patient.

The government has also been committed to ending hallway health care and has made a targeted investment into regions particularly struggling with this issue. This dedicated investment began in 2020/21 with a one-time investment to support the creation of an additional 129 hospital beds to increase hospital capacity in the Durham-Scarborough and London regions to target hallway health care. In 2023/24, this investment was made permanent.

Finally, expansion of inpatient capacity is a key component of the Ministry's 10-year capital plan. As part of this plan, the Ministry is investing in 50 major hospital development projects that will add another 3,000 new hospital beds in Ontario. Ontario's health capital investments over the next 10 years will lead to $40 billion in health infrastructure across the province.

4.3 Long Wait Times Impacted the Quality of Emergency Department Care, Resulting in Poor Patient Outcomes

4.3.1 Some Patients Returned to Emergency Departments within a Week in Worse Health

In 2016, Ontario Health introduced the Emergency Department Return Visit Quality Program (Quality Program), which was designed to build a culture of continuous quality improvement in emergency departments across the province.

To identify areas for improvement, the Quality Program requires participating hospitals to report to Ontario Health the reasons why patients return to emergency departments soon after their initial visit. The two types of return visits as defined in the program are:

- An emergency department return visit within 72 hours of discharge, and the return visit results in an inpatient admission.
- An emergency department return visit within seven days of discharge, and the return visit results in an inpatient admission and a sentinel diagnosis relevant to the diagnosis documented in the initial visit. A sentinel diagnosis is one that is severe and significant, such as a heart attack or pediatric sepsis (a bodily response to a serious infection that is considered life-threatening).

Each year, participating hospitals are required to audit all return visits with a sentinel diagnosis within seven days as well as a random selection of return visits within 72 hours. At least 50 return visits must be audited at each hospital and a summary sent to Ontario

Figure 18: Examples of Poor Patient Outcomes

Prepared by the Office of the Auditor General of Ontario

Patient Story	Patient Outcome
A patient reporting recurring episodes of abdominal pain was discharged from the emergency department after it was determined that the blood work, vital signs and a physical exam showed no concerns. A physician only examined the patient in the waiting room and didn't provide a follow-up plan or request outpatient imaging.	The patient returned two days later with a ruptured appendix that required emergency surgery.
A patient arrived at the emergency department complaining of difficulty swallowing. The patient waited for over five hours and, due to the long wait time, decided to take a taxi to another hospital.	Staff at the second hospital determined the patient needed a breathing tube and admitted the patient to the critical care unit.
A clinic referred a patient with a possible hip fracture to the emergency department. The patient received an X-ray about an hour after being triaged but was not seen by a physician until a further nine hours later. The physician then sent the patient for a CT scan, but because of the time already spent in the emergency department the patient decided to leave the hospital.	The patient received a CT scan as an outpatient and was eventually admitted for surgery the following day.
A patient at the emergency department presented with acute and chronic abdominal pain. A CT scan was ordered, but due to a long wait time for the scan the patient decided to leave and return the next day.	After returning to the emergency department for a CT scan the next day, the patient was diagnosed with a strangulated hernia and required inpatient admission.
A patient went to the emergency department with a skin reaction to chemotherapy. While the patient was discharged after receiving treatment, there were no discharge instructions on the record. The patient returned to the same emergency department the following day with the same symptoms. However, likely due to an expected long wait time, the patient left before receiving treatment.	The patient went to another hospital emergency department on the same day and was admitted as an inpatient.
Emergency department staff determined a patient had an obstructing kidney stone, but discharged the patient with a planned follow-up because there was no inpatient bed available.	The patient returned to the emergency department the next day with increased pain and was admitted to the hospital.

Note: These examples are based on a review of the documentation related to the Emergency Department Return Visit Quality Program, as well as discussions with staff at select hospitals we visited.

Health. These return visits may be the result of patients who left the emergency department without being seen by a physician due to long wait times during their initial visit (see **Section 4.2.1**).

We noted that in 2022, 1,135, or about 20%, of the 5,198 audits of return visits identified a quality-of-care issue or adverse event such as patient mismanagement (for example, lack of reassessment of patients), a delayed or missed diagnosis or an unsafe discharge decision. These audits included 274 return visits with a sentinel diagnosis, 104 of which identified a quality-of-care issue or an adverse event had occurred.

We reviewed the details of the audits performed by hospitals over the last five years and noted numerous examples where long wait times to see a physician, a lack of access to timely patient testing and a lack of inpatient bed availability resulted in poor patient outcomes. We also noted additional examples of poor patient outcomes during our work with hospitals (see **Figure 18**). In some instances, patients left emergency departments due to lengthy wait times, but returned shortly after their initial visits and required emergency surgery and hospital admission.

4.3.2 Hospitals Did Not Consistently Track and Report Emergency Department Return Visits and Related Quality-of-Care Issues

Participation in the Quality Program is not mandatory for all hospitals with an emergency department. Only emergency departments that participate in the Pay for Results (P4R) program (see **Section 4.6**) are required to participate in the Quality Program. At the time of our audit, 75 emergency departments participated in the Quality Program, so about half of Ontario's emergency departments were not required to report their data on return visits to Ontario Health. As such, Ontario Health did not know whether those hospitals internally audited their emergency department return visits to identity any issues related to quality-of-care or adverse events.

Furthermore, while the goal of the Quality Program is to foster a culture of continuous quality improvement, we found that hospitals did not report the results of their return-visit audits on a consistent basis, making it difficult to draw conclusions on how the province as a whole is performing. While hospitals are required to indicate whether a return visit was due to a quality-of-care issue (that is, a misdiagnosis or unsafe discharge), there was a wide variation in the way hospitals defined and classified these issues. For example, we found that in two very similar cases at different emergency departments, one hospital called the event a quality-of-care issue, while the other hospital did not. This may have contributed to the wide variation of return-visit rates we found across hospitals. For instance, one hospital indicated almost 35% of its return visits were due to a quality of care issue compared to 4% at another hospital.

Based on our review of data on return visits between 2018 and 2022, we found that the rate of return visits requiring admission remained constant even though the number of emergency department visits declined over that period.

Because of a Ministry decision to expand eligibility for participation in the P4R program, as discussed in **Section 4.6**, there is a likelihood more hospitals will be required to participate in the Quality Program.

RECOMMENDATION 6

To help ensure that emergency departments provide high-quality care, we recommend that Ontario Health expand and monitor the Emergency Department Return Visit Quality Program by requiring all hospitals with emergency departments to participate and report their data on return visits and patient outcomes or issues related to adverse events consistently and on a timely basis.

ONTARIO HEALTH RESPONSE

Ontario Health acknowledges the Office of the Auditor General of Ontario's recommendation, and as a key component to the Pay for Results (P4R) expansion announced by the Ministry of Health in 2023/24, will work with hospital sites to begin planning implementation of the Emergency Department Return Visit Quality Program (Quality Program) in future fiscal years.

Ontario Health aims to maintain the goals of the Quality Program for all participating emergency departments, while designing appropriate program requirements in its expansion to include small-volume sites.

4.3.3 Ambulance Offload Times Contributed to Even Longer Wait Times for Patients and Risks to Communities

Ambulances are a critical part of the health-care system. While 80% of the patients who visited an Ontario emergency department in 2022/23 entered by their own means, 20% were brought in by ambulance. Despite the importance of the ambulance network, we noted that some paramedic groups have struggled to maintain timely service in recent years because ambulances were often stuck at emergency departments waiting to offload a patient. Since all patients arriving at emergency departments are assessed the same way, patients arriving by ambulance did not get priority to walk-ins.

We met with senior staff from various paramedic groups across the province to better understand the

ambulance offload process and challenges faced by paramedic groups when offloading patients at hospitals. While there is no formal provincial target for ambulance offload times, paramedic groups informed us that on average 30 minutes or less is considered best practice in the industry. We found, however, that this target has not been met consistently and there have been cases where offload delays were significantly longer than the 30-minute target. For example:

- Ottawa Paramedic Service experienced offload delays of as long as three hours and faced a total of about 98,000 hours in offload delays in 2022/23.
- Toronto Paramedic Services experienced delays of up to 52 minutes and indicated that they faced a total of almost 62,000 hours in offload delays in 2022/23.

Tying up ambulances poses a significant risk for communities, and it is an ongoing challenge. For example, on multiple occasions in 2023, Essex-Windsor Emergency Medical Services had to declare "code black," a designation that signifies no ambulances are available in the community.

There are two main causes of offload delays: unavailability of nursing staff to immediately triage the patient and bring them into an assessment room; and limited assessment room space. As such, the paramedic must stay with the patient to provide support until emergency department staff take over.

To address the issue of lengthy offload times for ambulance staff, the Ministry implemented the Dedicated Offload Nurse Program in 2008. The program provides funding to some municipalities, which in turn transfer funding to local hospitals to hire nurses or other health-care professionals (i.e., paramedics) to help improve the timeliness and efficiency of the ambulance offload process so the paramedics can get back into the community in a timely manner. Paramedic groups have informed us that this program has been successful in improving offload times, but it does not address all of the main challenges. Given continuous hospital staffing issues and the unavailability of assessment rooms or beds, offload times have remained long even at hospitals with a dedicated ambulance offload nurse.

Some paramedic groups have worked with local hospitals to address the long-standing ambulance offload delays, or shorten offload times, especially for lower-acuity patients. For example:

- Peel Regional Paramedic Services worked with William Osler Health System to implement the Fit2Sit program in October 2020. This program allows paramedics to discharge lower-acuity patients quicker if they are able to sit in the waiting area. Patients are accompanied by paramedic staff to triage, while the hospital takes responsibility for monitoring those patients. We noted that this program has resulted in offload times for patients that meet the Fit2Sit criteria of about nine minutes, significantly shorter than the 30-minute industry standard.
- Windsor Regional Hospital has directly hired two paramedics in one of its emergency department sites to help manage and monitor patients arriving by ambulance until they can be triaged and assessed so paramedics can return to the community quicker.

Despite their success, these practices and processes have not been consistently adopted across hospitals even in regions or hospitals that have experienced lengthy ambulance offload delays.

RECOMMENDATION 7

To efficiently offload patients arriving at an emergency department by ambulance and more quickly free up ambulances to address other emergency calls, we recommend that the Ministry of Health, in collaboration with Ontario Health:

- continue to review and enhance the Dedicated Offload Nurse Program to ensure it supports improvement in offload times; and
- work with hospitals and regional paramedic groups to continue identifying other initiatives, such as the Fit2Sit program in Peel region, that

have improved the offload process, and share these practices across the province to help address lengthy ambulance offload times.

MINISTRY RESPONSE

The Ministry of Health (Ministry) acknowledges and supports this recommendation. The Ministry remains committed to continuing to review and enhance the Dedicated Offload Nursing Program (DONP) and to identify and share best practices across paramedic services and hospitals in order to help reduce ambulance offload times.

The Ministry has made the following progress on this recommendation:

- In the 2023 Ontario Budget, the government is investing an additional $51 million over three years to strengthen the DONP.
- In 2023/24, the DONP funding invested will help 30 municipalities provide 650,000 hours of offloading support, transferring ambulance patients to hospital care, and allowing paramedics to return to the community faster to respond to 911 calls.
- Expanded DONP eligibility to allow hospitals to also hire other types of health providers (paramedics, respiratory therapists, and physician assistants) in offloading positions, providing more flexibility to better manage ambulance offload times.
- Continue to share best practices from hospitals high performing in ambulance offload times (for example, North York General Hospital) with paramedic services and other hospitals across the province to help them improve their ambulance offload. Resources that have been shared include a Tool Kit for Promoting Ambulance Offload, created by Toronto Paramedic Services, with all paramedic services in the province.

4.4 Triaging Process Has Improved but More Oversight and Further Changes Are Needed

4.4.1 New Triaging System Was in Place but Some Hospitals Were Not Using It

As discussed in **Section 2.2.1**, triaging is the process of prioritizing patients based on the urgency of their symptoms or injury to help ensure that resources are allocated effectively to treat the sickest patients first.

When a patient visits an emergency department, their first clinical interaction is typically with a triage nurse. Triage nurses assess the urgency of a patient's condition based on both subjective and objective information, including the patient's presenting symptoms, general appearance and health history. The triage nurse also conducts general tests that typically include a check of the patient's blood pressure and vitals. This information is then used to assign a priority level using the Canadian Triage and Acuity Scale (CTAS).

During our 2010 audit Hospital Emergency Departments, hospitals were manually conducting triaging. At the time, we found that file documentation was sometimes lacking and triage was not performed on a consistent basis. In response to our findings and recommendations, the Ministry and Ontario Health began implementing the electronic Canadian Triage and Acuity Scale system, known as eCTAS, across hospitals in 2016 to help ensure consistency and oversight of triaging across the province. The eCTAS system allows triage nurses to input pertinent patient information to determine a CTAS level for each incoming patient.

Based on our review of eCTAS and discussion with hospital staff, we found that nurses' use of the system has generally made the triage process more consistent and efficient. Furthermore, we noted multiple studies that looked at usage of the eCTAS system and noted its benefits. For example, one study published in the *Journal of American College of Emergency Physicians* in 2020 looked at the triage process before and after the

implementation of eCTAS in Ontario and found that it improved the consistency of triaging patients, especially among patients with multiple complaints such as chest pain, fever and shortness of breath. Another study published the same year in the medical journal *Annals of Emergency Medicine* reviewed the use of eCTAS at seven Ontario emergency departments before and after implementation and found that the system had improved the accuracy of the assigned triage levels compared to an auditor's assessment of CTAS level.

Despite these improvements, and even though both Ontario Health and the Ministry have encouraged hospitals to implement the eCTAS system, 44 emergency departments do not currently use eCTAS. Ontario Health informed us that it was in the process of onboarding 11 more emergency departments as part of an eCTAS expansion project scheduled to take place in 2023/24—though, once completed, that would still leave 33 emergency departments outside the system.

4.4.2 Some Hospitals Were Consistently Overriding the Triage Level Assigned by the System, Indicating More Training May Be Needed

In some situations, nurses can decide that the triage level assigned by the eCTAS system is not urgent enough—that is, the triage nurse's observation and assessment of the patient may lead the nurse to believe the patient is sicker than what the system indicates. In these cases, it is possible for the triage nurse to manually override the eCTAS system and assign a higher triage level. For example, if the eCTAS system assigns a patient CTAS 4 but the nurse believes the patient needs to be seen more urgently, the nurse could manually assign the patient a CTAS 2. When this happens, the system tracks the override and the reason for the override based on a drop-down menu. The triage override function only allows a nurse to increase a patient's priority, not lower it.

Ontario Health, which centrally oversees the eCTAS system, monitors when triage nurses at any particular hospital override the system more than 10% of the time. When a hospital does so, Ontario Health will send information related to the overrides to the hospitals and ask administrators to explain the high number of overrides.

We noted that in the last five years, the provincial average override rate has consistently exceeded 10%, ranging from 14% to 16%. In that time, over 70 hospitals were overriding eCTAS more than 10% of the time. In 2022/23, about 13 hospitals were overriding the eCTAS levels in more than 25% of their cases, or 2.5 times the expected threshold set by Ontario Health.

Furthermore, we noted that in some cases, override rates were attributable to certain triage nurses, with some overriding the triage levels more often than others, indicating that they may not have been adequately trained on the use of the eCTAS system and its override function. For example, one of the pediatric hospitals we visited was overriding eCTAS in almost 29% of cases, with even higher override rates in earlier years. We also noted that hospitals had initiated additional training to help ensure triage nurses understood how to correctly utilize the system. However, the hospital also mentioned that eCTAS was not as well integrated with pediatric triaging. As such, the hospital indicated that it would be beneficial to update the eCTAS system by adding more symptoms aligned with pediatric care that impact triage levels.

There are situations in which increasing the triage level is valid. For example, patients presenting with non-urgent symptoms may also be undergoing significant mental distress that needs to be treated but cannot easily be captured in the eCTAS system. However, since the purpose of implementing the eCTAS was to help ensure consistency and oversight of triaging, overrides may raise the risk that patients are not being triaged equitably or in accordance with their needs. Ontario Health informed us that the eCTAS system may

not be able to capture all of the patient's concerns when they present at the emergency department, and therefore having some overrides is unavoidable, but should be limited overall.

RECOMMENDATION 8

To safely, effectively and equitably triage patients, we recommend that Ontario Health:

- work with all hospitals in the province to implement the electronic Canadian Triage and Acuity Scale (eCTAS) system;
- conduct a thorough analysis of why some hospitals, such as pediatric hospitals, have consistently high triage override rates and determine whether changes to the system are necessary; and
- ensure triage nurses are adequately trained on the use of the eCTAS system and receive regular ongoing training as needed.

ONTARIO HEALTH RESPONSE

Ontario Health acknowledges the Office of the Auditor General of Ontario's recommendation and, as a key component to the Pay for Results (P4R) expansion announced by the Ministry of Health in 2023/24, will use the opportunity to further work with hospital sites to begin planning implementation of eCTAS in future fiscal years and to analyze why some hospitals have consistently high triage override rates.

Ontario Heath uses a Train the Trainer system to train a clinical lead in each of the sites using the Ontario Health eCTAS Application (Complex and Basic). Clinical Leads are responsible for training the staff at their facility in how to use eCTAS. Certification and Webservice sites have chosen the option to use their own process and documentation in their eCTAS tools.

4.5 Human Resource Shortages and Payment Structures Posed Risks to Emergency Department Accessibility

4.5.1 Significant Staffing Shortages Reduced Access to High-Quality Emergency Care

Staffing shortages and vacancies, particularly in nursing, have put many emergency departments under pressure and resulted in temporary closures in recent years (see **Section 4.1.1**).

In discussions with Ontario Health and hospitals, we noted the high staff turnover and difficulty with hiring and retaining nurses were mainly due to:

- the introduction of Bill 124, which limited wage increases for many employed professionals (including nurses) to 1% each year for three years, angering nurses, especially those working at hospitals in urban centres with higher costs of living, and leading to court challenges;
- higher pay and flexibility being offered by agencies (discussed further in **Section 4.5.3**);
- low staff satisfaction at hospitals;
- an increase in workplace violence in emergency departments; and
- nurses retiring or taking early retirement.

Since the Ministry and Ontario Health have never collected and tracked information on staffing shortages and vacancies across emergency departments, we requested staffing counts and vacancies from the emergency departments we visited and compared the information in 2019/20 (pre-COVID-19) and 2022/23 (see **Figure 19**). We noted that:

- Most emergency departments experienced a significant increase in vacancy rates between 2019/20 and 2022/23. For example, one emergency department's vacancy rate of full-time registered nurse increased significantly from 6% to 26%, and the rate for part-time registered nurses increased from 23% to 51%.
- Most emergency departments had high vacancy rates for full- and part-time registered nurses in 2022/23 ranging from 11% to 51%.

Figure 19: Emergency Department Vacancies for Registered Nurses (RNs) at Selected Hospitals in Ontario, Pre- and Post-COVID-19 (%)

Prepared by the Office of the Auditor General of Ontario

Hospital	Position	Vacancy Rate[1]	
		2019/20	2022/23
William Osler Health System (Brampton Civic Hospital and Etobicoke General Hospital)	Full-time RN	6	26
	Part-time RN	23	51
Sinai Health System (Mount Sinai Hospital)	Full-time RN	3	19
	Part-time RN	12	19
Windsor Regional Hospital (Metropolitan campus and Ouellette campus)	Full-time RN	6	17
	Part-time RN	15	25
Children's Hospital of Eastern Ontario	Full-time RN	10	11
	Part-time RN	12	20
Hospital for Sick Children[2]	Full-time RN	8	22

1. As at March 31 fiscal year-end.
2. The Hospital for Sick Children did not have any part-time vacancies to report.

In summer 2022, Ontario Health began surveying hospitals on behalf of the Ministry to identify overall staffing pressures in emergency departments. We reviewed the results of this survey as of May 1, 2023 and found that out of the 71 hospitals that responded, 83% (or 59 hospitals) reported having a staffing shortage in their emergency departments to varying degrees. In the survey, 69% (or 49 hospitals) described the staffing shortage as moderate, while 14% (or 10 hospitals) said their staffing situation was severe or critical. Despite this, at the time of our audit neither the Ministry nor Ontario Health had developed a long-term strategy or acted upon this information to take specific actions related to hospitals with significant staffing shortages.

4.5.2 Hospitals Had Limited Flexibility to Address Staffing Shortages at Emergency Departments Using Internal Resources

An organization can often resolve staffing shortages in a specific department by reorganizing its internal staffing resources on a temporary basis. We asked administrators at the hospitals we visited whether they were able to have nurses in other units provide temporary support in the event of a nursing shortage in the emergency department. They informed us that hospitals' collective agreements with nursing staff provided them with limited flexibility to move nurses between units.

We noted that nurses are required to meet specific training requirements to work effectively in an emergency department. These requirements include:

- at least one to two years of hands-on training in addition to other certifications; and
- new nurses need to be overseen by an experienced and trained nurse.

While it is understandable that nurses with particular training and experience should work in areas where they have expertise, redeploying nurses from other units to fill temporary staffing gaps at emergency departments is a practical and feasible solution. We noted that the practice of redeploying nurses has been used by some hospitals we visited and was in place during the COVID-19 pandemic after a special order was issued by the Ontario government. Specifically:

- The government issued a special order during the pandemic under the March 17, 2020 declaration of emergency that allowed hospitals to temporarily reassign staff based on needs. This included redeploying staff (including nursing staff under collective agreements) within a

hospital or between hospital sites. For example, a hospital we visited indicated that because of this order, it was able to shift nurses from inpatient units into the emergency department on a temporary basis to fill significant vacancy gaps and sick leaves. The hospital indicated that it would be beneficial to continue to have this flexibility. However, this special order is no longer applicable.

- One of the hospitals we visited, where nurses were not part of collective agreements, had initiatives in place that enabled it to fill staffing gaps in the emergency department effectively without putting patient care at risk. Examples of such practices include:
  - using nurses from other units of the hospital to help fill staffing needs in the emergency department; and
  - having a trained and experienced emergency department nurse overseeing and supporting nurses redeployed to the emergency department from other units.

4.5.3 Hospitals Filled Staffing Gaps by Hiring Agency Nurses at Significantly Higher Hourly Rates

When a hospital is facing a nursing shortage that cannot be addressed by redeploying its own staff, it often has to rely on staffing agencies to fill gaps and vacant positions. This has put financial pressure on hospitals that employ agency nurses, partly because they are usually paid more than permanent staff.

While there are many staffing agencies in Ontario that provide nurses to fill positions, it is unclear how often hospitals use these agencies to fill vacancies at their emergency departments because the Ministry and Ontario Health do not collect such information. There also is no legislation that caps the amount these private, for-profit companies can charge hospitals. The Ministry and Ontario Health do not specifically track agency staff costs and rely on hospitals to manage their own budgets and make decisions related to agency staffing.

We reviewed data on agency-nurse spending across the hospitals we visited and found that in 2022/23, one hospital spent about $8 million on agency nurses in the emergency department, more than three times the amount it spent in 2021/22, and more than eight times its spending in 2019/20. Another hospital we visited spent $2.7 million on agency nurses across its emergency departments in 2022/23, 4.5 times more than the approximately $600,000 it spent in 2021/22.

Through our review of hospital finances, we found that the cost to use agency staff was significant because hospitals pay agency nurses significantly more than their own full-time permanent nurses. For example, agency nurses that hold the position of registered nurse working in an emergency department could get paid more than $75 an hour, compared with about $35 to $50 an hour for the full-time permanent nurses employed by a hospital. One hospital paid agencies from $99 to $106 an hour to hire a registered nurse for its emergency department.

Through our Office's 2023 audit Hospitals in Northern Ontario: Delivery of Timely and Patient-Centred Care, we found that the significant use of agency nurses extends beyond emergency departments. For example, that audit found that of the 34 Northern Ontario hospitals that responded to a questionnaire, 30 of them used agency nurses in 2022/23 at a cost of more than $73 million. Furthermore, that audit found that agencies charged hospitals as much as $160 an hour for a registered nurse.

Barring Ministry intervention, agency nursing costs may continue to rise. The higher pay and flexible hours for agency nurses have resulted in some permanent nurses leaving hospitals as well as high vacancy rates (as discussed in **Section 4.5.1**), which in turn has forced hospitals to rely on agency nurses even more to fill their nursing shortages.

RECOMMENDATION 9

To efficiently and economically deliver emergency care, we recommend that the Ministry of Health, in collaboration with Ontario Health:

- expand existing data collection to include vacancy data of emergency departments to identify staffing challenges and determine if any province-wide actions need to be taken;

- comprehensively collect and monitor hospital expenditures on agency staffing to determine the reasonableness of payments to staffing agencies and the need to negotiate or legislate such payments to ensure fairness and transparency; and
- work with collective-bargaining organizations to implement permanent mechanisms that allow for more flexibility of staff movement within each hospital in urgent and temporary situations.

MINISTRY RESPONSE

The Ministry of Health (Ministry) acknowledges the Office of the Auditor General of Ontario's recommendation to expand existing data collection to include vacancy data of emergency departments. The Ministry acknowledges the importance of effective data collection and analysis in support of effective health workforce planning. The Ministry will review the data-related aspects of the recommendation to determine how best to refine its data-collection practices in support of current and future work to support service delivery in emergency departments. Today, the Ministry already collects data regarding hospital staffing pressures, staffing positions, vacancies and staff absenteeism. Data related to compensation expenses for agency staff who provide direct care/services is collected on a quarterly basis in the Ontario Healthcare Financial and Statistical System. This information can be used to monitor the utilization of agency staff for particular service departments.

With respect to the element of the recommendation related to agency staffing, the Ontario government recognizes the role staffing agencies play in supporting a flexible workforce. The government also recognizes that agency rates in Ontario have increased significantly, creating instability for hospitals, long-term care homes and emergency departments. We are working to evaluate the issue of rising agency reliance and costs. This includes, as noted in the government's Plan to Stay Open: Health System Stability & Recovery, engaging with frontline partners to better understand how we can bring stability to hospitals, long-term care homes and emergency departments, while protecting quality of care. The Ministry will also review mechanisms that allow for more flexibility of staff movement within each hospital in urgent and temporary situations.

4.5.4 Inconsistencies and Flaws in the Physician Payment Structure Could Impact Timeliness and Oversight of Emergency Department Care

As discussed in **Section 2.3**, the majority of emergency department physicians are compensated through an alternative funding arrangement (AFA), while some physicians use a fee-for-service (FFS) model and bill directly to the Ontario Health Insurance Plan. In cases where an emergency department is under the AFA model, all emergency department physicians working for that hospital are part of the same AFA. For physicians compensated through the AFA, there is typically a base funding component, which is essentially a salary divided among the physicians working under the AFA.

We noted that outdated AFAs can contribute to hiring and retention challenges in some communities, particularly in Northern Ontario. For example, one northern hospital indicated that its significant reliance on physicians through the Locum Program (described in **Section 4.1.2)** could be attributed to the outdated terms and conditions of the AFA, which did not adequately capture the number and complexity of patients that emergency physicians had to treat. Because many patients do not have access to primary care, the emergency department can be the only care provider in a northern community. The situation, in turn, may lead to further physician vacancies and further reliance on the Locum Program.

We also noted that there can be a lack of oversight of the pay and performance of individual physicians who are part of an AFA. Specifically, we noted that the Ministry does collect the total hours worked by physicians collectively at each hospital for adherence to AFA agreements, but does not review information on

the funding provided to each physician or the volume of patients seen by each physician. For example, there is no oversight mechanism to identify and review physicians who see a relatively low number of patients per shift or who spend longer on assessments compared to peers.

We also found that patient access to a physician could be directly impacted by whether physicians are compensated through an AFA or FFS model. Although only 15% of all emergency departments are under an FFS model, of the five hospitals with the shortest physician initial assessment wait times in **Appendix 3**, three were using an FFS model while all five of the lowest performing hospitals were on an AFA.

For example, William Osler Health System's emergency department physicians are under an FFS model. Despite the high volume of patients in its emergency department, it still had relatively short wait times for a physician initial assessment compared to all other hospitals we visited, as noted in **Figure 12**. An emergency department physician at the hospital told us that the shorter wait times to see a doctor were a result of process improvements that were easier to implement under an FFS model.

The Ministry and the Ontario Medical Association have agreed to undertake a study to evaluate the AFA, the workload of emergency department physicians and the time they spent treating patients. The study, which may ultimately impact base payments made to those physicians, was expected to begin in January 2024 and be completed in early 2025. However, we noted that there was no plan to evaluate the effectiveness of both the AFA and FFS models and to determine which model better meets patient needs.

RECOMMENDATION 10

To effectively and efficiently compensate emergency department physicians, we recommend that the Ministry of Health work with Ontario Health and hospitals to comprehensively review all current compensation structures and make changes to help ensure they are patient-focused and incentivize timely patient care.

MINISTRY RESPONSE

The Ministry of Health (Ministry) acknowledges the Office of the Auditor General of Ontario's recommendation to work with Ontario Health and hospitals to review current compensation structures and make changes as needed to ensure patient-focused and timely patient care.

The Ministry recognizes the Ontario Medical Association (OMA) as the exclusive representative of physicians practising in Ontario. Under the OMA Representation Rights and Joint Negotiation and Dispute Resolution Agreement, the Ministry is required to consult the OMA to seek its advice about significant health-care policy and system issues that affect physicians. Further, changes related to physician compensation, including activities and accountabilities under non-fee-for-service agreements, are subject to the negotiations process between the parties set out in the Binding Arbitration Framework.

4.6 Oversight of Emergency Department Performance Was Lacking and Initiatives to Improve Performance Were Not Evaluated

To incentivize improvement in patient flow through emergency departments, the Ministry created the Pay for Results (P4R) program in 2008. Managed and overseen by Ontario Health, the program provides financial incentives to help hospitals improve the performance of their emergency departments. The objective of P4R is to support hospital innovation and practices that reduce patient wait times and length of stays.

The P4R program has focused on large hospitals with a high volume of emergency department visits. To be eligible to participate, an emergency department must have had at least 30,000 annual visits in the last two consecutive years. At the time of our audit, there were 75 hospital sites participating in the P4R program. On July 20, 2023, the government announced it would invest an additional $44 million in the P4R program and expand the eligibility criteria to

allow smaller hospitals to participate in the program, although the funding allocation was still in progress at the time of our audit.

The program assesses the performance of each participating hospital's emergency department using six key performance indicators:

- Length of stay for admitted patients
- Length of stay for non-admitted high-acuity patients
- Length of stay for non-admitted low-acuity patients
- Time to physician initial assessment
- Time to inpatient bed
- Ambulance offload times

Each year, hospitals participating in the program are ranked based on their performance compared with other hospitals. For the first five performance indicators noted above, the ranking considers each participating hospital's most recent annual performance and historical performance since joining the P4R program. For the indicator related to ambulance offload times, the ranking only considers the most recent annual performance. Once all hospitals have been ranked, they are allocated a portion of the P4R program funding, which was approximately $93 million in 2022/23.

4.6.1 P4R Program Showed Initial Successes but It Has Become Less Effective at Improving Emergency Department Patient Flow

Despite showing some success over the years, the P4R program has not had a significant impact on improving patient flow and reducing patient time spent in emergency departments in recent years. We reviewed historical P4R program data and found that in the early years of the program, some key performance indicators showed wait time reductions at participating hospitals. However, we found that the hospitals' average annual performance had deteriorated leading up to the December 2018—November 2019 period, the most recent full-year results before the COVID-19 pandemic, and their average annual performance decreased further during the pandemic. As **Figure 20** shows, based on the five indicators that use historical performance as a benchmark, a significant number of hospitals saw their performance deteriorate in 2019 compared to when they first joined the P4R program. For example, as of 2019 almost half of the 74 hospitals participating in the P4R program at that time had a longer overall patient length of stay in the emergency department for admitted patients and a longer wait time for an inpatient bed compared to when they joined.

Figure 20: Number of Hospitals Where Performance Deteriorated After Joining the Pay-for-Results (P4R) Program by Indicator, Pre-COVID-19

Source of data: Ontario Health

Performance Indicator	Hospitals Where Performance Deteriorated After Joining the P4R Program	
	#	%*
1. Length of Stay for Admitted Patients	36	49
2. Length of Stay for Non-Admitted High-Acuity Patients	18	24
3. Length of Stay for Non-Admitted Low-Acuity Patients	32	43
4. Time Before Physician Initial Assessment	28	38
5. Time to Inpatient Bed	35	47

Note: The Ministry created the P4R program in 2008, and hospitals joined the program in different years. This chart is based on each participating hospital's performance data from the period between December 2018 and November 2019, the most recent full-year results prior to the COVID-19 pandemic. It excludes the sixth performance indicator that measures ambulance offload times because that indicator does not factor in historical performance.

* The percentage is calculated based on data from the 74 hospitals that were participating in the P4R program in 2019.

Figure 21: Length of Stay for Non-Admitted High-Acuity Patients at Selected Hospitals in Ontario (hours)

Prepared by the Office of the Auditor General of Ontario

Hospital	Year Joined P4R	Hours Spent in Emergency Department*		
		Prior to Joining P4R Program	2019	2022
Sinai Health System (Mount Sinai Hospital)	2008/09	10.5	7.9	8.2
Hospital for Sick Children	2010/11	9.2	6.6	10.4
William Osler Health System (Brampton Civic Hospital)	2008/09	9.4	6.7	7.8
William Osler Health System (Etobicoke Hospital)	2009/10	8.0	6.4	7.0
Children's Hospital of Eastern Ontario (Ottawa site)	2010/11	6.8	6.9	9.5
Windsor Regional Hospital (Metropolitan campus)	2008/09	7.9	9.6	13.8
Windsor Regional Hospital (Ouellette campus)	2010/11	6.6	9.8	11.6

* This is calculated using the 90th percentile, meaning times are calculated after removing the 10% of patients with the longest wait times.

We reviewed these indicators across the hospitals we visited and found similar trends (see **Figure 21**). For example, some hospitals had shown improvement in the length of stay for non-admitted patients in 2019 while others had gotten worse, but all had regressed between 2019 and 2022.

Furthermore, while P4R funding is allocated to hospitals based on the performance of their emergency departments, we noted that participating hospitals continued to receive P4R funding even when their performance slipped from 2019 to 2022.

Ontario Health and some hospitals informed us that demographic profiles for communities and regions have changed significantly since hospitals began joining the P4R program almost 15 years ago. For instance, population growth or increased emergency department utilization make it more difficult for hospitals to maintain or improve their performance.

Another reason that P4R has become less effective is related to the way some hospitals are using the P4R funding. Based on our review of P4R documentation and practices across the hospitals we visited, we found that instead of testing and trying new methods to help shorten wait times and the overall length of stay in an emergency department, some hospitals were using P4R funding to create and/or fill nursing or clinician positions in order to keep up with patient volumes and care needs. This approach helps address patient flow in the short term, but may do little to improve patient wait times and length of stay in the longer term.

4.6.2 Some Performance Initiatives Appeared Beneficial but Evaluations Were Not Being Done to Confirm Viability for Expansion

Through our review of initiatives funded by the P4R program at the hospitals we visited, we noted that some appeared to be beneficial in improving patient flow and reducing the time patients spend in the emergency department. For example:

- SickKids has used some of its P4R funding to create an emergency department hub to treat ambulatory patients who are at lower acuity (CTAS 3 to CTAS 5) and likely to be discharged home. These patients comprise 76% of the patient visits to SickKids' emergency department.
- Windsor Regional Hospital used some P4R funding to create a dedicated emergency department psychiatrist shift seven days a week to reduce wait times for a psychiatric consultation and to help certain patients transition between the emergency department and the mental health assessment unit.
- Four of the five hospitals we visited used some P4R funding to hire physician assistants, who

help free up time for emergency department physicians to see more patients.

While funding for the P4R program is meant to be flexible and used by hospitals to develop initiatives that improve the performance of their emergency departments, we found that the Ministry and Ontario Health had not done a thorough evaluation of potential best practices to determine if they could be implemented on a permanent basis and expanded to more hospitals. If this evaluation had been done, hospitals would have been able to more effectively identify practices that improve patient flow.

RECOMMENDATION 11

To more effectively improve patient flow across emergency departments in Ontario, we recommend that Ontario Health, in collaboration with the Ministry of Health and hospitals:

- evaluate the effectiveness of the Pay for Results (P4R) program to determine what changes are necessary to meet the intended objectives, such as setting performance targets; and
- review hospitals' use of performance funding to ensure that these practices align with the objectives of the P4R program and that effective practices are adopted by more hospitals.

ONTARIO HEALTH RESPONSE

Ontario Health acknowledges the Office of the Auditor General of Ontario's recommendation to evaluate the effectiveness of the Pay for Results (P4R) program and review hospitals' use of performance funding. In 2023/24, the Ministry announced significant changes to the P4R program. Ontario Health will work closely with the Ministry and hospital sites on implementation of the P4R expansion and will use this opportunity to continue work to address the recommendation. Ontario Health closely monitors performance of all sites participating in P4R.

4.7 Province Does Not Have Framework to Evaluate and Encourage Use of Effective or Emerging Practices

4.7.1 Effective Diversion Practices at Emergency Departments Were Not Being Shared with Other Hospitals for Province-Wide Implementation

During our site visits, we noted that some hospitals have unique practices to divert certain patients away from the emergency department to a specific unit or space within the hospital for treatment. Such practices not only can expedite care for patients in a more appropriate setting but also free up space and resources in emergency departments. Examples of these practices included:

- In September 2022, SickKids introduced the Rapid Assessment of Pediatric Patients Zone (RAPP Zone) to provide care for patients who showed up at the emergency department but did not need emergency level care and could be seen and treated by a primary care physician. Specifically, parents of lower-acuity patients arriving at the emergency department would be directed to record their child's symptoms and general health information through an online application using a QR code on their smartphone. If they met certain criteria based on symptoms and age, patients would be directed to a different area of the hospital where they would be seen by a primary care physician (without the need for triaging by the emergency department). While this service was only available during specific times, SickKids estimated that approximately 20% of its low-acuity patients were being diverted from the emergency department as a result of this initiative. SickKids indicated that the costs of delivering care in the RAPP Zone is less than the cost of delivering care in the emergency department as these patients only require limited medication administration and nursing

monitoring or interventions. While we noted there were similar rapid assessment practices at other hospitals we visited, patients at those institutions were still being treated within the emergency department, which can divert resources away from more urgent cases.

- For over 10 years, Windsor Regional Hospital's Metropolitan site has been using an initiative to fully divert pregnant patients who arrive at the emergency department with specific symptoms related to pregnancy (such as cramping and vaginal bleeding). Instead of being triaged and waiting at the emergency department to be assessed by a doctor, these patients are sent directly to the obstetrics and gynaecology unit for triage and treatment. This initiative has helped Windsor Regional Hospital divert about 6,000 emergency department patients each year.

We also noted that other hospitals had practices in place to treat specific patient conditions in a more timely and appropriate manner within the emergency department. During our site visit to Brampton Civic Hospital, we noted that patients arriving with minor complaints such as a potential fracture or orthopaedic concerns could be triaged to a separate area within the emergency department if the patients met specific medical criteria. This area was staffed with an orthopaedic technician during certain hours of the day, and if the patient required an x-ray, the imaging could be quickly reviewed and interpreted for next steps.

While these practices have shown success, we noted that hospitals did not consistently and effectively share best practices province-wide. The Ministry and Ontario Health also did not have any framework to evaluate and encourage or recommend the use of effective practices that have shown success to hospitals across the province.

RECOMMENDATION 12

To provide patients with timely access to appropriate care, we recommend that Ontario Health work with hospitals to identify initiatives that have successfully and safely diverted lower-acuity patients, or those with specific symptoms, away from emergency departments, and share those practices for province-wide implementation.

ONTARIO HEALTH RESPONSE

Ontario Health acknowledges the Office of the Auditor General of Ontario's recommendation. Ontario Health will work with hospitals and community partners to identify initiatives and best practices to provide system level successes to ensure patients access the right care at the right time and place.

4.7.2 Urgent Care Centres Can Be Expanded to Care for Low-Acuity Patients

Urgent Care Centres (UCCs) are health-care settings specifically designed, equipped and staffed to provide care to patients seeking prompt or immediate treatment for non-life-threatening conditions and injuries without prior appointments. At the time of our audit, there were 11 UCCs in Ontario, although only seven of them were required to report data such as wait times to Ontario Health. One of the hospitals we visited (Windsor Regional Hospital) was at an early stage of planning to set up a UCC to specifically deal with lower-acuity patients due to a lack of timely access to primary care in the community.

Seen as a way to take some pressure off of emergency departments, UCCs typically handle patients with acuity levels between CTAS 3 to CTAS 5, though they still need to be staffed and equipped to deal with life-threatening situations. The goal of a UCC, which does not typically have short-stay beds, is to treat and release patients back to their home or community. If a patient does require admission to an inpatient unit or longer-term care, they would be transferred to an emergency department. Each UCC requires an agreement with an affiliated hospital to transfer patients requiring full-service emergency department care or patients who are not well enough to be sent home after receiving care at a UCC.

Figure 22: Time to See a Physician and Length of Stay at Urgent Care Centres (UCCs) in Ontario, 2022/23 (hours)

Source of data: Ontario Health

Urgent Care Centre	Time to Physician Initial Assessment	Length of Stay
1. St. Joseph's Hospital	1.4	2.4
2. Niagara Health System (Douglas Memorial Hospital site)	1.1	2.0
3. Niagara Health System (Port Colborne General site)	1.3	2.0
4. William Osler Health System (Peel Memorial Centre)	0.8	2.2
5. Trillium Health Partners (Queensway Health site)	0.9*	2.5*
6. Mackenzie Health (Vaughan site)	1.2	1.6
7. Kingston Health Sciences Centre (Hotel Dieu Hospital)	1.4	2.9
Provincial Average for Urgent Care Centres (UCCs)	**1.2**	**2.3**
Provincial Average for Emergency Departments	**2.0**	**6.2**

* Trillium Health Partners temporarily closed its UCC beginning April 2020 and has not reopened it since then. These results are from 2019/20, the most recent available data.

In 2022/23, there were approximately 230,000 patient visits to the seven UCCs that report data to Ontario Health. Patients visiting these UCCs were, on average, seen by a physician much quicker than they would have been in an emergency department and, in turn, their overall time getting the care they needed was significantly shorter. In 2022/23, patients waited an average of 1.2 hours in a UCC for their physician initial assessment compared to an average of two hours in emergency departments. Patients also spent an average of 2.3 hours in the UCC, which was over three times shorter than those visiting an emergency department. **Figure 22** provides a list of the seven UCCs and the average time to see a physician and length of stay.

Based on our visits to a UCC and an emergency department located in the same region that are both part of the William Osler Health System, we noted that the UCC at Peel Memorial Centre was able to see patients much quicker than the emergency department at Brampton Civic Hospital. Since the UCC and the emergency department are located relatively close to each other (about a 15-minute drive), we inquired whether William Osler Health System had a strategy to direct some lower-acuity emergency department patients to the UCC to help alleviate pressures on its emergency department and enable staff to focus on higher-acuity patients. While William Osler Health System did try to raise awareness and educate patients on the appropriate use of the UCC, we noted that there was no such strategy or procedure to direct lower-acuity patients to its UCC.

RECOMMENDATION 13

To improve access to emergency care for low-acuity patients, we recommend that the Ministry of Health, in collaboration with Ontario Health:

- assess the feasibility of a review of the Urgent Care Centres (UCCs) model and determine where expansion of this model can be best utilized; and
- work with hospitals to raise public awareness of alternative care settings such as UCCs that may be more appropriate for low-acuity patients.

MINISTRY RESPONSE

The Ministry of Health (Ministry) acknowledges the Office of the Auditor General of Ontario's recommendation to improve access to emergency care for low-acuity patients. The Ministry will engage with Ontario Health to determine if a review of the Urgent Care Centre model is required. The Ministry will also work with hospitals to determine the appropriate next steps in continuing to raise public awareness of alternative care settings for lower-acuity patients.

With respect to any new or existing Urgent Care Centre physician contracts, the Ministry recognizes the Ontario Medical Association (OMA) as the exclusive representative of physicians practising in Ontario. Under the OMA Representation Rights and Joint Negotiation and Dispute Resolution Agreement, the Ministry is required to consult the OMA to seek its advice about significant health-care policy and system issues that affect physicians. Further, changes related to physician compensation, including activities and accountabilities under non-fee-for-service agreements, are subject to the negotiations process between the parties set out in the Binding Arbitration Framework.

4.7.3 Virtual Urgent Care Pilot Program Has Shown Some Early Success but Subsequent Changes to the Program May Result in Worse Outcomes if Not Managed Effectively

In 2020, during the COVID-19 pandemic, the Ministry approved approximately $4 million in one-time funding to support a virtual urgent care program, sometimes referred to as a virtual emergency department. The pilot program was created to support patients who had concerns about visiting an emergency department in-person, as well as to divert lower-acuity patients away from the emergency department. The virtual urgent care program offers patients a convenient way to get medical advice or care using a computer or smartphone instead of going to an emergency department. Depending on patient needs, physicians working in virtual urgent care can provide a prescription, and advise patients whether to visit their primary care doctor or go to the nearest emergency department for an in-person assessment. In 2022/23, patients made over 50,000 virtual urgent care visits, compared with fewer than 20,000 visits in 2021/22.

In one example, two medical institutions in Toronto (University Health Network and Sunnybrook Health Sciences Centre) set up a virtual urgent care program in 2020. We met with staff involved in the delivery of the program and found that it was designed to offer same-day appointments to patients seven days a week, from 9 a.m. to 9 p.m. on Monday to Friday and from 9 a.m. to 1 p.m. on Saturday and Sunday. The virtual urgent care visit is meant for patients who cannot make an urgent appointment with their primary care provider but require urgent attention for non-life-threatening medical concerns. Symptoms suitable for virtual urgent care include a fever, body aches, sore throat or cough and fever.

Ontario Health engaged the Schwartz/Reisman Emergency Medicine Institute—a not-for-profit research, education and health policy institute under a partnership of the Sinai Health and North York General Hospital—to conduct an overall study of the virtual urgent care pilot program. The study, released in June 2022, highlighted a number of key outcomes:

- Over 75% of presenting complaints were low-acuity, with rash, fever, abdominal pain and COVID-19 vaccine queries representing about 30% of the issues discussed.
- Of the almost 83% of patients who had a primary care provider, about 31% indicated they contacted virtual urgent care because they could not make a timely appointment with their family physician.
- About 16% of patients were advised to visit their nearest emergency department while about 66% were discharged after receiving treatment and/or medical advice on next steps. The remainder were referred to primary care or other community care settings.
- 94% of patients rated their overall virtual experience as eight out of 10 or greater.

While the study identified positive outcomes, it also raised the concern that the program needed to be evaluated to determine if it was sustainable. In particular, the study indicated that patients, most of whom already had a primary care provider, were using the system in place of seeing a primary care provider to receive expedited medical advice. This was not the program's intended purpose and could put added strain on emergency department staff, who are responsible for running virtual urgent care initiatives.

The study also noted that a number of factors needed to be considered before a decision could be made to move forward with the virtual urgent care program. These included analyzing whether nurse

practitioners, physician assistants and primary care physicians can be utilized in the virtual program to support emergency department physicians, and whether virtual services can be amalgamated into a single provincial system, or network of regional systems, to better share resources among hospitals.

We also noted that another study, published in the *Canadian Medical Association Journal* in November 2023, questioned the overall impact of the virtual urgent care pilot program on both subsequent emergency department visits and hospital admissions. These indicate the need to better understand the inherent limitations of virtual care and ensure future virtual providers have timely access to in-person outpatient resources, to prevent subsequent emergency department visits.

Ontario Health informed us that it was integrating the virtual urgent care pilot program with the province-wide Health811 call service, which allows people to connect with a registered nurse day or night by phone to get certain kinds of medical advice. Patients who call 811 will be triaged by the registered nurse and if the patient is eligible for a virtual urgent care visit, the patient will be connected with the virtual urgent care clinic in their region and seen by a nurse practitioner. The nurse practitioner can assess the patient's needs, prescribe treatments and determine next steps, such as whether an emergency department visit is needed. This decision was based on findings from the virtual urgent care pilot program study that indicated most patients who accessed the program already had a primary care physician and also noted that nurse practitioners or other similarly trained individuals could provide the same level of care in a virtual setting.

However, there is a possibility that having a centralized model may not be as effective as virtual urgent care programs managed directly by hospitals, and further changes may be needed to move forward with the centralized model. For example:

- Through discussion with one of the hospitals we visited, we noted that the virtual urgent care clinic that the hospital previously ran was able to connect or refer virtual care patients for further assessment and treatment at the hospital if needed. For instance, the virtual urgent care clinic would be able to directly refer a patient for diagnostic imaging, and could also provide a prescription if needed. In contrast, if the patient used the Health811 system, the patient's journey may not be as seamless. For instance, if the nurse practitioner indicates an in-person visit is needed, the patient would have to repeat the triage process upon entering the emergency department.
- The two medical institutions in Toronto that initiated the joint virtual urgent care program, as noted above, raised similar concerns about the centralized model proposed by Ontario Health. They indicated that Ontario Health and the Ministry should better incorporate local hospitals into any future virtual care program so that patients can more easily be referred to obtain further assessments and treatments (for example, booking blood tests and getting a prescription) by calling Health811 rather than having to physically visit an emergency department and restart the entire patient journey.

RECOMMENDATION 14

To reduce the number of unnecessary emergency department visits and improve access to urgent care, we recommend that Ontario Health work with hospitals and physicians that deliver virtual urgent care to determine what changes should be made to the provincial Health811 program to better address health-care system gaps and meet patient needs.

ONTARIO HEALTH RESPONSE

Ontario Health acknowledges the Office of the Auditor General of Ontario's recommendation to work with hospitals and physicians that deliver virtual urgent care to determine what changes should be made to the provincial Health811. Ontario Health will work with the Women's College Hospital Institute for Health Systems Solutions and Virtual Care to evaluate current virtual urgent care models and ensure Health811 is leveraged to its potential to support gaps in patient care needs.

Appendix 1: Audit Criteria

Prepared by the Office of the Auditor General of Ontario

1. Effective triage, discharge and transfer processes and practices are in place at emergency departments to ensure patients have timely access to high-quality services and care that meet their needs.
2. Responsibilities and accountabilities of parties involved in the delivery of services and care at emergency departments are well defined to ensure that proper oversight is in place and patients are kept safe and provided with high-quality services and care that meet their needs.
3. Adequate and effective programs or initiatives are in place to ensure that emergency departments have stable and adequate levels of staffing and resources to provide patients with timely and high-quality services and care.
4. Funding for emergency departments is appropriately allocated, used and monitored to address the differences in needs among hospitals, and is responsive to changes in needs on a timely basis.
5. Effective communications processes are in place to raise public awareness and understanding of options available for care based on needs.
6. Sufficient, accurate and timely information related to emergency departments, such as service volumes, wait times and triage levels is regularly collected, assessed and used to guide decision-making.
7. Appropriate performance measures and targets are established to ensure that services and care at emergency departments are continuously monitored against intended objectives. Results are publicly reported and corrective actions are taken on a timely basis when issues are identified.

Appendix 2: Emergency Department Closures in Ontario, July 2022–June 2023

Prepared by the Office of the Auditor General of Ontario

Hospital	Approximate Hours of Closure
1. South Bruce Grey Health Centre (Chesley)	1,884
2. Glengarry Memorial Hospital	573
3. Perth and Smiths Falls District Hospital (Great War Memorial site)	529
4. Listowel Wingham Hospitals Alliance (Wingham and District Hospital)	502
5. Huron Perth Healthcare Alliance (Seaforth Community Hospital)	352
6. Huron Perth Healthcare Alliance (St. Marys Memorial Hospital)	175

Note: This table is based on emergency departments and urgent care centres that report wait-time information to Ontario Health; some small hospitals are not currently required to report such information.

Ministry of Health

Ontario Health

Hospitals in Northern Ontario: Delivery of Timely and Patient-Centred Care

Summary

Northern Ontario encompasses almost 90% of the province's total landmass, but only about 6% of the province's entire population. Thirty-six public hospitals of various sizes serve the approximately 790,000 Ontarians who call Northern Ontario home. Some of these hospitals are located in cities such as Thunder Bay and Sudbury, but the majority of them are smaller hospitals located in more rural and remote areas of the province. According to government and stakeholder documents, compared to the rest of Ontario, residents of Northern Ontario typically have poorer health outcomes, a shorter average life expectancy, and a higher average rate of hospitalization due to injury. Northern Ontario has a higher proportion of residents who are Indigenous and Francophone compared to the rest of the province. In Northern Ontario, there are fewer options for affordable housing and public transportation, and health-care professionals may not have access to the same amenities available in other parts of the province. In addition, a higher proportion of hospital beds in Northern Ontario are occupied by patients who are waiting to receive care elsewhere. All these factors present Northern Ontario hospitals with unique challenges for providing equitable, timely, and quality health care in the communities they serve.

In 2022/23, the Ministry of Health (Ministry) gave hospitals in Northern Ontario almost $1.9 billion to operate. This funding flowed through Ontario Health, an agency created in 2019 that absorbed a number of health agencies and the former Local Health Integration Networks in April 2021 to manage the health system. Both the Ministry and Ontario Health offer various programs to help improve access to hospital services in Northern Ontario, such as incentives to attract physicians and nurses to work and stay in the region. They also offer grants to reimburse travel expenses for Northern Ontario residents who, given the large landmass and limited number of local services available, need to travel long distances to access appropriate health care, so that residents are not disproportionally affected by virtue of living in northern or rural Ontario.

Our audit found that patients in Northern Ontario are more likely to experience longer waits to access the hospital care they need than patients from other parts of Ontario. Between 2018/19 and 2022/23, the percentage of days where patients were admitted in the hospital but were waiting for discharge to other more appropriate settings, such as a long-term care home or home care, was 24%–35% in Northern Ontario hospitals compared to 10%–22% in the rest of the province. This rate is known as the alternate-level-of-care (ALC) rate. Based on cost information provided

by the Ministry and data that was available from 18 of the 36 northern hospitals that reported ALC data to the Wait Time Information System, we estimated that the Province spent $65 million to keep acute-care patients in Northern Ontario hospitals because long-term care spaces and home-care services were not readily available for them. This is especially concerning when a hospital is at or close to capacity because high ALC rates can lead to hospital overcrowding and even longer wait times for patients who require urgent care at hospitals.

We also found that 10 hospitals in Northern Ontario had to close their obstetrics services between July 2022 and September 2023 because of a shortage of physicians and/or nurses; four remained closed as of the end of September 2023, with three of these closed for over a year. As a result, patients who live near these hospitals would need to travel to other locations, often at significant distances, to deliver a baby or obtain other obstetrics care. Ontario Health did not centrally monitor all instances of service closures at hospitals.

In addition, many hospitals in the north had to rely on using nurses supplied by staffing agencies to supplement their permanent nursing staff, more so than hospitals in the rest of Ontario. Between 2018/19 and 2022/23, the use of agency nurses increased 25 times for hospitals in Northern Ontario compared to about two and a half times for hospitals in the rest of the province. At the northern hospitals we visited during this audit, we found that nursing agencies charged them about three times the hourly rate of a full-time hospital nurse, in addition to accommodation and travel costs. For 2022/23, 29 of the 34 hospitals in Northern Ontario that responded to our questionnaire indicated that they paid about $78 million to private agencies for the use of registered nurses and registered practical nurses.

Some of our other significant findings include:

- **The Ministry did not have a dedicated health-care strategy that addresses all the north region's unique challenges; this is critical for improving access to health care for Northern Ontario patients and for supporting hospitals in the delivery of services.** Although the Ministry had started working toward creating a strategy back in 2009 when it established the Rural and Northern Health Care Panel, which recommended a framework for the region, a strategy was never finalized. In addition, Health Quality Ontario, now part of Ontario Health, developed the Northern Ontario Health Equity Strategy in 2018. This strategy recommended that a network be established with representatives from different sectors to help achieve health equity. However, five years later at the time of our audit, this has not been done because, according to Ontario Health, the Ministry did not approve the required funding.
- **Provincial initiatives and tools to manage health-care staffing shortages in Northern Ontario were fragmented.** The Ministry and Ontario Health separately administer health-care staff recruitment and retention initiatives for Northern Ontario. However, they have not regularly evaluated these initiatives to confirm whether they are effective in retaining physicians and nurses. Unlike British Columbia and Saskatchewan, Ontario does not have a provincial health-care staffing strategy that addresses unique challenges of working in health care in Northern Ontario. In addition, hospitals in Northern Ontario report staff vacancy data, but only on a voluntary basis, and neither the Ministry nor Ontario Health take responsibility for the accuracy of the data, limiting its usefulness in providing a true picture of the available supply of staff in the region. Although the Ministry has developed modelling tools to forecast expected demand for physicians, its tools are not all designed to take into account the age, health condition or location of patients, factors that would affect, for example, what specialists would be needed to serve the needs of different local communities.
- **Patients in northern hospitals could not always obtain timely diagnostic imaging services.** Over the last five years, hospitals in Northern Ontario were far from meeting the

target for wait times for MRI scans. There is a limited number of northern hospitals that have MRI and CT machines. Although the Ministry funds the approved operating hours of MRI and CT machines, it does not provide the capital funding for them. Instead, all hospitals in Ontario are expected to purchase these using funds they raise themselves. However, hospitals in Northern Ontario often face difficulties in raising funds compared to their southern counterparts; one hospital we visited estimated that it would take over two decades to raise the funds needed to purchase the hospital's first MRI machine. Patients in the area currently need to travel four hours away to obtain this service.

- **The Ministry's Northern Health Travel Grant Program's mileage rate of 41 cents per kilometre has not been updated since 2007**. The Ministry created this program in 1985 to provide financial assistance to Northern Ontario residents who must travel long distances to access care for a medical specialist or a Ministry-funded health-care facility. This mileage rate is well below the 2023 mileage rate of 68 cents per kilometre that the Canada Revenue Agency set for business travel. Also, the gas price has increased 58% since 2007. The Ministry has not measured the extent to which the program covers the actual mileage and accommodation expenses that patients incurred to access care away from home. Nor has it analyzed how far patients in Northern Ontario must travel to access care. Without this information to inform its funding decisions on what services to add to the hospitals, the Ministry risks perpetuating many of the health inequities that exist in northern communities.
- **Some, but not all, hospitals in Northern Ontario provided an Indigenous healing space for their patients, had traditional practice policies, had dedicated indoor smudging space, or allowed smudging in patient rooms, based on a survey of hospitals done by Ontario Health in early 2023.** About 17% of the population in Northern Ontario identify as Indigenous, compared to less than 5% in other regions of the province. A 2015 report by the Truth and Reconciliation Commission of Canada (Commission) recommended that health service agencies such as hospitals recognize the value of Indigenous healing practices. The report's recommendations also included increasing the number of Indigenous professionals in the health-care field, ensuring the retention of Indigenous health-care providers in Indigenous communities, and providing cultural competency training for all health-care professionals. However, hospitals do not consistently collect data on what proportion of their patients and staff are Indigenous because the *Public Hospitals Act* does not explicitly require it.

This report contains 20 recommendations with 48 action items to address our audit findings.

Overall Conclusion

Our audit concluded that the Ministry of Health and Ontario Health have processes in place to oversee that the delivery of hospital services in Northern Ontario is timely, consistent and meets patient needs, but they can work on improving their effectiveness. In particular, Ontario lacks a dedicated health-care strategy for the north region; a dedicated strategy could go a long way to better meet the unique health-care needs of Northern Ontario residents. As well, patients in Northern Ontario are more likely to experience longer waits to access the hospital care they need than patients from other parts of Ontario.

The Ministry and Ontario Health also did not routinely measure and publicly report the results and effectiveness of their Northern Ontario programs or initiatives to increase health-care staff in the region or to reimburse health-care travel costs for northern residents, and take corrective actions when necessary. In spite of various health-care staff recruitment and retention programs, the region continues to experience physician and nurse shortages, even leading to prolonged hospital service closures in several cases.

In addition, we found that the public hospitals in Northern Ontario did not consistently have effective processes in place to manage their resources with due regard for economy, so that their patients can receive services in a timely and cost-efficient manner. For example, patients in Northern Ontario are more likely to experience longer waits to access much-needed hospital services than patients from other parts of Ontario. This is despite their greater use of agency nurses—which increased 25 times between 2018/19 and 2022/23 compared to about two and a half times for hospitals in the rest of the province—at a significant financial cost. Unlike British Columbia and Saskatchewan, the Ministry does not have a dedicated health-care staffing strategy that would address these critical health-care challenges in Northern Ontario.

OVERALL MINISTRY RESPONSE

The Ministry of Health (Ministry) thanks the Office of the Auditor General of Ontario for its work, and accepts the overall conclusions of the report and the recommendations that impact the Ministry. The Ministry recognizes the unique challenges of providing equitable access to health care in Northern Ontario, and is committed to working with Ontario Health, northern hospitals and other stakeholder groups on developing and implementing programs and initiatives to address these challenges.

Ontario's health-care plan, Your Health: A Plan for Connected and Convenient Care, is built on three pillars: the right care in the right place, faster access to care, and hiring more health-care workers. Currently under development is an Integrated Capacity and Health Human Resources Plan for Ontario. The goal of this plan is to ensure a greater understanding of the health-care staffing needs in each community, which will inform the development of tailored programs and initiatives. Through innovative programs and initiatives, the Ministry will prioritize areas most in need, such as rural and remote communities, including Northern Ontario, where gaps already exist.

To improve access to health-care services in Northern Ontario hospitals, Ontario has, for example, made investments in the Weeneebayko Area Health Authority to expand the number of patients the hospital can care for, and to build an extended mental health and addictions centre and a long-term care elders lodge, with a goal to reduce wait times and to avoid patients remaining in hallways while they transition to the community.

As part of a long-term sustainability plan, Ontario is analyzing current gaps in the health-care system and anticipating the health-care needs of its population over the next 10 years to determine solutions to address growing health-care demands. With the aim of providing the right care in the right place, faster access to care and hiring more health-care workers in Northern Ontario, the Ministry will continue to work with Ontario Health, hospitals, and other stakeholders to achieve these goals.

OVERALL ONTARIO HEALTH RESPONSE

Ontario Health found the Auditor General's review of Northern Ontario hospitals to be valuable and welcomes the recommendation to collaborate with the Ministry of Health on a dedicated health-care strategy for the north.

Ontario Health North East and North West regions' role is to provide value to the system through health-care planning, funding, delivery, and performance monitoring. We are committed to ensuring that our hospitals, and all health-service providers, have the tools and information they need to deliver quality care in their communities. A dedicated health-care strategy for the North will help inform our Annual Business Plan and our Operational Plans to address some of the complex challenges in the region, such as health human resources training, recruitment, and retention, patient transportation, given its rural/remote locations, and the pressures that hospitals are facing from the COVID-19 pandemic.

It is important to note that the period covered for this audit overlapped with the height of the pandemic from 2020 to 2023, as well as the creation of Ontario Health in 2019, which are contributing factors that directly affect the Auditor General's

findings. The effects of the pandemic are unprecedented, and it needs to be taken into consideration when evaluating hospital performance and their ability to report. Similarly, Ontario Health was newly formed a few months prior to the pandemic, amalgamating 22 organizations, and responding to the crisis by implementing provincial directives such as pausing surgeries and diagnostic testing and by setting aside efficiency and effectiveness performance measures that are understandably an important part of normal operations; however, 2020–2023 was anything but normal. Ontario Health will continue to work with hospitals on pandemic recovery and, at the same time, build its processes to help transform the health-care system. These continuous improvement efforts align with the recommendations in the report.

2.0 Background

2.1 Profile of Northern Ontario

For the purposes of health-care planning and delivery, the Ministry of Health (Ministry) and Ontario Health (a provincial agency established in 2019 to connect, coordinate and modernize the health-care system) define the north region of Ontario as the area from Parry Sound in the south, Kenora in the west, Fort Severn in the north to Mattawa in the east. This area encompasses almost 90% of the province's total landmass, but only about 6% of the province's entire population, or about 790,000 based on 2021 census data. Most communities in the north are rural and remote with small populations—23 of the 36 hospitals in the north region have 60 or fewer beds. Sudbury and Thunder Bay, the two largest urban communities in the north, had populations of 166,000 and about 109,000, respectively, in 2021, and the highest number of beds in the region.

The demographics of Northern Ontario are different from much of the rest of the province. According to Ontario Health, about 17% of the population in Northern Ontario identify as Indigenous (compared to less than 5% in other regions of the province), about 16% identify as Francophone (compared to less than 10% in other regions of the province) and about 3% identify as a racialized population (compared to 13%–47% in other regions of the province).

In 2010, the Ministry published a document titled Ontario Rural and Northern Health Care Framework to guide the unique health-care needs of those Ontarians who live in rural, remote and northern areas of the province. According to that document, Northern Ontario had:

- a lower proportion of residents reporting very good or excellent health status compared to southern rural areas;
- a higher rate of hospitalization due to injury; and
- a higher rate of hospitalization for conditions where outpatient care could prevent or reduce the need for admission to a hospital.

Disparities between the health statuses of residents in Northern Ontario and the rest of Ontario continue to persist. According to more recent publications by Health Quality Ontario (it has since become part of Ontario Health) and the Ontario Medical Association between 2017 and 2021:

- the average life expectancy of those living in the North East and North West regions is lower by two and half years and about three years, respectively, compared to the provincial average;
- the potential years of life lost due to premature death per 100,000 people was 6,255–7,975 years for the North East and North West regions versus 4,198 years for all of Ontario;
- the percentage of inpatient days where hospital beds were occupied by patients who were designated as alternate-level-of-care (that is, they were waiting to receive care elsewhere) was about 23% in the North East and about 30% in the North West, compared to about 15% in all of Ontario; and
- a lack of access to high-speed Internet and unreliable connectivity limits the availability of virtual care for those in remote regions of Ontario.

2.2 Hospital Services in Northern Ontario

The province has a total of 140 public hospitals as of May 2023 spread across Ontario's six health regions: Central, East, Toronto, West, North East and North West; the latter two are sometimes considered one (North) region in certain Ministry and Ontario Health documents. Public hospitals operate on a not-for-profit basis and are funded by the Ministry through Ontario Health. These hospitals provide both inpatient services (requiring overnight stay, such as cardiac surgery and organ transplant) and outpatient services (such as cataract surgery, wound care and diagnostic imaging). Thirty-six or about 26% of the public hospitals in Ontario are located in Northern Ontario, as shown in **Figure 1**. Unlike southern Ontario, Northern Ontario does not have any private hospitals.

Most hospitals in Northern Ontario are located in rural areas and offer limited specialty services and diagnostic imaging services. **Appendix 1** lists the 36 hospitals with their respective number of beds in 2022/23 and acute-care services offered as of September 2023. As well, given their rural locations, some northern hospitals, such as the West Parry Sound Health Centre, are co-located with other health services such as primary care and long-term care. In 2022/23, northern hospitals had about 3,300 beds for various purposes such as acute care, mental health, complex continuing care, and rehabilitation, representing about 10% of all such beds available at Ontario's public hospitals.

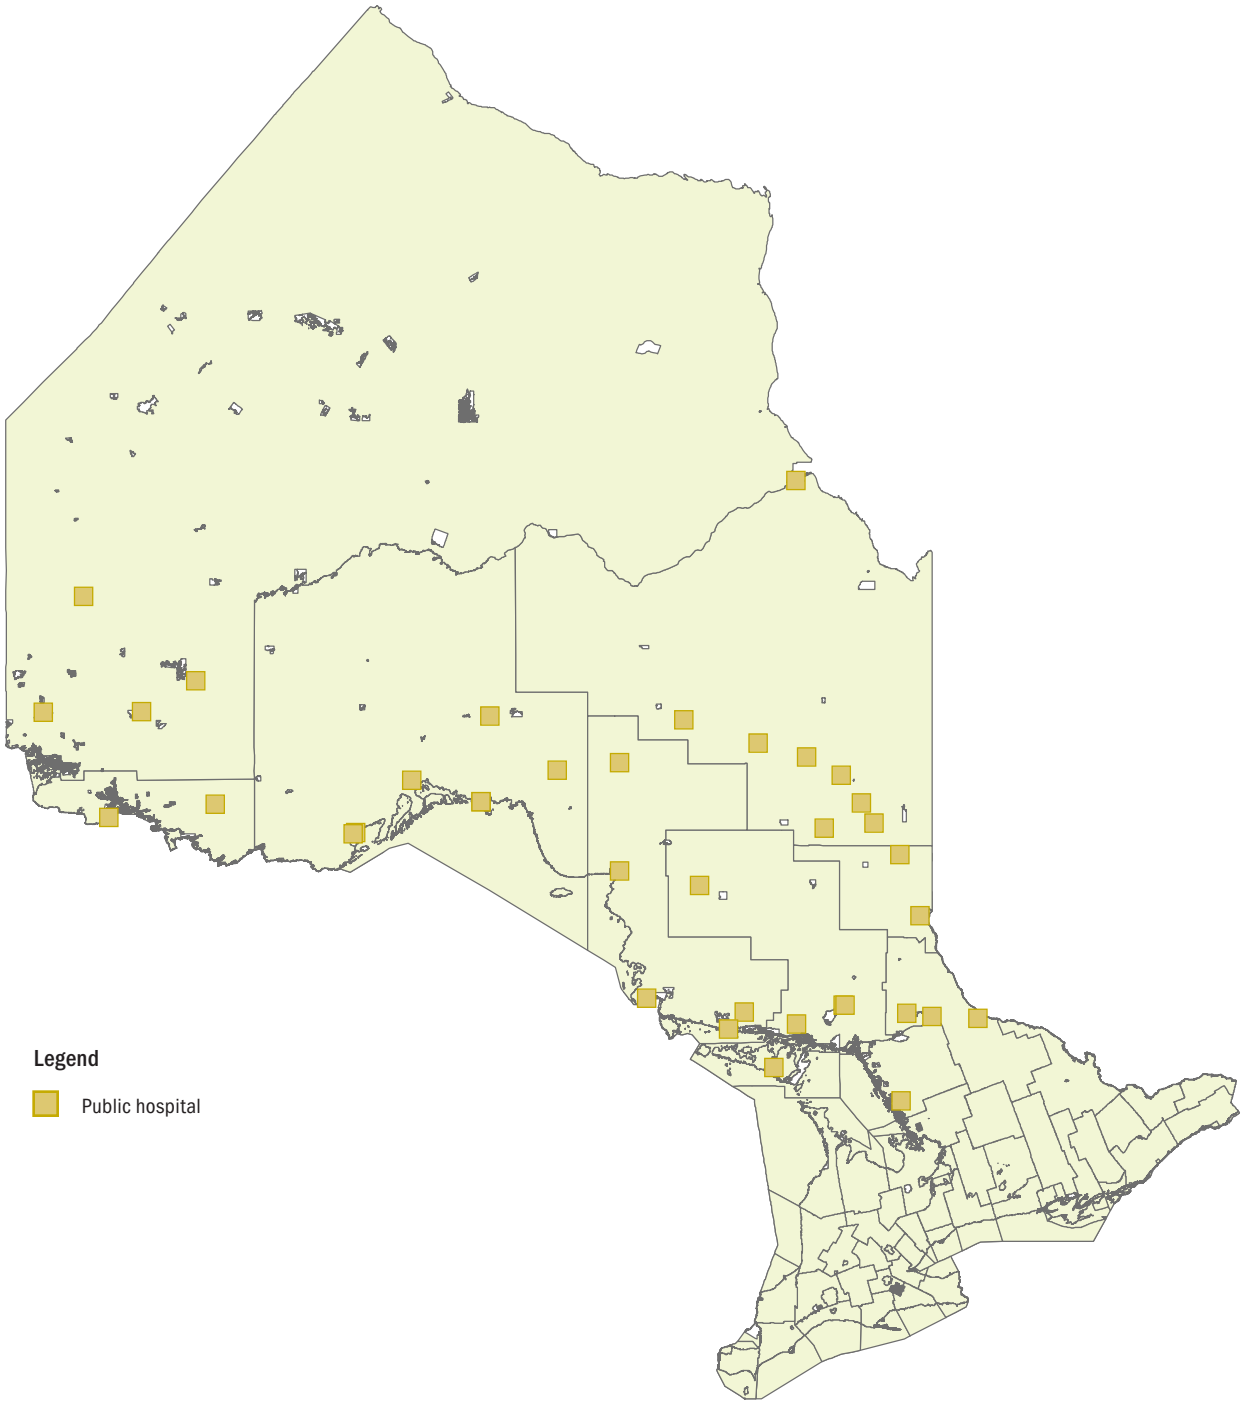
2.3 Unique Challenges of Hospital Services in Northern Ontario

2.3.1 Hospital Staffing

Hospitals in Northern Ontario are challenged with health-care staffing issues. According to Ontario Health, northern hospitals have consistently faced difficulties in recruiting and retaining health-care staff, especially in remote locations as the number of health-care professionals who originate from the north and choose to stay and pursue their career in the region may be limited. According to the Ministry and Ontario Health, health-care professionals who relocate to the north from other parts of the province are generally less likely to continue living in the north because of barriers that include fewer options for affordable housing and public transportation, a need for further acquired generalist skills to feel comfortable practising in the north, and reduced or lack of access to the same amenities available in other parts of the province.

The *Protecting a Sustainable Public Sector for Future Generations Act, 2019* (Act), also known as Bill 124, received royal assent in November 2019. This Act limited annual salary increases to 1% over three years for many parts of the public sector in Ontario, including hospitals. In November 2022, the Ontario Superior Court of Justice struck down this Act and declared it unconstitutional. At the time of our audit, the government was appealing the court decision.

The Ministry has several initiatives in place, some of which are administered by Ontario Health, to improve the availability of health-care staff in the north. These initiatives range from increasing the funding for a medical school in the north to providing incentives to bring health-care professionals from other regions of Ontario to work in the north region (see **Appendix 2**).



2.3.2 Access to Services

Unlike southern Ontario where hospitals may be less than half an hour away from each other by car, one may have to travel hundreds of kilometres in Northern Ontario to get to the next hospital, to either get to an available bed or access certain specialty services like paediatrics, obstetrics or mental health services.

To help patients in Northern Ontario obtain the care they need, the Ministry administers the Northern Health Travel Grant Program. This program was created in 1985 to provide financial assistance to Northern Ontario residents who travel long distances to access care from medical specialists or Ministry-funded health care facilities. Applicants for the grant have to pay their travel costs upfront and then apply to

Figure 1: Map of Ontario with Locations of the 36 Public Hospitals in Northern Ontario

Prepared by the Office of the Auditor General of Ontario

Note: There are two hospitals located in Sudbury (one acute care and one complex continuing care) and two hospitals located in Thunder Bay (one acute care and one complex continuing care). These locations are layered on one another on this map and therefore the 36 hospitals may appear as 34.

receive the financial assistance after completing their travel. The program provides:

- a grant of $0.41 for every kilometre travelled, based on return road distance travel with a minimum one-way travel of 100 kilometres between the patient's area of residence and the location of the nearest medical specialist or Ministry-funded health-care facility that can provide the required OHIP-insured service; and
- an accommodation allowance of $100–$550, dependent on the number of medically necessary lodging nights, per eligible treatment trip to patients whose one-way road distance to the nearest specialist or Ministry-funded health-care facility is at least 200 kilometres.

In August 2022, a bill was introduced in the Legislature to require the Minister of Health to establish an advisory committee to make recommendations for improving access to health services for people in Northern Ontario by means of reasonable, realistic and efficient reimbursement for travel costs. As of September 2023, this bill was still going through parliamentary discussion and consideration.

Virtual care can help improve patients' access to health services in general, but especially in Northern Ontario given the region's large geographic span. Health services provided to patients virtually can include a patient accessing a physician by phone or video, or a physician at a rural hospital accessing help from a specialist at a larger hospital. The Ministry funds virtual-care services to better connect people with health-care providers across the health-care system.

2.3.3 Meeting the Needs of Indigenous and Francophone Populations

With 17% of Northern Ontario's population being Indigenous and 16% being Francophone, hospitals in the region are expected to have programs that consider the culture, practices and linguistic needs of their local community and have staff who are trained to connect with them.

Indigenous Best Practices

A report published by the Truth and Reconciliation Commission of Canada in 2015 included 94 calls to action—covering areas including child welfare, education, justice and health—to redress the legacy of residential schools and advance the process of Canadian reconciliation. Some of the recommendations are relevant to hospital services in Northern Ontario, including:

- recognize the value of Indigenous healing practices and use them in the treatment of Indigenous patients in collaboration with Indigenous healers and elders where requested by Indigenous patients; and
- increase the number of Indigenous professionals working in the health-care field, ensure the retention of Indigenous health-care providers in Indigenous communities, and provide cultural competency training for all health-care professionals.

Multiple reports have cited best practices in health care for Indigenous peoples in Canada, which involve culturally sensitive approaches that respect Indigenous knowledge, values, and traditions. These practices include:

- cultural competency training for hospital staff to better understand the culture, history, and needs of Indigenous communities;
- involvement of Indigenous peoples in the planning, design, and evaluation of health-care services to ensure these encompass their needs;
- using traditional healing practices, as well as Indigenous patient navigators and interpreters, and incorporating Indigenous artwork and signage; and
- increasing the representation of Indigenous peoples in the health-care system by recruiting and retaining Indigenous health-care workers. These workers can better understand the cultural needs of Indigenous patients and can provide a vital connection between health-care providers and patients.

French Language Services

Under the *French Language Services Act* (Act), a hospital can be designated as French-speaking if it meets certain legislative criteria, including 20 specific requirements. By being designated under the Act, hospitals have to demonstrate that they can provide French language services that are available at all times, offered in an equitable fashion and equivalent to the quality of services offered in English.

Eleven or about one-third of the 36 hospitals in Northern Ontario were either fully or partially designated under the Act as of January 2023. A hospital can be partially designated when it provides only certain programs or services in French. To be fully designated, the hospital must offer all of its services in French actively and on a permanent basis. This means making French-language services available from the first point of contact between the user and the hospital, including all verbal communications and visual communications such as signs, notices and social media.

The 20 specific requirements are grouped in the following major topics: governance, direct services to clients, visual identification and communications, accountability, human resources policy and planning, and community support.

2.4 Key Players in Funding, Oversight and Delivery of Hospital Services in Northern Ontario

2.4.1 Ministry of Health

The Ministry of Health leads the provincial policy work for the health system in Ontario. Several branches within the Ministry work with hospitals in the north region, such as the Hospitals Branch, the Capacity and Health Workforce Planning Branch and the Primary Health Care Branch. While all three branches are responsible for developing policies that affect hospital services, the latter two focus on policies relating to health-care staff and travel grants, respectively.

The Ministry also provides funding to all public hospitals in the province through Ontario Health. The Ministry has the following objectives and priorities for health care in Ontario, as outlined in the Minister's December 2022 mandate letter for Ontario Health for 2023/24: providing the right care in the right place; providing better and faster access to treatments and supports; and hiring more health-care workers.

The Ministry and Ontario Health work together under the terms of a memorandum of understanding (MOU) between the two parties, signed in December 2021 with a requirement to be renewed at least once every five years. The MOU outlines the accountability relationship, roles and responsibilities, ethical framework, reporting requirements, audit and review arrangements, staffing, governance and risk management. In addition, the Ministry and Ontario Health have an accountability agreement between them that outlines Ontario Health's performance goals, reporting requirements and spending plan. This agreement is currently in effect for the period of 2021/22 to 2023/24, and must be renewed upon expiry.

2.4.2 Ontario Health

Ontario had 14 Local Health Integration Networks (LHINs), each a not-for-profit Crown agency covering a distinct region of Ontario. As a result of the Minister of Health's transfer orders under the *Connecting Care Act, 2019*, LHINs' functions related to health system funding, planning and community engagement were transferred to Ontario Health effective April 1, 2021. The north region, which comprises both the North West and North East regions, has a Performance Accountability and Funding Allocation team that is responsible for approving funding and monitoring compliance with the terms and performance targets set out in service accountability agreements with hospitals. Ontario Health also monitors funding to hospitals on an ongoing basis to ensure payments are made according to the hospital's approved spending plans, and are within estimates and program allocations.

2.4.3 Hospitals

Hospitals are independent corporations accountable to their own board of directors. As set out under the *Public Hospitals Act*, hospitals are directly responsible for the

quality of care provided to each of their patients. Hospital administrators are responsible for overseeing the delivery of services and implementation of programs, protocols and procedures adopted by the hospital board, within the parameters of provincial legislation.

The majority of a hospital's funding comes from the Ministry through Ontario Health, but the Ministry may also directly fund hospitals for time-sensitive, specific programs such as expense reimbursements related to the COVID-19 pandemic and capital projects. Hospitals may further raise their own funds through, for example, their foundations, revenues from parking, and allocating space to non-hospital services such as food vendors.

Each hospital signed a Hospital Service Accountability Agreement (HSAA) with Ontario Health. This agreement, standardized for all public hospitals in the entire province, outlines the accountabilities, performance expectations and roles of each party, as well as the requirement to maintain a balanced budget. The agreement also sets out key obligations of the hospital, including meeting all performance standards and reporting requested financial and performance information to Ontario Health.

2.5 Funding and Financial Information

Provincial funding for hospital services is governed under the authority of the *Public Hospitals Act*. It constitutes about 87% of total hospital revenue. The remaining 13% of hospital revenue comes from a variety of sources, such as municipal and federal grants, private insurance, patient self-pay, and fundraising. All revenues are to be used for day-to-day operations—including overhead costs for staffing, supplies and services—and capital initiatives.

In 2022/23, the 36 northern hospitals received total operations funding of about $1.9 billion, equivalent to an 8% share of operations funding for hospitals across the entire province; a similar share was noted in 2020/21 and 2021/22.

Communities play an important role in the success of a hospital in rural areas. Public hospitals often rely on donations, especially from the local community, for capital projects or equipment. Northern hospitals often face difficulties in raising large donations that may be more common for hospitals in the south. According to Ontario Health, the single largest donation to a hospital in Northern Ontario was $10 million in 2022 to Health Sciences North, the largest northern hospital, located in Sudbury. In comparison, a donation of $105 million was made in 2022 to build a new hospital and redevelop an existing one in the Greater Toronto Area.

2.6 Hospital Partnerships with Other Health-Care Providers

In 2019, the Ontario government announced the creation of Ontario Health Teams (OHT). Each OHT is envisioned to include a local hospital, a few long-term care facilities, some home-care agencies and, in some cases, community health clinics or family doctors all linked together in one grouping or team. At maturity, the Ministry expects that OHTs will be responsible for the health outcomes of a population within a geographic area; each will receive its own funding from the government and be subject to a standard set of indicators that will measure their performance in providing integrated care and improving patient outcomes. As of July 2023, the Ministry had approved the operation of 57 OHTs, including 10 in Northern Ontario. As shown in **Appendix 3**, of the 10 Northern Ontario OHTs in place, three were created in 2022 and three were created in 2023 during our audit. These 10 OHTs encompass 32 of the 36 Northern Ontario hospitals.

3.0 Audit Objective and Scope

Our audit objective was to assess whether the Ministry of Health (Ministry) and Ontario Health have effective processes in place to:

- oversee that the delivery of hospital services in Northern Ontario is timely and meets patient needs; and

- measure and publicly report the results and effectiveness of their programs or initiatives, and take corrective actions when necessary.

In addition, our audit assessed whether selected public hospitals in Northern Ontario have effective processes in place to:

- provide hospital services in a timely and cost-efficient manner that meets patient needs and in accordance with applicable legislation and guidelines; and
- use and manage resources with due regard for economy.

In planning for our work, we identified the audit criteria (see **Appendix 4**) we would use to address our audit objectives. These criteria were established based on a review of applicable legislation, policies and procedures, internal and external studies, and best practices. Senior management from the Ministry and Ontario Health reviewed and agreed with the suitability of our objectives and associated criteria.

We conducted our audit between January 2023 and September 2023. We obtained written representation from Ministry and Ontario Health management that, effective November 20, 2023, they had provided us with all the information they were aware of that could significantly affect the findings or the conclusion of this report.

Our audit work was conducted at the Ministry, Ontario Health and selected hospitals in Ontario's north region.

At the Ministry, we conducted the majority of our audit work at the following branches: the Hospitals Branch; the Capacity and Health Workforce Planning Branch; the Primary Health Care Branch; the Ontario Health Teams Policy and Operations Branch; the Indigenous, French Language and Priority Populations Branch; and the Health Data Branch. At these branches, we:

- interviewed representatives who are responsible for program areas pertinent to northern hospitals;
- reviewed applicable legislation and regulations as well as documents consisting mainly of briefing notes, information packages for senior management, and information on various programs; and
- obtained relevant data such as those on the Northern Health Travel Grant Program for patients, incentive programs specific to Northern Ontario to recruit and retain physicians and nurses, shortage of health-care professionals, use of agency nurses, and locations of nursing stations.

At Ontario Health, we:

- reviewed documents consisting mainly of financial information, annual business and operational plans, annual reports, agreements, emails and meeting notes;
- interviewed management and staff responsible for program areas including health-care planning, hospital performance monitoring and data collection, health equity and priority populations, the health-care workforce, and use of virtual care;
- obtained and examined data from systems including the Wait Time Information System, the Self Reporting Initiatives, the National Ambulatory Care Reporting System and the Discharge Abstract Database in order to conduct analyses on hospital performance;
- obtained and examined data from the S9 Dashboard for analysis of physician and nurse shortages; and
- obtained and examined data from the Health Force Ontario Unit on locum physicians.

We visited and completed detailed audit work at three hospitals—Health Sciences North in Sudbury, Hornepayne Community Hospital in Hornepayne, and Sioux Lookout Meno Ya Win Health Centre in Sioux Lookout. At these hospitals, we:

- observed hospital operations;
- interviewed hospital administrators and program staff responsible for recruiting and retaining staff, developing hospital strategy, measuring and reporting performance, monitoring patient flow, managing patient and family complaints, integrating hospital services with other service providers, improving

health equity, using virtual care and paying staff compensation;
- interviewed the Board Chair;
- examined documents related to health-care planning, accreditation and quality improvement, patient flow, health equity training, culturally appropriate health services, French language service designation, capital project approval, and Board of Director meetings; and
- obtained and analyzed data related to alternate-level-of-care patients, wait times and patient complaints.

We also visited four other hospitals: Anson General Hospital in Iroquois Falls and Lady Minto Hospital in Cochrane (both part of MICs Group of Health Services); Services de santé de Chapleau Health Services in Chapleau; and West Parry Sound Health Centre in Parry Sound. At these hospitals, we met with hospital administrators and staff and toured the hospitals to understand local best practices and any unique challenges.

Furthermore, we administered a questionnaire to all 36 hospitals in Northern Ontario to obtain data and information on the areas we examined in this audit; 34 or 94% of them responded.

Every few years, hospitals in Ontario participate in a voluntary accreditation process to assess performance against best practices on patient safety and quality of care, infection prevention and control, medication management, organizational culture and effective governance. For the seven hospitals we visited in this audit, the most recent accreditations were completed between 2018 and 2023. We considered the results of these accreditation reports in our audit work, but otherwise did not examine the same areas that were examined by the accreditation body in our audit.

To obtain stakeholder perspectives on hospital operations in Northern Ontario, we met with representatives from Home and Community Care Support Services, the Northern Ontario School of Medicine University, the Ontario Medical Association, Ornge, and the Registered Nurses' Association of Ontario.

We conducted our work and reported on the results of our examination in accordance with the applicable Canadian Standards on Assurance Engagements—Direct Engagements issued by the Auditing and Assurance Standards Board of the Chartered Professional Accountants of Canada. This included obtaining a reasonable level of assurance.

The Office of the Auditor General of Ontario applies Canadian Standards on Quality Management and, as a result, maintains a comprehensive system of quality management that includes documented policies and procedures with respect to compliance with rules of professional conduct, professional standards and applicable legal and regulatory requirements.

We have complied with the independence and other ethical requirements of the Code of Professional Conduct of the Chartered Professional Accountants of Ontario, which are founded on fundamental principles of integrity, objectivity, professional competence and due care, confidentiality and professional behaviour.

4.0 Detailed Audit Observations

4.1 Health-Care Strategy for Northern Ontario

4.1.1 No Dedicated Health-Care Strategy for Northern Ontario

The Ministry of Health (Ministry) did not have a dedicated health-care strategy for Northern Ontario that addresses the region's unique health-care needs, including challenges related to geography, the health-care workforce, Indigenous health and other health inequities. In 2009, the Ministry of Health and Long-Term Care had established the Rural and Northern Health Care Panel to define a vision, guiding principles, strategic directions and guidelines to assist the Ministry and the Local Health Integration Networks (since consolidated into Ontario Health) in addressing access to care for rural, remote and northern communities. As a result of this panel's work, in 2010, the Ministry issued an 85-page report titled Rural and Northern Health Care Framework/Plan—Stage 1 Report, which included a reference to two additional stages following

this first stage, to be concluded with the issuance of a final framework for the province.

The report also included the panel's 12 recommendations, as shown in **Appendix 5**, to support the Ministry in developing strategies for rural and northern health care. These recommendations included establishing a process to identify strategies to improve access to health-care services for First Nations communities, continuing to explore innovative ways of attracting health professionals to Northern Ontario, and creating a culture of collaboration and co-ordination among health-care providers in Northern Ontario.

We found that the Ministry never developed a final framework. We noted that Ministry staff last referred to the Stage 1 framework in their work in 2014 and, when we inquired about its status during our audit, they informed us that each government establishes its own strategy. The Ministry told us that, after consulting with the community and making investments to address the panel's recommendations, such as establishing family health teams in rural and northern communities and expanding the Ontario Telemedicine Network, it had determined that a formal framework was not required.

The Ministry told us that it has initiatives and programs specific to the north, some of which are discussed in this report, but it does not have a single document containing a comprehensive health-care strategy for the north region. For example, the Ministry has developed programs to recruit and retain health-care staff in Northern Ontario, such as the Northern and Rural Recruitment and Retention Initiative, the Northern Specialist Locum Programs, the Tuition Support Programs for Nurses and Nursing Community Assessment Visits.

According to the current memorandum of understanding between the Ministry and Ontario Health established in December 2021, the agency's mandate includes "to manage health service needs across Ontario consistent with the Ministry's health system strategies." Having a dedicated health-care strategy for the north is important to guide Ontario Health's focus on the specific areas that would address the unique health-care needs of residents in Northern Ontario.

4.1.2 Province's 2023 Health-Care Strategy Does Not Address All the Unique Challenges of Northern Ontario

The Ministry released Your Health: A Plan for Connected and Convenient Care for the entire province in February 2023. This plan covers three major areas: supporting the right care in the right place, providing faster access to care, and hiring more health-care workers. Apart from enhancing some capacity in northern and rural areas by adding 150 more education seats for nurse practitioners starting in 2023/24, this plan did not provide any specific strategies for addressing the longstanding health inequities identified in Northern Ontario, as mentioned in **Section 2.1.** As well, we confirmed with multiple Ministry branches that they, too, did not have any dedicated strategy targeting the unique challenges facing Northern Ontario hospitals or the north region overall.

The provincial health-care plan was released during our audit and was still being implemented when we completed our work; the Ministry informed us it was developing a mechanism for tracking and monitoring the plan's progress.

This one-size-fits-all approach misses an opportunity to identify all the elements that are needed to provide the best health-care possible in Northern Ontario, and work more effectively to address them. Our discussions with staff from Ontario Health and hospitals identified that non-health-related matters can also influence the quality of hospital services for patients. These include affordable housing, public transportation, child care, Indigenous cultural services and economic development. For example, the scarcity of child care and housing deters many health-care professionals from working in the north region; public transportation and related infrastructure issues can affect physical access to hospitals for both patients and health-care staff; and a lack of culturally safe care contributes to language and communication barriers and mistrust in the health-care system, discouraging some patients from using the health-care services they are entitled to. Also, overall economic development has a broad impact on education, income, employment levels, and access to healthier food options. With a

strategy that also focuses on addressing these unique regional factors, the government could better co-ordinate with other ministries, levels of government and delivery partners to improve the capacity and quality of health care in the region. Multiple stakeholder groups that we engaged with all agreed that there is a need for a dedicated health-care strategy for Northern Ontario. For example:

- Ornge, a Ministry-funded organization that provides air ambulance services across Ontario, indicated that a dedicated strategy for Northern Ontario would help address its specific challenges in the region, including a lack of detailed weather reports and the poor state of runways in some airports with limited de-icing during the winter.
- The Ontario Medical Association reinforced that a dedicated strategy for the north and rural areas is needed, and that a government body needs to be identified to be responsible for monitoring that the strategy is being implemented effectively and that it is leading to improvements in the health outcomes of residents in the north. This is in line with a recommendation in the Ministry's 2010 Rural and Northern Health Care Framework/Plan to create a single point of focus within the Ministry for rural, remote and northern health to increase accountability and make it easier to define and monitor standards for improving access to health care.

Having a dedicated strategy can also help set goals to support timely and accessible health care in Northern Ontario, and allow the government to monitor progress toward these goals. For example, one goal in a dedicated strategy can be to enhance Internet access in rural areas to increase the use of virtual technologies for patient care. Northern Ontario's large landmass limits patient access to services, and virtual care can play a large part to help with this. Providing virtual care is contingent on having reliable, high-speed Internet. A May 2023 report by an organization funded by the Federal Economic Development Agency for Northern Ontario noted that several major areas in Northern Ontario still did not have access to high-speed Internet. In November 2023, the government announced that it will be investing about $11 million to bring improved Internet access to several towns and First Nation communities across Northern Ontario by the end of 2025.

In 2015, the Registered Nurses' Association of Ontario published its Coming Together, Moving Forward: Building the Next Chapter of Ontario's Rural, Remote & Northern Nursing Workforce Report, which proposed 23 recommendations including to:

- "consider the context of rural, remote and northern health-care delivery through meaningful engagement of relevant stakeholders and conducting an impact analysis, when developing new provincial initiatives; and
- invest in ongoing infrastructure renewal and growth in rural and remote communities (i.e., telecommunications, hydro, transportation, housing, etc.)."

Also, before being absorbed into Ontario Health in 2019, Health Quality Ontario (a government agency with a mandate to advise on health-care quality) developed the Northern Ontario Health Equity Strategy in 2018. This strategy included a main recommendation to establish a Northern Network for Health Equity that would support efforts across different sectors to improve health equity for people living in Northern Ontario. According to the World Health Organization, health equity is achieved when everyone, regardless of their social, economic, demographic or geographic differences, can attain their full potential for health and wellbeing. Ontario Health has since implemented some initiatives that align with this strategy's objectives; for example, it has established an internal regional Equity, Inclusion, Diversity and Anti-Racism Committee, and supported hospitals becoming part of Ontario Health Teams to deliver co-ordinated health care that is more connected to patients' local communities. However, five years after it was first developed, the Northern Network for Health Equity had not been established because, according to Ontario Health, the Ministry did not approve its funding request.

We found that jurisdictions in the United States and Australia, and British Columbia in Canada have developed dedicated strategies and initiatives

that address the distinct health determinants in rural regions, much like those in the north, to help improve health-care delivery in these regions. Health determinants are factors such as income, physical environments and social supports that influence population health. We describe these strategies in greater detail in **Appendix 6**.

RECOMMENDATION 1

To better meet the unique health-care needs of Northern Ontario residents, we recommend that the Ministry of Health:

- work with Ontario Health, relevant ministries and stakeholder groups to develop and implement a dedicated health-care strategy for Northern Ontario, considering similar strategies from other jurisdictions as well as factors that may influence the delivery of health care, such as child care and housing;
- review recommendations from the Rural and Northern Health Care Framework/Plan, Northern Ontario Health Equity Strategy, and applicable associations and organizations such as the Registered Nurses' Association of Ontario, Ontario Medical Association and Ornge, and consider them in the dedicated strategy where appropriate;
- develop and monitor performance indicators that measure the goals and outcomes of this dedicated strategy;
- publicly report on the status of implementation of this dedicated strategy annually to show if it is leading to improvements in the health outcomes of residents in the north; and
- establish a schedule to regularly review and update this dedicated strategy.

MINISTRY RESPONSE

The Ministry of Health (Ministry) acknowledges this recommendation. The Ministry and Ontario Health will continue to prioritize the health-care needs for residents in Northern Ontario by building on and improving existing programs and initiatives and working toward the goal of providing the right care in the right place, faster access to care and hiring more health-care workers.

The Ministry will review this recommendation and conduct further analysis to determine the feasibility of a dedicated strategy. If this is deemed feasible, the Ministry will determine next steps that may include considering recommendations from other associations and organizations, developing and monitoring performance indicators, reporting on the status of implementation, and establishing a schedule to review and update the dedicated strategy.

4.2 Physician and Nurse Shortages in Northern Ontario

4.2.1 Ministry Did Not Have a Health-Care Staffing Strategy for the North

The Ministry told us that addressing health-care staffing challenges in Northern Ontario is a priority, but it did not have a plan to address these issues for the north region when we completed our audit.

As discussed in **Section 2.3.1**, the Ontario government has multiple programs in place to attract and retain health-care professionals. While there are some programs designed to help the north region, most programs are for the entire province. For example, the Ontario Learn and Stay Grant, offered by the Ministry of Colleges and Universities, reimburses students for tuition, books and compulsory fees for studying nursing, medical laboratory technology and paramedics in priority communities of Ontario. However, this program's list of priority communities includes cities such as Ottawa, Windsor and London, which are larger and typically attract more students than rural towns in the north. The Ministry stated that in 2022, of the 11,452 nurses who initially registered and reported being employed in Ontario, only 6.2% reported at least one nurse employment position in the North East or North West region.

As discussed in **Section 4.1.2**, Ontario has a health-care plan that covers health-care staffing; however,

the initiatives discussed are for the entire province with limited focus on the north region. In comparison, in September 2022, British Columbia and Saskatchewan each published provincial health-care staffing strategies that included specific planned actions for rural and remote areas. We describe these strategies in **Appendix 7**.

Having a health-care staffing strategy that recognizes the unique challenges in Northern Ontario would help address specific situations that effectively discourage recruitment in northern hospitals. For example, in one hospital we visited, management told us that it has a constant fear of losing Indigenous staff to a nearby federally funded health organization that can provide higher wages and tax exemptions to its Indigenous staff. Management told us it has been seeking a tax exemption from the Canada Revenue Agency for its Indigenous employees since 2011, so the hospital can better compete with other employers in the region to attract and retain talent. However, this was still not resolved at the time of our audit.

RECOMMENDATION 2

To better address health-care staffing challenges in Northern Ontario hospitals, we recommend that the Ministry of Health:

- work with Ontario Health to further implement a health-care staffing strategy with specific actions to address the unique characteristics of health care in Northern Ontario; and
- collaborate with the federal government to explore options to better address the particular staffing challenges of Northern Ontario hospitals—for example, by seeking an exemption on income tax applicable to hospitals' Indigenous employees.

MINISTRY RESPONSE

The Ministry of Health (Ministry) acknowledges this recommendation. The Ministry is working to improve health-care staffing in Northern Ontario as part of a broader health human resources strategy driven by Your Health: A Plan for Connected and Convenient Care. To date, this has included the deployment of a number of programs to support recruitment and retention in Northern Ontario in 2023/24 and beyond, including the Clinical Scholar Program, the Enhanced Extern Program, the Supervised Practice Experience Partnership, and the Community Commitment Program for Nurses.

The Ministry is working at present to evolve this plan to include the following elements moving forward:

- evaluating and calibrating existing recruitment and retention programs specifically for use in the north; and
- developing enduring solutions to support longer-term recruitment and retention of the health workforce in north.

Further the Ministry recognizes the need to work with sector and intergovernmental partners, including the federal government, to evolve and implement a successful health human resources strategy for Northern Ontario.

4.2.2 Staff Shortages Have Led to Ongoing Closures of Hospital Services in Northern Ontario

As discussed in **Section 2.3.1**, northern hospitals have consistently faced difficulties in recruiting and retaining health-care professionals. This shortage has resulted in hospitals having to either close certain departments or reduce operating hours for some services.

Prior to 2018, of the 36 northern hospitals, 19 had the resources to provide obstetrics services. In the summer of 2022, the Ministry asked Ontario Health to track obstetrics service closures in the province because it was a growing concern at the time. Ontario Health stated during our audit that it stopped reporting this information in March 2023 so that it could first establish a process to track all potential and actual closures, and flag any serious risks and concerns to the Ministry. In August 2023, Ontario Health implemented a process to centrally track closures in northern hospitals'

Figure 2: Closure of Obstetrics Departments at Northern Ontario Hospitals, July 4, 2022, to September 3, 2023

Source of data: Ontario Health

Hospital	Location	Type of Staff Shortage That Led to Closure	# of Times Closed	Total # of Days Closed[1]	Average # of Days[1] of Each Closure
Lady Dunn Health Centre	Wawa	Physician	1	**1,777.0**[2,3]	n/a
Weeneebayko Area Health Authority	Moose Factory	Physician	1	**1,707.0**[2,3]	n/a
Red Lake Margaret Cochenour Memorial Hospital	Red Lake	Physician	1	**427.0**[2]	n/a
West Parry Sound Health Centre	Parry Sound	Nursing and Physician	12	**179.5**[3]	15.0
St. Joseph's General Hospital	Elliot Lake	Nursing and Physician	83	**118.0**	1.5
Notre-Dame Hospital	Hearst	Physician	5	**119.0**[2]	n/a
North of Superior Healthcare Group (Wilson Memorial Hospital)	Terrace Bay	Nursing	1	**96.0**	96.0
Sault Area Hospital	Sault Ste. Marie	Physician	1	**3.0**	3.0
Sensenbrenner Hospital	Kapuskasing	Nursing and Physician	5	**2.0**	0.5
Temiskaming Hospital	New Liskeard	Physician	1	**0.5**	0.5

1. Calculated from hours.
2. Calculated as of September 3, 2023; department remained closed as of the end of September 2023.
3. Includes days closed prior to July 4, 2022, as the data that Ontario Health collected included retroactive information on closures.

obstetrics services. By the end of September 2023, 15 northern hospitals were providing obstetrics services.

Ontario Health also tracks emergency department closures across the province, which are described in our 2023 value-for-money audit of Emergency Departments. Ontario Health does not centrally track other department closures in hospitals in Northern Ontario, indicating this work is mostly done separately by regional teams within the agency.

As shown in **Figure 2**, Ontario Health's information showed that between July 4, 2022, and September 3, 2023, 10 of the 19 northern hospitals had reported closures in their obstetrics services lasting anywhere from half a day to this entire period. The agency told us that these hospitals closed their obstetrics services because of a shortage of nurses or physicians, or both. Patients who live near these hospitals would need to travel to other locations, often at significant distances, to obtain the needed non-emergency services. For example, the obstetrics services at Lady Dunn Health Centre in Wawa, Weeneebayko Area Health Authority in Moose Factory and Red Lake Margaret Cochenour Memorial Hospital in Red Lake remained closed as of the end of September 2023, with the first closed for about five years as of September 2023. Patients in Wawa would need to travel to the nearest hospital with obstetrics services—to Sault Ste. Marie, about two and a half hours by car. Patients in Moose Factory would need to travel to Timmins, a one-hour flight scheduled generally only during weekdays, or to Kapuskasing, which takes several hours of travel by airplane and car. Patients in Red Lake would need to travel to Dryden, which is about two and a half hours away by car. We asked Ontario Health whether there were plans to reopen the services at these hospitals. Ontario Health contacted the hospitals and told us that there was interest in restarting the service at Lady Dunn Health Centre, but there was no expected timeline due to a lack of physicians; Weeneebayko Area Health Authority expressed a desire to restart this service, but had not made any funding requests; and Red Lake Margaret Cochenour Memorial Hospital's Medical Advisory Committee decided that resuming the service would not be considered until at least spring 2024 because of a lack of physicians.

RECOMMENDATION 3

To help hospitals provide more accessible care to patients in Northern Ontario, we recommend that Ontario Health develop a process to centrally compile data on significant hospital service reductions, including reasons for the service reductions; and support hospitals with mitigating any service reductions or their impact on patients.

ONTARIO HEALTH RESPONSE

Ontario Health accepts the recommendation. Ontario Health is committed to connecting, co-ordinating, and modernizing our province's health-care system to ensure all people of Ontario have equitable access to high-quality health care, when and where they need it. Ontario Health supports the ongoing need to ensure service reductions and patient impacts are minimized due to health human resource shortages. Ontario Health will continue to strengthen its internal processes to regularly identify and compile data on all significant hospital service reductions, and work with hospitals to find solutions to mitigate service reductions and the impact to patients.

4.2.3 Lack of Reliable Data on Staffing Supply and Demand

Issues with Ministry's and Ontario Health's Collection of Hospital Staffing Data Limit Its Usefulness, and Information Gaps Persist

Both the Ministry and Ontario Health collect data on health-care staff shortages across Ontario, including Northern Ontario. However, we found that the data collected is incomplete and that neither party centrally oversees or fully reviews the data, therefore missing an opportunity to use the data effectively to assess and respond to staff shortages.

Hospitals report staffing data to the Ministry and Ontario Health mainly via three datasets, but we found some issues with the data collection that limit its usefulness. In **Appendix 8**, we describe these three datasets and the deficiencies we found in each. First, because reporting is not mandatory, not all hospitals report the requested data regularly, so the datasets are incomplete and therefore not fully reliable. Second, having three separate channels to collect similar data, such as the number of physician and nurse vacancies, puts an unnecessary administrative burden on hospitals and can discourage data submission. Having a single, mandatory platform for hospitals to submit their data would make it easier for more complete information to be collected, and help improve the reliability of the data. Third, we found discrepancies in the data reported through the different tools. For example, the Northern Ontario Physician Data Collection Tool reported the number of family physician vacancies in the North West and North East as 71 and 118, respectively, for November 2022; this was significantly different from 4 and 37, respectively, as reported by the S9 Census for the same period.

With incomplete and unreliable data to inform its decisions, the Ministry and Ontario Health cannot effectively respond to changing conditions by making impactful, evidence-based changes to improve the province's recruitment and retention programs for physicians and nurses in Northern Ontario.

Ministry's Tools for Forecasting Staffing Needs Not Useful on a Regional Basis, and Did Not Inform Retention and Recruitment Programs for Northern Ontario

The Ministry uses two modelling tools to forecast supply and demand for physicians in the province and one modelling tool to do the same for nurses. However, we found that it has not used this forecast information to help design and improve its programs aimed at attracting and retaining physicians and nurses in Northern Ontario. Also, the Ministry does not regularly report information generated by these tools.

The Ministry has been using the following modelling tools:

- The Assessing Doctor Inventories and Net-Flows Supply Model can project physician supply for up to a period of 19 years by tracking physicians

from post-graduate training, through their practising years, and to retirement, as well as by age, sex and specialty.

- The Utilization Model estimates the number of physicians required in the province based on a future utilization forecast, which is determined by applying the population's rate of visits by physician specialty, according to Ontario Health Insurance Plan claims, to population projections.
- The Ontario Nursing Simulation Model estimates the supply and demand for registered nurses and registered practical nurses.

We found the following concerns with the Ministry's use of these tools:

- The Ministry uses these tools on an ad hoc basis and has no schedule that defines how often it will generate current information for the nursing model or report this information to internal and any external stakeholders. By regularly using these tools to inform program improvement, the Ministry can keep its programs up to date based on current conditions.
- The Ministry's modelling tools for physicians and nurses do not allow for regional-level analysis or identify the needs of patients in a particular area. Yet, as shown in **Section 2.3.1**, Northern Ontario's health-care challenges are different from other regions. The Ministry informed us that it has historically preferred to rely on provincial-level modelling to identify professions or physician specialties with issues that require a more thorough analysis.
- The Ministry's modelling tools are not designed consistently to consider patients' gender, age and health conditions. We noted that the Ontario Medical Association is currently working on developing a model called the Physician Resources Integrated Model, which would use population health needs and workforce capacity along with artificial intelligence to predict future health-care needs, such as how many family physicians and specialists will be required to meet patient needs in a specific geographic area.
- The two physician modelling tools were last updated in 2021, and the nurse modelling tool was last updated in 2017. These updates included more recent data to improve future projections. The Ministry explained that it has not recently updated these tools because of resources being diverted to respond to the COVID-19 pandemic. It stated that it aims to update these tools every two years.
- As of November 2022, using these tools, the Ministry forecast that the demand for physicians will be 38,295 by 2030, which outpaces the supply of 37,703 by 592 physicians. We found no evidence that either the Ministry or Ontario Health has used this analysis to improve any of the health-care staffing programs for Northern Ontario.

RECOMMENDATION 4

To better plan for health-care staffing, we recommend that the Ministry of Health and Ontario Health:

- identify health-care staff shortage information being collected via different datasets and eliminate duplication, and work toward creating a single mandatory platform accessible to both organizations;
- update all modelling tools every two years, considering input from external stakeholders, such as the Ontario Medical Association, that may have other data elements not included in the Ministry's modelling tools;
- develop and implement a process to forecast health-care staffing needs at a regional level for the six health regions on a regular basis; and
- establish a schedule to periodically forecast the future supply and demand for physicians and nurses, follow the schedule to create forecasts and share them with relevant Ministry and Ontario Health program areas, particularly those that administer health-care staff recruitment and retention initiatives.

MINISTRY RESPONSE

The Ministry of Health (Ministry) acknowledges this recommendation.

The Ministry acknowledges the need to avoid the duplication of any data collected from health system employers and staff. The Ministry will work with Ontario Health to identify further opportunities for data integration in support of health workforce planning in the north.

The Ministry continues to work with a number of sector partners to enhance data and evidence in support of health workforce planning for Northern Ontario and the province as a whole. This includes collecting data in relation to physician workforce planning through the Ontario Physician Reporting Centre, a collaborative project of four organizations: the Ministry of Health, the College of Physicians and Surgeons of Ontario, the Council of Ontario Faculties of Medicine and the Ontario Medical Association.

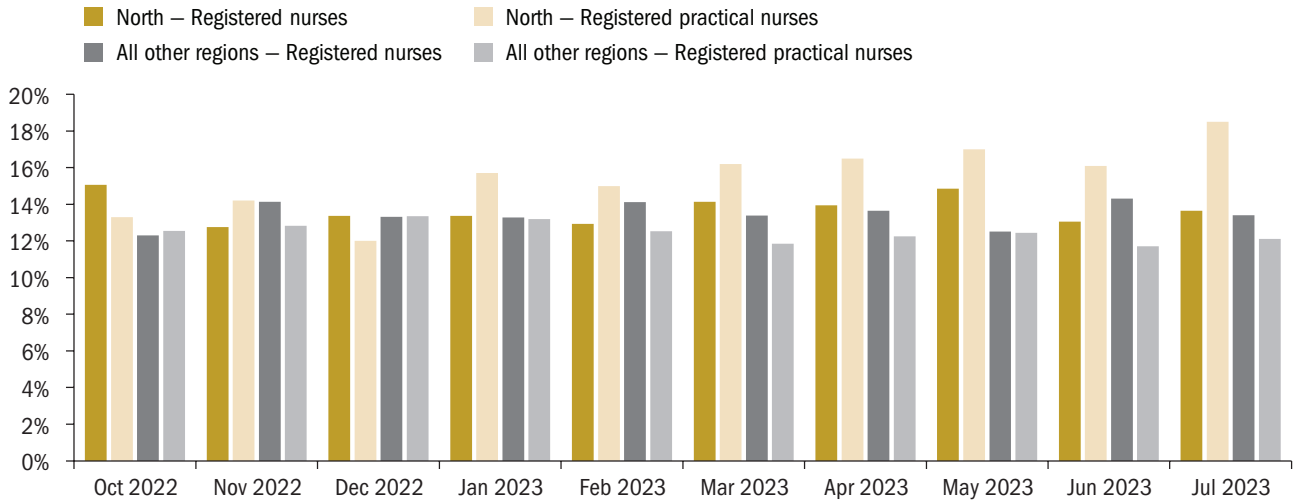
The Ministry will work with system partners including Ontario Health to improve our health workforce modelling tools and examine new methods to incorporate data on a regional level, while avoiding the duplication of any data collected from health system employers and staff.

ONTARIO HEALTH RESPONSE

Ontario Health accepts this recommendation. Ontario Health recognizes the importance of accurate, up-to-date information being available so that hospitals and system partners can make decisions that collectively support the recruitment and retention of health human resources across Ontario. Ontario Health will work with the Ministry of Health to develop a health human resources data plan for the province.

4.2.4 Incentive Program to Attract Nurses to Work in Rural Areas Was Never Evaluated and No Performance Goals Were Established

We found that hospitals in Northern Ontario experienced a higher percentage of vacancies for nurses than hospitals in other parts of the province. As shown in **Figure 3**, in July 2023, 11 northern hospitals reported to Ontario Health that vacancy rates were about 14% for registered nurses and 18.5% for registered practical nurses, while hospitals in other regions had vacancy rates of 13.5% and 12%, respectively. However, not all Northern Ontario hospitals regularly submit vacancy rate information because Ontario Health did not make it mandatory. All 34 Northern Ontario hospitals that responded to our questionnaire stated that they faced a shortage of nurses.

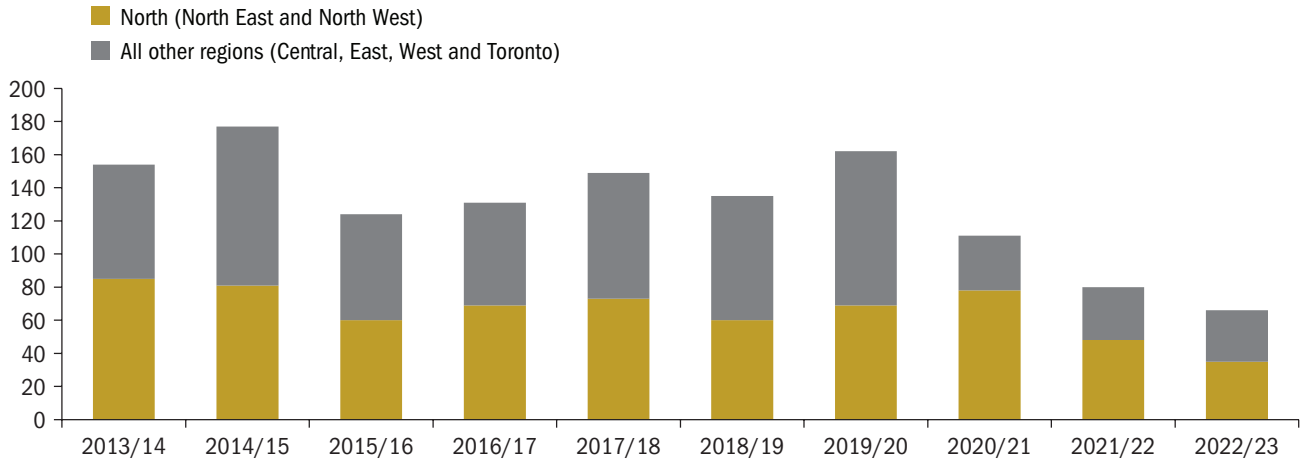


Multiple reports have highlighted a shortage of nurses in Ontario. Management at most Northern Ontario hospitals that we visited told us that they have a dire need for nurses. They also told us that the best way to recruit and retain nurses is to recruit them early in their career. To that end, the Ministry and Ontario Health separately administer nursing incentive programs directed at attracting early-career nurses. However, the only program that focuses on rural areas, which are more common in Northern Ontario, is the Tuition Support Program for Nurses.

The Ministry established this program in 2006/07 to offer tuition reimbursement to recent nursing graduates who choose to work in an eligible underserviced community. Over the last 10 years between 2013/14 and 2022/23, 51% of the program recipients started their nursing careers in a northern community. While more program recipients chose to begin their nursing careers in the north than in the south in five of the last 10 years, the number of program recipients who chose to begin their nursing careers in the north has dropped from 78 in 2020/21 to 35 in 2022/23, as shown in **Figure 4**.

We found that the Ministry has never evaluated the program since its inception about 16 years ago. The Ministry also has not established a target or measured

Figure 3: Vacancy Rates for Nurses at Hospitals in Northern Ontario and Other Regions, October 2022–July 2023



Source of data: Ministry of Health and Ontario Health

Note: October 2022 was the first month that this data was used by Ontario Health. Not all hospitals regularly submit this data.

Figure 4: Number of New Recipients of the Tuition Support Program for Nurses in Northern Ontario and Other Regions, 2013/14–2022/23

Source of data: Ontario Health

how many program recipients remain in Northern Ontario after participating in the program, or tracked whether the nurses originated from Northern or southern Ontario before beginning the program. As such, the Ministry cannot measure whether this program has been successful in building a sustainable workforce of nurses in Northern Ontario.

4.2.5 Northern Hospitals Increased Agency Nurses Hours While Paying Them About Three Times the Amount of Full-Time Staff

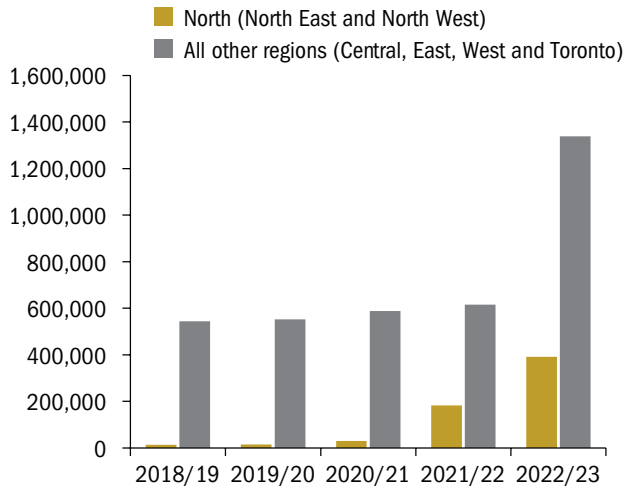
Agency nurses are nurses that are contracted through private agencies. The use of nurse agencies is not new in Ontario—agencies have been providing temporary staff to hospitals for many years to cover

vacancies. However, the COVID-19 pandemic has increased the reliance on these agencies, as much of the permanent nursing workforce was reportedly experiencing burnout.

Although the Ministry collects information on hospitals' expenditures on agency staff, the data does not differentiate between expenditures on registered nurses, registered practical nurses and personal support workers, and therefore the Ministry does not know the amount spent just on nursing staff. According to Ontario Health records, which are based on the Ministry's data, northern hospitals spent about $88 million in 2022/23 on health-care staff contracted through nursing agencies.

Of the 34 Northern Ontario hospitals that responded to our questionnaire, 29 of them informed us that they had used agency nurses in 2022/23 and, by their own accounts, spent a total of about $78 million on them.

As shown in **Figure 5**, between 2018/19 and 2022/23, the use of agency nurses in Northern Ontario hospitals increased 25 times, from just over 15,000 hours in 2018/19 to about 391,000 hours in 2022/23, compared to about two and a half times for the rest of the province, from about 540,000 hours to 1.34 million hours for the same period.



Hospitals in rural areas often have to pay travel and accommodation expenses for some agency nurses compared to hospitals in urban areas, where many agency nurses may already live. We found that, on average, among the northern hospitals we visited during this audit, nurse agencies charged about three times the hourly rate of a full-time nurse employed at a hospital, along with accommodation and travel costs. To illustrate:

- At one hospital we visited, agencies charged the hospital an hourly rate of $83.75–$160 in 2022/23 for a registered nurse, significantly higher than the established wages of $35.50–$42 an hour for that hospital's full-time, unionized registered nurses with up to five years of experience.
- At another hospital we visited, agencies charged the hospital an hourly rate of $120–$155 per hour in 2022/23 as opposed to the unionized wages mentioned above. This hospital also sometimes incurred additional compensation costs because it had to first offer shifts to its fulfill, unionized nurses and pay them overtime wages, but also had to use agency staff to fulfill minimum hours as stipulated in the agency contracts. This arrangement at times can result in more agency nurses than needed working shifts. In addition, this hospital is also responsible for covering the agency nurses' union dues.
- At another hospital we visited, the agency that provides nurses could charge even higher rates for shifts that were booked with less than 12 hours of notice.

At the time of our questionnaire, 30 hospitals had agreements in place with agency nurses; 25 of them had negotiated rates of $101–$150 per hour for a registered nurse, and 27 hospitals had negotiated rates of $76–$125 for a registered practical nurse.

Figure 5: Number of Hours Worked by Agency Nurses in Hospitals in Northern Ontario and Other Regions, 2018/19–2022/23

Source of data: Ministry of Health

In addition, hospitals that hire agency nurses would need to onboard and train them so they can perform the same duties in the same manner as the hospital's own nurses. Our questionnaire results showed that the 30 Northern Ontario hospitals that used agency nurses spent between one shift and four weeks to onboard agency nurses, with many taking about two weeks.

Management at the hospitals in Northern Ontario that we visited informed us that they face unique challenges when using agency nurses. For example:

- Smaller hospitals, which are common in Northern Ontario, typically require nurses to work in multiple departments. In comparison, larger hospitals typically have nurses who only work for a specific department. This workload and other factors have contributed to higher turnover rates among agency nurses.
- Staff from one hospital indicated that they felt they were becoming a travel agent because of the time they spent co-ordinating logistics for agency nurses, including arranging for their housing and transportation, since this is the hospital's responsibility.
- Due to high monthly rents and lack of housing in the community, one hospital we visited purchased its own housing for its agency nurses. However, this also came with additional responsibilities, such as paying for property taxes, Internet, furniture, lawn care and snow blowing, which take away resources from the hospital.

Despite these increased costs, northern hospitals may find it challenging to avoid using agency nurses. Management at one hospital we visited told us the number of agency nurse hours went from 2,000 hours in 2018/19 to over 98,000 in 2022/23 because of a mass exodus of nurses during the COVID-19 pandemic and after the passing of Bill 124, which limited nurses' annual salary increases. Some of these agency nurses had been working at the hospital for over a year. Management at another hospital we visited told us that it had avoided using agency nurses by bringing in more non-nursing support, such as personal support workers, which are staff trained to provide non-medical care such as changing bed linens, and helping patients to the bathroom, brushing their teeth and hair, and helping them be comfortable in bed. However, in October 2023, the hospital started hiring agency nurses to meet its staffing needs.

Of the 30 hospitals that used agency nurses and responded to our questionnaire, 18 stated that they had experienced patient care issues from using agency nurses. In addition, hospitals informed Ontario Health about instances where agency nurses lacked training, resulting in trust issues and extra supervision by physicians. Our 2023 value-for-money audit titled Long-Term Care Homes: Delivery of Resident-Centred Care found concerns regarding continuity of care from agency nurses.

RECOMMENDATION 5

To help increase the availability of nurses in hospitals in Northern Ontario, we recommend that the Ministry of Health:

- establish performance indicators and targets that measure the success of the Tuition Support Program for Nurses, and collect this data at least annually;
- evaluate the Tuition Support Program for Nurses at least once every five years and update the program as needed;
- assess the feasibility of creating a northern-specific program for nurses to help increase the supply of nurses in Northern Ontario; and
- regularly collect hospital spending data on agency health-care staff by type of staff and share it with Ontario Health.

MINISTRY RESPONSE

The Ministry of Health (Ministry) acknowledges this recommendation. The Ministry is working to improve health-care staffing in Northern Ontario as part of a broader health human resources strategy driven by Your Health: A Plan for Connected and Convenient Care. To date, this has included the deployment of a number of programs to support recruitment and retention in Northern Ontario in 2023/24 and beyond, including the Enhanced

Extern Program, the Supervised Practice Experience Partnership, and the Community Commitment Program for Nurses.

The Ministry is working at present to evolve this plan to include the following elements moving forward:

- evaluating and calibrating the Tuition Support Program for Nurses and other existing recruitment and retention programs specifically for use in the north; and
- developing enduring solutions to support longer-term recruitment and retention of the health workforce in the north.

Further, the Ministry recognizes the need to work with sector and intergovernmental partners, including the federal government, to evolve and implement a successful health human resources strategy for Northern Ontario.

The Ministry will continue to collect information on compensation expenses for agency staff based on the hours worked by agency staff versus contracted employees who provide direct care/services in the Ontario Healthcare Financial and Statistical System in support of health workforce planning, and will use this information to monitor the utilization of agency staff for particular service departments.

RECOMMENDATION 6

To help increase the availability of nurses in hospitals in Northern Ontario, we recommend that Ontario Health:

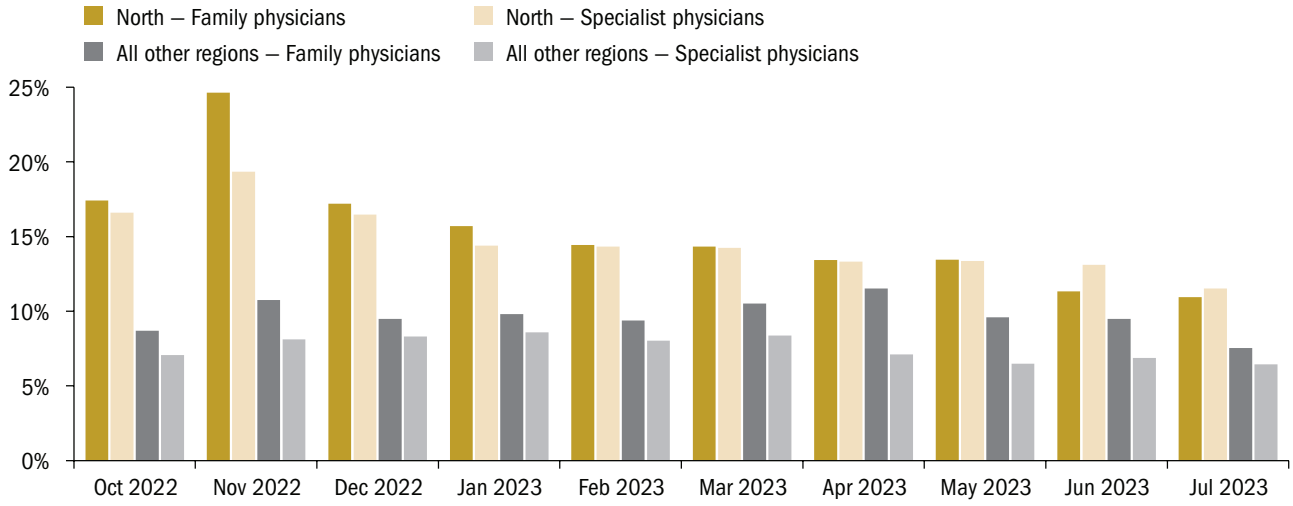
- regularly monitor data on the costs incurred by hospitals for the different types of agency health-care staff;
- explore the opportunity to leverage and align procurement of staffing agencies in the region, while ensuring that doing so does not add further risk to hospital service reductions and patient care in rural and remote hospitals; and
- assess the costs of agency nursing versus what may be required to stabilize and retain hospital-hired nursing staff, and share this analysis with the relevant stakeholders and decision-makers.

ONTARIO HEALTH RESPONSE

Ontario Health accepts this recommendation. Ontario Health understands the impacts of nursing agency staff use on Northern Ontario hospitals. Ontario Health will continue to regularly monitor data on the costs incurred by hospitals for the different types of agency health-care staff and develop local solutions with our hospital partners to help stabilize overall health staffing in communities. Ontario Health will explore opportunities to centralize procurement with agency corporations to maximize quality, value, and efficiency, while minimizing risk to hospitals. Ontario Health will analyze the costs of agency nursing to inform opportunities in support of hospital nurse retention.

4.2.6 Physician Vacancies in Northern Hospitals Still High Despite Recruitment and Retention Initiatives

Although the Ministry has introduced multiple programs to address the shortages of physicians in Northern Ontario, vacancies for family physicians and specialist physicians remained higher in that region compared to other regions in the province. The Ministry and Ontario Health began measuring vacancy data in October 2022. As shown in **Figure 6**, in the month of July 2023, 11 Northern Ontario hospitals reported vacancy rates of 11% for family medicine physicians and 11.5% for specialists, compared to vacancy rates of 7.5% and 6.4%, respectively, for the rest of Ontario.



However, the vacancy rates reported by northern hospitals between October 2022 and July 2023 represent 26 of the 36 hospitals in Northern Ontario. Only five of these 26 hospitals reported the vacancy data every month. Ontario Health only encouraged, but did not require, hospitals to submit vacancy information.

Of the 34 hospitals that responded to our questionnaire, 30 stated that they faced a shortage of physicians.

To encourage physicians to work in Northern Ontario, the Ministry manages two initiatives: the Northern and Rural Recruitment and Retention

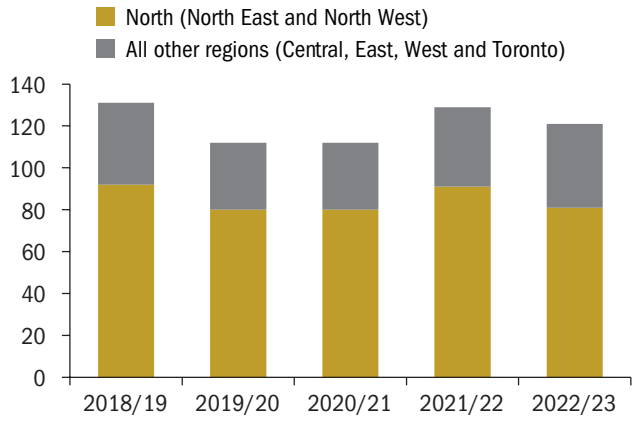
Figure 6: Vacancy Rates for Physicians at Hospitals in Northern Ontario and Other Regions, October 2022–July 2023

Source of data: Ministry of Health and Ontario Health

Note: October 2022 was the first month that this data was used by Ontario Health. Not all hospitals regularly submit this data.

Initiative (NRRRI) and the Northern Physician Retention Initiative (NPRI).

- The NRRRI, created in 2010, is intended to attract physicians to establish a new full-time practice in eligible northern and rural communities throughout the province. The initiative provides grants ranging from about $85,000 to $125,000 over a four-year period. According to the Ministry, as of March 2023, of the 1,500 physicians who were either actively using or had used the NRRRI, 1,066 or 71% had established new practices in the north region, with 70% of them having settled in the five larger northern cities—North Bay, Sudbury, Sault Ste. Marie, Timmins and Thunder Bay. The Ministry's best estimate of the payments it had made to physicians under this initiative between 2010 when the initiative first began and March 2023 was about $96 million.
- The NPRI, created in 2012, is intended to retain physicians already working in Northern Ontario for at least four years. The initiative pays just over $7,400 a year to each participating physician. The Ministry made $65 million in NPRI payments between 2012 when the program first began and March 2023. Between 2018/19 and 2022/23, about 870 physicians used the initiative annually and there was no notable increase in the number of physicians using the program during this period.



Reliable Data Not Maintained for Physician Incentive Programs

The Ministry admitted that it did not properly track the number of physicians who participated in the NRRRI over the years. The Ministry changed the participation information under the NRRRI multiple times during the course of our audit. As a result, neither we nor the Ministry could rely on this information. The Ministry's best estimate of participation data is shown in **Figure 7;** the number of physicians that received NRRRI funding to establish new practices in the north has fluctuated between 80 and 92 per year between 2018/19 and 2022/23.

Moreover, we found that other than tracking the number of new physicians recruited and retained annually through NRRRI and NPRI, respectively, the Ministry has not established any success measures to assess these two physician incentive programs. For example, the Ministry did not track how many of the

Figure 7: Number of New Physicians Who Received Funding from the Northern and Rural Recruitment and Retention Initiative in Northern Ontario and Other Regions, 2018/19–2022/23

Source of data: Ontario Health

physicians had moved to the north from other regions to show the impact the NRRRI had on bringing more physicians to the north, or how many physicians had completed the NRRRI and subsequently took advantage of the NPRI to show the impact the NPRI had on retaining physicians in Northern Ontario.

Physician Incentive Programs Are Not Regularly Evaluated for Effectiveness

We found that the Ministry has not recently reviewed its incentive program for attracting physicians to Northern Ontario, and it has never reviewed its incentive program for retaining physicians in the region. Regularly evaluating programs, including assessing current market conditions, could help the Ministry make necessary updates to keep the programs effective.

The Ministry conducted an internal review on the NRRRI in 2018, but not since. The internal review had 16 recommendations, which included reducing grant rates to physicians practising in larger northern urban centres to encourage them to move to smaller, rural communities, and introducing needs-based eligibility criteria to ensure program spending is targeted efficiently towards communities with the greatest need. At the time of our audit and five years since the evaluation was completed, the Ministry had implemented less than half of the recommendations and had no plans to implement the remaining recommendations, which include enhancing the advertisement of the initiative and regularly reporting on performance.

The Ministry introduced the NPRI in 2012, but has never reviewed the initiative to measure its effectiveness.

Incentive Amounts Paid to Physicians in Ontario Are Lower Than Other Provinces

Management at the Northern Ontario hospitals we visited expressed concerns that the incentives paid under these two initiatives are not in line with the high costs of living in the north, and therefore do not attract and retain enough physicians in the region. For example, while the Ontario NRRRI pays about $85,000–$125,000 over four years to physicians, Alberta's Rural Education Supplement and Integrated Doctor Experience pays physicians a stipend of $120,000 for a three-year term. As well, Prince Edward Island's Return-in-Service grants pay up to $115,000 for a three-year term in certain rural locations.

Payment Schedule of the Northern and Rural Recruitment and Retention Initiative May Deter Physicians from Staying the Full Work Term

The Ontario NRRRI pays up to $125,000 over four years, 40% of which is within the first year; this elevates the risk that the grant recipient may leave the program after the first year. Paying higher amounts toward the end—rather than the beginning—of a work term would more likely retain physicians for the full five years.

The Ministry did not accurately track program information and was therefore unable to even determine how many physicians have completed the full four years as opposed to leaving early.

In comparison, Saskatchewan recently enhanced its Rural Physician Incentive Program. It created this program in 2013/14 with an incentive of $47,000 over four years, but increased it to $200,000 over five years in April 2023. Qualifying physicians would receive $15,000 at the end of each of the first two years, $20,000 at the end of their third year, and $75,000 at the end of each of their fourth and fifth years.

Incentives Paid to Physicians Based on Outdated Rurality Index Score and No Consideration Placed on Existing Availability of Physicians in the Area

The index score that the Ministry uses to determine incentive amounts under the NRRRI is based on population and other factors from 2006, 17 years ago. This outdated index can mean that current incentive payments to certain communities in Northern Ontario are unjustified.

The Ministry pays different incentive amounts to qualifying physicians in the NRRRI depending on where they will be practising medicine. The Ministry uses the Rurality Index for Ontario (RIO) scores for communities to target funding to highly rural communities, which are prevalent in the north region. The RIO scores are based on three factors: population (count and density), travel time to a health-care referral centre that offers basic physician care, and travel time to a health-care referral centre that offers advanced specialty care. Health-care referral centres in the north are known as Northern Urban Referral Centres. They are located in North Bay, Sault Ste. Marie, Sudbury, Thunder Bay and Timmins. The Ontario Medical Association (OMA), which is responsible for negotiating physician payments with the Ministry, established the RIO scores in 1999/2000, and has not updated the scores since 2008 when they were based on 2006 Census data. If a particular community's population has fallen since then, physicians moving there could be eligible for a higher NRRRI incentive if the rurality score was updated to the current population.

An internal Ministry document from 2009 noted that when the NRRRI program was created, stakeholders were concerned that, among other things, the RIO scores did not take physician supply into account. This means that if a physician wants to practise in a community that has a high RIO score, the program still provides the incentive (and payment) to relocate to that community even if the community already has enough physicians. However, the Ministry still has not addressed this concern, 14 years later. The OMA agreed that RIO scores should likely be updated to account for changes, and told us that it had started the planning work to update them; however, it did not yet have any timelines in place. Any updated scores would then need to be approved by both the Ministry and the OMA.

RECOMMENDATION 7

To increase the availability of physicians in hospitals in Northern Ontario, we recommend that the Ministry of Health:

- establish performance indicators and related targets that measure the success of the Northern and Rural Recruitment and Retention Initiative (NRRRI) and the Northern Physician Retention Initiative (NPRI) and collect this data at least annually;
- re-evaluate the recommendations from its 2018 review of the NRRRI and implement the recommendations if still applicable;
- evaluate the NRRRI and NPRI initiatives at least once every five years;
- identify successful health-care staffing incentive programs from other jurisdictions, including their payment schedules, evaluate their feasibility for Ontario and update the NRRRI and NPRI accordingly; and
- work with the Ontario Medical Association to update the Rurality Index for Ontario scores while considering current market conditions and community demographics.

MINISTRY RESPONSE

The Ministry of Health (Ministry) acknowledges the recommendation. As part of developing a dedicated northern focus to its health human resources strategy, the Ministry is committed to enhancing the NRRRI and NPRI programs by establishing performance indicator targets and ensuring appropriate evaluation, including examining the experiences of other jurisdictions.

The Ministry recognizes the Ontario Medical Association (OMA) as the exclusive representative of physicians practising in Ontario. Under the OMA Representation Rights and Joint Negotiation and Dispute Resolution Agreement, the Ministry is required to consult the OMA to seek its advice about

significant health-care policy and system issues that affect physicians. Further, changes related to physician compensation, including activities and accountabilities under non-fee-for-service agreements, are subject to the negotiations process between the parties set out in the Binding Arbitration Framework.

The Rurality Index for Ontario is used in several instances by the Ministry; therefore, the Ministry is first considering the impacts of this measure of rurality and remoteness on its business and will engage with the OMA as appropriate following this review.

4.2.7 Ontario Health Did Not Evaluate, or Know the Full Cost of, Its Program to Bring Temporary Specialists to Northern Hospitals

Ontario Health administers the Northern Specialist Locum Programs (program), which aim to bring different specialists to temporarily work in Northern Ontario. A locum physician is one who fills in temporarily in another practice or community. We found that Ontario Health could not determine when it last evaluated this program to formally identify areas requiring improvement. Although Ontario Health tracks data on travel and reimbursable expenses for the program, it does not have access to the Ministry's OHIP billing data, and so it cannot track full information on the fees paid for the hours that locum physicians worked. This information is necessary for understanding the full cost of the program, and to help inform future efforts to improve the availability of specialist physicians in Northern Ontario such that patient access to care can be maintained.

Ontario Health administers two other locum physician programs in Ontario: the Rural Family Medicine Locum Program and the Emergency Department Locum Program. The Rural Family Medicine Locum Program is for temporary physicians for both community clinics and hospitals. We discuss the Emergency Department Locum Program in our 2023 value-for-money audit of Emergency Departments, which noted that four of the top nine hospital users of the Emergency Department Locum Program in 2022/23 were in the north region.

For the purpose of this report, however, we focused on the Northern Specialist Locum Programs. This program was established in 1982.

Across all hospitals in Northern Ontario, for the five-year period from 2018/19 to 2022/23, a total of 38,689 locum days were paid to all specialists participating in the program, averaging about 7,700 locum days per year. The specialties requiring the greatest number of locum days in Northern Ontario were internal psychiatry, general surgery, internal medicine, and anaesthesia. Four large northern cities—Sault Ste. Marie, Sudbury, Thunder Bay and Timmins—received about two-thirds of specialist locum coverage days.

For each specialist physician participating in this program, Ontario Health covered not only the physicians' work fees, but also other expenses including travel and accommodations; an additional premium for any travel days over three hours ranging from $493 to $1,480; daily expenses; and an honorarium of $322 per day. Between 2018/19 and 2022/23, Ontario Health paid about $25 million on travel fees and other expenses alone. The average daily cost of travel plus reimbursement for other expenses for a northern specialist was over $660, but could be as high as $1,802 plus actual travel and accommodation reimbursements.

Specialists who bill the government under the program bill for their work for the higher of either their usual fee-for-service rates through the OHIP billing system or the clinical locum rate (ranging from $595 for three to four hours to $1,786 for nine to 12 hours) through Ontario Health. However, the Ministry and Ontario Health only track the amount of fees specialist locum physicians claim using clinical locum rates, and not fee-for-service rates, and therefore could not determine the full costs of the program.

Ontario Health staff could not confirm when the program was last evaluated to determine whether updates are needed—for example, whether the program's fee structure remains reasonable considering different specialists have different fee-for-service rates.

Ontario Health stated that the program is intended to support patient access and physician recruitment and retention, and that it was never intended to be an alternative for recruitment. It further informed us that it does not have accountability for physician services. The program's eligibility and rates are decided between the Ministry and the Ontario Medical Association. Since Ontario Health administers this program, in our view it is in a unique position to support an evaluation with other stakeholders to determine whether this program still meets its intended purpose.

Patients in Northern Ontario More Likely to Be Transported by Air Ambulance to Receive Care Elsewhere

With much of Northern Ontario sparsely populated, transporting patients by air is a common practice to meet patient needs. For example, Weeneebayko Area Health Authority, located at Moose Factory—an island that is accessible only by water in the spring, summer and fall seasons, and by ice road in the winter months—has to rely on air ambulance services to transport patients to this hospital.

Ornge is funded by the Ministry of Health-and provides air ambulance and critical care transport services to people who are critically ill or injured. Ornge delivers its services through four land bases serving southern Ontario and nine air bases equipped with helicopters and/or airplanes located across Ontario. Six of these air bases are located in Northern Ontario—in Kenora, Moosonee, Sioux Lookout, Sudbury, Thunder Bay and Timmins.

In the five-year period between 2018/19 and 2022/23, Ornge completed on average about 18,000 patient transports per year across the province between health-care facilities, often from one hospital to another. In the month of May 2023 alone, Ornge completed about 2,280 transports into, out of, and within all 14 former Local Health Integration Network regions, with 47% of these activities serving just Northern Ontario alone.

We found that Ministry has not analyzed the cost of transporting patients within Northern Ontario or from the region to other parts of the province against the cost of enhancing local capacity to treat patients closer to home—for example, by bringing visiting specialists to more rural hospitals in Northern Ontario. Ontario Health indicated that it has no access to information from Ornge and it is not responsible for such an analysis. One northern hospital we visited ranked the top five specialists it could benefit from having onsite: vascular surgeon, cardiologist, rheumatologist, respirologist and endocrinologist. Currently, patients have to travel to other hospitals to obtain these specialist services, and use Ornge services if they are in critical conditions. According to Ornge, cardiology patients needed the most transports between Northern Ontario hospitals from 2018 to 2022. In 2022, five of Ornge's 20 longest-distance trips within the north region were for cardiology patients; most of them were transferred from smaller hospitals to Health Sciences North, the largest northern hospital and one of the designated cardiac centres in Northern Ontario.

RECOMMENDATION 8

To better inform decisions on program design for the Northern Specialist Locum Programs (program), we recommend that Ontario Health:

- obtain full billing data on locum physicians using the program from the Ministry of Health (Ministry) to determine whether the program payment structure remains appropriate; and
- work with the Ministry to review the usage of the program to identify systemic issues in an effort to determine sustainable solutions to maintain patient access to specialist physicians in northern hospitals.

ONTARIO HEALTH RESPONSE

Ontario Health accepts this recommendation. Ontario Health will work with the Ministry of Health to support analysis of physician billing data and usage of the Northern Specialist Locum Programs, and discuss opportunities to stabilize and improve equitable access to specialist care in Northern Ontario.

RECOMMENDATION 9

To better serve hospital users in Northern Ontario such that they can obtain more timely care closer to home, we recommend that the Ministry of Health conduct a cost/benefit analysis that considers the cost of transporting patients within Northern Ontario and from the region to other parts of the province and the cost of enhancing the local capacity to treat patients closer to home—for instance, by bringing visiting specialists to more rural hospitals in Northern Ontario.

MINISTRY RESPONSE

The Ministry of Health (Ministry) acknowledges the recommendation and the importance of providing Ontarians with timely specialist medical services closer to home, particularly in Northern Ontario, which is characterized by low population density and vast landmasses. The Ministry introduced the Visiting Specialist Clinic Program in 1982 to provide visiting specialist clinics on an outreach basis in targeted communities in Northern Ontario where the population base cannot support a full-time physician specialist. The Ministry will consider evaluating the continued effectiveness of this program.

The Ministry will investigate the feasibility of a cost/benefit calculation that considers the cost of transporting patients within Northern Ontario and from the region to other parts of the Province and the cost of enhancing the local capacity to treat patients closer to home. Undertaking this calculation will be determined based on available data and operational feasibility; other methodologies will also be considered if needed. The goal will be to ensure that the needs and preferences of patients in Northern Ontario remain at the forefront of healthcare planning.

4.2.8 Northern Ontario School of Medicine University Offers Opportunity to Help Increase Physician Workforce in Northern Ontario

The Northern Ontario School of Medicine University is funded jointly by the Ministry of Colleges and Universities and the Ministry of Health. It was created in 2002 and was legislated as a university in April 2022. The university is Canada's first stand-alone medical university and one of seven approved medical schools in the province. With campuses in Sudbury (located at Laurentian University) and Thunder Bay (located at Lakehead University), it provides medical education designated with the mandate to be accountable to the cultural diversity of the region it serves, including Indigenous and Francophone peoples, remote and rural communities, and urban centres.

The university offers an undergraduate Medical Doctor program as well as postgraduate residency programs in nine medical specialities including obstetrics and gynaecology, orthopaedic surgery, paediatrics and psychiatry. According to the university, as of November 2022:

- 559 physicians completed the Medical Doctor program since the first graduating class in 2009 and about 51%, or 284, of them practised in Northern Ontario with 63 of them working in rural communities; and
- 689 physicians completed their residency at the university and 57%, or 390, of them practised in Northern Ontario, with 94 practising in rural areas.

With respect to its postgraduate program, the university offers programs in just over 30% of the 28 physician specialties defined by the Royal College of Physicians and Surgeons of Canada. As well, of the total 96 postgraduate education seats available for 2024, only 34 of them are for specialty programs. Having more specialist program offerings can help increase the availability of different specialists in Northern Ontario.

RECOMMENDATION 10

To enhance the availability of the physician workforce in Northern Ontario, we recommend that the Ministry of Health work with relevant partners, including the Ministry of Colleges and Universities and the Northern Ontario School of Medicine University, to assess the feasibility of increasing the number of specialty programs offered at the university.

MINISTRY RESPONSE

The Ministry of Health (Ministry) acknowledges the recommendation. Ontario has announced an expansion of medical school education with a total of 449 postgraduate positions being added to the system. Of these, the Northern Ontario School of Medicine University is getting a total of 63 positions—38 will be for family medicine and 25 will be for specialty training. Of the 63 positions at the university, 10 have already been added and filled by residents, resulting in an addition of eight more specialty training positions and two more family medicine positions at the university.

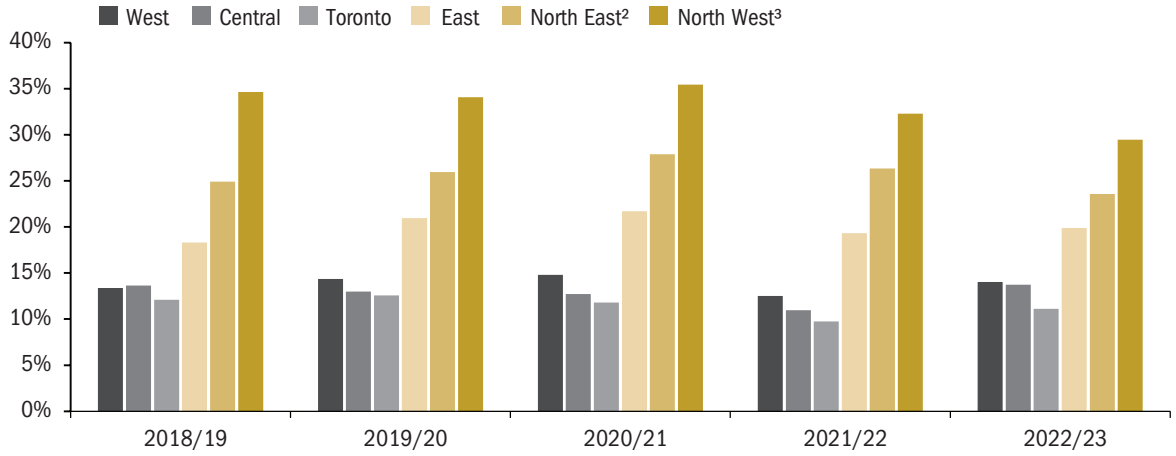
The expansion currently under way is dependent on the capacity of the system to expand. Medical schools will be required to support clinical placements for learners and identify preceptors to support their learning. All of this must be factored into any further expansion.

The Ministry continues to work with a number of sector partners, including the Ministry of Colleges and Universities, to enhance data and evidence in support of health workforce planning for Northern Ontario and the province as a whole. The planning of speciality medical education will be informed by this evidence (in addition to the expansion capacity) and will leverage the Northern Ontario School of Medicine University's ability to grow access to speciality services in the north through medical education.

4.3 Barriers to Timely Patient Care in Northern Ontario

4.3.1 Over 330 Patients Waiting for Long-Term Care and Home Care in Northern Hospitals

In the last five years from 2018/19 to 2022/23, patients in Northern Ontario hospitals were more likely to be waiting to be discharged to other more appropriate destinations compared to other regions in the province. This can lead to hospital overcrowding and increased wait times for patients that truly require services at a hospital, especially when the hospital is operating close to or at capacity.



As measured by the percentage of days a hospital bed was occupied by a patient who requires care from another setting such as a long-term care home or home and community care, annual alternate-level-of-care (ALC) rates for Northern Ontario hospitals ranged from about 29%–35% in the North West to about 24%–28% in the North East between 2018/19 and 2022/23. This was higher than rates of about 10%–22% in other regions, as shown in **Figure 8**.

Only half of the 36 hospitals in Northern Ontario report ALC data into the Wait Time Information System. Of the 18 hospitals that reported this data, eight have consistently reported increasing ALC rates over the past five years. As shown in **Figure 9**, Red Lake Margaret Cochenour Memorial Hospital experienced the highest growth in ALC rate from 14% to 45.8% over the five-year period. According to Ontario Health, this represents about five patients; however, this still represents about 30% of the total number of acute-care beds at this hospital, which may affect patient services. As well, 17 hospitals consistently had higher ALC rates than the provincial average throughout 2018/19–2022/23.

As of March 31, 2023, based on Ontario Health's data from 18 hospitals, a total of 549 patients were waiting in northern hospitals to be discharged to other care settings that best meet their needs, with 258 or 47% waiting for long-term care and 79 or 14% of patients

Figure 8: Annual Alternate-Level-of-Care Rates[1] for Hospitals, by Region, 2018/19–2022/23

Source of data: Ontario Health

1. Measured as the number of inpatient days designated as alternate level of care as a percentage of the total number of inpatient days. When a patient is occupying an inpatient bed in a hospital and does not require the intensity of resources/services provided in that care setting (acute, complex continuing care, mental health, or rehabilitation), the patient must be designated as alternate level of care at that time by the physician or delegate.
2. Based on alternate-level-of-care data from six hospitals that reported this information to a central database, out of 24 hospitals in the North East.
3. Based on alternate-level-of-care data from 12 hospitals that reported this information to a central database, out of 12 hospitals in the North West.

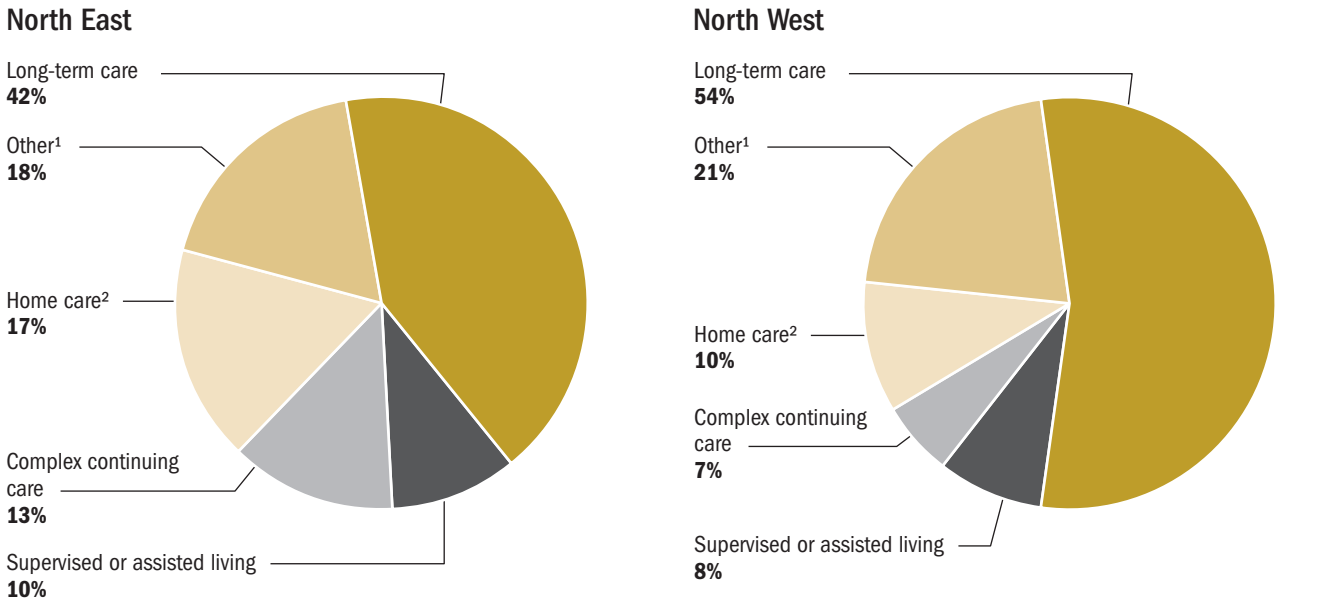
Provincial Average	**15.3**	**16.2**	**16.4**	**14.2**	**15.3**	**(0.2)**

waiting to be discharged home with home-care services provided by Home and Community Care Support Services. The remaining 39% of patients were waiting for other services, including assisted living, complex continuing care and palliative care. **Figure 10** shows a breakdown of the different destinations active ALC patients were waiting to be discharged to while occupying beds in northern hospitals as of March 2023.

Not being able to discharge patients can contribute to hospitals not having the capacity to care for other patients. In the last three years, the occupancy rates of two hospitals where we conducted detailed audit work were between 94% and 103%; these two hospitals had ALC rates between 20% and 36% in 2022/23, higher than the provincial average of 15% that year. An overcrowded hospital can have a significant impact on patients. For example, at a hospital we visited during our audit, we noted a complaint in March 2023 that an elderly patient who had fallen was confined to a stretcher in the emergency department for about 30 hours. The family was told that the hospital was over capacity and that a bed was not yet available.

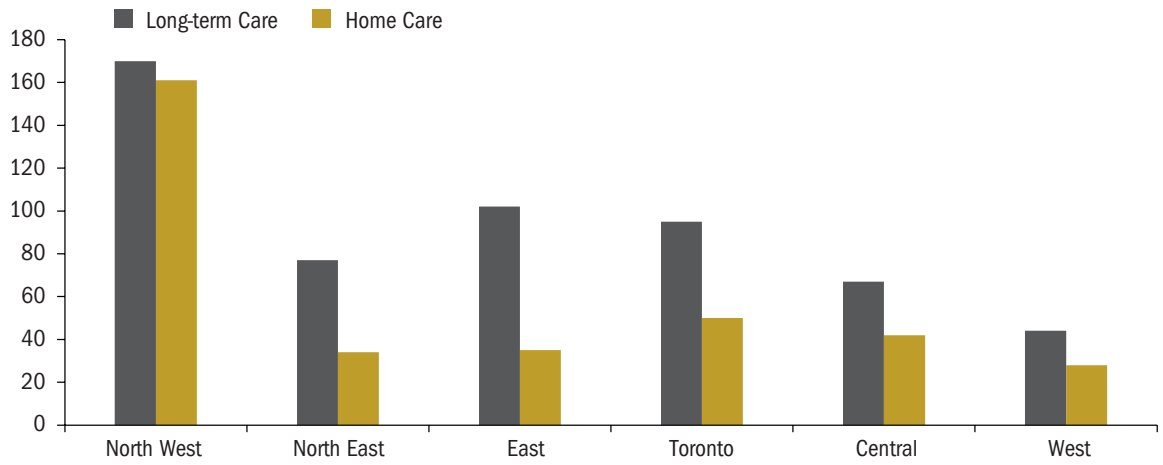


4.3.2 About $65 Million Used in 2022/23 to Support Acute-Care Patients in Northern Hospitals While They Waited for Long-Term Care and Home Care

The associated cost of keeping a patient in a hospital is higher than a long-term care home, which in turn is higher than the cost of home care.

Upon our request, the Ministry calculated that the average daily cost to keep an acute-care ALC patient in a hospital in 2021/22 was $849—this was the most recent data available when we completed our work. In contrast, according to the Ministry, the average daily cost to the province for a long-term care resident was $158 and the average daily cost for home care was $120 in the same period. Based on these daily estimates, in 2022/23, Northern Ontario hospitals used

Figure 10: Destinations for Alternate-Level-of-Care Patients Awaiting Discharge in Northern Hospitals That Report This Data, as of March 31, 2023



Source of data: Ontario Health

1. Includes rehabilitation facility, home with community services, home without supports, convalescent care, palliative care, mental health beds, and unknown destination.
2. Managed by 14 Home and Community Care Support Services organizations across the province.

Figure 11: Average Wait Time for Long-Term Care and Home Care for Patients Designated as Alternate Level of Care, by Region, as of March 31, 2023 (# of Days)

Source of data: Ontario Health

$79 million of their budgets to keep acute-care ALC patients in these hospitals while they were waiting for long-term care homes or home care. Had the long-term care beds and home-care services been available and the patients been discharged, the provincial cost would have only been about $14 million. This represents $65 million that the province could have saved because long-term care and home care were not readily available for patients ready to be discharged from northern hospitals to these alternate care settings in 2022/23. **Appendix 9** shows the methodology we used to calculate this estimate based on data from 18 hospitals that reported into the Wait Time Information System.

Across Northern Ontario as of March 31, 2023, the wait time for both long-term care and home care for ALC patients ranged from less than 30 days to over five years, with the average wait time being 77 days and 34 days for the North East region and 170 days and 161 days for the North West region, respectively, and as shown in **Figure 11**. The North West region had the longest wait time for both long-term care and home care.

In 2021, Ontario Health prepared a report, titled Informing Care for Seniors, which showed the capacity at the time of the report and anticipated demand for long-term care, assisted living services for high-risk seniors, and community support services at that time, and included recommendations related to the areas in the North West region that faced most significant long-term care pressure. The report determined that additional long-term care beds were required for 13 of the 14 areas in the North West region, with six areas identified as high-priority. Ontario Health told us that the Ministry of Long-Term Care had already approved bed allocations that will partially address these service gaps, if all of these beds are fully approved and constructed. However, none of these beds were actually in service for the people in these areas at the time we completed the audit, since the Ministry of Long-Term Care has a target completion date of 2028. The total number of long-term care beds in Northern Ontario was just below 7,000 from March 2019 to March 2022.

Over the last five years, Ontario Health had not required hospitals to develop improvement plans if they did not meet the performance indicators for ALC. Ontario Health indicated this is to recognize the COVID-19 pandemic's impact on hospitals and ALC being a system-wide issue that requires collaboration among different health-service providers. Instead, to help reduce ALC rates, Ontario Health developed a practice guide that identified leading practices for caring for and proactively managing hospitalized older adults at risk of delayed transition to an appropriate setting. In 2023/24, Ontario Health issued a memorandum to all hospitals in Northern Ontario to

conduct self-assessments on ALC leading practices to help identify required changes and develop action plans. Ontario Health stated that it supported these self-assessments by hosting information webinars and establishing planning committees across the region where representatives from the local health system meet to discuss ALC pressures.

RECOMMENDATION 11

To better care for patients in Northern Ontario in settings that are most suitable to their needs, we recommend that Ontario Health:

- support hospitals across Northern Ontario to adopt leading practices to improve transitions from one care setting to another; and
- work with other health partners including the Ministry of Health, the Ministry of Long-Term Care, and Home and Community Care Support Services to identify and implement solutions to increase the availability of long-term care and home-care services in Northern Ontario.

ONTARIO HEALTH RESPONSE

Ontario Health accepts this recommendation and is committed to continuing its work with northern hospitals on implementing The Alternate Level of Care (ALC) Leading Practices Guide (September 2021). In addition, Ontario Health will continue to work with the Ministry of Long-Term Care on identifying long-term care needs of the region's population and with Home and Community Care Support Services on the need for home care.

4.3.3 Patients in Northern Hospitals Could Not Always Obtain Timely Diagnostic Imaging Services

The timeliness of patient care in Northern Ontario is affected by the availability of services in a hospital. For example, the Ministry funds the approved operating hours of MRI and CT machines but does not provide the capital funding for them. Instead, hospitals in Ontario are expected to purchase these machines by raising their own funds. As discussed in **Section 2.5**, northern hospitals often face difficulties in raising large donations that may be more common for hospitals in other regions.

One hospital we visited estimated that it would take over two decades for it to raise the funds needed to purchase the hospital's first MRI machine; patients in the area currently need to travel four hours away to obtain this diagnostic imaging service.

Similarly, another hospital we visited requires a CT scanner to provide timely support to clinicians so they can diagnose patients more quickly and initiate treatment sooner. Patients at this hospital currently have to travel to another hospital about a 90-minute drive or 110 kilometres away. According to the business case that this hospital developed for the purchase of the CT scanner, it made about 1,900 referrals to another hospital in 2020/21, including for 54 stroke and transient ischemic attack patients, for which a timely CT scan is critical according to stroke diagnosis protocols. Although this hospital has successfully raised the required funds to purchase the required CT scanner through private donations, as of September 2023, Ontario Health had not yet approved the request submitted in November 2022. It informed us that this was due to staff shortages.

RECOMMENDATION 12

To improve access to diagnostic imaging services for patients in Northern Ontario, we recommend that Ontario Health, together with the Ministry of Health:

- assess the need for a dedicated funding model for diagnostic imaging equipment for hospitals in rural areas; and
- review diagnostic imaging equipment proposals submitted by hospitals on a timely basis.

ONTARIO HEALTH RESPONSE

Ontario Health accepts this recommendation and is committed to ensuring equitable and timely access

to health-care services. Ontario Health will work with the Ministry of Health to explore opportunities for funding models for diagnostic imaging equipment. Ontario Health will develop a proposal intake process that ensures all proposals submitted by hospitals are reviewed on a timely basis.

4.3.4 Northern Health Travel Grant Program Outdated and Not Regularly Evaluated

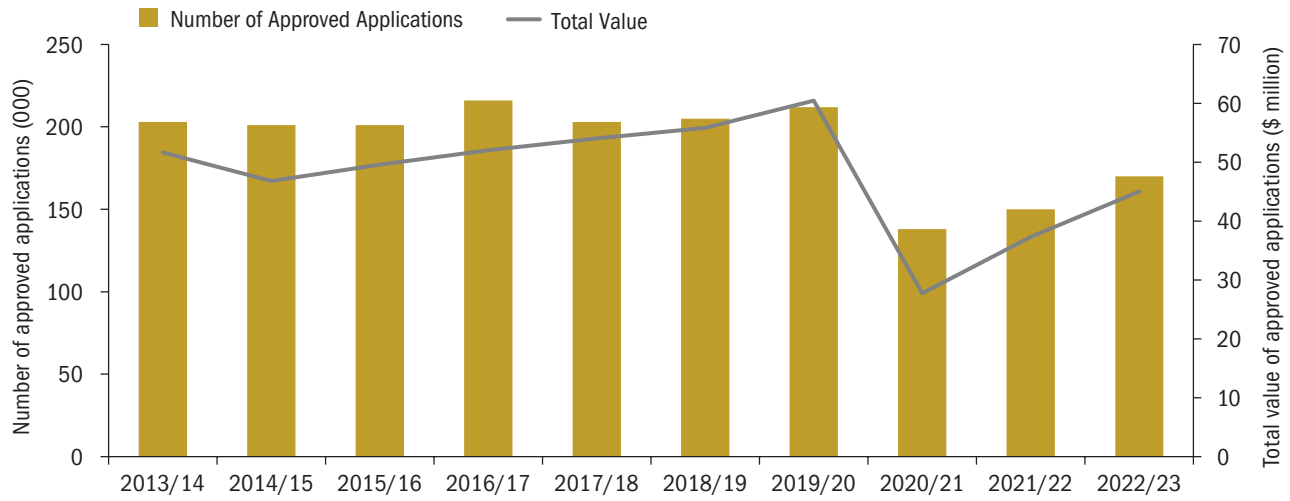
The Ministry provides financial assistance to Northern Ontario residents who may need to travel long distances to access services from a medical specialist or from a Ministry-funded health-care facility, so that residents in Northern Ontario are not disproportionally affected by the travel costs they may have to incur to obtain timely and appropriate health care. In 2022/23, the Ministry, which administers the Northern Health Travel Grant Program as described in **Section 2.3.2**, reported that it approved just over 170,000 applications and paid a total of about $45 million, down from about 205,000 applications and about $56 million in 2018/19.

Northern Health Travel Grant Program Uses Outdated Rate to Reimburse Mileage Expenses and Does Not Cover Meal Expenses

The Ministry has not changed the program's mileage allowance of 41 cents per kilometre since 2007, which is below market rate. This allowance is for either driving a personal vehicle or travelling using commercial means including flights, and is calculated based on the distance travelled after the first 100 kilometres. In comparison, as of June 2023, the Canada Revenue Agency (CRA) allows for Ontario employers to reimburse employees for using their personal vehicle for business purposes for the first 5,000 kilometres at 68 cents per kilometre. Even in 2007, the CRA's rate was 50 cents per kilometre, which was still higher than the program rate set in that year. As well, according to Statistics Canada, the average price of gas in Thunder Bay has increased by 58%, from $1.06 per litre in 2007 to $1.68 per litre in September 2023.

The Ministry last updated the program's accommodation allowance in 2017 from $100 per trip to up to $550 based on the length of the patient's trip, ranging from $100 per night to $550 total for eight or more nights. However, the updated allowance is still not always sufficient to cover the full cost of accommodation; this can cause particular hardship for people living on fixed or low incomes. For example, we found a reported case of two seniors from Northern Ontario living on fixed incomes having to pay out of pocket to obtain the care they needed in Toronto. Although they purchased a hotel room at a discounted hospital rate of $250 per night, the program only covered $100.

We researched similar programs in other jurisdictions. As shown in **Appendix 10**, other jurisdictions pay mileage and accommodation rates closer to market rates. For example, Nunavut's Extended Health Benefits program for residents who have exhausted their third-party insurance, or have no medical travel benefits, pays between $50 and up to the full cost of accommodation depending on the situation and pays for the transportation cost minus a $250 return airfare deductible. Through Newfoundland and Labrador's Medical Transportation Assistance program, patients who travel more than 200 kilometres for medical services can be reimbursed (depending on their locations) for their travel, accommodations and meals at a rate of 100% for the first $1,000, 50% on the next $3,000 and 75% for their remaining expenses per year.



Other jurisdictions, such as New Brunswick and Newfoundland and Labrador, also have meal allowances that include meals in the overall payments. However, the Ontario program does not reimburse meal expenses.

Effectiveness of the Northern Health Travel Grant Program Not Regularly Evaluated

The Ministry monitors monthly data on program spending, number of claims processed, time taken to pay patients once their application is received, and the percentage of applications processed within 30 business days. However, we found that it was missing an opportunity to use the data to identify gaps in the

Figure 12: Number and Total Value of Approved Applications for the Northern Health Travel Grant, 2013/14–2022/23

Source of data: Ministry of Health and Treasury Board Secretariat

health-care services it provides to residents of Northern Ontario. For example, it did not analyze how far patients must travel to access care, and use this to inform its funding decisions on what services to add to the hospitals. Also, it did not measure the extent to which the program covers actual mileage and accommodation expenses that patients incurred to access care away from home. In addition, the Ministry did not properly track the number of approved applications and related amounts, as we found data entry errors. As a result, we could not analyze the data in detail.

We also found that the Ministry has not regularly evaluated the program and has no plans to evaluate it. The Ministry informed us that it considers an increase in approved applications as an indicator of success. **Figure 12** shows that both the yearly number and value of approved applications has been relatively stable from 2013/14 to 2019/20. According to the Ministry, the decrease after 2019/20 was due to reduced medical travel during the COVID-19 pandemic, but applications have since been on the rise.

RECOMMENDATION 13

To improve the effectiveness of the financial assistance for Northern Ontario residents who need to travel long distances to access specialist services or care from Ministry-funded health-care facilities, we recommend that the Ministry of Health:

- re-evaluate the Northern Health Travel Grant Program, considering current market rates for travel and lodging, as well as similar programs in other jurisdictions; and
- establish appropriate performance indicators for the program, collect data to measure program performance and take corrective actions to address any performance deficiencies.

MINISTRY RESPONSE

The Ministry of Health (Ministry) acknowledges the recommendation and that recent inflationary pressures have introduced additional medical travel costs for Northern Ontarians. The Ministry is committed to continuously improving

the Northern Health Travel Grant Program, and will consider current market rates for travel and lodging as well as similar programs in other jurisdictions. The Ministry will continue to assess opportunities to enhance the program and will consider introducing additional performance indicators to augment the existing service delivery indicators currently monitored.

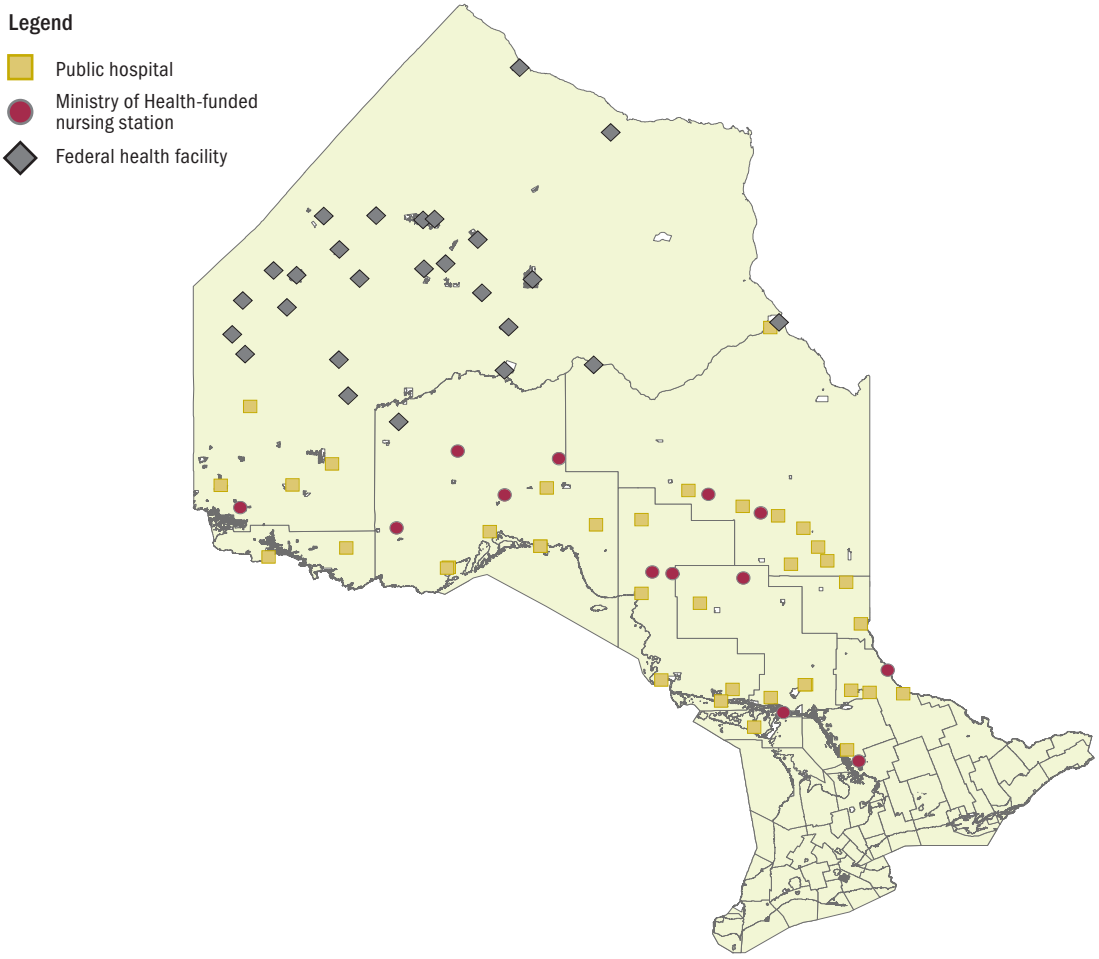
4.3.5 Nursing Stations Providing Primary Care Not Strategically Located across Northern Ontario

As discussed in **Section 2.3.2**, having timely access to hospital care is a key challenge for patients in Northern Ontario given the large landmass and lack of services at some hospitals. As shown in **Figure 13**, as of August 2023, Ontario's north region has 13 Ministry-funded nursing stations while the federal government funds 26 health facilities that provide primary-care services to Indigenous populations in this area.

Provincial nursing stations serve as primary health-care providers for geographically isolated communities, 80 kilometres or more away from a hospital or other alternative primary-care services where population densities are too small to support a full-time physician. These stations are typically staffed by registered nurses or nurse practitioners, with occasional visits from physicians.

The Ministry established most of the current provincial nursing stations in the 1970s and 1980s. Of the active nursing stations, the most recent one was created in 1993. No new stations have been created since then, though there were seven other nursing stations that had been absorbed into larger health-service providers since 2018 and now operate as secondary clinic locations for these providers. According to the Ministry, as of September 2023, it had no plans to create new nursing stations. As the nursing stations program has been in place since the 1970s, the Ministry could not produce any record to elaborate on the case made to establish each site in their current location.

We found that six of the 13 nursing stations are located less than 80 kilometres away from one or more northern hospitals, as shown in **Figure 14**. Having nursing stations located close to hospitals defeats their purpose of extending access to health services to reach more remote communities. Instead, these resources could be better situated to meet the needs of communities located farther away from hospitals.



Furthermore, we found that the Ministry does not co-ordinate its nursing stations with the federal government's health facilities—for example, to ensure they are not unnecessarily operating stations near each other or to share common resources. The Ministry stated that it has not co-ordinated with the federal government because the two programs have different mandates and serve different populations.

The Ministry last reviewed the operations of its provincial nursing stations in 2016 to determine if the program was meeting its intended purpose and to make improvements. The review made eight recommendations, including to increase funding to recruit more nursing staff, and to explore collaboration between nursing stations and physicians to avoid duplication of services. At the time of our audit and seven years since the evaluation was completed, the Ministry had implemented less than half of the recommendations and had no plans to implement the remaining recommendations, which included reducing duplication of services between nursing stations and family physician teams, and increasing data-sharing between health-care facilities.

The Ministry also has no plans to conduct another review in the short term, nor has it set any performance indicators or targets for the nursing stations to measure their effectiveness. Ministry staff informed us that the Ministry had not received any complaints about these nursing stations and therefore believed that the model was working well.

Figure 13: Map of Ontario with Locations of Ministry of Health-Funded Nursing Stations, Federal Health Facilities and Public Hospitals in Northern Ontario, as of August 2023

Prepared by the Office of the Auditor General of Ontario

Note: There are two hospitals located in Sudbury and two hospitals located in Thunder Bay. These locations are layered on one another on this map and therefore the 36 hospitals may appear as 34.

Figure 14: Ministry of Health-Funded Nursing Stations Located Less Than 80 km from the Nearest Hospital(s) in Northern Ontario

Prepared by the Office of the Auditor General of Ontario

Nursing Station	Nearest Hospital(s)	Approximate Distance (km)
Fauquier-Strickland Health Centre	Smooth Rock Falls Hospital and Sensenbrenner Hospital	33*
Missinaibi-Mattice Clinic	Notre-Dame Hospital and Sensenbrenner Hospital	33–66
Mactier Health Centre	West Parry Sound Health Centre	37
Nakina Medical Clinic	Geraldton District Hospital	65
Thorne Nursing Station	North Bay Regional Health Centre	68
Dubreuilville Medical Centre	Lady Dunn Health Centre	74

* Distances from the nursing station to the two nearest hospitals are 32.6 km and 33.3 km, respectively.

RECOMMENDATION 14

To enhance access to primary health care for Northern Ontario residents and reduce potential hospital visits, we recommend that the Ministry of Health:

- develop and implement a plan to identify locations in Northern Ontario where nursing stations could alleviate pressure on hospital services; and
- establish new or relocate existing nursing stations to the identified locations.

MINISTRY RESPONSE

The Ministry of Health (Ministry) acknowledges the recommendation and the importance of having access to primary care to reduce hospital visits.

While nursing stations are staffed exclusively by nurses and administrative personnel, Ontario is moving to expand an interdisciplinary approach to delivering primary care, such as in Nurse Practitioner-Led Clinics. The Ministry's 25 existing Nurse Practitioner-Led Clinics serve approximately 100,000 Ontarians and include interdisciplinary providers like social workers, dietitians, and others. Your Health: A Plan for Connected and Convenient Care includes an investment to create new interprofessional primary care teams in communities with the greatest need. By increasing the number of teams, people in underserviced communities and those without a family doctor will be able to connect to the care they need close to home.

The Ministry will reflect on the role of nursing stations in Northern Ontario in the context of Ontario's nursing and northern health initiatives in workforce planning.

4.4 Cultural and Linguistic Considerations at Northern Hospitals

Ontario Health has participated in multiple initiatives to advance relationships with Indigenous communities to better identify disparities, develop programs and monitor progress. Furthermore, as discussed in **Section 4.5.2**, Ontario Health has added new expectations in its 2023/24 accountability agreements with hospitals to measure and report on health equity. During our audit, we identified several areas that warrant continuous improvement to better meet the needs of Indigenous peoples in Northern Ontario. Below are our observations.

4.4.1 Indigenous Health Services Not Consistently Available at Northern Hospitals

Promoting health equity and anti-racism is a key priority for the Ministry and Ontario Health, as reflected in the Ministry's mandate letter to Ontario Health and also in Ontario Health's annual business plan. As well, the Truth and Reconciliation Commission of Canada (Commission), described in **Section 2.3.3**, called for recognizing the value of Indigenous healing practices and using them in the treatment of Indigenous patients in collaboration with Indigenous healers and elders where requested by Indigenous patients. In February 2023, Ontario Health collected information about hospital services for Indigenous peoples from all hospitals in Northern Ontario; these services include Indigenous healing spaces, traditional practice policies, dedicated indoor smudging spaces and the ability to smudge in a patient's room. Smudging is a traditional spiritual practice that involves burning certain herbs to create a smoke that is used for purification and cleansing.

Appendix 11 shows the results of a survey conducted by Ontario Health. About 33% or 12 of the 36 hospitals in the region did not respond to the survey. Of the 24 hospitals in Northern Ontario that responded, 11 hospitals provided an Indigenous healing space for their patients, 16 hospitals had a traditional practice policy, 13 hospitals had dedicated indoor smudging space, and 11 hospitals allowed

smudging in patient rooms. Two hospitals noted that they did not provide any of these services.

The three hospitals in the northern region where we conducted detailed audit work have each made efforts to offer Indigenous traditional practices. For instance:

- One hospital we visited integrates First Nations principles into many of the services it provides. This hospital has instilled traditional Indigenous values and practices into its governance and leadership structure, patient and client support programs, and healing and medicinal treatments, and offers localized cultural awareness and training, and traditional foods.
- Two of the three hospitals we visited had goals in their strategies to provide culturally safe care to Indigenous patients, and demonstrated a comprehensive range of services for Indigenous patients, including Indigenous patient navigators/interpreters, smudging services, elders in residence, and traditional healing and medicine.
- Two hospitals we visited have instituted advisory or elders councils to offer direction concerning the health of the Indigenous population. One of the hospitals had difficulty filling vacancies on its council, while the other's council also had vacancies but the hospital was undertaking efforts to fill them.

Ontario Health explained that while it requires hospitals to provide culturally appropriate services in a safe environment, it does not specify the type of services a hospital should provide to Indigenous patients because each community would have different needs. Ontario Health expects that hospitals engage with local Indigenous communities to determine the type of services that would be provided to meet their needs, and has a process in place where its staff are available to support hospitals in planning their programs.

Indigenous Culture-Related Training Available at Hospitals, but Uptake Was Limited

The Commission also called for providing cultural competency training for all health-care professionals. Indigenous cultural training can help health-care professionals better understand the unique cultural beliefs, practices, and historical experiences of Indigenous communities. Such training can also contribute to the broader goal of achieving equitable and inclusive health-care experiences for all individuals, regardless of their cultural background.

At the three hospitals where we conducted detailed audit work, we found that staff could access Ontario Health's online Indigenous Relationship and Cultural Awareness Courses, but only one hospital tracked participation, which was low, at 6% as of August 2023. Another hospital we visited introduced a video related to Cultural Safety through an online learning platform and 57% of its staff completed the training. At one of the three hospitals, staff could obtain training from two locally developed courses, though just over half of its staff had completed one or both courses, even though this hospital's internal policy requires that staff complete the required training at least once in their career with the hospital.

We found that Ontario Health does not require hospitals to provide mandatory training for staff to raise their awareness of Indigenous culture, or to track the percentage of staff who completed training. Ontario Health stated that it instead requires hospitals to undergo an accreditation process, which includes an assessment of people-centred care that is culturally safe.

Training staff to raise awareness of Indigenous culture and providing cultural competency and anti-racism training could help reduce negative incidents or complaints about how Indigenous patients are treated in hospitals. For example, at one hospital we visited, there was a complaint about a nurse who interrupted a drumming ceremony in a patient's room and demanded it stop, which the family found to be disrespectful because it did not reflect the wishes of the patient and the family.

4.4.2 Data Collection on Indigenous Staff and Patients Fragmented

As noted in **Section 2.1**, about 17% of the population in Northern Ontario is Indigenous. Collecting relevant data is crucial for identifying disparities, monitoring progress, and developing targeted programs, with

an ultimate aim to reduce health-care inequity for Indigenous peoples. Such data may include Indigenous identity (for example, First Nations, Inuit, Métis), Indigenous population health status, access to culturally appropriate health services, language barriers, and how different services are used. Ontario Health supports an Indigenous-led approach to exploring options of how data can be collected to better identify disparities, develop targeted programs, and monitor progress.

We found that the number and proportion of Indigenous patients at each northern hospital was largely unknown to either Ontario Health or hospitals since not all hospitals have information on the number of patients who self-identify as Indigenous. Some hospital staff informed us that their process to collect data would start through self-identification by including culturally appropriate questions in patient registration forms. Of the 34 Northern Ontario hospitals that responded to our questionnaire, only 13 included specific fields on patient registration forms through which patients can voluntarily self-identify as Indigenous. Of the hospitals where we conducted detailed audit work, one knew that about 90% of its patients are Indigenous; another hospital collected self-identification data in two of its programs and was planning to expand collection to other programs. The third hospital did not collect self-identification data, but serves a small population of just under 1,000 people (as of 2021), of which about 100 identify as Indigenous.

As well, the Commission called for increasing the number of Indigenous professionals working in the health-care field, and ensuring the retention of Indigenous health-care providers in Indigenous communities. Again, we found that neither Ontario Health nor hospitals could provide an accurate count of the number or proportion of Indigenous staff at hospitals. Based on the information reported by 34 Northern Ontario hospitals that responded to our questionnaire, we found that almost 60% of northern hospitals do not collect this data, though 14 hospitals were able to provide an estimated percentage of their staff who self-identify as Indigenous, which ranged from 0% to 10%. Of the hospitals where we conducted detailed audit work, management knew the number of Indigenous professionals on the executive team, but could only roughly estimate the number of Indigenous professionals who provide front-line services. None of the hospitals measured whether these numbers were increasing year over year in line with the Commission's recommendation to increase the number of Indigenous professionals working in the health-care field. Ontario Health indicated that it does not require hospitals to collect self-identification information for patients or staff because the *Public Hospitals Act* does not explicitly require it.

RECOMMENDATION 15

To help reduce health inequities and provide culturally appropriate services to meet the needs of Indigenous peoples in Northern Ontario, while recognizing the spirit of the calls for action from the Truth and Reconciliation Commission of Canada (Commission), we recommend that Ontario Health, in consultation with Indigenous communities, work with hospitals to:

- assess ways in which hospitals can more consistently collect data about the Indigenous patients they serve, as well as their Indigenous staff, in an appropriately sensitive manner;
- collect data from all hospitals on the type of Indigenous services provided on at least an annual basis;
- monitor progress on the Commission's calls to increase the number of Indigenous professionals working in health care and to retain Indigenous health-care providers in Indigenous communities; and
- develop a mechanism to monitor that all hospital staff have access to training to promote health equity and anti-racism, and measure participation rates.

ONTARIO HEALTH RESPONSE

Ontario Health accepts this recommendation. It has built many enduring relationships with Indigenous communities and learned a great deal about working together to remove Indigenous peoples'

barriers to access health care and improve Indigenous health outcomes. Many of our foundational learnings are aligned closely with the Calls to Action from the Truth and Reconciliation Commission of Canada, which is reflected in our Indigenous Health Equity Work Plan.

Ontario Health will explore opportunities with Indigenous Partners (the data agreement holders) and hospitals regarding opportunities to collect data on Indigenous patients and staff to serve Indigenous populations better. Ontario Health will continue to strengthen its annual data collection from hospitals on the type of Indigenous services they provide.

Ontario Health will implement a holistic evaluation plan incorporating Indigenous "Ways of Knowing" and methodologies to support the newly established "local obligations" outlined in the 2023 Hospital Service Accountability Agreements. The obligations include advancing Indigenous health strategies and equitable health outcomes and requiring executives to complete training on the topic. Ontario Health's actions will evolve as Ontario Health's expertise and capacity in this work increases and as its goals are met, and as Indigenous priorities shift.

4.4.3 Hospitals Designated to Provide French Services Not Reviewed in a Timely Manner

As noted in **Section 2.3.3**, about 16% of the residents in Northern Ontario are French-speaking. The Ministry of Francophone Affairs defines a French-designated area as one where Francophones make up at least 10% of the population or a city which has at least 5,000 Francophones. As shown in **Appendix 12**, the North East is a designated area, while the North West is partially designated (that is, it has some "French-designated areas").

According to Ontario Health, as of January 2023, eight northern hospitals were fully designated and three were partially designated. We found that all of the fully or partially designated hospitals under the *French Language Services Act* (Act) are located in the North East.

Hospital representatives told us they have difficulty recruiting health-care professionals in general, let alone those who are bilingual or Francophone. For example, one of the fully designated hospitals we visited did not meet the full designation requirement because, as of April 2023, 26% of its staff who were in French-designated positions did not meet the linguistic requirements for their positions.

Ontario Health has set out further expectations regarding the French language in the Hospital Service Accountability Agreement. The Ministry of Health has also set out requirements for non-designated hospitals that have been "identified" to work towards designation under the Act. We selected a sample of designated, partially designated, and non-designated but identified hospitals in Northern Ontario, and requested the reports that these hospitals are required to submit to Ontario Health, and found mixed results:

- Hospitals that are designated must submit a French language services report annually. In our sample, we found the required reports were submitted.
- Hospitals that are non-designated and non-identified must submit a report annually that outlines how the hospital addresses the needs of its Francophone community. We found that one of the two sampled hospitals did not submit the required report.
- Hospitals that are non-designated and identified must submit a French language services plan and provide services in French according to their existing language capacity. In our sample, we found that none submitted the required services plan. Ontario Health informed us that it asked these hospitals to describe their progress in meeting at least five additional designation requirements each fiscal year. These five requirements are in addition to their previously identified targets, which are individual to each hospital as they are at different levels of maturity. The goal is to reach 20 total requirements to reach designation. However, we found no

Figure 15: Status of Evaluations for Northern Hospitals' Compliance with French Designation Requirements, as of August 31, 2023

* A total of 11 Northern Ontario hospitals were designated to provide French services under the *French Language Services Act*.

evidence that Ontario Health has been monitoring reported data or the hospitals' progress, for which it cited concerns with a staffing shortage.

Furthermore, the Ministry of Francophone Affairs requires organizations that are fully or partially designated to complete an evaluation every three years to confirm they remain compliant with the designation requirements. In practice, designated hospitals in Northern Ontario provide data to Ontario Health, which assesses the hospitals for compliance with the designation requirements, and shares the results with the hospital. The 11 designated hospitals in Northern Ontario were due for evaluation at different times between 2020/21 and 2023/24, while six of them were due for evaluation between 2020/21 and 2022/23; however, we found that only four of the six were evaluated on time, as shown in **Figure 15**.

Not offering sufficient French language services at hospitals could hinder effective communication and accessibility for Francophone patients in Northern Ontario. For example, at one fully designated hospital we visited that received a total of 39 complaints in the last four years concerning French language services, we found instances where patients complained that they were not "actively offered" French services when they presented themselves to the point of entry screening or while receiving care—a requirement under the Act to be fully designated.

RECOMMENDATION 16

To reduce health inequities in Northern Ontario hospitals and better meet the linguistic needs of Francophone patients, we recommend that Ontario Health:

- monitor that designated hospitals complete their evaluation every three years to confirm they remain compliant with the *French Language Services Act* requirements; and
- monitor that identified hospitals submit services plans to demonstrate their capacities and progress toward meeting designation requirements.

ONTARIO HEALTH RESPONSE

Ontario Health accepts the recommendations outlined in the report to better meet the linguistic needs of Francophone patients. Improving French language services is particularly important to Ontario Health given the large Francophone population it serves in the north regions. Ontario Health will review its French Language Services Operational Plan and identify and implement strategic actions to improve measurement, monitoring,

and evaluation of French language services in the region. Ontario Health will support hospitals, and other health-service providers, on compliance and maturing the process to review their progress to increase the number of designated health-service providers, and support identified health-service providers in improving their capacity toward meeting, or increasing, the number of designation requirements completed.

RECOMMENDATION 17

To reduce health inequities in Northern Ontario hospitals and better meet the linguistic needs of Francophone patients, we recommend that the Ministry of Health collaborate with the Ministry of Francophone Affairs to assess the feasibility of mandating that hospitals in designated areas of Northern Ontario become designated under the *French Language Services Act*.

MINISTRY RESPONSE

The Ministry of Health (Ministry) acknowledges the recommendation and the importance of accessing acute health care for Northern Ontario residents and the consideration of mandating hospitals in designated areas of Northern Ontario under the *French Language Services Act*.

Further, a hospital that is not designated does not mean that there are no French services offered. Many of these smaller hospitals communicate in both languages because Ontario offers free translation services to all hospitals in designated areas and/or all hospitals that are partially/fully designated. Translation requests are sent to the regional hub (Health Science North in Sudbury) where there is a team of translators and a co-ordinator.

Noting that being designated is volunteer-based, the Ministry respects the decisions of board-governed hospitals on whether to seek formal designation based on community input and an assessment of the costs and benefits. Furthermore, because of access to free translation services, there may not be an additional incentive for smaller hospitals in designated areas in the north to become designated.

The 11 designated or partially designated hospitals represent some of the largest hospitals in the north. These hospitals are situated in more populated regions, making it easier to recruit and retain French health human resources. Consequently, these hospitals can fulfill the requirements needed for designation under the *French Language Services Act*.

The Ministry will consider the potential costs and benefits of mandating hospitals in designated areas to become designated.

4.5 Hospital Performance Measurement and Reporting

To establish and govern the relationship between Ontario Health and public hospitals, as discussed in **Section 2.4.3**, each hospital enters into an accountability agreement known as the Hospital Service Accountability Agreement (HSAA). The HSAA not only outlines the specific responsibilities and obligations of both parties, but also defines the accountability and performance expectations of hospitals, including performance indicators, associated targets, and the frequency of reporting. Ontario Health has regional teams that are responsible for monitoring the performance of hospitals in each region.

4.5.1 Not All Northern Hospitals Submitted a Consistent Set of Performance Information and Ontario Health Had No Defined Timelines to Rectify This

Hospitals submit wait times for surgeries and diagnostic imaging as well as alternate-level-of-care (ALC) information through the Wait Time Information System (WTIS), and Ontario Health is responsible for monitoring this information. The ALC information measures the extent to which patients occupy hospital beds, but in fact no longer require acute-care services; they are ready to be discharged from the hospital, but are waiting for another more appropriate care setting

such as a long-term care home, a rehabilitation facility or home care.

We found that not all 36 Northern Ontario hospitals report wait times, while only half the hospitals reported ALC information through WTIS and the others reported it through a separate system. As such, at the time of our audit, Ontario Health had to rely on multiple sources of information to review the performance of all northern hospitals, or to identify any that may be performing poorly so that issues could be more readily addressed. However, we found that information stored in one source was less complete than the other source, affecting the comparability of the information.

Of the 36 Northern Ontario hospitals:

- six did not report surgical wait times, even though these hospitals provided surgical services to patients;
- seven others did not report wait times for CT scans, a type of diagnostic imaging, even though these hospitals provided diagnostic imaging services to patients;
- 18 did not submit ALC information through the information platform (WTIS) and therefore Ontario Health had to use a different report to obtain the ALC data for these hospitals on a weekly basis. However, this reported data does not substitute the WTIS report because it is only available weekly rather than daily, and only includes acute-care patients instead of all ALC patients, their admission source and barriers to discharge.

During our audit, Ontario Health was collaborating with two of the six northern hospitals that did not report surgical wait times to onboard them to WTIS, but this work was still ongoing when we completed the audit. Ontario Health had no defined timeline to complete the onboarding for these two hospitals. For the remaining hospitals, the agency informed us that it was still in the initial planning stages and timelines had not been established yet. According to a presentation made by Ontario Health to hospitals in 2023 on WTIS onboarding, the process of onboarding required about seven months of effort and resources, including planning, clinical engagement, interface development, testing, mapping, registration, training, data quality and compliance.

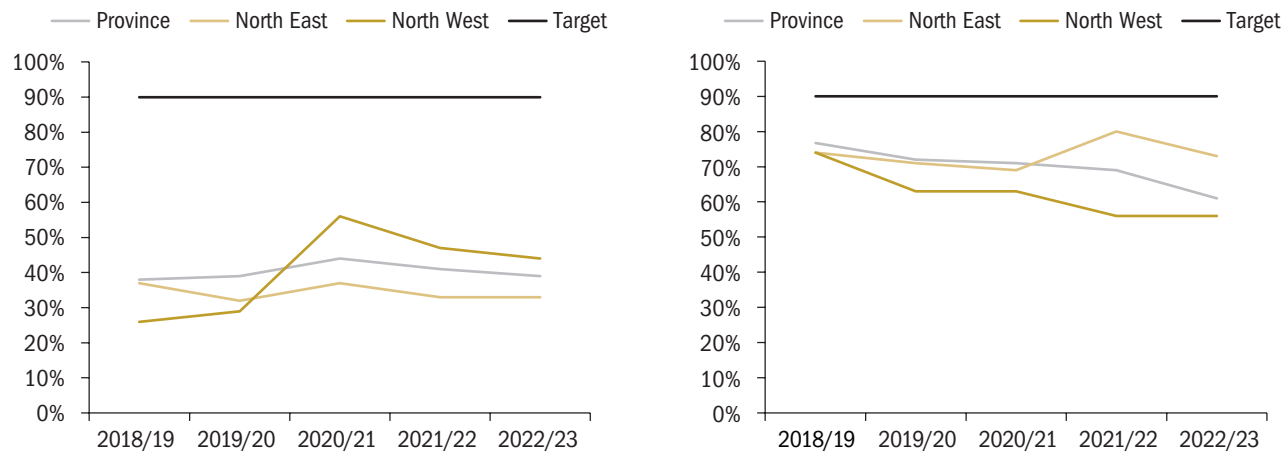
4.5.2 Hospitals No Longer Required to Aim for Targets Relating to Diagnostic Imaging and Emergency Department Wait Times

In 2023/24, Ontario Health introduced a new version of the HSAA for all hospitals in Ontario, but some indicators—including wait time for diagnostic imaging and emergency department length of stay—were reclassified from performance indicators to monitoring indicators. In doing so, Ontario Health eliminated the requirement for hospitals in Ontario to achieve specific targets for these indicators. Ontario Health told us this change was necessary because of the current state of the health system, where it may not be reasonable to request an action plan from hospitals when they do not meet targets and it might be more relevant to focus on mitigation discussions. The different types of indicators mentioned in the HSAA are described in **Figure 16**.

Not having a target could deter hospitals from innovating to achieve better results. For instance, **Figure 17** and **Figure 18** show the performance of

Figure 16: Types of Indicators Used in the Hospital Service Accountability Agreement

Source of data: Ontario Health

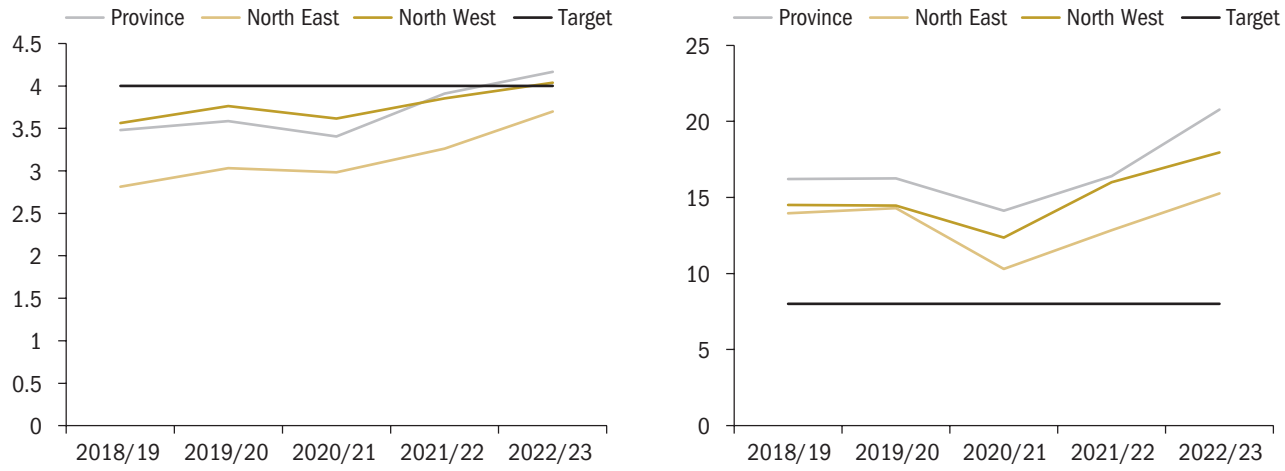


Type of Indicator	Definition
Performance indicator	A measure of hospital performance for which a target is set.
Monitoring indicator	A measure of hospital performance that may be monitored against provincial results or provincial targets, but for which no target is set.
Explanatory indicator	• A measure that is connected to and helps to explain performance in a performance indicator or a monitoring indicator. • May or may not be a measure of hospital performance. • No target is set.
Performance target	The level of hospital performance expected with regard to a performance indicator or a service volume.

the two regions in Northern Ontario compared to the whole province regarding wait times for non-emergency adult MRI and CT scans, and the average wait times in emergency departments, respectively. Over the last five years, North East and North West hospitals were far from meeting the target for wait times for MRI scans, and the average length of stay in emergency departments for admitted patients continued to increase in the regions.

To align with provincial priorities and reflect the current hospital operating environment and focus, Ontario Health introduced two new performance

Figure 17: Percentage of Non-Emergency* Adult MRI and CT Scans Completed within Target Wait Times, 2018/19–2022/23



Source of data: Ontario Health

* Non-emergency includes priority 2 to 4 MRI and CT scans (with priority 2 being the most urgent) compared to priority 1 scans, which are emergencies.

Figure 18: Average Number of Hours Spent in Emergency Department for Non-admitted and Admitted Patients, 2019/20–2022/23

Source of data: Ontario Health

indicators in the 2023/24 HSAA, for which hospitals would be required to meet specific targets; these were the percentage of overall long-waiters across all surgical areas (that is, the percentage of patients whose total wait time for a surgical procedure exceeded the target) and ALC throughput ratio (that is, the ratio of discharged ALC patients to newly added ALC patients over a period of time).

In March 2020, shortly after the COVID-19 pandemic was declared a public health emergency, the Ministry had asked all hospitals to cease all non-essential and elective services or reduce them to minimal levels. Ontario Health indicated that this contributed to the increased wait times for diagnostic imaging and surgical services, and setting targets during this time would affect the hospitals' ability to meet targets.

4.5.3 Over 40% of Northern Hospitals Not Contractually Required to Measure and Report on Health Equity

We found that the Hospital Service Accountability Agreement (HSAA) between individual hospitals and Ontario Health does not require hospitals to measure health equity through the use of performance or monitoring indicators. This is despite the fact that both the Ministry and Ontario Health have designated promoting health equity as a strategic priority in 2022/23.

Ontario Health stated that although health equity is not yet measured through the HSAA, it is monitored through expectations outlined under the local obligations of HSAA. In the HSAA for 2023/24, these obligations require hospitals to plan, measure and report on health outcomes, culturally safe access to services, and hospital executive training related to promoting the health of Indigenous peoples. However, Ontario Health staff stated that it will support hospitals to put plans in place by 2024/25 because it needs more time to work on streamlining the planning requirement to ensure consistency across hospitals and to define the metrics that will measure progress.

The 2023/24 HSAA came into effect on April 1, 2023, but as of October 2023, Ontario Health had given extensions to 16 or 44% of the 36 Northern Ontario hospitals to sign this agreement by March 31, 2024. Ontario Health has provided similar extensions to hospitals in other regions given the financial uncertainty faced by hospitals as the Ministry and Ontario Health were still working to fully determine the impact that the overturning of Bill 124 would have on hospital staff's retroactive pay, and as the impact gets realized by the hospitals depending on the arbitration awards, along with inflation and other pressures. Hospitals that had not yet signed the new HSAA would not be bound contractually toward the new indicators and local obligations, though Ontario Health still expects hospitals to report on the new indicators, achieve related targets, and respond to its queries when targets are not being met.

RECOMMENDATION 18

To more effectively monitor the performance of hospitals, we recommend that Ontario Health:

- evaluate the benefits of onboarding all Northern Ontario hospitals that are not currently reporting all information on wait times for surgeries and diagnostic imaging, and alternate-level-of-care rates through the Wait Time Information System, establish an implementation plan with timelines, and collaborate with the Ministry of Health and these hospitals to complete the onboarding;
- reinstate performance targets for wait time indicators for diagnostic imaging and emergency department length of stay in the next iteration of the Hospital Service Accountability Agreement; and
- require hospitals to measure and report indicators related to health equity.

ONTARIO HEALTH RESPONSE

Ontario Health agrees with this recommendation. To ensure effective monitoring, Ontario Health will evaluate the benefits of onboarding remaining hospitals to the Wait Time Information System and develop an implementation plan and timeline in collaboration with the Ministry of Health and

the hospitals. Ontario Health will also review the prior Hospital Service Accountability Agreements' indicators for diagnostic imaging and emergency department length-of-stay for appropriateness in future agreements. Ontario Health will continue to include and expand expectations regarding health equity reporting in the agreements.

4.5.4 Limited Intervention by Ontario Health for Hospitals Not Meeting Performance Targets

Ontario Health collects financial performance indicators from all 36 hospitals in Northern Ontario as part of the HSAA reporting requirements. As shown in **Figure 19**, in 2022/23, 30 of the 36 hospitals showed negative total margins—this is the highest proportion of hospitals in Northern Ontario with expenditures exceeding revenue in the last five years, as illustrated in **Figure 20**. In addition, 14 of the 36 hospitals in 2022/23 experienced liquidity challenges, with their current ratios below one. According to the HSAA, hospitals are required to plan for and maintain an annual balanced operating budget, which means that for each funding year, the total expenses of the hospital must be equal to or less than its total revenue. In 2023/24, the agency put a hold on the need for all hospitals across Ontario to submit hospital improvement plans, to recognize that hospitals face rising agency nurse costs and retroactive pay increases to hospital staff following the strike-down of Bill 124, as explained in **Section 2.3.1**. At the time of our audit, Ontario Health and the

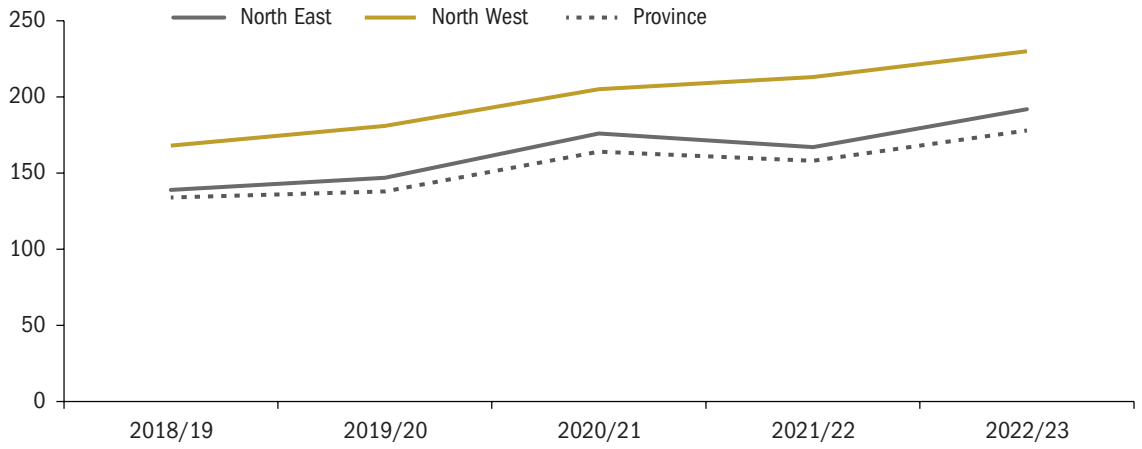
Figure 20: Hospitals in Northern Ontario with a Negative Total Margin,[1] 2018/19–2022/23



Source of data: Ontario Health

	2018/19	2019/20	2020/21	2021/22	2022/23
# of all hospitals[2]	37	37	37	36	36
# of hospitals with a negative total margin	11	9	1	3	30
% of all hospitals that had a negative total margin	30	24	3	8	83

1. Negative total margin means total hospital expenses exceeded total revenue.
2. In 2020/21, Englehart & District Hospital Inc. and Kirkland and District Hospital merged to become Blanche River Health, reducing the total number of hospitals from 37 to 36 in following years.

Figure 21: Average Wait Times for All Adult Surgeries, by Region, 2018/19–2022/23 (# of Days)

Source of data: Ontario Health

Note: Wait times include time waited from referral to first clinician appointment, and time waited from decision to surgery.

Ministry had not finalized their plans to help hospitals manage these financial deficits.

We also found that Ontario Health did not consistently require underperforming hospitals to submit hospital improvement plans, even before it put a hold on the need to submit these plans. For instance, 11 hospitals had deficits for one or multiple fiscal years between 2018/19 and 2021/22, but were not required to have operational reviews or submit hospital improvement plans. Ontario Health did not have documented justification for why all hospitals with poor financial performance did not develop and submit hospital improvement plans. Ontario Health stated that it considered multiple factors—including the magnitude of the deficit, forecast future revenue, and the reasons for the deficits and whether they were within the hospital's control—when determining whether to request hospital improvement plans from hospitals that underperformed.

We also noted that over the last five years, the North East and North West regions' surgical wait times for adults rose consistently year over year and consistently exceeded the average wait times for the entire province, as shown in **Figure 21**. In response to this, Ontario Health worked with hospitals to establish recovery plans aimed at improving surgical wait times and reducing the percentage of long-waiters (that is, patients who have waited longer than target wait times) to 30%, which is higher than the HSAA target of 20% but was within the agency's established acceptable range of results. During our audit, Ontario Health started working with northern hospitals that missed the provincial target for diagnostic imaging wait times, which we described in **Section 4.5.2**, to help them establish recovery plans to address their underperformance.

RECOMMENDATION 19

To recognize that hospital performance could be affected by outside factors beyond their control, but still drive improvements in other ways within a hospital's control, we recommend that Ontario Health identify and monitor alternative performance indicators if it concludes that a hospital is not meeting targets because of factors beyond their control.

ONTARIO HEALTH RESPONSE

Ontario Health agrees with this recommendation. Ontario Health will continue to monitor relevant indicators for hospitals in support of driving improvements in areas within a hospital's control, and will explore opportunities to identify and develop other indicators to drive improvements in areas beyond a hospital's control.

RECOMMENDATION 20

To hold hospitals more accountable for delivering expected performance levels, we recommend that Ontario Health work with underperforming hospitals to develop and implement a mutually agreed upon action plan to rectify performance issues, and monitor their progress.

ONTARIO HEALTH RESPONSE

Ontario Health agrees with this recommendation. Ontario Health supports holding hospitals accountable for delivering expected performance and will continue to work with underperforming hospitals to ensure performance improvement plans are in place and progress and effectiveness is appropriately monitored.

1. Based on number of "Total Beds (daily average)" as reported by hospitals to the Ministry of Health via the 2022/23 Bed Census Summary.
2. Based on data reported by individual hospitals that responded to our questionnaire in September 2023.
3. City of main site—hospital has multiple sites.
4. This hospital provides non-acute care services such as mental health, rehabilitation, or complex continuing care.
5. Offering of acute-care services based on information provided by Ontario Health.
6. Services provided by visiting specialist(s).

Appendix 2: Provincial Programs to Recruit and Retain Physicians and Nurses in Ontario Hospitals

Source of data: Ministry of Health and Ontario Health

Program	Description	Operated by	Designed for Northern Ontario
Northern and Rural Recruitment and Retention Initiative	Helps attract physicians to establish a new full-time practice in eligible communities throughout the province, including the north, by providing payments between about $85,000 and $125,000 paid over a four-year period.	Ministry of Health	✓
Northern Physician Retention Initiative	Helps retain full-time physicians in the north who have already completed at least four years of continuous full-time practice by paying a retention incentive equivalent to just over $7,400 for each year they continue to practise in the region.	Ministry of Health	✓
Tuition Support Program for Nurses	Helps attract nurses from rural and remote communities to return to practise in eligible communities across the province within their first year of graduation by offering tuition reimbursement. The length of return of service required is based on the number of year's tuition that is reimbursed.	Ministry of Health	
Physician Return of Service Programs	Includes multiple programs that help physicians commit to practise in an eligible Ontario community for up to five years in exchange for training or interest relief support.	Ministry of Health	
International Medical Graduates Return of Service	A type of return-of-service program that provides an opportunity for physicians educated outside of Canada to apply for residency positions through the Canadian Resident Matching Services. This return of service is five years, and can be completed anywhere other than the Greater Toronto Area and Ottawa.	Ministry of Health	
Repatriation Program Return of Service	A type of return-of-service program that offers participants an opportunity to complete a residency training position in order to meet Canadian certification. In return, participants commit to practise medicine in an eligible Ontario community for up to five years. This can be completed anywhere other than the Greater Toronto Area and Ottawa.	Ministry of Health	
Northern Specialist Locum Programs	Provides relief and vacancy locum coverage to help support the recruitment and retention of specialists in Northern Ontario communities.	Ontario Health	✓
Emergency Department Locum Program	Helps hospitals avert closure of an emergency department because of physician unavailability; provides urgent locum coverage as an interim measure of last resort to designated hospitals facing significant challenges covering emergency department shifts.	Ontario Health	

Program	Description	Operated by	Designed for Northern Ontario
Rural Family Medicine Locum Program	Supports the viability of rural practice and helps to maintain ongoing primary medical care in eligible communities in Ontario by providing short-term locum coverage for practising rural family physicians.	Ontario Health	
Community Commitment Program for Nurses	Helps attract registered nurses, registered practical nurses and nurse practitioners who have not worked as a nurse in the prior six months to work in hospitals and other health-care facilities by providing $25,000 for a two-year commitment. Program started in May 2022.	Ontario Health	
Distributed Medical Education programs	Provide rural and regional clinical education opportunities outside of Academic Health Sciences Centres (Health Sciences North and Thunder Bay Regional Health Centre in the north) to undergraduate and postgraduate medical trainees at all medical schools. One of the goals is to promote physician practice in rural and northern communities.	Medical Schools	
Hospital Special Premium Payment	Physicians with a practice location with a Rurality Index for Ontario score >=40 receive a hospital special premium payment of a) $7,500 if they have provided $2,000 in eligible hospital services, and b) an additional $5,000 if they have provided an additional $6,000 or more in eligible hospital services, for a maximum of $12,500.	Ministry of Health	

Appendix 3: List of Ontario Health Teams in Northern Ontario and Date Created

Source of data: Ontario Health

Ontario Health Team	Region	Hospital	Date Created
Nipissing Wellness	North East	North Bay Regional Health Centre	Dec 7, 2019
		West Nipissing General Hospital	
All Nations Health Partners	North West	Lake of the Woods District Hospital	Dec 9, 2019
Algoma	North East	Sault Area Hospital	Jul 23, 2020
		North Shore Health Network	
Rainy River District	North West	Atikokan General Hospital	Nov 18, 2020
		Riverside Health Care Facilities (sites: La Verendrye Hospital, Rainy River Health Centre, Emo Health Centre)	
Maamwesying	North East	St. Joseph's General Hospital*	Oct 14, 2022
		Espanola General Hospital*	
Noojmawing Sookatagaing (previously City and District of Thunder Bay)	North West	Thunder Bay Regional Health Sciences Centre	Oct 14, 2022
		St. Joseph's Care Group	
		Nipigon District Memorial Hospital	
		Santé Manitouwadge Health	
		Geraldton District Hospital	
		North of Superior Healthcare Group (sites: McCausland Hospital and Wilson Memorial General Hospital)	
Kiiwetinoong Health Waters	North West	Red Lake Margaret Cochenour Memorial Hospital	Oct 14, 2022
		Dryden Regional Health Centre	
		Sioux Lookout Meno Ya Win Health Centre	
Timiskaming Area	North East	Blanche River Health (sites: Kirkland & District Hospital; Englehart & District Hospital)	Jul 13, 2023
		Temiskaming Hospital	
Cochrane District	North East	Smooth Rock Falls Hospital	Jul 13, 2023
		Timmins and District Hospital	
		Sensenbrenner Hospital	
		Notre-Dame Hospital	
		Anson General Hospital	
		Bingham Memorial Hospital	
		Lady Minto Hospital	
		Services de santé de Chapleau Health Services	
		Hornepayne Community Hospital	
Sudbury Espanola Manitoulin Elliot Lake	North East	Manitoulin Health Centre (sites: Little Current, Mindemoya)	Jul 13, 2023
		St. Joseph's Continuing Care Centre of Sudbury (sites: Greater Sudbury, South Bay Rd, Clarion Hotel)	
		St. Joseph's General Hospital*	
		Espanola General Hospital*	
		Health Sciences North	

* This hospital participated in two Ontario Health Teams at the time of our audit.

Appendix 4: Audit Criteria

Prepared by the Office of the Auditor General of Ontario

Ministry of Health and Ontario Health
1. Provincial strategies are in place and being achieved to support the delivery of timely and patient-centred services in hospitals in Northern Ontario.
2. Performance indicators and targets are established and continuously monitored against actual results to ensure that intended outcomes are achieved and corrective actions are taken on a timely basis when issues are identified.
3. Provincial programs to recruit and retain qualified health-care professionals in Northern Ontario hospitals are regularly monitored and assessed to ensure cost-effectiveness.
4. Initiatives to increase accessibility to hospital services are regularly monitored and assessed to ensure they are meeting their intended purposes.
Selected Hospitals
1. Hospitals co-ordinate with other health service providers to ensure that patients have timely and equitable access to care and health services.
2. Hospitals provide culturally and linguistically appropriate services to patients.
3. Hospitals use available financial and health human resources with due regard for economy and efficiency.
4. Sufficient, appropriate and timely information is available to allow effective oversight of hospital operations.

Appendix 5: Recommendations from the Rural and Northern Health Care Framework/Plan—Stage 1 Report, 2010

Source of data: Rural and Northern Health Care Panel

1.	Create a single point of focus within the Ministry of Health and Long-Term Care (now the Ministry of Health) for rural, remote and northern health. Identifying one person, group or section responsible for rural and northern health will increase accountability in this critical area, and make it easier to define and monitor standards for increasing access to health care.
2.	Establish a process to identify strategies and guidelines to improve access to health-care services for First Nations communities. First Nations communities have unique and complex health-care needs. Any plan to improve access to health care in rural and northern communities must consider these, while also considering the needs of remote, isolated and distant non-Indigenous communities.
3.	Continue to explore innovative ways of attracting health professionals to rural, remote and northern communities in Ontario. There is a constant need for doctors and nurses, as well as nurse practitioners, pharmacists, dieticians and other health-care professionals. Any plan to attract these professionals to rural and northern communities must also be integrated into the broader strategy to attract health-care professionals to Ontario.
4.	Explore ways of better integrating Emergency Medical Services (land and air) with the planning and delivery of local health services in rural and northern communities in Ontario. Currently, Emergency Medical Services are organized at a municipal level and funding and delivery models vary across different regions. This can create barriers to access, particularly in a region as vast as Northern Ontario. Better integration with Local Health Integration Networks (LHINs)* will lead to increased collaboration and co-ordination, resulting in better patient care.
5.	Explore ways of better integrating Public Health services in rural and remote Ontario. As is the case with Emergency Medical Services, public health services and delivery models vary from region to region. This can create imbalances and fragmented services. Better integration with LHINs can help to correct those imbalances.
6.	Support a "local hub" model of health planning, funding and delivery in rural, remote and northern communities. By integrating services across different health sectors and across different communities in rural and Northern Ontario, all parts of the health-care system can work together to deliver the best possible care to patients.
7.	Create a culture of collaboration and co-ordination amongst health-care providers in rural and Northern Ontario. Clearly identify roles and responsibilities and put in place the necessary infrastructure to support a better system of referrals, more efficient patient transfers and better overall access to care.
8.	Improve and strengthen relationships between academic health sciences centres (teaching and research hospitals) and local providers in rural, remote and northern communities. Bigger hospitals have much to offer in the way of support to local providers, and formal networks should be established to enable and encourage that support. This includes telemedicine, patient transfers, remote consultations and the sharing of best practices.
9.	Engage local communities to actively participate in the decision-making process for health-care planning, funding and delivery. The very best way to identify and meet local health-care needs is to consult with local communities. Improved collaboration and dialogue between the public, health-care providers and LHINs is a critical component of any plan to increase access to health-care services.
10.	Conduct a review of how best to improve planning, co-ordination and funding of inter-facility transfers. Moving patients from one facility to another can be difficult, particularly in rural and remote areas. Improving access to care means improving the ways in which we move people between the facilities where they receive that care.

11. Conduct a review of how best to enhance community-based non-urgent transportation solutions. The availability of non-urgent (i.e., not Emergency Medical Services or ambulance) transportation services is very limited in many rural, remote and northern areas of the province. This results in residents either not being able to travel to access care, or incurring high out-of-pocket costs while doing so. The new rural and northern health-care framework must contain measures to enhance non-urgent transportation in areas of the province where it is lacking.

12. Increase the availability of clinical and education technology. Electronic information management holds great potential to improve health care, and that is particularly true in rural and remote areas where travel can be difficult and there may be relatively fewer health-care providers. Any plan to improve access must take advantage of services such as eHealth, telemedicine, and simulation learning, and should include incentives to encourage their use by health professionals.

* On April 1, 2021, the Local Health Integration Networks (LHINs) continued to operate under a new business name, Home and Community Care Support Services, with a narrowed mandate to deliver and arrange patient services. Non-patient functions, such as funding, planning and community engagement, were transferred to Ontario Health.

Appendix 6: Examples of Other Jurisdictions' Health-Care Strategies Targeting Rural Areas

Prepared by the Office of the Auditor General of Ontario

British Columbia

Northern Health released its 2020–2023 Strategic Plan and 2020/21–2022/23 Service Plan, which included initiatives that focused on:

- partnerships to develop and support accessible affordable housing;
- innovative practices in transportation, accommodation, and technology to balance the fact that services are not available in every community;
- increasing the participation of Indigenous workers in health care and health sciences; and
- partnerships to support the employment of locally representative workforces.

Virginia, USA

The Virginia Rural Health Plan 2022–2026 focuses on seven priority areas to monitor the overall health and well-being of the state's rural communities. These areas include education, nutrition and food security, healthy moms and babies, access to health-care services, behavioural health, substance use disorder and recovery, and workforce development.

Queensland, Australia

The Rural and Remote Health and Wellbeing Strategy 2022–27 outlines what the state calls a "whole-of-system approach" to achieving health equity for its rural and remote populations. The strategy recognizes the importance of building stronger partnerships with health, non-health, public, not-for-profit and private system partners to align activities, share resources and share accountabilities.

Australia

The Department of Health and Aged Care's Stronger Rural Health Strategy aims to build a sustainable, high-quality health workforce by 2028 that is distributed across the country based on community need. With a focus on rural and remote communities that have difficulty attracting health-care professionals, the strategy includes many initiatives related to teaching, training, recruitment and retention to improve the health of people in rural areas.

Appendix 7: Examples of Other Jurisdictions' Health-Care Staffing Strategies with Actions Targeting Rural Areas

Prepared by the Office of the Auditor General of Ontario

British Columbia

The Health Human Resource Strategy—Putting People First includes immediate new actions as well as initiatives under way for health professions including paramedics, pharmacists, nurses and physicians. The strategy includes 70 actions that will span five years, focusing on four areas—retain, redesign, recruit and train—to achieve a healthy and productive workforce. Certain actions help direct health-care professionals to rural communities. For example, one action is to develop a new provincial travel resource pool to help deploy nurses to communities of need for short-term support. Another action is to collaborate with other ministries to develop a provincial health sector housing strategy to address barriers to recruitment in communities where market housing is not readily available. In addition, the strategy introduces specific approaches to support and protect Indigenous patients and providers.

Saskatchewan

The Health Human Resources Action Plan includes investing more than $60 million into four areas to address the challenges in health-care staffing and build a more sustainable health-care workforce. The four areas are recruitment, training, incentives and retention, and each area includes action items. For example, one action item aims to add 100 new full-time positions in rural and remote areas for professions such as registered nurses and licensed practical nurses, among others. The plan also mentions converting 150 part-time positions to full-time permanent positions in rural and remote areas for some health-care professions. The Saskatchewan government also intends to provide up to $50,000 in incentive funding over three years for a return-of-service agreement for hard-to-recruit positions, mainly in rural and remote areas. The plan also calls for developing a First Nations and Métis recruitment and retention strategy.

Appendix 8: Tools Used to Track Staffing Data in Northern Hospitals and Deficiencies of Each Tool

Prepared by the Office of the Auditor General of Ontario

Tool	Inception Date	Frequency of Reporting	Description	Deficiencies
Ontario Health North Workforce Profile Tool	Late 2022	Ongoing	• Enables hospitals in Northern Ontario to create and maintain profiles for their current workforce, including nurses. • Ontario Health would use this information to understand the vacancy and agency staffing rates across multiple sectors, as well as to forecast future needs and staffing pressures by geography and type of pressure (such as physician vs. nurses).	• Not yet fully implemented; Ontario Health plans to fully implement this information tool by March 2024. • Participation rate was just over 50% of all northern hospitals as of May 2023, according to Ontario Health.
HealthForceOntario—Northern Ontario Physician Data Collection	2018	Twice yearly	• HealthForceOntario (now part of Ontario Health) began collecting this data in 2018, in partnership with the Northern Ontario School of Medicine (NOSM). • Ontario Health collects data on the number of physicians working and the number of physicians that hospitals were recruiting for at the time.	• Ontario Health must conduct a significant amount of follow-up to obtain complete data, which is then passed to NOSM and discussed with stakeholders.
S9 Census	Apr 2020	Monthly*	• Hospitals report data including physician and nurse shortages, vacancies and absenteeism rates. • Ontario Health began measuring this data from October 2022. Ontario Health uses the data from this census for its monthly internal reporting.	• Reporting is voluntary; as such, some hospitals may submit the data late or not at all. The Ministry of Health sends hospitals email reminders to submit data, but does not mandate reporting. • 10 of the 36 hospitals did not submit data on vacancies between October 2022 and July 2023 (based on information from Ontario Health). • Four of the seven hospitals we visited submitted the data between October 2022 and July 2023. • We found data anomalies, and were told by Ontario Health that reporting of physician information may not be fully accurate because physicians are not hospital employees and may work in multiple locations.

* At Ontario Health's request, the Ministry of Health asked all hospitals to report data weekly starting April 2020, then changed it to monthly starting May 2023.

Appendix 9: Methodology Used to Estimate Additional Costs to Provide Hospital Acute Care to Patients Designated as Alternate-Level-of-Care (ALC) and Waiting for Long-Term Care and Home Care, 2022/23

Prepared by the Office of the Auditor General of Ontario

Data Used	Most Recent Data From	Source of Data
Step 1: **Calculate the total estimated cost to keep all acute-care patients designated as ALC in northern hospitals.**		
Average daily cost for an acute-care[1] patient to stay in a hospital	2021/22	Ministry of Health
Number of days patients were designated as ALC (ALC days) at northern hospitals that submitted this information through the Wait Time Information System	2022/23	Wait Time Information System
Step 2: **Subtract the estimated cost the province would have incurred if the proportion of ALC patients waiting for long-term care had received beds in long-term care homes instead.**		
Average daily cost for a resident to stay in a long-term care home (net of resident's basic bed co-payment adjusted to the estimated collection rate)	2021/22[2]	Ministry of Health
Proportion of hospital ALC days belonging to acute-care patients who were waiting for long-term care homes	2022/23	Wait Time Information System
Step 3: **Subtract the estimated cost the province would have incurred if the proportion of ALC patients waiting for home care had received home care instead.**		
Average daily cost for a home-care client to receive care at home	2021/22[2]	Ministry of Health
Proportion of hospital ALC days belonging to acute-care patients who were waiting for home care	2022/23	Wait Time Information System
Result: $65 million		

This estimate excludes:

- ALC patients in 18 of 36 Northern Ontario hospitals that do not report this information into the Wait Time Information System.
- The number of days acute-care patients designated as ALC waited in hospitals for a long-term care home or home-care application to be processed. This could vary from one case to another, but Home and Community Care Support Services could not provide a standard timeline.
- Data on whether a hospital is at capacity or not.
- Capital costs related to long-term care beds and any additional start-up costs to operate long-term care beds and home care services.

1. Cost data provided by the Ministry is for acute-care patient only and excludes non-acute or post-acute care patients such as those in mental health and rehabilitation beds. Does not consider co-payments by patients waiting for long-term care who need to contribute a co-payment toward their stay at the hospital.
2. Though 2022/23 information was available for long-term care and home care, to keep cost information across all three sectors consistent, we opted to use 2021/22 for this analysis.

Appendix 10: Comparison of Ontario's Northern Health Travel Grant Program with Similar Programs Offered in Other Provinces

Prepared by the Office of the Auditor General of Ontario

Province/ Territory	Program	Covered Expenses			
		Meals	Accommodations	Mileage	Companion[1]
Ontario	Northern Health Travel Grant	$0	$100 per night, up to $550 for ≥8 nights; trips must be over 200 km one way	For trips over 100 km—$0.41 per km for transport by land and air	Yes, but if travel by personal vehicle, the reimbursement is split
Nunavut	Extended Health Benefits[2]	≤$50 per day depending on the situation	$50 to full cost per day, depending on the situation	Full cost with $250 return airfare deductible on approved medical travel	Yes, but not for accommodations
Newfoundland and Labrador	Medical Transportation Assistance[3]	Trips must be over 200 km one way. Depending on the patient's location, either: 1) 100% for the first $1,000; 50% for the next $3,000; and 75% for the remaining expenses per year; or 2) $400 deductible on the first claim. The first $100 of eligible expenses in excess of $400 is reimbursed at 100%; the next $3,000 is reimbursed at 50%; and any remaining eligible expenses in excess of $3,500 during the 12-month period are reimbursed at 75%.			Yes, but not for accommodations
Manitoba	Northern Patient Transportation Program[4]	$0	$0	Full cost	Yes, plus ≤$24.65 per day for meals; ≤$65 per night for accommodations (or $30 if staying in private home); ≤$35 in miscellaneous transportation for up to two days and, if driving, reimbursed at the cost of bus fare
New Brunswick	Out of Province Hostel Facilities & Meal Allowance[5]	≤$110 per day for meals and accommodations; if required to stay more than 30 days, ≤$2,500 for accommodations, but not meals		$0	Meals at ≤$66.74 per day

1. A companion is someone—usually a family member or a caregiver—who escorts the patient to obtain care elsewhere. Most programs reimburse expenses for companions only when prior approvals are given, such as when it is medically necessary to have an escort accompany a patient.
2. Eligibility: All residents who have exhausted their third-party insurance or have no medical travel benefits.
3. Eligibility: Residents who incur substantial out-of-pocket travel costs to access specialized insured medical services that are not available in their immediate area of residence and/or within the province.
4. Eligibility: Residents living north of the 53rd parallel from the Manitoba-Saskatchewan border to Lake Winnipeg, with a Manitoba health card or treaty status.
5. Eligibility: Patients who are required by their physician to travel outside the province but still within Canada and remain at least three consecutive nights at a hostel.

Appendix 11: Indigenous Healing Spaces and Cultural Practice Policies in Northern Hospitals, February 2023

Source of data: Ontario Health

Hospital	Location	Indigenous Healing Space	Traditional Practice Policy	Dedicated Indoor Smudging Space	Smudging Allowed in Patient Room

West Parry Sound Health Centre	Parry Sound		n/a		

n/a: Hospital did not provide information to Ontario Health.

1. According to Ontario Health data, permission to smudge in a patient's room at Lady Minto Hospital depends on the case, and it may be allowed with a portable venting system.
2. Data covers three hospital sites including Emo Health Centre, La Verendrye General Hospital and Rainy River Health Centre.

Appendix 12: Map of French-Designated Areas in Ontario, as of January 2022

Source: Ministry of Francophone Affairs

Note: Last updated on January 14, 2022, through the Ministry of Francophone Affairs website, https://files.ontario.ca/ofa_designated_areas_map_en.pdf

Ministry of Long-Term Care

Long-Term Care Homes: Delivery of Resident-Centred Care

1.0 Summary

Long-term care homes provide accommodation, nursing and personal support services to adults who need 24-hour care, seven days a week (24/7). All long-term care homes are publicly funded and are licensed and regulated by the Ministry of Long-Term Care (Ministry) to operate in Ontario. Most residents in long-term care homes are seniors; over half are 85 years or older. However, homes are also open to anyone over the age of 18 who has comprehensive care needs that cannot be met in other settings.

Our Office has conducted several audits of long-term care in recent years, covering the areas of quality inspection (2015), food and nutrition (2019), and pandemic readiness and response (2021). For this audit, we focused on the ability of long-term care homes to provide residents with both high quality of care and high quality of life. While it is essential to care for the physical well-being of residents, it is equally important that homes offer support and enrichment to meet the mental, social, spiritual and cultural needs of residents. Long-term care homes exist for the benefit of residents; the interests of residents should be at the centre of all decisions. That is the essence of resident-centred care.

Overall, we found that long-term care homes lack the resources and supports to provide their residents with care and a living environment that is centred on their needs. More proactive leadership, guidance and support from the Ministry and its system partners (for example, Ontario Health) are essential to address the systemic issues identified in the audit.

Despite a significant increase in Ministry funding for long-term care staffing (an additional $4.9 billion over four years, 2021/22–24/25), we found that homes are still struggling to maintain sufficient staff to meet the needs of their residents. Many homes we visited have high vacancies and turnover in their nursing and personal support positions, and our analysis of staffing data revealed that a quarter of the homes in the province still provide fewer hours of direct care to residents than the provincial targets. To fill the staffing gap, homes have used agency staff with increasing regularity—a temporary solution that is costly and unsustainable. In addition, we noted from our visits to homes that some homes were missing certain allied health professionals (for example, physiotherapists, social workers and recreational therapists) that are key to residents' quality of life. With the Province set to build 30,000 new long-term care beds by 2028, the staffing issue will only worsen if actions are not taken.

We also found that homes are not always prepared to prevent and manage responsive or aggressive behaviours, which are common among residents with dementia, complex mental illness, substance use and other neurological disorders. These behaviours have sometimes led to physical injuries, creating an unsafe environment for both residents and staff.

In long-term care homes across Ontario, diverse populations must coexist in environments that are geared toward the needs of the majority. Hence, we

found cases where younger adults may not have access to age-appropriate programs and meaningful social connections, and where autistic residents may face a daily barrage of bright lights and loud noises. We also found instances where immigrants may seldom eat foods from their culture or have conversations in a language they understand.

Over the past few years, both the Ministry and long-term care homes have responded to the COVID-19 pandemic with intense efforts to prevent infections and control outbreaks. As the level and risk of infections decline and home operations continue to normalize, the Ministry and the homes should turn their focus toward the quality of life for residents.

The following are some of our significant findings.

Staffing

- **Staffing levels for nurses and personal support workers (PSWs) varied among homes.** We found that at least a quarter of the homes in the province failed to consistently reach the provincial targets in 2021/22–22/23 for hours of direct care. We also noted that the staff-to-resident ratio varied significantly across the homes we visited, especially during the evening and overnight shifts when the coverage of one home could be two or more times worse than another home—with ratios of up to 1:80 for nurses (one nurse for 80 residents) and 1:30 for PSWs. Recruitment and retention continue to be a significant challenge in the long-term care sector due to a shortage of health human resources in Ontario.
- **Increasing reliance on agency staff was costly and reduced continuity and quality of care.** We found that the average direct-care hours provided by contracted nurses and PSWs, including those supplied by agencies, rose from 4% in the first quarter of 2021/22 to 10% in the last quarter of 2022/23. We also noted that the reliance on agency staff varied significantly across homes, with agency staff contributing up to 50% of a home's direct-care hours. By their temporary nature, agency staff were unable to provide residents with the same continuity of care as permanent staff, and some homes we visited noted that mistakes like medication errors tended to happen more frequently among these staff. Agency staff also cost significantly more than permanent staff, since staffing agencies are private for-profit companies and there is currently no legislation capping the amount that these agencies can charge homes. For example, based on our estimates, the average hourly rate for an agency registered nurse (RN) was $97.33/hour, which was 142% higher than the average rate of an RN directly employed by a home ($40.15/hour), with a portion of the difference retained as profit by the agencies.
- **Pay inequity between homes and other health-care settings contributed to higher turnover and staff vacancies.** Besides competition within the long-term care sector, homes also face competition for staffing resources from other health-care settings, such as hospitals. We noted that hospitals offer better pay than long-term care homes. For example, the average hourly rate for registered nurses was 6% higher in hospitals ($40.47) than in long-term care ($38.05); and the average hourly rate for registered practical nurses was 11% higher in hospitals ($29.99) than in long-term care ($27.02). This disparity puts homes at a disadvantage in staff recruitment and retention, resulting in high vacancy rates of 8–12% for PSW and nursing positions in 2022/23.
- **The availability of allied health professionals (AHPs) varied among homes, with many homes lacking support from key professions.** AHPs include a broad range of professions—such as nurse practitioners, physiotherapists, occupational therapists and social workers—whose services contribute to residents' quality of life. We found that about half of the homes fell below the provincial target for direct-care hours in the fourth quarter of 2022/23. Our analysis of 2022/23 staffing data revealed that many homes were severely lacking services from certain

AHPs. For example, 74% of homes provided zero hours of direct care from nurse practitioners. Our visits to homes also confirmed that the utilization of AHPs varied across homes, with some positions missing from some homes.

- **Personal support workers (PSWs) continue to be unregulated.** While PSWs constitute the largest workforce in long-term care homes (approximately 60% of direct-care staff), they are unregulated. The profession is not governed by a code of conduct or standards of practice, and there is no regulatory body to report PSWs with serious misconduct or competency issues in order to discipline or keep them out of long-term care homes. An oversight authority was established in 2021. However, the authority is not functioning as yet and it is not mandatory for PSWs to register with the authority.

Resident-Centred Care

- **Homes had limited access to behavioural support resources.** Responsive or aggressive behaviours are common among people living with dementia, complex mental illness and substance abuse. We noted that over 40% of long-term care residents were assessed with aggressive behaviours in 2022/23. We identified examples from homes we visited where residents' aggressive behaviours led to physical harm or harassment of other residents and/or staff. Homes often do not have sufficient resources to effectively manage these behaviours. For instance, we found the following:
  - Over one-third of the homes we visited were denied funding to hire dedicated behavioural support staff.
  - Although the Ministry has established 307 beds in behavioural specialized units to provide a tailored environment for residents with behaviours that cannot be managed in the regular long-term care setting, the supply is limited and the admission to these units is generally restricted only to residents with a dementia diagnosis.
  - External behavioural resources for younger residents with mental illness or addiction problems were limited, as many of these resources would not accept residents under the age of 65.
- **There was not enough culturally specific care to meet the demand.** There are currently 57 out of 626 long-term care homes focused on serving specific ethnocultural or religious groups. We found that the median wait time in 2022/23 for an ethnocultural or religious home could be up to 1,843 days (approximately five years), compared to 50–223 days for all homes, depending on the region. Our regional analysis noted that while certain regions have a high concentration of particular ethnic groups (for example, the population in Peel Region is approximately 14% South Asian), there are no designated ethnocultural homes in those areas to serve that need. In our visits to mainstream homes (that is, homes that do not provide culturally specific care), we noted that the level of cultural accommodation varied across homes—for example, not all homes have staff who can communicate with residents in their native language, either directly or using language tools or technologies. Providing care in the residents' own language is important, especially for those with dementia (about 63% of all residents), who are more likely to revert to their mother tongue as their condition intensifies.
- **Younger residents were underserved in homes that cater to an elderly population.** Homes had about 6,200 (6.3%) younger residents under the age of 65 as of 2022/23, with some in their early 20s, who stay in long-term care homes because of their high care needs. It is difficult for younger residents to develop social connections that bridge the generation gap between them and the predominantly senior population. In addition, younger residents often do not have access to age-appropriate recreation programs, as programs at long-term care homes primarily cater to the senior residents (for

example, bingo, 60s-themed movies and music activities). In our visits to homes, we also noted that community resources for age-appropriate activities were limited, with some younger residents not getting access to any resources in the community.

Alternate Level of Care (ALC) Patients

- **Implementation of new legislation has not been transparent to the public.** A patient who requires an alternate level of care is someone occupying a hospital bed who no longer requires acute care in the hospital setting. The *More Beds, Better Care Act, 2022,* which came into full effect on September 21, 2022, authorizes Home and Community Care Support Services to determine the ALC patient's eligibility for long-term care and to select homes for the patient without the patient's consent. There were 7,357 ALC patients placed into long-term care homes between September 21, 2022 (effective date of the *More Beds, Better Care Act, 2022*) and March 31, 2023; of that total, 99 ALC patients were placed in homes that were not selected by patients but by placement co-ordinators without the patient's consent, as allowed by the new legislation. Among the remaining 7,258 placements, approximately 60% were not placed in their first-choice home, which was comparable to the 58% observed in the six-month period prior to the implementation of the *More Beds, Better Care Act, 2022*. Despite the public's concerns over the new legislation, none of this information has been disclosed to the public to show when and how the new provisions were used.
- **Outcomes of ALC patients in long-term care homes were not monitored to assess whether their needs were met.** Aside from freeing up hospital beds, one intent of the new legislation is to provide ALC patients with the care they need and a better quality of life in a more appropriate setting. However, the Ministry has not monitored the outcomes of ALC patients after their admission to long-term care to determine whether the transitions were smooth and whether these patients were actually doing well after discharge from the hospital.

Funding and Oversight

- **Funding method lacked up-to-date information to meet residents' current care needs.** The Ministry adjusts the funding to homes every year based on the health condition of each home's residents. However, the index used for adjustment is driven by resident acuity data collected from homes two years prior. Given that the residents' average length of stay in homes is about two to three years, and that health conditions can change significantly over that period, this data does not reflect residents' current care needs. In comparing the data for 2021/22 and 2023/24, we noted that the index can fluctuate significantly for some homes over the two-year gap, with one home reporting an increase of up to 18% (reflecting higher resident needs) and over 40 homes reporting an increase of 5% or more.
- **Long-term care homes faced barriers in navigating through and accessing funding initiatives.** The Ministry currently has over 40 funding initiatives to provide homes with additional funds to address specific issues. The funding system is complex and administratively burdensome, with different requirements for each initiative. Smaller homes are particularly challenged by the process as they have fewer administrative resources than larger homes. We also found that the Ministry has not consistently analyzed the uptake of these funding initiatives to determine whether the initiatives met their intended purposes, and to identify barriers that impede homes from effectively accessing funds.
- **Not all performance indicators had targets to drive and measure improvements, including indicators for residents' safety and care.** The service accountability agreements between Ontario Health and long-term care homes have nine indicators for the homes. However, aside

from two indicators that measure home financial health, most indicators have no targets—including those measuring home performance in relation to quality of care and resident safety. This limits Ontario Health's ability to effectively monitor and hold homes accountable for their performance.

This report contains 12 recommendations, with 29 action items, to address our audit findings.

Overall Conclusion

Our audit concluded that the Ministry, in conjunction with Ontario Health and long-term care homes, does not have fully effective systems and procedures to ensure that residents receive quality care and services. We found that the ability of long-term care homes to provide competent and appropriate care that meets resident care needs is constrained by staffing issues in the health-care sector. Despite increases in funding, long-term care homes still have high vacancy rates for nurses and personal support workers (PSWs)—about 8,000 open positions in 2022/23. To manage the staffing gap, some homes have paid a high price to hire temporary staff from agencies. The high vacancy rates and the increased use of temporary agency staff are disruptive to resident care. We also noted from our visits to homes that some homes have significantly poorer staff-to-resident ratios, which impedes their ability to care for the increasingly complex needs of residents. From 2018/19 to 2022/23, about 41% to 44% of residents exhibited some form of aggressive behaviours and required more care time from staff. We found that homes are not always prepared to manage these behaviours, which puts the safety of both residents and staff at risk on occasions.

We found that long-term care homes lack some of the resources and programs that are critical to residents' quality of life. For example, many homes have not employed certain allied health professionals (for example, social workers, physiotherapists and recreational therapists) who provide a broad range of services that address the physical, emotional, social and spiritual needs of residents. Moreover, home resources and programs primarily catered to the interests and needs of the majority of residents aged 85 and above, resulting in the unique needs of certain groups of residents, such as younger residents, not being met. The supply of culturally sensitive homes is also limited and wait times are long.

Lastly, neither the Ministry nor Ontario Health has developed targets to effectively measure the performance of long-term care homes in relation to quality of care and resident safety. The Ministry also has not consistently measured the uptake of its various funding initiatives to determine if the initiatives (totalling $1.8 billion in 2022/23) have met their intended purposes.

OVERALL MINISTRY RESPONSE

The Ministry of Long-Term Care (Ministry) acknowledges the recommendations from the Auditor General and will use them to further inform key Ministry priorities, which aim to increase the confidence of residents and prospective residents, as well as their families, in the quality of long-term care in Ontario. While there are many effective systems and procedures in place to ensure that residents receive quality care and services, there is always more that can be done to improve resident experience.

As the long-term care sector continues to recover from the ongoing impacts of the COVID-19 pandemic, the Ministry remains committed to supporting a system where every resident experiences the best possible quality of life, supported by safe, high-quality care. The Ministry works closely with our partners, including Ontario Health, and has a multi-year plan to fix long-term care through strategic priority areas, including staffing, sustainability and capital development. These priorities and enablers align with the pillars of Your Health: A Plan for Connected and Convenient Care, and are supported by the quality framework and provisions of the *Fixing Long-Term Care Act, 2021*.

Recent initiatives and investments have built a solid foundation on which to grow, including:

- strengthening staffing and care through investment of up to $4.9 billion over four years towards training, hiring and retention of sector staff;
- doubling the number of home inspectors and enhancing accountability through a $72.3 million investment;
- creating modern, safe, comfortable homes with a commitment to create 30,000 new beds by 2028; and
- enacting the *Fixing Long-Term Care Act, 2021,* and Ontario Regulation 246/22, which more closely align the language in the Residents' Bill of Rights with the grounds of discrimination in the Ontario Human Rights Code and established direct hours of care targets, new compliance and enforcement tools, and strengthened emergency planning and quality improvement requirements.

2.0 Background

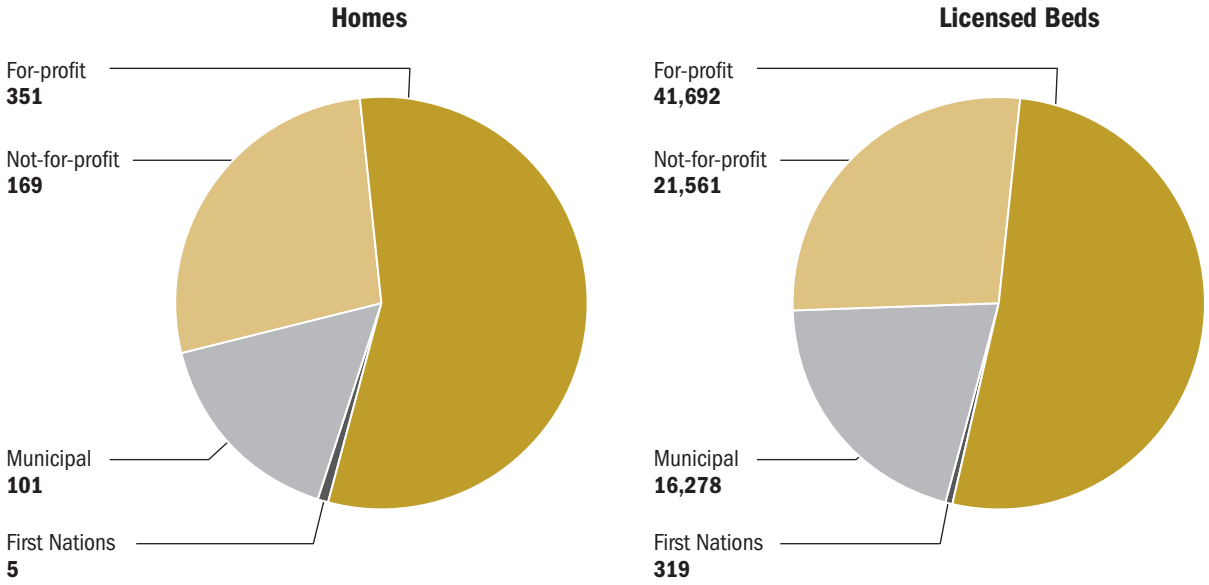
2.1 Overview

Long-term care homes provide 24/7 nursing and personal care, as well as assistance with activities of daily living to those whose needs cannot be safely met in the community through, for example, care at home and supportive living programs. In addition to nursing and personal support services, long-term care homes provide residents with a wide range of services—from therapies to recreational programs—to improve physical and mental health, enrich daily life, and promote well-being. The *Fixing Long-Term Care Act, 2021* (Act) describes a long-term care home as "the home of its residents" and a place where its residents "may live with dignity and in security, safety and comfort and have their physical, psychological, social, spiritual and cultural needs adequately met."

2.1.1 Ontario's Long-Term Care Landscape

There are currently 626 long-term care homes in the province, with close to 80,000 licensed beds. These homes can be publicly or privately owned, operating either for profit or not for profit (see **Figure 1**). Homes are spread throughout the province and vary in size, ranging from fewer than 20 beds to over 400 beds. Regardless of ownership and size, all long-term care homes are publicly funded and must be licensed by the Ministry of Long-Term Care (Ministry) to operate in Ontario. They are regulated and subject to requirements prescribed by the Act.

Ontario's senior population (age 65 or older) has grown significantly, from about 2 million in 2013 to almost 2.8 million in 2022, an increase of almost 40% over a 10-year period. Based on the latest population projections published by the Ministry of Finance, this trend is expected to continue, with the senior population projected to increase to 4.4 million by 2045. Among the senior population, the number of seniors aged 85 and older is expected to grow the fastest (see **Appendix 1**).

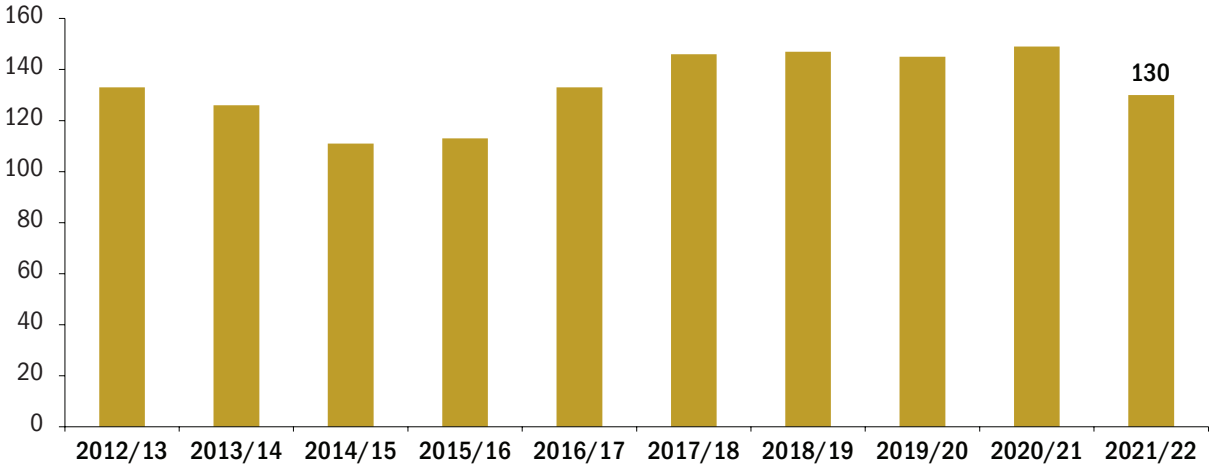


While the senior population increased by almost 40% over the last 10 years, the province's long-term care capacity has remained stagnant, with the number of licensed beds increasing by less than 2% since 2015. The median wait time for long-term care homes has remained long, sitting at about 130 days in 2021/22 (see **Figure 2**). To increase long-term care capacity, the Province has committed to invest $6.4 billion to build 30,000 new long-term care beds by 2028 and to redevelop over 28,000 older beds to modern design standards through the Long-Term Care Development Program. Some projects include beds dedicated for specific cultural and linguistic needs.

2.1.2 Resident Demographics

The average age of long-term care residents in Ontario is about 83 years old and the average length of stay

Figure 1: Number of Long-Term Care Homes and Beds in Ontario by Home Type, January 2023



Source of data: Ministry of Long-Term Care

Note: Out of a total of almost 80,000 licensed beds, approximately 4,600 were not in operation, largely due to a directive issued during the COVID-19 pandemic, which eliminated three- or four-bed ward rooms. The directive requires homes to place residents (new admissions and re-admissions) in a room with no more than one other resident.

Figure 2: Median Wait Time for Long-Term Care Bed in Ontario, 2012/13–2021/22 (days)

Source of data: Ontario Health

in a long-term care home is about two to three years. While the majority of residents are seniors aged 65 or older, homes also include a younger population of residents who have experienced brain injury, stroke or other conditions that require the 24/7 care provided by long-term care homes. Today's home residents have more complex needs than in the past, with higher acuity (more severe conditions) and specialized care needs. The majority of residents have cognitive impairments and 63% of residents have a dementia diagnosis. **Figure 3** shows the profile of long-term care home residents in Ontario. The profile of long-term care

Figure 3: Profile of Long-Term Care Residents in Ontario, 2022/23

Source of data: Canadian Institute for Health Information

Selected Characteristics	%
Physical health	
Occasional bladder incontinence	83.8
Occasional bowel incontinence	69.0
Diagnosis of hypertension	64.5
Some indication of health instability[1]	62.0
Diagnosis of diabetes	28.4
Total dependence in activities of daily living	13.4
Diagnosis of cancer	10.6
Daily pain[2]	5.2
Mental and cognitive health	
Moderate to very severe cognitive impairment[3]	72.1
Diagnosis of dementia	63.4
Limited or no social engagement[4]	41.7
Some aggressive behaviour[5]	40.7
Signs of possible depression[6]	24.3

1. Residents with a score of 1 or greater on the Changes in Health, End-Stage Disease and Signs and Symptoms (CHESS) Scale. Score ranges from 0 to 5, with 5 being the "highest instability."
2. Residents with a score of 2 or greater on the Pain Scale, which considers the frequency and intensity of pain. Score ranges from 0 to 3, with 3 being "severe or excruciating daily pain."
3. Residents with a score of 3 or greater on the Cognitive Performance Scale (CPS). Score ranges from 0 to 6, with 6 being "very severe impairment."
4. Residents with a score of 2 or lower on the Index of Social Engagement (ISE). Score ranges from 0 to 6, with 0 being the "lowest social engagement."
5. Residents with mild to more severe aggressive behaviour.
6. Residents with a score of 3 or greater on the Depression Rating Scale (DRS). Score ranges from 0 to 14, with "3 or greater" indicating the "potential presence of a depression disorder."

residents in Ontario is consistent with or slightly more severe than the Canada-wide profile on most measures.

2.2 Key Roles in Long-Term Care

2.2.1 Ministry of Long-Term Care

In June 2019, the Province separated the Ministry of Health and Long-Term Care into two ministries: Ministry of Health and Ministry of Long-Term Care. **Figure 4** summarizes the key roles of the Ministry of Long-Term Care, which include developing policies, implementing initiatives, facilitating sector-wide discussions, regulating through licensing and inspections, funding, and collaborating with other ministries in matters related to long-term care.

2.2.2 Ministry of Health

Despite becoming a standalone ministry, the Ministry of Long-Term Care still collaborates with the Ministry of Health in a number of ways. For example, the two ministries must work collaboratively to address broader health-sector issues, such as health human resources, seniors' access to care services at home and in the community, as well as transitional care following hospitalization.

The Ministry of Health also oversees two Crown agencies—Home and Community Care Support Services (HCCSS) and Ontario Health—both of which play a key role in long-term care, as follow:

- HCCSS provides assessment and placement coordination services for the long-term care sector.

Figure 4: Key Roles of the Ministry of Long-Term Care

Prepared by the Office of the Auditor General of Ontario

Key Role	Description
Policy maker	• Develop legislation, regulations and policies for long-term care homes.
Facilitator	• Build and maintain relationships with key stakeholders representing the sector, families and residents. • Engage with long-term care homes to identify and address systemic operational challenges.
Regulator	• License long-term care operators. • Inspect homes to enforce the requirements of the *Fixing Long-Term Care Act, 2021*.
Funder	• Approve, oversee and fund the development and redevelopment of long-term care homes. • Provide operational funding to long-term care homes—through Ontario Health and directly to homes.
Implementer	• Assess and manage service and financial needs. • Implement strategies and initiatives across the sector.
Collaborator	• Work with other ministries, such as Ministry of Health and Ministry of Seniors and Accessibility, on cross-sector strategic priorities to enhance the continuum of care for seniors.

- Ontario Health, through its accountability agreement with the Ministry of Long-Term Care, manages the performance of individual long-term care homes and the province's long-term care system, working with stakeholders to implement provincial priorities and providing advice and support to the Ministry of Long-Term Care. Ontario Health also maintains service accountability agreements with long-term care homes to hold homes accountable for meeting performance expectations.

2.2.3 Long-Term Care Homes

Long-term care homes are governed by the *Fixing Long-Term Care Act, 2021* and its regulation, O. Reg. 246/22, which set out requirements relating to: residents' rights, care and services; quality; admissions; councils for residents and families; operation of the home, including staffing; funding; licensing; and compliance and enforcement. Homes are also required to comply with the terms and conditions outlined in their respective service accountability agreements with Ontario Health.

Every long-term care home must have staff in the following key management positions:

- The **administrator** is in charge of the home and responsible for its management.
- The **medical director** advises the home on matters relating to medical care and must be a physician.
- The **director of nursing and personal care** supervises and directs the nursing and personal care staff of the home and must be a registered nurse.

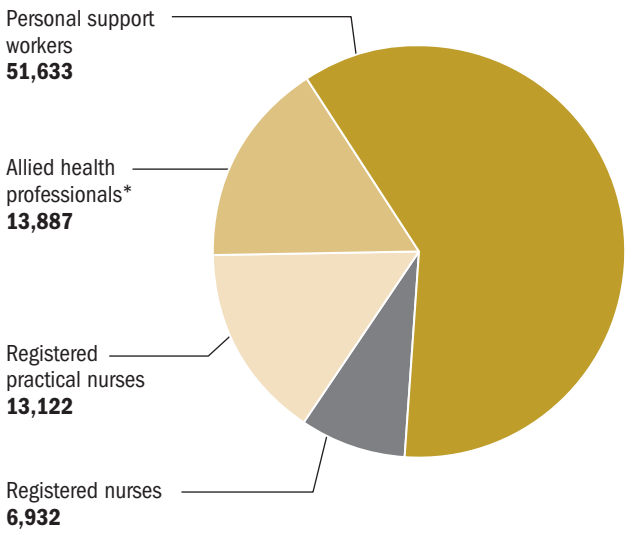
Besides the management roles described above, long-term care homes hire staff to provide direct care and support services to their residents. Specifically:

- **Direct-care staff** typically include registered nurses, registered practical nurses, personal support workers, and allied health professionals (for example, nurse practitioners, physiotherapists, occupational therapists, dieticians and social workers).
- **Support staff** include those who provide other essential services unrelated to care, such as janitorial and meal preparation staff.

To provide 24-hour nursing care, every long-term care home must have either a physician or a registered nurse in the extended class (that is, nurse practitioner) providing after-hours and on-call coverage. Also, each home is required to have at least one registered nurse on duty and present at all times, who must be an employee and a member of the permanent nursing staff of the home, except for circumstances as prescribed in regulation where this requirement may not apply.

As of March 31, 2023, there were over 85,000 direct-care staff in the province's long-term care sector. **Figure 5** shows the total number of direct-care staff by position.

2.3 Funding for Long-Term Care



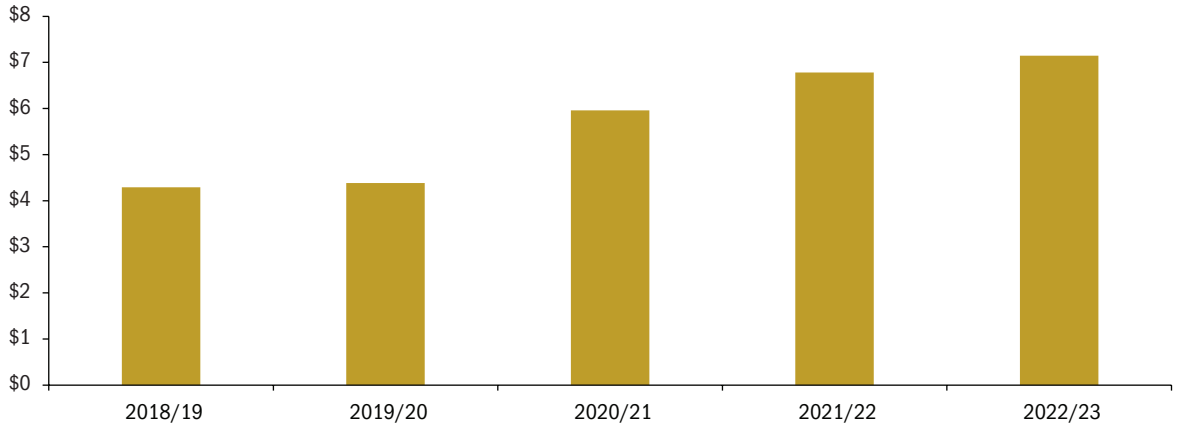
The Province provides funding to long-term care homes to support their ongoing operations. Funding is distributed to homes through the Level-of-Care funding model (see **Section 4.8.1**) and through additional funding streams for specific program objectives (see **Section 4.8.2**). Provincial funding has increased significantly since 2020/21 (see **Figure 6**) to help long-term care homes respond to challenges brought by the COVID-19 pandemic, as well as to implement initiatives to improve the long-term care system (see **Section 2.4**). Residents also contribute a co-payment amount set in regulation. As of July 1, 2023, a resident's co-payment rate ranges from $65.32 per day to $93.32 per day, depending on whether the resident is in basic, semi-private or private accommodation.

2.4 Key Strategic Initiatives

The COVID-19 pandemic has exacerbated and exposed the inadequacies within Ontario's long-term care sector. Various studies and audits have recommended ways to improve the sector (including Ontario's Long-Term Care COVID-19 Commission Report in 2021 and our Office's 2021 audit, *COVID-19 Preparedness and Management: Special Report on Pandemic Readiness and Response in Long-Term Care*). In response, the Ministry of Long-Term Care (Ministry) is implementing various initiatives to fix Ontario's long-term care. These initiatives primarily aim at improving staffing in long-term care, accelerating the development and re-development of long-term care beds, strengthening inspection and enforcement capacity, and broadening the continuum of services to seniors.

Figure 5: Direct-Care Staff in Ontario's Long-Term Care Sector by Position, March 31, 2023

Source of data: Ministry of Long-Term Care



* Examples of allied health professionals include physiotherapists, occupational therapists, nurse practitioners, resident support personnel and activity personnel.

The staffing-related initiatives and impacts are core to the subject matter of this audit. These initiatives, with an estimated investment of up to $4.9 billion by 2024/25, are outlined in the Ministry's 2021-2025 Long-Term Care Staffing Plan, and focus on the following areas:

- increase the hours of direct hands-on care provided by nurses and personal support workers and expand resident access to allied health professionals;
- accelerate and expand education pathways to help increase the supply of new qualified staff;
- build effective and accountable leadership in long-term care homes, support the ongoing development of staff and improve working conditions to help staff retention; and
- continuously monitor and measure the progress of the various staffing plan initiatives.

Figure 6: Provincial Funding Provided for Long-Term Care, 2018/19–2022/23 ($ billion)

Source of data: Ministry of Long-Term Care

3.0 Audit Objective and Scope

Our audit objective was to assess whether long-term care homes, in conjunction with the Ministry of Long-Term Care (Ministry) and Ontario Health, have effective systems and procedures in place to ensure that residents receive quality care and services in a safe environment, by:

- managing, allocating and monitoring staffing resources to provide residents with competent and appropriate care that meets their needs;
- implementing practices and programs to improve services and quality of life for residents; and
- monitoring performance, identifying areas for improvement and implementing action plans on a timely basis.

In planning our work, we identified the audit criteria we would use to address our audit objective (see **Appendix 2**). These criteria were established based on a review of applicable legislation, policies and procedures, internal and external studies, and best practices. Senior management of the Ministry and Ontario Health reviewed and agreed with the suitability of our objective and associated criteria.

We conducted our audit from January 2023 to September 2023, and obtained written representation from the Ministry and Ontario Health senior management that, effective November 20, 2023, they have provided us with all the information they were aware of that could significantly affect the findings or the conclusion of this report.

In arriving at the audit conclusion, we have performed procedures including, but not limited to, the following:

- interviewed key personnel at the Ministry, Ontario Health, and Home and Community Care Support Services;
- interviewed representatives from selected industry associations and advocacy groups (for example, Ontario Long-Term Care Association, AdvantAge Ontario, Ontario Association of Residents' Councils and Ontario Personal Support Workers Association);
- interviewed long-term care residents of selected homes;
- conducted site visits of a sample consisting of 18 long-term homes (see **Appendix 3**), which were selected based on a variety of factors, including:
  - location and area of coverage;
  - home type (for-profit, not-for-profit or municipal);
  - home size (based on number of licensed beds);

  - number of recent complaints and critical incidents; and
  - resident population (for example, percentage of residents with cognitive impairment, with aggressive behaviour, or with greater need for assistance in activities of daily living);
- examined legislation and regulations that govern Ontario's long-term care sector;
- examined memorandums of understanding, accountability agreements and mandate or strategic letters between the Ministry and Ontario Health;
- reviewed documentation from the Ministry, Ontario Health, Home and Community Care Support Services and long-term care homes (for example, policies and procedures, decision documents, performance monitoring or assessment reports, complaints, and financial, staffing and other resident records);
- performed sample testing and data analyses on trends across years (for example, staffing level and ratios, staffing mix, direct-care times, wait times, and performance indicators); and
- performed benchmarking or jurisdictional comparisons where applicable.

We conducted our work and reported on the results of our examination in accordance with the applicable Canadian Standards on Assurance Engagements—Direct Engagements, issued by the Auditing and Assurance Standards Board of the Chartered Professional Accountants of Canada. This included obtaining a reasonable level of assurance.

The Office of the Auditor General of Ontario applies the Canadian Standards on Quality Management and, as a result, maintains a comprehensive quality control system that includes documented policies and procedures with respect to compliance with rules of professional conduct, professional standards and applicable legal and regulatory requirements.

We have complied with the independence and other ethical requirements of the Code of Professional Conduct of the Chartered Professional Accountants of Ontario, which are founded on fundamental principles of integrity, objectivity, professional competence and due care, confidentiality and professional behaviour.

4.0 Detailed Audit Observations

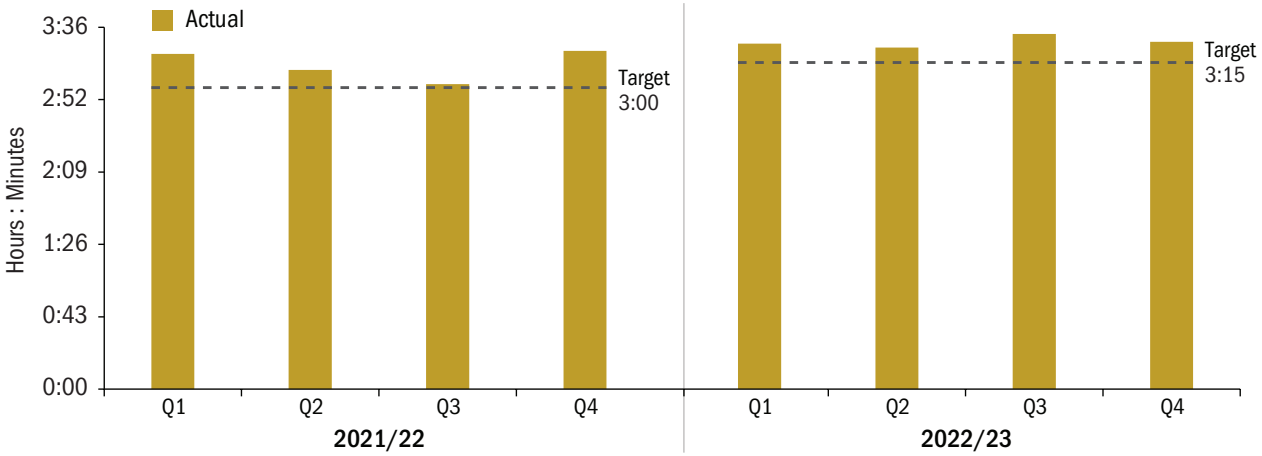
4.1 Homes Lacked Stable and Adequate Staffing to Care for Residents

To provide residents with high-quality care and to keep them safe, it is critical that long-term care homes maintain a stable and adequate level of nursing and personal care staff. However, despite additional funding from the Ministry of Long-Term Care (Ministry) to support staffing increases since 2021/22, we found that long-term care homes are still experiencing difficulty in recruiting and retaining staff to meet residents' needs. Some homes have had to resort to paying hefty prices to hire temporary staff from agencies to fill open shifts.

4.1.1 Direct-Care Time and Staff-to-Resident Ratios for Nursing and Personal Support Staff Varied among Homes

While the quality of care provided to residents could be affected by various factors (for example, the home environment, home management, staff experience), the reliable presence of nursing staff and personal support workers, and a sufficient staff-to-resident ratio, are key elements in maintaining high-quality care.

Hours of Direct Care

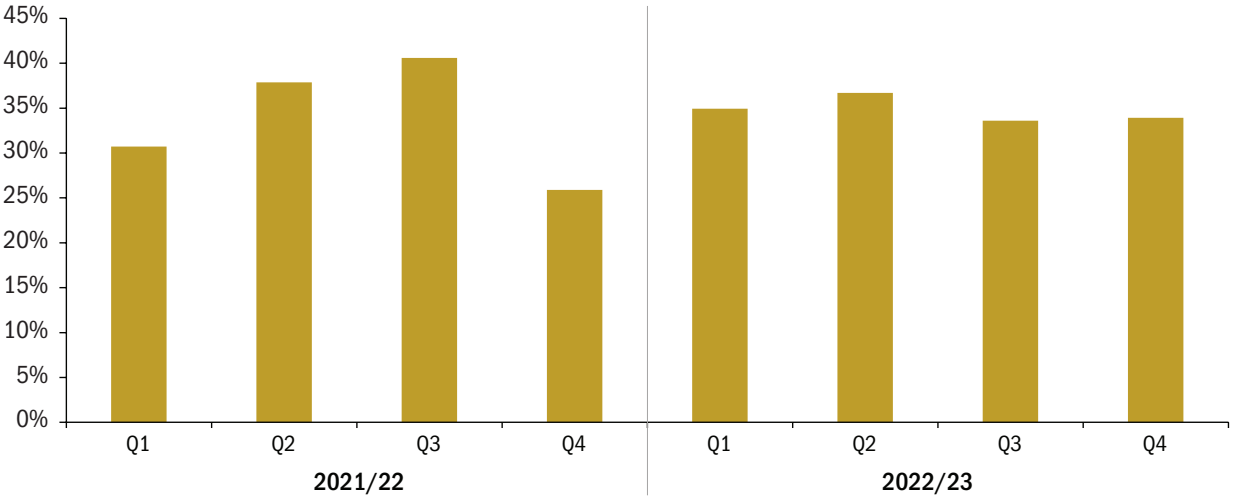


In its 2021-2025 Long-Term Care Staffing Plan, the Ministry recognized the need to have additional staff in homes to provide increased hands-on care to residents. To enable homes to increase their hours of direct care, the Ministry budgeted approximately $3.6 billion to be allocated to homes over four years, from 2021/22 to 2024/25, for the hiring and retention of registered nurses (RNs), registered practical nurses (RPNs) and personal support workers (PSWs). This

is in addition to the base funding allocated to homes (see **Section 4.8.1**). The target, as defined in the *Fixing Long-Term Care Act, 2021* (Act), is for the province to reach a daily average of 4 hours of direct care per resident by 2024/25, with interim targets set for each of the three preceding years (that is, 3 hours by 2021/22; 3 hours 15 minutes by 2022/23; and 3 hours 42 minutes by 2023/24).

In examining staffing data from long-term care homes, we noted that even though homes have collectively achieved the interim provincial targets set for 2021/22 and 2022/23 (see **Figure 7**), direct-care hours varied among homes and at least a quarter of the homes were unable to consistently meet the targets set for the province (see **Figure 8**). However, we found that the Ministry has yet to complete analysis beyond data validation to understand the causes of the

Figure 7: Hours of Direct Care by Nurses and Personal Support Workers (Provincial Average), 2021/22–2022/23



Source of data: Ministry of Long-Term Care

Note: The provincial average is based on the average hours of direct care provided by registered nurses, registered practical nurses and personal support workers, as reported by over 97% of homes that submitted staffing data to the Ministry for the period.

Figure 8: Percentage of Homes Below Target for Direct Care by Nurses and Personal Support Workers, 2021/22–2022/23

Source of data: Ministry of Long-Term Care

Note: The percentage of homes not meeting the provincial target is based on the average hours of direct care provided by registered nurses, registered practical nurses and personal support workers, as reported by over 97% of homes that submitted staffing data to the Ministry for the period.

variations. We also noted that the Ministry does not have insight into how the funds were used to increase direct care (for example, how much was used and by which homes) because the information is unavailable due to delays in reconciling and settling financial information with the homes (refer to **Section 4.8.3**).

The homes and stakeholders we spoke with indicated that recruitment continues to be a challenge in the long-term care sector due to a shortage of health-care workers in Ontario. The strong competition for resources has left many long-term care homes with vacancies. For example, one of the homes we visited indicated that even though the Ministry has provided funding to support the increase in direct care, it had been unable to take full advantage of the additional funding to fill all vacancies due to difficulties in hiring. Homes could have positions vacant for months and receive very few applications to their job postings. Our analysis of staffing data for 2022/23 noted that, despite increases in funding, long-term care homes maintained an average vacancy rate of 11% for RNs (1,047 positions), 12% for RPNs (2,089 positions) and 8% for PSWs (4,870 positions). Also, certain homes have found it harder to attract staff due to factors such as the home's location and compensation (as discussed in **Section 4.1.3**).

The Ministry of Long-Term Care, in collaboration with other ministries (for example, Ministry of Health, Ministry of Colleges and Universities), implemented a number of initiatives in recent years to increase the supply of health human resources. For example, investments have been made to: expand enrolment in nursing and PSW programs at publicly assisted post-secondary education institutions, private career colleges and district school boards; support internationally educated nurses to transition and practise in Ontario; and enhance opportunities for Indigenous learners studying PSW or nursing programs at Indigenous institutes. Some of these initiatives are in an early phase of implementation while staffing shortages remain an issue in long-term care homes. With the commitment to build 30,000 new long-term care beds by 2028, the demand for staffing from the long-term care sector will continue to rise over the next five years.

Staff-to-Resident Ratios

We noted from the homes we visited that the staff-to-resident ratios varied across homes (see **Figure 9**). The variance was particularly noticeable during the evening and overnight shifts, when one home could have one staff person caring for more than twice as many residents, compared to another home. Overnight-shift staff cover a variety of activities, which include performing routine checks, documenting resident condition and care, administering medications, assisting residents with personal care and responding to call bells, among other tasks. Homes with a staff-to-resident ratio as poor as 1:80 for nurses and 1:30 for PSWs could struggle to keep up with the needs of residents during night time, especially in emergencies and where staff need to actively supervise residents who remain awake. For example, one home

Figure 9: Staff-to-Resident Ratios by Shift in Homes We Visited, May–August 2023

Prepared by the Office of the Auditor General of Ontario

	Nurses*		Personal Support Workers	
	Best Ratio	Worst Ratio	Best Ratio	Worst Ratio
Day shift	1:16	1:30	1:6	1:10
Evening shift	1:16	1:40	1:7	1:23
Overnight shift	1:23	1:80	1:13	1:30

Note: Ratios are based on data from the 18 long-term care homes we visited (see **Appendix 3**).

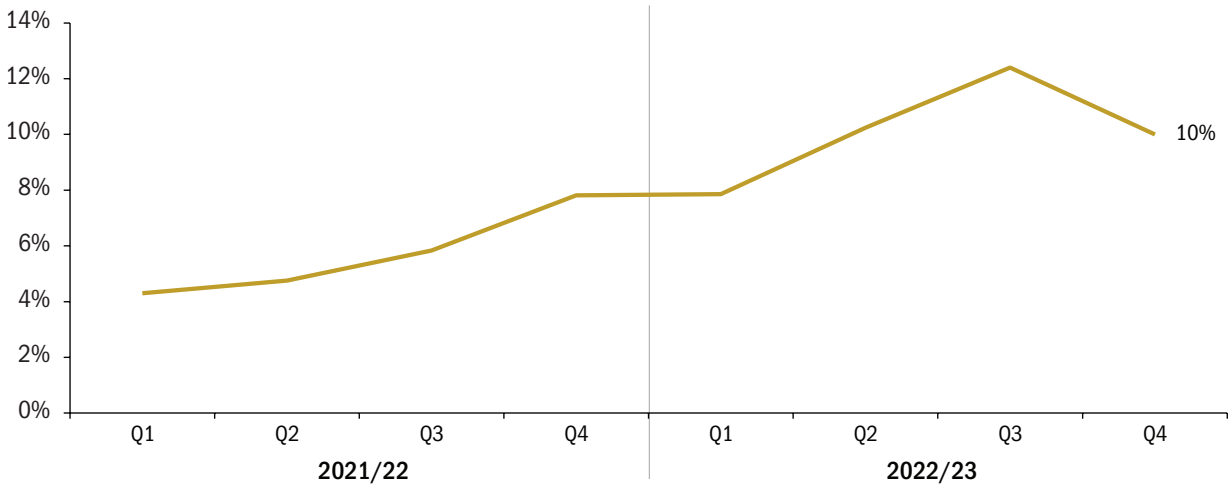
* Nurses include both registered nurses and registered practical nurses.

indicated that, with fewer staff on the overnight shift, it took longer to complete routine floor checks, which could delay the discovery of resident falls.

Staff-to-resident ratios are unregulated and are determined by homes based on their own assessment of needs. While setting a standard staff-to-resident ratio for all homes is difficult or not feasible, in its 2021–25 Long-Term Care Staffing Plan, the Ministry has committed to developing guidance for long-term care homes on staffing models, with staff-to-resident ratios identified as an area for consideration. To date, however, no guidance on staff-to-resident ratios has been issued.

4.1.2 Reliance on Agency Staff Was Costly and Reduced Continuity and Quality of Care

Historically, long-term care homes have hired nursing and personal support staff through agencies to meet temporary needs. However, in recent years, some homes are increasingly relying on agency staff to fill shifts. Section 80 of the *Fixing Long-Term Care Act, 2021* requires long-term care homes to limit the use of temporary, casual or agency staff, in order to provide a stable and consistent workforce and to improve continuity of care to residents. An over-reliance on agency staff could disrupt resident care and add financial pressure on long-term care homes, given the higher hourly rates for these staff. The homes and stakeholders we spoke with also consistently identified the heavy reliance on agency staff as one of the primary concerns in long-term care.



Reliance on Agency Staff Has Been Increasing

As noted in **Section 4.1.1**, homes collectively met the provincial targets for direct-care hours set for 2021/22 and 2022/23 (**Figure 7**). However, our analysis of staffing data revealed that a considerable and increasing percentage of those care hours were provided through contracted staff, including those from agencies, as opposed to regular or permanent staff. As shown in **Figure 10**, these contracted staff accounted for approximately 10% of direct-care hours (over two million hours) provided to residents by nurses and personal support workers (PSWs) in the fourth quarter of 2022/23, an increase from 4% in the first quarter of 2021/22.

We also noted that the reliance on agency staff varied significantly across homes, with agency staff

Figure 10: Percentage of Direct Care Provided by Contracted Staff, 2021/22–2022/23

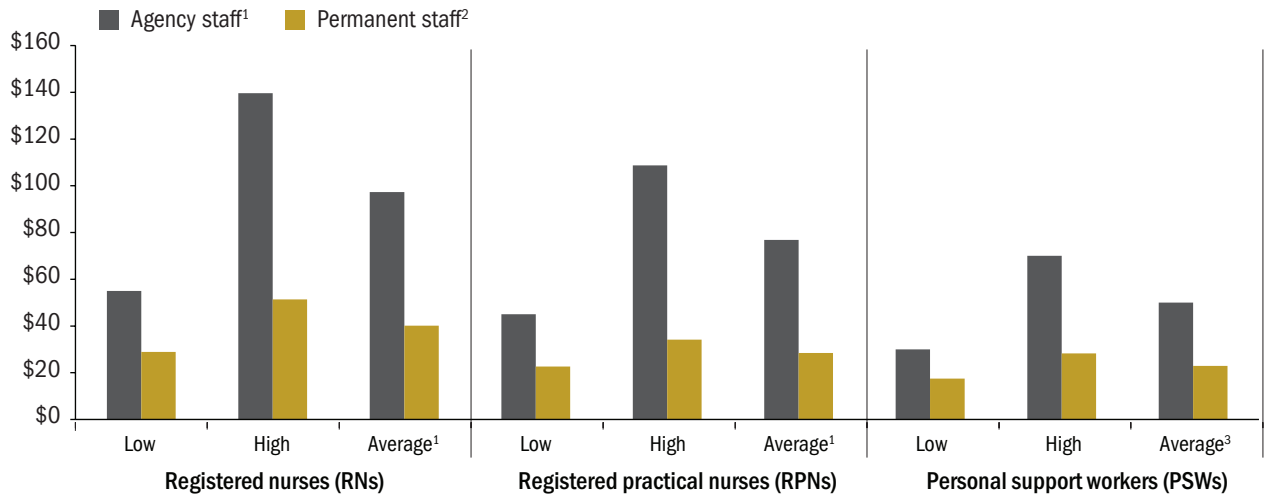
Source of data: Ministry of Long-Term Care

Note: Percentages are based on staffing data submitted to the Ministry from over 97% of homes. Contracted staff include registered nurses, registered practical nurses and personal support workers supplied by agencies, as well as those who were independently contracted by homes. Presumably the majority of the direct-care hours were contributed by agency staff; however, the actual breakdown of hours between agency staff and staff independently contracted by homes is unavailable from the staffing data.

contributing up to 50% of the direct-care hours of nurses and PSWs at some homes at certain times over the two-year period from 2021/22 to 2022/23. In general, we found that homes in rural or remote areas placed the heaviest reliance on agency staff among all areas, likely because rural and remote areas have traditionally faced greater challenges in attracting health-care workers than urban centres.

Agency Staff Cost More

Staffing agencies are private for-profit companies, and there is currently no legislation capping the amount that these agencies can charge their clients, including long-term care homes. With the entire health-care sector experiencing staffing shortages, agencies can charge long-term care homes significant premiums. Their high profit margins enable agencies to offer higher wages to attract nurses and PSWs to pursue agency opportunities, exacerbating the vacancy issue experienced by long-term care homes. An increased use of agency staff also meant that more public funds were going to these private agencies.



Based on staffing data, homes often pay significantly higher rates for agency staff than for permanent employees. **Figure 11** shows the average hourly rates for agency staff, in comparison to the averages for permanent employees in the same position. Specifically, we noted that:

- The average hourly rate for agency staff is significantly higher than the rate for permanent staff. For instance, the average rate for an RN employed through an agency was $97.33/hour, which was 142% higher than the average wage of an RN directly employed by a home ($40.15/hour).
- The hourly rate for agency staff in the same position also varies significantly. For example, the hourly rate for an RN employed through an agency could range from $55/hour to $139.65/hour.

In addition to the higher hourly rates for agency staff, we were informed by the Ontario Long-Term Care Association that some of its members in remote locations also provided agency staff with accommodation and transportation subsidies. This was confirmed through our visits to homes, with three homes in areas

Figure 11: Average Hourly Wages of Agency and Permanent Staff Providing Direct Care

Sources of data: Ministry of Long-Term Care and Treasury Board Secretariat

1. For agency staff, average wages were calculated from data reported by long-term care homes to the Ministry of Long-Term Care for the third quarter ending September 30, 2022, the latest data available.
2. For permanent staff, average wages were calculated from data submitted to the Treasury Board Secretariat for the Workforce Data Transparency Survey as of December 31, 2021, the latest data available. Wages for PSWs do not include the wage enhancement subsidized by the government. The enhancement was introduced in October 2020 during the COVID-19 pandemic.
3. Average wage is an average of the low and high hourly wages reported for the position. It does not represent the actual average wage earned by staff.

outside urban centres indicating they paid agency staff for travel and/or accommodation in the past. One home informed us that it paid $115 per night on average for agency staff accommodation in early 2023. Another home estimated it paid almost $280,000 in 2021 and 2022 for the travel and accommodation of its agency staff.

Continuity of Care Goes Down as Agency Staffing Goes Up

As discussed in **Section 2.1.2**, today's long-term care residents have more complex needs than residents in the past. It is important for homes to maintain a stable workforce that fosters intimate and trusting relationships between residents and staff, so that staff can better understand the needs and preferences of the residents they care for and provide better continuity of care. Continuity of care improves resident care and experiences, especially for seniors with dementia who rely on familiar faces for reassurance.

Agency staff, by their temporary nature, are unable to provide the same continuity of care to residents that permanent staff can provide. This view is shared among many homes we visited. Homes indicated that agency staff were at times unable to attend to residents' needs in a timely manner due to a lack of familiarity with the residents and with policies. For example, the agency staff would have to spend additional time understanding a resident's ability and dietary preferences, hence slowing down the workflow and upsetting the resident.

The agencies also do not always provide staff that are of high quality or good fit with the home. A couple of homes noted that mistakes like medication errors tended to happen more frequently among agency staff, and there were instances where the home would have to release an agency staff person due to performance or attitude issues. Agency staff who return to the same home on multiple occasions were generally better acquainted with the home's residents and policies and became more accountable to the home. However, while homes could ask for the same staff from the agencies, fulfilling the requests depended on availability.

The Ministry's Long-Term Care Technical Advisory Table is currently examining the agency staff issue within the sector to inform future strategies. No specific planned actions and target completion dates had been decided at the time of our audit.

4.1.3 Pay Inequity Contributed to High Staff Vacancies and Turnovers

On July 30, 2020, the Ministry released a staffing study to help inform a comprehensive staffing strategy for long-term care. The study used compensation data from 2018/19 and found that wages of registered nurses (RNs), registered practical nurses (RPNs) and personal support workers (PSWs) varied across long-term care homes, depending on home type. In general, within the long-term care sector, municipal homes paid the highest wages, followed by not-for-profit homes and then for-profit homes. The same trend showed in the more recent compensation data collected by the Treasury Board Secretariat through its Workforce Data Transparency Survey. Our review of the data found a notable wage disparity among municipal, for-profit and not-for-profit homes as of December 31, 2021 (see **Figure 12**).

Wage disparity could cause unnecessary staff movement, resulting in certain long-term care homes having higher turnover and staff vacancies, which in turn impact the level and continuity of care provided to residents. Our analysis of vacancy data from homes revealed that for-profit homes and not-for-profit homes have consistently higher vacancy rates than municipal homes for all nursing and personal support positions (see **Figure 13**).

Besides competition within the long-term care sector, homes also face competition for staffing resources from other health-care settings, such as hospitals. As identified in the Ministry's 2020 Staffing Study, hospitals on average offer better pay than long-term care homes. For example, the average hourly rate for registered nurses was 6% higher in hospitals ($40.47) than in long-term care ($38.05); and the average hourly rate for registered practical nurses was 11% higher in

Figure 12: Hourly Wages for Permanent Nurses and PSWs by Home Type, December 31, 2021 ($/hour)

Source of data: Treasury Board Secretariat

	Registered Nurses (RNs)		Registered Practical Nurses (RPNs)		Personal Support Workers (PSWs)[1]	
Type of Home	**Hourly Range**	**Average[2]**	**Hourly Range**	**Average[2]**	**Hourly Range**	**Average[2]**
All homes	28.94–51.37	40.15	22.70–34.18	28.44	17.54–28.26	22.90
For-profit	28.94–51.13	40.03	22.70–32.88	27.79	17.54–28.26	22.90
Not-for-profit	29.58–51.16	40.37	22.84–32.89	27.87	17.90–27.46	22.68
Municipal	31.14–51.37	41.26	24.94–34.18	29.56	19.50–28.02	23.76

Note: Wages are based on data reported to the Treasury Board Secretariat by long-term care homes in response to the Workforce Data Transparency Survey. The response rate to the survey was approximately 43% among for-profit homes, 34% for not-for-profit homes and 33% for municipal homes.

1. Wages for PSWs do not include the wage enhancement subsidized by the government. The enhancement was introduced in October 2020 during the COVID-19 pandemic. In April 2022, the government made this wage enhancement permanent for PSWs.
2. Average wage is an average of the low and high amounts in the Hourly Range. It does not represent the actual average wage earned by staff.

Figure 13: Vacancy Rates for Nurses and PSWs by Home Type, Fourth Quarter 2022/23 (%)

Source of data: Ministry of Long-Term Care

Note: Vacancy rates show the percentage of jobs that have not been filled for 90 days or more. They do not include short-term vacancies, sick leaves or other forms of temporary absence. The percentages are based on staffing data reported by homes to the Ministry of Long-term Care. Over 97% of homes submitted data for the period.

hospitals ($29.99) than in long-term care ($27.02). This disparity puts homes at a disadvantage in staff recruitment and retention. We noted high turnover and vacancy rates in many homes we visited. For example, one of the large homes had almost 30 vacant positions (excluding temporary positions) in its direct-care staff at the time we visited. In another medium-sized home, 20 nurses and PSWs resigned within the first six months of 2023.

Over the past few years, the Province has not taken a systemic approach to address compensation across health-care settings, considering wage parity to reduce compensation-related labour shortages. The enactment of the *Protecting a Sustainable Public Sector for Future Generations Act, 2019* (Bill 124) on November 8, 2019, did not help to reduce the wage gap across long-term care homes, and may have exacerbated the issue by limiting wage increases at not-for-profit homes to a maximum of 1% annually. However, Bill 124 was overturned by the Ontario Superior Court on November 29, 2022.

The Ministry informed us that compensation harmonization is one of the options that will potentially

be considered in the broader Health Human Resources Strategy that the Ministry of Health is currently developing.

RECOMMENDATION 1

To provide residents with high-quality care and to keep them safe, we recommend that the Ministry of Long-Term Care:

- analyze hours of direct care and staffing mix (that is, permanent staff versus temporary agency staff) at the home level to identify homes with staffing challenges, work with those homes on strategies to address their recruitment and retention challenges, and monitor the outcomes of the strategies;
- monitor staff-to-resident ratios, especially for periods that typically have staffing shortages (such as overnight shifts, weekends and holidays);
- complete the review of the use of agency staff in long-term care and implement strategies to reduce usage and prevent price gouging; and
- collaborate with the Ministry of Health in developing and implementing the long-term Health Human Resources Strategy to address staffing supply and compensation disparity issues across the sector.

MINISTRY RESPONSE

The Ministry of Long-Term Care (Ministry) acknowledges the Auditor General's recommendation to analyze hours of direct care and staffing mix, monitor staff-to-resident ratios, complete the review of the use of agency staff, and collaborate with the Ministry of Health in developing and implementing the Health Human Resources Strategy.

The Ministry is committed to increasing direct hours of care for residents in long-term care in line with the direct-hours-of-care targets under the *Fixing Long-Term Care Act, 2021* (Act), through $4.9 billion in targeted funding dedicated to supporting the achievement of the direct-hours-of-care targets, and other programs aimed at increasing the supply of health human resources.

The Ministry is actively undertaking home and regional-level direct-hours-of-care analysis and will continue with that effort to better understand where there are opportunities to increase direct-hours-of-care performance. To address recruitment and retention, the Ministry will also continue to implement and monitor the uptake of programs that aim at supporting recruitment and retention, such as the personal support workers' permanent wage enhancement, Supporting Professional Growth Fund, Hiring More Nurse Practitioners program, bridging and laddering programs, clinical placements and education/training programs.

As part of work to develop and amend regulations under the Act, the Ministry has made it easier for homes to hire from a broader pool of qualified staff while ensuring safety for residents. Long-term care homes are best positioned to determine the appropriate staffing complement based on their own knowledge of their residents' needs, and the Ministry will continue to monitor staffing mix ratios to inform ongoing supports to the sector.

The Ministry is reviewing the use of agency staff in long-term care to understand regional and home-level trends and is also considering new programs to support human resource capacity, increase full-time work and reduce reliance on agency staff. The Ministry will continue to work in partnership with the Ministry of Health to plan for future staffing needs across the long-term care sector.

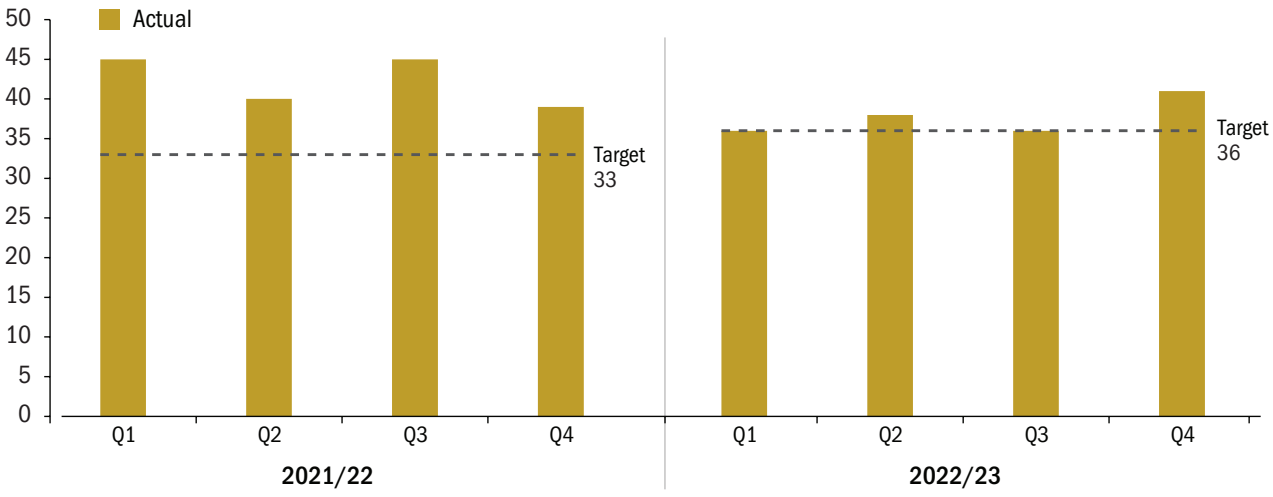
4.2 Not All Residents Had Access to Key Allied Health Professionals to Optimize Quality of Life

In addition to 24/7 nursing and personal care, residents at long-term care homes also need access to a

broad range of services from health professionals, such as nurse practitioners, physiotherapists, occupational therapists, social workers, dieticians, activity assistants and others, to help ensure their physical, emotional, social and spiritual well-being. Collectively referred to as allied health professionals (AHPs), these personnel provide care through a variety of programs that are essential in helping residents to maintain and improve their quality of life.

4.2.1 Availability of Allied Health Professionals Varied among Homes

The *Fixing Long-Term Care Act, 2021* establishes a 36-minute target (per resident, per day) for direct care provided by AHPs by March 31, 2023, with an interim target of 33 minutes by March 31, 2022. The 36-minute target was based on a 20% increase to the level of direct-care time identified in 2018. In order to help homes reach the target and sustain care at that level, the Ministry of Long-Term Care (Ministry) budgeted approximately $430 million on top of annual base funding to be allocated to homes over four years, 2021/22–24/25.

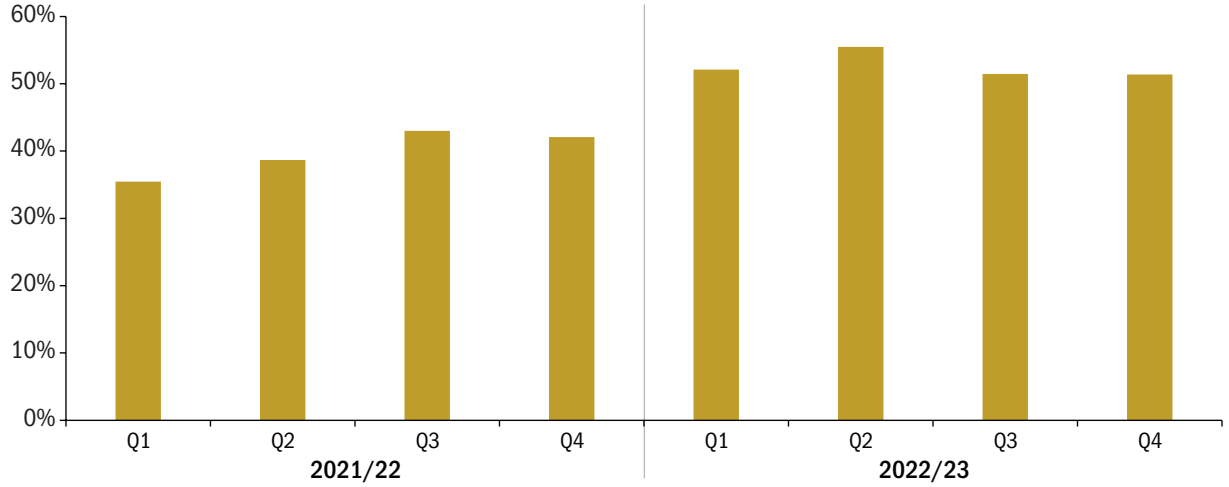


The legislated care target for AHPs is set at the provincial level—that is, it is measured as the average for all homes rather than at the individual home-level. In our analysis of quarterly data on direct-care hours from 2021/22 to 2022/23, we noted that while the annual targets were met at the provincial level (see **Figure 14**), about half of the homes were unable to individually meet this target by the end of 2022/23 (see **Figure 15**). This is similar to what we observed in the direct-care hours for nursing and personal support (refer to **Section 4.1.1**). We found that the Ministry has not investigated direct-care hour variations across long-term care homes to identify under-performing homes with low direct-care time by AHPs, and to understand variations among homes, in order to determine whether residents across the province received equitable services.

4.2.2 Support Was Missing from Key Allied Health Professionals

Our further examination of staffing data also revealed that some homes have consistently failed to provide their residents with services from certain AHPs, as

Figure 14: Minutes of Direct Care by Allied Health Professionals (Provincial Average), 2021/22–2022/23



Source of data: Ministry of Long-Term Care

Note: The provincial average is based on staffing data submitted to the Ministry of Long-Term Care from over 97% of homes.

Figure 15: Percentage of Homes Below Target for Direct Care by Allied Health Professionals, 2021/22–2022/23

Source of data: Ministry of Long-Term Care

Note: The percentage of homes not meeting the provincial target is based on staffing data submitted to the Ministry from over 97% of homes.

Figure 16: Homes with No Direct-Care Time Reported for Key Allied Health Professionals, 2022/23

Source of data: Ministry of Long-Term Care

Allied Health Professionals (AHPs)	# of Homes	% of Homes
No nurse practitioner	456	74
No religious or spiritual support staff	447	72
No occupational therapist	418	68
No restorative aide (rehabilitation or therapy aide)	331	54
No social worker or social service worker	239	39
No physiotherapist, physiotherapy aide or physiotherapy assistant	74	12
No activity director or activity assistant	14	2

Note: Results are based on staffing data submitted to the Ministry from over 97% of homes.

indicated by the zero hours of care reported for these professions throughout 2022/23 (see **Figure 16**). Homes have the flexibility to decide the mix of AHPs and their hours, based on the specific and differing needs of residents. However, by having zero or minimal involvement from certain AHPs, homes risk not providing their residents with the comprehensive care they need. This is especially true for residents receiving palliative care. Palliative care in long-term care focuses on improving the quality of life for residents and their families, managing residents' symptoms, and providing psychosocial support and end-of-life care where appropriate. This requires the participation of a multidisciplinary team of care providers—including AHPs—to provide not just the necessary medical interventions, but also psychological, social, emotional and spiritual support.

Nurse Practitioners

As shown in **Figure 16**, 74% of all homes did not have a nurse practitioner in 2022/23. Nurse practitioners can assess, diagnose and treat residents (including prescribing most medications and introducing other interventions); mentor and coach the home's clinical

team; and assist with resident care planning. Consistent with the staffing data in 2022/23, we found that about half of the homes we visited did not have an in-house nurse practitioner at the time of our visit.

We found that homes that do not have in-house nurse practitioners typically have some form of access to these professionals from the community. For example, nurse practitioners from programs like the Nurse-Led Outreach Team would support homes by reviewing resident care plans and providing education to staff on specialized areas, such as palliative care. However, the extent of support varies: some homes access these external resources on an as-needed basis; others receive scheduled visits at differing frequencies, ranging from weekly to monthly. While homes acknowledged the external support, they indicated that having in-house nurse practitioners to provide timely and continuous monitoring of resident conditions, as well as staff education, would be more beneficial. Homes indicated that external nurse practitioners were not always available to assist on urgent matters.

The importance of the nurse practitioner's role in long-term care was highlighted in past reports, such as the *Long-Term Care COVID-19 Commission Report*. In its 2020 staffing study, the Long-Term Care Staffing Study Advisory Group also recommended that the Ministry consider opportunities to further expand the use of nurse practitioners. In October 2022, the Province announced an investment of $57.6 million over three years (2022/23–24/25) in a program to recruit and retain up to 225 additional nurse practitioners in the long-term care sector. The Ministry informed us that 66 full-time-equivalent nurse practitioners had been hired and retained through this program as of August 1, 2023, and confirmed that funding for nurse practitioners hired under this program will continue beyond the original funding end-date of March 31, 2025.

Therapists

Regulation requires every home to provide therapy services to residents, including on-site physiotherapy and occupational therapy. Despite the requirement, our analysis of 2022/23 data noted that 68% did not have an occupational therapist, 54% did not have a restorative aide and 12% did not have a physiotherapist or physiotherapy aide/assistant (see **Figure 16**). Some of these homes did not have any of these three AHPs to support the rehabilitation of residents at all.

Falls are a common cause of injury and emergency department admissions among long-term care residents. According to Ontario Health's system performance reporting, the percentage of long-term care residents who fell increased from 13.8% in 2012/13 to 16.2% in 2021/22, exceeding the provincial benchmark of 9%. Better access to physiotherapy and occupational therapy could potentially improve the trend, as research suggests that effective interventions from these therapies can help prevent falls in long-term care homes and can deliver other benefits to residents, such as improved physical performance and pain reduction.

Social Workers and Spiritual Support

Spiritual well-being and physical health are both important to quality of life. However, our analysis of 2022/23 data indicated that 39% of homes did not have a social worker or social service worker, and 72% of homes did not have religious or spiritual support staff (see **Figure 16**).

While some residents shared with us their positive experiences with the social workers, others indicated that they have never met one in their homes. For example, we noted the following from our visits to homes:

- Five homes did not have a social worker on staff at the time of our visit.
- Six homes had a vacancy in the social work department at the time of our visit. One of them had the position vacant for three months, during which the one remaining social service worker was overseeing the needs of over 170 residents. Another home had two full-time social workers remaining, overseeing the needs of 249 residents.
- One home had only one full-time position budgeted to meet the needs of 160 residents.

The homes we visited informed us that, as well as providing direct care to residents and communicating with their families, their social workers (or social

service workers) also perform a wide variety of tasks, such as reviewing applications, conducting home tours, putting together tour packages, and other administrative tasks as needs arise. One social worker we interviewed estimated that the amount of time they spent on tasks not involving direct care and communication with residents was approximately 55–60%.

In December 2022, the Province announced that it would be providing close to $20 million over three years (2022/23–24/25) to increase social support services for long-term care residents. The funding aims to support the provision of services, mainly by registered social workers and social service workers, toward a best-practice minimum of 30 minutes of care per resident every four weeks. Comparing the fourth quarter of 2022/23 to the previous year, long-term care homes reported an increase of 51 social workers and social service workers in total, which resulted in an increase of 5.8 minutes of direct care provided by these professionals every four weeks. As of September 2023, the Ministry does not yet have approval for funding to sustain this program beyond 2024/25.

Activity Directors or Activity Assistants

While regulation requires every home to have a designated lead for the recreational and social activities program, we noted that about 2% of homes still did not have an activity director or activity assistant in 2022/23 (see **Figure 16**). We also noted that the homes we visited differed in their recreation staff-to-resident ratio. Some homes had ratios as poor as 1:35 (1 staff person for 35 residents), which was three or more times worse than other homes with a ratio of 1:10 or better.

Various studies have stressed the importance of meaningful recreational activities for residents' quality of life and well-being. For example, a study published by the National Institutes of Health in March 2015 noted that having a choice of meaningful activities is important for improving residents' sense of independence and positive self-image. This study also mentioned past research, which found that nursing home residents with Alzheimer's disease demonstrated less agitated behaviours when activities were tailored to their skill level and interests.

RECOMMENDATION 2

To provide residents of long-term care homes with sufficient and timely access to allied health professionals (AHPs), we recommend that the Ministry of Long-Term Care:

- analyze hours of direct care by AHPs at the home level to identify homes with challenges meeting the target, work with those homes on strategies to improve their care hours, and monitor the outcomes of the strategies;
- monitor staff-to-resident ratios and determine whether certain key AHP services should be provided in all homes; and
- project future needs for different AHP services in long-term care and work with homes to develop plans to address potential shortages.

MINISTRY RESPONSE

The Ministry of Long-Term Care (Ministry) acknowledges the Auditor General's recommendation to analyze hours of direct care by AHPs, monitor staff-to-resident ratios, and project future needs for different AHP services.

The Ministry recognizes that allied health professionals (AHPs) provide a critical component of care to long-term care residents. The Ministry implemented targets in legislation for direct care by AHPs and is committed to supporting increases in direct care for residents in long-term care homes, not only through staffing funding but also funding for the Resident Health and Wellbeing Program. This program supports hiring more AHPs (for example, social workers and social service workers) into long-term care, and contributes to the AHP direct-hours-of-care target, and by extension to enhanced resident well-being. The Ministry is actively undertaking home and regional-level direct-hours-of-care analysis and will continue with that effort to better understand

where there are opportunities to increase direct-hours-of-care performance.

While there are some AHP services currently named in regulation (for example, physiotherapy), long-term care homes are best positioned to determine the appropriate staffing complement based on their own knowledge of the needs of the residents living in the home; the Ministry will continue to monitor staff-to-resident ratios to inform ongoing supports to the sector. The Ministry is committed to working with the sector to ensure the funding and regulatory framework for staffing enables long-term care homes to support meeting resident care needs and to address potential shortages. As part of work to develop and amend regulations under the *Fixing Long-Term Care Act, 2021*, the Ministry has made it easier for homes to hire from a broader pool of qualified staff while ensuring safety for residents. The Ministry is also involved in work to clarify and codify the important role that resident support personnel play as AHPs in homes.

4.3 Personal Support Workers Lack Regulation and Standardized Education

As noted in **Section 2.2.3** and **Figure 5**, personal support workers (PSWs) constitute the largest workforce in long-term care homes, making up approximately 60% of the homes' 85,000 direct-care staff. Although they carry out most of the day-to-day care, we found insufficient regulation of the PSW profession and inconsistencies in PSW education to help ensure the quality of care.

4.3.1 PSWs Are Unregulated with No Accountability Mechanisms for Standard of Care

Unlike most health-care professions (for example, physicians and nurses), PSWs are not regulated in Ontario or the rest of Canada; they are not licensed and their actions are not governed by professional practice standards or a code of ethics or code of conduct. There is no regulatory body for long-term care homes to report professional misconduct, incompetence, incapacity or harmful behaviour of PSWs, or for members of the public to make a complaint about a PSW, to ensure the consistent investigation and enforcement of disciplinary measures in all cases.

Homes we visited have terminated PSWs for misconduct or incompetence in the past. For example, several PSWs were terminated by a home when these individuals were found to be physically abusive to a nonverbal resident on multiple occasions by providing care in rough and undignified ways (such as pushing, pulling and grabbing) and unsafely repositioning the resident. Another home terminated a PSW for the individual's aggressive and emotionally abusive behaviour toward a resident and another staff member. In the absence of a regulatory body, it is easier for PSWs who display these problematic behaviours to move from job to job, and difficult for their future employers to know of the risks.

In June 2021, the *Health and Supportive Care Providers Oversight Authority Act, 2021* received royal assent, which led to the creation of the Health and Supportive Care Providers Oversight Authority (Authority) to serve as a new regulatory body providing oversight of PSWs. To date, however, the Authority has not performed any oversight activities because all of the legislation that enables the Authority to fulfill its mandate is not yet in force. But even if the legislation were fully enforced, the effectiveness of the regulatory regime remains uncertain because the legislation does not require PSWs to register with the Authority.

PSWs play a vital role in long-term care homes; it is important to have appropriate accountability mechanisms to ensure they deliver safe, competent, ethical and high-quality care to residents. Accountability mechanisms would also benefit the PSW profession as a whole by disciplining individuals who discredit the profession and removing them from the sector if necessary.

4.3.2 Some PSW Education Programs Did Not Provide Adequate On-the-Job Training

As stated in Ontario Regulation 246/22 (Regulation) under the *Fixing Long-Term Care Act, 2021* (Act), anyone who provides personal support services in long-term care homes must successfully complete a PSW program that meets the standards set by the Ministry of Colleges and Universities (MCU) and has a minimum duration of 600 hours. Neither the MCU's PSW program standard nor the Regulation has prescribed the delivery method or how program hours should be divided between class time and practical experience. In our review, we noted a high degree of variability among programs—both in the practical experience they provide and in the duration of the programs.

The issue of inconsistencies in PSW program offerings was identified in our Office's 2021 audit, *COVID-19 Preparedness and Management: Special Report on Pandemic Readiness and Response in Long-Term Care*. This special report noted that programs offered at community colleges ran for about 24–30 weeks and included 140–438 hours of practical experience; whereas programs offered at private career colleges ran for about 29–52 weeks and included approximately 350–400 hours of practical experience. Although the Act and the PSW program standard have been updated since the 2021 audit, we noted from our visits to homes that inadequate on-the-job training remains a concern. For example:

- One home has PSWs who studied predominantly through online courses. The PSWs exhibited poor communication skills when having difficult conversations with residents. More practical training would have better equipped them for the role.
- Another home indicated that the PSW educational curriculum does not offer sufficient training in soft skills, such as teamwork and customer service, which are essential for the role. More on-the-job training would allow PSWs to gain exposure to these skills before they start working in homes.

Homes we visited also informed us that more on-the-job training could have a positive impact on the preparedness of PSW graduates from the different programs and, consequently, on the quality of care that residents receive.

Long-term care homes are accountable for ensuring that the credentials of all their staff are meeting the legislated requirements. However, without a pubic registry of qualified PSWs or a published list of accredited PSW programs that meet MCU standards, it is difficult for homes to validate a PSW's credentials, given the variation in PSW programs offered by different institutions.

RECOMMENDATION 3

To help ensure that personal support workers (PSWs) are appropriately trained, professional, and accountable to the public, we recommend that the Ministry of Long-Term Care:

- fully launch the Health and Supportive Care Providers Oversight Authority and strengthen its oversight by requiring mandatory registration for PSWs who provide health or supportive care services in long-term care homes; and
- work with the Ministry of Colleges and Universities to review and amend the current education standards to make the proportion of in-class versus practical experience more consistent across PSW certificate programs offered by different institutions.

MINISTRY RESPONSE

The Ministry of Long-Term Care (Ministry) acknowledges the Auditor General's recommendation to fully launch the Health and Supportive Care Providers Oversight Authority and strengthen its oversight, and to work with the Ministry of Colleges and Universities to review and amend the current education standards.

The Ministry continues to work with the Ministry of Health as they lead the implementation of the new Health and Supportive Care Providers

Oversight Authority. Working in collaboration with the Ministry of Health, the Ministry will seek stakeholder feedback regarding the proposed education, training, and experience requirements to register with the new Oversight Authority. The Ministry may seek approval to amend its regulations, as needed, to ensure consistency with the Oversight Authority requirements and clarity for the sector. Long-term care homes will continue to be responsible for ensuring those working as PSWs meet the criteria outlined in regulation.

The Ministry acknowledges that consistency of educational requirements is vitally important to ensure personal support worker (PSW) graduates are appropriately prepared to work in long-term care. The Ministry will work with the Ministry of Colleges and Universities (MCU) as they amend the program standard in response to educational requirements developed by the Health and Supportive Care Providers Oversight Authority during MCU's future reviews.

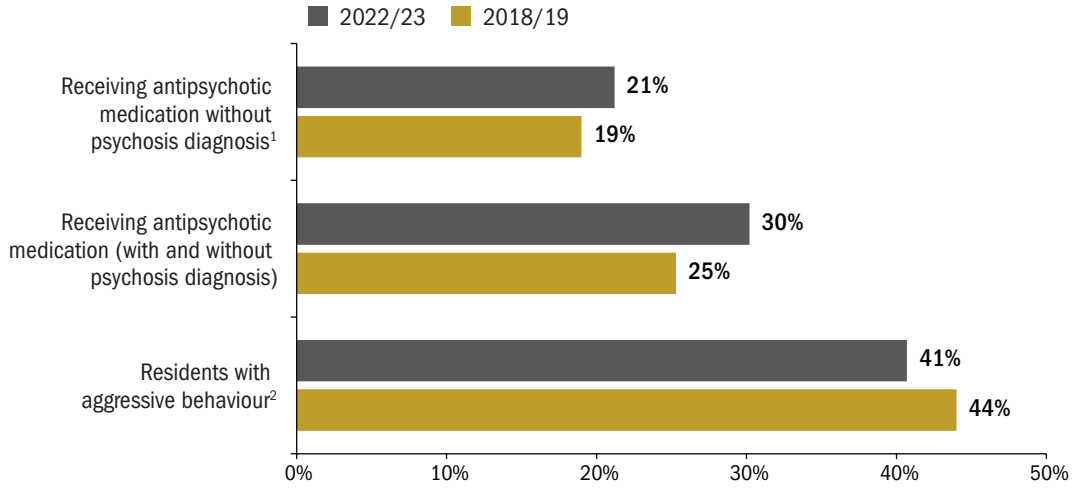
4.4 Homes Struggled to Cope with Complex Behavioural Issues

Residents have varying levels of cognitive abilities. About 63% of residents have a dementia diagnosis (see **Section 2.1.2**), meaning most have at least some loss of cognitive functioning and loss of behavioural abilities, which could interfere with daily life and activities. A considerable number of residents (12%) also have a mental health history of psychiatric illness or developmental disability.

4.4.1 Responsive or Aggressive Behaviours Remain Prevalent in Long-Term Care Homes

Responsive behaviours are actions, words and gestures presented by people in response to something negative, frustrating or confusing in their social and physical environment. These behaviours are common among people living with dementia, complex mental illness, substance use and/or other neurological disorders. Examples of responsive behaviours include, but are not limited to, hitting, pushing, throwing things, biting, hurting oneself or others, pacing/wandering, general restlessness, screaming, sexually expressive behaviours and repetitive sentences or questions.

Responsive behaviours are prevalent in long-term care homes, given the high percentage of residents with dementia and mental disorders. A 2021 paper published by the Journal of Long-Term Care studied residents from 1,319 long-term care facilities across Canada, spanning a 16-year period from 2002 to 2018, and found that the rates of severe aggressive behaviours were more than three times higher among residents with dementia and/or mental disorder compared to those without either diagnosis.



Based on our review of data from the Canadian Institute for Health Information (CIHI), the percentage of long-term care home residents with aggressive behaviours has fluctuated slightly over the last five years (2018/19–22/23) but remained high, ranging from 41% to 44% (see **Figure 17**).

The regulation requires every long-term care home to have strategies and plans developed to meet the needs of residents with responsive behaviours. However, many homes we visited indicated that managing responsive behaviours continued to be a challenge due to limited access to resources and supports (see **Section 4.4.3**) and increasing mental health issues (see **Section 4.6.2)**, and that these behaviours sometimes threatened the safety or well-being of others. For example:

- A resident's responsive behaviours escalated, resulting in a Code White (a code for violent behaviour) when staff determined that the behaviours were becoming an endangerment to the individual and others and causing destruction of property. Emergency services and police were called on scene. Following the incident, the resident continued to exhibit aggressive behaviours, both verbally and physically.
- A resident, who had an increase in physical expressions and was verbally abusive (including

Figure 17: Percentage of Residents with Aggressive Behaviour and Residents Receiving Antipsychotics, With or Without a Diagnosis of Psychosis, 2018/19 and 2022/23

Source of data: Canadian Institute for Health Information

1. The percentage excludes residents with a diagnosis of schizophrenia or Huntington's chorea, experiencing delusions or hallucinations, with an end-stage disease, or receiving hospice care.
2. The percentage includes all residents with an Aggressive Behaviour Scale score higher than zero (zero indicates no aggressive behaviour).

expressing threats of violence), attacked another resident twice within a week, resulting in the other resident becoming fearful of leaving the room. As a result of these incidents, the home had tried to transfer the resident to an alternative community-based facility. However, the transfer process was challenging, as the resident refused to complete an assessment for the transfer.

- A resident sexually harassed other female residents. The home referred the resident to a hospital's inpatient adult mental health program, but the referral was declined as the resident was not meeting the program's criteria for admission. The program acknowledged the home's difficult situation, but indicated that it could not take urgent acute cases directly from the community—including long-term care homes. The program would only accept patients transferred from a designated psychiatric hospital if they were deemed treatment resistant.
- A resident yelled at and hit staff and refused to let anyone touch her, making it difficult for staff to provide personal care assistance, such as changing incontinence products.

4.4.2 Antipsychotic Drug Use Raised a Potential Quality-of-Care Concern

Antipsychotic drugs are used to manage symptoms of psychosis, but are also prescribed for residents to manage severe behavioural and psychological symptoms of dementia. As noted in the 2021 study published by the Journal of Long-term Care (see **Section 4.4.1**), the use of psychotropic drugs (including antipsychotics) may have contributed to residents being asleep for most of the day, keeping their activity and social engagement levels low. Other studies also showed the side effects and dangers of using antipsychotic drugs, which include an increased risk of falls and fractures in older adults.

As shown in **Figure 17**, we noted that use of antipsychotic drugs in long-term care homes has increased over the last five years (2018/19–22/23). Specifically, in 2022/23, 30% of residents were on antipsychotics (up from 25% in 2018/19) and 21% of residents were on antipsychotics without a diagnosis of psychosis (up from 19% in 2018/19), which still slightly exceeded the provincial benchmark of 19% set for these cases. This raises a concern as to whether these drugs are sometimes used inappropriately, especially when the percentage of residents with aggressive behaviours has

declined over the same period (from 44% in 2018/19 to 41% in 2022/23).

Our observation is in line with a study published in Health Services Insights in May 2023, which also raised the question of whether antipsychotics were used pre-emptively in anticipation of challenges during outbreaks and staffing shortages. The study showed that the percentage of residents on antipsychotics without a diagnosis of psychosis also increased during the COVID-19 pandemic in other provinces, including Alberta, British Columbia and Manitoba.

4.4.3 Homes Had Limited Access to Behavioural Support Resources

The ability of long-term care homes to prepare and care for residents with responsive behaviours could be affected by a number of factors, such as the level of staffing, the adequacy of staff training and the availability of dedicated resources for behaviour supports.

Low Staffing Level

As discussed in **Section 4.1.1**, staff-to-resident ratios are not regulated and vary across homes. A home we visited estimated that, with a 1:8 staff-to-resident ratio in the morning, a personal support worker (PSW) could only spend approximately eight to 10 minutes on average to get each resident ready for breakfast within a two-hour window, excluding the time spent on charting and documenting the care provided. This means that within eight to 10 minutes, the staff would have to wake the resident and help the resident use the bathroom (or change their diaper), brush their teeth and get dressed.

Given the current cognitive and physical state of residents, some residents would benefit from or need more one-to-one care. It can be difficult to properly care for residents within the time available, let alone deal with a sensitive population of residents who have more severe behavioural issues. This becomes even more challenging for homes with poorer staff-to-resident ratios, which we observed to be as severe as 1:10 in the morning shift in the homes we visited. For example, a home indicated that it could take up to three staff to provide care for one of its residents, as the resident would resist and react aggressively to care. This had left staff members with less time to attend to the needs of other residents.

Lack of Staff Training/Education

Homes we visited agreed that more in-person, practical training is beneficial because work performed in long-term care homes can be very hands on, which makes in-person training more effective. However, a widespread shortage of resources in the sector (see **Section 4.1.1**) has prohibited homes from providing more in-person training. Homes advised us that it was challenging to find the backfill support necessary to free up staff on the floor to attend training. Of the homes we visited, all have provided some level of training, but the training was mostly provided online, with at least two homes offering only online training.

With over 40% of residents exhibiting aggressive behaviours, it is important that staff at long-term care homes are sufficiently trained to identify behavioural triggers and to manage such behaviours, including ways to communicate with residents. We identified some examples from homes we visited, where resident care could have been enhanced with more training:

- A staff member declared a Code White (a code for violent behaviour) immediately when a resident with severe dementia slammed the table, which triggered an emergency procedure. The supervisor at the home suggested that staff might be able to recognize behavioural clues earlier and prevent the behaviour (or de-escalate the situation differently) if the staff received more training on dealing with residents with severe dementia.
- A resident with a long history of schizophrenia and bipolar disorder would become agitated and verbally abusive towards staff, and staff were unable to manage those behaviours with the same strategies they used to care for residents with dementia. The home felt that it would be beneficial for staff members to receive training on mental disorders and mental health.

- A staff member attempted to stop a resident from entering other residents' rooms, but was unsuccessful and sustained injury as a result of the resident's responsive behaviour. The home indicated that it would be beneficial if the staff had been trained with gentle persuasive techniques.

Limited Beds in Behavioural Specialized Units (BSUs)

The Ministry of Long-Term Care (Ministry) has established Behavioural Specialized Units (BSUs) within some long-term care homes. These units specialize in caring for those with complex behaviours by providing increased staffing, a tailored environment, focused behavioural assessment and enhanced care planning. While each BSU has its own unique admissions criteria designed to align with local needs, in general, BSUs are meant to provide transitional care support for new or existing long-term care residents who have responsive behaviours that cannot be managed in the regular long-term care environment. Residents in BSUs are expected to return to their regular long-term care home setting once their behaviours have stabilized and the extra care requirements gradually taper off.

There were 307 BSU beds in the province as of March 31, 2023. As shown in **Figure 18**, these beds had 94 individuals on wait lists as of March 31, 2023, and a median placement time that ranged from 24 days to 223 days in 2022/23, depending on the region. Aside from those on the wait list, we noted that 142 BSU bed applications were rejected in 2022/23 for reasons such as a lack of nursing expertise or physical facilities needed to provide the care. Ontario Health also informed us that some residents that would benefit from a BSU bed may not be added to the wait lists as the wait is too long.

Homes we visited had varying experiences with the application process. For instance:

- One home applied for BSU beds twice, with each application rejected after the BSU reviewed the resident's behavioural assessment. According to this home, one BSU indicated that it was not suited to care for the resident, who expressed physical aggressions and was previously involved in two critical incidents. Another BSU indicated that the resident was difficult to redirect, required several staff to assist, was impulsive and reacted with aggression when feeling threatened. These rejections raise a question about the accessibility of BSUs and their ability to provide specialized care to those with complex behaviours.
- One home indicated that it attempted to apply for a BSU bed several years ago, but none were

Figure 18: Beds in Behavioural Specialized Units (BSUs) in Long-Term Care Homes, and Wait Lists and Placement Time by Region

North East	8	4	3	87
Total	**307**	**94**	**188**	

* Median time to placement is provided by the region.

available. The home ended up managing the resident with involvement from the resident's family.

- One home indicated that it never applied for a BSU bed for its residents, as its understanding was that the process could be lengthy.

Our review of the eligibility criteria of six out of 14 BSUs in operation as of March 31, 2023, also noted that the criteria are restrictive. While there are variations across BSUs, all of them require applicants to be medically stable, have a diagnosis of dementia, and exhibit responsive behaviours that are challenging or cannot be managed in the current environment. Some BSUs have explicitly excluded individuals with active substance abuse or whose behaviours are primarily caused by brain injury, mental illness or a neurological condition. Although long-term care homes have a large population of residents with dementia, they also care for residents with other conditions, such as mental illness, substance use disorder and neurological illness, which are especially common among younger residents (refer to **Section 4.6**). By restricting admission to only those diagnosed with dementia, BSUs are not accessible to certain residents whose responsive behaviours cannot be managed in the standard long-term care environment, and homes are left to deal with the behaviours of these residents with their limited resources.

The Ministry is working with Ontario Health to expand BSU capacity and expects that approximately 70 new BSU beds will be added in 2023/24, with an allocated funding of $5.5 million. However, with 41% of long-term care residents having aggressive behaviours (see **Figure 17**) and with over 6,000 residents assessed with more severe aggressive behaviours, there is a risk that the number of BSU beds is still inadequate to meet the needs of the population, even with the additional beds.

Lack of Dedicated Behavioural Support Resources

In 2010, the then Ministry of Health and Long-Term Care launched an initiative called Behavioural Supports Ontario (BSO), through which homes receive funding to hire dedicated staff to support the home in caring for residents with complex and responsive behaviours. While the homes we visited viewed BSO staff as valuable resources, funding for those positions is only provided to homes that Ontario Health has identified in its BSO action plan. Over one-third of the homes we visited were declined funding for BSO staff. Although resources such as mobile BSO support services are available on an as-needed basis in the regions where these homes were situated, the homes indicated that in-house support would provide greater benefits due to the ongoing behavioural issues of residents.

While long-term care homes also have access to a variety of regular or referral-based external behavioural supports (such as psychiatric evaluation and medication recommendation for residents) through partnerships with hospitals or other community resources, we noted from our visits to homes that most homes did not always have adequate or timely access to these services. For example:

- A home with over 150 residents had a psychiatrist visiting the home only once a month, through the Psychiatrist Outreach Program in its local health network. To supplement this, the home paid to contract a geriatric psychiatrist to visit the home once a month to obtain more specialized service.
- A home had access to the Behavioural Support Services in a hospital, which would assign a nurse and PSW team to perform onsite observation and provide recommendations on non-pharmacological interventions (that is, not involving the use of medications) to help the home manage residents' behaviour. However, it could sometimes take a few months for a team to be assigned to the home, depending on the availability of resources.
- A home accessed a hospital's senior mental health behavioural program for two residents, but the wait time was approximately nine to 10 months.

RECOMMENDATION 4

To help ensure that long-term care homes are able to manage responsive and aggressive behaviours of residents, we recommend that the Ministry of Long-Term Care work with Ontario Health to:

- monitor staff-to-resident ratios for residents with more severe responsive behavioural issues;
- consult with homes to identify gaps in behavioural support resources for long-term care (including resources within homes, external support networks, and behavioural specialized units at both the regional and home level), and develop and implement action plans to address the gaps; and
- provide centralized expertise and a forum for homes to share ideas and practices related to behavioural management.

MINISTRY RESPONSE

The Ministry of Long-Term Care (Ministry) acknowledges the Auditor General's recommendation to monitor staff-to-resident ratios for residents with more severe responsive behaviour issues, and consult with homes to identify gaps in behavioural support resources for long-term care.

The Ministry recognizes the importance of helping to ensure long-term care homes are able to effectively support residents with responsive behaviours. The Ministry has invested in high-quality, innovative programs that provide appropriate care to residents with responsive behaviours, including Behavioural Supports Ontario (BSO) and through behavioural specialized unit beds. In addition, to enable centralized supports for BSO services, the Ministry has invested in the operation of the BSO Provincial Coordinating Office (PCO). BSO PCO helps to bring together BSO teams of specialized staff to share best practices and develop practical clinical tools for long-term care staff.

The Ministry also initiated the Local Priorities Fund to enable Ontario Health to make investments in targeted specialized staffing, equipment and supports aimed at removing barriers to alternate level of care in the respective regions. This includes funding for staff training regarding patients with dementia in order to support overall quality of life for residents and reduce the risk of behaviours that could lead to hospital transfer. Separately, the Ministry's High Intensity Needs Fund supports the costs for residents with acute or intensive service needs. This includes funding for supplementary staffing required as a result of ongoing or emerging responsive behaviours and funding for preferred accommodations.

Ontario Health, in partnership with long-term care homes, is best positioned to determine the appropriate BSO staffing complement based upon in-depth knowledge of the needs of residents living in the home and on available investments. The Ministry will continue to monitor BSO staffing mix ratios to inform ongoing supports to the sector and will continue to work with Ontario Health, long-term care homes and other sector partners to identify best practices for maximizing available investments, as well as gaps and opportunities for improved supports for residents who exhibit higher risk, aggressive responsive behaviours.

ONTARIO HEALTH RESPONSE

Ontario Health acknowledges the Auditor General's recommendation. Ontario Health coordinates and integrates several programs that support long-term care homes to manage residents with responsive and aggressive behaviours, including Behavioural Supports Ontario (BSO), Behavioural Support Units (BSUs), the Local Priorities Fund, and High Intensity Needs Fund.

Ontario Health will continue to work with the Ministry and system partners (for example, the BSO Provincial Coordinating Office) and local BSO lead organizations to implement programs and identify mechanisms to share best practices and ideas to support homes in providing care for individuals with responsive behaviours, ensuring quality care

and safety for all residents, in alignment with provincial investments. The target completion date is March 31, 2026.

4.4.4 Incomplete, Inaccurate or Outdated Information about New Residents Hindered Preparation by Homes

Before accepting an admission, long-term care homes receive information about the applicant from Home and Community Care Support Services, which includes health, functional, behavioural and other supplemental assessments as appropriate. However, homes we visited informed us that assessments regarding the applicant's behaviours were not always complete or accurate. For example, certain behavioural issues were not mentioned, and information fields on behaviour triggers could be left blank.

Homes we visited also informed us that the assessments do not always capture the applicant's current condition, as they could be completed up to three months before the authorization of admission. During the three-month period, there can be changes to the applicant's care needs due to advanced age and comorbidities. Although a reassessment is supposed to be completed whenever an applicant's condition has changed significantly, this depends on whether the placement co-ordinator, the applicant, or the applicant's primary care provider, caregiver or substitute decision-maker would initiate it.

Incomplete, inaccurate or dated assessments can hamper a home's ability to prepare for the arrival of new residents. For example:

- A resident's pre-admission assessment did not indicate any wandering or exit-seeking behaviour and so the resident was initially admitted to a non-secure unit at the home. However, soon after admission, the resident wandered away from the home twice within a month, resulting in two critical incidents reported to the Ministry. As a result, the home had to move the resident to a secured unit. The resident's family subsequently informed the home that the resident did exhibit exit-seeking behaviour in the previous home.
- One home noted that an applicant's pre-admission behavioural assessment indicated that the applicant had no explicit behaviours. However, upon admission, it was clear that the resident was verbally and physically aggressive, prompting the home to change plans and move the resident to a high-intensity care room. Had the behaviours been more accurately described in the pre-admission assessment, the home indicated that it could have planned ahead and been better prepared to provide high-intensity care.

Transitioning into long-term care is especially difficult for those living with dementia, and their behaviours could escalate during the initial period of home admission. Having incomplete or inaccurate assessments would only increase the stress on both the residents and staff during the transition period, and should be prevented.

RECOMMENDATION 5

To help ensure that long-term care homes are well informed of the condition of prospective residents in preparation for their admission, we recommend that the Ministry of Long-Term Care work with Home and Community Care Support Services and with homes to review the pre-admission assessment process; determine whether changes can be made to improve the completeness, accuracy, consistency and timeliness of information provided to homes; and then to implement the necessary changes.

MINISTRY RESPONSE

The Ministry of Long-Term Care (Ministry) acknowledges the Auditor General's recommendation to work with Home and Community Care Support Services and with homes to review the pre-admission assessment process and to implement the necessary changes.

The government released Your Health: A Plan for Connected and Convenient Care (the Plan), which aims to connect people in Ontario to the health care they need, when they need it. Through the Plan, Ontario will modernize home care and provide connected care through Ontario Health Teams to support the right care in the right place.

The Ministry recognizes the need to modernize admissions and placement processes to make it more transparent, more user friendly and less burdensome, and has initiated a review of current assessment tools. This work will include engagement with the Ontario Medical Association and Home and Community Care Support Services to inform work that will ensure the tools contain relevant information related to long-term care applicants' health conditions and care needs, in order for homes to assess if they have the nursing expertise as well as facilities to support the admission of applicants. In addition, the government is proposing to develop a new agency—Ontario @ Home—that, if passed, will assume the responsibilities of long-term placement.

4.5 Long-Term Care Sector Was Not Responsive to Cultural Needs of Residents

Ontario's population is highly diverse. According to the 2021 census by Statistics Canada, for example, about 34% of Ontario's population is made up of members of visible minorities, about 30% are immigrants and about 3% have an Indigenous identity. With a resident mix resembling the diverse population of the province, there is a high demand for culturally sensitive long-term care services in Ontario.

Cultural accommodation is important for improving the quality of life for long-term care residents. One important aspect of cultural accommodation is food. Research shows that culturally appropriate meals can encourage residents to eat and drink, which in turn reduces the risk of malnutrition and unintended weight loss. Another important consideration is care in the residents' own language. Communication is essential for one's social life, and people with dementia often lose command of their second language and revert to their mother tongue as their condition intensifies. Culturally appropriate care is also an important element in palliative care. For example, different cultures can have differing ideas of the meaning of life and death, as well as differing involvement of friends and family in care. Stakeholders in long-term care recognize culturally appropriate palliative care as an aspect that needs improvement in long-term care.

Despite the obvious benefits of culturally sensitive care, we found that Ontario's long-term care sector has gaps in delivering such care to those who need it.

4.5.1 Culturally Specific Long-Term Care Homes Are Limited Across the Province

Out of 626 long-term care homes across the province, there are currently 57 designated homes (or about 9%) across the province focused on serving specific ethnocultural groups (for example, Indigenous, Chinese, Finnish, French, Greek, Italian and Ukrainian) or religious groups (for example, Christian, Catholic and Jewish). We visited three ethnocultural homes during the audit and observed various ways in which these homes create a familiar environment for their residents of specific ethnicity. For example:

- A majority of staff members speak the residents' native language or share the same culture as the residents. At one of the three homes we visited, over 95% of staff spoke the native language of residents.
- Signs and information, such as recreational calendars, are posted in the residents' native language.
- Menus are designed to suit the tastes of their residents and reflect their cultural heritage—for example, serving traditional Eastern European and Asian meals daily.
- Elements of the residents' culture are incorporated in activities, with activities conducted in the residents' native language.

- The residents' cultural background is incorporated into the home's décor, television programs and music.

Ethnocultural homes are popular among ethnic communities and tend to have much longer wait times. Our examination of placement data noted that the median wait time for an ethnocultural home was up to 1,843 days (or approximately five years) in 2022/23. This is significantly longer than the provincial median time for placement into a long-term care home, which ranged from 50 days to 223 days in 2022, depending on the region. The long wait times clearly illustrate the popularity of these homes and an insufficient supply to meet the demand—especially since the introduction of the *More Beds, Better Care Act, 2022* to facilitate the flow of alternate level of care (ALC) patients from hospitals to long-term care homes (refer to **Section 4.7**).

Our analysis of regional demographics and long-term care homes noted that, while certain regions have a high concentration of particular ethnic groups, there are no ethnocultural homes in those areas to serve that need. For example, based on 2021 Census data, Peel Region has a high concentration of South Asians (about 14%), but there are no ethnocultural homes in that region designated to support South Asian residents. There is currently one capital development project, comprising 97 new beds and 159 redeveloped beds, planned for this region to meet the needs of the South Asian community. As of September 2023, the project is in the early planning stage and a completion date is not available.

Two international reports, issued in 2011 and 2015, have compared the effect of ethnocultural and mainstream homes on ethnic-specific residents. Both papers found that those living in ethnic-specific homes perform better physically and mentally (for example, exhibiting a less stressful transition into long-term care, more interactions with other residents, higher morale, and lower prescription rates for antipsychotic medication). To date, the Ministry has not completed an analysis of the quality of care, approach to care, and impact on residents of ethnocultural homes versus mainstream homes in Ontario. Such an analysis would provide an opportunity for the Ministry to identify best practices that could be shared across homes to improve care for culturally diverse populations.

The Ministry also has not assessed whether the supply of long-term care homes meets the needs of Ontario's diverse population, considering factors such as ethnicity, cultural heritage, and sexual and gender diversity, among others. Socio-demographic data of existing long-term care residents is limited and does not show where residents of different backgrounds are living.

4.5.2 Level of Cultural Accommodation Varied Across Mainstream Homes

Though having more long-term care homes catering to specific ethnic, cultural or religious groups would be ideal, it is not feasible to have a home for every ethnocultural or religious community in Ontario. A diverse resident population is a reality that mainstream homes have to manage. For example, in one of the homes we visited in the Greater Toronto Area, 20 different languages were spoken by residents. Mainstream homes should be sensitive to the diverse languages and cultural needs of their residents.

We noted from our visits that non-ethnocultural and non-religious homes adopt cultural accommodations to varying extents. For example, some homes use cue cards, sign boards, electronic translation applications or translation by volunteers to overcome communication barriers, and get help from family members to take residents to religious services. Knowledge could be shared among homes to improve care for a culturally diverse population.

We also noted that the need for, or importance of, cultural accommodation in long-term care homes, especially for food, has been raised by homes and stakeholder groups in the past. For example, in October 2016, Toronto City Council requested that the provincial government develop a separate, case-specific funding mechanism for the provision of cultural and religious meals in long-term care homes, in support of the 10 city-operated homes that serve a very diverse

resident population. A similar recommendation was made in 2016/17 by AdvantAge, a provincial association representing not-for-profit homes and services for seniors. Since 2016/17, the Ministry has increased funding to the Nutritional Support category—from $8.33 per resident per day to $12.07 per resident per day (see **Section 4.8.1**). However, the recommendation for a separate funding mechanism to provide cultural and religious meals has not been directly addressed. We noted from our visits to homes that mainstream homes sometimes have difficulty creating meal plans to meet the requests and cultural preferences of individual residents.

RECOMMENDATION 6

To help ensure that long-term care homes are able to care for the culturally specific needs of a diverse resident population, we recommend that the Ministry of Long-Term Care:

- analyze the supply and demand of culturally specific homes in Ontario, factoring the results of the analysis into long-term home development planning; and
- work with long-term care homes to identify best practices for culturally sensitive care and provide homes with guidance for developing practical improvement plans (for example, in the areas of staff training, communication technology investments, and engagement of community and religious organizations).

MINISTRY RESPONSE

The Ministry of Long-Term Care (Ministry) acknowledges the Auditor General's recommendation to analyze the supply and demand of culturally specific homes in Ontario, and work with long-term care homes to identify best practices for culturally sensitive care.

As of November 2023, the Ministry is working with the sector on more than 100 capital projects that propose to serve the needs of Francophone, Indigenous and other culturally specific populations. The Ministry will continue to work with the Ministry of Health and Ontario Health, as well as key sector stakeholders, to assess the capacity needs of the long-term care sector to support an informed approach to system planning within the broader health sector, including the need for services and supports that meet the diverse needs of residents.

Furthermore, the Ministry funds the Centres for Learning, Research and Innovation to educate and train current and future long-term care staff in areas including cultural competency and equity, diversity and inclusion. The Ministry is also exploring the opportunity to establish a Long-Term Care Quality Centre that could support homes by identifying and sharing best practices for culturally sensitive care, so that residents can benefit from culturally appropriate care and services.

The Ministry is committed to goals that advance long-term care services that better meet the unique histories, perspectives and needs of residents. Consistent with this goal, Ontario enacted the *Fixing Long-Term Care Act, 2021*, which included more closely aligning the language in the Residents' Bill of Rights with the grounds of discrimination in the Ontario Human Rights Code; and palliative care requirements were expanded to reflect a more holistic approach that accounts for residents' physical, emotional, psychological, social, cultural and spiritual needs. In addition, ongoing initiatives, including the development and redevelopment of long-term care homes, are enhancing programs and services for long-term care residents.

4.5.3 Prospective Residents with Cultural Needs Lacked Information About Long-Term Care Options

We found that prospective long-term care residents from diverse backgrounds do not have sufficient information to make their home choices.

The Ministry does not publicly list long-term care homes by ethnicity or by the particular group or community served (for example, with respect to religion or sexual and gender diversity), and the Ministry website does not support the filtering of homes by any characteristics other than home name, home address (complete or partial) and user location.

Ontario Health reports on the performance of long-term care homes across the province on its website, using a number of quality indicators—for example, residents who fell, were physically restrained, had pressure ulcers, experienced pain, or had worsened symptoms of depression. Although data on each home is available on the website, it is not easy to compare performance across homes. Each time, users of the website can only select a maximum of five homes for comparison against the Ontario average, indicator by indicator.

RECOMMENDATION 7

To help ensure that prospective long-term care residents from specific cultural groups or communities have access to essential information for home selections, we recommend that the Ministry of Long-Term Care work with Ontario Health to enhance features on their websites by publishing the list of culturally specific homes by type of community served (for example, ethnicity, religion, sexual and gender diversity) and allowing for filtering by home characteristics and performance.

MINISTRY RESPONSE

The Ministry of Long-Term Care (Ministry) acknowledges the Auditor General's recommendation to work with Ontario Health to enhance features on their websites by publishing the list of culturally specific homes by type of community served and allowing for filtering by home characteristics and performance.

Transparency and ease of access to information are of utmost importance to prospective long-term care home residents and their families. The Long-Term Care Home Finder tool, launched in 2022, enables people to find and compare long-term care homes across the province and provides other resources to help people make an informed choice when considering long-term care. The Ministry recognizes that making even more information available will help prospective residents and their family members make informed decisions and is committed to working collaboratively with Ontario Health and other partners, as needed, to ensure websites can support prospective long-term care applicants in searching for culturally specific homes by type of community served.

ONTARIO HEALTH RESPONSE

Ontario Health acknowledges the Auditor General's recommendation. Ontario Health will work in collaboration with the Ministry and other partners, as needed, to support easier access to information about ethnocultural homes.

4.6 Homes Were Not Fully Able to Serve Younger Residents

Most people think that long-term care homes are only for the elderly. But long-term care homes provide a residential alternative for individuals 18 years of age or older who have a valid Ontario health card and have high care needs that cannot be met with any combination of caregiving in their own home or community. As of 2022/23, about 6,200 (6.3%) of the residents in long-term care homes were under the age of 65, including some who were around 20.

Younger people need to be in long-term care because they suffer various conditions that affect their ability to care for themselves, such as brain injury, stroke, physical disability, mental illness or developmental disabilities. Although younger residents are a minority in long-term care homes, it is important that their needs are satisfied. The *Fixing Long-Term Care Act, 2021* (Act) prescribes that every resident has the right to an optimal quality of life.

4.6.1 Homes Lacked Age-Appropriate Supports for Younger Residents

While long-term care homes have the skills to care for the physical needs of younger residents, the environment and recreational programs do not always provide these residents with the stimulation and social surroundings that are vital to a good quality of life—especially for those with better cognitive ability.

Various studies conducted in long-term care homes have demonstrated that social connection is linked to both mental and physical health outcomes, which in turn impact residents' quality of life. However, in a population that is made up predominantly of seniors (over half are 85 years or older and many have dementia), it is difficult for younger residents to develop social relationships and cultivate connections with fellow residents.

Also, younger residents often do not have access to age-appropriate recreation and leisure programs, as the programs at long-term care homes primarily cater to the senior residents. For example, activities like bingo, Elvis-themed music activities, and movies from the 60s are popular in the homes we visited, while activities catering to younger residents—such as outings to movies and shopping centres—are limited. Homes also informed us that community resources that help connect younger residents to age-appropriate activities and peers of similar age are also limited.

We identified cases at the homes we visited where the social, recreational and intellectual needs of younger residents could not be met by the programs at the home. For example:

- A home had only two residents (1%) under the age of 60. One of these residents, around 20 years of age with a brain injury, enjoyed attending a community program to socialize with peers closer to the resident's age. However, the resident required supervision to attend the program and could only afford one such supervised trip per month. The home and the resident's family were trying to find ways to send the resident to these events more often.
- A home had a younger resident, around 50 years of age with a memory disorder, who would need more activities and stimulation geared toward that age group. However, younger residents in this home were offered the same programming as the rest of the, more senior, population. While the resident participated in swimming activities outside the home, these were set up by the resident's family.
- A 35-year-old resident with cerebral palsy required nursing care but was cognitively intact and could converse very well. From the home's perspective, the resident could benefit from living in a group home, as group homes provide a supervised living environment designed to offer care (including daily living assistance and medical services) in a more intimate setting than a long-term care facility can provide.

4.6.2 Younger Residents with Aggressive Behaviours Posed Safety Risks to Frail Residents

Responsive or aggressive behaviours are not only common among people living with dementia, but also displayed by some of those with complex mental illness, substance use disorder or neurological issues—conditions seen in the younger population in long-term care homes. Some homes we visited noted that they are seeing more younger residents with mental illness and/or addiction issues.

We observed a wide age range among residents living in some long-term care homes. For example, in one of the homes we visited, the youngest resident was 35 while the oldest was 100. According to the Act, it is the home's responsibility to ensure the safety and security of all residents. However, maintaining the security of residents over 65, who tend to be frailer due to age, can be difficult when they are cohabitating with younger residents who exhibit aggressive behaviours.

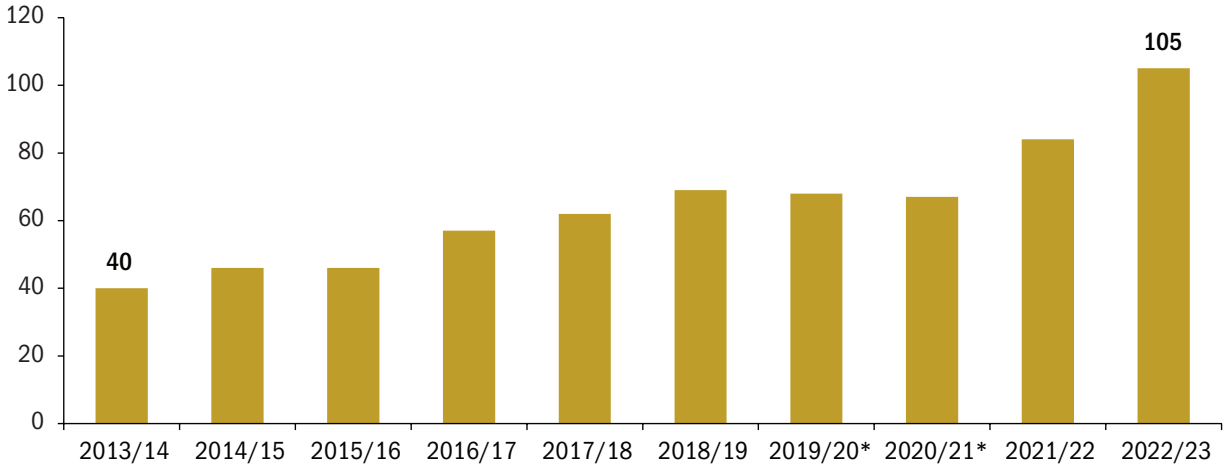
While it is challenging for homes to manage responsive behaviours as a whole (see **Section 4.4**), it is even

more challenging when younger residents who are physically strong are involved in altercations. As one home put it: "how can you protect a 90-year-old confused resident from a 55-year-old physically capable person if that person turns aggressive?"

We noted cases in the homes we visited that illustrate the challenge in managing the behaviours of younger residents with a history of mental illness, addiction or autism. For example:

- A home had a younger resident under the age of 65, who was diagnosed with early dementia and appeared to have an alcohol problem in the past. Unlike other seniors in the home, the behaviour of this resident was unpredictable, without warning signs, and staff were not able to figure out the trigger. The resident punched and kicked a staff member and pushed another resident on different occasions. The resident was eventually released as the home was not suitable to provide care.
- A home has a younger resident, who is about 40 years of age, is cognitively intact and has a history of heavy drug use. The resident was sent to the hospital for psychiatric evaluation as the individual was threatening to commit suicide and also made threats to staff members and distressed other residents. The resident was discharged from the hospital within 48 hours. The resident does not like being at a long-term care home and is waiting for a group home, with an estimated wait time of five to seven years.
- A home has a younger resident in their mid-40s, who was sent to hospital due to intoxication and suicidal ideation. The resident was previously involved in an incident where the individual had slapped the head of another resident who was over 80 years of age, for which a Code White (a code for violent behaviour) was declared and police were notified.
- A home was scheduled to provide respite care (that is, short-term caregiver relief) for an autistic resident, about 20 years of age, for two weeks. However, the home had to send the resident back to the primary caregiver after a couple of days as a staff member was severely assaulted. The home indicated that staff were not trained to care for someone with moderate to severe autism (see **Section 4.6.3** for further discussion on autistic residents).

Homes indicated that they are not equipped to manage the aggressive behaviours of younger residents because education and training for staff at long-term care homes are geared toward providing care for seniors with dementia. Because staff have less training about mental illness, drug addiction or autism, they are not as proficient in caring for younger residents with these conditions. For example, individuals suffering from these conditions could have different behavioural triggers than those with dementia, which staff might not be able to identify and address due to lack of training and experience. Staff also lacks the skills to interact with these residents.



We also noted that homes have limited external resources to help them manage behavioural issues among younger residents, especially those with mental illness or addictions. The Behavioural Supports Ontario (BSO) initiative supports long-term care homes (refer to **Section 4.4.3**), but focuses on older adults. Many homes are also linked to psychogeriatric or senior mental health resources, which generally do not accept referrals for residents under the age of 65. While psychiatric hospitals are able to accept younger residents, obtaining timely access is a challenge due to strict eligibility or admission criteria.

4.6.3 Long-Term Care Staff Lacked Knowledge and Skills to Care for Autistic Residents

In analyzing the changes in resident profiles in Ontario's long-term care homes over time, we noted that the number of autistic residents has increased by approximately 162% over the last decade, from 40

Figure 19: Number of Autistic Residents in Long-Term Care Homes, 2013/14–2022/23

Source of data: Ministry of Long-Term Care

* Data for 2019/20 and 2020/21 may be incomplete because data submissions to the Continuing Care Reporting System were postponed during the COVID-19 pandemic.

in 2013/14 to 105 in 2022/23 (**Figure 19**). While these residents remain a minority within the total population of long-term care homes, no other physical or mental characteristics have had such a significant increase among residents over the same period.

This increasing trend aligns with findings from the 2019 Canadian Health Survey on Children and Youth, which indicated that approximately one in every 50 Canadian children and adolescents is autistic and that the rate has continued to rise over time. While autistic individuals are mostly cared for by their parents during their childhood and throughout adolescence, external support and care are needed for some individuals as their parents age or die. Hence, some younger autistic people end up living in long-term care if they require 24/7 care.

While there is a wide spectrum in the type and severity of symptoms, many autistic individuals have communication problems, difficulty with social interactions, a tendency to repeat specific patterns of behaviour and a restricted range of activities and interests. Many also have co-occurring health conditions, such as sleep disorders and other mental health issues. Hence, caring and planning activities for autistic residents can be challenging.

Homes we visited acknowledged that they do not have enough trained staff to properly care for autistic residents, who are small in overall numbers but high in specific needs. For example, one home indicated that with only one recreational staff person to plan and assist with activities for approximately 32 residents, it would not be able to provide more customized, one-to-one activities to fully attend to the unique needs of an autistic resident. The home indicated that a group home would be a better option for these individuals because, as noted in **Section 4.6.1**, group homes are designed to help individuals with complex health-care needs in a more intimate setting compared to a long-term care facility.

RECOMMENDATION 8

To help ensure that the needs of the younger residents in long-term care homes are met, we recommend that the Ministry of Long-Term Care, in collaboration with Ontario Health:

- identify and connect long-term care homes with community programs and external resources to provide additional support for younger residents who have social and recreational needs or have mental health and addiction issues;
- work with homes to identify additional training that long-term care staff need to enhance their knowledge and skills in caring for residents with mental illness, addictions and developmental disabilities (for example, autism), and support homes in obtaining the training; and
- engage homes to identify and assess if more suitable living options are available, or should be developed, for certain groups of younger residents, and work with other partner ministries, as applicable, to develop a plan to implement these options.

MINISTRY RESPONSE

The Ministry of Long-Term Care (Ministry) acknowledges the Auditor General's recommendation to identify and connect long-term care homes with community programs and external resources; work with homes to identify additional training to enhance staff knowledge and skills in caring for residents with mental illness, addictions and developmental disabilities; and engage homes to identify and assess if more suitable living options are available for certain groups of younger residents.

The Ministry has launched many initiatives to address the complex needs of long-term care residents, including the Local Priorities Fund and High Intensity Needs Fund that aim to meet the care requirements of high-needs residents.

The Ministry will continue to work with Ontario Health and other partners to improve long-term care staff capacity to respond to the diverse needs of residents, including younger residents with responsive behaviours and those on the autism spectrum, and will collaborate with the Ministry of Health and Ministry of Children, Community and Social Services to identify, assess and implement more options that improve access to alternative care and community activities and supports for younger Ontarians when they are admitted to a long-term care home.

ONTARIO HEALTH RESPONSE

Ontario Health acknowledges the Auditor General's recommendation. Ontario Health works with the Ministry, long-term care homes, and system partners to support the provision of high-quality, safe care to all long-term care home residents, including those who are younger, have special social and recreational needs, or mental health and addictions issues. We are committed to working with the Ministry and system partners, including Ontario Health Teams, to identify ways to better meet the needs of younger residents and the staff who care for them in long-term care homes. Ontario Health's recommendations for a tactical plan will be developed by March 31, 2025.

4.7 Implementation of Legislation That Increased the Flow of Hospital Patients to Long-Term Care Was Not Transparent to the Public and Not Adequately Monitored

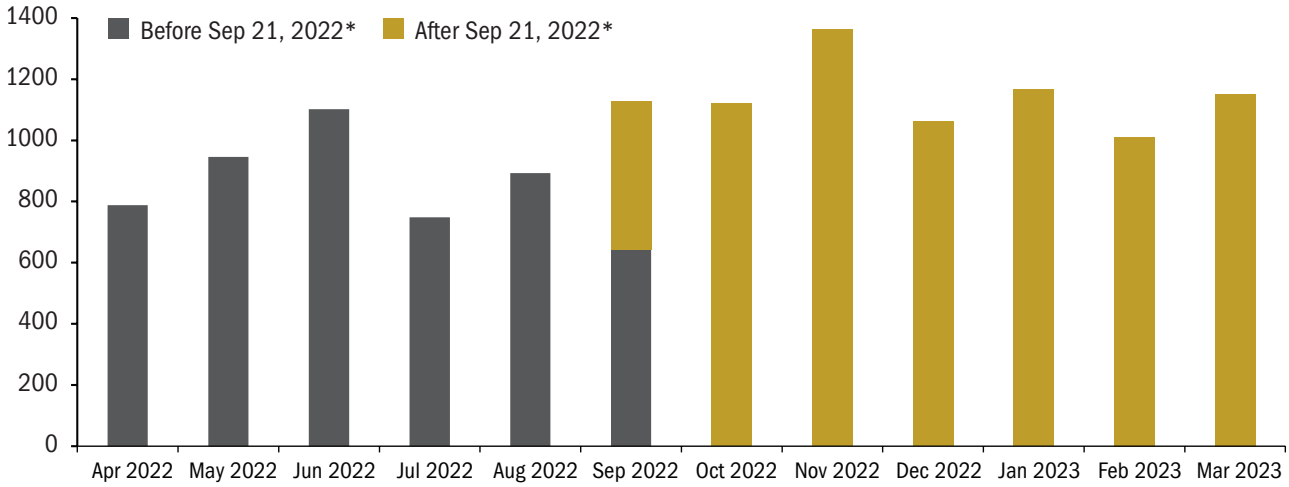
Long-term care homes admit residents from the community and also admit hospital patients when they are identified for alternate level of care (ALC). An ALC patient is someone occupying a hospital bed who does not require the intensity of services provided in the hospital care setting and who can be discharged in the opinion of the attending clinician. A long-term care home, rehabilitation facility or the patient's own residence are examples of preferred discharge destinations for ALC patients.

On September 21, 2022, the *More Beds, Better Care Act, 2022* came into full effect. To facilitate the flow of ALC patients from hospitals to long-term care homes, the new legislation authorized the placement

co-ordinator of Home and Community Care Support Services to take certain actions without the patient's consent, after reasonable efforts have been made to engage the patient (or the substitute decision-maker) to obtain consent. Examples of these actions include determining the patient's eligibility for long-term care, selecting homes for the patient within defined geographic parameters, and providing assessments and information about the patient to selected homes. For these patients, when a bed in one of the selected homes becomes available, they have 24 hours to accept the offer or risk being charged $400 per day to remain in the hospital (as stated in Regulation 965 under the *Public Hospitals Act*).

4.7.1 Transparency Was Lacking in the Implementation of New Legislation

In 2022/23, almost 12,500 ALC patients were admitted to long-term care, with 7,357 of these admissions occurring after the full implementation of the *More Beds, Better Care Act, 2022* on September 21, 2022 (**Figure 20**).



Our analysis of the placement of these 7,357 ALC residents between September 21, 2022 (effective date of the *More Beds, Better Care Act, 2022*) and March 31, 2023, noted the following:

- The new legislation resulted in 99 ALC patients being placed in homes that were not selected by the patients but by placement co-ordinators without the patient's consent.
- The other 7,258 ALC patients were placed into one of the patient-selected homes, with about 40% being placed in their first-choice home. However, the remaining approximately 60% were placed in a lower-ranked patient-selected home, which was comparable to the 58% observed in the six-month period prior to the new legislation's implementation. As of June 2023, less than 1% of these individuals had subsequently been transferred to a higher-ranked patient-selected home, with the rest remaining on the wait list for the opportunity to transfer if desired.

We found that the Ministry of Long-Term Care (Ministry) has not disclosed any of the above information to the public. The Ministry also does not know how many ALC patients (if any) were charged the $400 daily hospital fee for declining a long-term care bed offer since the implementation of the *More Beds, Better Care Act, 2022*; the information is neither collected by the Ministry nor by its partners, including the Ministry of Health and Ontario Health.

Figure 20: Number of Alternate Level of Care (ALC) Patients Transferred to Long-Term Care Homes, 2022/23

Source of data: Home and Community Care Support Services

* September 21, 2022 was the effective date of the *More Beds, Better Care Act, 2022* to facilitate the flow of ALC patients from hospitals to long-term care homes.

The *More Beds, Better Care Act, 2022*, which is intended to help free up hospital beds by increasing the flow of ALC patients to long-term care, has come under scrutiny from the public and some health-care advocates due to the actions that can be taken without consent. Stakeholders have also raised concerns over the impact that the new legislation has on the capacity of ethnocultural homes, as well as the ability of other long-term care homes to meet the respective ethnic, religious and linguistic needs of ALC patients. The Ministry's examination of long-term care placement data confirmed that the number of applicants admitted to cultural homes from the community has been declining over the years as various legislative changes were made to give patients waiting in hospitals the highest priority for admission into long-term care, with the implementation of the *More Beds, Better Care Act, 2022* in September 2022 further exacerbating the issue (refer to **Section 4.5.1** regarding the demand for culturally specific homes).

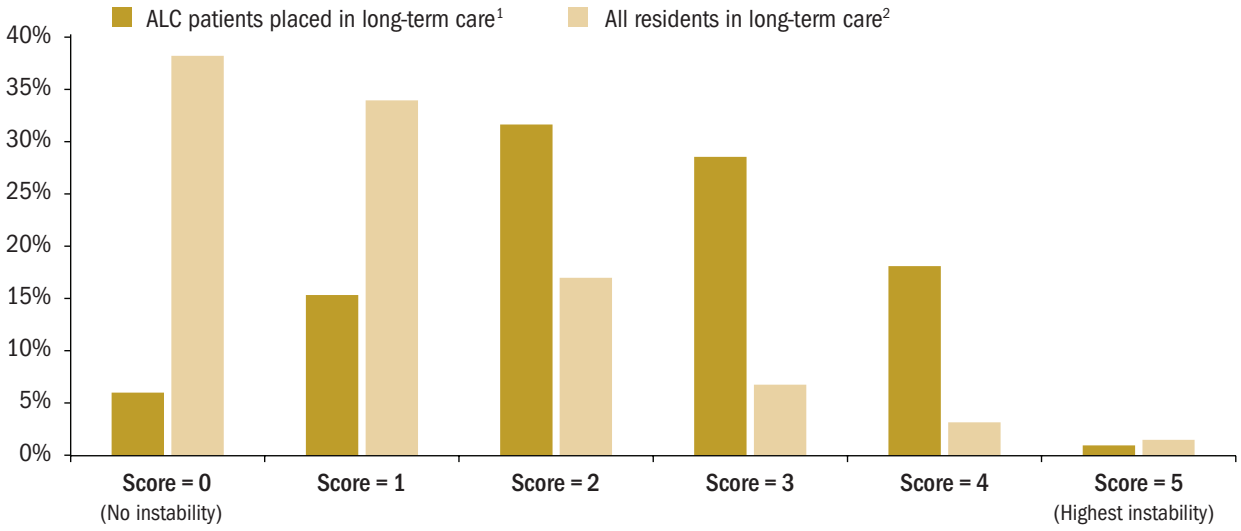
4.7.2 Outcomes of ALC Patients in Long-Term Care Homes Were Not Monitored to Assess Whether Needs Were Met

When the *More Beds, Better Care Act, 2022* was proposed, the Province indicated that the new legislation was intended to provide ALC patients with the care they need and a better quality of life in a more appropriate setting ("providing the right care in the right place"), while freeing up hospital beds for those who need them. However, the Ministry has not monitored the care outcomes of ALC patients after their admission to long-term care homes to determine if these patients are doing well after being discharged from hospitals. Existing clinical datasets are aggregated and outcomes cannot be readily separated between ALC patients and residents from the community.

Through our review and comparison of data on residents' health conditions, we noted that ALC patients transferred to long-term care homes are frailer, with higher health instability, compared to average long-term care residents. Our review of data on ALC patients noted that almost 80% of these patients were assessed at Score 2 or above on the Changes in Health, End-Stage Disease and Signs and Symptoms (CHESS) scale, which is designed to predict mortality associated with frailty and to measure instability in health (see **Figure 21**). Based on our observation and discussion with staff at the long-term care homes we visited, while some homes receive ALC patients who are similar to their residents from the community, others receive ALC patients that are frailer or with more complex needs, which creates care and resource challenges for the homes.

Although homes are responsible for providing quality care to residents, the Ministry can play a greater oversight role by monitoring, at the provincial level, the care outcomes of ALC patients after their transition into long-term care homes. Trends and findings identified from the analysis would help inform the Ministry's future decision-making and improvements to policies and processes. For example, the Ministry could obtain a better understanding of the following:

- whether ALC patients (especially those who went to homes outside of their preferred list or to homes selected by the placement co-ordinator without the patient's previous consent) have worse health outcomes (for example, higher hospital readmission rates); and
- whether long-term care staff require more training or have the capacity to care for the higher proportion of residents who were ALC patients from hospitals, given the homes' current staffing levels.



RECOMMENDATION 9

To help ensure alternate level of care (ALC) patients entering long-term care homes are receiving the care they need and that the public is well informed, we recommend that the Ministry of Long-Term Care, in collaboration with Home and Community Care Support Services:

- improve transparency around the use of the *More Beds, Better Care Act, 2022*, by providing the public with more information on the

Figure 21: Health Stability Scores for Alternate Level of Care (ALC) Patients Compared to All Residents in Long-Term Care Homes in Ontario

Sources of data: Home and Community Care Support Services (HCCSS) and Canadian Institute for Health Information (CIHI)

Note: Health stability is scored on the Changes in Health, End-Stage Disease and Signs and Symptoms (CHESS) scale. The scale ranges from 0 to 5, with higher scores representing an increased risk of mortality, more intense service needs, and increased health instability.

1. Data for ALC patients is sourced from HCCSS and reflects the CHESS scores of ALC patients placed in long-term care in 2022/23, based on their most recent assessment before placement.
2. Data for all residents in long-term care homes is sourced from CIHI and reflects the CHESS scores of all residents—including residents from the community and ALC patients from hospitals—assessed in 2022/23.

transfers of ALC patients (for example, the number and frequency of transfers, use of the authority under the new legislation, and impacts of ALC transfers on hospitals, long-term care homes and the community);

- collect data related to care outcomes of ALC patients admitted to long-term care homes and work with homes to analyze the data and identify potential improvements for future admission processes; and
- work with homes to determine if long-term care staff require additional training to meet the needs of ALC patients, and support homes in obtaining the training.

MINISTRY RESPONSE

The Ministry of Long-Term Care (Ministry) acknowledges the Auditor General's recommendation to improve transparency around the use of the *More Beds, Better Care Act, 2022*, collect data related to care outcomes of ALC patients admitted to long-term care homes, and work with homes with respect to staff training to meet the needs of ALC patients.

In collaboration with Home and Community Care Support Services (HCCSS) and the Ministry of Health, the Ministry will explore opportunities for potential improvements in the placement process through data collection and transparency to support all applicants, including ALC patients transitioning into long-term care and their families or caregivers.

The Ministry is working with long-term care homes, Ontario Health, HCCSS and the Canadian Institute for Health Information (CIHI) to collect and analyze data that allows for standardized evaluation and identification of potential improvements. The data includes information about long-term care residents who potentially could have been cared for at home, as well as residents' preferences, needs and strengths. Some of this

information about residents is available online, including on CIHI's website on the Ministry's Long-Term Care Home Finder webpage.

To support training needs of staff, the Ministry funds the Centres for Learning, Research and Innovation to educate and train current and future long-term care staff in areas including cultural. The Ministry is also exploring opportunities to establish a Long-Term Care Quality Centre that could provide additional support by identifying and sharing best practices for homes that have identified the need for training to better meet the needs of ALC patients.

The *Fixing Long-Term Care Act, 2021* (Act) and Ontario Regulation 246/22 (Regulation) require every home to have a plan of care in place for every resident living in the home. These plans are unique for each resident and focus upon the resident's individual needs and preferences. Care plans are developed for every resident whether they have previously resided in the community or transferred to the long-term care home from hospital. In addition, the Act sets requirements for staff training that can help to meet the needs of all residents, including those who were previously ALC patients—for example, to address infection prevention and control, pain management, fall prevention and management, skin and wound care and palliative care. The Ministry will work with and support homes with staff who require training to meet the needs of ALC patients.

4.8 Funding Changes Are Required to Meet Residents' Current Needs and Improve Responsiveness

As discussed in **Section 2.3**, the Province provides funding to long-term care homes through the Level-of-Care funding model and additional direct funding targeted at specific program objectives. Our review noted various deficiencies in the funding methodology and the process requires improvement.

4.8.1 Funding Method Lacked Up-to-Date Information to Meet Residents' Current Care Needs

We found that the largest portion of funding for long-term care homes, the Level-of-Care per diem, is based on out-of-date information, and therefore does not reflect current resident care needs.

The basic Level-of-Care funding for beds in long-term care homes includes funding in multiple categories, or envelopes. The largest of these categories is the Nursing and Personal Care envelope, which accounts for more than half of the Level-of-Care funding that the Ministry of Long-Term Care (Ministry) provides to each home (see **Figure 22**). A home's Nursing and Personal Care envelope is adjusted every year based on the condition of the home's residents. Funding is increased for homes where residents show higher levels of acuity (more severe conditions), and reduced for lower levels of acuity, in order to align funding with care needs.

The adjustment factor—called the Case Mix Index—is based on resident acuity data collected from homes and is intended to represent the average resource intensity needed to care for the residents of a home for a given year. However, we noted that the information the Ministry uses to calculate the Case Mix Index is based on resident acuity data collected by homes two years prior, which does not necessarily reflect the current needs of residents since health conditions can change significantly over that time period. Moreover, with residents spending an average of two to three years in a home, it means that the Ministry could be paying homes based on the health status of residents who are no longer at the home.

In comparing the Case Mix Index that was used to adjust funding between 2021/22 and 2023/24, we noted that the index can fluctuate significantly for some homes, with an increase of up to 18% for one home and an increase of 5% or more in over 40 homes over the two-year time gap. Decreases in the Case Mix Index are capped at 5% per year, as the Ministry

Figure 22: Base Level-of-Care Per Diem Funding Envelopes, April 1, 2023

Source of data: Ministry of Long-Term Care

Funding Category or Envelope	Coverage	Per Diem Rate ($ per resident, per day)
Nursing and Personal Care[1]	• Direct-care staff • Supplies and equipment to provide care	105.96
Program and Support Services	• Program staff • Equipment related to programs • Therapies provided to residents	12.48
Nutritional Support[2]	• Raw food • Nutritional supplements	12.07
Other Accommodations[3]	• Housekeeping services • Building and property operations and maintenance • Dietary services • Laundry and linen • General and administrative services	57.65
Total		**188.16**

Note: The per diem amounts do not include each home's allocation of an additional amount, called the global per diem. Long-term care homes can use the surplus funds within each envelope to balance expenditures across envelopes, as needed. Some restrictions apply (for example, homes cannot reallocate surplus funds from any envelope to the Other Accommodations envelope).

1. The per diem for each home is adjusted by the Case Mix Index, which represents the average acuity of the home's residents in a given year. Only a portion of the per diem ($103.80 per resident, per day) is subject to the adjustment.
2. Excludes costs related to other food programs and the cost of food preparation.
3. Includes $0.37 for Quality Attainment Premium funding, which is subject to full recovery if homes have not met the accreditation requirements.

has imposed a "stability floor" to minimize the impact and prevent homes from being financially penalized excessively in any one year. Based on the current Level-of-Care per diems (see **Figure 22**), a 1% difference in the Case Mix Index is equivalent to a $1.04 difference in funding per resident, per day. For a 100-bed home, an 18% increase in the Case Mix Index translates to an increase of about $680,000 in annual Level-of-Care funding. The fluctuations we observed illustrate the need to use more current information to determine funding for individual homes.

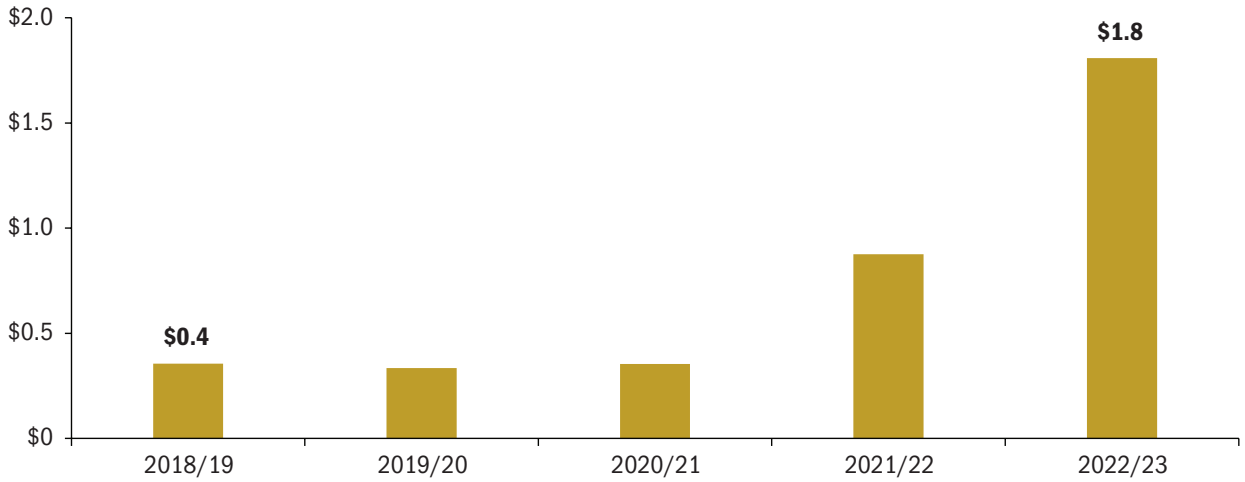
In addition to not reflecting the current care needs of residents, stakeholders have expressed concerns that the existing funding model could inadvertently provide disincentives for homes to improve resident care and outcomes. To illustrate, if a home implements effective programs or practices that improve residents' quality of services and life, the residents' acuity may decrease accordingly. This means that the home's Case Mix Index would also drop, which in turn would reduce funding from the Ministry. The unintended consequence is that the home may obtain less funding as a result of improving care to its residents. In order to maintain or increase funding, homes would not have an incentive to improve resident care and outcomes. We noted from our visits to homes and from stakeholder interviews that some homes have hired consultants to help them optimize their Case Mix Index in order to maximize their funding.

We note that these concerns—the lack of timeliness and the operation of the CMI as a disincentive—were also identified in the 2020 Staffing Study carried out by the Ministry. The Ministry is evaluating its funding model and expects a technical advisory group to propose recommendations by late 2023 for its consideration.

4.8.2 Long-Term Care Homes Faced Barriers in Navigating and Accessing Funding Initiatives

Aside from Level-of-Care funding (see **Section 4.8.1**), the Ministry provides additional funding to long-term care homes through a broad range of funding initiatives directed at specific issues and expenses of homes. The Ministry's direct funding initiatives have increased by more than 400% over the past five years, rising from $0.4 billion in 2018/19 to $1.8 billion in 2022/23, excluding funding related to the COVID-19 pandemic (see **Figure 23**). However, navigating through and accessing these initiatives is difficult and administratively burdensome for homes, which could impede uptake and hence reduce the effectiveness, or defeat the purpose, of these initiatives.

Funding Information was Hard to Navigate



The Ministry currently has over 40 direct funding initiatives. We found that there is neither comprehensive funding information nor a single authoritative listing of funding initiatives available to long-term care homes. Although these initiatives are communicated to homes at their inception and funding documentation can be found on the Ministry's long-term care homes portal (ltchomes.net), relevant information is embedded in a large number of other announcements, correspondence and technical documents, which complicates access. Some homes we visited indicated that the large number of initiatives and the lack of centralized, organized information makes it difficult to navigate through the information, and also difficult to determine whether specific initiatives are still in effect.

Fund Administration was Complex

Some of the over 40 direct funding initiatives from the Ministry are claims-based or require an application for funding. For most of the initiatives though, the Ministry allocates funds to homes without requiring an application. However, to use the allocated funds, homes must first determine whether they meet the eligibility requirements for each funding initiative, and then must maintain the required documentation and identify the reporting requirements specific to each initiative in their annual filings with the Ministry. If a home does not meet all of the requirements, the Ministry will claw back the funding after

Figure 23: Provincial Funding Provided for Long-Term Care Through Direct Funding Initiatives, 2018/19–2022/23 ($ billion)

Source of data: Ministry of Long-Term Care

Note: The figure includes initiatives funded by Ministry of Long-Term Care, except those related to COVID-19 pandemic from 2019/20 to 2022/23.

reconciliation and settlement, which will be years later (see **Section 4.8.3**).

Given that each funding initiative has its own eligibility criteria, timeline, documentation and reporting requirements, homes must invest considerable time and effort to access these funds. We heard from long-term care homes as well as stakeholder groups about the complexity of this funding system and the administrative burden it imposes, with smaller homes being affected the most as they do not have the same amount of administrative resources as the larger or chain-operated homes.

Funding Initiatives Had Limitations and Uptake Was Unknown

We found that the Ministry has not consistently analyzed the uptake of its funding initiatives to determine which homes have benefited from initiatives, which ones have not, and why. Such analysis is necessary to help the Ministry determine whether the initiatives have met their intended purposes (providing homes in need with additional funding) and what are the barriers, if any, that impede homes from taking advantage of the Ministry's initiatives. The Ministry advised that one impediment in carrying out such an analysis is the delay in the reconciliation and settlement process with long-term care homes (see **Section 4.8.3**).

Through our interviews with homes and examination of initiative policies or documentation, we observed potential design limitations in certain funding initiatives that have impeded homes from benefitting from the funds. For example:

- The **High Intensity Needs Fund** is a claims-based program designed to provide additional funding for residents with acute or intensive care needs. We examined Ministry records for the fund and found that, for the five years from April 2018 to March 2023, the Ministry turned down 24% of the amounts claimed by homes. For over half of the claims that were turned down, the reason was that homes did not fill out the forms correctly. This was confirmed in our discussions with homes, which indicated that their funding requests were rejected for not having the form filled out correctly, though the criteria applied by the Ministry appeared to be inconsistent (for example, a form could be filled out in the same way, but get rejected or approved on separate occasions).
- The **Resident Health and Well-Being Program** provides funding to homes to enhance resident access to social support services. At the time of the announcement, only three months remained in 2022/23. A home that did not have existing staff for this function would need to hire the person within three months (that is, before year-end), as otherwise the amount would be clawed back by the Ministry. The short turnaround time had limited the ability of homes to use the fund for its first year.
- The **Nurse Practitioner Initiative** was introduced to provide additional funds for homes to hire nurse practitioners. The initiative required homes to hire first and then apply for funding. We heard from stakeholders that homes did not want to incur the financial risk of hiring staff when funding to pay for the staff was uncertain. We note that the Ministry added additional flexibility for homes for this initiative in its second year.
- The **Local Priorities Fund** provides funding to certain homes for the costs of specialized staff, equipment and services needed to support individuals requiring specialized care. A home informed us that, although its application for funding to purchase equipment was approved, it could not use the full approved amount because equipment could not be obtained within the short time frame permitted by the funding policy.

Since 2020/21, the Ministry has increased its funding in long-term care to support homes in improving their quality of care, with the largest amount invested in staffing-related initiatives. Timely analysis of the utilization of funding initiatives is important for the Ministry to assess whether the funds are effectively

addressing the staffing issues in individual homes and across the sector (refer to **Section 4.1** and **Section 4.2** for staffing issues).

4.8.3 The Ministry Was Almost Five Years Behind in Settling Finances with Homes

Through Ontario Health, the Ministry advances funds to homes based on estimates. To determine the actual amount of funding for which a home is eligible, the home must submit to the Ministry an audited annual report that provides detailed information on its actual revenue and expenditures for the year. The Ministry undertakes a reconciliation of this information and then either asks the home to pay back any overpayment or provides additional funding to the home in the case of underpayment. Timely settlement would help homes manage their cash flow, especially in cases where the home is owed money.

However, we found that the Ministry was significantly behind in reconciling and settling with long-term care homes. As of July 2023, the Ministry had only fully completed reconciliations up to calendar year 2018. This has resulted in a delayed recovery of approximately $30 million from homes due to overpayment and a delayed payout of about $3 million to homes due to underfunding. The Ministry advised that it has hired four additional staff to address the backlog and intends to complete all reconciliations up to 2021 by March 2024. As of early October 2023, the Ministry indicated that it had completed almost all reconciliations for the 2019 calendar year, but those from 2020 onwards were yet to be done.

RECOMMENDATION 10

To help ensure that funding aligns with resident care needs and is accessible to long-term care homes, we recommend that the Ministry of Long-Term Care:

- complete its evaluation of the Level-of-Care funding model, with participation from homes, and implement changes to ensure that funding is based on current resident care needs and provides incentives to improve residents' condition;
- analyze the uptake of various direct funding streams, consult with homes to determine why certain homes are not taking advantage of these funding programs, and identify ways to make the programs more accessible to all homes in need; and
- clear the backlog of annual reconciliations and settlements.

MINISTRY RESPONSE

The Ministry of Long-Term Care (Ministry) acknowledges the Auditor General's recommendation to complete its evaluation of the Level-of-Care funding model, analyze the uptake of various direct funding streams, and clear the backlog of annual reconciliations and settlements.

The Ministry is continuously monitoring the operating funding model and exploring opportunities to improve how the model contributes to improving the quality of resident care. The Ministry is holding consultations with a technical advisory group comprising long-term care homes and other sector stakeholders to review operating funding, and will put forward recommendations for consideration to ensure current resident care needs are being met. Additionally, the advisory group will develop recommendations related to funding streams such as the High Intensity Needs Fund. This work will inform program changes intended to ensure that programs are accessible to those who need it.

The Ministry continues to make significant investments of up to $4.9 billion in staffing and specialized supports to complement the ongoing investments in the Level-of-Care funding model. In addition, the Ministry is exploring, in conjunction with the Canadian Institute for Health Information (CIHI), the potential implementation of the new interRAI Long-Term Care Facility (LTCF) instrument in Ontario long-term care homes. The new interRAI (LTCF) is expected to reduce the

administrative burden and improve the collection of resident care data. The Ministry will work with partners to explore opportunities to ensure funding is based on more recent resident care data and intends to undertake a review of its staffing funding lines to streamline and clarify them. Consideration will also be given to appropriate funding flexibility to support the hiring of more staff into the long-term care sector.

The Ministry is also making significant progress in expediting the annual reconciliation process to clear the backlog, and is committed to enhancing the timeliness of this work going forward.

4.9 Accountability Framework Was Not Clear to Ensure Effective Oversight of Long-Term Care Homes

The Ministry of Long-Term Care (Ministry) and Ontario Health have shared funding and accountability authorities for long-term care under the *Connecting Care Act, 2019*. The accountability framework is outlined in the accountability agreement between the Ministry and Ontario Health, under which Ontario Health has the general obligation to manage the long-term care system and home performance, provide and reconcile funding, and implement provincial priorities. However, we found that the actual authorities of Ontario Health in relation to the long-term care sector are limited, and the oversight of long-term care homes' performance could be enhanced.

4.9.1 Not All Key Indicators Had Targets

Ontario Health signs service accountability agreements with long-term care homes, as required under the *Connecting Care Act, 2019*. The accountability agreements hold homes accountable for operational, performance and funding expectations. However, we found that these agreements do not include targets for most of the indicators.

The service accountability agreements identify nine indicators, which are grouped into three categories (**Figure 24**). Targets, however, are only set for performance indicators that measure the home's financial

Figure 24: Long-Term Care Home Key Indicators

Source of data: Ontario Health

Category	Indicator	Type of Indicator	Target
Organizational Health and Financial	Debt service coverage ratio	Performance	1
	Total margin	Performance	0
Co-ordination and Access	Percent resident days—Long stay	Explanatory	n/a*
	Wait time from determining eligibility by Home and Community Care Support Services to receiving response from long-term care home	Monitoring	n/a*
	Long-term care home refusal rate	Explanatory	n/a*
Quality and Resident Safety	Percentage of residents who fell in the last 30 days	Monitoring	n/a*
	Percentage of residents whose pressure ulcers worsened	Monitoring	n/a*
	Percentage of residents on antipsychotics without a diagnosis of psychosis	Monitoring	n/a*
	Percentage of residents in daily physical restraints	Monitoring	n/a*

* No targets have been set for these indicators.

health. The agreement describes the remaining indicators as monitoring or explanatory in nature, hence no targets have been set. These monitoring or explanatory indicators include measures of the home's performance in relation to quality of care and resident safety.

We noted that Ontario Health publicly reports on several measures of long-term care home performance (refer to **Section 4.5.3**). An additional list of priority indicators is also recommended to long-term care homes for incorporation into the homes' quality improvement plans. However, the absence of targets for key indicators limits Ontario Health's ability to effectively monitor and hold homes accountable for their performance in critical areas, such as care quality and resident safety.

RECOMMENDATION 11

To help ensure that long-term care homes are meeting operational, performance and funding expectations, we recommend that Ontario Health:

- update the indicators in its service accountability agreements with long-term care homes to include performance targets—especially in the areas of quality of care and resident safety; and
- monitor long-term care home performance against targets, with timely follow-up of homes that fail to meet the targets or whose performance has consistently declined.

ONTARIO HEALTH RESPONSE

Ontario Health acknowledges the Auditor General's recommendation. Ontario Health will review and establish performance targets and corridors for appropriate and relevant quality and safety indicators as part of the next Long-Term Care Service Accountability Agreement refresh cycle, planned for implementation on April 1, 2025. Ontario Health will also introduce by April 1, 2025, a mechanism to identify and monitor long-term care homes with performance outside the established corridors.

4.9.2 Key Players' Actual Responsibilities Did Not Match Their Defined Roles in Accountability Agreement

Ontario Health Had Limited Authority for Funding

The Ministry and Ontario Health have shared funding and accountability authorities for long-term care under the *Connecting Care Act, 2019*. The accountability framework is outlined in the accountability agreement between the Ministry and Ontario Health, under which Ontario Health has the general obligation to provide and reconcile funding. While Ontario Health is technically the primary source of funding for long-term care homes, most decision-making and administration for both Level-of-Care and special initiative funding are performed by the Ministry.

The Ministry informs Ontario Health of the amount to advance to homes, and performs reconciliations to validate home spending and determine settlement amounts (that is, the amount to recover from homes for overpayment, and vice versa), as described in **Section 4.8.3**. For the few funding programs that Ontario Health is responsible for administering directly (for example, the Local Priorities Fund and Behavioural Supports Ontario), Ontario Health would maintain the service accountability agreements with applicable homes, but funding decisions are ultimately subject to the Ministry's approval. With little authority and involvement in the funding process, Ontario Health is not in a position to hold homes accountable for meeting funding expectations.

Performance Goals Were Limited for Ontario Health

The *Connecting Care Act, 2019* requires that the accountability agreement between the Ministry of Long-Term Care and Ontario Health include performance goals and objectives for Ontario Health, as well as standards and targets to measure the agency's performance. Our examination of the current accountability agreement found that it has only one performance

indicator, which is "Wait time for long-term care home placement." While Ontario Health contributes to the overall system performance on wait time, long-term care home assessment and placement is an activity primarily performed by Home and Community Care Support Services. The accountability agreement does not have any other performance indicators for Ontario Health.

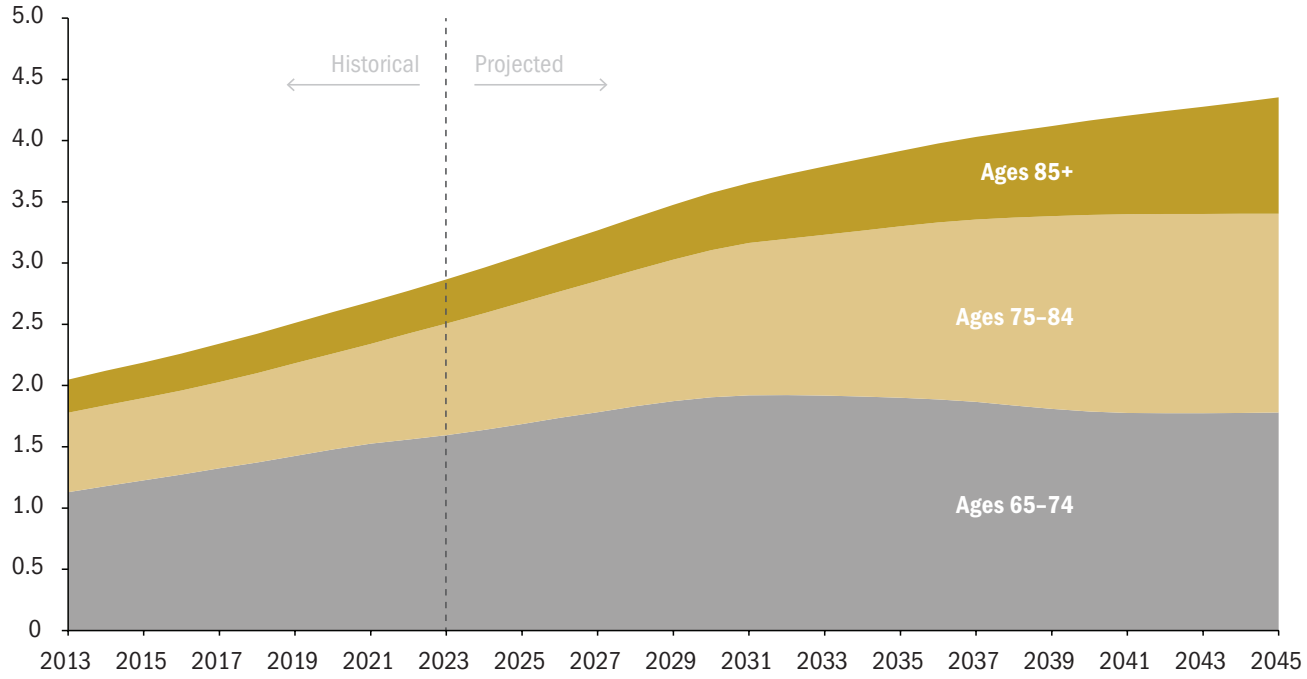
RECOMMENDATION 12

To help ensure that oversight accountabilities are clearly defined and executed, we recommend that the Ministry of Long-Term Care work with Ontario Health to:

- review and update the accountability agreement between the two parties to ensure that key oversight accountabilities (for example, funding and performance monitoring) are clearly defined and that the framework is supported by authorities and processes; and
- establish performance goals, objectives and targets to measure Ontario Health's performance in fulfilling its accountabilities defined in the agreement.

MINISTRY RESPONSE

The Ministry of Long-Term Care (Ministry) acknowledges the Auditor General's recommendation to review and update the accountability agreement, and to establish performance goals, objectives and targets to measure Ontario Health's performance.



The Ministry has established a strong collaborative relationship with Ontario Health, which is critical to addressing the long-standing and systemic challenges facing the long-term care sector so that every resident can experience the best possible quality of life, supported by safe, high-quality care. The Ministry is committed to further strengthen that partnership. Specifically, the Ministry and Ontario Health have initiated the process to refresh the Ministry of Long-Term Care–Ontario Health Accountability Agreement to reflect evolving and maturing roles of both parties and to ensure responsibilities and accountabilities are clearly defined. As part of this work, the Ministry is working with Ontario Health to review and update the performance indicators used to measure and monitor Ontario Health's performance.

ONTARIO HEALTH RESPONSE

Ontario Health acknowledges the Auditor General's recommendation. Ontario Health is working with the Ministry on a review and update of the Ministry of Long-Term Care–Ontario Health Accountability Agreement to include clearer definition of accountabilities that are supported by authorities and processes. Indicators and targets for measuring Ontario Health's performance in fulfilling its accountabilities outlined in the Accountability Agreement will be part of the review and update process. The 2024–27 Accountability Agreement is targeted for completion by March 31, 2024.

Appendix 1: Age Distribution of Seniors in Ontario, 2013–2045 (million)

Sources of data: Statistics Canada and Ministry of Finance

Appendix 2: Audit Criteria

Prepared by the Office of the Auditor General of Ontario

1. Long-term care homes have stable and adequate staffing, an appropriate mix of resources and well-established programs to ensure that residents are safe and have high-quality care and services that meet their needs.
2. Long-term care homes have effective hiring and training processes to ensure that management and staff are competent, with the right qualifications and training to address the needs of residents.
3. Residents of different long-term care homes are subject to equitable levels of care and services, regardless of the size, location and type of home (for-profit, not-for-profit, or municipal).
4. Long-term care homes have adequate procedures and systems in place to ensure that medications are stored and disposed safely, administered as prescribed and accurately accounted for.
5. Funding methods adequately address the different needs among long-term care homes and residents and respond to changes in needs on a timely basis. Also, processes are in place to validate the eligibility of home expenditures.
6. Meaningful performance measures and analytics are established to monitor home activities and identify areas for continuous improvement. Results are publicly reported and timely corrective actions are taken when issues are identified.

Appendix 3: Long-Term Care Homes We Visited

Prepared by the Office of the Auditor General of Ontario

Type	Name	Size[1]	City/Town
For-profit	Muskoka Shores Care Community	Large	Gravenhurst
	Cheltenham Care Community	Large	North York
	Roberta Place	Medium	Barrie
	Park Lane Terrace	Medium	Paris
	Port Perry Place	Medium	Port Perry
	Creedan Valley Care Community	Small	Creemore
	King City Lodge Nursing Home	Small	King City
Not-for-profit	Kensington Gardens	Large	Toronto
	West Park Long Term Care Centre	Large	Toronto
	Providence Manor	Large	Kingston
	Ukrainian Canadian Care Centre[2]	Medium	Etobicoke
	Villa Colombo Seniors Centre	Medium	Vaughan
	Yee Hong Centre – Scarborough McNicoll[2]	Medium	Scarborough
Municipal	Seven Oaks	Large	Scarborough
	The John M. Parrot Centre	Large	Napanee
	Tall Pines Long Term Care Centre	Medium	Brampton
	Elgin Manor	Small	St. Thomas
First Nations	Iroquois Lodge Nursing Home[2]	Small	Ohsweken

1. Small home is 96 beds or fewer; medium home is more than 96 but fewer than 161 beds; large home is 161 beds or more.
2. Home caters to residents of a specific culture.

Ministry of Natural Resources and Forestry

Management of Aggregate Resources

1.0 Summary

From highways and subway tunnels to hospitals, schools and houses, aggregates—such as sand, gravel, stone and rock—are essential for building much of Ontario's infrastructure. These natural materials are extracted from the earth's surface, with loose aggregates dug out from pits, and solid bedrock materials blasted from quarries.

The extraction of aggregates can fundamentally transform landscapes, temporarily or permanently altering features such as woodlands, wetlands and farmland. The ongoing operation of a pit or quarry, as well as the accompanying heavy-duty truck traffic, can also have a number of negative impacts—particularly when close to communities—including noise, vibration (from blasting) and air pollution (such as dust and particulate matter).

The Ministry of Natural Resources and Forestry (Ministry) is responsible for administering the *Aggregate Resources Act* (Act), which was enacted in 1990. Those wishing to extract aggregates must obtain either a licence (to extract on private land) or a permit (to extract on Crown land) from the Ministry. Approval holders must inspect their operations and self-report on their compliance to the Ministry annually, and must pay an annual extraction fee on a per-tonne basis. Approval holders must also fully rehabilitate their sites once they have finished extraction. The Ministry has delegated a number of responsibilities to The Ontario Aggregate Resources Corporation (TOARC), including collecting production reports and extraction fees from aggregate operators, and rehabilitating legacy pits and quarries that operated before the Act came into effect and were abandoned.

Our audit found that the Ministry is falling short in balancing its competing roles of facilitating the extraction of aggregate resources and minimizing the impacts of aggregate operations, particularly through its role in regulating the industry to ensure approval holders comply with all necessary requirements. The Ministry has made recent progress to streamline and expedite the approvals process, but we found that this improvement has come at a cost to its inspection, enforcement and oversight activities.

The following are some of our most significant observations:

Inspections

- **The Ministry had a significant shortage of experienced aggregate inspectors, with challenges in recruitment and retention.** Ministry inspections are key to ensuring that aggregate operators are meeting their approved operating conditions, rehabilitating their sites as required, and properly self-reporting any non-compliance issues. Despite the important role aggregate inspectors serve as the Ministry's "eyes on the ground," we found that there was a lack of

experienced staff. We determined that, as of May 31, 2023, there was a total of 34 designated aggregate inspectors Ministry-wide, with an average of two aggregate inspectors per district. Seven districts each had a single designated inspector, and two districts had none. A further 19 staff were being trained to be designated inspectors as of November 2023. Furthermore, we found that the inspectors lacked experience. As of May 31, 2023, almost half (41%) of the 34 designated aggregate inspectors had held their designation for less than one year. We heard from environmental, community and resident groups that they have difficulty trying to contact inspectors when they have concerns; similarly, aggregate operators raised concerns about the level of technical knowledge held by inexperienced inspectors when they come on site.

- **The limited number of inspectors has contributed to declining and low inspection rates.** We found that inspection rates decreased by 64% between 2018 and 2022. While some decrease can be attributed to paused activity in 2020 and 2021 during the COVID-19 pandemic, the trend began prior to 2020 and continued in 2022, despite there being no stay-at-home restrictions that year. The four district offices we reviewed in depth had inspected only 35% of the licensed or permitted sites in our sample within the previous five years. Further, based on our analysis of 2022 inspection data, we found that three of the four offices had each inspected less than 5% of operations in their jurisdiction in that year. The Ministry's failure to conduct inspections on a regular basis, or at all, increases the risk that negative social and environmental impacts from non-compliance issues at aggregate sites go unreported and undetected. As well, it signals to both the regulated community and concerned stakeholders that there are few consequences associated with non-compliance.

Non-Compliance and Enforcement

- **Non-compliance within the aggregate industry remains high.** Over the past five years, the percentage of inspected sites deemed satisfactory by Ministry inspectors has remained low, fluctuating between 36% and 52%. During this period, inspectors filed 1,750 inspection reports that identified operational non-compliances, such as extracting below the approved depth or failing to conduct progressive rehabilitation. As well, TOARC reports certain violations under the Act to the Ministry, including operators' failures to submit annual production reports, pay required annual fees, or comply with extraction limits. At the end of each calendar year, TOARC reports the number of these violations that remained outstanding. The number reported by TOARC increased 74% from 206 in 2018 to 359 in 2022; across the five years, there were 1,654 violations.
- **Despite the high rate of non-compliance, the Ministry rarely pursued charges.** When inspectors identify non-compliance issues they have a range of options, such as education and outreach, to encourage voluntary compliance or issuing a warning. Alternatively, they can take additional steps such as referring a case to the Ministry's Enforcement Branch to investigate and potentially issue a charge. Between 2018 and 2022, inspectors made 26 referrals, representing less than 1% of the over 3,400 violations identified during this time. While not all instances of non-compliance warrant enforcement action, Ministry policy states that charges should be pursued when operators significantly exceed their allowable extraction tonnage. Yet, we noted three companies that exceeded their allowable extraction volume by over 1,000%, but were not referred to the Enforcement Branch, and so were not investigated or charged. We also found that over the past five years, the Ministry issued only two fines, for a combined total of $1,230, for unpaid fees. This represented 0.4% of the total fees outstanding in December 2022.

- **The Ministry did not enforce self-reporting requirements.** Every year, aggregate approval holders must inspect their operations to assess whether they comply with operating and progressive rehabilitation requirements, and submit a compliance assessment report to the Ministry by September 30. The penalty for failing to do so is an immediate and automatic deemed suspension of their operations. However, we found that these reports were often not submitted on time, and that the Ministry did not enforce the suspension for operators that failed to submit reports on time or at all. We reviewed records from four Ministry offices and found that, as of May 2023, 25% of all 1,030 operators within the offices' jurisdictions had not submitted a 2022 report more than seven months after the due date. Apart from sending a letter notifying non-compliant operators that they were suspended, none of the offices did anything more to enforce the suspension. We found 11 out of a sample of 80 sites continued to produce aggregate in 2021 despite never having submitted a self-assessment report for 2020, which should have resulted in an automatic suspension.
- **Fees to extract aggregates are likely too low to cover the costs needed to effectively administer the program.** The Ministry has a goal of achieving full cost recovery for its aggregate program. However, in 2019, the Ministry estimated that the annual extraction fees paid by operators would result in $7.96 million in annual revenue, covering approximately 80% of the program's costs at that time. The Ministry restructured the program in 2020, but as of 2023, it still could not determine its current program costs. Stakeholders have expressed concerns about the Ministry's lack of capacity to enforce compliance, with some industry members stating that the Ministry's limited enforcement efforts contribute to a lack of public trust and opposition to aggregates projects. This concern is significant enough that organizations representing both aggregate operators and municipalities (a key consumer of aggregates) have expressed support for higher aggregate fees to pay for increased enforcement.

Final Rehabilitation

- **The Ministry did not have processes in place to ensure that sites are promptly rehabilitated, and returned to productive use, after extraction is complete.** Under the Act, aggregate pits and quarries must be rehabilitated after extraction has ceased. While many aggregate operators properly rehabilitate their sites, we found 1,524 sites that have sat dormant (without reporting any aggregate extraction) for at least 10 years. These sites represent more than 25,000 hectares of land, approximately the size of Brampton, Ontario. There may be valid reasons why a site sits dormant for multiple years, other than the fact that the pit or quarry has been fully extracted. However, for sites that have sat dormant for many years, there is a risk that those sites have, in fact, finished extraction and operators are avoiding rehabilitation efforts. Allowing sites to remain dormant for long periods without final rehabilitation violates the notion that aggregate extraction is an interim use of land, one of the key tenets of aggregate management in the Provincial Policy Statement.

Supply and Demand for Aggregates

- **The Ministry has not provided the public with complete and accurate information on the supply and demand for aggregates.** Absent such information, many stakeholders have concluded, based on the limited available data, that there is an oversupply of aggregates already approved for extraction. This contributes to opposition to proposals for new or expanded pits and quarries. To assist with its understanding of supply and demand, the Ministry has commissioned several studies over the years. The most recent study from 2016 estimated that the Greater Golden Horseshoe region had reserves of 3,337 million tonnes

of unextracted aggregates in licensed pits and quarries, and annual demand of 111 million tonnes. However, the consultant who conducted the study cautioned against viewing the estimates as a realistic indication of supply, noting that the data was based on limited and outdated information. In January 2023, the Ministry commissioned an updated supply and demand study, which uses a voluntary and anonymous survey of industry members for information on their supply of aggregates. However, there is no mechanism to verify the anonymous data, nor a plan to corroborate it through field verification, which could leave the Ministry with potentially inaccurate data. Accurate data is important to inform Ministry decisions on managing the province's aggregate resources, as well as to foster more informed discussions and potentially reduce conflict among stakeholders.

Recycled Aggregate

- **Low fees for extracting virgin material provide little incentive to use recycled aggregate.** Recycled aggregate can, if of sufficient quality, be used in place of virgin aggregate. Its use can reduce the need for new or expanded pits and quarries and the associated environmental and social impacts of extracting virgin aggregate. Charging fees to extract virgin aggregate can increase its cost, and so help make recycled aggregate more cost-effective by comparison. While Ontario charges fees only for extracting virgin aggregate, and not for producing recycled aggregate, we found that the fees were too low to provide a meaningful financial incentive to use recycled aggregate instead. By contrast, the United Kingdom (UK) has a much higher extraction fee, equivalent to about $3.20 per tonne for 2023, approximately 14 times higher than what Ontario currently collects ($0.23 per tonne). The explicit objectives of the UK fee are to address the environmental costs associated with quarry operations, cut demand for virgin aggregate, and encourage the use of alternative materials where possible. While numerous factors may contribute to the UK's higher recycling rates, it is noteworthy that the use of recycled aggregate in the UK (roughly 25% of total aggregate use) is more than triple Ontario's estimated 7%.

Databases

- **Outdated information systems made it difficult for Ministry staff to execute their duties and for applicants to track their submissions.** We found the Ministry used paper records, five different information systems, and Excel spreadsheets to deliver various aspects of the aggregate resources program. The outdated databases and lack of digital records made it challenging for Ministry staff to execute their duties. For example, the 30-year-old system that staff used to issue approvals cannot track the progress of applications for licences, permits, or approval amendments. A separate database used by staff at the district level to record inspection reports did not record or track the use of other compliance tools, such as warnings or rehabilitation orders, or the status of compliance. The Ministry did not have a centralized, integrated database that contained all information about each aggregate pit and quarry, including approval documents and compliance and enforcement data.

This report contains 18 recommendations, with 31 action items, to address our audit findings.

Overall Conclusion

Our audit found that the Ministry did not have effective systems and processes in place to ensure compliance with the *Aggregate Resources Act* and aggregate-related

regulations, policies and approvals, nor to oversee aggregate development and operations in a manner that minimizes adverse impacts on the environment.

The limited number of experienced inspectors who play a front-line compliance role, and the infrequency with which aggregate operations are inspected, raise significant concerns that non-permissible activities will remain unchecked—perhaps for years on end. The intention of the self-compliance approach is to encourage operators to proactively self-identify, disclose and rectify any issues of non-compliance. The success of this approach rests upon the premise that operators who fail to self-disclose issues of non-compliance (that are subsequently identified through complaints or Ministry inspections) will be more harshly penalized than those that do. Through our audit, however, we have found that this was not the case.

We also found that the Ministry was not ensuring that land from which aggregates are fully extracted is rehabilitated effectively and in a timely manner. The number of sites that have remained dormant and unrehabilitated for more than 10 years, and in some cases for over two decades, challenges the notion within the Provincial Policy Statement that aggregate extraction is an interim use of land. This has also given rise to public concerns that more than enough aggregate sites have already been approved, and there is no need to issue more approvals for extraction. Also feeding into these concerns, the Ministry did not have reliable data about supply and demand, further compounding perceptions of an oversupply. Finally, we found that the Ministry was missing opportunities to increase the use of recycled aggregate, which can be an effective way to reduce the need for new or expanded pits and quarries and limit impacts on the environment.

OVERALL MINISTRY RESPONSE

The Ministry of Natural Resources and Forestry (Ministry) thanks the Auditor General for this report and its recommendations. The Ministry plays an important role in balancing the environmental impacts with the economic development opportunities created by resource extraction and is committed to working collaboratively with First Nations and Indigenous communities, municipalities, the public and the aggregate industry to ensure that systems are in place to manage and regulate these activities.

The findings of this report align with the path the Ministry is on to modernize and improve aggregate resource management in Ontario. The Ministry made legislative and regulatory changes under the *Aggregate Resources Act* and established four new Aggregate Resources of Ontario Provincial Standards between 2019 and 2022. Approval functions were centralized in 2020, with additional staffing capacity added in 2022, to ensure consistent and efficient delivery of aggregate licensing and permitting functions. The observations and recommendations contained in this audit align with actions under way to renew the Ministry's compliance function and to increase field presence.

2.0 Background

2.1 Overview of Aggregates in Ontario

Aggregates is a broad term for the group of natural materials—sand, gravel, clay, stone and rock—that are extracted from the earth's surface. They are excavated from either a pit or a quarry, depending on their type: loose aggregates (such as sand and gravel) are dug out from pits; solid bedrock materials (such as granite and limestone) are removed from quarries through blasting (see **Appendix 1** for a glossary).

Aggregates are a core material of many construction products. For example, limestone is used to make cement, which is a key ingredient in concrete. Sand and gravel are also used to make concrete as well as asphalt pavement (see **Figure 1** for information on aggregate types and uses). Aggregates are essential for the construction of almost everything from major public

Figure 1: Types of Aggregates and Their Common Uses

Prepared by the Office of the Auditor General of Ontario

Type of Aggregates	Description	Common Uses
Extracted from pits		
Sand	Hard, naturally occurring granular rock material that is finer than gravel and coarser than dust.	To make concrete, asphalt pavement, mortar, plaster and glass.
Gravel	Small, naturally occurring stones and pebbles, or a mixture of sand and small stones.	Directly in driveways, walkways and decorative landscaping, and to make concrete and asphalt pavement.
Clay/Shale	Fine-grained, naturally occurring earthy material.	To make bricks and ceramics; also an ingredient in cement.
Extracted from quarries		
Bedrock	Naturally occurring deposits of hard, solid rock (such as granite, limestone and sandstone).	May be used, as slabs or blocks, for landscaping projects, home countertops and monumental buildings.
		More commonly used to create crushed stone, which is used to make concrete and asphalt pavement and generally any kind of base for construction, including building foundations, roads and driveways.

infrastructure projects, such as hospitals, schools, highways and subway tunnels, to smaller projects, such as roads, sidewalks, sewer pipes and homes. **Figure 2** provides examples of the amount of aggregates needed for various types of construction projects.

Ontario's growing population and the corresponding growth in new housing and infrastructure has resulted in high demand for aggregates, especially in the Greater Golden Horseshoe region around Toronto. To meet the high demand, Ontario produces the largest volume of aggregates of any Canadian province or territory. The most common types of aggregates produced in Ontario are sand, gravel and crushed stone. In total, 172 million tonnes of aggregates were extracted in Ontario in 2022. Aggregate extraction has increased, on average, by 3.2 million tonnes (2%) per year over the past 10 years (see **Figure 3** for aggregate extraction volumes from 2013 to 2022).

The most recent provincial estimate on the breakdown of how aggregates are used is from a 2016 consultant's report prepared for the Ministry of Natural Resources and Forestry. This report estimated that the majority (79%) of extracted aggregates from 2010 to 2014 was used for construction (such as for roads, homes and buildings). Another 19% was used for non-construction purposes (such as sand for glass and road ice control). The remaining 2% was exported to other provinces or countries as raw aggregates (see **Figure 4** for a breakdown).

2.1.1 Where Are Aggregates Extracted in Ontario?

The location of aggregate extraction is determined by two main factors. First, aggregates are only found where nature has deposited them. While Ontario is generally rich in aggregate resources, the types and quantity of available aggregates varies considerably around the province, depending on the geology and rock formation of the particular area. For example, southern Ontario's geology includes large areas of limestone, formed hundreds of millions of years ago, but the quality of bedrock for aggregate purposes varies by location. Thousands of years ago, retreating

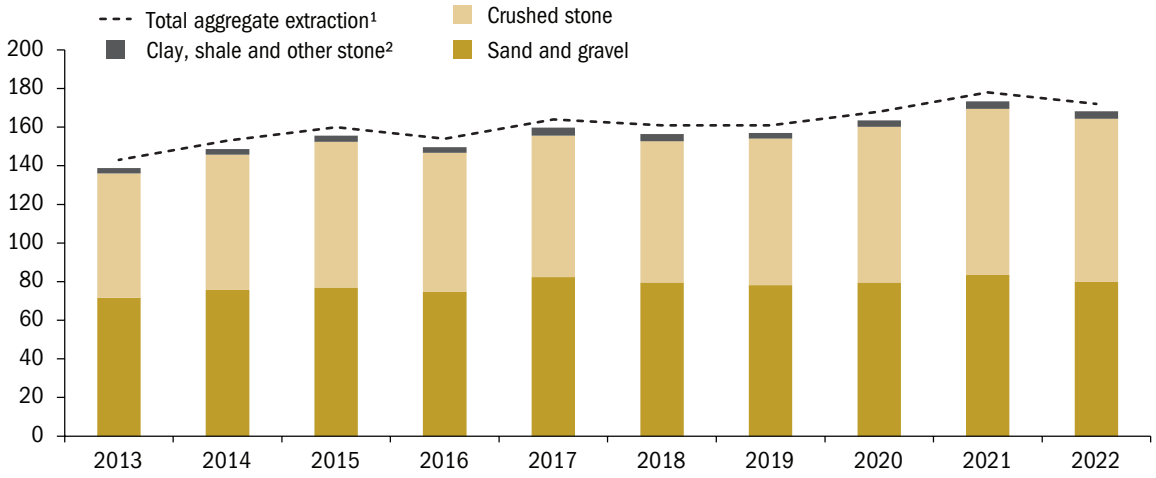


Figure 2: Examples of the Amount of Aggregates Needed for Various Construction Projects

Source of data: The Ontario Aggregate Resources Corporation; Ontario Stone, Sand & Gravel Association

Type of Project	Approximate Amount of Aggregates Required	
	Tonnes	Truckloads
Average-sized brick house	250	12
Average-sized school	13,000	650
Average-sized hospital	94,000	3,760
One kilometre of a four-lane highway	36,000	1,760
One kilometre of a subway tunnel	91,200	4,560

Figure 3: Total Aggregate Extraction[1] Volumes in Ontario, 2013–2022 (million tonnes)

Source of data: The Ontario Aggregate Resources Corporation

1. Total aggregate extraction includes all aggregates extracted in Ontario pursuant to either an aggregate licence (on private land in designated areas) or an aggregate permit (on Crown land), as well as the small volume (2.5% of total aggregates) that is extracted either on private land in undesignated areas or in forest pits on Crown land, both of which do not require a licence or permit (see **Section 2.2.1**).
2. Other stone includes slabs or blocks of rock/stone (such as granite, limestone, flagstone or marble) for uses such as ornamental surfacing of buildings, landscaping or countertops.

glaciers left behind abundant deposits of sand and gravel across many parts of this region.

Second, the location of aggregate extraction is dictated by where the aggregate product is needed. Aggregates are heavy and therefore expensive to transport long distances; they also contribute to greater pollution the farther they are transported given the dust, noise and vehicle emissions that come from trucking. As a result, the vast majority (90%) of all aggregates extracted in Ontario between 2013 and 2022 came from southern Ontario, close to where population growth and development pressures are greatest. See **Appendix 2** and **Appendix 3** for maps showing the locations and prevalence of extraction operations across Ontario.

2.1.2 Environmental and Social Impacts of Extracting Aggregates

The digging, blasting, processing and transporting of aggregate materials can cause a number of environmental and social impacts.

Aggregate extraction can fundamentally—and irreversibly—transform the landscape, which can affect important natural features on or near extraction sites. For example, aggregate operations can temporarily or

Figure 4: Estimated Breakdown of End Uses of Raw Aggregates in Ontario, 2010–2014

Source of data: Supply and Demand Study of Aggregate Resources Supplying the Greater Golden Horseshoe (2016)

End Use	% of Total Use
Construction projects	**79**
New roads and highways	31
New homes, condominiums and apartments	14
Non-residential buildings	12
Road and other construction repair	12
Other new infrastructure	10
Non-construction purposes (such as sand for road ice control, abrasive cleaners and glass products)	**19**
Export to other provinces or countries as raw aggregates	**2**
Total	**100**

permanently alter or destroy woodlands, grasslands, wetlands or farmland, which each serve important functions, such as providing wildlife habitat, drainage to prevent flooding, or productive soil in which to grow food. Further, while aggregate extraction itself is not a direct threat to water quality, it may pose a risk to local groundwater resources by exposing new pathways for pollutants (such as fuel used onsite) to flow into the groundwater. Aggregate extraction below the natural water line, which typically involves pumping out large volumes of water, may also have localized impacts on groundwater levels and flow patterns.

Although all aggregate sites are required by law to be rehabilitated (both progressively during operation while extraction continues elsewhere on the site, and fully after extraction is complete), some aspects of the landscape may be permanently altered. So, while certain natural features can be restored (such as recreating some wildlife habitat through planting), other features cannot. For example, aggregate extraction often results in a large depression that creates a new pond or lake, which can permanently alter the way water drains and refills the groundwater reserves.

In addition to the environmental impacts caused by the establishment of a pit or quarry, their ongoing operations have other impacts. The majority of extraction in the province occurs in southern Ontario, often near populated areas. Local residents of communities in proximity to aggregate pits and quarries frequently express strong concerns about noise and vibrations from extraction operations (especially from blasting) and the accompanying heavy-duty truck traffic, and about increased air pollution (such as dust and particulate matter) from both onsite operations and trucking. Siting pits and quarries farther from communities can reduce the impact of site operations on neighbouring residents, but can increase pollution and greenhouse gas emissions, as well as costs, when aggregate materials are transported greater distances to reach those communities.

Although the Province considers aggregate extraction an interim use of land, an aggregate site may remain open for decades. In some cases, sites have been operating for over a century. Because aggregate operations and their impacts can be so long-lasting, few people want to live near one. As a result, applications for new or expanded pits and quarries are often highly controversial.

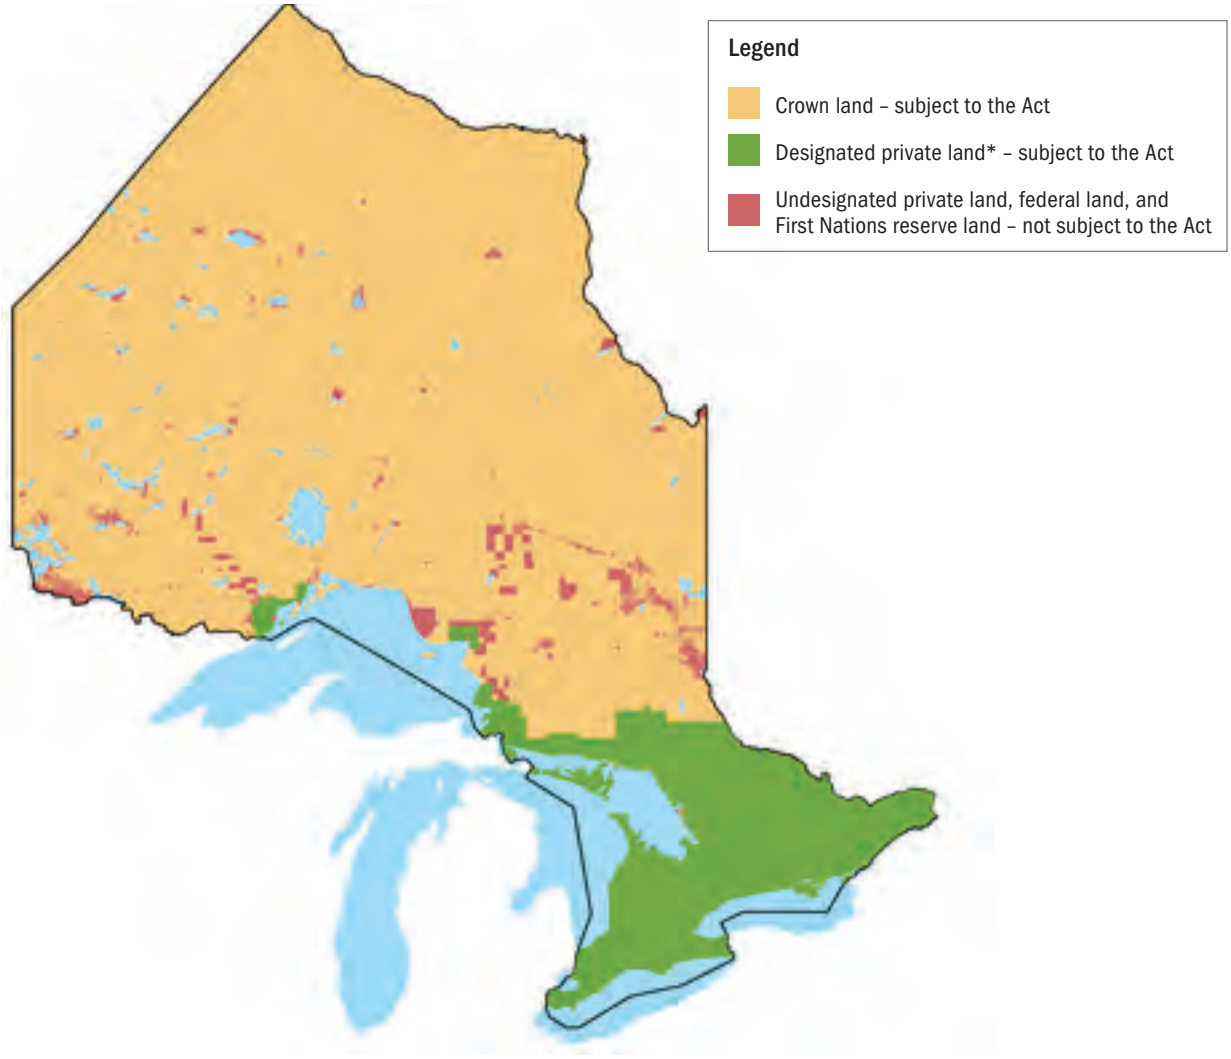
2.2 Regulation and Oversight of Aggregate Resources

The Ministry of Natural Resources and Forestry (Ministry) is responsible for regulating aggregate development in Ontario (see **Appendix 4** for an organizational chart of the divisions and branches involved). The Ministry's oversight of aggregates is guided by the *Aggregate Resources Act* (Act) and the general regulation (O. Reg. 244/97) under that Act.

The purposes of the Act are to:

- provide for the management of Ontario's aggregate resources to meet local, regional and provincial demand;
- regulate aggregate operations on both Crown and private land;
- minimize the adverse environmental impacts of aggregate operations; and
- require the rehabilitation of land from which aggregates have been excavated.

In essence, the Act sets out a dual role for the Ministry to support and facilitate aggregate extraction on the one hand, while also regulating the industry so as to minimize the negative impacts of that extraction to the extent possible.



Aggregate development in Ontario is also guided by other provincial laws and land-use plans (see **Appendix 5**). Most notably, according to the Provincial Policy Statement, aggregate extraction has primacy over other land uses, aggregates must be made available as close to market as possible, and demand for these resources does not have to be demonstrated. Similar to the *Aggregate Resources Act*, the Provincial Policy Statement also states that extraction should be conducted in a manner that minimizes negative impacts, and that sites must be rehabilitated in order to mitigate negative impacts and allow for future land uses.

2.2.1 Approvals for Extracting Aggregates

Subject to a few exceptions, anyone wishing to extract aggregates from land subject to the Act must obtain an approval from the Ministry. As seen in **Figure 5**, the Act applies to all provincial public (Crown) land and most private land except for a few small areas (mostly in Northern Ontario) that have not been designated; the

Figure 5: Provincial Area Subject to the *Aggregate Resources Act*

Source: Ministry of Natural Resources and Forestry

* Areas of the province identified under the *Aggregate Resources Act* regulation in which a licence is required to excavate aggregates from private land.

Act also does not apply to either federal or First Nations reserve land. In general, to extract on public land, applicants must obtain an aggregate *permit*; to extract on private land, applicants must obtain an aggregate *licence*. See **Figure 6** for a description of the approval types and the exceptions.

From 2012 to 2022, the Ministry issued an average of 40 new approvals per year, for a total of 261 new licences and 178 new permits issued over this period. By tonnage, 93% of aggregate extracted from 2012 to 2022 was on private land pursuant to a licence, with 4% extracted on Crown land pursuant to a permit; less than 3% was extracted pursuant to one of the exceptions (**Figure 7**). As approvals can remain valid indefinitely (unless revoked or surrendered), at the end of 2022, there were 6,015 valid approvals (3,573 licences and 2,442 permits) authorizing aggregate extraction in Ontario.

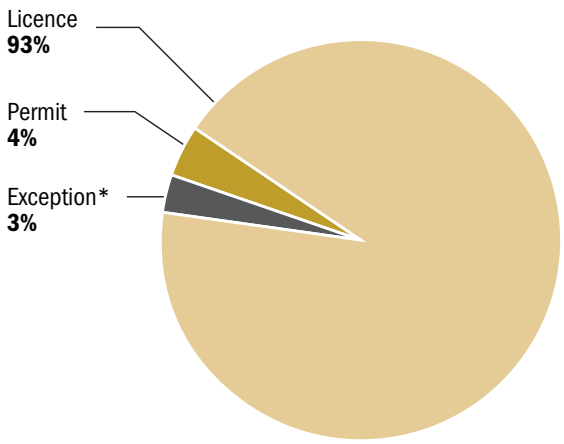
To obtain an approval for a new licence or permit, applicants must follow a prescribed process, as set out in **Appendix 6**. In general, this process begins with the applicant submitting a draft site plan and several technical reports to the Ministry (see **Appendix 7**); then, notifying and consulting with the public and relevant ministries, municipalities, conservation authorities, agencies and Indigenous communities; and, finally, attempting to address all comments and objections received.

Ministry staff then review all information in the application, as well as external comments submitted. The Ministry may also provide its own comments on applications. As part of the review process, Ministry staff also confirm that the applicant has fulfilled its obligations to ensure that the siting of the proposed operation complies with municipal zoning and provincial land-use plans (see **Appendix 5**). As well, staff may identify other approvals that may be required by the Ministry of the Environment, Conservation and Parks (see **Appendix 8**), based on the information provided in the application.

Upon completing their review, Ministry staff either recommend that the Minister issue or refuse the licence application, or, where there are unresolved issues, the Ministry may refer the licence application to the Ontario Land Tribunal for a decision. For permits, a director in the Regional Operations Division has delegated authority to issue or refuse the application.

If an approval holder wishes to later amend its site plan or approval document, the process varies depending on the type and complexity of the change sought (see **Appendix 9**).

Figure 6: Types of Approvals for Extracting Aggregates



Prepared by the Office of the Auditor General of Ontario

Location	Approval Type	Exceptions (subject to alternative types of approval)*
Crown land	**Aggregate Permit**	• Pits used for forest operations are regulated under the *Crown Forest Sustainability Act, 1994*.
Private land	**Aggregate Licence** • **Class A** authorizes the removal of more than 20,000 tonnes annually • **Class B** authorizes the removal of 20,000 tonnes or less annually	• Municipalities and the Ministry of Transportation may obtain a wayside permit instead of a licence for short-term (< 18 months) aggregate removal on private land for the sole use of road construction or maintenance. However, wayside permits are rarely used. • As of January 2022, farm businesses may excavate up to 3,000 cubic metres from a pit (depending on the type of aggregate) and individuals may excavate up to 300 cubic metres from a pit for personal onsite use without a licence if they register for permit-by-rule. Registrants must meet all pre-conditions (e.g., minimum distance from a well or water body) and follow all operating rules set out in the regulation. As of June 2023, four individuals had registered under the permit-by-rule exception.

* By tonnage, 2.5% of total extracted aggregate from 2013 to 2022 was extracted pursuant to one of the exceptions.

Figure 7: Breakdown of Aggregate Extraction by Approval Type, 2012–2022

Source of data: The Ontario Aggregate Resources Corporation

* Subject to alternative types of approval, such as a wayside permit or permit-by-rule.

2.2.2 Self-Inspection: Compliance Assessment Reports

All approval holders are required to inspect their operations annually to assess whether they comply with all operating and progressive rehabilitation requirements, and to document this assessment in a compliance assessment report. The report format is a simple checklist that lists all applicable operating and rehabilitation requirements that must be inspected and reported on, by answering yes or no to each item. For example, the form asks whether site entrances and exits are clearly marked and whether fencing has been installed to limit public access to the site. Approval holders must submit the report to the Ministry by September 30 each year.

If a self-report indicates an issue of non-compliance, the approval holder must immediately stop the contravention (if operational) and remedy the situation within 90 days. Under the Act, an approval is deemed to be automatically suspended if the report is not submitted on time, or if it discloses a contravention that is not remedied within 90 days of report submission. The suspended approval is deemed reinstated once the required report has been submitted, or the contravention has been remedied. If the contravention remains unaddressed, the Ministry may eventually revoke the licence or permit.

2.2.3 Ministry Inspection and Enforcement

Ministry inspections of aggregate operations are conducted by staff, called integrated resource management technical specialists (IRMs), who are spread across the Ministry's 36 offices (in 18 districts). Each IRM can work across several program areas (such as lands and waters, fish and wildlife, and forestry) in addition to aggregates. For an IRM to perform onsite aggregate inspections, they must be specifically designated under the Act to serve as an inspector by a district manager. During an aggregate inspection, inspectors are to assess compliance with all operating and progressive rehabilitation requirements as set out in the Act, the regulation, the approval holders' site plans, and any licence or permit conditions.

According to the Ministry, aggregate sites are to be randomly inspected, in accordance with the Ministry's risk-based compliance inspection model. Sites may receive higher priority for inspection if, for example, the site is newly approved, the licensee or permittee has failed a previous inspection, or complaints have been received.

Inspectors have several options to resolve non-compliance issues (see **Appendix 10**). They may begin with education and outreach to encourage voluntary compliance. Depending on various factors, including the type and seriousness of the violation and history of non-compliance, they may take additional steps, such as issue a warning or an order for compliance. Alternatively, inspectors may refer the case to conservation officers at the Ministry's Enforcement Branch to investigate (that is, collect evidence of a violation) and potentially issue a charge. In more serious cases, the Ministry can also revoke a licence.

2.2.4 Final Rehabilitation and Surrendering Approvals

Once an approval holder has ceased its extraction operations and deemed the site to be fully rehabilitated,

it submits a request to the Ministry to surrender its approval. The Ministry may accept the surrender only after the site has been inspected and the Ministry inspector is satisfied that the site has, in fact, undergone final rehabilitation, and all fees (and royalties as applicable) have been paid (see **Section 2.2.5**). Once the Ministry accepts the surrender, the approval holder no longer has any obligations for the property under the Act.

Typically, final rehabilitation consists of grading (levelling) the landscape, replacing top soil, and revegetating the land to return it to its former condition, or to a condition that is similar to surrounding land uses. While there is a range of rehabilitation strategies, sites where aggregates have been extracted below the water table are typically converted into ponds and lakes. As of 2023, there were 971 active pits and quarries that were approved to extract below the water table, representing 18% of all active sites in the province. A wider range of options exists for operations above the water table, as these can be naturalized for habitat or converted for agricultural, recreational, residential or commercial use.

2.2.5 Fees and Royalties

As required by the Act and regulation, both licence and permit holders must pay an annual extraction fee on a per-tonne basis, or an annual minimum fee, whichever is greater. Permit holders must also pay royalties for the use of Crown-owned resources. Each year, the Ministry adjusts the fees and royalties to account for inflation and publicly posts the adjusted amounts by January 1 (see **Figure 8** for 2022 and 2023 fee and royalty rates). Using 2023 rates, **Figure 9** illustrates the fees and royalties that would apply to the aggregates used in different construction projects.

The Ministry does not collect or disburse the fees itself, but has delegated this responsibility, and others, to The Ontario Aggregate Resources Corporation (see **Section 2.3**).

2.3 The Ontario Aggregate Resources Corporation

The Ontario Aggregate Resources Corporation (TOARC) is a private corporation created in 1997 to act as the trustee of the Aggregate Resources Trust, a trust established under the *Aggregate Resources Act* to hold and disburse aggregate fees and royalties. A Memorandum of Understanding between TOARC and the Ministry sets out the parties' respective roles and processes. TOARC's key responsibilities are outlined below.

2.3.1 Collecting Fees, Royalties and Production Reports

By January 31 of each year, aggregate operators must submit production reports to TOARC showing both the quantity and type of aggregates they extracted the previous year. Based on this information, TOARC invoices approval holders for the amounts owing, and approval holders must pay their invoices by March 15 of that year. TOARC sends a report to the Ministry every April

Figure 8: Annual Fees and Royalty Rates, 2022 and 2023

Source of data: Ministry of Natural Resources and Forestry

	2022	2023
Fee		
Class A licences and aggregate permits authorized to remove more than 20,000 tonnes annually	21.3 cents/tonne or $741, whichever is greater	22.7 cents/tonne or $789, whichever is greater
Class B licences and aggregate permits authorized to remove 20,000 tonnes or less annually	21.3 cents/tonne or $370, whichever is greater	22.7 cents/tonne or $394, whichever is greater
Royalty (for use of Crown-owned resources)		
Aggregate permits only	53.9 cents/tonne	57.4 cents/tonne

Figure 9: Examples of Aggregate Fee and Royalty Costs Generated by Typical Construction Projects*, 2023

Prepared by the Office of the Auditor General of Ontario

	Fee ($0.227/tonne)	Royalty ($0.574/tonne)
Brick house (250 tonnes)	56.75	143.50
Subway tunnel, 1 km in length (91,200 tonnes)	20,702.40	52,348.80

* Aggregate fees and royalties are paid by aggregate operators based on their total annual extraction volumes; these examples illustrate the fees and royalties that would be generated by the amount of aggregates needed for two typical construction projects.

of all outstanding production reports and fees that were due for the previous year, and then subsequently sends updated monthly reports.

Since 2000, TOARC has conducted audits of selected approval holders' reported extraction tonnage to confirm that operators are accurately reporting their extraction tonnage and paying fees and royalties based on the tonnes of aggregate extracted. As of December 2022, TOARC had audited 1,334 approval holders, holding a total of 3,598 licences and permits. The audits have resulted in the collection of an additional $1.8 million in net aggregate fees.

2.3.2 Distributing Fees

TOARC distributes the collected fees and royalties among the Province and the municipal and regional governments with pits or quarries within their boundaries, in accordance with the formula set out in the regulation. Fee revenues are distributed as follows:

- 61% to the local municipality in which a pit or quarry is located;
- 15% to the county or regional municipality in which the site is located;
- 21% to the Province (paid into the Consolidated Revenue Fund); and
- 3% to a fund for rehabilitating legacy sites (**Section 2.3.3**) and related research.

Royalties, which are paid by permit holders only, are paid to the Province for the use of Crown-owned aggregate. In 2022, $39.6 million was collected in fees and royalties, of which $28.4 million was disbursed to local and regional municipal governments, and $10.1 million was disbursed to the Province (see **Figure 10**).

2.3.3 Rehabilitating Legacy Sites

TOARC rehabilitates legacy sites through its Management of Abandoned Aggregate Properties (MAAP) program, a program that was originally run by the Ministry. Legacy sites are abandoned pits and quarries that operated before the Act came into effect in 1990, and that were left unrehabilitated. Once a site is added to TOARC's work plan, it surveys the site, designs a rehabilitation plan, and then publicly tenders the rehabilitation work to contractors. TOARC visits the site for the next two to five years to monitor the effectiveness of the rehabilitation. These legacy sites are typically small, as the aggregate was often extracted only to construct nearby roads. An average of $1 million per year has been directed to the MAAP program over the past five years from the annual fees paid by operators.

According to TOARC's database, there are 8,237 legacy sites across Ontario, but as of October 2023, TOARC has closed the files for 6,578 of these sites because they are no longer candidates for rehabilitation through the MAAP program. Files are closed for various reasons, including that the site has been rehabilitated, the site has re-naturalized, or the current landowner has declined rehabilitation (see **Figure 11** for the reasons for file closure). For details on TOARC's rehabilitation work see **Section 4.5.3**.

2.3.4 Rehabilitating Sites with Revoked Approvals

Prior to 1997, security deposits were collected from pit and quarry operators to guarantee funding for post-extraction rehabilitation. In 1997, however, the

Figure 10: Distribution of Fees and Royalties, 2018–2022 ($ million)

Source of data: The Ontario Aggregate Resources Corporation

Disbursement	2018	2019	2020	2021	2022
Local municipalities	9.4	19.4	20.0	21.4	22.8
Counties and regional municipalities	2.4	4.8	5.0	5.3	5.6
Province (from licence fees)	5.5	6.7	7.0	7.5	7.9
Province (from royalties and permit fees)	1.7	1.8	1.7	1.9	2.2
Abandoned Pits and Quarries Rehabilitation Fund for the Management of Abandoned Aggregate Properties program	0.8	1.0	1.0	1.1	1.1
Total	**19.8**	**33.7**	**34.7**	**37.2**	**39.6**

Figure 11: Reasons for File Closures in the Management of Abandoned Aggregate Properties (MAAP) Database, as of October 2023

Source of data: The Ontario Aggregate Resources Corporation

Reason File Closed	# of Files
Site rehabilitated	
Site rehabilitated by MAAP program and the Ministry	643
Site rehabilitated by owner	796
Site no longer requires rehabilitation	
Site developed	766
Site naturalized	2,650
No historical extraction on site[1]	396
Other	
Site now licensed	355
Site situated on Crown land[2]	268
Landowner declined rehabilitation[3]	704
Total files closed	**6,578**

1. Either no land disturbances could be found on site, or it was determined the site disturbance was not a result of aggregate extraction, or the extracted aggregates were not used off site.
2. These sites have been closed because The Ontario Aggregate Resources Corporation does not currently have explicit responsibility for them (see **Section 4.5.3**).
3. These files are not formally closed and could be reopened in the future if landowner changes their mind or if land changes ownership.

Province eliminated security deposits, and operators who had already paid securities received partial refunds based on a formula established by the Ministry. The remaining balance of approximately $10.6 million was transferred to TOARC when it was established.

Through investments, TOARC has increased this amount to $16 million in 2022. TOARC uses these monies to both pay for its operational expenses and rehabilitate sites with revoked approvals where rehabilitation is still required. Since 1997, TOARC has rehabilitated 18 formerly licensed sites and 10 formerly permitted sites using these monies.

3.0 Audit Objective and Scope

Our audit objective was to assess whether the Ministry of Natural Resources and Forestry (Ministry) had effective systems and processes to:

- regulate aggregate development and operations on Crown and private land in a manner that minimizes adverse impacts on the environment;
- ensure compliance with the *Aggregate Resources Act*, and regulations, policies, permits and licences related to aggregate operations;
- ensure the land from which aggregates have been excavated is effectively rehabilitated; and
- measure and publicly report on the state of Ontario's aggregate resources and the delivery of the Province's aggregate resource program.

In planning for our work, we identified the audit criteria we would use to address our audit objective. These criteria were established based on a review of applicable legislation, policies and procedures, internal and external studies, and best practices. Senior

management reviewed and agreed with the suitability of our objectives and associated criteria as listed in **Appendix 11**.

Our audit scope focused on the Ministry's oversight, licensing and permitting of aggregate extraction operations on both Crown and designated private land. Aspects of aggregate operations that are regulated by other ministries (such as air emissions, which are regulated by the Ministry of the Environment, Conservation and Parks, and workplace safety, which is regulated by the Ministry of Labour, Immigration, Training and Skills Development) were not part of the scope of this audit.

We conducted our audit between January 2023 and August 2023. We obtained written representation from Ministry management that, effective November 21, 2023, they had provided us with all the information they were aware of that could significantly affect the findings or the conclusion of this report.

Our audit work was conducted primarily at the Ministry's office in Peterborough. We also obtained compliance information from the Ministry district offices in Aurora, Bancroft, Guelph and Thunder Bay. We selected Aurora because of its proximity to the Greater Golden Horseshoe region, an area with significant development and high aggregate demand; Bancroft as it has a mix of permits and licences; Guelph because of the high number of licences and volume of aggregate produced within its jurisdiction; and Thunder Bay as a northern office.

As part of our audit work, we:

- interviewed Ministry staff responsible for approvals, inspections and enforcement to understand their practices to issue approvals and inspect and enforce compliance with the *Aggregate Resources Act*, regulation and other requirements;
- reviewed Ministry documents, including a sample of new and amended aggregate approvals, to assess the timeliness and completeness of the Ministry's review and approval processes;
- analyzed data on production reporting and outstanding fee payments to determine non-compliance trends;
- reviewed a sample of inspection reports and compliance assessment reports from the four Ministry offices to determine timeliness of submission, completeness and Ministry verification practices;
- reviewed Ministry-wide enforcement data to analyze enforcement trends; and
- attended inspections (planned, follow-up, and surrender) to observe how Ministry inspections are conducted.

We also met with external stakeholders, including those representing:

- The Ontario Aggregates Resources Corporation;
- the Ministry of Transportation and the Ministry of the Environment, Conservation and Parks;
- industry, including representatives of the Ontario Stone, Sand & Gravel Association, as well as individual operators and consultants; and
- other relevant stakeholder groups, such as Gravel Watch Ontario, Environmental Defence, Reform Gravel Mining Coalition, the Canadian Environmental Law Association, the Toronto and Area Road Builders Association, and the Top Aggregate Producing Municipalities in Ontario.

We conducted our work and reported on the results of our examination in accordance with the applicable Canadian Standards on Assurance Engagements—Direct Engagements issued by the Auditing and Assurance Standards Board of the Chartered Professional Accountants of Canada. This included obtaining a reasonable level of assurance.

The Office of the Auditor General of Ontario applies Canadian Standards on Quality Management and, as a result, maintains a comprehensive system of quality management that includes documented policies and procedures with respect to compliance with rules of professional conduct, professional standards and applicable legal and regulatory requirements.

We have complied with the independence and other ethical requirements of the Code of Professional Conduct of the Chartered Professional Accountants of Ontario, which are founded on fundamental principles

of integrity, objectivity, professional competence and due care, confidentiality and professional behaviour.

4.0 Detailed Audit Observations

4.1 Ministry Inspections

4.1.1 Ministry Lacked Experienced Inspectors

Ministry inspections are a key mechanism for ensuring that aggregate approval holders comply with all operating and progressive rehabilitation requirements. Despite the important role inspectors play as the Ministry's "eyes on the ground," we found that there was a significant shortage of experienced individuals performing this function.

Each of the Ministry's 18 district offices is responsible for filling its own staffing needs. We determined that, as of May 31, 2023, a total of 34 integrated resource management technical specialists (IRMs) had been designated as aggregate inspectors Ministry-wide, up from 22 designated inspectors in 2022. Further, an additional 19 IRMs had been hired and/or were being trained to be designated aggregate inspectors as of November 2023. Despite the increased staffing, some district offices continued to experience vacancies and staff turnover. As of May 31, 2023, the Ministry had an average of two designated aggregate inspectors per district. Seven districts each had a single designated inspector, and two districts had none. Furthermore, only 16 inspectors conducted field inspections in 2022, with a single inspector responsible for 27% of all inspections conducted that year.

Moreover, we found that the inspectors lacked experience, having been in their positions for only a short time. As of May 2023, almost half (41%) of the 34 designated aggregate inspectors had held their designation for less than one year.

This lack of experience limits staff's ability to respond to public complaints in a thorough and informed manner and to address potential issues of non-compliance. Aggregate inspections entail checking a variety of technical operational and safety requirements, which requires training and expertise. For example, inspectors must check that operators are not extracting below the allowable depth, that blasting activities are being properly monitored, and that land is being progressively rehabilitated according to the site plan.

We heard from stakeholders, such as environmental, community and resident groups, that not only did they have difficulties identifying which inspectors to contact about their concerns, they also felt that inspectors were slow to respond, and were not fully informed. Two large aggregate operators also told us they felt the inspectors who inspected their operations were inexperienced. The industry association has also raised concerns with the Ministry about inspectors' technical and safety knowledge that seemed to show inadequate training.

To understand the Ministry's challenges in attracting and retaining aggregate inspectors, we spoke with 16 Ministry staff who currently hold, formerly held, or supervise this position. We learned that the aggregate inspector role can be more demanding and challenging than other similar positions in several ways. First, compliance work can require inspectors to interact with the public and operators in a difficult conflict-resolution capacity. Several Ministry staff told us the work is highly stressful for an entry-level position, and there are more attractive options to work in less stressful positions at the same pay grade. Second, several inspectors told us they did not feel sufficiently experienced, and lacked training and mentorship for their inspection role.

In speaking with aggregate inspectors we learned that, in contrast to other program areas within the Ministry (such as fish and wildlife), the aggregate program does not have a regional contact who can support inexperienced staff if they have questions. This role existed before, but was lost when the Ministry reorganized in spring 2020. Before then, all approvals for aggregate pits and quarries were handled by district offices across the three regions, alongside inspection activities. In April 2020, the Ministry centralized all aggregate licence and permit approvals into an integrated Aggregates Section under the Divisional Delivery Branch; staff in district offices are

no longer responsible for reviewing applications (see **Appendix 4**). Many staff members who had previously worked as aggregate inspectors moved into the Aggregates Section to focus solely on processing applications. These employees already had experience with the approvals process (which was within their responsibilities when they worked in district offices) and their new positions provided better financial compensation. The Ministry centralized the approvals process to improve efficiency, decrease wait times and provide consistency; however, this restructuring resulted in a significant loss of inspection expertise in the field.

In April 2023, the Ministry launched a new formalized training program that requires inspectors to participate in onsite training. As part of this, the Ministry adopted a mentorship approach with a goal of improving the knowledge and capacity of inspection staff. However, the lack of experienced mentors in the district offices could make this goal difficult to achieve.

RECOMMENDATION 1

To provide proper inspection coverage for aggregate pits and quarries, and ensure compliance with the *Aggregate Resources Act*, we recommend that the Ministry of Natural Resources and Forestry:

- develop and implement processes to address the challenges identified in recruiting, training, and retaining staff serving as aggregate inspectors, and
- provide on-the-ground training and mentorship in district offices.

MINISTRY RESPONSE

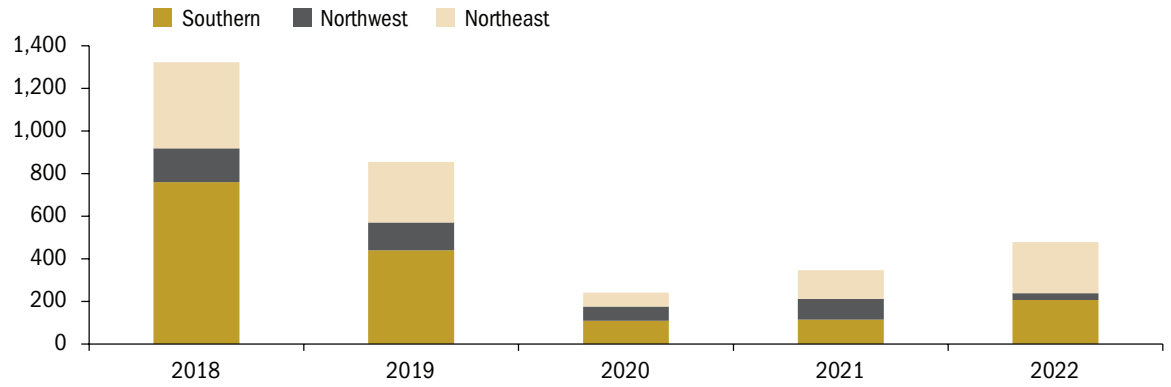
The Ministry of Natural Resources and Forestry (Ministry) acknowledges the challenges in recruiting, and retaining trained staff, and that these challenges are not unique to the aggregate program.

In early 2021, the Ministry launched an internal review of the Regional Operations Division organizational structure. Outcomes of the review included adjusting the structure of the division to improve client service and build flexibility into delivery approaches, and creation of the integrated resource management technical specialist positions. The Ministry has invested in significant and ongoing recruitment efforts to fill vacancies in these positions across the province.

The Ministry recognizes there is more work to be done to ensure the attraction, recruitment, training and retention of these critical positions that deliver the aggregates and other resource management programs. Several initiatives are already under way, including compliance training initiatives, outreach to students and new professionals, exit interviews and development of recruitment tools and streamlined processes.

The Ministry will continue to develop and provide training as well as promote mentoring of integrated resource management technical specialists, to ensure staff have the required knowledge to perform their duties.

4.1.2 Ministry Inspected Aggregate Operations Infrequently



We found that the number of inspections across the province was low, and has decreased over the past five years.

Aggregate approvals can contain various conditions intended to minimize impacts on neighbours (such as noise, dust and vibrations) and to protect the environment (such as water resources and species at risk). Regular and thorough inspections help to ensure compliance with these conditions, as well as maintain a level playing field across the industry, and increase community support for operations. Without regular inspections, the Ministry cannot verify that aggregate pits and quarries are complying with their operating conditions. This leads to complaints from the public and an overall negative perception of the industry.

We reviewed the Ministry's inspections data between 2018 and 2022, and found that inspection rates decreased by 64%, from 1,322 inspections in 2018 to 479 in 2022 (see **Figure 12**). Some of this decrease, particularly in 2020 and 2021, can be attributed

Figure 12: Number of Aggregate Inspections Per Year, By Ministry Region, 2018–2022

Prepared by the Office of the Auditor General of Ontario

to a pause in activity due to lockdowns during the COVID-19 pandemic. However, the decreasing trend began prior to the pandemic and continued through 2022, despite there being no stay-at-home order during that year's inspection season. Our audit found that the primary reason for the decrease was a shortage of Ministry inspectors (see **Section 4.1.1**).

We reviewed the inspection records from the past five years for 80 licensed or permitted sites that we randomly selected from four Ministry offices across the province, with 20 sites selected from each. As shown in **Figure 13**, only 35% of the sites had been inspected within the previous five years. Recognizing that the most recent five-year period is an anomaly on account of the pandemic, we also analyzed the inspection data from just 2022 (when inspection activity should have returned to normal). Based on this analysis, we found that the Aurora office had inspected 22% of operations within its jurisdiction in 2022, while the other three offices had each inspected less than 5% of operations that year (see **Figure 14**).

In the absence of regular inspections, the Ministry cannot verify that pit and quarry operators are meeting all of their operating conditions, rehabilitating their sites as required, and properly self-reporting any non-compliance issues. Indeed, we found the lack of inspections was frequently raised as a concern. Community groups and neighbours of aggregate operations complained to us of dust, noise and vibration impacts going unchecked by the Ministry. Members of the aggregate industry also expressed concerns about how the lack of inspections of poorly run aggregate operations hurts the image of the entire industry.

Figure 13: Percentage of Sites Inspected within the Past Five Years (2018–2022)*

Prepared by the Office of the Auditor General of Ontario

Ministry Office	# of sites in sample	# of sites inspected in 2018–2022	% of sites inspected in 2018–2022
Aurora	20	8	40
Bancroft	20	3	15
Guelph	20	6	30
Thunder Bay	20	11	55
Total	**80**	**28**	**35**

* Based on a sample of 20 randomly selected sites (including licensed and permitted sites) from each of four Ministry offices from four different districts.

Figure 14: Percentage of Aggregate Sites Inspected, by Ministry Office, 2022

Prepared by the Office of the Auditor General of Ontario

Ministry Office*	% of operations inspected in 2022
Aurora	22
Bancroft	1
Guelph	4
Thunder Bay	2

* The four Ministry offices were selected to represent a range of geographic areas and levels of aggregate activity and demand, on both private and Crown land.

4.1.3 Ministry Did Not Properly Plan its Annual Inspections

Inspection planning is an important process for identifying aggregate pits and quarries that are a high priority for inspection and for determining inspection schedules. However, we found that Ministry offices were not properly planning their annual inspections, which increases the risk that non-compliance issues go undetected and unresolved.

Each aggregate inspector's workload consists of both planned and unplanned inspections. Unplanned inspections (generally conducted in response to complaints) make up a small percentage of the workload. Between 2012 and 2023, the Ministry conducted 438 unplanned inspections, representing 4% of all inspections. This leaves the bulk of inspectors' time for planned inspections. Since aggregate extraction is a seasonal activity, generally running from spring to fall, Ministry inspections are conducted during the same period. Precise timing depends on the weather and area of the province (for example, aggregate extraction may begin in April in southern Ontario, but in June in Northern Ontario), but each district has a reasonably predictable season for inspections, and is responsible for developing its own annual plan for carrying them out.

The Ministry provides a prioritization matrix to help inspectors identify which sites are a higher priority for inspection. For example, the Ministry considers newly approved sites to be a high priority for inspection so that it can set a baseline of compliance. Operators with a history of non-compliance or operations with major site plan amendments are also considered high priorities for inspection. Prioritizing sites for annual inspections is especially important when staffing resources are limited.

We requested the inspection plans for the Aurora, Bancroft, Guelph and Thunder Bay offices. As of July 2023, only Aurora and Thunder Bay were able to provide us with documented plans. Aurora indicated eight planned inspections for the 2023 season and Thunder Bay indicated 38 planned inspections. We were advised that the other offices did not have inspection plans for various reasons, including not having the staff capacity to conduct planned inspections or staff lacking experience or training.

RECOMMENDATION 2

To maximize inspection resources for higher-priority aggregate pits and quarries, and better ensure compliance with the *Aggregate Resources Act*, we recommend that the Ministry of Natural Resources and Forestry require every district office to develop an inspection plan before the start of each inspection season that sets out a sufficient number of planned inspections according to priority level, and to follow the plan when conducting inspections for that season.

MINISTRY RESPONSE

The Ministry of Natural Resources and Forestry (Ministry) acknowledges the Auditor General's recommendation and recognizes the importance of a strategic approach to guiding inspection effort and assessing compliance outcomes. Through its Compliance Renewal Initiative, the Ministry is reviewing its approach to annual compliance planning and reporting for multiple programs, including aggregates. This includes consideration of a clear process and criteria to identify the number of inspections needed in each district based on priorities, defined accountabilities for completing inspections, and modern tools to document inspection effort and track results. Implementation is planned to begin in 2024/25.

4.1.4 Inspection Reports Often Incomplete or of Poor Quality

Ministry inspectors must complete a report every time they inspect an aggregate pit or quarry. Our review of these inspection reports from 2012 to 2022 reveals that many of them are incomplete or of poor quality.

Inspection reports are divided into six sections, and a final section for additional notes. Each of the

six sections contain items for an inspector to review (see **Figure 15**). For each item being reviewed, there is a checkbox for the inspector to indicate whether the operations are compliant, non-compliant, not applicable or not inspected for that particular item.

We requested inspection reports for all planned inspections conducted between 2012 and 2022 for 80 randomly selected aggregate operations across four offices (20 operations from each). Three of the four offices were unable to provide us with inspection reports for all of the selected sites (see **Figure 16**). Of the inspection reports we received, we found a number of issues with the quality and completeness of the reports. We found that, overall:

- 39% of the reports did not provide evidence that all key items had been inspected. While not every item on the list would need to be inspected during every inspection, our Office identified several key items that one would expect to be inspected in all cases (such as boundary markers and gates), but which were not consistently marked as inspected. We note that the digital inspection form has a default setting of "not inspected" for each item. As such, it is not possible for our Office, Ministry staff reviewing the reports, or any member of the public that requests a report, to be able to verify that all key items have indeed been inspected.

Figure 15: Items Listed for Inspection on an Aggregate Inspection Template*

Prepared by the Office of the Auditor General of Ontario

Section	Items to be Inspected
General	• Identification signs, gates, entrance/exit.
Operational	• Berms, setbacks, stockpile location, excavation face heights, trees within five metres of extraction face, extraction depth, buildings, stripping, progressive rehabilitation, inert fill, undercutting of excavation face, global positioning system corners, boundary demarcation.
Equipment	• Asphalt plant, concrete plant, portable crusher, permanent crusher, wash plant, screening plant.
Environmental	• Pumping and discharging of water, ditching, Permit to Take Water, Environmental Compliance Approval for noise, discharges and wastes, scrap, dust, fuel storage, *Endangered Species Act* agreement or permit. • Setbacks for Provincially Significant Wetlands, woodlands, or Areas of Natural and Scientific Interest.
Recycling	• Asphalt (reclaimed asphalt paving), concrete, glass, bricks, slag, asphalt shingles.
Monitoring reports	• Water monitoring, noise monitoring, blast monitoring, adaptive management plan.
Other/notes	• Any other item deemed necessary to achieve compliance. A space for recording general comments.

* Not all items are applicable to all aggregate operations.

Figure 16: Issues Identified by our Office in a Sample* of Ministry Inspection Reports, 2012–2022

Prepared by the Office of the Auditor General of Ontario

	Ministry Office				
Issue	**Aurora**	**Bancroft**	**Guelph**	**Thunder Bay**	**Overall**
% of sites for which reports could not be provided to our Office	0	55	10	25	**23**
Of reports provided:					
% missing key items	40	64	50	17	**39**
% with no notes	27	0	8	25	**20**
% with no photographs (where corrective action was required)	65	67	42	37	**50**

* Our sample included 80 randomly selected sites, including 20 from each of four Ministry offices from four different districts.

- 20% of the reports had no notes attached, making the purpose or outcome of the inspection difficult to determine. Without notes, it is also difficult to understand why certain elements of an operation were not inspected.
- 50% of inspection reports that required corrective actions did not include photographs, as required by Ministry procedures. Taking photos of an inspected site is important for recording the state of an operation at the time and for proving conditions of non-compliance. Without photos, it is also difficult to track progress over time, especially if the inspector changes between inspections. In the absence of photos, a subsequent inspector would have difficulty confirming any non-compliance and determining whether conditions have worsened or improved.

In addition, we found that for one office, 45% of the inspection reports provided an overall assessment that the site was "in compliance," even though they showed some of the individual items as being non-compliant and noted remedial actions that were required.

RECOMMENDATION 3

So that the Ministry of Natural Resources and Forestry has accurate and reliable inspection records to inform compliance activities and program improvements, we recommend that the Ministry develop and implement processes to ensure that inspection records are filled out consistently, completely, and properly.

MINISTRY RESPONSE

The Ministry of Natural Resources and Forestry (Ministry) agrees with the recommendation and acknowledges the importance of ensuring operational staff are continually learning and collaborating so that aggregate inspections and compliance efforts across all districts are undertaken consistently and completely and are properly documented. The Ministry will review training materials and update as needed to ensure staff are equipped to conduct inspections and complete inspection records properly.

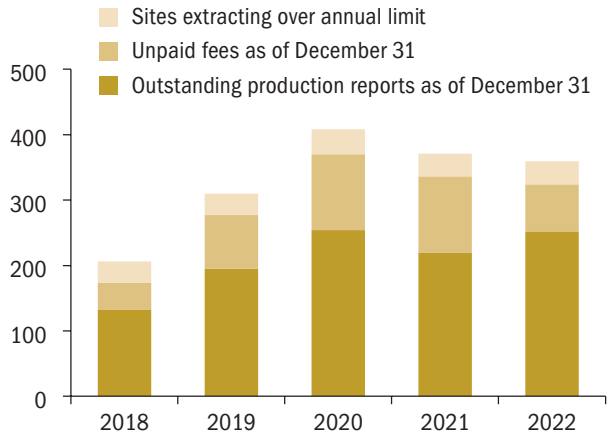
4.2 Enforcement of Non-Compliance

4.2.1 High Rates of Non-Compliance at Aggregate Sites

We found that the aggregate sector has a high rate of non-compliance, considerably higher than other Ministry program areas.

Up until 2017/18, the Ministry tracked the annual compliance rate of its various program areas. In 2018, the Ministry published its last Performance Measures Annual Report covering the period from April 1, 2017, to March 31, 2018. That report indicated that, based on 1,693 inspections conducted in 2017/18, the compliance rate for aggregate pits and quarries was 38%, similar to the rate from the three previous years. In comparison, the Ministry found that this compliance rate was considerably lower than the compliance rate achieved by other Ministry program areas, including forestry (91%) and petroleum exploration, extraction and production (67%).

The Ministry stopped tracking overall annual compliance rates for program areas in 2018, as it ceased to be a Ministry priority. In the absence of Ministry tracking and reporting, we compiled data from all inspections conducted on aggregate pits and quarries across the Ministry from 2018 to 2022. Using this data, we calculated the compliance rate (the percentage of inspected sites that were deemed satisfactory by the Ministry) over these five years, and found that it has remained low, fluctuating between 36% and 52%. Over the five-year period, inspectors filed 1,750 inspection reports identifying non-compliances.



In addition to violations identified through inspections, violations of the Act may also be identified by TOARC. All approval holders are required to submit production reports to TOARC by January 31 each year, and to pay fees by March 15 based on the volumes reported or the set minimum fee, whichever is higher. A failure by an approval holder to provide a production report (which is required even if no aggregate was produced), to pay annual fees, or to comply with the annual extraction limits set out in its approval, are all violations under the Act. TOARC is responsible for providing the Ministry with reports on operators'

compliance with these requirements, but the Ministry is responsible for enforcement.

As outlined in **Section 2.3.1**, TOARC provides the Ministry with a monthly report of operators that have either outstanding production reports or annual fees. TOARC also reports annually to the Ministry on operators that report extraction volumes that exceed their authorized amounts. TOARC reported that there were 206 instances of these three types of non-compliance remaining at the end of 2018; in 2022, this number increased 74% to 359 (see **Figure 17**). Between 2018 and 2022, TOARC reported a total of 1,654 of these types of violations.

Figure 17: Number of Cases of Non-Compliance Reported to the Ministry of Natural Resources and Forestry by The Ontario Aggregate Resources Corporation, 2018–2022

Source of data: The Ontario Aggregate Resources Corporation

4.2.2 Ministry Rarely Pursued Charges Despite High Rates of Non-Compliance

Despite the high rates of non-compliance repeatedly identified by Ministry inspectors and reported by TOARC (see **Section 4.2.1**), we found that inspectors rarely made use of a key compliance tool: referrals to the Enforcement Branch to pursue charges and, ultimately, fines. For minor offences, charges can be in the form of a ticket up to $750. For more serious offences, charges can be in the form of a court summons, which can result in a prosecution and fines of up to $1,000,000. While not all violations merit action by the Enforcement Branch, and many violations may be best addressed through measures like education, the lack of a reasonable threat of enforcement could encourage non-compliance. Indeed, the continuing high rate of non-compliance among aggregate operators suggests that they may not fear any repercussions for failing to comply with the Act, regulation and other requirements. A lack of enforcement not only undermines the Act's purpose "to control and regulate aggregate operations," it also increases the risk of negative impacts on nearby communities and the environment.

Although the Ministry has a variety of compliance tools available (see **Appendix 10**), we specifically examined referrals the Ministry's aggregate inspectors made to the Enforcement Branch to pursue charges as a key tool to encourage and enforce compliance. Inspectors from across all district offices made a total of 26 referrals to the Enforcement Branch from 2018 to 2022. These referrals, averaging five per year, represent less than 1% of the 3,404 violations identified at aggregate pits and quarries by either the Ministry's inspection reports (1,750) or TOARC reports (1,654) during this time period.

Although, as noted above, not all instances of non-compliance necessarily require enforcement action, the Ministry's internal policy explicitly states that the Ministry should pursue charges (which can lead to fines) if an operator significantly exceeds its allowable extraction tonnage. However, we examined the 2018–2022 records as reported by TOARC to the Ministry and found that three companies had exceeded their annual extraction limit by over 1,000%, with one up to 1,800%. We found that, in all three cases, the Ministry had not made an enforcement referral, and therefore the Ministry did not investigate or charge these companies for these violations.

As discussed in **Section 4.1.1**, external stakeholders have expressed concern about the Ministry's lack of capacity to enforce compliance. Although the Ministry's Enforcement Branch includes 209 field conservation officers (after successfully filling 25 new positions in 2022), the district offices responsible for inspecting aggregate pits and quarries have high staff turnover rates and unfilled inspector positions. Therefore, the

Enforcement Branch's ability to enforce requirements at aggregate sites is constrained, in part, by the capacity for district offices to identify and refer cases of non-compliance.

4.2.3 Enforcement Tools and Practices Too Weak to Deter Violations

We found that the Ministry's enforcement tools and practices can be ineffective at compelling aggregate operators to comply with the Act, and provide little incentive to fix violations.

For example, the Ministry has acknowledged in internal documents that it has a particular challenge in collecting unpaid aggregate fees and that its existing enforcement tools are not always the most effective to address overdue accounts. We analyzed TOARC data on unpaid aggregate fees from 2018 to 2022, and found that, as of December 31, 2022, 432 sites had not paid their annual aggregate fee, as required by the Act, for at least one of the last five years; of these, 41 had not paid their annual aggregate fees for all five years. We also analyzed the fines issued over the past five years for overdue fees and found that the Ministry issued only two fines for this offence, for a combined total of $1,230 in fines. The total fines levied represent just 0.4% of the $327,676 unpaid aggregate fees that TOARC calculated as remaining outstanding as of December 31, 2022. The total amount of unpaid fees is even higher; there were 649 production reports due in the past five years that remained outstanding at the end of 2022, meaning that TOARC could not calculate the fees owed by these operators.

Not only does the Ministry rarely pursue charges as a means to collect unpaid fees, the Ministry also does not charge interest on overdue aggregate fees, although the Act gives it the legislative authority to do so. Charging interest on unpaid fees is a commonly used mechanism across financial fields to encourage prompt payment of fees, and is used by the Ministry itself for overdue Crown timber charges.

Further, TOARC also audits operators' record keeping and reporting, and provides copies of its audit assessment to the Ministry. We found, however, that the Ministry did not have a procedure to systematically follow up on deficiencies identified in TOARC's assessments. TOARC has raised concerns that the Ministry does not follow up with operators, especially those who do not comply with the Act by keeping proper and detailed records. A lack of Ministry oversight and enforcement of proper record-keeping and reporting creates a risk that operators may be underreporting their extraction rates and therefore underpaying their fees.

In 2022, the Ministry introduced tickets as a more efficient means to fine violators of the Act, without resorting to resource-intensive court prosecutions. While it is too soon to evaluate its effectiveness, we noted that the maximum ticket fine is relatively low, and so provides only a small penalty for failing to comply with the annual fee requirements. A ticket for failing to pay the annual aggregate fee (which is a minimum of $394) carries a $300 fine, and operating without a licence or permit carries a $750 fine. By comparison, the maximum fine for traveling on GO Transit without paying a $3.70 fare is $200, which is over 50 times the cost of complying with the fare rules.

Administrative monetary penalties are another type of enforcement tool that can be used to discourage non-compliance and, like tickets, do not involve a resource-intensive court prosecution. For example, the Ministry issues administrative monetary penalties for violations by the forestry sector of the *Crown Forest Sustainability Act, 1994*, but does not use them for violations of the *Aggregate Resources Act*. Unlike the low maximum fine limit for tickets, the Ministry can issue much higher fines through the administrative monetary penalties for forestry violations. For example, whereas a ticket for operating without an aggregate licence or permit has a fine of $750, the administrative penalty for harvesting timber without a licence is either $15,000 or five times the value of forest resources harvested, whichever is greater. Also, unlike tickets, the fines imposed through an administrative monetary penalty cannot be appealed in court, which can make them a more efficient compliance tool. As noted in **Section 4.2.1**, the Ministry has found that the compliance rate for its forestry program has been much higher than for its aggregate program.

4.2.4 Ministry Does Not Enforce Payment of All Fines

When regulators impose substantial fines for non-compliance, it not only penalizes illegal activity, it also communicates to the regulated industry that non-compliance will not be tolerated, which can help deter future non-compliance. However, these benefits are lost if payments are not actually enforced. We found cases of unpaid fines for violations at aggregate pits and quarries, and noted that the Ministry did not have a mechanism to enforce the payment of fines.

Fines issued for violations of the Act, a provincial statute, are collected along with all other provincial offences, and not by the Ministry. Since 2002, Ontario municipalities have been responsible for collecting fines levied for provincial offences. In 2011, the Ontario Association of Police Services Boards (Association) noted that municipalities were not prepared or resourced to collect unpaid fines and that the amount of unpaid fines had grown considerably. The Association did report success, however, in collecting parking ticket and red-light camera fines, as well as Highway 407 tolls and fees. This success was due to the fact that the Ministry of Transportation has a process for municipalities to report these unpaid fines to it so that it can deny validation of a vehicle licence plate. The Association also reported some success when the Ministry of Transportation suspends driver's licences, which it does for other violations such as speeding. By contrast, the Ministry of Natural Resources and Forestry does not have a mechanism by which municipalities can report unpaid fines to it so that the Ministry can suspend or deny aggregate permits and licences.

We analyzed data provided by the Ministry of the Attorney General on defaulted fines for aggregate pits and quarries. The data included $217,940 in fines issued under the Act that were in default as of December 2022, and were issued as far back as 1991. The data also indicated that $81,000 is owed by three businesses that each hold an active aggregate licence or permit; these fines were issued between 2011 and 2013.

RECOMMENDATION 4

So that compliance with the *Aggregate Resources Act* is effectively encouraged and enforced, we recommend the Ministry of Natural Resources and Forestry:

- centrally track annual compliance data based on the results of Ministry inspections and the reports from The Ontario Aggregate Resources Corporation;
- review the Ministry's processes and practices for district office staff to make referrals to the Enforcement Branch and, based on the outcome of the review, implement any changes to its compliance and enforcement policies and practices;
- charge interest for overdue annual fees and royalties;
- review and adopt additional enforcement tools needed to address non-compliance; and
- determine options to further improve fine payments to municipalities.

MINISTRY RESPONSE

The Ministry of Natural Resources and Forestry (Ministry) acknowledges that centralized tracking of compliance data would help support efforts to achieve compliance with the *Aggregates Resources Act*. The Ministry has initiated a review of the internal systems being used to track existing aggregate compliance and enforcement activities and outcomes.

The Ministry will undertake a review of *Aggregates Resources Act* compliance tools and processes and explore opportunities for enhancement. Guidance to staff on the enforcement referral process will be developed to further support decision-making related to non-compliance.

The Ministry acknowledges the recommendation to charge interest on overdue fees and royalties and, with government direction, will work with The Ontario Aggregate Resources Corporation to explore potential options.

The Ministry will explore options to further influence fine payments to municipalities.

4.3 Self-Inspection and Self-Reporting by Operators

4.3.1. Ministry Not Enforcing Compliance Assessment Report Requirements

Ministry staff advised our Office that the self-compliance approach (see **Section 2.2.2**) is intended to encourage operators to proactively self-identify, disclose and rectify any issues of non-compliance. The Ministry seeks to encourage operators to self-disclose non-compliance on the basis that they will be rewarded through leniency by the Ministry, whereas operators who fail to self-disclose issues that are later found through complaints or Ministry inspections will, in theory, be more harshly penalized. However, we found that the Ministry did not have processes in place to ensure that this approach is meeting its intended goal of encouraging operators to properly self-report.

We found that the Ministry did not have a centralized database or standardized mechanism in place to track late or improperly completed reports. The Ministry encourages approval holders to submit their reports through the centralized online Natural Resources Information Portal; however, the reports can also be submitted to Ministry offices via email, fax, or by dropping off or mailing a hard copy. As such, we found that each office has developed its own internal processes for receiving and tracking these reports. While staff in some offices we visited have developed very detailed databases that effectively track which reports they have received and the content of the self-reported information, other offices use basic spreadsheets with varying levels of functionality.

We reviewed records from 2022 at four Ministry offices and found that these reports were not consistently received on time. (We focused exclusively on reports from 2022 because three of the four offices were unable to confirm receipt of all reports submitted in 2020 and 2021 due to staffing and technology challenges during the COVID-19 pandemic.) Overall, as of May 2023, we found that 25% of all 1,030 operators within the four offices' jurisdictions had not submitted a 2022 report more than seven months after the due date (September 30, 2022). The Bancroft office was missing 46% of the required reports, while the Guelph, Thunder Bay and Aurora offices were missing 32%, 3% and 2%, respectively.

We also reviewed all reports received by the Ministry over the past three years from 20 randomly selected active operations from four Ministry offices to assess their completeness. We found that 15% of the reports were incomplete or of poor quality. For example, some reports had sections that were left blank. Others appeared to be exact copies of reports submitted from previous years, while others did not include the sketches required when remedial actions were identified or rehabilitation was conducted.

Furthermore, the compliance assessment report does not require operators to confirm that they have filed their annual production report with TOARC and paid their annual fees. As noted in **Section 4.2.1**, there are high rates of non-compliance with these requirements and the Ministry relies on TOARC to identify those operators that are not compliant. Including this requirement in the compliance assessment report could serve as a further incentive to submit reports and pay fees in a timely fashion.

Finally, we found the Ministry did not enforce suspensions for operators that did not submit reports on time or at all. In reviewing the procedures that Ministry staff used to address late or incomplete reports, we found inconsistencies among the four offices. In particular, the offices differed as to when they would send letters to operators with outstanding reports to notify them that they are suspended. For the 2022 reporting year, one office started sending letters as early as October 14, two weeks after the reports were due. Two other offices started in February and May 2023—four and seven months, respectively, after they were due.

The Act stipulates that a failure to submit a report by the due date will result in an immediate and automatic deemed suspension to operate. However, none of these four offices did anything more to enforce the suspension beyond sending a letter, such as conducting a site visit to confirm operations were halted. Furthermore, we found that deemed suspensions were not documented in the Ministry's central databases. This raises a risk that sites that hold licences deemed

to have been suspended continue to operate. In our review of 80 sites from four district offices, we found 11 sites continued to produce aggregate in 2021 despite never having submitted a self-assessment report for 2020, which should have resulted in an automatic suspension.

RECOMMENDATION 5

So that annual compliance assessment reports serve as an effective tool for ensuring compliance with the *Aggregate Resources Act*, we recommend that the Ministry of Natural Resources and Forestry implement and standardize processes across all districts to:

- consistently track when compliance assessment reports are received;
- review compliance assessment reports in a timely and thorough manner to identify reports that are late, incomplete or improperly completed; and
- enforce suspensions of operators who do not comply with the reporting requirements, and reflect that status in internal Ministry systems.

MINISTRY RESPONSE

The Ministry of Natural Resources and Forestry (Ministry) acknowledges the recommendation and agrees that a consistent, standardized approach to the delivery of the aggregate program across all regions and districts is important.

The Ministry will explore options to track the submission rates and quality of annual compliance assessment reports and leverage existing Ministry systems to collect and track information submitted by the regulated community.

The Ministry will consider training opportunities that will further educate staff on the appropriate compliance options for aggregate licensees and permittees who fail to submit, or improperly complete a compliance assessment report.

The Ministry will review existing procedures with respect to automatic suspensions of licensees and permittees who fail to submit an annual compliance assessment report and explore options to improve Ministry follow-up and internal tracking.

4.4 Fees to Extract Aggregates Likely Too Low to Cover Program Costs

The Ministry has a goal of achieving full cost recovery for its aggregate program. In other words, the Ministry aims to recover the full cost of all services it provides for the aggregate program—including reviewing approvals and inspecting and enforcing compliance—from aggregate-related fees. However, we found that the Ministry's fee structure for extracting aggregates was likely not enough to cover the costs of administering the existing program, let alone to cover additional costs needed to effectively deliver the mandate of the Act.

In 2014, the Ministry began a process to update its fee structure to try to achieve full cost recovery for the future delivery of the program. The Ministry determined it would need to assess the program capacity required to effectively and efficiently deliver the mandate of the Act. Following stakeholder consultations, the Ministry brought in a new fee structure in 2019 that would increase revenue and index all fees going forward to account for inflation.

At that time, the Ministry estimated these changes would result in $7.96 million in annual revenue for the Province. It also estimated that the Province would receive approximately $100,000 per year in additional application and related fees. By contrast, using 2015/16 fiscal data, the Ministry estimated that the Province spent approximately $9.91 million each year on activities related to managing aggregate resources, excluding the aggregate-related costs of other ministries. The increased revenue would therefore cover only about 80% of its program costs. The Ministry acknowledged that, while the annual fee increase would not achieve full cost recovery, it would be a step toward that goal.

Moreover, the Ministry also recognized that the expenses associated with delivering the aggregate program would increase after implementing other policy changes proposed at the time. Three years later,

however, the Ministry was unable to provide our Office with the annual cost of delivering its program.

As noted in **Section 4.1** and **Section 4.2**, many stakeholders, including from the aggregate industry, have expressed concerns about the Ministry's lack of capacity to inspect and enforce compliance. Some industry members have stated that the Ministry's limited enforcement has contributed to a lack of public trust and opposition to aggregate pits and quarries. This concern is significant enough for organizations representing both operators and municipalities, a key consumer of aggregates, to call for higher aggregate fees to pay for increased enforcement. In 2012, the Ontario Stone, Sand & Gravel Association and the Top Aggregate Producing Municipalities of Ontario formed a committee to advocate for increased Ministry enforcement paid for by higher aggregate fees, among other issues. In 2021, despite the 2019 increase in fees, both groups reiterated their continued support to the Ministry for this approach.

In addition to these concerns that aggregate fees are too low to support the Ministry's inspection and enforcement activities, the fees may also be too low to support other program goals, including to conserve aggregate resources and encourage aggregate recycling, as set out in the Provincial Policy Statement (see **Section 4.7.2**).

RECOMMENDATION 6

To effectively deliver the mandate of the *Aggregate Resources Act*, we recommend that the Ministry of Natural Resources and Forestry:

- assess the Province's full cost of operating its current aggregate program, as well as the additional resources necessary to adequately enforce aggregate policies; and
- explore options to recover the full program costs, including those related to enhanced enforcement.

MINISTRY RESPONSE

The Ministry of Natural Resources and Forestry (Ministry) acknowledges this recommendation and recognizes the importance of having sufficient resources to implement the aggregate program. The Ministry will assess the full program costs and consider options to recover those costs in future modernization of the aggregate program.

4.5 Final Rehabilitation

4.5.1 Ministry Did Not Have Processes to Ensure Aggregate Sites are Promptly Rehabilitated After Extraction is Complete

Ontario's Provincial Policy Statement states that, "to recognize the interim nature of extraction," aggregate pits and quarries must be rehabilitated to allow for future land uses. However, we found that the Ministry did not have mechanisms in place to ensure that aggregate extraction is, in practice, a temporary land use and that sites are promptly returned to productive use after extraction is fully completed.

While final rehabilitation is required under the Act once extraction is complete, it is up to the approval holder to determine when extraction is finished. As such, there is no clear time frame for the Ministry to begin enforcing the requirement for an approval holder to undertake final rehabilitation of the site.

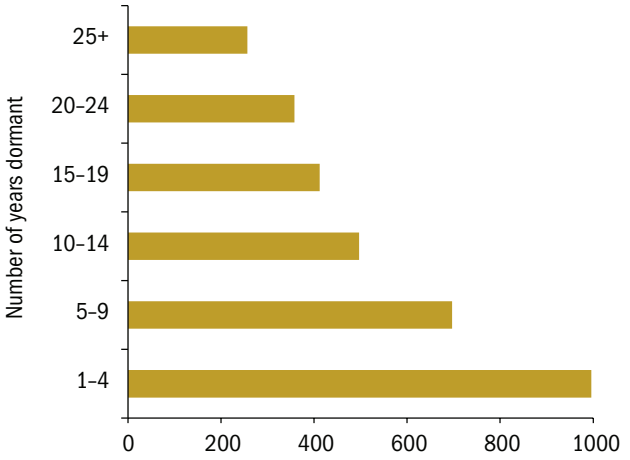
Furthermore, there is some incentive for an approval holder to retain its aggregate licence or permit, even if it is no longer actively extracting aggregate, rather than complete rehabilitation and surrender its approval. Rehabilitation can entail considerable costs, depending on the particular property and the site plan requirements. For example, in 2022, The Ontario Aggregates Resources Corporation (TOARC) spent an average of $37,549 per hectare to rehabilitate sites to the baseline requirements of regrading and revegetating. By contrast, the annual fee to maintain a permit or licence for a dormant aggregate site is less than $800.

While many aggregate operators properly rehabilitate their sites and promptly return the land to productive use after extraction is complete, we found numerous sites across the province that have not been surrendered, even though extraction was no longer taking place on them. We analyzed extraction

data provided by TOARC and found that 1,524 sites reported zero aggregate extraction in at least the past 10 years (see **Figure 18**). Of these, 257 sites reported zero aggregate extraction for at least the past 25 years (since 1998). The sites that have sat dormant for at least 10 years represent more than 25,000 hectares of land, approximately the size of Brampton, Ontario.

There may be valid reasons why a site sits dormant for multiple years, other than the fact that the pit or quarry has been fully extracted. A site may sit dormant because it does not have the specific type or quality of aggregate in demand by the local market at a point in time (and shipping heavy aggregates to farther markets can be prohibitive), but may still have reserves of other aggregates that can potentially be used for future projects. However, for sites that have sat dormant for many years, there is a risk that those sites have, in fact, finished extraction and are avoiding rehabilitation efforts. Allowing sites to remain dormant for long periods without final rehabilitation violates the notion that aggregate extraction is an interim land use, one of the key tenets of aggregate management in the Provincial Policy Statement.

RECOMMENDATION 7



To give credence to the Provincial Policy Statement's recognition that aggregate extraction is an interim land use, and to ensure that disturbed land is returned to productive use in a timely manner that accommodates subsequent land uses, we recommend that the Ministry of Natural Resources and Forestry develop and implement a strategy to assess sites that have been dormant for more than 10 years and ensure that sites that have completed extraction are rehabilitated and surrendered.

MINISTRY RESPONSE

The Ministry of Natural Resources and Forestry (Ministry) agrees with this recommendation and is currently undertaking an analysis of rehabilitation and dormant aggregate sites in Ontario. The Ministry notes that progressive and final rehabilitation are legal requirements of any approval pursuant to the *Aggregate Resources Act*. Between 2013 and 2022, roughly 8,000 hectares have been rehabilitated and surrendered. Depletion rates of individual aggregate operations will vary based on market conditions, proximity to larger population centres and demand for certain aggregate products.

Figure 18: Number of Dormant Aggregate Sites

Source of data: The Ontario Aggregate Resources Corporation

4.5.2 Ministry Does Not Require Long-Term Monitoring to Ensure Final Rehabilitation of Aggregate Sites Is Successful

Once the Ministry accepts the surrender of an aggregate licence or permit, the approval holder no longer has any obligations under the Act for that property. However, in some cases, it cannot be immediately determined whether measures to rehabilitate the land have been fully effective. As such, long-term monitoring is considered a best practice to ensure that rehabilitation has been successful. However, we found that the Ministry does not require approval holders to monitor their rehabilitation measures over a longer term before it approves surrender requests.

As discussed in **Section 2.2.4**, an approval holder may apply to surrender its licence or permit after it deems a site's rehabilitation to be complete. Complete rehabilitation means the site has been regraded and the soil has been replaced and revegetated, so that the land is restored to its former condition, or to a

condition that is similar to surrounding land uses. For sites where below-the-water-table extraction has occurred, complete rehabilitation typically involves creating a lake or pond, and revegetating the surrounding area. If rehabilitation meets the specifications stated in the Act, the regulation and the approval holder's site plan, an aggregate inspector may accept the surrender request.

There are a number of examples across Ontario of former aggregate pits and quarries that have been successfully rehabilitated back to a former land use or to a new productive use. For example, after the completion of extraction on a gravel pit in Fonthill, new techniques used during progressive and final rehabilitation led to the successful growth of specialty crops, including peaches, cherries and pears, on the site. In another example, a former gravel pit in Hamilton was rehabilitated to become part of the horticultural rock garden collection at the Royal Botanical Gardens. During our audit, we visited several successfully rehabilitated sites, including a former gravel pit near Cambridge that has been converted into an aquaculture operation that raises rainbow trout. However, rehabilitation measures require both time and money, and not all operators exercise the same level of care and diligence in these efforts.

As such, long-term site monitoring is important to fully assess the effectiveness of rehabilitation. For example, monitoring species population numbers may be needed to assess whether wildlife habitat is being re-established; monitoring soil productivity levels may be needed to assess whether a former agricultural site is being effectively returned to farmland. Long-term monitoring can also detect any unintended impacts that become apparent only later—for example, if revegetation efforts do not succeed, or if regrading results in unwanted changes in water drainage patterns.

TOARC, which is responsible for rehabilitating legacy pits and quarries in Ontario (see **Section 4.5.3**), monitors and revisits the sites that it rehabilitates for another two to five years (depending on the site and landowner access) to check on soil development and ensure that the site remains vegetated and rehabilitation has been successful.

In 2008, TOARC, which is also responsible for providing education and training on rehabilitation to interested parties, released best practice guidelines for rehabilitating aggregate pits and quarries. These best practices indicated that monitoring and reporting should be included as part of all rehabilitation plans, even if it is not required by law. Similarly, the Ministry's 2010 State of the Aggregate Resource in Ontario report identified long-term monitoring of rehabilitated sites as a best practice. Despite this guidance, long-term monitoring is not required in Ontario. As part of regulatory changes made in 2020, however, the Ministry may require that applicants seeking to extract aggregate within a prime agricultural area continue monitoring after final rehabilitation has been completed. While this is a positive step, it is too recent to evaluate whether it is being effectively implemented.

RECOMMENDATION 8

To help ensure that final rehabilitation measures at aggregate pits and quarries have been effective, we recommend that the Ministry of Natural Resources and Forestry develop and implement procedures for confirming, at the time of surrender of approvals, that final rehabilitation measures have been successful and have not resulted in any unintended consequences.

MINISTRY RESPONSE

The Ministry of Natural Resources and Forestry (Ministry) acknowledges the importance of ensuring the successful and effective rehabilitation of pits and quarries. The Ministry will review current policy and procedures with respect to the inspection and decision on the surrender of an aggregate site. The Ministry will consider measures to improve how staff determine that final rehabilitation has been completed in accordance with the licensee or permittee's site plan.

4.5.3 TOARC Progressing with Rehabilitation of Legacy Sites on Private Land, but Ministry Not Ensuring Crown Land Legacy Sites Are Rehabilitated

After almost 30 years of the Ministry's and TOARC's work rehabilitating legacy sites, most high-priority legacy sites on private land have been rehabilitated (with the exception of sites where TOARC was not permitted access). By comparison, we found that the Ministry was not ensuring that legacy sites on Crown land have been, or are being, rehabilitated. This does not instil public confidence that the Ministry is effectively fulfilling its role in managing Crown land, which is meant to be used and accessed by all Ontarians.

From 1990—when the Act came into effect—until 1997, the Ministry was responsible for rehabilitating legacy sites. The Ministry created an inventory of sites, and developed a rating system to prioritize sites for rehabilitation, considering public access and safety, environmental risks, size and visibility. For example, high-priority sites might contain unstable slopes, deep water, vertical cliffs and easy public access, while low-priority sites might have more gradual slopes and less public access. In 1997, the Management of Abandoned Aggregate Properties program was created, with TOARC taking over responsibility for rehabilitating legacy sites (see **Section 2.3.3**).

Since the program's creation, 643 legacy sites on over 905 hectares of private land have been rehabilitated. This includes 25 high-priority, 508 medium-priority and 72 low-priority sites, and 20 with no priority rating. As of October 2023, 1,659 files remained open in TOARC's database. This included 22 high-priority, 1,161 medium-priority and 374 low-priority sites, and 102 sites categorized as unknown priority. Despite their priority status, TOARC has stated that it is unable to conduct rehabilitation work on the remaining 22 high-priority sites because the current private landowners refuse to grant TOARC access to the sites.

The Act assigns TOARC responsibility for rehabilitating legacy pits and quarries, but it does not explicitly state that legacy sites on both private and Crown land are included. To date, TOARC has only rehabilitated legacy sites on private land.

In 2018, the regulation under the Act, which sets out how to distribute aggregate fees, was changed to allow a portion of the annual aggregate fees for permittees (for extraction on Crown land) to be put toward the program. Previously, only a portion of the annual aggregate fees for licensees (for extraction on private land) were contributed to this program. However, the Ministry never directed TOARC to expand its efforts, and the Ministry has made no final decision to formally add legacy sites on Crown land to TOARC's rehabilitation responsibilities.

Under the *Public Lands Act*, the Ministry is responsible for managing public, or Crown, land. However, the Ministry has limited records of where legacy sites on Crown land are and has made no attempt to categorize the risk these sites pose to public safety. As noted above, TOARC has an extensive database, which includes some limited information on legacy sites located on Crown land (acquired through both its own work and historical information provided by the Ministry). We were advised by the Ministry that because 30 years have passed since the *Aggregate Resources Act* came into effect, it has assumed that many sites have naturalized and that district offices had previously addressed any safety risks in their areas.

RECOMMENDATION 9

So that risks associated with legacy aggregate sites on Crown land are addressed, we recommend that the Ministry of Natural Resources and Forestry work with The Ontario Aggregate Resources Corporation to:

- update and clarify responsibility for rehabilitating legacy sites on Crown land; and
- identify and assess legacy sites on Crown land, including the level of risk to public safety, and undertake the rehabilitation of any high-risk sites where feasible.

MINISTRY RESPONSE

The Ministry of Natural Resources and Forestry acknowledges the recommendation and, with government direction, will work with The Ontario Aggregate Resources Corporation to clarify roles and responsibilities with respect to identifying and rehabilitating any potentially high-risk abandoned aggregate sites on Crown land.

4.6 Supply and Demand for Aggregates

4.6.1 Ministry Not Verifying Accuracy of Supply Data

We found issues with the quality of the underlying data that is used in studies commissioned by the Ministry to estimate the supply of aggregates in Ontario. We also found that the Ministry did not have a process to verify the accuracy of this data. Having an accurate understanding of the availability of aggregate reserves (unextracted supply), as well as demand and consumption trends for such resources, at the local and regional level is important so that the Ontario government can make informed decisions about how it manages its aggregate resources.

The Act states that the Ministry may, in administering the Act, initiate various studies relating to the supply and demand for aggregates. To assist with gathering this important information, the Ministry previously commissioned five supply and demand studies for aggregates, with the most recent study completed in 2016. The 2016 study focused on the Greater Golden Horseshoe region. Comparing both supply and demand in a particular region, as opposed to the entire province, is important because aggregates are generally sought out as close as possible to where they are needed, which minimizes the impacts of transporting heavy aggregates long distances. The study focused on the Greater Golden Horseshoe region because it has the greatest need for aggregates in the province.

The 2016 study estimated that the region would consume 111 million tonnes of aggregates per year over the next 20 years. It also estimated that the region had reserves of 3,337 million tonnes (545 million tonnes in licensed quarries and 2,792 million tonnes in licensed pits). The estimates in the study appeared to suggest that total available reserves were more than sufficient to meet future demand for the next two decades (2,220 million tonnes).

However, the consultant who conducted the study cautioned against viewing these high-level estimates as a realistic indication of available supply. The consultant noted a high degree of uncertainty with the supply data because of limitations with the information used to estimate the quantity, quality and type of below-ground aggregate resources.

The 2016 study used site plans (which outline the allowable extraction areas and depths of licensed pits and quarries), aerial photos from 2002 (the most recent available at the time), digital elevation data and basic geological information to roughly estimate the amounts and types of aggregate reserves. However, aggregate operators did not participate in the study, which limited the study's ability to fill data gaps with specific site assessments of the types and quality of available reserves at operators' sites. The study also did not involve any field verification (such as taking samples of open site sections or from boreholes drilled in unextracted areas) to evaluate the type and quality of the unextracted aggregate reserves.

The consultant therefore recommended that, in addition to updating estimates with newer information as it becomes available, field verification should be conducted to improve data quality. In January 2023, the Ministry commissioned an updated supply and demand study for the Greater Golden Horseshoe region, to be completed by December 2023. The contract includes plans to use more up-to-date aerial photos and to survey industry members on the different types, amounts and quality of aggregates in their individual reserves. In contrast to the previous study, the Ministry has proactively sought to gain industry support for this study, which has the potential to improve the information it collects about aggregate reserves.

However, we noted that the industry survey was voluntary and, with a goal of providing confidentiality to aggregate operators, anonymous. A voluntary,

anonymous survey with no mechanism to verify the data creates a high risk of incomplete and inaccurate reporting. Instead, there are other ways to obtain higher-quality data while still addressing industry's confidentiality concerns. For example, the Ministry already requires aggregate approval holders to provide TOARC with confidential data on aggregate extraction, which is audited by TOARC and publicly reported at the municipal level, rather than by site. However, the Ministry does not require industry to similarly report data on the unextracted reserves remaining on aggregate sites. Moreover, the contract for the 2023 study also did not include field verification for quality control.

4.6.2 Lack of Publicly Available Supply and Demand Information Contributes to Public Concern

We found that the Ministry was not providing the public and stakeholders with information to create a detailed and accurate picture of aggregate supply and demand. Ontario's Provincial Policy Statement is clear that there is no requirement that demand for more aggregate resources be shown before making more supply available. However, absent information on supply and demand, many stakeholders have concluded that there is an oversupply of aggregates already approved for extraction. This contributes to frequent opposition to proposals for new or expanded pits and quarries. By publishing more detailed and accurate information about aggregate supply and demand, the Ministry could help foster more informed discussions and potentially reduce conflict among industry, community groups, municipalities and other stakeholders.

As discussed in **Section 4.6.1**, the Ministry's most recent (2016) supply and demand study appeared to suggest that available supply in the Greater Golden Horseshoe region (3,337 million tonnes) was more than adequate to meet demand for the next two decades (2,220 million tonnes). However, the study also estimated that only 1,470 million tonnes (44%) of the total reserves were high-quality, but the Ministry did not publish this information online. Ministry staff deemed the full report to be long and very technical, so the Ministry ultimately published only a summary of the report, which did not include an estimate or description of high-quality reserves.

Detailed information about the type and quality of aggregates that are available relative to those in demand is important context. Aggregate materials come in different sizes, shapes and chemical compositions. Different end uses require different types and qualities of aggregate. For example, high-rise developments and highway construction typically only use high-quality concrete and asphalt pavement, which can reduce future maintenance and repair costs. Lower-quality aggregates can be used as base (below the surface) material for roads, and even lower-quality material can be used to backfill holes.

In the absence of detailed supply and demand information, stakeholders turn to other forms of available information. For example, publicly available data on annual extraction tonnage shows that approval holders typically extract less than their maximum allowable annual tonnage limits. This information may be seen to indicate that approved aggregate supply exceeds demand. However, the maximum-allowable annual tonnage is included in a licence or permit to mitigate the impacts of aggregate operations, particularly by limiting local truck traffic; it does not indicate the amount of aggregates available at a site.

In 2022, a coalition of environmental organizations (comprising Environmental Defence, the Council of Canadians, Water Watchers and the Wilderness Committee) called for a moratorium on the approval of new aggregate sites in Ontario, arguing that the Ministry had already approved the extraction of 13 times more aggregate than is actually removed each year and, therefore, that no more pits or quarries are needed. Several municipalities, including those with the highest volume of aggregate extraction in Ontario within their borders (for example, Caledon, Halton Hills and Milton) have also expressed support for a moratorium. The coalition dismisses industry's claim that there is a shortage of high-quality aggregate reserves, pointing to a lack of publicly released data to support it.

RECOMMENDATION 10

To improve public trust, better inform government decision-making, and support more informed discussions with and among stakeholders, we recommend that the Ministry of Natural Resources and Forestry:

- implement processes to obtain accurate and complete data, including on the amounts, types and quality of available supply of aggregates;
- establish a regular interval for updating supply and demand data; and
- regularly publish all non-confidential aggregate supply and demand data online, including information on estimated amounts, types and quality of supply.

MINISTRY RESPONSE

The Ministry of Natural Resources and Forestry (Ministry) agrees with this recommendation. Going forward, the Ministry will retain leading industry engineering consultants, working with the Ministry and industry to implement modern technologies to provide more accurate and complete data on supply. Estimates for the upcoming study have been made using the best available satellite imagery and LiDAR data (laser-derived elevation data) to create reserve estimates for several hundred sites in the Greater Golden Horseshoe. The upcoming supply and demand study is augmented by quality surveys of over 100 individual operations and expands on existing information and data gathered from earlier comprehensive studies.

The Ministry also acknowledges the importance of undertaking regular review of the availability of aggregate resources to meet market demand.

Related to current market demand for aggregate, each aggregate licence and permit is required to report annual production so annual demand is well documented and understood.

The Ministry does undertake supply and demand updates on a regular basis and will continue to do so. In recent years, studies reviewing supply of aggregate and related issues have been published in 2009 and 2016, with another to be completed in 2023. The 2023 study will include a more detailed assessment of aggregate availability on a geographic basis.

The Ministry strives to make all non-confidential information publicly available. The Ministry will generally make all non-proprietary information, including on estimated amounts, types and quality of available supply, available on its website or upon request.

4.7 Recycled Aggregate

Recycled aggregate includes crushed concrete and asphalt pavement that is processed and reused in other building projects. Aggregate recycling can occur within pits and quarries, which are regulated by the Ministry. Recycling can also occur in separate aggregate recycling facilities, which are outside the Ministry's jurisdiction.

Recycled aggregate can, if of sufficient quality, be used in place of virgin aggregate. Its use can reduce the need for new or expanded pits and quarries, and the associated environmental and social impacts of extracting virgin aggregate. Recycling aggregates also diverts construction waste from landfill. However, recycling aggregates within a pit or quarry may also extend the life of an aggregate site, and may result in impacts on neighbours and the environment.

Ontario's Provincial Policy Statement states that aggregate resources must be conserved, including through aggregate recycling, where feasible. While the Ministry does not have the power to increase the use of recycled aggregate in Ontario on its own, it has the lead role in managing the province's aggregates. Accordingly, the Ministry developed a policy in 2007 in which it committed to "encourage the reduction, reuse and recycling of aggregate materials in all facets of its partnerships" with the industry, ministries and others.

4.7.1 Ministry Lacked Accurate Estimates for Recycled Aggregate Use

The Ministry's most recent estimate is that 13 million tonnes of recycled aggregate is used annually, which is equivalent to 7% of Ontario's total aggregate use. However, the Ministry's estimate is for the year 2006, almost two decades ago. The lack of recent data limits the Ministry's ability to assess trends on recycled aggregate supply and use, and its ability to make informed aggregate management decisions.

The consultant that provided the 2006 estimate to the Ministry warned that Ontario lacked a methodology or system to effectively track the use of recycled materials. The consultant recommended an approach for the government that included developing guidelines on how and what materials to track, creating an online database for public agencies (such as municipal governments) to input information on their recycled aggregate use, and reporting annually to promote the benefits of aggregate recycling.

In 2018, the Ministry developed a plan to survey aggregate operators to gather data on recycled aggregate imported and exported from their sites. However, that work did not proceed after a change in government in 2018.

In April 2021, the Ministry started to require approval holders with new aggregate recycling operations to report on the amount of recycled material leaving their sites. However, this reporting requirement excludes the vast majority of sites where aggregate recycling actually occurs. The requirement does not apply to sites that were approved to recycle aggregates before April 2021, or to sites where aggregates are recycled external to a pit or quarry. As a result, only 1,000 tonnes of recycled material were reported in 2022. This reported value is 0.01% of the Ministry's 2006 (most recent) estimate of annual recycled aggregate use in Ontario.

At the time of our audit, the Ministry was commissioning a supply and demand study update (see **Section 4.6**). However, the contract for this study did not include work to update data on recycled aggregate as a source of supply. This omission reflects the Ministry's focus on meeting Ontario's aggregate demand through approvals of new pits and quarries, rather than through alternatives such as recycling.

RECOMMENDATION 11

To make informed decisions regarding recycled aggregate, we recommend that the Ministry of Natural Resources and Forestry work with other relevant ministries to:

- implement a system to track major sources of recycled aggregate supply and use in Ontario; and
- regularly report publicly on summarized results.

MINISTRY RESPONSE

The Ministry of Natural Resources and Forestry (Ministry) acknowledges the recommendation and will share it with the other ministries that are involved in the usage of recycled aggregate off a licensed aggregate pit or quarry. It is important to note that recycling of aggregate does not need approval under the *Aggregate Resources Act* to occur outside of a pit or quarry (e.g., sites with municipal approval to recycle).

The Ministry will explore the feasibility of tracking recycled aggregate on pits or quarries. However, requiring operators to undertake reporting of recycled material at each site would result in additional regulatory burden to the industry, and would only report on a portion of aggregate recycling that occurs in Ontario.

4.7.2 Low Fees for Extracting Virgin Material Provide Little Incentive to Use Recycled Aggregate

In some jurisdictions, governments charge fees for the extraction of virgin aggregate but not for the production of recycled aggregate, which can help make the use of recycled aggregate more cost-effective by comparison. While Ontario does charge fees only on virgin aggregate extraction, we found that the fees were not

high enough to provide a significant financial incentive to use recycled aggregate instead.

Multiple factors influence the cost of recycled aggregate, and therefore its economic competitiveness compared to virgin aggregate. For example, purchasing recycled aggregate from a source close to where it will be used can reduce transportation costs compared to trucking virgin aggregate from a distant pit or quarry. Conversely, rigorous processes to remove contaminants and ensure quality control can render recycled aggregate more expensive than virgin materials.

A 2022 study commissioned by the Toronto and Area Road Builders Association analyzed the potential benefits of using recycled aggregate in infrastructure projects. The study estimated that the cost to deliver virgin "Granular A" aggregate to make roads and parking lots in four sites in the Greater Toronto Area would be $22–$24 per tonne. It also estimated that recycled aggregate could potentially be $8 per tonne cheaper (that is, cost $14–$16 per tonne) if transportation costs could be reduced by sourcing these materials closer to the project rather than using virgin material from pits or quarries farther away. Although the avoidance of paying aggregate fees could be considered another benefit of using recycled aggregate, the study's authors did not even mention this potential benefit. Ontario's aggregate fees comprised only about 1%–3% of the estimated purchase cost of virgin aggregate in the study.

The United Kingdom (UK), by contrast, has a much higher extraction fee to encourage the use of recycled, rather than virgin, aggregate. The 2023 UK fee for virgin aggregate is equivalent to about $3.20 per tonne, approximately 14 times higher than what Ontario collected for extracting virgin aggregate in 2023 ($0.23 per tonne). The explicit objectives of the UK fee are to address the environmental costs associated with quarry operations, cut demand for virgin aggregate, and encourage the use of alternative materials where possible. While a number of factors may contribute to the UK's higher recycling rates, it is noteworthy that the use of recycled aggregate in the UK (making up roughly 25% of total aggregate use) is more than three times higher than Ontario's estimated 7%.

4.7.3 Ministry Has Made Little Progress in Addressing Barriers to Recycled Aggregate

Despite Ministry commitments to encourage the use of recycled aggregate, we found that the Ministry had made little progress addressing the barriers preventing a greater uptake of recycled aggregate among consumers.

There are several barriers that limit the use of recycled aggregate, including technical ones. For example, virgin aggregate is typically preferred for high-performance applications, such as rut-resistant asphalt, because it provides greater assurance that high-quality standards will be met. There are also concerns that recycled aggregate can be contaminated with foreign materials, which can affect the safety and performance of the recycled aggregate. For example, metal rebar and other demolition waste can be mixed in with the crushed concrete.

Another barrier is resistance by some users of aggregate that stems from a lack of information or education. Several studies have highlighted a need for more education and promotion in this area. For example, in 2009, a Ministry consultant found little support for the use of recycled aggregate by municipalities and recommended continuing education on the benefits of recycled aggregate. In 2018, the Toronto and Area Road Builders Association commissioned a survey of 25 municipalities and found that municipal policies often prohibit or severely limit the use of recycled aggregate in construction projects. The survey found that performance and reliability were the municipalities' main considerations. The Association concluded that there is an opportunity to encourage municipalities to realize the benefits of using more recycled aggregate. The Association suggested that municipalities can learn from each other and the Ministry of Transportation, which uses recycled aggregate for highways.

A further barrier relates to concerns raised by some stakeholders about the process of recycling aggregates within pits and quarries. A lack of data that evaluates the risks of recycling within aggregate sites, and an absence of best practices to address any such risks, contributes to these concerns.

Despite past commitments to encourage aggregate recycling and provide education, the Ministry has made very little progress. In 2007, the Ministry committed to "encourage the reduction, reuse, and recycling of aggregate materials in all facets of its partnerships with the public, the aggregate industry and other key ministries." In 2014, the Ministry reaffirmed that education and information are the strongest tools to increase the acceptance and use of recycled aggregate materials. However, in 2019, the Ministry's internal review of its aggregate recycling policy noted that "no guidance documents or other records [from the Ministry were] found that would indicate any initiative by the ministry to educate stakeholders or to promote the benefits of recycling aggregates."

In May 2023, during the course of our audit, the Ministry established a multi-stakeholder working group to share information on recycled aggregate. As part of its role, the group is to help identify barriers and inform the development of best practices and policies to support access to, and the use of, recycled aggregate in Ontario. The group plans to meet four times over six months; it first met in June 2023 and identified issues to discuss at the three future meetings. Although these meetings are an important first step, further action will be required to remove barriers identified by the working group.

RECOMMENDATION 12

To support the increased use of recycled aggregate and responsible recycling processes, we recommend that the Ministry of Natural Resources and Forestry work with stakeholders to develop and implement a plan to reduce educational, informational and financial barriers and establish best practices for the production and use of recycled aggregate.

MINISTRY RESPONSE

The Ministry of Natural Resources and Forestry (Ministry) acknowledges this recommendation and is working with the Ministry of Transportation, the Ministry of the Environment Conservation and Parks, and the Ministry of Municipal Affairs and Housing to explore barriers to recycled aggregate usage in Ontario. Based on the outcome of this, the Ministry will work with other relevant ministries and stakeholders to develop a plan to reduce barriers and establish best practices.

4.8 Approvals for Aggregate Licences and Permits

4.8.1 Late or Absent External Technical Reviews Mean Some Important Factors May Not Be Considered

An important part of the application process is the external review of the application and associated technical reports by other agencies with specialized expertise to assess and comment on the potential impacts of the proposed new pit or quarry. Many agencies (such as the local municipality, conservation authority and partner ministries) are sent the application, and their comments can provide valuable input for the Ministry. In particular, the Ministry relies on the expertise of the Ministry of the Environment, Conservation and Parks (Environment Ministry) on protecting species at risk, and the expertise of the Ministry of Agriculture, Food and Rural Affairs (Agriculture Ministry) on conserving agricultural land. We reviewed a sample of applications and found, however, that these expert reviews were not done consistently. Without a consistent approach, important factors included in the technical reports, such as protecting species at risk and preserving agricultural land, may not be reviewed and commented upon by the appropriate agencies for all approvals.

The external review process begins with applicants sending their application, including the relevant technical reports (see **Appendix 7**), to all applicable

agencies for review and comment. Any agency that wishes to comment on the application must do so within the prescribed 60-day consultation time frame. The applicant must then work to address these comments, including revising the application and site plan. Comments that are not submitted within the prescribed time frame do not have to be addressed by the applicant (unless the application is ultimately forwarded to the Ontario Land Tribunal, which has discretion to consider comments made outside the formal comment period). The applicant then submits a final information package to the Ministry that indicates how it has attempted to address all comments received.

We reviewed a sample of 15 final information packages from applications that were approved in 2022, and examined whether the Environment Ministry (Species at Risk Branch) and the Agriculture Ministry (Policy Division) reviewed and provided comments within the prescribed consultation period. We found, however, that these expert reviews were not done consistently, and important factors were not properly considered or addressed in some approvals.

Species at Risk Considerations

We found that in four (or 27%) of the 15 information packages, the Environment Ministry did not respond at all to the applicant's request to review the application for concerns about species at risk, such as endangered or threatened species. In another six (or 40%) packages, the Environment Ministry responded to the request after the 60-day consultation deadline. In these six cases, the Environment Ministry responded an average of 184 days (six months) after the consultation deadline, ranging from 26 to 455 days late.

In addition to the request for the Environment Ministry's review through the aggregate application process, every site that identifies habitat of threatened or endangered species also triggers a review by the Environment Ministry under the *Endangered Species Act, 2007* to ensure that proposed operations do not harm the species or their habitat. While operations will therefore still be reviewed by the Environment Ministry through the *Endangered Species Act, 2007* process, many concerns about species at risk can be addressed by modifying the site plan conditions during the aggregate application process. When comments are not provided on the application, or are provided long after the legislated deadline and well into the period in which applicants are making changes to address the feedback received, the opportunity to improve a proposed application and site plan based on expert input is more likely to be missed.

Agricultural Considerations

Similarly, applicants must circulate their aggregate application to the Agriculture Ministry where the applicant has either submitted an Agricultural Impact Assessment report, or has proposed aggregate operations on prime agricultural land (having the highest quality and capability for agriculture) and does not intend to restore the land to the previous soil quality. We reviewed all five final information packages from 2022 that were sent to the Agriculture Ministry for comment. We found that in two (or 40%) of the five packages, the Agriculture Ministry did not respond to the request for comments at all, and in one (20%) of the packages, the Agriculture Ministry commented 123 days (four months) after the consultation period ended.

Unlike the review of species at risk, which is triggered for all applications that identify habitat of threatened or endangered species, the only time an applicant must attempt to address agricultural comments is if they are raised during the consultation period. Therefore, if the Agriculture Ministry misses the consultation deadline or does not respond to application review requests, applications for operations that will degrade agricultural land may be approved without any conditions to minimize impacts.

RECOMMENDATION 13

So that important expert input from other agencies is incorporated into aggregate licences and permits to mitigate the negative impacts from proposed new aggregate pits and quarries, we recommend that the Ministry of Natural Resources and Forestry work with the Ministry of the Environment,

Conservation and Parks; the Ministry of Agriculture, Food, and Rural Affairs; and any other commenting agencies to ensure a full review of aggregate licence and permit applications within the prescribed timelines.

MINISTRY RESPONSE

The Ministry of Natural Resources and Forestry (Ministry) agrees that expert input from reviewing agencies is an important input to the development of a new aggregate authorization. Earlier this year, the Ministry engaged with staff from both the Ministry of the Environment, Conservation and Parks and the Ministry of Agriculture, Food and Rural Affairs to explain the aggregate approval process in detail and outline the importance of commenting within the required timelines. The Ministry is committed to exploring further opportunities with these ministries, as well as any other commenting agencies who express an interest in better understanding how to participate in the approvals process, to ensure a full review of aggregate licence and permit applications within prescribed timelines.

4.8.2 Cumulative Impacts Not Taken into Consideration in Approvals

Some areas in Ontario—such as the Townships of North Dumfries and Puslinch and the Town of Caledon—are naturally rich in aggregate deposits and therefore have multiple licensed pits and quarries in close proximity. For example, we visited an area in Cambridge during our audit that had 11 pits located within 2.8 kilometres of one another. The siting of multiple pits and quarries together can have cumulative (or combined) negative impacts on surrounding communities, local roads, and ecosystems (such as a loss of local natural areas) beyond the individual impacts of any one site alone. We found, however, that the Ministry does not have guidelines or processes for staff to consider the cumulative impact of multiple nearby aggregate operations when issuing approvals for new aggregate licences or permits.

British Columbia, by contrast, takes cumulative effects into consideration before approving new aggregate pits and quarries. British Columbia has a framework on cumulative impacts that provincial staff use to assess each new project across the natural resource sector—including aggregate operations—in the context of its combined or additive environmental, social and economic effects.

While the Ministry has not developed a provincial framework for assessing the cumulative impacts of aggregate operations, it has worked on developing two site-specific guidelines:

- In 2010, the Ministry collaborated with the Grand River Conservation Authority and the Ontario Stone, Sand & Gravel Association to develop best practice guidelines for addressing cumulative effects of new below-water aggregate operations in priority areas within the Grand River watershed. However, these guidelines are geographically limited to the cumulative effects of aggregate operations on water quality and quantity in this particular area. Moreover, as they are only best practices and not required as part of the approval considerations, Ministry staff do not take them into consideration when issuing aggregate approvals in this watershed.
- In December 2022, the Ministry formed a working group to develop a framework on cumulative impacts that Ministry staff can use to assess applications for new aggregate pits and quarries on the Saugeen Peninsula (also known as the Bruce Peninsula). As part of this, the Ministry has been working with the Saugeen Ojibway Nation to determine whether aggregate operations are having a cumulative adverse impact on traditional values and treaty rights. At the time of our audit, the Ministry was working on an internal draft report on the status of black bears on the peninsula and how they are affected by various development activities, including aggregates. The Ministry told our Office that this report will inform future discussions on how to consider the cumulative impacts of aggregate development on black bear populations.

A provincial cumulative impacts framework could provide guidance and processes for Ministry staff to consider the additive impacts of an additional aggregate operation within an area (beyond the regular consideration of impacts on an individual site basis) when issuing a licence or permit. Such a framework could provide the Ministry with a fair and defensible approach for working with applicants to incorporate, as needed, more stringent conditions or restrictions in site plans and licences or permits—such as lower daily maximum tonnages to limit truck traffic, reduced extraction depths, or increased dust control or noise mitigation measures—to address the cumulative impacts imposed by a new or expanding operation on the environment and neighbours in an already heavily burdened area.

RECOMMENDATION 14

To minimize the cumulative impacts of aggregate pits and quarries on the environment and nearby communities, we recommend that the Ministry of Natural Resources and Forestry develop a framework to incorporate consideration of cumulative impacts of aggregate operations when making decisions on new or amended approvals.

MINISTRY RESPONSE

The Ministry of Natural Resources and Forestry (Ministry) acknowledges the recommendation and will continue exploring approaches, including the development of a framework, to consider cumulative impacts in decision-making.

The Ministry will continue its work to understand the cumulative impacts of aggregate extraction activities on Aboriginal and Treaty rights in the review of permit and licence applications.

The Ministry also acknowledges that land-use planning conducted by municipalities is an effective way to address the cumulative impacts of various development activities, including aggregates, on the environment and nearby communities and First Nations. The Ministry will continue to encourage interested parties to participate in municipal planning processes to guide where aggregate resource development may be permitted to occur.

As part of the application process under the *Aggregate Resources Act*, there are technical reports, prepared by qualified professionals, that must support an application. These reports look at potential impacts to the environment and the community. These include planning and land-use considerations, haulage routes and truck traffic, a cultural heritage report, noise assessment, natural environment impact assessment and a hydrogeological report, which includes an impact assessment when the potential for impacts exist.

The Ministry has made regulatory changes under the *Aggregate Resources Act* to strengthen environmental protections through enhanced studies and source water protection, and require additional reporting for site rehabilitation, which help assess cumulative impacts.

4.8.3 Better Ministry Oversight of Self-Filed Amendments Needed

In September 2020, Ontario Regulation 244/97 under the Act was amended to allow applicants to amend their site plans or licences without Ministry approval for six different types of lower-risk changes (such as changing the type of fencing or updating contact information following the transfer of an approval to a new holder) provided that certain eligibility criteria are met and specified conditions are followed. The self-filed amendment process provides an opportunity to increase efficiencies and reduce administrative burdens for both industry and Ministry approvals staff. However, we identified gaps in the Ministry's oversight, which needs to be improved before the self-filed amendment process is further expanded.

Self-filed amendments can be submitted via a designated Ministry email address or the Natural Resources Information Portal. They do not require Ministerial approval, as long as the change is within the list of permitted activities. We found that self-filed amendments

submitted to the Ministry were only periodically monitored by Ministry staff and were not consistently reviewed to ensure they met the permitted list of changes set out in the regulation. We reviewed all self-filed amendments submitted to the Ministry in 2022, and found that 35 (or 48%) of the 73 submissions were not permissible. For example, impermissible self-filed amendments that were submitted included changes to the setback distance (the distance extraction will occur from the licence boundary), alterations to the rehabilitation plan, and a request for a licence surrender. Each of these proposed amendments were not permissible for the self-filed process, and should have undergone staff review and approval. According to the Ministry, it does not take any steps to verify self-filed amendments, and instead relies on the attestations of applicants that their submissions comply with the regulation. As such, the Ministry has neither confirmed whether operators implemented any of their self-filed changes, nor taken steps to prevent them from doing so.

Additionally, we found that another three (or 4%) of the 74 submissions did not contain required information—a completed self-filed amendment form and an updated site plan. This means that Ministry staff were unable to conclude whether the proposed activity qualified as a self-filed amendment. The Ministry internally identified that self-filed amendments should be reviewed to prevent impermissible activities from being submitted as self-filed amendments. However, the Ministry had not yet implemented any such process, and told us it believes the attestation process is sufficient.

The Ministry initiated the self-filed amendments approach in September 2020 in an effort to improve the efficiency of its approvals program. Prior to the regulatory amendment, the Ministry had 292 amendment applications waiting to be processed in June 2020. However, an internal Ministry review in 2022 found that the initial list of six allowable types of self-filed amendments did not yield significant efficiencies. Ministry staff therefore recommended that additional lower-risk activities be added to the regulation to reduce burden on staff and improve efficiencies for operators. In August 2023, the Ministry changed O. Reg. 244/97 to expand the list of self-filed amendments to include the following five additional site plan changes: import materials for recycling where processing facilities have already been approved; change the location of entrances and exits; add, remove or change the location of above-ground fuel storage tanks; allow portable processing equipment on site; and allow portable concrete or asphalt plants on site for public road authority projects.

RECOMMENDATION 15

To ensure compliance with Ontario Regulation 244/97 under the *Aggregate Resources Act*, we recommend that the Ministry of Natural Resources and Forestry create and implement a system to review all submitted self-filed amendments to ensure the proposed activities are permissible.

MINISTRY RESPONSE

The Ministry of Natural Resources and Forestry (Ministry) acknowledges the recommendation and will explore options to develop and implement a process to audit the submissions and quality of amendments without approvals (self-filed amendments) submitted by the regulated community.

To ensure a consistent approach across all districts with respect to the receipt of amendment without approval submissions, the Ministry will continue to develop and provide training to ensure staff have the required knowledge to perform their duties and initiate appropriate compliance actions and follow up on aggregate licensees and permittees who submit an ineligible or improperly completed amendment without approval form.

4.9 Information Systems and Policies

4.9.1 Ministry's Outdated Information Systems Make It Difficult for Staff to Execute Duties and for Applicants to Track Submissions

The Ministry uses paper records, five different information systems (see **Figure 19**) and Excel spreadsheets to deliver different aspects of the aggregate resources program. The databases are limited in their ability to share information, which makes it challenging for Ministry staff to execute their duties.

The existing Aggregate Licence and Permit System (ALPS), which contains basic information about individual sites, lacks the ability to track the progress of applications for new licences or permits, amendments, transfers and surrenders. The system is more than 30 years old and does not offer the functionality that the current approvals program requires. Because of the limitations of ALPS, Ministry approvals staff currently rely on four different non-integrated spreadsheets to track the progress of applications.

The Aggregate Site Inspection Application (ASIA) database, which has been in use since 2012, is primarily used by staff at the district level to record inspection reports. It also includes digital site plans. However, it does not record or track the use of other compliance

Figure 19: Ministry of Natural Resources and Forestry Aggregate-Related Information Systems

Prepared by the Office of the Auditor General of Ontario

Information System	Details
Aggregate Licence and Permit System (ALPS) Implemented in 1992	• Internal database used by Ministry to manage approved licences and permits. Includes: · contact information of approval holders; · site locations; and · some compliance activities (e.g., suspended and revoked sites). • Ministry can perform queries internally for information on existing and historical sites.
Aggregate Site Inspection Application (ASIA) Implemented in 2012	• Internal database used by site inspectors in district offices to store compliance and inspection records for aggregate operations. Ministry staff use it to: · generate inspection reports; · generate province-wide inspection summary reports; and · store digital site plans. • Ministry can filter/prioritize sites for inspection based on risk categories (e.g., extraction depth, berms and setbacks).
Natural Resources Information Portal (NRIP) Implemented in 2021	• Publicly accessible online application system. • Aggregate operators use it to submit compliance assessment reports. The goal is to eventually allow them to: · submit a new approval application or amend an existing approval; and · monitor the status of their submission. • Ministry uses Excel spreadsheets to track applications internally, but is working to move this function, and all other functions, to NRIP for internal use.
NICHE Records Management System	• Used by the Enforcement Branch to manage cases of non-compliance referred to it by documenting: · occurrences of non-compliance; · progress of investigations; and · outcomes of prosecutions.
Pits and Quarries Online	• Publicly accessible online tool that provides information on licensed and permitted pits and quarries, including: · licensee/permittee name; · location; · type of operation (i.e., pit or quarry); and · maximum allowable annual tonnage.

tools, such as warnings or rehabilitation orders, or the status of compliance.

Furthermore, these databases are not integrated. In fact, the Ministry does not have any centralized database that contains all information about each aggregate pit and quarry, including site plan and approval documentation, as well as compliance and enforcement data. Until recently, aggregate approvals (and all supporting documentation such as site plans) were paper-based and stored at district offices. As of September 2023, the information relating to 26% of active licences and permits has been scanned and digitized. This means, for example, that when approvals staff review applications for an amendment, they must request paper records from district offices and search shared folders for digitized documents, including email correspondence. They must also review ASIA to see an applicant's most recent site plan.

In January 2021, the Ministry made a commitment to issue all approvals, including those for aggregates, through the Natural Resources Information Portal (NRIP), a publicly accessible online application system that was implemented that year. The Ministry started integrating elements of the aggregate approvals process into NRIP in 2021. At the time of our audit, however, aggregate approval holders were able to use NRIP only to submit their annual compliance assessment reports. The Ministry plans to integrate other aggregate program functions, including the information contained in both ALPS and ASIA, into NRIP and aims to complete the integration by 2026/27.

Ideally, Ministry staff and applicants would be able to log into NRIP and view application details and transaction history, and applicants would also be able to submit the documentation required for each approval. Currently, applicants submit the required documentation by email and the only notification they receive is an automatic reply that the documents have been received, with no information provided on next steps or timelines.

RECOMMENDATION 16

To deliver the services of its aggregate program more efficiently, we recommend that the Ministry of Natural Resources and Forestry integrate all existing approval information, as well as compliance information, into the Natural Resources Information Portal in a timely manner.

MINISTRY RESPONSE

The Ministry of Natural Resources and Forestry agrees and is prioritizing the integration of aggregate approval and compliance information in future development of the Natural Resources Information Portal.

4.9.2 Out-of-date Policies Cause Confusion and Delays in the Approvals Process

The Ministry's out-of-date policies and procedures manual has contributed to delays in issuing aggregate approvals, and has left stakeholders confused about the applicable rules.

The Ministry's Aggregate Resources Policies and Procedures Manual (manual), which is posted on the Ministry's website, provides guidance to Ministry staff on how the Act is to be implemented. As well, aggregate operators, members of the public, and other stakeholders rely on this manual—along with information on the Ministry's website—to understand the regulatory framework.

Despite its importance, however, the manual has not been updated as a whole in almost 20 years. In most cases, individual policies and procedures date back to 2006 and do not include the recent regulatory changes made in September 2020, April 2021, and January 2022. Significantly, some of these changes, such as allowing applicants to self-file some types of amendments, are not included in the manual.

Internally, the Ministry has identified that the manual is one of the most important resources applicants use during the application process, but that it

is currently failing to meet applicants' needs because it lacks clear and up-to-date information. This outdated information increases the amount of time that aggregate specialists—the Ministry staff that process approvals—spend addressing applicants' questions during the approvals process. The Ministry is currently updating the manual with an expected completion date of 2025, although the Ministry has noted that this timeline may change as Ministry priorities evolve.

RECOMMENDATION 17

To provide clearer guidance to staff about how to implement the *Aggregate Resources Act*, and to applicants about their obligations during the application process, we recommend that the Ministry of Natural Resources and Forestry update all sections of the Aggregate Resources Policies and Procedures Manual by 2025, and release updated sections as completed.

MINISTRY RESPONSE

The Ministry of Natural Resources and Forestry (Ministry) agrees with this recommendation and has identified a number of priority policies to be updated in a phased approach. The first batch of these policies will be released in the near future for public and industry comment and review before finalizing. Other policies have been identified by the Ministry for update in subsequent stages of the manual update. Updated policies will be released once the consultation process is completed. Given the number of policies requiring revision due to program and legislative change, the review and update of the Policies and Procedures Manual may extend beyond March 2025.

4.10 Ministry Lacked Performance Measurement Framework for Aggregate Program

We found that the Ministry had not developed a performance measurement framework for its aggregate program. These frameworks outline processes to collect, analyze and report on a program's performance and whether it is achieving its intended outcomes. Without such a framework, decision-makers and the public cannot determine how effectively the Ministry is managing aggregate resources.

The Treasury Board Secretariat has provided guidance to all ministries emphasizing the importance of developing key performance indicators and targets to track performance, report on progress and drive continuous improvement. For over a decade, the Secretariat has encouraged ministries to develop performance measurement frameworks.

It is a best practice to establish and collect information on performance measures that show whether current actions are working and targets are being met. For Ontario's aggregate resources program, such measures would help inform what corrective actions need to be taken to deliver the program in an efficient and effective manner, while at the same time minimizing the impact of aggregate operations on the environment and nearby communities.

Our audit found that, since the 2019/20 fiscal year, the Ministry has had one key performance indicator that pertains to a service standard of determining, within 20 calendar days of receipt, whether application requirements have been met for aggregate licence applications. Apart from this one key performance indicator, the Ministry had not established a performance measurement framework or any other performance indicators to measure outcomes of the aggregate program as they relate to the purposes of the Act. These could include indicators that measure the effectiveness of the Ministry's regulation of aggregate operations (such as overall compliance rates), the rehabilitation status of excavated land, and the frequency of adverse impacts on the environment.

RECOMMENDATION 18

To assess the effectiveness of its aggregate program at achieving intended objectives, improve public transparency about the impacts of aggregate

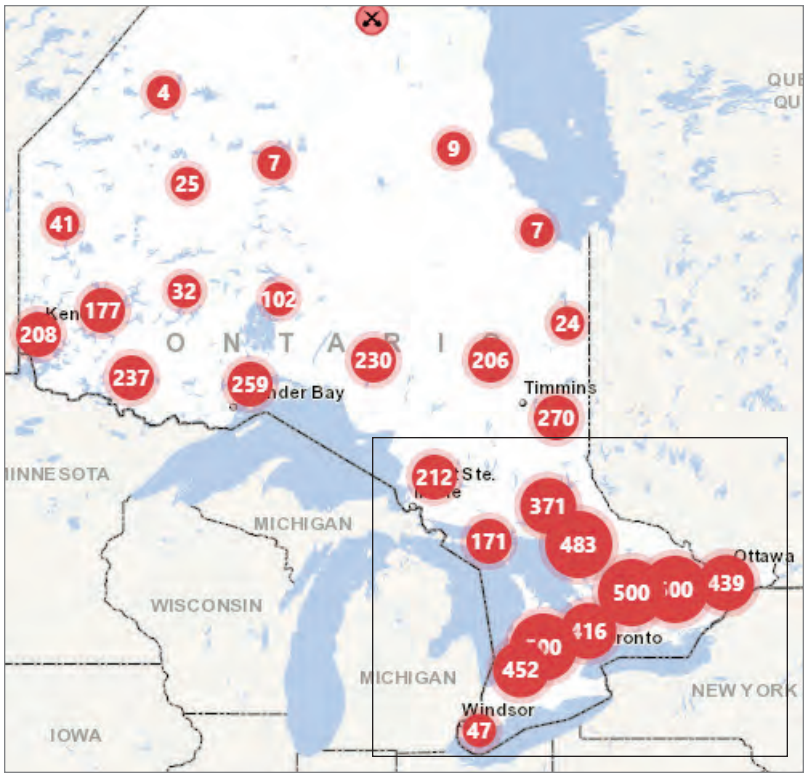
operations on the environment and nearby communities, and to drive continuous improvement, we recommend that the Ministry of Natural Resources and Forestry:

- develop a performance measurement framework for its aggregate program, including meaningful, measurable, and outcome-based performance indicators with targets and timelines; and
- regularly report to the public on the status of these performance indicators and targets.

MINISTRY RESPONSE

The Ministry of Natural Resources and Forestry (Ministry) agrees that a performance measurement framework would be helpful to assess and report on the effectiveness of the aggregate program. As a first step, the Ministry is committed to updating our policies and procedures and the information management systems that will improve how we collect and evaluate aggregate program data. As progress is made to implement **Recommendations 16** and **17**, the Ministry will explore opportunities to develop performance measures that include targets, timelines and a mechanism to provide status reports to the public.

Appendix 1: Glossary



Prepared by the Office of the Auditor General of Ontario

Aggregates	Gravel, sand, limestone, granite, or other rock that is excavated with the purpose of building things such as roads, highways, schools and hospitals, as well as making other products such as toothpaste and glass.
Aggregate approvals	The umbrella term for aggregate licences and aggregate permits.
Aggregate licence	An approval for a pit or quarry issued under the *Aggregate Resources Act* allowing for the excavation of aggregates on privately owned property. Licences are broken out into either Class A (for removal of more than 20,000 tonnes of aggregates annually) or Class B (for removal of 20,000 tonnes or less of aggregates annually).
Aggregate permit	An approval for a pit or quarry issued under the *Aggregate Resources Act* allowing for the excavation of aggregates that are Crown property, on land where the surface rights are Crown property, or from land under water.
Aggregate Licence and Permit System	A Ministry database that contains information relating to the management of aggregate extraction, and is used for issuing licences and permits across the province.
Compliance assessment report	An annual report that aggregate operators must submit to the Ministry that assesses their compliance with the *Aggregate Resources Act*, regulation, their site plan and the conditions of their approval.
Cement	Product made by heating various aggregates, such as limestone, shale, clay and crushed rock, at extremely high temperatures and then grinding the resulting substance to a fine powder. When mixed with water, it creates a paste, which is the primary ingredient to make concrete.
Concrete	Product made by combining aggregates (usually sand and gravel or crushed stone) with a paste made from water and cement. When the cement/water mixture hardens, it binds the aggregates into a rock-like mass. Concrete is the most widely used building material in the world.
Dormant site	A pit or quarry that is still subject to a valid licence or permit under the *Aggregate Resources Act* (i.e., the approval has not been revoked or surrendered), but where extraction is no longer occurring.
Legacy site	A pit or quarry where operations stopped before the *Aggregate Resources Act*, which requires a licence or permit, came into effect. These sites were abandoned and left unrehabilitated.
Pit	A location where loose aggregates such as sand or gravel are being or have been excavated. Excavation from pits occurs through digging.
Production report	An annual report that aggregate operators must submit to The Ontario Aggregate Resources Corporation that sets out the quantity and type of aggregate extracted and removed from a site in each month during the previous year. Approval holders that received their approval after April 1, 2021, must also report the amount of recycled aggregate removed.
Progressive rehabilitation	The rehabilitation of disturbed land in phases as extraction continues elsewhere within a site. Progressive rehabilitation is required by the Act, and the phases and order in which they are to be completed must be set out in the site plan. Licence or permit conditions may also outline further requirements.
Quarry	A location where solid aggregates such as limestone or granite are being or have been excavated. Quarries are located at the surface of the land (rather than underground) and are rarely deeper than 30 metres. Excavation from quarries occurs through blasting.
Recycled aggregate	Used cement, concrete or asphalt, or construction or demolition waste, debris or by-products, that has been reclaimed and processed for reuse in other building projects, in place of virgin aggregates. Recycled aggregates are used to make various new construction materials, such as asphalt and concrete for roads and sidewalks.

Rehabilitation	Treatment of land from which aggregates have been excavated so that the use or condition of the land is restored to its pre-excavation condition or use, or to a condition compatible with the use of adjacent land.
Reserves	In-ground aggregate resources that can be readily accessed.
Revoked licence or permit	An approval that has been rescinded by the Minister of Natural Resources and Forestry. Under the *Aggregate Resources Act* the Minister may revoke an approval for various reasons, including: a contravention by the approval holder of the Act, regulation, site plan or condition; or the insolvency of the approval holder.
Royalty	A payment made to the Crown in recognition of the extraction of aggregates owned by the Crown. Under the *Aggregate Resources Act*, the minimum royalty is set at 50 cents/tonne, and increased annually to account for inflation. The Minister of Natural Resources and Forestry may set a higher rate or may allow exemptions.
Site plan	A legally binding document that contains the applicant's contact information, geographic information for the site, maps, and details relating to: • existing site features; • site operations; • rehabilitation plans; and • cross sections of the site. The Ministry of Natural Resources and Forestry has established standards that outline all required information.
Surrendered licence or permit	An approval that has been voluntarily relinquished by an approval holder. The Minister of Natural Resources and Forestry may accept the surrender if satisfied that the approval holder has paid all required annual fees, and has completed final rehabilitation of the site.
The Ontario Aggregate Resources Corporation	A corporation that performs several duties on behalf of the Ministry of Natural Resources and Forestry as outlined in an indenture between itself and the Ministry, including collecting and disbursing aggregate fees, rehabilitating legacy pits and quarries, and collecting and reporting extraction statistics.

Appendix 2: Location and Number of Pits and Quarries in Ontario

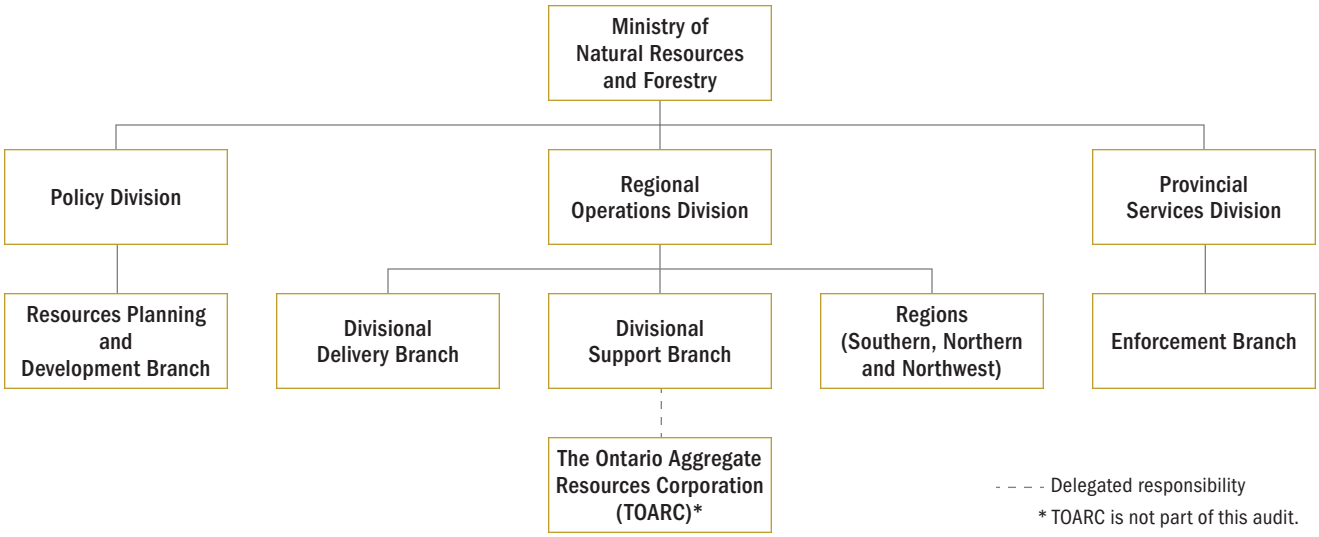
Southern Ontario



Appendix 3: Ten-Year Average of Annual Extraction by Licensed Operators, by Upper Tier Municipality, 2013-2022 (millions of tonnes)

Source of data: The Ontario Aggregate Resources Corporation

Appendix 4: Entities Involved in the Oversight of Aggregate Resources

Prepared by the Office of the Auditor General of Ontario

Policy Division	Develops policies, programs, regulations and legislation to manage Ontario's natural resources, including aggregates.
Resources Planning and Development Branch	Resources Development Section provides policy analysis, advice, and interpretation related to aggregates management.
Regional Operations Division	Implements policies and delivers programs related to natural resources, including aggregates, across Ontario.
Divisional Delivery Branch	Aggregates Section reviews and approves new aggregate licences and permits, and authorizes changes to existing approvals and surrenders of approvals.
Divisional Support Branch	Provides support for other branches, including data collection, digital services and program co-ordination.
Regions	District offices across the three regions inspect and oversee compliance at licensed and permitted sites, and refer cases of non-compliance to the Enforcement Branch, as necessary.
Provincial Services Division	Oversees a range of province-wide services, including: aviation, forest fire and emergency services; fish and wildlife services; and enforcement.
Enforcement Branch	Investigates cases of non-compliance and pursues charges and convictions.
The Ontario Aggregate Resources Corporation	• Acts as trustee of the Aggregate Resources Trust. • Rehabilitates legacy aggregate sites and unrehabilitated sites where the approval has been revoked. • Collects and disburses aggregate fees and royalties. • Collects and publishes statistics on aggregate extraction. • Conducts research and education on aggregates.

Appendix 5: Laws and Land-Use Plans that Provide Additional Direction* for Siting Aggregate Operations

Prepared by the Office of the Auditor General of Ontario

***Planning Act* (Provincial Policy Statement, 2020)**
To establish a legislative framework for provincial land-use planning, with which all municipalities and other approval authorities must comply. The Provincial Policy Statement provides specific policy direction on matters related to land-use planning and development, including the siting of aggregate pits and quarries.

States that aggregate resources are to be:

- identified and protected for long-term use;
- made available as close to market as possible, and that a demonstration of need for aggregates (including any type of supply/demand analysis) shall not be required, regardless of the availability of other local aggregate resources;
- extracted in a manner that minimizes social, economic and environmental impacts; and
- conserved, including through aggregate recycling, where feasible.

Requires progressive and final rehabilitation in order to recognize the interim nature of extraction, allow for subsequent land uses, and mitigate negative impacts.

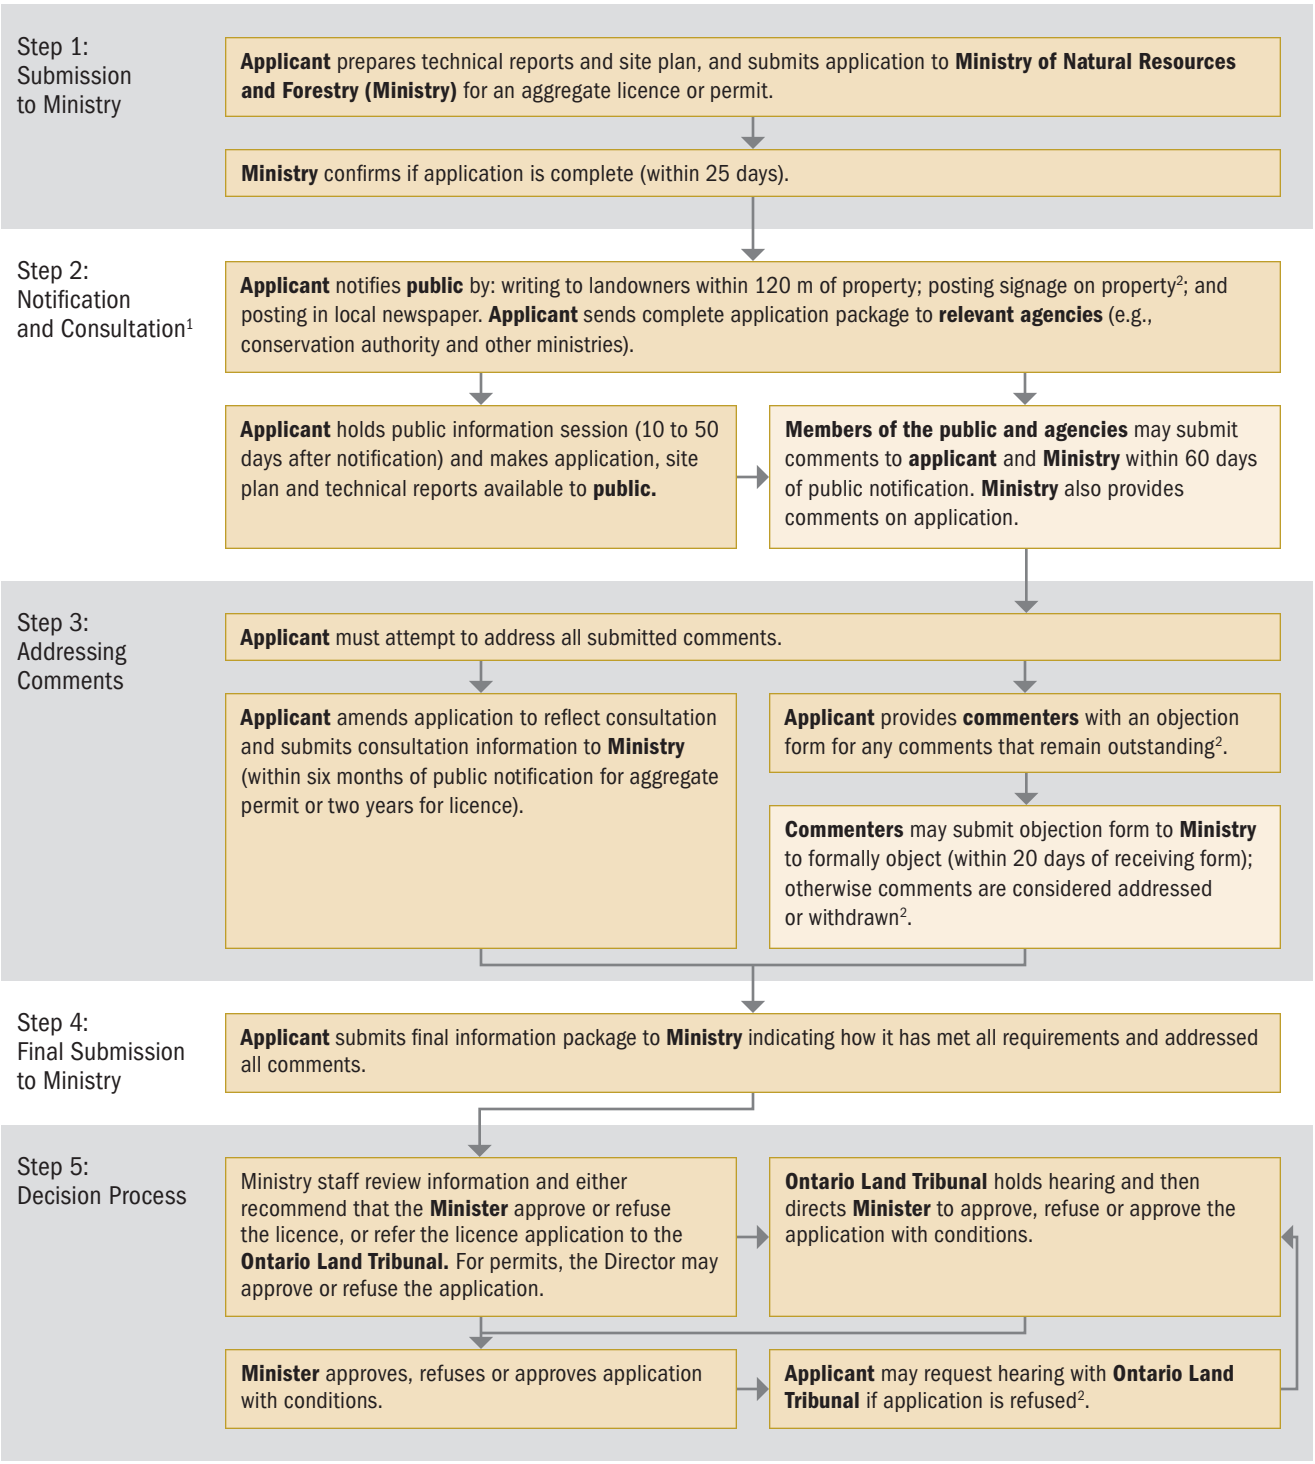
***Greenbelt Act, 2005* (Greenbelt Plan, 2017)**
To permanently protect land around the Greater Golden Horseshoe, including to protect against the loss and fragmentation of agricultural land, and give permanent protection to the natural heritage and water resources that sustain ecological and human health.

- Prohibits new aggregate pits and quarries in significant wetlands, significant woodlands, or in the habitat of endangered or threatened species, in the Greenbelt's Natural Heritage System (with exceptions). Sets out enhanced final rehabilitation requirements for pre-existing aggregate operations.
- Sets out a maximum allowable disturbed area limit for new aggregate operations in the Greenbelt's Protected Countryside, and requires pre-existing operations to rehabilitate any disturbed area that exceeds this limit.
- Sets out additional criteria for applications for new aggregate operations in the Greenbelt (e.g., requires applicants to demonstrate how the connectivity between key natural heritage features and key hydrologic features will be maintained).

***Niagara Escarpment Planning and Development Act* (Niagara Escarpment Plan, 2017)**
To provide for the maintenance of the Niagara Escarpment and land in its vicinity as a continuous natural environment, and to ensure only such development occurs as is compatible with that natural environment.

- Prohibits aggregate pits and quarries in 76% of the area covered by the Niagara Escarpment Plan.
- In the two areas where pits and quarries are allowed—the Escarpment Rural Area (23%) and the Mineral Resource Extraction Area (1%)—requires an additional development permit and plan amendment (for operations extracting more than 20,000 tonnes annually) from the Niagara Escarpment Commission.

***Oak Ridges Moraine Conservation Act, 2001* (Oak Ridges Moraine Conservation Plan, 2017)**
To protect the ecological and hydrological integrity of the Oak Ridges Moraine Area.



- Prohibits new aggregate pits and quarries in 46% of the area covered by the Oak Ridges Moraine Conservation Plan (Natural Core Areas and Settlement Areas).
- Allows aggregate extraction in 24% of the area (the Natural Linkage Areas), but not below the water table.
- Allows aggregate extraction below the water table in the remaining 30% of the area (Countryside Areas).
- Sets out strict rehabilitation requirements for the allowed aggregate operations.

***Places to Grow Act, 2005* (A Place to Grow: Growth Plan for the Greater Golden Horseshoe, 2020)**
To support the development of complete communities with access to transit, employment, and a variety of housing.
• Establishes policies restricting the location of new and expanded aggregate operations, and policies affecting the rehabilitation of aggregate sites within the Greater Golden Horseshoe.
Provincial Parks and Conservation Reserves Act, 2006
To permanently protect a system of provincial parks and conservation reserves.
• Prohibits aggregate extraction in any provincial park or conservation reserve.

* Prohibitions and restrictions in legislation (and supporting land-use plans) that limit the siting of aggregate operations are implemented through the adoption of municipal official plans.

Appendix 6: Process to Obtain a New Aggregate Licence or Permit

Prepared by the Office of the Auditor General of Ontario

1. As licences and permits are prescribed instruments under the *Environmental Bill of Rights, 1993*, the Ministry is also required to conduct a separate consultation process pursuant to that law.
2. These steps apply to aggregate licences only (not to aggregate permits).

Appendix 7: Site Plan and Technical Report Requirements for Applications for New or Amended Aggregate Approvals

Prepared by the Office of the Auditor General of Ontario, based on the requirements set out in the Ministry of Natural Resources and Forestry's Aggregate Resources of Ontario Standards

Applications for New Approvals

Site plan: Gives background information about existing site features prior to extraction, operational information about the proposed site, and information about how a site is to be extracted (such as phasing, depth and types of equipment). It is the primary instrument used for administering the *Aggregate Resources Act*. Must include:

- mitigation measures to be taken, where potential impacts have been identified;
- monitoring programs to be followed, where recommended by technical reports or to address concerns raised;
- areas to be avoided and protected;
- map of the proposed location; and
- proposed progressive and final rehabilitation plans.

Summary statement: Depending on the application type, the summary statement may include background and operational information, rehabilitation plans, and hauling routes to/from the site.

Technical reports and information: Gives technical and operational information to help assess the environmental and social impacts on the proposed site area. Depending on the proposed application, may require technical reports on the following:

- maximum predicted water table;
- natural environment (including impacts on habitat of endangered or threatened species);
- cultural heritage;
- agricultural impact assessment;
- water report (for extraction below the water table);
- noise assessment; and/or
- blast design.

Applications for Prescribed Significant Amendments to Approvals (see Appendix 9)

Technical reports and information: Gives technical information to help assess the environmental and social impacts of the proposed significant amendment.

- Applicants seeking to lower the depth of extraction below the water table must submit:
  - a water assessment;
  - a natural environment assessment;
  - planning and land use considerations; and
  - source water considerations.
- Applicants seeking to expand into an adjacent road allowance must submit:
  - a water assessment (if extracting below the water table);
  - a natural environment assessment;
  - a cultural heritage assessment;
  - an agricultural assessment;
  - planning and land-use considerations; and
  - source water considerations.

Appendix 8: Ministry of the Environment, Conservation and Parks Approvals that May be Required for Aggregate Operations

Prepared by the Office of the Auditor General of Ontario

Endangered Species Act, 2007
To identify and protect species at risk (e.g., endangered and threatened species) and their habitats, and promote the recovery of species that are at risk.
• Aggregate operators must meet conditions to mitigate the impacts of pits and quarries on endangered and threatened species (e.g., prepare and implement a mitigation plan; prepare and provide an annual report on the operation's effects on identified species at risk).
• For certain endangered species (named in regulation under the Act), the Environment Ministry may require a permit if an aggregate project or activity is expected to have an impact on the species or its habitat.
Environmental Protection Act
To provide for the protection and conservation of the natural environment.
• Aggregate operators must obtain an Environmental Compliance Approval for any air and noise emissions.
• Establishes guidelines for excess soil brought into aggregate operations.
Ontario Water Resources Act
To provide for the conservation, protection and management of Ontario's waters and for their efficient and sustainable use.
• Aggregate operators wishing to take or remove more than 50,000 litres of water per day (e.g., to pump water out of a quarry) must obtain a Permit to Take Water.
• Aggregate operators must obtain an Environmental Compliance Approval if discharging any wastewater back into the environment.

Appendix 9: Types of Aggregate Approval Amendments

Prepared by the Office of the Auditor General of Ontario

Type of Amendment	Description	Examples	Amendment Process
Prescribed significant amendments	Two specific types of major changes as set out in the *Aggregate Resources Act*.	• Lowering the extraction from above to below the water table. • Expanding a licence boundary into an adjacent road allowance.	• Applicants must follow the same application process as for new approvals (see **Appendix 6**). • Applicants must submit additional technical reports (see **Appendix 7**).
Other significant amendments	Major changes to a site plan or approval document that would significantly alter the operation or rehabilitation of a site, other than the two prescribed significant amendments.	• A change in maximum annual tonnage. • A significant change to the progressive or final rehabilitation plans. • A change that will increase potential negative impacts to natural heritage features.	• Approval from the Ministry is required. • Applicants must first notify and consult with other ministries, agencies and municipalities that have a direct interest in the proposed change. Must also notify neighbouring landowners if they are potentially affected by the proposed change. • Technical reports may need to be submitted to support proposed changes.
Non-significant amendments	Changes to a site plan or approval document that would not significantly alter the operation or rehabilitation of the site.	• Changes to location of gates and fencing. • Changes to final slopes or grading during rehabilitation.	• Ministry approval is required. • Notification and consultation procedures are not required (however, the Ministry may require notification and consultation if it determines the change is significant).
Self-filed amendments	Small or routine types of changes to a site plan only (as set out in the regulation).	• Updating the name and contact information of an approval holder following the transfer of an approval. • Changing the type of fencing.	• Does not require review or approval by the Ministry, provided specific conditions are met (e.g., annual fees are up to date). • Approval holder must provide a copy of the amended site plan to the Ministry.

Appendix 10: Compliance and Enforcement Options

Source of data: Ministry of Natural Resources and Forestry's Aggregate Compliance Handbook

	Description/Features	Issued By	Best Used For
Warning	• More informal process; can be written or verbal	Aggregate inspector	• Very minor infractions (e.g., minor over-tonnage) • First-time offence
Inspection report	• Issued after a site inspection • Lists non-compliance issues identified by inspector, with remedial action dates	Aggregate inspector	• Minor violations • No immediate need to cease activities
Rehabilitation order	• Outlines specific rehabilitation work to be done within specified time frame	Aggregate inspector	• Where progressive or final rehabilitation has not been performed in accordance with site plan
Inspector's order for compliance	• Written direction ordering an operator to rectify a violation within specified time frame, or to stop extraction from an illegal site and require rehabilitation	Aggregate inspector	• Illegal operations • Moderate violations, or violations that have not been rectified following a warning or inspection report
Notice of suspension	• Requires operator to stop operations, effective immediately • Creates strong incentive to correct a violation	Aggregate inspector	• Any serious violation where there is an immediate need to stop the activity or obtain compliance on site
Charge	• Charges for minor offences can be in the form of a ticket with a fine of up to $750 • Charges for more significant offences can result in a court prosecution and, if found guilty, a fine of up to $1,000,000 plus $100,000 for each day the offence occurs or continues • Court prosecutions can also result in a court order to rectify a violation	Conservation officer	• Illegal operations • When there has been non-compliance with previous notices or orders • Serious violations that warrant "an overall message to the industry"
Notice of revocation	• Order that revokes a licence or permit • Provides a final resolution	Minister (licences) or District manager (permits)	• When pit or quarry has been abandoned or owner/operator declares bankruptcy • Violations where past charges and enforcement tools have had no effect • When rehabilitation is not the primary concern

Appendix 11: Audit Criteria

Prepared by the Office of the Auditor General of Ontario

1. The Ministry of Natural Resources and Forestry (Ministry) reviews applications for new and amended aggregate approvals and makes approval decisions in an efficient and effective manner and in accordance with the requirements and purposes of the *Aggregate Resources Act*, regulation, standards and policies.
2. The Ministry's operating requirements are sufficient to minimize the local impacts of aggregate operations on surrounding communities and the environment.
3. The Ministry has effective inspection and enforcement processes in place to ensure compliance by aggregate operators with the *Aggregate Resources Act*, and relevant regulations, policies, permits and licences.
4. The Ministry has timely, complete and accurate information about Ontario's aggregate resources to inform decision-making related to managing aggregate resources sustainably. The Ministry publicly reports on such information.
5. The Ministry has processes to ensure that The Ontario Aggregate Resources Corporation complies with, and performs, all responsibilities in an effective and efficient manner as outlined in the Act, the regulation, the Indenture Agreement and its Memorandum of Understanding.
6. Through its own operations and oversight of The Ontario Aggregate Resources Corporation, the Ministry ensures that land from which aggregates have been excavated is effectively restored to its former use or condition, or is changed to another use or condition that is or will be compatible with the use of adjacent land.
7. The Ministry encourages the environmentally and socially responsible production and use of recycled aggregate.
8. The Ministry establishes meaningful performance targets related to the delivery and effectiveness of its aggregate resource program, and measures and publicly reports on progress toward targets.

Ministry of Tourism, Culture and Sport

Metropolitan Toronto Convention Centre and Ottawa Convention Centre

1.0 Summary

A convention centre is a space designed to hold large-scale events such as conferences, trade shows, consumer shows, corporate events, as well as food and beverage events like banquets or wedding receptions. A typical convention centre is made up of exhibition halls, meeting rooms and ballrooms, and may also offer amenities like hotels, restaurants and on-site parking.

While convention centres can be owned and operated by private entities, many belong to and/or are operated by municipal and provincial governments. In Ontario, there are two provincial convention centres—the Metropolitan (or Metro) Toronto Convention Centre (MTCC), in Toronto, and the Ottawa Convention Centre (OCC, or Shaw Centre), in Ottawa. They operate as individual Crown agencies overseen by the Ministry of Tourism, Culture and Sport (Ministry). Both centres are located in the downtown area of their respective cities, giving convention delegates easy access to transportation, hotel accommodations, restaurants, tourist attractions and other amenities.

Governments usually operate convention centres for the purpose of stimulating economic activity in their regions, creating employment opportunities, spurring economic growth and generating tax revenue. Events held at MTCC and OCC attract delegates from across Canada, the United States and around the world. During their visit, these delegates have an economic impact on the region by spending on transportation, accommodation, dining and entertainment, and by visiting tourist attractions. Delegates who come from farthest away tend to have the greatest economic impact because they tend to stay longer and spend more money.

Excluding the two years of the COVID-19 pandemic, over the past decade the two centres combined to generate, on average, an estimated $600 million in economic impact per year. Their combined average annual operating profits totalled about $20 million. Client satisfaction surveys from the past 10 years showed that almost all respondents rated their overall experience at MTCC and OCC positively. This included event planners as well as exhibitors.

Our audit found that the two centres were focusing on attracting events that made profit rather than attracting events that promoted and developed tourism in their regions. For its part, the Ministry did not properly oversee the centres to ensure they were operating in a way that best achieved their mandate. A strategic focus on promoting and developing tourism is likely to generate more economic impact for the province.

We also noted that, in the aftermath of the COVID-19 pandemic, the two centres were finding it difficult to bring back events; future bookings for conventions were down by about 50% from their pre-pandemic levels. The Ministry had asked the government in 2022 and 2023 to fund incentives to help attract large-scale convention centre events to Ontario. However, the government did not approve the funding, citing other priorities. In contrast, provincial

governments in British Columbia and Quebec have chosen to finance such incentives to help their convention centres in their post-pandemic recovery.

Ministry of Tourism, Culture and Sport

These were some of our observations related to the Ministry:

- **Ministry oversight of provincial convention centres did not ensure that the centres were operating in full alignment with their legislative mandate.** Legislation mandates each centre operate "in a manner that will promote and develop tourism and industry in Ontario." Being profitable is not mentioned in the legislated mandates. However, we found that often it was an event's profitability, not its role in promoting or developing tourism (to generate economic impact), that both centres largely focused on when determining how much to bid to win the opportunity to host an event. In 2016, a Ministry consultant who reviewed the provincial convention centres' mandate advised the Ministry that, if the centres focused on events that were commercially successful (profitable), they could end up generating less economic impact for Ontario. Despite this, the Ministry did not take any steps to ensure that economic impact was being maximized by the centres.
- **Millions of dollars in potential economic impact have been lost while the centres focused on their individual profitability.** We found that, since 2018, the centres had collectively lost the opportunity to host 97 events (78 at OCC and 19 at MTCC) because the centres had set their bid prices too high to host events, aiming to achieve greater profitability.
  - For MTCC's 19 lost events, eight coincided with the two fiscal years in which COVID-19 pandemic lockdowns occurred, which made it harder to find replacement events over the same time period. Of the remaining 11 events which occurred either before or after the pandemic lockdowns, MTCC was unable to book replacement events for four of them. These four events were estimated by Destination Toronto (a destination marketing organization that focuses on promoting tourism in Toronto who managed the bidding for these events on behalf of MTCC) to have had an economic impact of approximately $27 million.
  - Of the 78 events that OCC lost, 29 coincided with the two fiscal years when the pandemic lockdowns occurred, so we removed them from our analysis. We found that for 15 of the remaining 49 events, OCC was unable to book any other event. According to OCC, these 15 events had the potential to generate an estimated economic impact of about $25 million.

  Overall, therefore, MTCC and OCC missed the opportunity to generate an estimated $52 million in additional economic impact for the province.

Provincial Convention Centres

We found that, generally, both MTCC and OCC effectively managed their operations and facilities, satisfied the expectations of their clients and maintained economic efficiency. MTCC consistently received positive feedback from its clients, with 95% of survey respondents between 2013/14 and 2022/23 rating their experience positively. Meanwhile, OCC's client satisfaction ratings from 2013/14 to 2022/23 were also very good, with event planners giving, on average, a score between 4.5 and 5 each year out of 5 on client satisfaction surveys.

Nevertheless, we noted that both centres faced challenges in attracting large-scale events.

Metro Toronto Convention Centre

- **MTCC no longer had enough contiguous space to host the largest conventions and trade shows that could come to Toronto.** Among a sample of comparable North American convention centres, MTCC ranked 18 out of 21 in terms of the size of its contiguous rentable space (space that is adjoining, with no obstructions or

gaps). According to one estimate, it did not have enough space to host 27% of conventions and trade shows that could come to Toronto. This lack of contiguous space has resulted in 20 international conventions that were formerly held at MTCC relocating to other convention centres. These international events, which together had approximately generated an estimated $490 million in economic impact for Ontario, have effectively outgrown MTCC.

- **MTCC was sometimes not selected as a venue because of a lack of available hotel rooms in downtown Toronto.** A lack of available and/or affordable hotel rooms in downtown Toronto has resulted in MTCC losing bids to host events. We identified 23 such instances for events that were bid on, but lost, between 2017 and 2019. These events were estimated as being able to generate approximately $344 million in economic impact for the province. We noted that some municipal and state governments in the United States have taken proactive measures to build hotels or incentivize them to be built near convention centres.
- **The Ministry's decision on a redevelopment plan proposed by MTCC remained outstanding.** As a result of the relative lack of contiguous space and nearby availability of hotel rooms, in 2019, MTCC proposed plans to redevelop the centre, which included expanding the size of available event space to capture more of the large-scale convention market as well as building 2,500 to 3,000 hotel rooms connected to the facility. Leadership at MTCC presented preliminary redevelopment plans to the Ministry in 2019 and provided an update in 2021 and, at the time of our audit, had not received any direction regarding the possibility of redeveloping the centre at the existing location.

Ottawa Convention Centre

- **A lack of direct flights to Ottawa resulted in OCC losing bids to host international conventions.** We found seven instances where OCC was unsuccessful in its bid to host an event to be held between 2022 and 2026 because of the relative scarcity of direct flights to Ottawa. It is estimated that these events would have brought nearly $25 million in economic impact to the province. According to a 2020 survey of event planners (completed prior to the COVID-19 pandemic), about 40% of planners rated flight access to Ottawa as "average or poor." The planners ranked Ottawa 25 out of 40 North American cities for flight access, behind cities such as Pittsburgh, Portland and Phoenix. We found that as of August 2023, flights in and out of Ottawa were still down by about 27% from their pre-pandemic levels, with international flights down by 53%.
- **Ottawa's decline in activity in its downtown core has reduced the city's appeal to event organizers.** Event planners we spoke to informed us that when evaluating an event destination, one important criterion was the vibrancy of the destination, a measure which includes a city's restaurants, attractions, cultural offerings and its "walkability" in relation to the convention centre. According to information from the Canadian Chamber of Commerce, an association that advocates for the needs of businesses, as of June 2023, foot traffic to Ottawa's downtown (where OCC is located) was still nearly 34% below its pre-pandemic, January 2020 level. By comparison, other tracked Canadian municipalities were down about 9%, on average.

This report contains 10 recommendations, with 28 action items, to address our audit findings.

Overall Conclusion

Our audit concluded that the Metro Toronto Convention Centre (MTCC) and Ottawa Convention Centre (OCC) were not operating in a manner to best achieve their legislative mandates. The two centres were making operational decisions that favoured their own

financial interests rather than the promotion and development of tourism (which generates economic impact) for the province. Further, the Ministry of Tourism, Culture and Sport (Ministry) did not properly oversee the two centres to ensure they were directly pursuing their legislative mandates.

We also concluded that while the Ministry supported the provincial convention centres with over $40 million during the COVID-19 pandemic to maintain their operations, the provincial convention centres have not been adequately supported in their recovery from the COVID-19 pandemic. As of June 2023, future bookings for conventions at both convention centres had declined by nearly 50% compared to their pre-pandemic levels. Despite this downturn, and in contrast to some other Canadian jurisdictions, the government of Ontario did not approve the Ministry's proposed incentive program aimed at attracting large-scale events, including conventions.

We concluded that, generally, the Ministry had not provided clear direction to the provincial convention centres as to how to address other recent challenges impacting their ability to maintain themselves as international-class convention centres. MTCC faced challenges related to its aging facility. Particularly, its layout and the size of its exhibit and meeting spaces were not meeting the needs of large-scale events. As well, securing enough hotel rooms for event attendees was a problem. MTCC had proposed redevelopment of the centre to the Ministry, and was awaiting a response. OCC was impacted by a significant decline in direct international flights to Ottawa, down by about 53% from pre-pandemic levels. While governments in other jurisdictions were actively working with airlines to increase flight frequency, the Ministry was not providing support in this regard.

We concluded that, generally, both MTCC and OCC effectively managed their operations and facilities, satisfied the expectations of their clients and maintained economic efficiency. MTCC consistently received positive feedback from its clients, with 95% of survey respondents between 2013/14 and 2022/23 rating their experience positively. Meanwhile, OCC's client satisfaction ratings from 2013/14 to 2022/23 were also very good, with event planners giving, on average, a score between 4.5 and 5 out of 5 on client satisfaction surveys each year.

Finally, we concluded that the Ministry required MTCC and OCC to track and measure performance indicators and the centres publicly reported on those. While MTCC and OCC reported on numerous performance metrics and generally achieved their performance targets, we noted that MTCC's economic impact target was relatively less ambitious than its revenue growth target and OCC did not start setting a target for the economic impact generated by the centre until 2018/19.

OVERALL MINISTRY RESPONSE

The Ministry of Tourism, Culture and Sport (Ministry) appreciates the work of the Office of the Auditor General of Ontario and welcomes the recommendations to help build on the success of our convention centres, and the economic impact they provide for Ontario.

The government is focused on rebuilding the economy and creating good jobs for Ontarians. The Metro Toronto Convention Centre and the Ottawa Convention Centre are agencies of our ministry and important economic generators for the cities of Toronto and Ottawa. When people attend events at convention centres they directly and indirectly support jobs and surrounding businesses, such as hotels and restaurants.

The Auditor General's recommendations provide useful feedback to help the Ministry and our convention centres work together to create even greater benefits for the province. We will work with these recommendations and explore opportunities to help our convention centres attract more and larger events, while maximizing the economic impact generated for the province.

OVERALL METRO TORONTO CONVENTION CENTRE RESPONSE

We wish to express our sincere gratitude to the Office of the Auditor General of Ontario for providing us with the opportunity to review this report.

We acknowledge and embrace the recommendations made in your report, particularly those pertaining to the capital improvement process, the resolution of our marshalling yard requirement, and improving event-delegate and staff safety, such as through the concept of a convention district. These recommendations resonate with our mission, and we are fully committed to their effective implementation. We are also aware that certain recommendations are directed towards the Ministry of Tourism, Culture and Sport (Ministry), and we recognize their potential indirect impact on our operations. To ensure a seamless and successful implementation, we are eager to collaborate closely with the Ministry and other relevant stakeholders, including working with Ottawa Convention Centre (OCC), Destination Toronto and Ottawa Tourism to perform an analysis of convention centre incentive-based programs across North America.

Collaboration and open communication with the Ministry is pivotal in ensuring that our strategies are well-aligned with its vision and goals. We are committed to working closely with the Ministry because that facilitates a unified approach that benefits not only MTCC and OCC but also the larger community by driving economic and cultural growth. Your recommendations are essential steps in this direction, and we look forward to their implementation.

OVERALL OTTAWA CONVENTION CENTRE RESPONSE

The Ottawa Convention Centre is pleased with the overall content of this report and we thank the Office of the Auditor General of Ontario for its time and work. It has shed light on the challenge of providing economic impact while maintaining a state-of-the-art building and meeting a debt repayment obligation.

Delivering economic impact to the city of Ottawa and the province of Ontario is the Ottawa Convention Centre (OCC)'s objective. We know that when the centre is full of national and international conventions our hotel partners, local retailers, restaurants and other ancillary businesses benefit from new money brought to our destination.

As a for-profit operating entity with an obligation to repay a $1 million debt in perpetuity to the Ontario Financing Authority (OFA) as well as an obligation to maintain a world-class convention centre through ongoing upgrades, replacement and enhancement to capital assets, it is difficult for the centre to deliver solely on economic impact and still fulfill its financial obligations each year. We fully support the recommendation that the Ministry work with OCC's management and the OFA to determine if any changes are needed to OCC's annual $1 million payment, including whether funding could be prioritized for capital repairs when necessary.

Management appreciates that the Office of the Auditor General of Ontario made data-driven assessments of the OCC's operations and sales and marketing initiatives. It is important to note that while details in this report on our lost business due to high costs are accurate, some of these costs can be outside of our direct control, such as the cost of lodging and air travel for event attendees.

We are pleased the audit recognizes the International Association of Convention Centres' APEX Best Convention Centre in the World Award in 2020 and our high and consistent customer service scores. Management was recognized as good operators of the business and adhering to proper business practices.

2.0 Background

2.1 The Purpose of Convention Centres

A convention centre is a space designed to hold large-scale events (often involving thousands of people) such as conferences, trade shows, consumer shows, corporate events, as well as food and beverage events like banquets or wedding receptions. A typical convention

centre is comprised of exhibition halls, meeting rooms and ballrooms, and may also offer amenities like hotels, restaurants and on-site parking.

Convention centre events typically generate two types of financial impact: profits for the venue and economic impact for the local economy. Privately owned convention centres are run for the purpose of generating profits for the owners. Governments, however, usually develop and operate convention centres for the purpose of stimulating economic activity in their respective regions, creating employment opportunities, spurring economic growth and generating tax revenue. Convention centres in Ontario play a significant role in attracting delegates from across Canada, the United States and around the world. These delegates contribute to the local economy by spending on transportation, accommodation, dining and entertainment and by visiting tourist attractions. This cash infusion to the local economy is known as economic impact.

2.1.1 Calculating the Revenue and Economic Impact of Convention Centre Events

Revenue refers to funds received by the convention centre, through what the client spends on items such as venue rent, food and beverage purchase, Internet access and security. On the other hand, economic impact is a measure of the dollar impact of an event on its local and regional economy overall, not just spending at the centre. This impact includes direct spending by event delegates in the broader community, such as spending on hotels, restaurants, transportation (such as flights and taxis), retail shops, entertainment and tourist attractions. The event would also indirectly contribute to economic impact as a result of the increased demand for goods and services. For instance, as a result of convention attendance, local hotels and restaurants may hire more staff, purchase additional supplies or order more food, thus stimulating economic impact in these sectors and their related supply chains. Lastly, salaries and wages paid to those who work in industries that benefit from direct delegate spending go on to spend their wages in their communities, creating additional economic impact for the region. The total amount of all of this spending is known as economic impact.

Convention centres use specialized tools to calculate the economic impact of the events they host in Ontario. In the 1980s, the Ministry of Tourism, Culture and Sport developed the Tourism Regional Economic Impact Model (TREIM), a specialized analytical tool and methodology to assess and quantify the economic impact of tourism-related activities, including those held at convention centres. A web version of TREIM was made available in 2005 so that tourism stakeholders (including convention centres) could calculate the economic impact that would come from hosting a prospective event. TREIM is widely used in the tourism sector of Ontario.

The current version of TREIM relies on data from various sources to analyze and calculate the economic impact of tourism in Ontario. For example, it includes information from Statistics Canada's 2011 Census and National Household Survey, providing details on employment, income, population and housing across the region. Subsequent to 2011, additional census surveys have been conducted by Statistics Canada that are not reflected in TREIM. Other provinces (such as Nova Scotia) use the same sources of national tourism data (such as those compiled by Statistics Canada) that TREIM does when calculating the economic impact of tourism in their regions.

2.1.2 Economic Impact of Large-Scale International Events

In general, events that bring the greatest number of delegates who travel the farthest distance can create the most economic impact. These delegates are more likely to spend on transportation, accommodations, dining, entertainment and visiting tourist attractions than local delegates. The furthest-travelling delegates are also more likely to bring their family and extend their stay at the event destination beyond its conclusion. In 2019, Statistics Canada found that international convention delegates spent an average of $1,528 per person per visit, compared to $758 spent by Canadian convention delegates from outside of Ontario

Figure 1: Direct Spending in Ontario Generated per Convention Delegate per Visit in 2019

Source of data: Statistics Canada

	Origin of Delegate		
Average Spending ($)	**Ontario**	**Canada**	**International**
Transportation	110	279	515
Accommodation	119	311	687
Food and beverage	82	139	229
Recreation/entertainment	18	17	25
Retail/other	20	12	72
Total	**349**	**758**	**1,528**

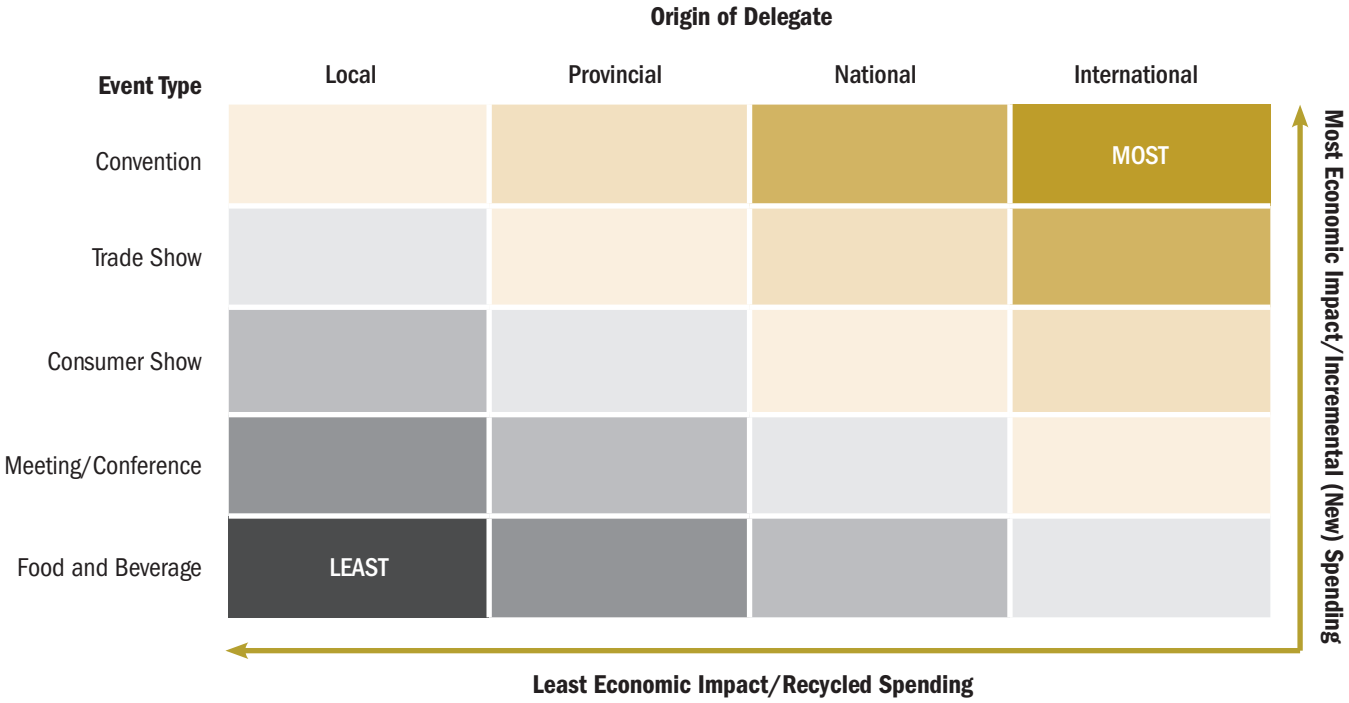
Note: Data is for 2019, the most recent year of review. The total economic impact generated by visitors is greater than their direct spending, as economic impact also includes all the indirect impacts that this spending generates, such as the number of jobs supported, including full-time, part-time, seasonal and temporary employment, which then generates wages and salaries. Direct spending also does not capture all the federal, provincial and municipal taxes generated.

and only $349 by convention delegates within Ontario. **Figure 1** provides details of direct spending in Ontario generated per convention delegate, per visit, in 2019.

Also, international and national convention delegates bring new money into the province. Convention delegates who already live here are likely to spend their money on other activities in the province, in the absence of a convention event, so the impact from local delegates amounts to "recycled spending"—taking spending from one sector of the provincial economy and giving it to another. Large government-owned, operated and/or controlled convention centres generally target delegates who come from outside their province so that genuinely new spending underpins the economic impact of the events they hold.

Figure 2 depicts the general relationship of event types and delegate origin location with their respective economic impact potential, including whether new or recycled spending is generated. For instance, in general, international conventions draw a larger number of international delegates to the host destination when compared to events focused on food and beverage, such as banquets, which tend to draw local visitors. This is one reason why international conventions generate significant economic impact for the host destination.

Large-scale conventions are usually held by the biggest Canadian, American and international professional and trade associations and organizations. As these events have the potential to make significant contributions to the local economy of the host, there is significant competition among convention centres around the world to host such events. For example, a large-scale convention for an international medical research association, held in Toronto in 2016, was attended by about 5,600 delegates who generated $1.1 million in revenue for the Metro Toronto Convention Centre and added an estimated $18 million in economic impact to the provincial economy.



2.1.3 Event Planners

In order to secure bids to host an event, a convention centre must often "impress" event planners. Event planners have the responsibility for researching, recommending and contracting future convention sites (and associated hotel rooms) for the organizations who hire them. Event planners play a vital role in the venue selection process, assessing a centre's ability to deliver large-scale events based on what are called the internal and external characteristics of the convention centre.

Internal characteristics include the venue's size and layout, including the amount of contiguous exhibit hall space (space that is adjoining, with no obstructions or gaps) that is available, the food and beverage offerings of the venue as well as the amenities and services provided by the convention centre, like the audio/visual technologies available. External characteristics are features of the location, for example, the neighbourhood or the downtown of the city and the infrastructure

Figure 2: Type of Event and Origin of Delegate, in Relation to Economic Impact

Prepared by the Office of the Auditor General of Ontario

surrounding it. Important external characteristics for event planners to determine are the ease of access to an international airport, regularity of flight service, access to large roads and transit networks. Equally important is the supply and availability of hotel accommodations at various price points and the safety and vibrancy of the surrounding area (including availability of dining options and tourist attractions).

These same criteria are also often used by the industry to classify convention centres into three tiers, indicating their suitability for hosting types of events. Detailed descriptions of each tier can be found in **Appendix 1**.

The event planners we interviewed as part of this audit (see **Section 3.0** for more details) told us that the size of a centre's contiguous exhibit hall, as well as the size and number of meeting rooms, were the most critical factors when selecting a destination for a convention. The availability of accommodations at various price points nearby and the availability of direct flights were also identified as important factors.

The logistics of organizing a large-scale international convention that will attract thousands of delegates from around the world can be very complex. As a result, event planners assess and book the venue and accommodations three to five years in advance of a planned event and, for some of the largest conventions, eight or more years in advance. Once a venue is selected, it is crucial for the convention centre to host the event exceptionally well, given the competitive context for event planning. Conventions often rotate between major cities, based on an organization's bylaws, and a client may become a repeat customer based on good experience at a particular destination and venue. For instance, a major technology company held its annual conference at MTCC in 2004, returning in 2012 and 2016. A negative customer service experience is one reason why a convention centre may lose the opportunity to host the event again.

2.2 Provincially Operated Convention Centres

Provincial and municipal governments across Canada own, operate and/or control many convention centres. Some of the prominent ones are listed in **Appendix 2**. The Province of Ontario operates (through separate Crown agencies) two convention centres: the Metropolitan Toronto Convention Centre (MTCC), a Tier 1 venue in Toronto, and the Ottawa Convention Centre (OCC), a Tier 2 venue in Ottawa. The Ministry of Tourism, Culture and Sport (Ministry) has oversight responsibilities for both Crown agencies. **Figure 3** provides venue profiles of these two centres.

2.2.1 Metropolitan Toronto Convention Centre

MTCC is the only Tier 1 convention centre in Ontario and the largest Tier 1 convention centre in Canada. See **Appendix 3** for a comparison of rental space at MTCC to select government owned and/or operated convention centres in Canada (including the two other Tier 1 convention centres, the Montréal Convention Centre and the Vancouver Convention Centre).

MTCC opened in 1984 (North Building at 255 Front Street West) and expanded in 1997 (South Building at 222 Bremner Boulevard). Together, the buildings provide over 550,000 square feet of rentable space, including over 440,000 square feet of exhibit space, 77 meeting rooms and one multi-purpose ballroom. MTCC also has a 1,232 seat multi-purpose theatre.

MTCC does not own the North Building, its parking lot or the land on which it is located. These are leased from Oxford Properties for a nominal fee of $1 per year for a 99-year term that expires in 2083. The South Building is owned by MTCC and its land is leased from the City of Toronto for a nominal fee of $1 per year that also expires in 2083.

MTCC has hosted on average about 500 events per year and estimated that it has contributed on average about $493 million to the provincial economy each year between 2013/14 and 2022/23, excluding 2020/21 and 2021/22, which were impacted by COVID-19 public health restrictions.

Its legislation, the *Metropolitan Toronto Convention Centre Corporation Act* (MTCC Act), sets out MTCC's mandate as follows: "to operate, maintain and manage an international class convention centre facility in the City of Toronto in a manner that will promote and develop tourism and industry in Ontario."

MTCC is governed by its Board of Directors (MTCC Board), consisting of a minimum of seven and a

Figure 3: Venue Profiles for Metro Toronto Convention Centre (MTCC) and Ottawa Convention Centre (OCC)

Source of data: Metro Toronto Convention Centre and Ottawa Convention Centre

	MTCC	OCC
Available Rental Space[1] (square feet)		
Exhibit space	440,877	55,741
Meeting space	110,992	45,915
Ballroom space	28,000	19,032
Total space available for rent	579,869	192,000[2]
Overall building size	2,200,000	404,224
Largest exhibit hall	259,325	55,741
Maximum number of exhibit halls[3]	8	3
Maximum number of meeting rooms[3]	77	28
Theatres (seats)	1 (1,232)	0 (0)

1. Excludes space not available for rent, such as retail stores, restaurants and/or coffee shops, if any.
2. In addition to exhibition, meeting and ballroom space, OCC has over 70,000 square feet of additional space it rents out to clients for pre-function activities.
3. Refers to the number of separate areas available for rent. These rooms can be used for multiple purposes, such as exhibits, meetings, and food and beverage rooms.

maximum of 13 members, no more than 10 of whom are appointed by the Lieutenant-Governor-in-Council (provincial appointees) and three who are appointed by the City of Toronto (municipal appointees). As of August 31, 2023, there were 11 members (three of whom were municipal appointees) and two vacancies (provincial). **Appendix 4** provides an overview of MTCC's Board membership and composition as of August 31, 2023.

A chief executive officer appointed by the MTCC Board is responsible for the management of MTCC, which as of August 31, 2023, employed approximately 331 full-time and 427 part-time and casual staff. The centre is a unionized workplace. At the time of our audit, 601 of the centre's 758 employees were represented by a union. **Appendix 5** provides an overview of MTCC's organization structure.

2.2.2 MTCC's Financial Obligation to the Government of Ontario

MTCC's South Building opened in 1997, its construction financed by a $145-million loan from the Ontario Financing Authority (OFA), a lending agency of the Province of Ontario. Between 1997 and 2003, MTCC made partial interest payments totalling $17.5 million towards its loan obligations. Then, in 2003, the OFA released MTCC from the original loan obligation in exchange for annual payments of at least $2.5 million in perpetuity to the Minister of Finance. In addition to the minimum payment, MTCC is required to remit "any surplus cash not required for the running of the MTCC business." As of March 31, 2023, MTCC has paid a total of $109.5 million to the Minister of Finance; on average, approximately $5.2 million has been remitted per year since 2003.

2.2.3 Ottawa Convention Centre

Ottawa Convention Centre, formerly known as the Ottawa Congress Centre, opened in 1983. For redevelopment, it was demolished in 2008, rebuilt- and re-opened in 2011 on the same site. Since 2011, OCC has hosted about 4,860 events. The facility has 192,000 square feet of space across four levels, with 23 multi-purpose event rooms, an executive boardroom, a ballroom and a multi-purpose hall which can accommodate up to 6,260 people when utilizing all available space at OCC.

OCC is one of several government-owned and/or operated Tier 2 venues in Canada; some other prominent government owned and/or operated centres that are generally considered Tier 2 venues are in Edmonton, Calgary, Halifax, Quebec City and Winnipeg. The Enercare Centre in Toronto is also generally considered a Tier 2 venue. See **Appendix 3** for a comparison of rental space in these and Tier 1 venues in Canada.

OCC does not own the land where it operates. OCC leases the land it is on from Cadillac Fairview for a nominal fee of $1 per year for 80 years. The term expires in 2091. OCC has hosted on average about 460 events per year and estimated that it has contributed on average about $110 million to the provincial economy each year between 2013/14 and 2022/23, excluding 2020/21 and 2021/22, which were impacted by COVID-19 public health restrictions.

Its legislation, the *Ottawa Convention Centre Corporation Act* (OCC Act), sets out OCC's mandate as follows: "to operate, maintain and manage an international class convention centre facility in the City of Ottawa in a manner that will promote and develop tourism and industry in Ontario."

OCC is governed by its Board of Directors (OCC Board) consisting of a minimum of seven and maximum of 12 members, no more than nine of whom are appointed by the Lieutenant-Governor-in-Council (provincial appointees) and three of whom are appointed by the City of Ottawa (municipal appointees). As of August 31, 2023, there were 11 members on the OCC Board, eight of whom were provincial appointees and three of whom were municipal appointees, with one vacancy (provincial). **Appendix 6** provides an overview of OCC's Board membership and composition as of August 31, 2023.

A chief executive officer, appointed by the OCC Board, is responsible for the management of OCC, which as of August 31, 2023, employed approximately

18 full-time staff across sales, marketing, finance and management positions plus an additional 12 staff in security. In addition, OCC outsourced most of its food and beverage services to Aramark, a service organization known for event support and management. Aramark employed 230 staff including waiters, cooks, chefs and others to support events and services held at OCC. **Appendix 7** provides an overview of OCC's organizational structure.

2.2.4 OCC's Financial Obligation to the Government of Ontario

Ottawa Convention Centre was built (completed in 2011) to replace the facility known as the Ottawa Congress Centre. The new facility nearly tripled the floor space from 67,000 square feet to 192,000 square feet. The construction was funded by all three levels of government (federal government $50 million, provincial government $60.4 million and the City of Ottawa $40 million) as well as through a $40 million, 25-year loan obtained by OCC through the OFA in 2011.

In 2012, OCC made an interest payment of about $1.9 million towards its loan obligation. Soon after, due to OCC's weak financial position, it requested that payments be suspended for five years. The OFA agreed to suspend repayment on the loan for a five-year period. Then, in February 2018, a Ministry-hired consultant reviewed OCC's operations and raised concerns regarding the centre's liquidity and cash flow position. The consultant advocated for the loan to be forgiven and replaced with performance payments. The payments would have been determined based on cash flow available after operational and capital expenditures, and would have been deferred for a period of 10 years (until 2027/28) until OCC's financial situation improved. The OFA informed us they reviewed the consultant's report issued to the Ministry of Tourism, Culture and Sport, but that the OFA was not required to accept its recommendation. The OFA indicated they relied on their own analysis when making the recommendation to the Minister of Finance that OCC be released from the original loan payment schedule in favour of an annual payment in perpetuity.

In May 2018, the OFA released OCC from the original loan repayment schedule. The condition for release was that OCC make an annual payment of $1 million in perpetuity to the OFA along with any additional surplus cash not required for running its business. The perpetual annual payment of $1 million to the OFA is guaranteed by the Ministry. As of March 31, 2023, OCC has made five payments of $1 million, for a total of $5 million since 2018. The payment made to OFA is promptly forwarded to the Province as per the Release and Settlement Agreement.

2.3 Role and Responsibility of the Ministry of Tourism, Culture and Sport

The Ministry is not involved in the day-to-day operations of the convention centres. Its responsibilities are mainly to provide administrative oversight, focused on providing direction and guidance to the convention centres regarding their operations and performance as well as to ensure that they adhere to their legislative mandates, government policies, directives and administrative agreements. The Ministry's key responsibilities for the two centres include:

- outlining, through government mandate letters, the high-level expectations, key commitments and performance priorities of each agency;
- ensuring that government directives are followed;
- reviewing and approving each agency's annual business plan;
- recommending to Treasury Board/Management Board of Cabinet (TB/MBC) each agency's provincial funding allocation;
- reporting and responding to TB/MBC on agency performance and compliance with applicable government policies and directives;
- reviewing, approving and tabling in the Legislature each agency's annual report;
- when appropriate or necessary, taking action or directing an agency to take corrective action with respect to its administration or operations; and

- outlining the accountability framework and roles and responsibilities for the agency and Ministry in an administrative Memorandum of Understanding.

The Ministry is also responsible for seeking approval from TB/MBC for certain changes to MTCC and OCC, including but not limited to changes in governance structure, accountability framework, mandate and legislation/constituting instruments.

In addition, the Ministry runs the Capital Repair and Rehabilitation (R&R) program, a $25-million annual program that provides infrastructure funding to 12 agencies and attractions overseen by the Ministry, including MTCC and OCC. The program provides funding for the renewal, expansion and modernization of capital assets and funding.

Program funding is distributed to agencies based on an assessment of their requests against core eligibility criteria (which consider the asset repair's impact on health and safety, asset integrity, code compliance and legislation, as well as the criticality of the asset for the business).

2.3.1 Government Assistance to MTCC and OCC Related to COVID-19 Public Health Restrictions

The COVID-19 pandemic and related public health restrictions created financial challenges for both MTCC and OCC. Both agencies were only able to hold a limited number of events, which greatly impacted their ability to generate revenue. To address this, the Province of Ontario provided emergency financial assistance to MTCC and OCC through a Transfer Payment Agreement of $31.2 million and $12 million respectively. **Figure 4** provides an overview of the COVID-19 government assistance provided to the two convention centres.

The centres used the transfer payment funding to cover eligible operating expenses, which included salaries and other employment benefits, administrative costs, utilities, interest payments, insurance costs, non-discretionary legal fees, human resources (e.g., severance pay) and professional dues such as audit fees for the annual financial statement audits. Discretionary spending such as performance pay, cash incentives, investments and capital purchases were ineligible.

2.4 Local Incentive Fund for Large-Scale Conventions

To attract large-scale conventions that have a substantial economic impact, local hotels and the city's destination marketing organization may collaboratively contribute funds to subsidize costs such as rent fees for events hosted at MTCC and OCC. This financial incentive aims to entice event planners to select Toronto (at MTCC only) and Ottawa (including at OCC) as their preferred venue over competing destinations.

In Toronto, this incentive is funded by MTCC, Destination Toronto and 21 participating downtown hotels. Destination Toronto is a destination marketing organization that promotes tourism in Toronto. Destination Toronto also handles the bidding process for certain conventions in Ontario that require co-ordination between many parties, such as the convention centre and multiple hotels. It is funded by a Municipal Accommodation Tax, which is an additional fee that municipalities can levy on short-term accommodations such as hotels. Similarly, in Ottawa, incentives for OCC are funded by OCC and Ottawa Tourism (Ottawa's

Figure 4: COVID-19-Related Government Assistance to Convention Centres ($ million)

Source of data: Ministry of Tourism, Culture and Sport

Venue	2020/21	2021/22	2022/23	Total
Metro Toronto Convention Centre	13.6	17.6	0.0	**31.2**
Ottawa Convention Centre*	4.5	5.3	2.2	**12**

* Also received $400,000 in 2020/21 from the Ministry of Tourism, Culture and Sport (Ministry) Emergency Stabilization Capital Funding, a one-time capital funding program available to agencies of the Ministry to support COVID-19-related capital upgrades (e.g., sanitization stations, plexiglass shields).

destination marketing organization that is also funded by a Municipal Accommodation Tax).

To qualify for the incentive program, conventions must meet the definition of "city-wide," large-scale conventions. In Toronto, for events that would use MTCC as the host venue, the event must be an international convention that attracts a minimum of 1,500 delegates and occupies a minimum of two hotels. In Ottawa, the event must be held at a venue in Ottawa (which could be OCC) and require the use of at least three hotels to accommodate delegates, with a minimum of 500 hotel rooms on the peak event night.

3.0 Audit Objective and Scope

Our audit objective was to assess whether the Ministry of Tourism, Culture and Sport has effective processes and systems in place to oversee, monitor and report on the provincial convention centres on a timely basis, to ensure that they meet key legislative and policy requirements, as well as best practices for the operation of world-class convention centres.

In addition, the objective of our audit was also to assess whether Metropolitan Toronto Convention Centre and Ottawa Convention Centre each had effective processes and systems in place to:

- meet key legislative and policy requirements, and best practices for the operation of world-class convention centres that can host international events; and
- measure, evaluate, and publicly report on the centre's effectiveness.

In planning for our work, we identified the audit criteria (see **Appendix 8**) we used to address our audit objective. These criteria were established based on a review of applicable legislation, policies and procedures as well as best practices. Senior management at the Ministry of Tourism, Culture and Sport (Ministry), Metropolitan Toronto Convention Centre (MTCC) and Ottawa Convention Centre (OCC) reviewed and agreed with the suitability of our objective and related criteria.

We conducted our audit between January 2023 and August 2023. We obtained written representation from the Ministry, MTCC and OCC that, effective November 21, 2023, they had provided us with all the information they were aware of that could significantly affect the findings or the conclusions of this report.

Our audit work was conducted at MTCC, OCC, the Ministry's Agency Relations and Accountability Division (ARAD) and the Ministry's Tourism and Culture Division (TCD).

Our audit work at the ARAD included an analysis of policies and procedures, as well as discussion with staff responsible for overseeing whether the convention centres met their legislated mandates, achieved performance targets and complied with applicable government directives, Ministry policies and guidelines. We also assessed the Ministry's asset management processes and procedures, long-term capital planning and its role in assisting convention centres to attract convention events to the province.

Our audit work at TCD involved discussions with staff responsible for strategic planning for the tourism sector, including the convention centres, and a review and sample testing of the results of the Ministry's past convention incentive programs.

Our audit work at MTCC and OCC included an analysis of policies and procedures, as well as discussions with senior management and staff who were responsible for managing overall operations and measuring and reporting on the performance of the organizations. Data analysis and sample testing was performed to determine whether the convention centres complied with applicable requirements and best practices, and to identify trends related to the convention centre's efficiency, effectiveness and compliance.

As part of our audit, we researched other jurisdictions to identify best practices in convention centre management. We spoke with the British Columbia Ministry of Tourism Arts, Culture and Sport, BC Pavilion Corporation (who operate Vancouver Convention Centre) and Events East Group (who operate the Halifax Convention Centre) to better understand how they oversaw and operated convention centres in their regions. In addition, we met with senior representatives of the convention and business travel industry

and stakeholder groups in Ontario and Canada, such as the Canadian Association of Exposition Management, Convention Centres Canada, Destination Canada, Destination Toronto, the Greater Toronto Hotel Association, Meetings Mean Business, Ontario Tourism Education Corporation, the Ottawa Board of Trade, the Ottawa-Gatineau Hotel Association, Ottawa Tourism, the Toronto Region Board of Trade and the Tourism Industry Association of Ontario, to obtain their perspectives on issues related to operating convention centres, including operational best practices and their views on MTCC's and/or OCC's operations. We also met with representatives from Air Canada, the Ottawa International Airport Authority and Porter Airlines to learn about the challenges and opportunities Toronto and Ottawa might encounter in organizing events that require air transportation.

On November 16, 2023, the Ontario government introduced Bill 151, *Improving Real Estate Management Act, 2023* (Real Estate Act), for first reading in the Legislature. Second reading was carried on November 21, 2023. If the Real Estate Act is passed, it will prohibit both MTCC and OCC from acquiring or disposing of a freehold interest in real estate property without approval from the Minister of Infrastructure. As such, the Real Estate Act could impact some of our findings and recommendations (such as the potential redevelopment of MTCC, discussed in **Section 4.3.4** and the potential acquisition of a marshalling yard by MTCC, discussed in **Section 4.3.5.**) We will consider the impact of this legislation on our recommendations when we perform our follow-up audit on this report.

We also met with 10 event planners for some of the top conventions in the world to learn about their preferences and how they assess a destination city and a convention centre's ability to handle large-scale events, prior to selecting an event host.

We also reviewed the relevant audit reports issued by the Province of Ontario's Internal Audit Division in determining the scope and extent of our audit work.

We conducted our work and reported on the results of our examination in accordance with the applicable Canadian Standards on Assurance Engagements—Direct Engagements issued by the Auditing and Assurance Standards Board of the Chartered Professional Accountants of Canada. This included obtaining a reasonable level of assurance.

The Office of the Auditor General of Ontario applies Canadian Standards on Quality Management and, as a result, maintains a comprehensive system of quality management that includes documented policies and procedures with respect to compliance with rules of professional conduct, professional standards and applicable legal and regulatory requirements.

We have complied with the independence and other ethical requirements of the Code of Professional Conduct of the Chartered Professional Accountants of Ontario, which are founded on fundamental principles of integrity, objectivity, professional competence and due care, confidentiality and professional behaviour.

4.0 Audit Observations

4.1 Bookings for Conventions Down Almost 50% Since the Pandemic

Event planners typically select and reserve their venues several years in advance of the planned event. We conducted an analysis of the number of reservations at Metro Toronto Convention Centre (MTCC) and Ottawa Convention Centre (OCC) for future conventions by comparing the number of definitive reservations booked for all conventions before and after the COVID-19 pandemic, that is, at June 2019 and June 2023. Bookings for upcoming conventions were down by 43 events (or 44%) for MTCC while OCC had a decrease of 69 bookings (or 50%). Overall, for the two convention centres, reservations for future conventions were down by 112 events, an average of 47%.

From April 1, 2019 to March 31, 2020, the fiscal year prior to the onset of the pandemic in Ontario, the two convention centres held a total of 902 events, which added an estimated $632 million to Ontario's economy. In the most recent fiscal year (2022/23), the centres hosted about 300 fewer events. According to the two centres, these events generated an estimated economic impact of about $498 million, a decline of $134 million

from the estimated $632 million generated in the year prior to the pandemic. The amount of economic impact generated by MTCC was estimated to have declined by about $87 million (or 18%) while OCC's economic impact declined by an estimated $47 million (or 32%).

4.1.1 The Ministry Has No Strategy to Help the Convention Centre Industry Recover

The Ministry of Tourism, Culture and Sport (Ministry) has not created a strategy to support the recovery and growth of the Province's convention centres. This is particularly concerning in our post-COVID-19 context, where convention centres are not generating the same revenue and economic impact as they did prior to the pandemic. Business and convention delegates have a significant impact on the local economy because they often spend more money during their trips by bringing their families and visiting other parts of the province, which can include spending time at more premium restaurants and attractions. Convention attendees boost local businesses and create job opportunities.

We found that between 2021 and 2023, the provincial governments in British Columbia and Quebec published specific plans aimed at directly helping their convention centres recover events lost during the pandemic. For example, British Columbia's 2022–2024 Strategic Framework for Tourism noted a key priority was to "rebuild confidence and drive bookings in BC's business events and conferences industry."

As noted in our Office's 2023 report on tourism support programs, the Ministry currently does not have a strategic plan for tourism. A convention centre strategy could be developed as part of an overall strategic plan for tourism or as a standalone document.

4.1.2 Elsewhere and in the Past, Incentive Funds Have Been Used to Increase Convention Centre Attendance and Achieve Economic Impact

We found that the provincial governments of British Columbia and Quebec, two jurisdictions competing with Ontario for conventions, allocated $8 million and $15 million respectively (in 2022/23) for incentives to help their centres attract conventions. At the time of our audit, the Ontario government was not allocating any funds for such incentives.

In the past in Ontario, incentive funding has been used to attract conventions. In 2003, Ontario's then Ministry of Tourism and Recreation initiated a program (the Convention Development Fund) to help convention centres recover from a decline in event bookings caused by the severe acute respiratory syndrome (SARS) pandemic. The Ministry began paying for incentives to attract large-scale events to convention centres in Ontario, including MTCC and OCC. Through the 2008 financial crisis and beyond, the Ministry continued to fund and operate these incentive programs. From 2003 to 2013, the Ministry spent over $10 million, of which $2.8 million was spent directly on attracting 17 conventions to MTCC and 12 conventions to OCC. These 29 conventions drew approximately 136,000 delegates and, between 2012 and 2018, were estimated to have added about $179 million to Ontario's economy.

For instance, $212,000 of government funding was used to help attract a large-scale financial sector convention held at MTCC in 2017. It was estimated this event added about $13.6 million to Ontario's economy. Another $50,000 was spent on securing a convention for international educators held at OCC in 2015, which was estimated to add about $3.3 million to the economy. According to the Ministry's own analysis, for every dollar it spent in incentive funding, $60 of economic impact was generated for the province, of which $10.50 was directed to provincial tax revenues.

In 2021, the Tourism Economic Recovery Ministerial Task Force—a task force set up to make recommendations to the Ministry to support the economic recovery of the tourism industry in Ontario after the COVID-19 pandemic—recommended that the provincial government introduce a support fund for conventions and business events which would provide incentives for event holders to host events at Ontario convention centres (such as through discounted or free hotel rooms and/or event rental space).

To act on this recommendation, in 2022 the Ministry asked the government for funding of $45 million to restart its contributions to the Convention Development Fund, but the government did not approve the request. The Ministry again requested funding of $50 million in 2023, which was also not approved.

We reviewed the government's assessment of the Ministry submissions and found that funding for the incentives was not granted because the government's priority at that time was addressing the capital repair backlog at agencies and attractions accountable to the Ministry (such as those that participate in the Ministry's Capital Repair and Rehabilitation Program, which is discussed in **Section 2.3**). Treasury Board Secretariat staff responsible for assessing the Ministry's annual submissions confirmed to us that the government was focused at the time on capital repair needs over the creation of new tourism incentives.

RECOMMENDATION 1

To support the Metro Toronto Convention Centre (MTCC) and Ottawa Convention Centre (OCC) in their post-pandemic recovery and in growing the economic impact potential for the two centres, we recommend that the Ministry of Tourism, Culture and Sport (Ministry):

- perform an analysis of convention centre incentive-based programs across North America, with input from MTCC, OCC, Destination Toronto and Ottawa Tourism;
- based on the above analysis, determine if an incentive program should be implemented in the province;
- work with MTCC and OCC (and other tourism stakeholders as deemed appropriate) to determine any other initiatives that should be implemented; and
- prepare and submit a funding proposal to the government based on the initiatives identified.

MINISTRY RESPONSE

The Ministry accepts this recommendation and will review the efforts of other jurisdictions and needs of the industry. The Ministry will consider opportunities to assist industry partners with attracting and hosting international business events.

The Ministry will perform an analysis and based on the analysis will determine if convention centre incentive-based programs should be implemented in Ontario and will work with MTCC, OCC, Destination Toronto and Ottawa Tourism to explore next steps on this or any other initiatives that should be implemented. Any associated opportunities and initiatives will be developed and submitted as a funding proposal to the government, where appropriate.

4.2 Ministry Did Not Ensure the Provincial Convention Centres Operated to Maximize Economic Impact

We found that the Ministry did not ensure that the centres were operating so as to best achieve their legislative mandate. According to the *Metropolitan Toronto Convention Centre Corporation Act* and the *Ottawa Convention Centre Corporation Act*, each centre is to operate, maintain and manage a world-class convention centre "in a manner that will promote and develop tourism and industry in Ontario." The legislated mandate does not refer to generating revenue or profit, yet decision-making at each centre was largely based on the pursuit of profit for the individual venue instead of maximizing economic impact.

As discussed in **Section 4.2.2** to **Section 4.2.4,** this focus had consequences for the way each centre put together its event-booking strategy, executive performance pay and performance targets.

4.2.1 Economic Impact Is the Legislated Mandate of Convention Centres

We found that, in 2016, the Ministry hired a consultant to review MTCC's legislated mandate (OCC's legislated mandate is nearly identical to MTCC's). The consultant concluded from its review that the primary mandate of the centre is to generate economic impact for Ontario.

Figure 5: Mandates of Select Government-Owned Convention Centres

Prepared by the Office of the Auditor General of Ontario

Convention Centre	Mandate
Vancouver	To generate economic and community benefits for British Columbia through the management and marketing of the province's premier convention and exhibition facility.
Halifax	To attract and host national and international events that drive economic and community benefits for Nova Scotia.
Calgary Telus	To manage, market and operate the Calgary Telus Convention Centre in an efficient and market-competitive manner in order to maximize overall economic impacts to the City of Calgary while maintaining financial performance within an acceptable range.
Edmonton	To increase the economic impact of the visitor-based economy in Edmonton.
Québec City	To attract major conventions and events with an international calibre convention centre and exceptional service, positioning Québec City and area as the premiere destination for business events and driving economic activity.*
Vancouver Island	To manage and operate the centre consistent with the goals of the City and operated in the public interest, to create positive economic impact, stimulate growth for the City and provide for the cultural enrichment of the community.
Winnipeg	Together we collaborate and innovate with partners and guests to create outstanding, experiential events that contribute to the economic prosperity of our City and Province.*

* Mission statement.

This is consistent with the primary objective of other government-operated convention centres in Canada. See **Figure 5**, showing the mandate statements of a sample of other Canadian convention centres**.**

The consultant also noted that the centres' commercial objectives might be at odds with the achievement of economic impact, something we discuss in **Sections 4.2.2** to **4.2.4.**

4.2.2 Centres Aimed to Be Profitable Rather than Maximize Economic Impact

Our audit found that, while the legislated mandate of each convention centre does not state that the centre should be profitable, each centre's board of directors had established a goal for its centre to be profitable. In 1984, MTCC's Board of Directors established a goal "to operate on a cost recovery commercial (profitable) basis over the long term." In 2012, OCC's Board of Directors adopted a similar goal to be profitable. While no records from 1984 could be found to indicate why the MTCC's Board made that decision, OCC's management told us that the centre must be profitable to ensure it has the money to make the annual payment of $1 million to the government (as explained in **Section 2.2.4**). As discussed in **Section 2.2.2,** MTCC is also required to remit at minimum $2.5 million annually to the Minister of Finance. (Historically, the centre has exceeded this amount, by contributing on average more than $5 million annually since 2003.)

We asked the Ministry about the centres' legislated mandate and whether the convention centres should focus on generating economic impact or being profitable. The Ministry said that each centre should follow its act, and deferred our question to the centres.

The centres told us that being profitable was an important part of their mandate. We noted that management's performance pay eligibility criteria at both centres was tied to the revenues and profits generated and was not related at all to the economic impact of the events hosted.

Similarly, we noted that while both centres generally achieved their performance targets, the targets focused less on the economic impact generated by the centres than on revenue. For example, from April 1, 2015 to March 31, 2020, MTCC's revenue-growth target increased by about 40%, whereas its economic impact growth target increased by 3.5%. We noted that, while OCC has had a revenue target as of reopening in 2011, the centre did not establish an economic impact target until 2018/19.

4.2.3 Events With the Highest Revenue Did Not Always Generate the Highest Economic Impact

We analyzed events held at MTCC from April 2013 to March 2023. We found that those events that were estimated to have contributed the most economic impact to the provincial economy were not necessarily the most profitable ones. For example, of the 10 events that generated the most revenue for MTCC between 2013/14 and 2022/23, only four were also in the top 10 when ranked by their estimated economic impact. In fact, four of the high-revenue generating events ranked 20 or lower when it came to the size of their estimated economic impact.

For instance, the event that generated the fourth-highest revenue for MTCC between 2013/14 and 2022/23 ranked 20 in terms of its relative economic impact compared with all events hosted by MTCC during that period. Revenue generated for a convention centre is therefore not directly correlated with economic impact generated for the province. This is because not all convention centre delegates generate the same economic impact. As discussed in **Section 2.1.2**, delegates from outside of Canada tend to spend more than local delegates, even if their international events have lower attendance (and therefore generate less revenue) than local events; they are likely to generate more economic impact for this reason. **Figure 6** illustrates how the top 10 revenue-generating events hosted from April 2013 to March 2023 ranked in terms of the economic impact they generated for the province. As discussed in **Section 4.4.1**, OCC estimates the economic impact for its events on an aggregate basis, which prevented us from conducting a similar analysis for its events.

Figure 6: Top 10 Events by Revenue Held at Metro Toronto Convention Centre, April 2013–March 2023 and Their Economic Impact

Source of data: Metro Toronto Convention Centre

Event	Year	Revenue Ranking	Economic Impact Ranking	Revenue ($ million)	Estimated Economic Impact ($ million)
A	2017	1	1	**5.1**	**83.7**
B	2017	2	6	**5.0**	**29.5**
C	2016	3	4	**4.7**	**40.4**
D	2018	4	20	**3.4**	**14.2**
E	2018	5	27	**2.7**	**9.7**
F	2017	6	17	**2.5**	**15.0**
G	2019	7	16	**1.8**	**16.0**
H	2018	8	2	**1.7**	**56.7**
I	2017	9	31	**1.6**	**8.4**
J	2018	10	22	**1.6**	**13.4**

4.2.4 Centres' Pricing Strategy Led Them to Forego Millions of Dollars in Economic Impact

We found that both centres' focus on profits resulted in them not hosting available events that would have brought economic impact to the province. When we asked MTCC to provide the most common reasons for rejecting an event, MTCC told us that one of the most common reasons was that the event did not generate enough revenue or profits for the centre.

As explained in **Section 2.4,** Destination Toronto handles the bidding process for many large-scale conventions in the City of Toronto. Their records showed that between January 1, 2017 and December 31, 2019 MTCC chose not to bid on 12 national and international events, largely due to financial considerations for the centre. Destination Toronto estimated that those 12 events had the potential to generate about $63 million in economic impact.

We found that MTCC lost an additional 19 national and international conventions to be held between 2018 and 2026 because the price of its bid to host the event was too high, and therefore not as competitive as other cities' bids. Destination Toronto estimated that these 19 events had the potential to generate about $159 million in economic impact for the province. Of these 19 events, eight coincided with the two fiscal years where the COVID-19 pandemic lockdowns occurred. However, for four of the remaining 11 events that occurred either before or after the pandemic lockdowns, we discovered that MTCC was unable to book replacement events. The four lost events would have generated an estimated economic impact of approximately $27 million.

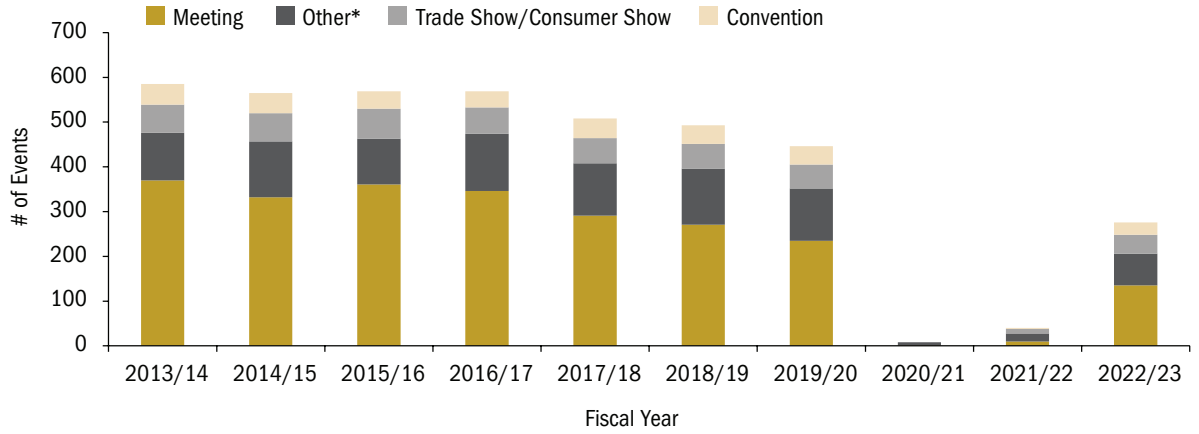
Similarly, we found that with OCC there were 78 known instances when a bid for a convention to be hosted between 2018 and 2025 was lost because, according to the event planners, OCC's bid price was too high. The estimated economic impact of these events was about $142 million. Of these 78 events, 29 coincided with the two fiscal years where COVID-19 pandemic lockdowns occurred. Outside of the pandemic, for the time frames of 15 of the remaining 49 events, OCC was not able to book any other event. According to OCC, these 15 events would have generated an estimated economic impact of about $25 million.

For the two convention centres, that means there was a total estimated loss of $52 million in economic impact since 2018 in relation to 19 of the 60 (32%) of the lost events, even when we removed from consideration events to be held during 2020/21 and 2021/22.

RECOMMENDATION 2

To align the strategy of the Metro Toronto Convention Centre (MTCC) and the Ottawa Convention Centre (OCC) with the primary legislated objective of the centres, we recommend that the Ministry of Tourism, Culture and Sport (Ministry):

- consult with MTCC and OCC as to the primary objective of both centres, including to what degree it is expected that they focus on maximizing the economic impact they generate for the province;
- work with the boards of directors of MTCC and OCC to align event bidding and booking strategies and executive performance pay structures with the convention centres' full mandate, based on the above clarification; and
- require MTCC and OCC to establish economic impact targets on an annual basis that are based on each centre's updated event bidding and booking strategy.



MINISTRY RESPONSE

The Ministry accepts this recommendation and will consult with MTCC and OCC on the primary objective of both centres and how to interpret their mandates as well as the development and implementation of economic impact targets.

Following consultation and through the Minister's annual letter of direction to each agency and as part of approval of each agency's annual business plan, the Ministry will require each agency to specify economic impact targets while accounting for bidding and booking strategies and self-sustainability. The Ministry will also work with the centres' boards of directors to ensure that event bidding, booking strategies and executive performance pay structures align with the centres' mandates.

Figure 7: Events Held at Metro Toronto Convention Centre, April 2013–March 2023

Source of data: Metro Toronto Convention Centre

* Other includes exams, food and beverage events, special events like weddings, sporting events, film and television shoots, religious celebrations, dance productions, concerts, graduations and theatre events.

4.3 MTCC: Performance and Challenges

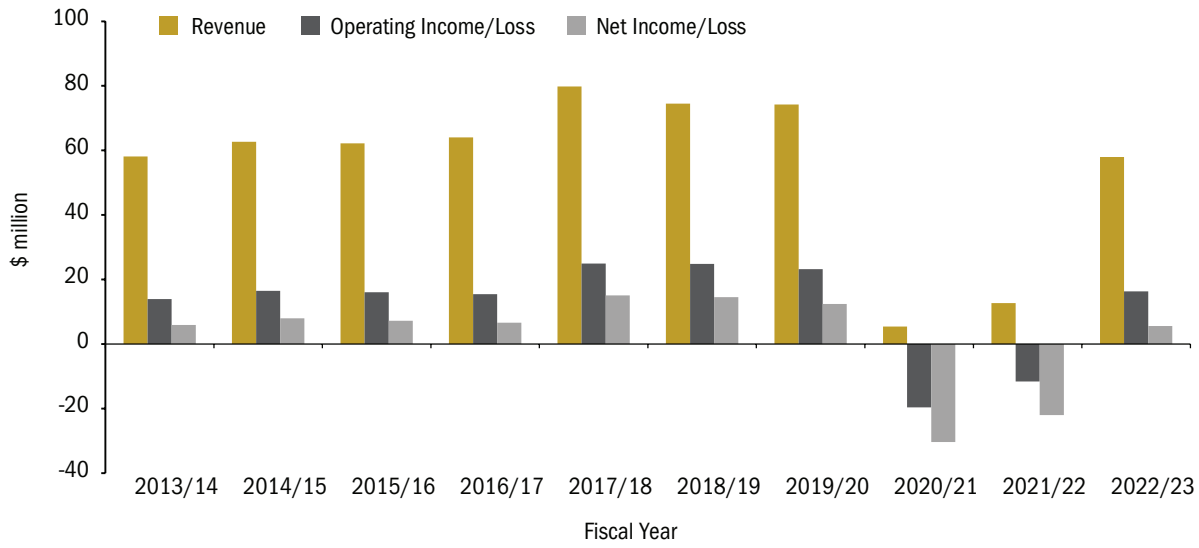
4.3.1 MTCC's Financial and Operational Performance

From fiscal years 2013/14 to 2022/23, MTCC held approximately 4,000 events. Client satisfaction surveys from the past 10 years show that 95% of survey respondents, which includes event planners and exhibitors, rated their overall experience with MTCC's services as "excellent," "very good" or "good."

Due to the COVID-19 pandemic and associated public health restrictions, only a few events were held at MTCC in 2020/21 and in 2021/22. In the seven fiscal years prior to the COVID-19 pandemic (April 1, 2013 to March 31, 2020), MTCC averaged a 55% occupancy rate for its rental space (70% is generally considered full capacity by industry standards). Refer to **Figure 7** for the number of events by type held at MTCC from April 2013 to March 2023.

MTCC generates revenue through various sources, including event space rental, food and beverage sales, parking, commissions (such as from a partner vendor for audio-visual services used during events) and communication services (such as charging for the use of wireless Internet). In the past decade, its revenue breakdown has been approximately:

- 39% from food and beverage sales;
- 25% from space rental;
- 17% from parking;
- 13% from commissions and communication services; and
- 6% from other sources (such as rental fees from tenants).

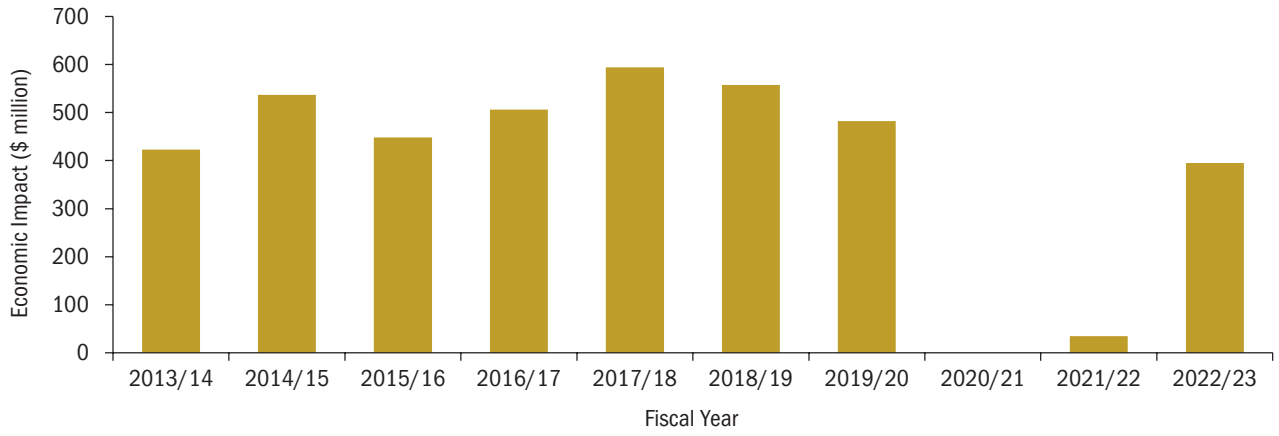


For a detailed overview of MTCC's revenue, operating income and net income from 2013/14 to 2022/23, refer to **Figure 8**. For a comparison of its financial performance to other government-operated Tier 1 venues in Canada, see **Appendix 9**.

MTCC estimates that it has contributed on average about $493 million to the provincial economy each year between 2013/14 and 2022/23, excluding 2020/21 and 2021/22, which were impacted by COVID-19 public health restrictions. In 2019/20, MTCC held 446 events, which contributed approximately $480 million to the Ontario economy. Refer to **Figure 9** for the annual economic impact generated by MTCC from 2013/14 to 2022/23, which is calculated by MTCC using the Ministry's Tourism Regional Economic Impact Model (TREIM) tool (explained further in **Section 2.1.1**).

The event planners we spoke to emphasized that the current location of the MTCC is exceptionally vibrant, making it one of the top reasons why they chose MTCC to host their events. MTCC's downtown Toronto

Figure 8: Revenue, Operating and Net Income and Loss Generated by Metro Toronto Convention Centre, April 2013–March 2023

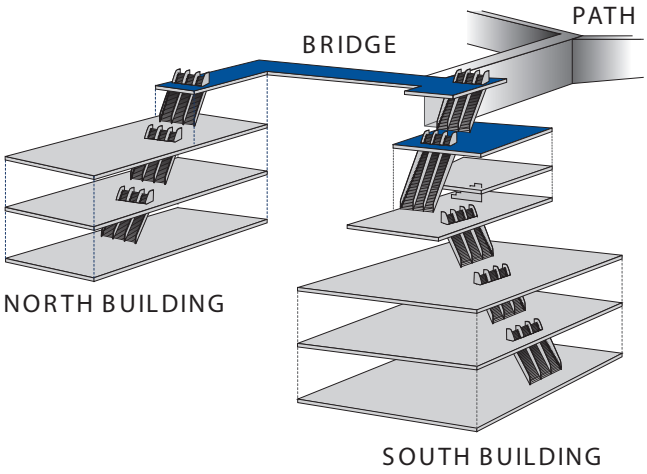


Source of data: Metro Toronto Convention Centre

Note: Due to the COVID-19 pandemic public health restrictions, there was a significant drop in revenue in 2020/21 and 2021/22 (and to lesser extent in 2022/23). Financial assistance of $31.2 million was provided by the Ministry of Tourism, Culture and Sport, as discussed in **Section 2.3.1**, and is not included in the operating and net income and loss calculations so as to reflect the convention centre's independent performance. Depreciation costs are included in the calculation for net income/loss. Annual payments to the Ontario Financing Authority are not shown here.

Figure 9: Annual Estimated Economic Impact Generated by Metro Toronto Convention Centre, April 2013–March 2023

Source of data: Metro Toronto Convention Centre



Note: Estimate obtained by inputting event-specific details into the Tourism Regional Economic Impact Model (TREIM) developed and maintained by the Ministry of Tourism, Culture and Sport. The TREIM is explained in **Section 2.1.1.** Due to the COVID-19 pandemic and public health restrictions, there was a significant drop in economic impact in 2020/21 and 2021/22.

location, in close proximity to tourist attractions, restaurants and hotels, was a key reason they preferred it. Furthermore, its location next to Union Station and the Union Pearson (UP) Express provided convenient access to Toronto's Pearson International Airport.

Despite this, MTCC faces other challenges that have limited its ability to win event bids. In **Section 4.3.2** and **Section 4.3.3** we lay out these challenges. **Section 4.3.4** presents the solution MTCC has come up with to address these challenges.

Figure 10: Metro Toronto Convention Centre Layout

Source: Metro Toronto Convention Centre

4.3.2 MTCC Was Too Small to Accommodate over 25% of the Available Convention and Trade Show Market

MTCC has over 440,000 square feet of exhibit space, however this space is not contiguous. Contiguous space are areas that are physically connected or adjacent to each other without any obstructions or gaps, allowing for easy flow and movement of people and equipment. MTCC is comprised of one 182,000-square-foot hall (North Building) and a separate 259,000-square-foot contiguous exhibit hall (South Building) which are connected by a 250-foot bridge across Toronto's Union Station railway tracts. MTCC's layout is shown in **Figure 10**.

Because of its layout, MTCC is effectively comprised of two medium-sized buildings, with the South Building being utilized to host conventions while the North Building is utilized mostly for other events. According to a 2019 survey conducted by a third-party consultant for MTCC, almost 90% of event planners surveyed said they strongly preferred venues with one large building/contiguous space. This is because conventions held in contiguous, as opposed to separated, spaces are easier to set up and manage. About 60% of the planners surveyed also said that in the next two to five years they expected their events to require even more space. Most of the event planners we met with confirmed their events were growing in size and will require more contiguous space in the future.

We found that in terms of its contiguous space, MTCC ranked low, or 18 out of 21 among a sample of comparable Tier 1 convention centres in North America. Further, many convention centres have expanded in the past 26 years, since MTCC was last expanded (1997), so MTCC has fallen in the size rankings. **Figure 11** and **Appendix 10** compare the largest contiguous exhibit hall at MTCC to some of its North American competitors.

A consultant was hired by MTCC in 2019 to evaluate the facility's ability to meet the needs of the industry. The consultant found that MTCC was unable to accommodate about 27% of the convention and trade show market that could be held in Toronto. When we reviewed the attendance records of the 129 large-scale conventions held at MTCC over the past 10 years, excluding the two years of the pandemic, we found that, on average, MTCC annually hosted only a few events where attendance exceeded 10,000 people. The events with more than 10,000 people attending required the use of both the North and South buildings. We noted that in order to accommodate this number of delegates, the events generally had to split their exhibitions across multiple floors or employed a set-up with a number of small booths and tables, such as for a job fair, which allowed for more people to attend. Attendance at the remaining 107 events averaged about 3,300 delegates.

Twenty International Conventions Have Outgrown MTCC and Left for Other Venues

MTCC hosts a wide variety of events such as conferences, consumer shows and exhibitions. As explained in **Section 2.1.2**, conventions with international delegates add the most economic impact to the province. When we analyzed the economic impact created by the 4,059 events held at MTCC over the past 10 years, we found that, as of August 2023, 45 of the top 50 events that contributed most to the provincial economy were large-scale conventions; of these, 43 (or 96%) were international events (largely attended by delegates from outside Canada).

Figure 11: Largest Contiguous Halls in Select North American Convention Centres, as of August 2023

Prepared by the Office of the Auditor General of Ontario

Venue	Location	Year Built	Year Last Expanded	Largest Contiguous Hall (square feet)
Georgia World Congress Center	Atlanta, GA	1976	2002	1,120,428
Ernest N. Morial Convention Center	New Orleans, LA	1986	2006[1]	1,026,627
Dallas Convention Center	Dallas, TX	1957	2011[2]	726,526
Indiana Convention Center	Indianapolis, IN	1972	2011[1]	566,600
George R. Brown Convention Center	Houston, TX	1987	2014	547,350
Pennsylvania Convention Center	Philadelphia, PA	1993	2011	528,000
San Diego Convention Center	San Diego, CA	1989	2001	525,701
Henry B. Gonzalez Convention Center	San Antonio, TX	1968	2016	513,944
Walter E. Washington Convention Center	Washington, DC	2003	2013	473,000
Music City Center	Nashville, TN	2013	n/a	353,143
Metro Toronto Convention Centre	Toronto, ON	1984	1997	259,325

1. At the time of our audit, convention centre was undergoing redevelopment and/or expansion.
2. At the time of our audit, was approved for redevelopment.

By analyzing historical bookings, and from discussions with MTCC's sales staff, we discovered that in the past 22 years (2001/02 to 2022/23), MTCC lost 20 international conventions because the conventions had outgrown the centre. The last time these 20 events were held at MTCC, they had an average attendance of about 11,700 delegates and an estimated total economic impact of about $490 million.

Additionally, these conventions are held periodically, meaning that they could have been hosted at MTCC multiple times in the future had they not outgrown the centre. **Figure 12** lists the 20 international conventions that were lost, their attendance and rank by estimated economic impact they had previously generated for the provincial economy. To take one example, a large medical association from the US held its annual convention at MTCC in 2015. This convention was attended by approximately 18,000 delegates, with 86% being international attendees. This convention was estimated as contributing about $40 million to Ontario's economy. After being held at MTCC in 2015, this annual convention moved to MTCC's competitor convention centres in Atlanta, San Francisco (twice), New York (twice), San Diego and New Orleans, all of which offered greater contiguous space. We obtained the Request for Proposal for this event (as scheduled for 2025) and noted that the event now needs a minimum of 260,000 square feet of contiguous space in an exhibit hall, slightly more than the 259,000 square feet of contiguous space MTCC can offer.

Similarly, a well-known American organization dedicated to promoting sustainability and environmentally friendly practices within the construction and building industry held its annual convention at MTCC in 2011, bringing 22,000 delegates and contributing an estimated $44 million to Ontario's economy. Since then, the event has moved to MTCC's competitor convention centres in San Francisco (twice), Philadelphia, New Orleans, Washington, D.C. (twice), Los Angeles, Boston, Chicago, Atlanta and San Diego, all of which provide more contiguous space. MTCC appears to no longer be part of the regular destination rotation for this event. We obtained the Request for Proposal for this event (as scheduled for 2019) and noted that the

Healthcare and Medical	2001	6,000	0.70	12
Healthcare and Medical	2009	4,500	0.30	9
Total		**233,180**	**19.46**	**488**

* Metro Toronto Convention Centre and Destination Toronto expect that this event will outgrow MTCC's current size by 2029.

event now needs a minimum of 500,000 square feet of contiguous space in an exhibit hall—much more room than MTCC's maximum contiguous rentable space of 259,000 square feet.

Layout of the Meeting Space Prevented MTCC From Hosting Some Events

Besides the exhibit space, we observed that some clients stopped hosting meetings at MTCC because it did not have the meeting space they required. MTCC has about 110,000 square feet of meeting space that can be broken into 77 meeting rooms. One professional organization held an event at MTCC in 2009, bringing in 6,000 delegates and an estimated $12 million in economic impact for the economy, and another science organization held an event in 2004, bringing 5,000 delegates and generating an estimated $10 million in economic impact. Destination Toronto confirmed to us that both of these events have now moved to convention centres with a more practical meeting space configuration.

Overall, the consultant hired by MTCC had noted an industry trend that in order to compete effectively for larger conventions, convention centres must increasingly offer a combination of large contiguous exhibit space capable of accommodating conventions, trade

shows, information booths and displays, along with large meeting spaces (and number of rooms) suitable for hosting keynote addresses and breakout sessions. For example, the Vancouver Convention Centre offers more flexible interior space than MTCC, with its lobby and pre-function areas being able to accommodate small gatherings, networking and informal meetings. This design also fosters networking opportunities for event attendees.

We spoke to some of the event planners in charge of planning large-scale conventions and most reiterated there was a growing demand for larger exhibit space and additional meeting rooms due to the increasing attendance (delegates and exhibitors) at their events. They voiced concerns about the MTCC's layout, particularly that the North Building and South Building were divided by a long bridge, which resulted in time-consuming walks between buildings that disrupted the flow of an event. Furthermore, from their perspective, there was a shortage of meeting rooms and pre-function areas at MTCC.

4.3.3 MTCC Lost 23 Conventions Due to Hotel-Related Issues, Which Could Have Generated an Estimated $344 Million in Economic Impact

Toronto is among the top five largest metropolitan areas in North America (per 2015 Census Data). Data analysis performed by a consultant hired by MTCC in 2019 found that, in terms of the number of hotel rooms surrounding a convention centre, Toronto ranked 15 of 20 comparable cities in Canada and the US, behind a number of smaller cities such as Seattle and Indianapolis.

Further, according to data from Destination Toronto, MTCC lost bids to host 23 conventions due to hotel-related issues for bids submitted from 2017 to 2019. These events could have generated an estimated $344 million in economic impact for the province. **Figure 13** provides an overview of conventions lost due to hotel issues.

Research and surveys in 2019 and 2020 that were conducted for MTCC came to the same conclusion. For example, to reserve 2,500 hotel rooms for an event in Toronto, an event planner may have to co-ordinate with up to 12 different hotels. This puts MTCC at a competitive disadvantage compared to cities such as Atlanta, San Diego and San Francisco, where 2,500 rooms can be reserved at just three or four hotels.

We analyzed six instances where business was lost as a direct result of too many hotels being required to secure the hotel block. In these instances, where the required hotel block was anywhere from 1,800 to 3,000 rooms, we found that at least eight hotels were needed in order to secure these blocks, and in some instances up to 12 hotels. On average, each hotel was able to block off only 236 rooms. This issue occurred at different times in a year; the lost events were scheduled between months of April and October from April 2019 to April 2023.

In a separate example, MTCC had to refuse business from an American medical association convention planned for 2026. It was to involve 2,000 attendees, many from outside the province. This event had to be

Figure 13: Bids for Large-Scale Conventions Lost Due to Hotel-Related Issues, 2017–2019

Source of Data: Destination Toronto

Reason for Lost Business	Total # of Delegates	# of Events	Estimated Economic Impact ($ million)
Hotel rates too high	11,350	5	32
Too many hotels required to secure block	42,700	9	129
Hotel unwilling to accept room rate proposed by event organizer	9,300	4	23
Number of rooms requested was unavailable	35,000	5	160
Total	**98,350**	**23**	**344**

rejected by MTCC as hotel room blocks could not be secured to satisfy the event's requirements. As part of the event bid, the association requested 1,055 rooms to be blocked off on the peak night, when organizers expected the greatest number of delegates.

In two other separate instances provided to us by Destination Toronto, conventions were lost as a direct result of hotel-supply issues. One event was due to be held in 2023 and required 2,400 rooms on a peak night, while the other was scheduled for 2025 and required 2,270 rooms. Due to the number of hotels needed to co-ordinate and accommodate these bookings, both event planners decided to locate their conventions in other cities.

Some Governments Support Construction of Hotels Near Convention Centres

We found that some municipal and state governments in the United States have taken measures to help build or incentivize the building of hotels near convention centres, to make it easier to accommodate bookings for large-scale events. For example:

- In Chicago, Illinois, around $560 million US of state and municipal funding was used in 1998 and 2013 to construct two hotels prioritizing convention delegates at the McCormick Palace convention centre.
- In 2015, the state of Utah introduced a convention centre development incentive to incentivize the construction of new hotels near the Salt Palace Convention Center in Salt Lake City. In 2019, a developer executed an agreement with the state and municipal governments in Utah to build a hotel in this location. Incentives that are part of the program include a $75 million US tax rebate incentive through property tax benefits, land conveyance, and sales tax rebates.
- Texas has granted tax incentives to hotels that expand room capacity near convention districts since 2002.
- Colorado's Economic Development Commission supported five projects from 2012 to 2015, including a private resort with a convention centre in Aurora, Colorado, featuring 1,501 hotel rooms which opened in 2019.

We noted that currently, the Ministry does not offer any similar incentives to encourage hotels to be built near convention centres.

4.3.4 Ministry Has Not Acted on MTCC's Redevelopment Plans

In February 2018, MTCC's management initiated research into the potential redevelopment of the centre to attract more large-scale international conventions. MTCC informed us that, since then, along with the landlord for the North building (Oxford Properties), it has spent over $2 million to conduct market research and industry analysis to assess future demand.

Leadership at MTCC told us they believed, based on the analysis of the consultant they hired, the economic impact generated by out-of-town delegates of the centre was likely to decline about 7% annually (or $27 million annually) from about $402 million on average at the time of the consultant's work to $375 million annually going forward as a result of MTCC not being able to book as many large-scale, international events.

According to the consultant hired by MTCC, the centre could recapture lost market share and target larger-scale international events by increasing its total and contiguous exhibit space, as well as adding additional meeting and ballroom space. MTCC management told us it believes that some of the events that MTCC lost (discussed in **Section 4.3.2** and identified in **Figure 12**) have the potential to return, with a redeveloped facility. MTCC's redevelopment plans also include building 2,500 to 3,000 new hotel rooms connected to the facility that would be managed by MTCC to ensure room blocks and rates were prioritized for the conventions they held.

The aforementioned research and analysis was shared with the Ministry in 2019, with more details being provided in 2021, and MTCC asked for Ministry direction and funding to pursue further work on the potential redevelopment. MTCC informed us it has

also shared information on a desired redevelopment with other provincial government officials as well as with the City of Toronto, who is the landlord of MTCC's South Building.

According to MTCC, the Ministry had not provided any direction on the redevelopment of MTCC's facility. The Ministry informed us that MTCC was still exploring options for redevelopment and the Ministry would review any items that MTCC brought forward in the future pertaining to redevelopment. As MTCC's prior report to the Ministry did ask for further direction and funding to pursue additional work on a potential redevelopment of the centre, it is important that both parties determine together what the next steps are.

We noted that most of the research and information submitted to the Ministry in relation to MTCC's potential redevelopment was gathered prior to the COVID-19 pandemic and therefore needed to be updated (such as to account for the change in future reservations that MTCC was experiencing in the aftermath of the pandemic, as discussed in **Section 4.1**).

RECOMMENDATION 3

To ensure that Metro Toronto Convention Centre (MTCC) is best positioned to attract international conventions and generate economic impact for the province in the future, we recommend that the Ministry of Tourism, Culture and Sport (Ministry):

- work with MTCC to identify what information it requires from it to be able to make a decision on the potential redevelopment of its centre;
- provide direction to MTCC as to when it plans to make a decision on the redevelopment of its centre;
- independently assess the long-term impact of the size and layout of MTCC's exhibit and meeting space and Toronto's hotel availability on MTCC's ability to win and attract large-scale conventions;
- conduct research on other jurisdictions to determine best practices for incentivizing new hotels to be built near convention centres as well as how to manage hotel bookings to secure rooms for delegates; and
- based on this independent analysis, perform a cost/benefit analysis to decide to what extent (if any) MTCC should be redeveloped, particularly in terms of the size and layout of the total centre, the total amount of contiguous exhibit hall, meeting space, ballroom size and hotel space controlled by the convention centre, as well as if any other incentives for building new hotels near convention centres are necessary.

MINISTRY RESPONSE

The Ministry accepts the recommendation and will work with Metro Toronto Convention Centre (MTCC) and other partners to advance information gathering and independent analysis on the redevelopment proposal to support decision-making over the upcoming business planning cycle (2024/25–2026/27). The Ministry will keep MTCC informed of when a government decision with respect to redevelopment is anticipated to be made, and will also engage with MTCC on any required agency decision-making to support redevelopment. The Ministry will assess hotel capacity near MTCC and best practices from other jurisdictions for incentivizing new hotels and managing hotel bookings near convention centres.

RECOMMENDATION 4

To ensure that Metro Toronto Convention Centre (MTCC) has a strategy to effectively attract and win bids for events in both the short-term and the long-term, we recommend that MTCC:

- prepare and execute a short-term event bidding and attraction strategy (to cover the time period until the Ministry of Tourism, Culture and Sport (Ministry) makes a redevelopment decision for the centre) and share this with the Ministry; and
- prepare and execute a long-term event bidding and attraction strategy based on the Ministry's redevelopment decision (as described in

Recommendation 3) and share this with the Ministry.

METRO TORONTO CONVENTION CENTRE RESPONSE

We value the recommendation to ensure that the Metro Toronto Convention Centre (MTCC) is well-equipped with a strategic approach to attract and secure event bids effectively, both in the short and long term. We are committed to taking a proactive approach to address this recommendation and we will prepare and execute an event-bidding and attraction strategy that covers the period until the Ministry makes a redevelopment decision for the centre and share this with the Ministry. The success of our convention centre is closely tied to our ability to remain competitive and adaptable, and we appreciate the guidance provided.

Moreover, we are dedicated to working closely with our Ministry to provide the necessary information for their decision-making process regarding potential redevelopment of MTCC. This collaboration will ensure that the Ministry has all the required data to make informed choices. Once a redevelopment decision is made, we will prepare and execute a long-term event bidding and attraction strategy that aligns with the Ministry's decision and share this with the Ministry.

4.3.5 MTCC Has Aging Assets and a Capital Repair Backlog of About $17 Million

Keeping facilities in a state of good repair is crucial to impressing convention delegates and event planners. We noted that as of June 30, 2023, MTCC had estimated a backlog of about $17 million in capital repairs.

Our audit found that some of the items that required repair and upgrading were critical to the centre's operations. For example, 17 escalators, which typically last about 25 years, had reached the end of their useful life in 2022. One escalator was installed in 1984 and reached its end of useful life in 2009. In total, replacing the escalators would cost $6.5 million. Furthermore, fire alarm systems that should have been replaced in 2018 due to obsolete parts remained in use. The cost to upgrade these systems was $2.5 million.

We asked MTCC how it planned to address the repair backlog, and found it did not have a timetable in place to address it. MTCC leadership said they were awaiting government direction on possible redevelopment of the facility (see **Section 4.3.4**) and it would not make sense to invest money in the existing facility if it was going to be redeveloped**.** They also said their priority was to save enough funds to secure a marshalling yard.

Marshalling Yard Purchase Could Divert Funds From Addressing the Capital Repair Backlog

A marshalling yard is where convention exhibitors receive and organize their freight and transportation vehicles that bring exhibits and event materials to and from the centre. At the time of our audit, MTCC did not have a permanent marshalling yard. Furthermore, in the past 13 years, MTCC has had to relocate its marshalling yard twice.

In 2011, the centre's lease at 24 Bathurst Street was not renewed. MTCC went on to lease land at 100/120 Cherry Street, until that lease was terminated in 2020. At that time, the City of Toronto reclaimed the land for the purposes of development. So, in November 2020, MTCC relocated to a vacant parcel of land on Horner Avenue that is owned by the Province.

MTCC has asked to acquire the land at Horner Avenue for use as its permanent marshalling yard. The Government of Ontario's Realty Directive does not allow the transfer of the land at a nominal amount and the Government of Ontario's Tangible Capital Assets Policy (TCAP) states that such a transfer must happen at fair market value, unless an exemption is approved by Treasury Board/Management Board of Cabinet (TB/MBC).

In June 2021, when the transaction for MTCC to gain access to the land at Horner Avenue was being negotiated, the land was valued at about $12 million and its lease would have been $700,000 per year. Due to significant impacts on MTCC's operations as a result of the COVID-19 pandemic and public heath

restrictions, MTCC was permitted to continue to lease the property for $1 per year for a five-year term.

That term will end in 2026, and in order to avoid another relocation, MTCC is still seeking to purchase the land. The Ministry informed us that the site could only be purchased at fair market value unless an exemption was sought by MTCC and approved by TB/MBC. In 2023, MTCC estimated the value of this parcel of land at around $18 million.

MTCC has been saving about $500,000 per month to be able to purchase the Horner Avenue land. MTCC estimated that, based on the current value of the land, it would take about three years in total to save the necessary funds to purchase the land. This is money that could be spent on critical capital repairs.

RECOMMENDATION 5

To ensure that critical infrastructure is secured for Metro Toronto Convention Centre (MTCC) business operations and that all necessary repairs are performed at the convention centre in a timely manner, we recommend that MTCC:

- submit its capital repair plan to the Ministry of Tourism, Culture and Sport (Ministry); and
- provide periodic updates to the Ministry on progress in clearing the repair backlog.

METRO TORONTO CONVENTION CENTRE RESPONSE

We appreciate the recommendation to enhance the critical infrastructure and promptly address necessary repairs at the Metro Toronto Convention Centre. We take this recommendation seriously and are committed to ensuring the highest level of functionality to our business operations.

To address this recommendation, we will continue to present our self-funded capital plan, which will include our plan to address our capital repair backlog, as an integral part of our yearly business plan. This approach ensures that our capital repair plan is aligned with our operational priorities and financial resources. Furthermore, we are dedicated to enhancing our process for quarterly updating for the Ministry on the progress of addressing the repair backlog.

RECOMMENDATION 6

To ensure that Metro Toronto Convention Centre (MTCC) can continue to host conventions without requiring it to raise significant funds to purchase its current marshalling yard, we recommend that the Ministry of Tourism, Culture and Sport (Ministry) provide guidance to MTCC regarding different options for securing a marshalling yard for the long-term, including on the possibility of a long-term lease.

MINISTRY RESPONSE

The Ministry accepts the recommendation and will work with MTCC and others, as required, to provide guidance and direction on possible options for the long-term securing of a marshalling yard.

4.3.6 Security Incidents Up 72% at MTCC Since 2016/17

Our review of security incident logs from 2016/17 to 2022/23 revealed a significant increase in incidents. There was a 72% rise in the overall number of incidents during this seven-year period, from 186 to 319 incidents.

A breakdown of security incidents by type can be found in **Figure 14**, which shows a substantial increase in "unwelcome guest interactions" (up by over 200 such incidents a year in 2022/23 compared to 2016/17). Unwelcome guest interactions are situations where individuals entered the MTCC premises unauthorized. "Event thefts" also increased slightly (from nine events in 2022/23 compared to seven in 2016/17), which relates to thefts that occurred during events on MTCC premises. MTCC told us that, as a result of the increase in total security incidents, it has added security staff members as well as increased patrols of the venue. It has also started stationing staff in specific areas of the venue to deter further security incidents from occurring.

Figure 14: Incidence of Security Events at Metro Toronto Convention Centre from April 2016 to March 2023

Source of data: Metro Toronto Convention Centre

Type of Incident	2016/17	2017/18	2018/19	2019/20	2020/21	2021/22	2022/23	Change (%)
Unwelcome guest interactions	24	21	9	128	84	130	231	863
Event thefts	7	7	4	33	4	2	9	29
Damage to property	40	44	24	97	4	4	44	10
Break and enters	0	2	0	6	0	0	2	-
Other	115	76	80	245	7	8	33	(71)
Total	**186**	**150**	**117**	**509**	**99**	**144**	**319**	**72**

As MTCC can only control access and activity in its building (and not those of adjoining buildings or nearby public and private property), MTCC indicated it was working with the City of Toronto and the Toronto Police Service to address encampments and aggressive behaviour from people experiencing homelessness. The event planners we spoke to emphasized that the safety and security of their delegates was of paramount importance. They carefully considered the safety of destinations when making their event location choices. Naturally, they did not want to host events at destinations or centres where delegates might feel unsafe. Even a small number of security incidents can therefore damage the reputation of a convention centre and impact its ability to attract events.

We reviewed about 470 event surveys from April 2018 to March 2023 to check whether security incidents were having an impact on event planners' perceptions of MTCC. During this time period, we found there were nine formal complaints about the safety of the centre, including three break-ins and thefts; four intruder incidents; and two complaints about interactions with people experiencing homelessness.

Continued Security Incidents Can Lead to Loss of Events

Our research showed that repeated security incidents at conventions centres elsewhere have resulted in those centres' loss of major event clients. One example is when a large technology company relocated its convention away from San Francisco, citing security concerns.

In some jurisdictions, such as San Diego, Los Angeles and Philadelphia, governments have addressed safety and security concerns by designating the area surrounding a convention centre as a "convention district."

In convention districts, rules that prohibit loitering are typically enforced through regular patrols to ensure the safety and comfort of convention attendees. For example, in San Diego, California, the Downtown San Diego Partnership's Clean and Safe Program was designed to provide maintenance, enhance safety, tackle unhoused care and invest in the beautification of the area. This included ensuring that garbage bins were emptied and sidewalks were clean and involved "safety ambassadors" who enhanced security by visiting businesses, providing directions and even walking delegates to their accommodations. This program is funded through public and private funding.

RECOMMENDATION 7

To ensure a high-level of safety for delegates and staff, we recommend that Metro Toronto Convention Centre (MTCC):

- review practices in other jurisdictions such as San Diego, Los Angeles and Philadelphia, where the concept of a "convention district" has been adopted, to address the increasing number

of security incidents, including addressing unwelcome guest interactions; and

- work with the Ministry of Tourism, Culture and Sport (Ministry), the City of Toronto and local law enforcement agencies to develop and implement a plan to address the rise in security incidents, based on the results of the above review.

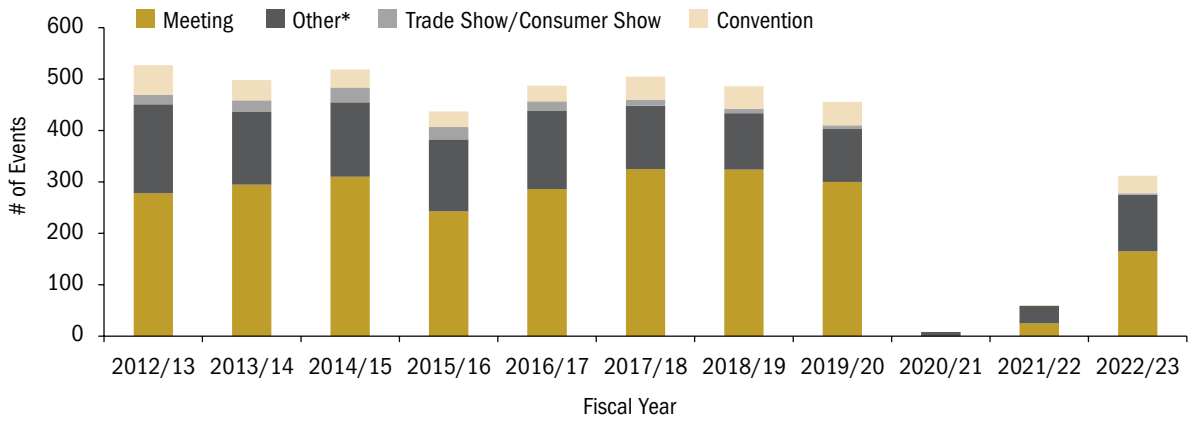
METRO TORONTO CONVENTION CENTRE RESPONSE

We appreciate the recommendation to prioritize the safety of delegates and staff at the Metro Toronto Convention Centre. Safety is of paramount importance, and we are committed to maintaining a secure environment for all those who visit and work at our facility.

In response to this recommendation, we will proactively review practices and strategies implemented in other jurisdictions that have successfully adopted the concept of a convention district, particularly in addressing unwelcome guest interactions. We understand that examining such models can offer valuable insights into enhancing security and safety within our own context.

Furthermore, we are dedicated to working with the Ministry, the City of Toronto, local law enforcement and other stakeholders to develop and implement a comprehensive plan that addresses the increasing security incidents, incorporating practices from the above review. This collaborative approach will allow us to draw on the expertise and resources of various stakeholders to create an effective and sustainable security strategy.

4.4 OCC: Performance and Challenges



4.4.1 OCC's Financial and Operational Performance

Between fiscal years 2013/14 and 2022/23, OCC held approximately 3,800 events. Refer to **Figure 15** for a breakdown of events by type during this period. Due to the COVID-19 pandemic and public health restrictions, only a few events were held in 2020/21 and in 2021/22. In the seven fiscal years prior to the COVID-19 pandemic, OCC was averaging an occupancy rate of 42% for its rentable space (70% is considered full capacity by industry standards).

OCC generates revenue through various sources including food and beverage sales, event space rental, commissions (such as from a partner vendor for audio-visual services used during events) and communication services (such as charging for the use of wireless

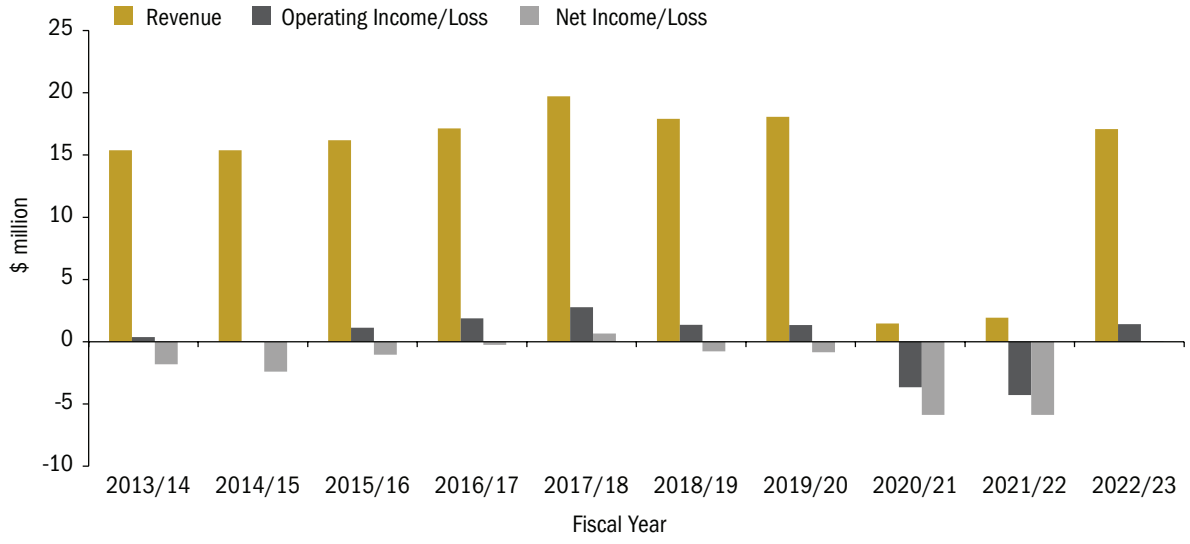
Figure 15: Events Held at Ottawa Convention Centre, April 2013–March 2023

Source of data: Ottawa Convention Centre

* Includes exams, food and beverage events, special events like weddings, sporting events, film and TV shoots, religious celebrations, dance productions, concerts and graduations, and theatre events.

internet). Unlike MTCC, the current lease between OCC and the landlord at the time of our audit did not include the parking lot and associated revenues. Over the past decade, OCC's revenue breakdown has been, approximately:

- 60% from food and beverage;
- 26% from space rental;
- 10% from commissions and communication services; and
- 4% from other sources.

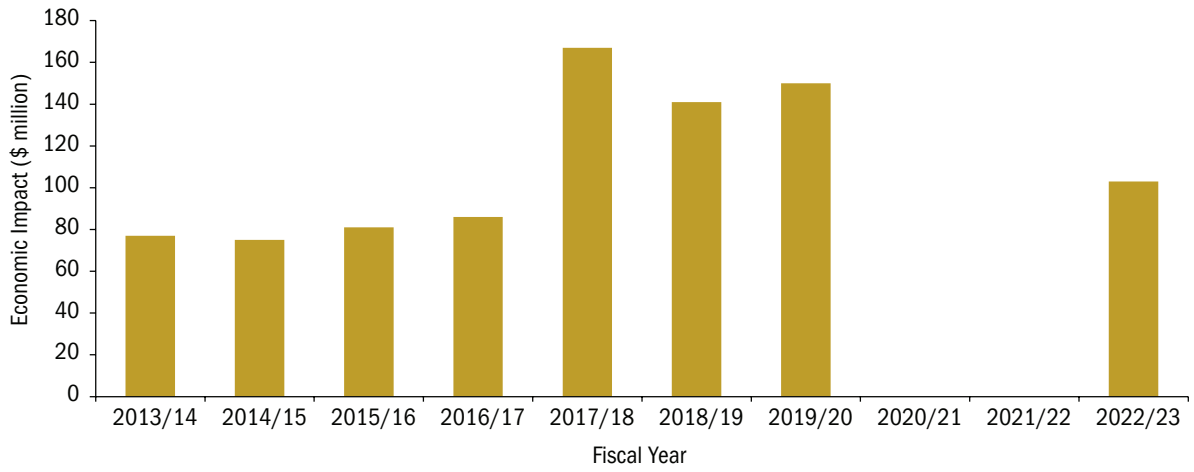


During this time frame, OCC's revenue was relatively stagnant, with the centre generating an average operating income of about $1.29 million per year. OCC has been unable to generate net profits (after amortization and depreciation expenses) from its operations since redevelopment in 2011/12, other than $650,000 in 2017/18 and about $40,000 in 2022/23. For a detailed overview of OCC's revenue, operating income and net income from 2013/14 to 2022/23, refer to **Figure 16**. For a comparison of OCC's financial performance to other government-operated Tier 2 venues in Canada, see **Appendix 9**.

In 2019/20, OCC held 456 events that generated an estimated economic impact of $150 million (or about $330,000 per event) for Ontario. In the past 10 years, excluding the two pandemic years, OCC estimates that it generated an average economic impact of about $110 million per year for the province. Refer to **Figure 17** for an estimate of the annual economic impact generated by OCC from 2013/14 to 2022/23, which it calculated using the Ministry's Tourism Regional Economic Impact Model (TREIM) tool (explained in **Section 2.1.1**) with a modified approach. Given its limited staff, OCC calculates the economic impact generated during the year by inputting the estimated average spending for delegates and exhibitors into the TREIM model, as OCC has informed us that it does not have resources to collect and input detailed spending data for each individual event. The average spending per attendee and delegate was calculated by a third-party consultant, in 2013, and is adjusted to account for the cumulative consumer price index change since 2012.

Our audit found that OCC's service was rated highly by its clients. In 2020, OCC was recognized for its

Figure 16: Revenue, Operating and Net Income and Loss Generated by Ottawa Convention Centre,April 2013–March 2023



Source of data: Ottawa Convention Centre

Note: Due to the COVID-19 pandemic public health restrictions, there was a significant drop in revenue in 2020/21 and 2021/22 (and to lesser extent in 2022/23). Financial assistance of $12 million was provided by the Ministry of Tourism, Culture and Sport, as discussed in **Section 2.3.1**, and is not included in the operating and net income and loss calculations so as to reflect the convention centre's independent performance. Depreciation costs are included in the calculation for net income/loss. Annual payments to the Ontario Financing Authority are not shown here.

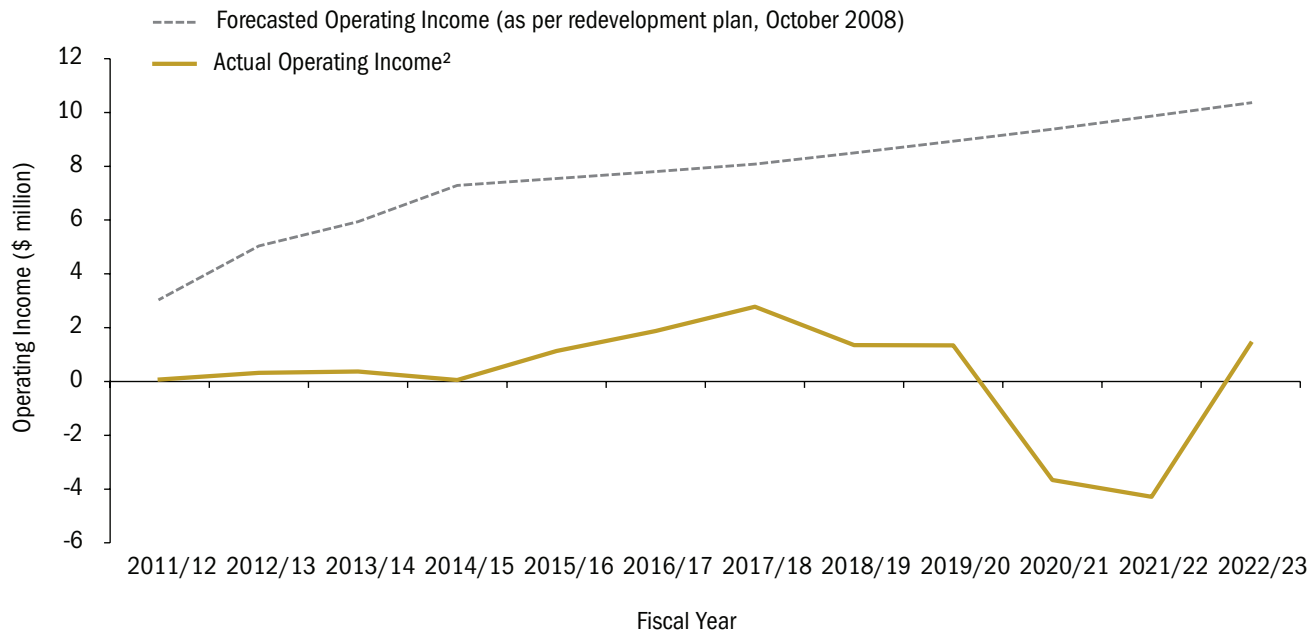
Figure 17: Annual Estimated Economic Impact Generated by the Ottawa Convention Centre, April 2013–March 2023

Source of data: Ottawa Convention Centre

Note: Estimate obtained using the Tourism Regional Economic Impact Model (TREIM) developed and maintained by the Ministry of Tourism, Culture and Sport. Ottawa Convention Centre informed us that given its limited staff and the time-consuming nature of this exercise, it used a modified approach to calculate of the economic impact, which is described in **Section 2.1.1.** Due to the COVID-19 pandemic public health restrictions, there was a significant drop in economic impact in 2020/21 and 2021/22.

service by the International Association of Convention Centres (AIPC), an association for professional convention and exhibition centre managers, and was awarded the title of the best convention centre in the world. Our review of client satisfaction surveys from 2013/14 to 2022/23 found that OCC's client satisfaction rating (as evaluated by surveys of event planners) ranged from an average of 4.5 to 5 out of 5 each year.

Although client satisfaction has been high, OCC has struggled to be profitable. We found that, unlike MTCC, OCC did not have as many diversified revenue streams to lower its rent prices while remaining profitable. For example, OCC did not operate a parking lot, so it was unable to generate parking revenue, which accounted for about 17% of MTCC's $533-million revenue in the past 10 years (excluding 2020/21 and 2021/22).



Projections for OCC's Redevelopment Were Overly Optimistic

Our audit found that the projections developed for OCC's redevelopment, completed in 2011 (discussed in **Section 2.2.3**), were overly optimistic about the forecasted revenues and operating income that the centre would generate. For example, redevelopment documents for OCC showed that the centre was supposed to receive $2 million in support payments annually from tourism industry entities benefiting from the redevelopment of the facility. These revenues would have contributed to either the capital expenses or ongoing operating costs at OCC for a 25-year period. However, OCC senior management informed us that they were never able to successfully negotiate the $2 million annual payment from the tourism sector.

Further, projected food and beverage revenue fell short of forecasts. We compared OCC's food and beverage revenue for 2017/18, its best performance year so far, to the projections made for the same year in the redevelopment plan. OCC was forecasted to make $15.9 million in food and beverage revenue, yet only made $12.3 million. Similarly, OCC was forecasted to make $9.2 million in rent revenue that year but only made $5.2 million. Overall, excluding the two years of the pandemic, since opening in 2011, OCC has had a shortfall of about $62 million in actual operating income compared to what was forecasted from the redevelopment plan. Between 2011/12 and 2022/23, (excluding 2020/21 and 2021/22, in order to assess the time period when impacts of the COVID-19 pandemic were non-existent or minimal), OCC earned only about 15% (or $10.7 million) of the $72.5 million

Figure 18: Actual and Forecasted Operating Income[1] for Ottawa Convention Centre, April 2011–March 2023 ($ million)

Prepared by the Office of the Auditor General of Ontario

1. Subsidies and financial assistance provided by governments such as those during the COVID-19 pandemic are not included in the operating income/loss calculations to reflect the convention centre's independent performance. Depreciation costs are also not included in the calculation of operating income. Any annual payments, such as those made by Ottawa Convention Centre (OCC) to the Ontario Financing Authority, are also not shown here.
2. Calculated using OCC's financial statements.

in operating income forecasted at that time. See **Figure 18** for actual and forecasted operating income for OCC from 2011/12 to 2022/23.

4.4.2 OCC Had Not Completed Necessary Capital Repairs

Our audit found that as of July 31, 2023, OCC had a backlog of capital repairs totalling about $15.8 million. We found that some of the outstanding repairs were considered critical to operations. For example, OCC's kitchen ovens, installed in 2011, have reached the end of their useful lives. OCC's IT network is at risk due to aging cables, degraded performance and considerable difficulty in troubleshooting and sourcing replacements. A failure in the network could disrupt technology throughout the building. In February 2023, OCC estimated the cost of these repairs to be $1.1 million and $1 million, respectively.

As discussed in **Section 4.4.1**, OCC achieved only about 15% of the annual operating income projections in the redevelopment plan. OCC told us it would like to complete the repair work as soon as possible, but did not have the money. Through the Capital Repair and Rehabilitation funding program (R&R Program), the Ministry offers financial support for 12 agencies and attractions it oversees to address critical capital repairs. Since 2019, OCC has applied to the R&R Program every year, asking in total for $11.8 million. It was approved for $5.5 million (over the period 2019–2023). However, as noted above, by July 31, 2023, OCC's short-term backlog (over the next three years) grew to about $15.8 million, with over $5 million in critical repairs remaining outstanding.

The $1-million payment OCC makes to the Ontario Financing Authority (OFA) annually could be used toward necessary capital repairs. As mentioned in **Section 2.2.4**, while the consultant hired by the Ministry to review OCC's operations advocated for the loan between OCC and the OFA in relation to OCC's

redevelopment be forgiven and replaced with performance payments (based on cash flow available after operational and capital expenditures), they also advised that performance payments be deferred for a period of 10 years (until 2027/28) if OCC's actual performance remained unsustainable, as forecasted. The OFA informed us they reviewed the consultant's report issued to the Ministry of Tourism, Culture and Sport, but that OFA was not required to accept its recommendation. OFA indicated they relied on their own analysis when making the recommendation to the Minister of Finance that OCC be released from the original loan payment schedule in favour of an annual payment in perpetuity.

OCC's current operating environment (including the 50% decrease in future bookings identified in **Section 4.1** and reduced flight availability to the region post-COVID-19 pandemic identified in **Section 4.4.3**) make it worth reconsidering this recommendation.

RECOMMENDATION 8

To ensure that Ottawa Convention Centre's (OCC's) state of repair does not impact customer experience and result in the loss of future revenue and economic impact, we recommend that the Ministry of Tourism, Culture and Sport (Ministry):

- work with OCC to complete assessments of its critical repair needs and ensure that they are addressed in a timely manner; and
- work with the Ontario Financing Authority and OCC's management to determine any changes needed to OCC's annual payment to the Province, including whether funding could be prioritized for capital repairs when necessary.

MINISTRY RESPONSE

The Ministry appreciates the recommendation and has OCC scheduled to receive an updated condition assessment in Spring 2024. Updated condition data will support OCC in modernizing its asset management practices and collect much-needed data on the state of infrastructure.

The Ministry will continue to engage OCC as part of its asset management working group to support asset management planning and help to prioritize its most critical needs so that they can be addressed in a timely manner.

The Ministry will work with OCC and other partners as required to determine if funding can be prioritized for capital repairs when necessary.

4.4.3 Price and Availability of Flights to Ottawa a Barrier to Attracting Conventions to Ottawa

Ottawa's flight availability has worsened since the COVID-19 pandemic. Compared with Toronto, Ottawa has fewer non-stop flights and the flights are more expensive generally. This hurts OCC's ability to attract events as, not surprisingly, event planners prefer cities with frequent and economically priced direct air service.

According to a 2020 survey of North American event planners (completed prior to the COVID-19 pandemic), about 40% of planners rated flight access to Ottawa as "average or poor." These planners ranked Ottawa 25 out of 40 cities for flight access, behind cities such as Pittsburgh, Portland and Phoenix. The event planners we interviewed told us that availability of direct flights and cost of the air fare were major criteria to evaluate potential event destinations.

By analyzing data provided to us by the Ottawa International Airport Authority, we found that as of August 2023, flights in and out of Ottawa were still down by about 27% from the pre-pandemic levels. Specifically, from March 2020 to August 2023, domestic flights in and out of Ottawa decreased by 18% while international flights decreased by 53%. Representatives from Porter Airlines told us that, although the market for leisure travel was recovering, the business travel market had not recovered as quickly. Similarly, representatives from Air Canada told us that while the market for leisure travel has recovered, the business travel market has not recovered to the pre-pandemic levels.

In addition, Canada's 2023 federal budget proposed further reducing expenses on travel by roughly 15% (of

2022/23 levels) going forward. Federal government travel is a key driver of demand for travel in the Ottawa region. According to estimates from Public Works and Government Services Canada, in 2019, nearly 300,000 passengers travelling through Ottawa Airport were federal public servants travelling for government business. In 2022, that number was down nearly 63% to about 110,000. With fewer travellers, airlines operated fewer flights in and out of Ottawa. In turn, the limited flight access made it harder for OCC to attract and retain convention business.

Data from the Ottawa International Airport Authority showed that, as of July 2023, Ottawa had 524 weekly flight departures with approximately 58,000 available passenger seats. This volume was significantly less than other comparable North American cities, as well as less than Toronto and Montréal, which had about 4,000 and 1,900 weekly departures, respectively, and approximately 600,000 and 300,000 available passenger seats. In **Figure 19** we compare air service to these North American cities.

Cost of Flying to Ottawa From International Destinations Was Generally Higher Than Toronto

Our audit found that, besides there being a relatively small number of flights to Ottawa, the cost of flights from international destinations was generally higher than flights to Toronto, for example. We researched the cost of airfare to Ottawa and Toronto from six major cities: three in Europe (London, Paris and Frankfurt) and three in North America (San Francisco, Los Angeles and Chicago) for dates in October 2023. On average, airfare to Ottawa ($937) was 20% more expensive than to Toronto ($778). Because it is usually necessary to take a connecting flight, the average air travel time from these six cities to Ottawa (650 minutes) was 248 minutes (about four hours) longer than to Toronto (402 minutes).

Representatives we interviewed from Air Canada told us that international direct flights to Ottawa were more challenging economically as Ottawa was a smaller local market compared to Toronto or Montréal. In addition, Ottawa was not a major hub for Air Canada and therefore lacks the connectivity to feed international flights. Representatives we interviewed from Porter Airlines told us that Ottawa's geographic proximity to two major hubs (Montréal and Toronto) factored in to decisions that airlines made about network connectivity. It was more economical for airlines to offer short connecting flights between these two hubs and Ottawa.

Figure 19: Weekly Flight Departures and Passenger Seats from Select North American Cities as of July 2023

Prepared by the Office of the Auditor General of Ontario

City	# of Weekly Flight Departures	# of Weekly Passenger Seats
Washington, DC	5,037	629,573

Ottawa, ON	524	57,738

Lack of Direct Flights to Ottawa Contributed to OCC Losing Bids to Host Seven International Conventions Between 2022 and 2026

We analyzed the convention bids lost by OCC for events to be held between 2022 and 2026. We found that in seven instances the reason given for OCC losing the winning bid was "lack of direct flights." For instance, OCC lost the following bids:

- The 2022 annual convention for an international medical science society, with an estimated attendance of 300 delegates. The convention was held in Dublin, Ireland. It would have generated an estimated $100,000 in revenues for OCC and an estimated economic impact of over $800,000.
- The 2024 annual convention for an international medical society, with an estimated attendance of about 3,200 delegates, was lost to the Montréal Convention Centre. This would have brought in an estimated $350,000 in revenue for OCC and an estimated $8.8 million in economic impact to the economy.
- The 2026 annual convention for an international science society, with an estimated attendance of 3,000 delegates, will be held in Calgary instead of Ottawa. The convention would have brought an estimated $575,000 in revenue for OCC and an estimated $8.1 million in economic impact.

In total, it is estimated that these seven events would have brought in over 9,000 attendees and nearly $1.5 million in revenue. All seven of these bids were for international convention events, events which bring the greatest economic impact per delegate (see **Section 2.1.2**). OCC estimated that these events would have brought nearly $25 million in economic impact to the province.

In other cases, a lack of direct flights can affect rates of attendance. For example, an event planner for an event held at OCC in 2022 told OCC that many potential attendees chose not to come to their event because there were no direct flight options to Ottawa. In 2022, when OCC held this athletics/dance event, it had lower attendance than expected (it had been contracted for 350 attendees, however only 300 attendees were present for the event), OCC estimated that approximately $135,000 in economic impact was lost as a result of lower attendance, which resulted in the event planner contracting less space with OCC for future events.

We noted that several Canadian provincial and American state governments were able to establish and expand direct flight routes to their smaller Tier 2 cities, similar to Ottawa, by providing financial support. For instance:

- Manitoba allocated $4.8 million in 2022/23 to enhance direct flight connections to Winnipeg from international cities like Atlanta.
- Nova Scotia invested $19.3 million in May 2022 to attract new routes to Halifax and Sydney.
- Saskatchewan plans to spend up to $2.2 million in 2023/24 to support direct flights between Saskatoon and Minneapolis.
- Ohio has invested $10 million US annually since 2020 to establish flight services connecting cities like Akron, Columbus, Cleveland and Cincinnati to regional and international destinations.

4.4.4 Downtown Ottawa Has Experienced a Notable Decline in Activity, Reducing the City's Appeal to Event Organizers

Event planners we spoke to informed us that when evaluating an event destination, one of their important criteria was the vibrancy of the destination, including its restaurants, attractions, cultural offerings and their "walkability" in relation to the convention centre. Delegates may then be able to have a dynamic and stimulating experience while attending conferences and conventions. A city's overall appeal to delegates is an important decision factor as it helps to build attendance, which is important to the event planner and their organization.

Ottawa has always been considered a Tier 2 destination due to its smaller population, lack of direct air access and other factors. (See **Appendix 1** for the categories of convention centre venues and supporting city infrastructure.) Unfortunately, changes to where people work in Ottawa since the COVID-19 pandemic have had a lasting impact on the character of the

downtown area, decreasing its vibrancy and making it less attractive to prospective clients.

A July 2023 report published by CBRE Group, a global commercial real estate services and investment firm, found that office building vacancy in downtown Ottawa increased from about 6% in the first quarter of 2020 (before the declaration of the COVID-19 pandemic) to 15% by the end of the second quarter of 2023. The federal government is the largest commercial tenant in Ottawa and the largest employer in the city, with over 120,000 employees. It announced in June 2023 plans to sell or transfer several of its office buildings in downtown Ottawa, as a result of the hybrid work model that has emerged after of the pandemic.

Vacancies have resulted in a noticeable decline in foot traffic, regular customers and the overall activity in the downtown area, which has impacted local businesses. In March 2023, the Canadian Chamber of Commerce, an association that advocates for the needs of businesses to the government, published a report on Canada's urban centres. This report assessed the mobility trends and the impacts on business as a result of the COVID-19 pandemic, comparing January 2023 trends to January 2020. While overall mobility in Ottawa was down 20% compared to January 2020, the downtown core remained as much as 45% below the pre-pandemic levels. According to the mobility dashboard prepared by the Canadian Chamber of Commerce, as of June 2023, foot traffic in Ottawa's downtown (where OCC is located) was still nearly 34% below January 2020 levels. The same dashboard identified the national average foot traffic, by contrast, was about 9% below January 2020 levels across all other Canadian municipalities tracked by the dashboard.

RECOMMENDATION 9

To support the ability of the Ottawa Convention Centre (OCC) to attract events and generate economic impact for the province, we recommend that the Ministry of Tourism, Culture and Sport (Ministry):

- review practices in other jurisdictions where support is provided to attract new direct flight routes, such as in Manitoba, Nova Scotia, Saskatchewan and Ohio;
- work with OCC to assess its future bookings and opportunities for larger conventions;
- conduct a cost/benefit analysis to assess the jurisdictions to where air service would be beneficial for attracting more events at OCC; and
- develop and execute a strategic plan to address the findings of the cost/benefit analysis.

MINISTRY RESPONSE

The Ministry accepts the recommendation and recognizes that a jurisdictional scan on flight routes and travel may help to inform an assessment of OCC's ability to host larger events.

The Ministry will work with OCC on conducting the recommended assessment and provide direction to OCC based on findings to articulate a proposed strategy and plan in a future business planning process for the booking of large conventions informed by the cost/benefit analysis.

RECOMMENDATION 10

To assist in improving the vibrancy of downtown Ottawa and increase the likelihood that the Ottawa Convention Centre (OCC) is selected to host events, we recommend that OCC:

- engage with local stakeholders (including the City of Ottawa, Ottawa Tourism and the Ottawa Board of Trade) to understand any initiatives they can participate in to help improve the vibrancy of downtown Ottawa;
- participate in such initiatives that align with its mandate and for which OCC has the necessary

human and financial resources available to devote to them; and

- identify to the Ministry of Tourism, Culture and Sport (Ministry) initiatives they could participate in that would improve the vibrancy of downtown Ottawa for their consideration.

OTTAWA CONVENTION CENTRE RESPONSE

The Ottawa Convention Centre (OCC) agrees with this recommendation. OCC will engage with local stakeholders (including the City of Ottawa, Ottawa Tourism and Ottawa Board of Trade) to understand the initiatives they can participate in to help improve the vibrancy of downtown Ottawa.

OCC is currently in the process of developing its strategic plan for the next three years. As part of this process, consideration will be given to resources, both human and financial, that can be devoted to participate in initiatives that will improve the vibrancy of downtown Ottawa and align with our mandate.

OCC will work with the City of Ottawa, Ottawa Tourism, Ottawa Board of Trade and other stakeholders to identify initiatives the Ministry would benefit from participating in, particularly ways the Ministry can participate in attracting business events that would directly benefit the downtown core and its surrounding areas.

Appendix 1: Categories of Convention Centre Venues and Supporting City Infrastructure

Prepared by the Office of the Auditor General of Ontario

Convention Centre (Venue)	City (Infrastructure)	Example
Tier 1		
• Largest convention centres that could serve large events like national and international conventions • Expansive exhibit halls, numerous meeting rooms and large ballrooms, capable of accommodating a large audience • Advanced technology available (e.g., audio and visual equipment and services) • Supplementary amenities like in-house catering, retail spaces and hotels	• Urban areas with a large and dense concentration of population, advanced infrastructure and many amenities • Well-connected transportation network reaching major airports and highways • Extensive selection of dining, hotels, entertainment options	• Metro Toronto Convention Centre • Vancouver Convention Centre
Tier 2		
• Convention centres of smaller capacity with diversity of amenities; more affordable than their Tier 1 counterparts and could serve medium-sized events like regional conferences and exhibitions • Medium-sized venues that offer a reduced number of amenities and smaller area than Tier 1 centres • Multiple meeting rooms, some exhibit spaces and standard catering options • Situated in mid-sized cities or suburban regions; host medium-sized events such as regional conferences, business meetings and smaller-scale trade shows	• Mid-sized urban regions with numerous comparable attributes to Tier 1 cities, but on a smaller scale • Many restaurants, attractions and some hotel choices	• Ottawa Convention Centre • Calgary (Telus) Convention Centre
Tier 3		
• May feature a small convention centre or community centre; attractive destinations for events, such as niche conferences or local trade shows • Smallest in size, with restricted amount of exhibit space and a small number of available meeting rooms • Cater to local events such as community fairs, small business expos or training workshops	• Small cities, towns or rural regions with a restricted range of amenities and infrastructure • Limited transportation and hotel choices	• Vancouver Island Conference Centre • Prince George Conference and Civic Centre

Appendix 2: Major Convention Centres Owned and/or Operated by Municipal and Provincial Governments in Canada

Prepared by the Office of the Auditor General of Ontario

Convention Centre	Owner	Location
Municipally owned and/or operated		
Calgary (Telus) Convention Centre	City of Calgary	Calgary, Alberta
Chatham-Kent John D. Bradley Convention Centre	Municipality of Chatham-Kent	Chatham, Ontario
Edmonton Convention Centre	City of Edmonton	Edmonton, Alberta
Enercare Centre	City of Toronto	Toronto, Ontario
Regina Exhibition Association Limited (REAL) District	City of Regina	Regina, Saskatchewan
Fredericton Convention Centre	City of Fredericton	Fredericton, New Brunswick
Penticton Trade and Convention Centre	City of Penticton	Penticton, British Columbia
Prince George Conference and Civic Centre	City of Prince George	Prince George, British Columbia
Winnipeg Convention Centre	City of Winnipeg	Winnipeg, Manitoba
London Convention Centre (RBC Place London)	City of London	London, Ontario
St. John's Convention Centre	City of St. John's	St. John's, Newfoundland and Labrador
Saskatoon's Arts and Convention Centre (TCU Place)	City of Saskatoon	Saskatoon, Saskatchewan
Vancouver Island Conference Centre	City of Nanaimo	Nanaimo, British Columbia
Victoria Conference Centre	City of Victoria	Victoria, British Columbia
Whistler Conference Centre	Resort Municipality of Whistler	Whistler, British Columbia
Provincially owned and/or operated		
Halifax Convention Centre*	Province of Nova Scotia	Halifax, Nova Scotia
Gatineau Convention Centre (Palais des congrès de Gatineau)	Province of Québec	Gatineau, Québec
Metro Toronto Convention Centre	Province of Ontario	Toronto, Ontario
Montréal Convention Centre (Palais des congrès de Montréal)	Province of Québec	Montréal, Québec
Québec City Convention Centre (Centre des congrès de Québec)	Province of Québec	Québec City, Québec
Ottawa Convention Centre	Province of Ontario	Ottawa, Ontario
Vancouver Convention Centre	Province of British Columbia (BC Pavilion Corporation)	Vancouver, British Columbia

* Since re-opening in January 2018, the Province of Nova Scotia has been operating the Halifax Convention Centre in partnership with the Halifax Regional Municipality.

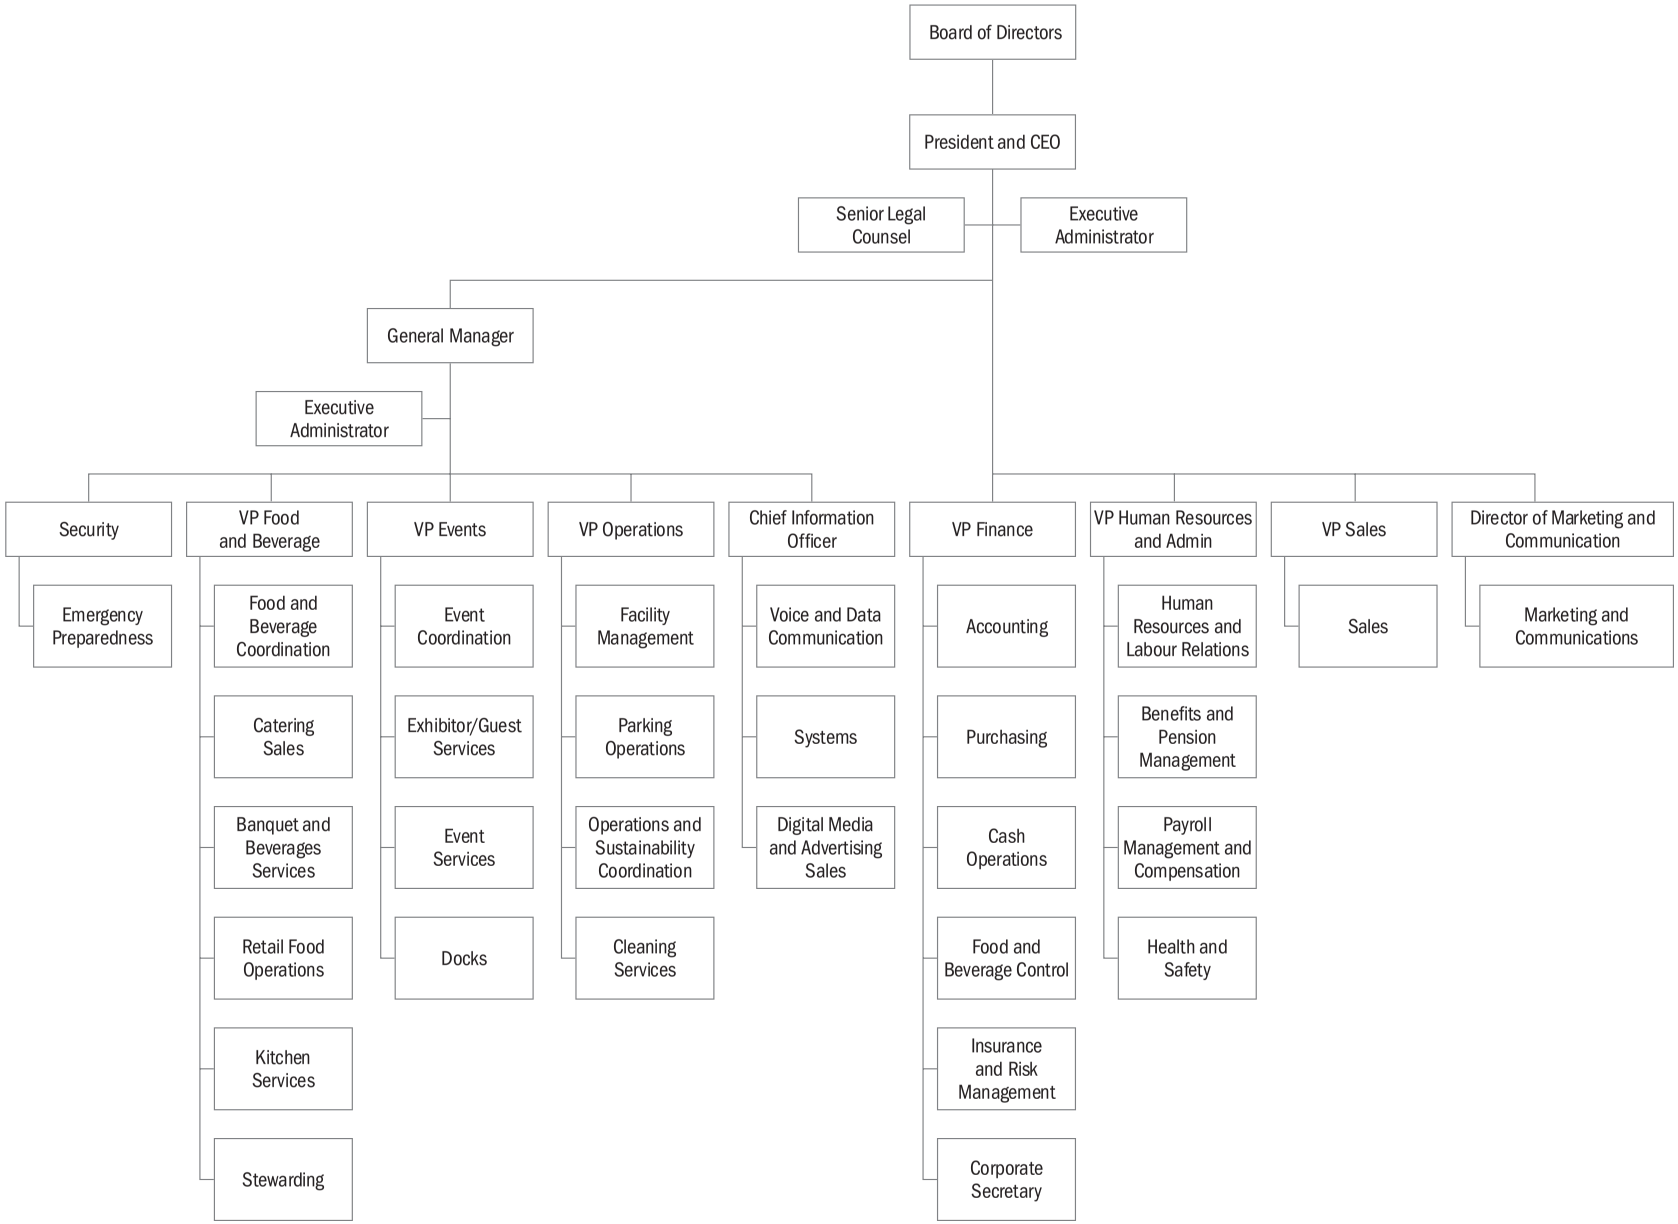
1. Convention centres are all owned and/or operated by provincial or municipal governments, as of July 31, 2023.
2. Two separate buildings.

Appendix 4: Board of Directors of Metro Toronto Convention Centre as of August 31, 2023



Source of data: Metro Toronto Convention Centre

Name	Term	Appointing Government and Role
Justin Mooney, Chair	April 16, 2023–April 15, 2026	Provincial Appointee Chair
James Villeneuve	July 23, 2023–July 22, 2026	Provincial Appointee Member
Mark Beckles	July 30, 2023–July 29, 2026	Provincial Appointee Member
Linda Montgomery	August 17, 2023–August 16, 2026	Provincial Appointee Member
Maureen Harquail	October 22, 2020–October 21, 2023	Provincial Appointee Member
Gina Saccoccio Brannan	November 4, 2021–November 3, 2024	Provincial Appointee Member
Robert J. Hunter	May 2, 2022–May 1, 2025	Provincial Appointee Member
Scott Beck, Stakeholder Representative	July 23, 2022–July 20, 2025	Municipal Appointee Member
Jascha Jabes	July 23, 2022–July 20, 2025	Municipal Appointee Member
Beth Potter	June 9, 2023–June 8, 2026	Provincial Appointee Member
Nikki Holland	July 23, 2022–July 20, 2025	Municipal Appointee Member

Note: Each municipally appointed member holds office for a term not longer than three years and until their successor is appointed and is eligible for reappointment. In June 2023, Royal Assent was given to Bill 91, the *Less Red Tape, Stronger Economy Act, 2023*, which amended the *Metropolitan Toronto Convention Centre Corporation Act*. Provincially appointed members are now appointed for a term not exceeding three years, rather than for a term not exceeding three years and until their successor is appointed. Additionally, the Lieutenant-Governor-in-Council is no longer required to appoint one of the Board members as President and CEO of MTCC. Instead, the Board is now required to hire a president and CEO, who cannot be a member of the Board.

Name	Term	Appointing Government and Role
Jim Armour, Chair	March 21, 2022–March 20, 2025	Provincial Appointee Member
Fred Sherman	July 9, 2023–July 8, 2026	Provincial Appointee Member
Kathleen Stanley	March 11, 2021–March 10, 2024	Provincial Appointee Member
David Muir	September 16, 2021–September 15, 2024	Provincial Appointee Member
Cynthia Bland	October 7, 2021–October 6, 2024	Provincial Appointee Member
Yilong Ma	March 4, 2022–March 3, 2025	Provincial Appointee Member
Ann Matejicka	December 1, 2022–November 30, 2025	Provincial Appointee Member
Debra Armstrong	November 15, 2020–December 31, 2026	Municipal Appointee Member
Michael Crockatt	November 15, 2020–December 31, 2026	Municipal Appointee Member
Jagdeep Perhar	June 29, 2023–June 28, 2026	Provincial Appointee Member
Stephanie Plante	December 14, 2022–December 31, 2026	Municipal Appointee Member

Note: In June 2023, Royal Assent was given to Bill 91, which amended the *Ottawa Convention Centre Corporation Act*. Provincially appointed members are appointed for a term not exceeding three years, rather than for a term not exceeding three years and until their successor is appointed. Each municipally appointed member holds office for a term not longer than three years and until their successor is appointed and is eligible for reappointment.

Appendix 7: Ottawa Convention Centre Organizational Chart

Source of data: Ottawa Convention Centre

Note: As of August 31, 2023, OCC had a total of 260 staff, consisting of 30 in-house staff (including 12 security staff) and 230 outsourced Aramark staff.

Appendix 8: Audit Criteria

Prepared by the Office of the Auditor General of Ontario

Ministry of Tourism, Culture and Sport (Ministry)
1. Effective processes are in place to establish the roles and responsibilities of the Ministry as well as each provincial convention centre and the Ministry effectively carries out its role and responsibilities.
2. Effective oversight processes are in place to monitor and ensure that provincial convention centre operations achieve legislative mandates, comply with applicable government directives and guidelines, and that timely corrective action is taken where they do not.
3. Effective processes are in place to help provincial convention centres maintain international-class convention centre facilities.
4. Meaningful performance indicators and targets for provincial convention centres are established, monitored, and compared against actual results to ensure goals, legislative requirements, and guidelines are achieved. Results are publicly reported.
Metro Toronto Convention Centre (MTCC) and Ottawa Convention Centre (OCC)
1. MTCC and OCC effectively attract convention events that promote and develop tourism and industry in Ontario.
2. MTCC and OCC economically and efficiently host convention events that satisfy the expectations of their clients.
3. MTCC and OCC govern and manage their operations and facilities economically, efficiently and effectively.
4. Meaningful performance indicators and targets for MTCC and OCC are established, monitored, and compared against actual results to ensure goals, legislative requirements, and guidelines are achieved. Results are publicly reported and corrective action is taken on a timely basis if targets are not met.

Appendix 9: Financial Performance of Tier 1 and Select Tier 2 Canadian Convention Centres[1] in Fiscal Year 2019/20

Prepared by the Office of the Auditor General of Ontario

	Tier 1 Venue			Tier 2 Venue						
	Metro Toronto Convention Centre (MTCC)	Montréal Convention Centre	Vancouver Convention Centre	Ottawa Convention Centre (OCC)	Calgary (Telus) Convention Centre[2]	Edmonton Convention Centre[2]	Halifax Convention Centre	Québec City Convention Centre	Toronto Enercare and Beanfield	Winnipeg Convention Centre[2]

1. Convention centres are all owned and/or operated by provincial or municipal governments.
2. This convention centre reports its financial performance based on the calendar year. We used information for calendar years ending December 31, 2019 to conduct the analysis.
3. Calculated by the Office of the Auditor General of Ontario. using the financial statements.
4. Operating income and revenue have been adjusted for all convention centres for comparability purposes. Subsidies and financial assistance provided by governments in these jurisdictions are not included in the revenue and operating income/loss calculations to reflect the convention centre's independent performance. Depreciation costs and taxes (applicable only to the Montréal, Québec City and Edmonton centres) are also not included in the calculation of operating income. Any annual payments, such as those made by MTCC and OCC to the Ontario Financing Authority, are also not shown here.
5. Economic impact includes Exhibition Place.

Appendix 10: Largest Contiguous Space in Select Tier 1 North American Convention Centres

Ministry of Health

Public Health Ontario

1.0 Summary

Public Health Ontario is an independent, board-governed agency with a broad mandate to provide scientific and technical advice and support to those working across health-related sectors to protect and improve the health of Ontarians. This includes carrying out and supporting activities such as population health assessment, public health research, surveillance, epidemiology, and planning and evaluation. Established in 2007 following the SARS outbreak in 2003, Public Health Ontario is one of the three pillars of Ontario's public health system, consisting of 34 local public health units and the Ministry of Health (Ministry), which exercises its authority in the area of public health primarily through the Office of the Chief Medical Officer of Health.

Public Health Ontario supports areas such as preventing and controlling infections and the spread of communicable diseases, improving environmental health and preventing chronic diseases, and operates Ontario's public health laboratory. Public Health Ontario provided public health and testing expertise during the COVID-19 pandemic, for example, in the area of vaccine safety, through its surveillance of adverse events following immunization.

The Ministry is the primary funder of Public Health Ontario. The agency spends the majority of its annual funding, which was about $222 million in 2022/23, on operating the province's 11 public health laboratory sites. Ontarians relied on the agency's public health laboratory to perform 6.8 million tests in 2022/23 for diseases that include HIV, syphilis, tuberculosis, influenza, COVID-19 and West Nile virus. The laboratory also carries out all required testing relating to outbreaks and investigations in Ontario, and has the capability of diagnosing pathogens requiring a high level of biosecurity and safety measures.

In early 2019, the Province announced its intention to modernize Ontario's public health system. A 2019 discussion paper to support the provincial plan outlined the key challenges facing public health. The paper noted the importance of working toward clearer and better aligned roles and responsibilities between the Province, Public Health Ontario and local public health units. In particular, it stated Public Health Ontario's potential to strengthen public health functions if these are co-ordinated or provided at the provincial level. The government revised its approach to modernizing the public health system in August 2023 to include a review of standards that govern the work of public health units, the roles and responsibilities that all three pillars of the public health system play, as well as their relationships and alignment across and beyond the broader health-care system.

Our audit found that Public Health Ontario has been unable to meet a number of its legislated responsibilities under the *Ontario Agency for Health Protection and Promotion Act, 2007.* This is partially due to a lack of direction from the Ministry to perform at its full potential. This includes a continued lack of clarity on roles and responsibilities in an evolving health-care system that saw the introduction of a new health agency, Ontario Health, that became operational in 2019. Though Public Health Ontario is responsible for providing scientific and technical advice and support to clients in the government, it was not consulted on some critical decisions concerning public health, such as the health impacts of increased access to gambling

and alcohol in recent years, and it did not address these topics independently.

We also found that lack of information sharing between the Ministry, public health units and Public Health Ontario has limited the agency's ability to centralize and co-ordinate work effectively in the area of research and evidence synthesis (a research methodology involving collecting the best available evidence on a given topic and summarizing it to inform best practice). This has resulted in duplication of efforts between provincial and local public health entities. From our work, we noted examples where multiple public health units have independently developed local resources in areas including key public health issues such as mental health and alcohol, when it would have been more cost-effective for Public Health Ontario to develop resources centrally.

Further, we found that Public Health Ontario's laboratory sites, where about 70% of its financial resources are allocated, were not operating efficiently. We found that three sites were able to perform tests on only 9% to 20% of the samples and specimens they receive, transferring the remainder of samples to other laboratory sites. Each of these three sites had base operating costs ranging from $5 million to $10 million over the last five years. The agency explained that transferring out laboratory tests to other sites was necessary for reasons that included lack of expertise or lack of sufficient volume to maintain competency of laboratory personnel in a specific test, lack of equipment to conduct certain tests, and efficiencies to achieve economy of scale. The agency developed a plan collaboratively with the Ministry in 2017 to modernize its laboratory operations by consolidating resources into fewer laboratory sites and discontinuing or restricting eligibility for certain tests; however, the government still had not approved the plan at the time of our audit. The Ministry stated this was due to reasons that include the COVID-19 pandemic and more recent recommendations relating to provincial laboratory optimization from an external consulting firm. We also found that the agency was not taking the lead in performing or co-ordinating testing for the surveillance of some diseases of public health significance. These include a laboratory test to detect latent tuberculosis—a disease of public health significance that can disproportionally affect Indigenous people and newcomers to Ontario—as well as wastewater testing for the detection of COVID-19, which is currently led by another Ministry.

Other observations of this audit include:

- **Public Health Ontario is challenged by a lack of sustainable funding from the Ministry of Health.** We found that since 2019/20, Public Health Ontario has seen limited increases in base funding, and has had some of its base funding replaced by one-time annual funding. While the Ministry has increased base funding since 2020/21, it has still not restored it to pre-pandemic levels. This lack of consistent funding threatens Public Health Ontario's ability to fully deliver on its mandate, and hinders the agency's ability to continue to provide services. For example, the agency has begun to explore options to scale back or dismantle the operations of a committee designed to enhance provincial capacity to respond to public health emergencies.
- **Public Health Ontario did not adequately monitor compliance with procurement policies.** We found that Public Health Ontario has not always followed the Ontario Public Service Procurement Directive, as well as the agency's own corporate procurement policy. From 2018/19 to 2022/23, Public Health Ontario staff at various laboratory sites were using their purchasing cards to make recurring purchases of laboratory and health-care supplies from the same vendor, instead of engaging in competitive procurement as required by internal policies. The agency provided explanations for why it used purchasing cards for recurring transactions with two of the top vendors. For the remaining 28 vendors, we found that annual transaction values over this same period ranged from $25,133 to $222,283. We further found that Public Health Ontario does not have a formal process to track vendor performance

and non-compliance, even though the Directive requires vendor performance to be managed and documented.

- **Public Health Ontario mostly measures outputs but little in the way of client satisfaction or service quality**. The agency establishes performance indicators as well as targets in its annual business plans; however, these indicators mostly focus on quantifying the output of the agency's operational activities rather than client satisfaction and actual performance of its core activities, making it difficult for the agency to demonstrate that it has been effective in meeting the needs of its clients. We also found that the agency's performance indicators do not cover all of its key functions, for example, the performance of its research ethics committee, which provides ethics reviews to 26 of Ontario's 34 public health units, to measure the turnaround time of its reviews.
- **Public Health Ontario's information technology (IT) processes need improvement**. We examined Public Health Ontario's IT controls and processes related to user account management, cybersecurity and software management. Due to the nature of these findings and so as to minimize the risk of exposure for Public Health Ontario, we provided relevant details of our findings and recommendations directly to Public Health Ontario. Public Health Ontario agreed with the recommendations and committed to implementing them.

This report contains 10 recommendations, with 24 action items, to address our audit findings and to position Public Health Ontario for success to continue to contribute to the overall health of Ontarians as a public health agency, independent from the government.

Overall Conclusion

Our audit concluded that Public Health Ontario has delivered on some areas of its mandate as set out in the *Ontario Agency for Health Protection and Promotion Act, 2007* (Act), but does not yet sufficiently collaborate with the Ministry of Health and local public health units to clearly define and ascertain the agency's role in areas such as undertaking public health research, disseminating knowledge, and delivering public health laboratory services to more effectively protect and promote the health of the people in Ontario and reduce health inequities.

We also concluded that Public Health Ontario mostly measures outputs but little in the way of client satisfaction or service quality, and that the agency's suite of performance indicators does not cover all of its key functions.

OVERALL PUBLIC HEALTH ONTARIO RESPONSE

Public Health Ontario thanks the Auditor General for this comprehensive value-for-money audit report.

Public Health Ontario is committed to fulfilling our mission to enhance the protection and promotion of the health of the people in Ontario and to contribute efforts toward reducing health inequities. By providing scientific and technical advice and leadership to support our clients across the public health and health systems, we enable evidence-informed public health action and decision-making.

In consideration of our role in the province, we recognize the importance of continuing to strive to improve our operations and enhance the quality of our services and products. As such, we appreciate the independent review of our organization by the Auditor General and the recommendations brought forward, all of which we have accepted and have plans to address.

When interpreting the findings of the report, it is important to note that the time frame covered by the audit includes more than three years during which Public Health Ontario was actively engaged in the COVID-19 pandemic response. Public Health Ontario, like other public health organizations, was greatly affected by the extraordinary demands of the pandemic. Due to the need to dedicate considerable resources to the pandemic, some areas of

our work did not progress as planned during this period, such as efforts to reduce purchasing card usage in the laboratory and expand our outcome-based performance measures.

As we are now in the process of returning to a "new normal" for the public health system in Ontario, Public Health Ontario is leveraging the lessons learned during the pandemic to inform the development of our next strategic plan covering the years 2024–29. The insights shared through this audit are helpful inputs that will support us in our commitment to continuous quality improvement and further enhance our leadership role within the public health system.

2.0 Background

2.1 Overview of Public Health Ontario

The Ontario Agency for Health Protection and Promotion (also known as Public Health Ontario) was established in 2007 as an independent, board-governed agency, primarily funded by the Ministry of Health (Ministry) in response to Ontario's challenges faced during SARS, a global respiratory outbreak that affected Ontario and other parts of Canada in 2003. Public health is the organized effort of society to promote and protect the health of populations and reduce health inequities through the use of supportive programs, services and policies. Thus, Public Health Ontario's role is chiefly in disease surveillance, disease prevention and outbreak preparedness, as opposed to clinical treatment.

In accordance with the *Ontario Agency for Health Protection and Promotion Act, 2007*, the legislation that created Public Health Ontario, the agency's mandate is to:

- enhance the protection and promotion of the health of Ontarians;
- contribute to efforts to reduce health inequities by providing scientific and technical advice and support to those working across health-related sectors to protect and improve the health of Ontarians; and
- carry out and support activities such as population health assessment, public health research, surveillance, epidemiology, planning and evaluation.

The agency's primary clients are the Office of the Chief Medical Officer of Health as well as various divisions within the Ministry, Ontario's 34 public health units, health system providers and health system partners. The Chief Medical Officer of Health of Ontario is responsible for determining provincial public health needs, developing public health initiatives and strategies, and monitoring public health programs delivered by Ontario's local public health units. Ontario's 34 public health units are primarily funded by the Ministry but also receive funding from local municipalities; each is led by its own Medical Officer of Health and governed by a Board of Health—and therefore they operate independently from each other. The public health units provide programs and services to all members of their respective communities as per the Ontario Public Health Standards—the minimum requirements that public health units must adhere to in delivering programs and services—and as determined by their own Boards of Health. They are not accountable to Public Health Ontario.

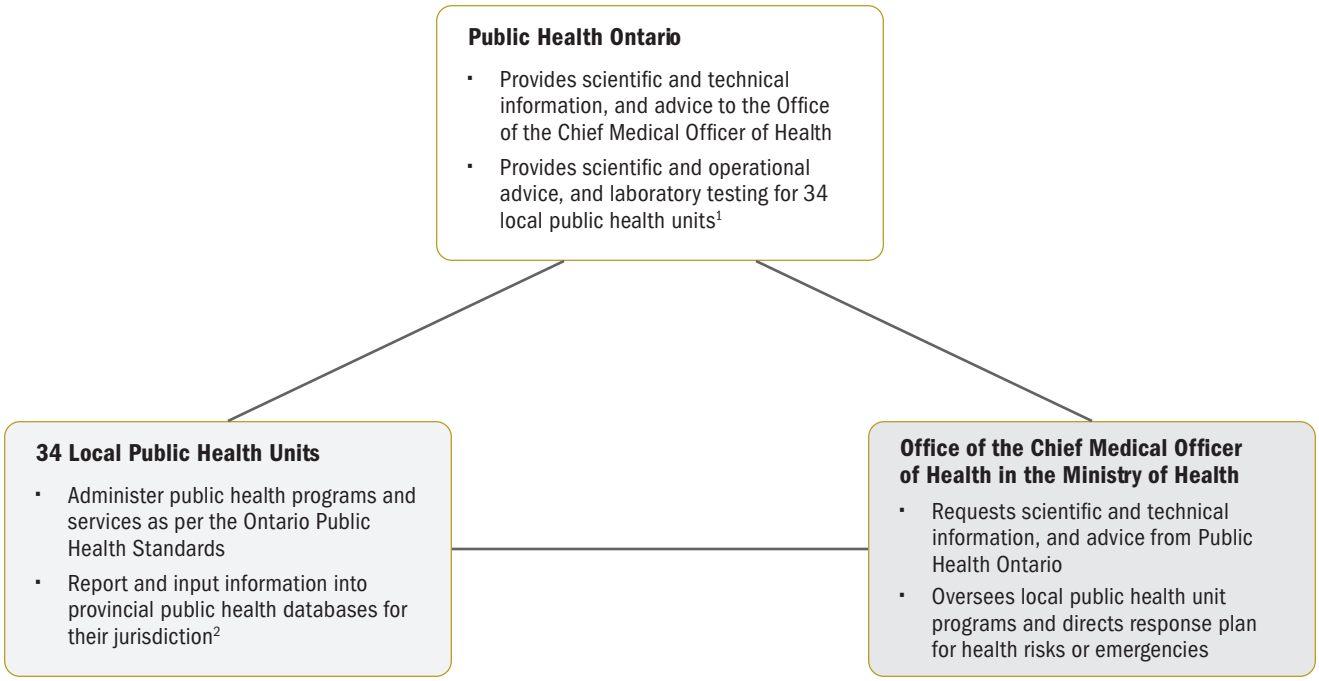

Figure 1 illustrates the relationship between Public Health Ontario and the various organizations involved in Ontario's public health system, which, according to the Chief Medical Officer of Health, consists of about 9,000 people. Public Health Ontario has a complement of just under 870 full-time-equivalent staff as of June 2023.

2.1.1 Public Health Modernization

As part of the 2019 Ontario Budget, the Province announced in April 2019 (pre-COVID-19 pandemic) that public health would be undergoing a modernization process. This decision had the most impact on public health units, aiming to reduce their number from 35 (since reduced to 34 through amalgamation)

Figure 1: Public Health Model in Ontario

Prepared by the Office of the Auditor General of Ontario

1. In addition to public health units, Public Health Ontario's laboratory provides testing services to other health-care providers, for example, clinicians and community laboratories.
2. Local public health units are not accountable to Public Health Ontario.

to 10 by April 1, 2020; however, this modernization process was paused when the COVID-19 pandemic was declared in March 2020.

As part of the modernization process, the Ministry of Health launched a public consultation in November 2019, appointing a special advisor to lead the process of gathering feedback, and releasing a discussion paper in November 2019 outlining the key challenges facing public health. In this paper, Public Health Ontario is acknowledged as a key partner in the public health system, with the following themes being discussed:

- working toward improved clarity and alignment of roles and responsibilities between the Province, Public Health Ontario and local public health units;
- reducing duplication of efforts, co-ordinating and providing certain public health functions, programs or services at the provincial level, possibly by Public Health Ontario; and
- clarifying the role of Public Health Ontario in better informing and co-ordinating provincial priorities to increase consistency.

The government revised its approach to modernizing the public health system in August 2023 to include a review of the Ontario Public Health Standards, the roles and responsibilities that all three pillars of the system—the Ministry, Public Health Ontario and the local public health units—play, as well as their relationships and alignment across and beyond the broader health-care system.

2.2 Key Program Areas

Public Health Ontario's operations consist of five principal public health program areas: Laboratory Science and Operations; Health Protection; Environmental and Occupational Health; Health Promotion, Chronic Disease and Injury Prevention; and Knowledge Exchange and Informatics.

2.2.1 Laboratory Science and Operations

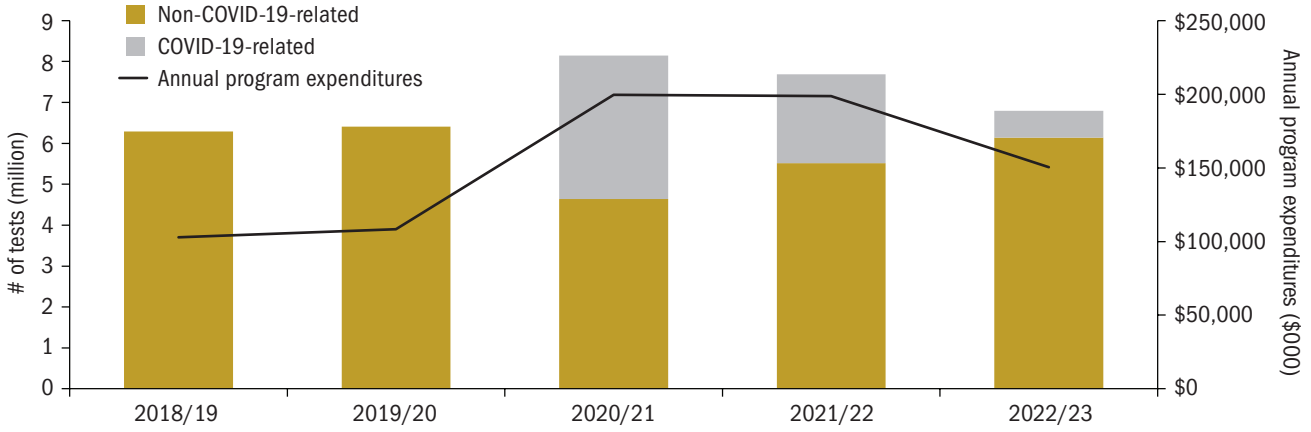
About 70% of the agency's resources are allocated to the operation of its laboratory. Public Health Ontario has 11 fully accredited laboratory sites across Ontario, located in Toronto, Hamilton, Kingston, London, Orillia, Ottawa, Peterborough, Sault Ste. Marie, Sudbury, Thunder Bay and Timmins. The agency's laboratory conducts a wide range of functions described by the Canadian Public Health Laboratory Network, including laboratory tests such as diagnostic tests and confirmatory tests, as well as complex tests that other providers, such as hospital and community laboratories, refer to it. This testing informs public health surveillance, detects threats and outbreaks, and enables preventive and therapeutic interventions for public health action and patient management in Ontario.

Public Health Ontario's laboratory serves public health units, hospital and community laboratories, long-term-care homes and other congregate settings, clinicians in private practice, and private citizens in the context of private well water testing. It performs the majority of its laboratory tests Monday to Friday for the detection and diagnosis of infectious diseases (such as tuberculosis) or antimicrobial resistance (that is, when a bacterium or fungus develops the ability to defeat the drug designed to kill it), and for specialized testing for molecular profiling of pathogens by examining the entire genetic makeup of a specimen (for example, identifying which variant of COVID-19 someone has), including genomics. Public Health Ontario's laboratory also offers after-hours support, and it has been performing COVID-19 testing daily since the summer of 2020. It was still performing this daily testing at the time of our audit.

Public Health Ontario's laboratory performed about 6.8 million tests in 2022/23; these tests include 100% of diagnostic HIV testing and over 95% of syphilis testing in the province. According to the agency, it operates one of the largest tuberculosis laboratories and one of the largest diagnostic mycology laboratories in North America. As well, the agency indicates that it is known as the provincial resource and expert for laboratory testing and outbreak support for emerging pathogens, as well as for the 10 most common infectious agents causing the greatest burden of disease in Ontario. These agents include *C. difficile, E. coli,* hepatitis B, hepatitis C, HIV, human papillomavirus, influenza, rhinovirus, *Staphylococcus aureus* and *Streptococcus pneumoniae*. The laboratory also carries out all testing relating to pathogens found in food, water or the environment to assist in their investigations, and is able to diagnose pathogens requiring a high level of biosecurity and safety measures, such as tuberculosis and anthrax.

Public Health Ontario's laboratory undergoes accreditation by Accreditation Canada and the Canadian Association for Laboratory Accreditation Inc. to ensure that processes in accordance with the International Organization for Standards and requirements under environmental laws such as the *Safe Drinking Water Act, 2002* are in place. As of June 2023, all 11 public health laboratory sites have met these standards and requirements, including those designed to help mitigate future occurrences similar to the Walkerton *E. coli* outbreak in 2000.

Figure 2 shows that test volumes at public health laboratory sites increased from about 6.3 million in 2018/19 to 7.7 million in 2021/22, primarily due to conducting COVID-19–related laboratory tests, and then decreased to 6.8 million in 2022/23. The cost of each laboratory test generally increased between 2018/19 and 2022/23 by 36%, from about $16.33 to $22.15.



2.2.2 Health Protection

Public Health Ontario's Health Protection program provides data analysis, surveillance, evidence generation and synthesis, and consultation services to its clients. These activities are intended to better prevent communicable diseases, reduce transmission of infectious agents, and support system capacity building and professional development in public health and infection control best practices in Ontario. Expertise in this program spans:

- all diseases of public health significance (such as hepatitis A and B) as defined under the

Figure 2: Expenditures on Laboratory Services and Number of Tests Performed by Public Health Ontario, 2018/19–2022/23

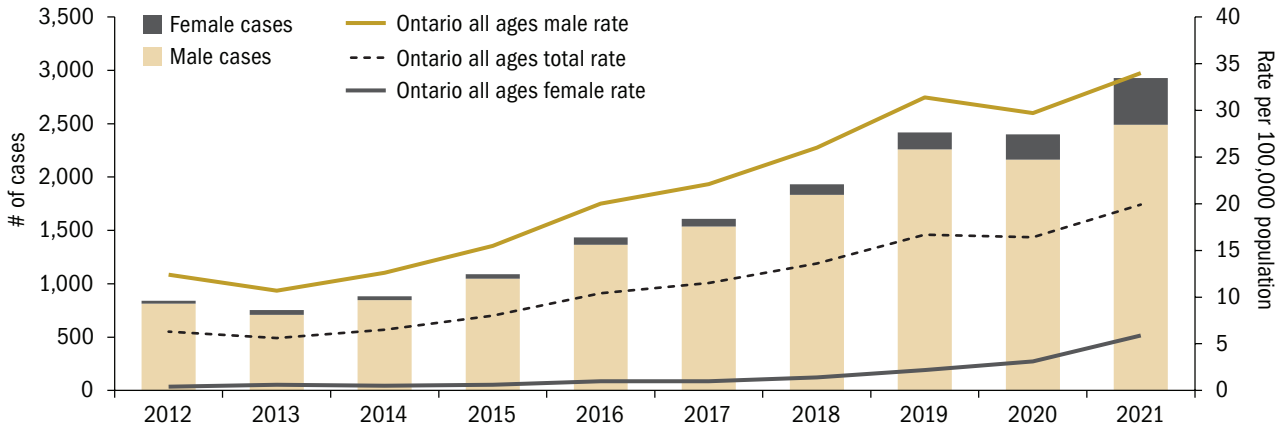
Source of data: Public Health Ontario

Health Protection and Promotion Act (see **Appendix 1** for a full list of diseases of public health significance);

- surveillance and epidemiology of communicable diseases;
- infection prevention and control (IPAC) best practices and lapse investigations (that is, deviations from IPAC standard of care);
- programs and research to support epidemiology, immunization and antimicrobial stewardship (that is, promoting appropriate use of antibiotics to limit the development of antibiotic resistance); and
- emergency preparedness.

Public Health Ontario has an interactive online tool to track infectious disease trends, which provides 10 years of analyzed data on diseases of public health significance in Ontario. This helps the agency's clients and partners with surveillance, as well as informing program planning and policy. For example, as shown in **Figure 3**, the cases and rate of syphilis in Ontario from 2012 to 2021 have been steadily increasing according to Public Health Ontario's surveillance efforts; this information could be helpful to clinicians, policy-makers, and the public to raise awareness. In 2021/22—the latest year for which information is available—over 2.1 million total visits were made to Public Health Ontario's online centralized data and analytic tools, down from about 2.9 million in 2020/21, the first year that the agency measured this metric.

2.2.3 Environmental and Occupational Health



Public Health Ontario's Environmental and Occupational Health program area provides field support and helps the agency's clients and partners better understand and address evolving public health issues relating to exposures in the environment, such as indoor air quality, outdoor air pollution, water quality and food safety. This program works with and supports public health units and policy-makers to better respond to environmental threats and issues. This is done through situation-specific consultation and advice, interpretation of data, research, evidence-based reviews, case studies, access to environmental monitoring equipment, and training workshops.

2.2.4 Health Promotion, Chronic Disease and Injury Prevention

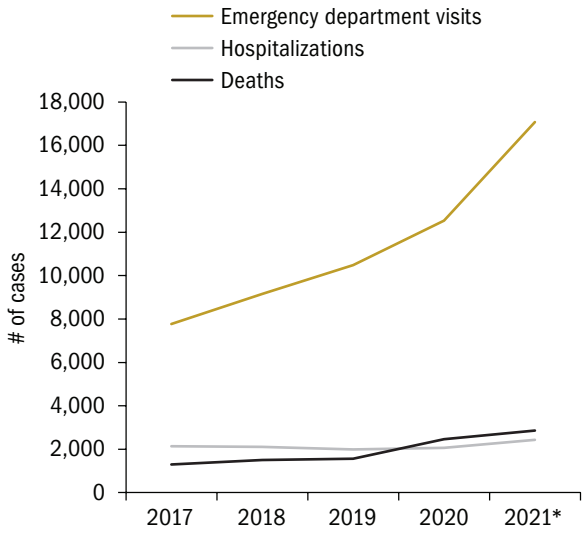
According to the World Health Organization, health promotion entails building healthy public policy; creating supportive environments; strengthening community action; developing personal skills; and reorienting health-care services toward prevention of illness and promotion of health. Public Health

Figure 3: Infectious Syphilis Cases and Rates for All Ages and by Sex in Ontario, 2012–2021

Source of data: Public Health Ontario

Ontario's Health Promotion, Chronic Disease and Injury Prevention program focuses on non-communicable diseases (such as heart disease, cancer, diabetes) and injuries, oral health conditions, and the modifiable risk factors that contribute to them. The program covers comprehensive tobacco control; healthy eating and physical activity; oral health; reproductive, child and youth health; healthy schools; mental health promotion; substance use (for example, opioids, alcohol, cannabis, tobacco); injury prevention; health equity; and health promotion. One of the program's activities is tracking data on substance abuse, such as opioid-related morbidity and mortality, as shown in **Figure 4**.

2.2.5 Knowledge Exchange and Informatics



Public Health Ontario's Knowledge Exchange program supports the development and dissemination of the agency's products and services, including its external website. The program delivers professional development, including special events and learning exchanges, and the annual Ontario Public Health Convention; supports medical resident and student placements at Public Health Ontario and in public health units; provides training and education programs; and delivers library services, knowledge mobilization and evaluation supports to its own staff, as well as to the overall public health sector. In 2021/22—the latest year for which information is available—this program area facilitated 70 professional development sessions to external clients and stakeholders.

This program also includes the Locally Driven Collaborative Projects (LDCP) program, which brings together public health units, along with academic and community partners, to collaboratively design and implement applied research and program evaluation projects on important public health issues of shared interest, and build new partnerships among participants. Examples of LDCP in prior years include a project to help public health units plan programs around substance abuse and harm reduction, and another project to identify lessons learned from the collection of sociodemographic data during the COVID-19 pandemic, as this data informs targeted improvement to address health inequities.

Informatics applies information and data science to public health practice, research and learning, enabling and bridging the use of technology and data to present critical information needed for effective public health decision-making. This team provides specialized and centralized supports for the governance, acquisition, synthesis, analysis, interpretation and presentation of data and information.

Figure 4: Emergency Department Visits, Hospitalizations and Deaths Related to Opioid Use in Ontario, 2017–2021

Source of data: Public Health Ontario

* According to Public Health Ontario, death data for 2021 should be considered as preliminary and is subject to change. Possible contributing factors to rising rates of opioid-related harm during the COVID-19 pandemic include increased stress, social isolation and mental illness, resulting in changes in drug use, and reduced accessibility of addiction, mental health and harm reduction services.

2.3 Organizational Structure and Accountability

2.3.1 Organizational Structure

Figure 5 shows Public Health Ontario's program areas and senior management. Public Health Ontario's office and main laboratory site is located in Toronto, with laboratory sites in 10 other cities across Ontario. As of August 2023, Public Health Ontario had 1,176 employees (just under 870 full-time equivalents), with 67% (792) of its employees working in laboratory sites across the province.

2.3.2 Governance and Accountability

The Agencies and Appointments Directive issued by the Management Board of Cabinet, an accountability framework for all board-governed provincial agencies, outlines the requirements of the reporting relationships between parties (see **Appendix 2** for more information). Public Health Ontario must adhere to this accountability framework. The Chief Medical Officer of Health, a senior employee of the Ministry, also has the power to issue directives to the agency, as shown in **Figure 6**.

A memorandum of understanding (MOU) between the agency and the Ministry outlines accountability relationships, roles and responsibilities, and expectations for the operational, administrative, financial, staffing, auditing and reporting relationships. Public Health Ontario's day-to-day operations are administered by the President and CEO, who reports to the agency Board of Directors. Public Health Ontario's Board of Directors consists of a maximum of 13 voting members; each is appointed for a three-year term by the Lieutenant Governor in Council. According to the *Ontario Agency for Health Protection and Promotion Act, 2007,* appointment of people to Public Health Ontario's Board should consider persons with skills and expertise in areas covered by Public Health Ontario or in corporate governance, and include a person with expertise in public accounting or with related financial experience, and a lay person with demonstrated interest or experience in health issues. **Figure 7** shows that the agency's Board of Directors consisted of 12 people, with one vacancy, as of June 2023.

2.3.3 Joint Liaison Committee

The Joint Liaison Committee was created by the Ministry in 2008, shortly after the agency was established, to address issues of mutual interest between the Ministry and Public Health Ontario, resolve issues, provide direction, and delegate and co-ordinate work. The Committee is co-chaired by either the Assistant Deputy Minister or the Chief Medical Officer of Health from the Ministry, as well as the Chief Executive Officer of Public Health Ontario. The Committee held its last meeting prior to 2017/18, and since then the Office of the Chief Medical Officer of Health and the Chief Executive Officer of Public Health Ontario have mutually agreed to liaise informally as needed.

In April 2020, the Office of the Chief Medical Officer of Health created the COVID-19 Public Health Measures Table, consisting of public health unit

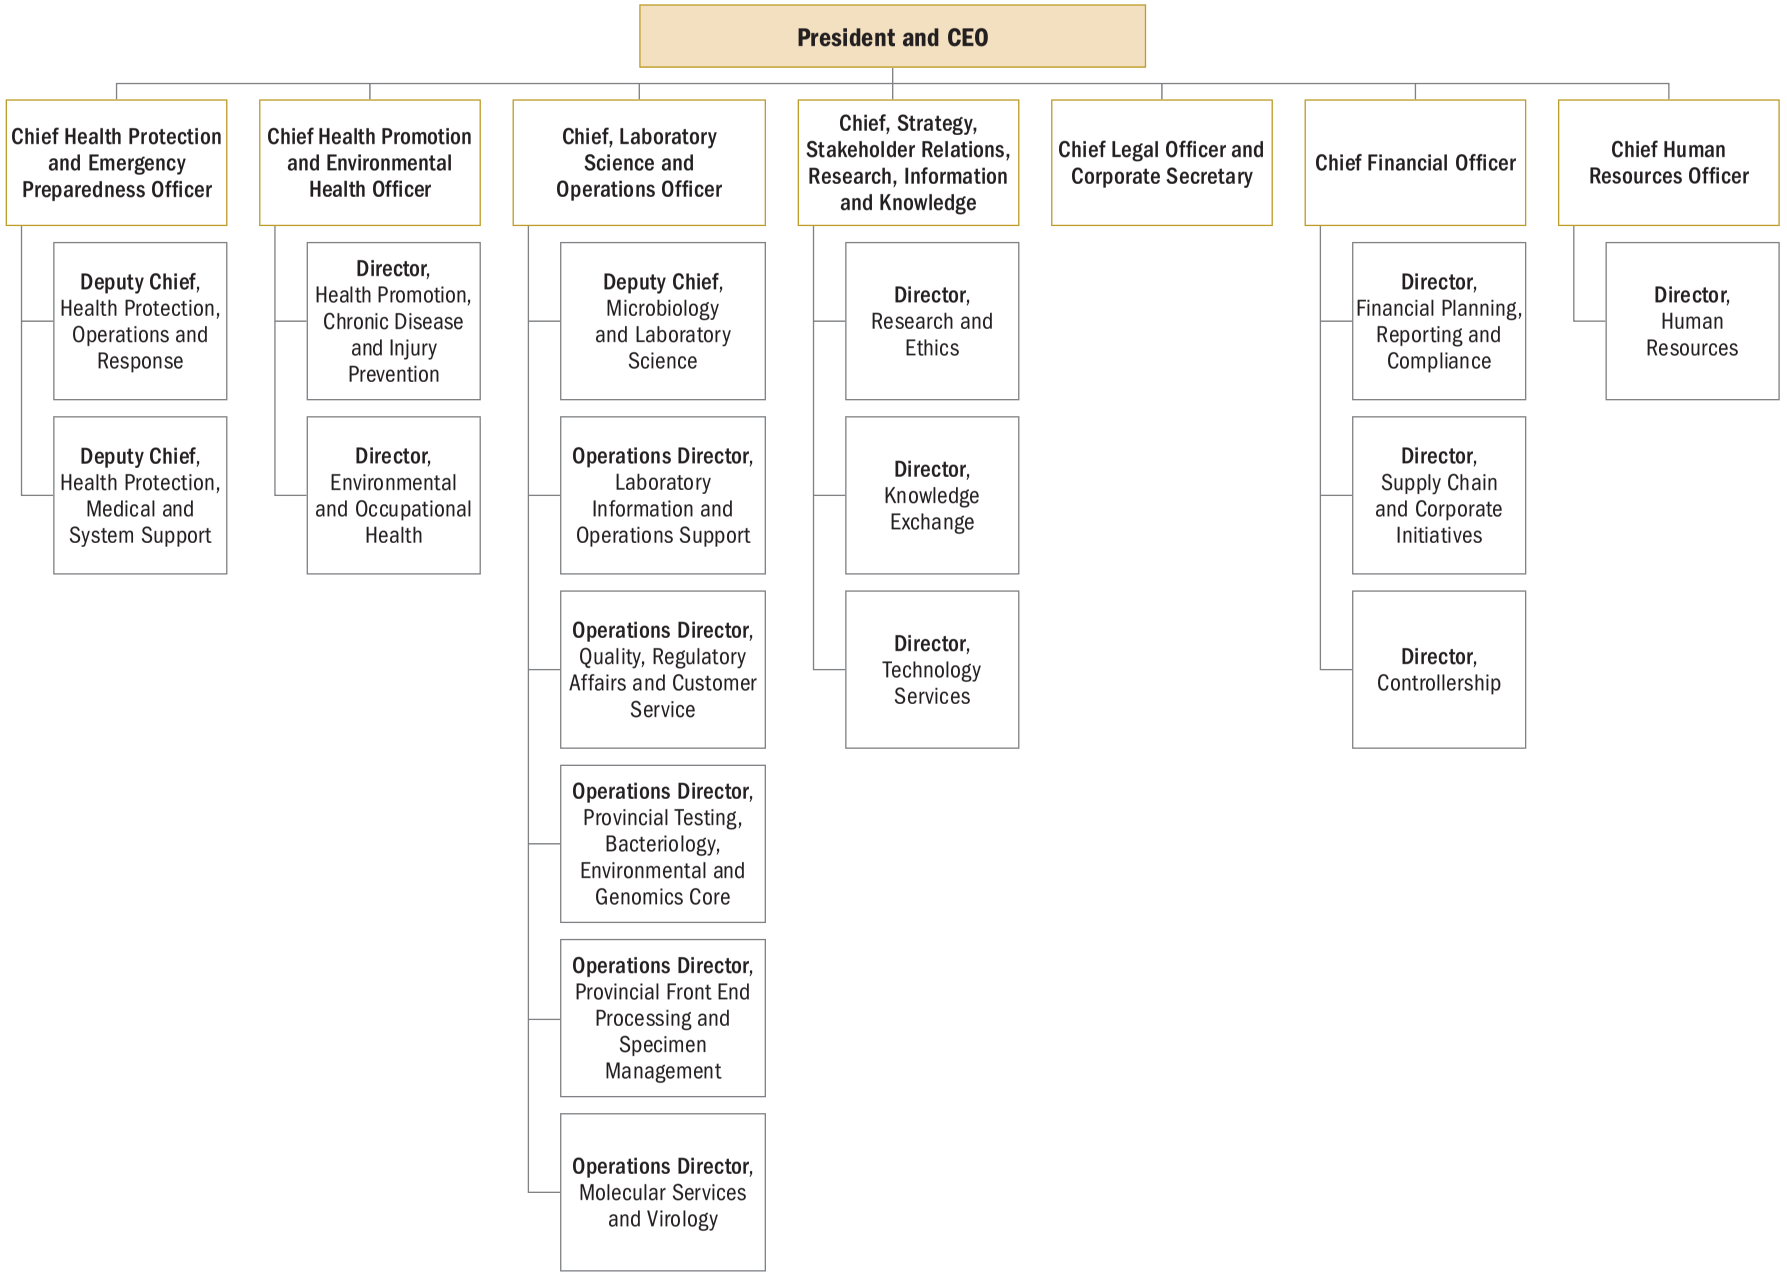

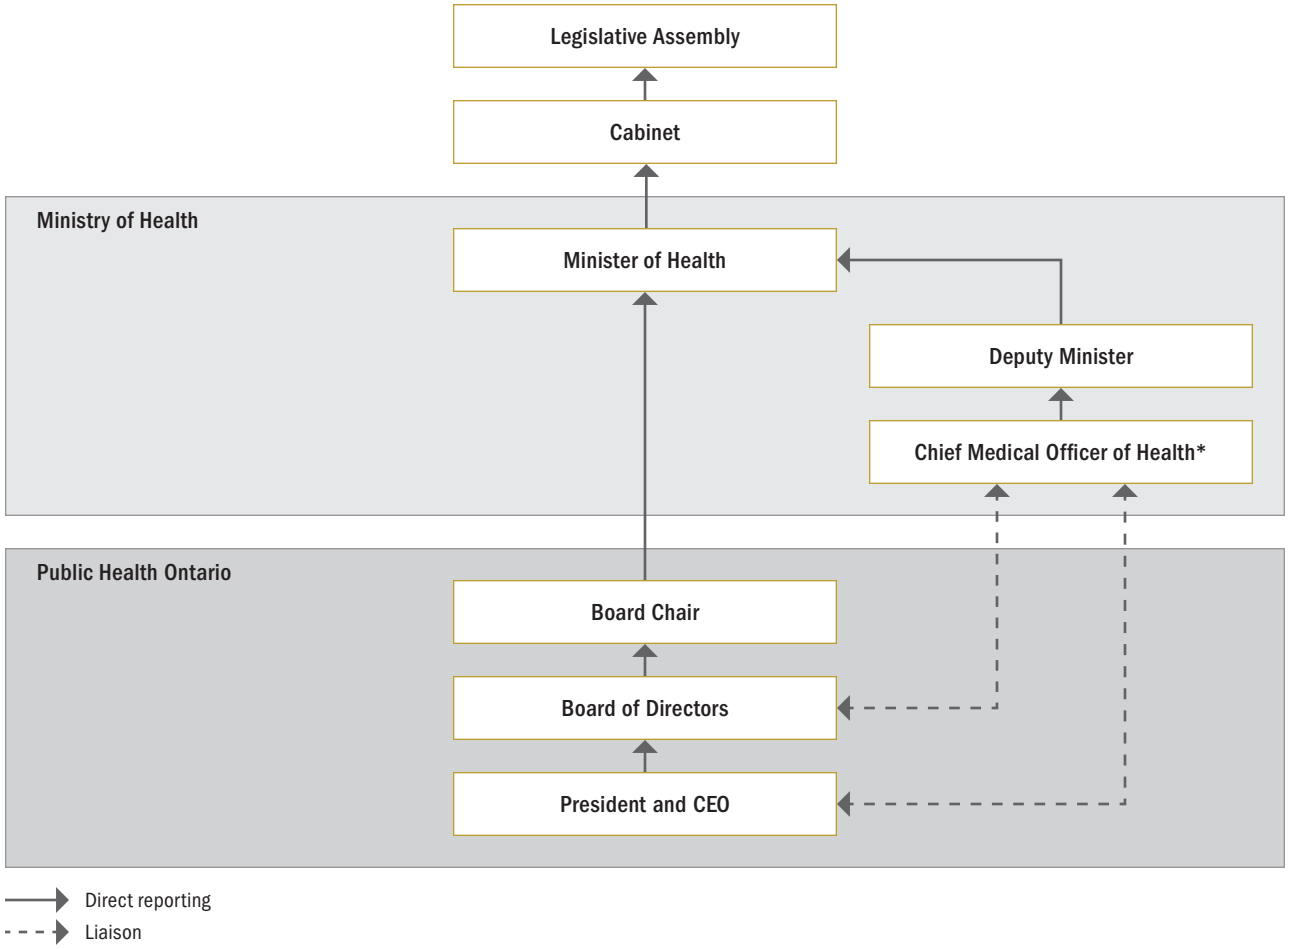

Figure 6: Accountability Framework for Public Health Ontario

Prepared by the Office of the Auditor General of Ontario

* The Chief Medical Officer of Health plays a liaison role between Public Health Ontario and the Ministry of Health, sitting as a non-voting member of the Board of Directors at Public Health Ontario, as well as a voting member on the Strategic Planning Standing Committee of the Board of Directors at Public Health Ontario to convey Ministry strategies and provincial priorities to Public Health Ontario. The Chief Medical Officer of Health also has the power to issue directives to Public Health Ontario.

representatives and Public Health Ontario, with the purpose of providing advice to the Chief Medical Officer of Health on public health measures that may be implemented to prevent or slow the transmission of COVID-19.

2.4 Financial Information

As shown in **Figure 8**, Public Health Ontario's expenditures were about $222 million in 2022/23, an approximately 37% increase over the last five fiscal years. The increase was mainly attributable to a temporary increase in testing volumes during the COVID-19 pandemic. In the last five years, 71% of the agency's actual expenditures related to its laboratory program, 18% related to science and public health programs, and the remaining 11% were for general administrative and amortization expenses.

Figure 9 shows funding provided to Public Health Ontario for the last five years. The Ministry is the primary funder of Public Health Ontario, providing about 94% of the agency's revenue. The agency also receives grants, mainly from the Canadian Institutes of Health Research, which averaged about $1.8 million

Figure 7: Public Health Ontario Board of Directors as of June 30, 2023

Source of data: Public Health Ontario

Name	Board Position	Current/Most Recent Role
Helen Angus	Chair	Chief Executive Officer of AMS Healthcare, former Deputy Minister of Health
Dr. Isra Levy	Vice-Chair Chair, Governance and Human Resources Standing Committee[1]	Vice-President of Medical Affairs and Innovation, Canadian Blood Services
Ian McKillop	Member Chair, Strategic Planning Standing Committee[2]	Associate Professor at University of Waterloo, School of Public Health Sciences
S. Ford Ralph	Member Chair, Audit Finance and Risk Standing Committee[3]	Former Vice-President of Petro-Canada
Roxanne Anderson	Member	Senior Vice-President of Business Optimization and the Chief Financial Officer of the Victorian Order of Nurses
Harpreet Bassi	Member	Executive Vice-President, Strategy and Communications, Niagara Health
Cat (Mark) Criger	Member	Indigenous Elder, Traditional Teacher and Knowledge Keeper
William MacKinnon	Member	Former Chief Executive Officer of KPMG
Theresa McKinnon	Member	Former Partner at PwC Canada, Assurance
Rob Notman	Member	Trustee and former Board Chair of the Royal Ottawa Mental Health Centre
Dr. Andy Smith	Member	President and Chief Executive Officer of Sunnybrook Health Sciences Centre, Professor of Surgery at the University of Toronto
David Wexler	Member	Former Chief Human Resources Officer for the Vector Institute for Artificial Intelligence, FreshBooks, Syncapse, Alias Systems and the Canada Pension Plan Investment Board

1. The Governance and Human Resources Standing Committee supports the Board's commitment to and responsibility for the sound and effective governance of Public Health Ontario. This includes nominations for recommendation by the Board for appointment to the Board; appointment of Board members to committees; help with orientation and education of new directors to assist them in fulfilling their duties effectively; and support for the Board in its oversight of human resources policies and strategies.
2. The Strategic Planning Standing Committee provides reviews and advice on Public Health Ontario's strategic planning, performance measurement, quality assurance and stakeholder engagement processes, and monitors and advises it on progress against goals. The Chief Medical Officer of Health is part of this standing committee.
3. The Audit Finance and Risk Standing Committee ensures that Public Health Ontario conducts itself according to the principles of ethical financial and management behaviour and that it is efficient and effective in its use of public funds by overseeing Public Health Ontario's accounting, financial reporting, audit practices and enterprise risk management.

annually in the last five years. Ministry-provided base funding for Public Health Ontario has generally flatlined over the last 10 years, and decreased in 2019/20 just prior to the onset of the COVID-19 pandemic. While the Ministry has increased base funding subsequent to 2020/21, it still has not restored it to pre-pandemic levels.

2.5 Other Jurisdictions

In Canada, British Columbia's BC Centre for Disease Control and Quebec's Institut national de santé publique are close comparators to Public Health Ontario. The federal government's Public Health Agency of

1. Increased revenue from 2019/20 to 2021/22 corresponds to increased operating expenditures due to Public Health Ontario's increased services to respond to COVID-19.
2. Covers fiscal years 2020/21 to 2022/23 only, as this represents the most significant time period for COVID-19 expenses, and represents three-year base funding and COVID-19 one-time funding as a percentage of base operations expenditures.
3. Public Health Ontario recognized COVID-19 revenue in its accounting records as related expenses were incurred.
4. Numbers do not add up due to rounding.

Canada, while similar to Public Health Ontario, is not governed by a board but rather overseen by the federal Minister of Health. **Appendix 3** shows a comparison of mandates and reporting relationships among these agencies.

3.0 Audit Objective and Scope

Our audit objective was to assess whether Public Health Ontario has effective systems and procedures in place to:

- deliver its mandate as set out in the *Ontario Agency for Health Protection and Promotion Act, 2007*, which includes providing scientific and technical advice and support to identified clients, including the Ministry of Health and other relevant ministries and agencies, public health units, and health-care providers; delivering public health laboratory services; undertaking public health research; and advancing and disseminating knowledge, best practices and research, with the goal of protecting and promoting the health of the people in Ontario and reducing health inequities; and

- measure and publicly report on the quality and effectiveness of these activities.

In planning for our work, we identified the audit criteria (see **Appendix 4**) we would use to address our audit objective. These criteria were established based on a review of applicable legislation, policies and procedures, internal and external studies, previous reports from our Office, and best practices. Senior management at Public Health Ontario reviewed and agreed with the suitability of our objectives and associated criteria.

We conducted our audit between January 2023 and August 2023. We obtained written representation from Public Health Ontario management that, effective November 10, 2023, it had provided us with all the information it was aware of that could significantly affect the findings or the conclusion of this report.

At Public Health Ontario, we:

- reviewed applicable legislation and regulations as well as documents consisting mainly of financial information, contracts and agreements, policy and procedure manuals, annual business plans, annual reports, strategic plans and meeting minutes;
- interviewed senior management and program staff responsible for all program areas, selected former agency management staff, as well as the Board Chair;
- obtained and analyzed financial and operational data from Public Health Ontario systems; and
- observed laboratory operations and met with staff at four of the 11 public health laboratory sites, located in London, Orillia, Sudbury and Toronto.

At the Ministry of Health, we conducted the majority of our work at the Office of the Chief Medical Officer of Health, where we interviewed staff and senior management, and reviewed documents consisting mainly of briefing notes, agreements, funding letters and external review reports of Public Health Ontario conducted since 2016.

We interviewed medical officers of health or their delegates from eight of the province's 34 public health units, consisting of Eastern Ontario; Grey Bruce; Kingston, Frontenac and Lennox & Addington; Niagara; Peel; Sudbury; Timiskaming; and Toronto, to better understand local interactions with and perspectives on Public Health Ontario. We selected these public health units based on their size, geographic location and issues identified through our research. We reached out to 18 public health units to obtain more information on their courier routes for laboratory samples and specimens that would be delivered to Public Health Ontario, of which 16 responded. We selected these public health units based on factors including their geographic location and whether they used the agency's or their own couriers. We also reviewed public-facing websites for all 34 public health units to identify locally developed knowledge products.

To assess the cybersecurity risks to Public Health Ontario, we met with and obtained data from the Cyber Security Division of the Ministry of Public and Business Service Delivery, which provides certain services to the agency.

To gain familiarity with emerging public health issues, we attended The Ontario Public Health Convention in March 2023. This conference was organized by Public Health Ontario for public health professionals.

In addition, we researched similar organizations in British Columbia and Quebec to identify best practices for public health agencies.

We conducted our work and reported on the results of our examination in accordance with the applicable Canadian Standards on Assurance Engagements—Direct Engagements issued by the Auditing and Assurance Standards Board of the Chartered Professional Accountants of Canada. This included obtaining a reasonable level of assurance.

The Office of the Auditor General of Ontario applies Canadian Standards on Quality Management and, as a result, maintains a comprehensive system of quality management that includes documented policies and procedures with respect to compliance with rules of professional conduct, professional standards and applicable legal and regulatory requirements.

We have complied with the independence and other ethical requirements of the Code of Professional Conduct of the Chartered Professional Accountants of

Ontario, which are founded on fundamental principles of integrity, objectivity, professional competence and due care, confidentiality and professional behaviour.

4.0 Detailed Audit Observations

4.1 Ministry of Health Has Not Leveraged Public Health Ontario Effectively to Achieve Its Full Intended Capacity and Potential to Improve the Health of Ontarians

4.1.1 Public Health Ontario Has Been Left Out of the Province's Decision-Making with Major Public Health Implications

Despite the mandate of Public Health Ontario to provide scientific and technical advice and support to clients working in government, public health, health care and related sectors, the agency was not consulted when the government made some of its decisions affecting public health, such as those relating to increased access to alcohol and gambling. As well, upon observing recent government decisions on increased access to alcohol and gambling, Public Health Ontario has not conducted independent research in these areas.

Increased Access to Alcohol and Gambling

The government's decision to increase access to alcohol in various settings, such as grocery stores and convenience stores, was first announced in 2015 and saw expansion in 2019 and 2023. In addition, the new legal Internet gaming market in Ontario has grown by an average of more than 50% in total wagers and gaming revenue each quarter since its launch in April 2022. According to iGaming Ontario, a total of 1.65 million player accounts were active over the course of the 2022/23 fiscal year; these players on average spent about $70 per month.

Public Health Ontario representatives confirmed with us that government decision-makers have not consulted them on the health impacts of either of these decisions, which have implications on addictions and mental health on a population level. We asked the Ministry of Health (Ministry) why it did not consult Public Health Ontario, and Ministry representatives explained that the Ministry of Finance made both of these decisions. It did not seek an assessment of the impacts on public health from the Office of the Chief Medical Officer of Health, which also did not conduct a health impact assessment on increased access to alcohol and gambling. The Ministry informed us that, instead, the Ministry of Finance, working with other partner ministries, engaged and consulted stakeholders, for example, the Centre for Addiction and Mental Health, to understand the potential impacts.

In these cases, the government did not fully leverage Public Health Ontario to provide expert advice on the potential population health impacts of policy decisions made. One of the legislated responsibilities of Public Health Ontario according to the *Ontario Agency for Health Protection and Promotion Act, 2007* (Act) that created it, is "to inform and contribute to policy development processes across sectors of the health care system and within the Government of Ontario through advice and impact analysis of public health issues." Our 2017 audit on Public Health: Chronic Disease Prevention highlighted the Health in All Policies approach, defined by the World Health Organization as an approach that considers how government decisions affect population health so that more accountability is placed on policy-makers. Our 2017 report recommended that the Ministry develop a process to integrate this approach into policy settings where appropriate, but this had not yet been fully implemented as of the time of this audit.

While these provincial policy changes affecting public health were occurring, Public Health Ontario did not prioritize publishing the state of the evidence in these areas. To illustrate, in relation to alcohol, a public health unit in October 2018 requested Public Health Ontario to answer a research question on the impact of increasing alcohol availability. However, instead of publishing an independently researched knowledge product that could establish Public Health Ontario's position on the state of the evidence, the agency compiled a list of existing journal articles and sent the

completed list directly to the public health unit in May 2019.

Similarly, we found that Public Health Ontario has not published any research on the health impact of problem gambling. In 2012, the agency published a knowledge product on the burden of mental illness and addictions in Ontario, but that product did not discuss problem gambling. We researched whether public health units had to independently develop knowledge products on problem gambling and found that six public health units—North Bay and Parry Sound, Ottawa, Peterborough, Sudbury, Toronto, and Windsor—had developed such research independently. Toronto Public Health explained in its report that studies have suggested an increase in problem or pathological gambling rates after gambling expansion, such as in Niagara where the rate increased from 2.2% to 4.4% one year after a casino opening. It also went on to note a consistent social impact from problem gambling, such as suicide and personal bankruptcy rates, with direct or indirect impacts on individuals and families.

We found that, unlike Public Health Ontario, other provinces have centrally developed knowledge products on problem gambling. For example, Quebec has made available centrally developed resources and knowledge products on the population health impact of problem gambling. Specifically, the Institut national de santé publique du Québec has on its website an interactive map that allows the public to quantify and visualize exposure and vulnerability to gambling in Quebec, and to support development of preventive initiatives and interventions to address these issues. Similarly, we found that British Columbia's Centre for Disease Control had included problem gambling on its website on substance use, indicating that a report was forthcoming.

Decisions Made During the COVID-19 Pandemic

Public Health Ontario was also not consistently consulted by the Province to provide scientific and technical advice in certain key decisions related to the COVID-19 pandemic.

According to the Act, one of the roles of Public Health Ontario is to provide scientific and technical advice, and operational support, to any person or entity in an emergency or outbreak situation that has health implications, as directed by the Chief Medical Officer of Health.

Our 2020 audit on COVID-19 preparedness and management, Outbreak Planning and Decision-Making, noted that Public Health Ontario played a diminished role in the COVID-19 pandemic, despite the agency being created in response to the SARS outbreak in 2003. Even when Public Health Ontario provided advice, such as on the recommended indicators and threshold triggers for lockdown, the Ministry of Health either did not fully follow this advice, or implemented the agency's advice much later than suggested.

Similarly, our 2022 audit on the COVID-19 Vaccination Program noted that Public Health Ontario was not represented on the COVID-19 Vaccine Distribution Task Force, where it felt that it could have contributed more scientific or technical expertise and support on vaccine distribution decisions.

4.1.2 Public Health Ontario's Role Has Continued to Diminish in the Public Health System, with Increased Reliance on One-Time Annual Funding

Public Health Ontario Could Not Fully Deliver Its Mandate, Citing Capacity and Funding Constraints

As noted in **Section 2.4**, in 2019/20, the Ministry reduced Public Health Ontario's base funding, replacing it with one-time annual funding. This was done because the Ministry at that time had assumed that its laboratory modernization plan would be implemented and that Public Health Ontario would be consolidated as part of Ontario Health. One-time funding makes it challenging for Public Health Ontario to plan for activities, as such funding is susceptible to being withdrawn. While the Ministry has increased base funding since 2020/21, it has still not restored it to pre-pandemic levels.

We found that, while the Ministry reduced Public Health Ontario's base funding assuming implementation of the laboratory modernization plan, the Ministry has not yet implemented this plan. We discuss this plan in greater detail in **Section 4.2.1**.

The Ministry also eventually did not consolidate Public Health Ontario into Ontario Health, as it had assumed it would. The government announced in 2019 that it would consolidate multiple health-care agencies and organizations, including Cancer Care Ontario, Trillium Gift of Life Network and all 14 Local Health Integrated Networks, within a single agency, known as Ontario Health. Ontario Health is responsible for planning and funding the health-care system, primarily in clinical settings, and ensuring health service providers have the tools and information to deliver quality care.

Despite both of these assumptions resulting in reduced base funding for Public Health Ontario, the Ministry has still not restored the agency's base funding to pre-pandemic levels, even though neither assumption was realized.

Our 2020 audit on COVID-19 preparedness and management, Outbreak Planning and Decision-Making, noted that, due to resource constraints, Ontario Health performed some tasks that were outlined in the Ontario Health Plan for an Influenza Pandemic as the responsibility of Public Health Ontario. These included co-ordinating laboratory testing for COVID-19 and analyzing provincial surveillance data.

Public Health Ontario explained to us that its budget has been flatlined for over 10 years, and has repeatedly raised this concern in its annual business plan, which it has submitted to the Ministry. While the Ministry provided Public Health Ontario with one-time COVID-19 funding between 2019/20 and 2022/23, this was strictly for use in the laboratory for COVID-19 testing, and little was added to fund the rest of the agency's mandate to support its growth, such as in environmental health, health promotion, and chronic disease and injury prevention.

As explained in **Section 2.3.2**, the relationship between Public Health Ontario and the Ministry is governed by provincial legislation and directives, but also by a memorandum of understanding (MOU) that has not been updated since 2015. The Ministry and Public Health Ontario have continued to affirm the existing MOU since 2015 when new Board chairs and ministers have taken office. They informed us at the time of our audit that they were working on refreshing the MOU, with expected completion by the end of 2023.

Lack of Consistent Funding Puts the Continuation of Advisory Committee for Public Health Emergencies at Risk

In July 2020, the Province created the COVID-19 Science Advisory Table to provide emerging evidence and advice to the Ministry of Health to inform Ontario's response to the COVID-19 pandemic. Part of the impetus for this Table was that Public Health Ontario could not fully support the Province in providing synthesized evidence relating to the COVID-19 pandemic due to capacity constraints. The Table was external to Public Health Ontario, though one of the then vice-presidents of the agency was a co-chair. In July 2022, following direction from the Ministry of Health, Public Health Ontario became the permanent home of this Table. In September 2022, Public Health Ontario, building on the work of the Table, announced the establishment of the Ontario Public Health Emergencies Science Advisory Committee, an external advisory committee whose mandate is to enhance provincial capacity to respond to public health emergencies with the best available evidence.

The Ministry provided one-time funding of $1.2 million in 2022/23 to the agency to establish and oversee this committee, but did not continue this funding in 2023/24. Public Health Ontario informed us that, as a result of the Ministry no longer providing funding, it was exploring options to scale back or dismantle the operations of this committee.

RECOMMENDATION 1

To enhance the clarity, relevance and value of Public Health Ontario's role in Ontario's public health system, we recommend that Public Health Ontario work with the Ministry of Health (Ministry) to:

- develop and implement a process to include Public Health Ontario's review of evidence when developing provincial policy decisions that impact public health; and
- clarify the agency's roles and responsibilities in the memorandum of understanding between the agency and the Ministry, especially with respect to Public Health Ontario's role in relation to Ontario Health's role.

PUBLIC HEALTH ONTARIO RESPONSE

Public Health Ontario accepts the recommendation, and will work with the Ministry of Health to enhance and clarify our role within the public health system. While there are existing mechanisms in place for the Ministry to request support and advice from Public Health Ontario as needed, we recognize that there may be opportunity for improvement by formalizing a process specific to supporting provincial policy decisions. We also recognize the importance of clarifying the agency's roles and responsibilities in the memorandum of understanding between Public Health Ontario and the Ministry, which, as noted in the report, is currently in the process of being refreshed.

RECOMMENDATION 2

To ensure that Public Health Ontario has sustainable resources required to deliver on the agency's mandate effectively, we recommend that Public Health Ontario work with the Ministry of Health to develop a business case that addresses reallocation of one-time annual funding to base funding.

PUBLIC HEALTH ONTARIO RESPONSE

Public Health Ontario accepts the recommendation to work with the Ministry of Health to reallocate its one-time annual funding to base funding for the agency.

4.1.3 Lack of Information Sharing on Priority Areas of Public Health Units Limits Public Health Ontario's Ability to Centralize and Co-ordinate Work

Public Health Ontario obtains input from the Ministry and public health units, often through regular meetings, to inform its work. However, it does not have established information-sharing processes on what Ontario's 34 public health units plan to do in terms of their program priorities and what research they would require that is best done centrally. Public health units report planned activities to the Ministry on an annual basis, but the Ministry does not share this information with Public Health Ontario. As a result, we found instances of fragmented responses to key public health issues and duplication of effort.

According to the *Ontario Agency for Health Protection and Promotion Act, 2007,* the agency is tasked with the responsibility to "undertake, promote and coordinate public health research in cooperation with academic and research experts as well as the community." About half of the requests made to Public Health Ontario between 2018/19 and 2022/23 to conduct consultations, answer scientific questions and deliver presentations came from public health units, and the number of these requests ranged from 413 to 1,023 requests per year. Despite this, Public Health Ontario does not receive important summarized information on public health units' planned program activities for the upcoming year so as to proactively prepare and direct its own efforts.

In contrast, every year, the Ministry of Health requires all 34 public health units to submit an annual service plan that outlines how each public health unit plans on satisfying the Ontario Public Health Standards, which we explain in **Section 2.1**. This includes planned activities, such as seasonal flu clinics, and the vaccine clinics in schools that public health units deliver as part of their programs. However, as the Ministry does not share the priorities in these annual service plans with Public Health Ontario, the agency

cannot synthesize information from these annual service plans to effectively identify areas where it can provide the most value across all public health units, such as co-ordinating research efforts and developing knowledge products, including evidence briefs and literature reviews. One of the purposes of these is to give users synthesized and easy-to-understand evidence to help them design programs and support advancing public health policy, knowledge and best practices in Ontario.

We found that public health units had duplicated efforts in producing resources on public health topics. For example, as noted in **Section 4.1.1**, six public health units individually developed resource materials on problem gambling, with Public Health Ontario not having published any such materials centrally. Similarly, between 2016 and 2020, eight public health units individually developed local resources on mental health and made these resources public. While five of these public health units referenced Public Health Ontario materials for either data or publications, the remaining three did not reference the agency at all. Public Health Ontario last conducted a full literature review on the burden of mental health problems and addictions in 2012, over 10 years ago.

With respect to the agency-developed resource on mental health from 2012, we further found that Public Health Ontario's research did not cover some important areas that public health units needed and therefore had to produce on their own. This led to public health units duplicating efforts amongst themselves, a missed opportunity to have Public Health Ontario prepare one central report covering all these common topics. Specifically, public health units individually compiled data on the use of mental health services, suicide rates, emergency department visits, and community belongingness in the context of their own regions, while comparing these to the provincial scale. Public Health Ontario's knowledge products on mental health did not discuss any of these topics for public health units to reference and adapt to their communities.

A successful example of this type of centralization has been seen in the topic of alcohol consumption. Seven public health units created knowledge products on low-risk alcohol consumption guidelines, and six out of the seven referenced the agency for either data or publications. In this instance, the majority of data references were taken from Public Health Ontario's snapshot of self-reported rates of exceeding the low-risk consumption guidelines, where individual public health units pulled the centralized data and informational pieces for use in their local context.

Nevertheless, Public Health Ontario has demonstrated the ability to partner with public health units and other stakeholders to produce knowledge products:

- In 2013, one year after its literature review on mental health, Public Health Ontario released a report in partnership with Toronto Public Health and the Centre for Addiction and Mental Health, which discussed how Ontario public health units were addressing child and youth mental health.
- Since 2012, Public Health Ontario has partnered with four public health units to become hub libraries, which provide library services to 22, or 65%, of the province's 34 public health units. Public health units may use the services of a hub library to promote knowledge exchange, which may be used for a variety of purposes, including to search for peer-reviewed journal articles and research done on a topic that a public health unit would want to build local resources on.

Agency representatives informed us that, as part of their strategic planning consultations in 2023, they heard feedback from some public health units that there is an interest in Public Health Ontario developing more centralized and shared services to avoid overlap and duplication of effort. Such services may include a repository of resources on topics of mutual interest. They added that the agency would be considering its role in this. In the meantime, librarians performing the search through this partnership are encouraged to check to see if any other librarians have done a similar search already. Neither Public Health Ontario nor the partnered libraries receive copies of completed health unit knowledge products, limiting the potential for information sharing and reduction of duplication of efforts.

RECOMMENDATION 3

To improve the cost-effectiveness and efficiency of generating public health research in Ontario, we recommend that Public Health Ontario work with the Ministry of Health and public health units to:

- evaluate the feasibility of a formal process to centralize public health research across all three pillars of the public health system in Ontario; and
- if the current process is kept, create a searchable research repository consisting of all public health journal articles and research products prepared by Public Health Ontario as well as individual public health units and share access to this repository with all public health units.

PUBLIC HEALTH ONTARIO RESPONSE

Public Health Ontario accepts the recommendation, and recognizes that there are opportunities to gain efficiencies through centralized public health research activities. While Public Health Ontario already routinely produces knowledge products, including scientific reports and research publications, on a variety of public health topics, we will engage with the Ministry of Health and public health units to evaluate the feasibility of further centralization. With respect to the potential creation of a central research repository, Public Health Ontario will also explore this idea with the Ministry and our public health unit clients to determine if this would be a valuable resource to support their work.

4.1.4 Multiple Recommendations of the Agency's 2016 Mandate Review Still Not Implemented

In 2016, the Ministry commissioned a review of Public Health Ontario's mandate, as is required for board-governed agencies every six years under the Agencies and Appointments Directive (Directive), described in **Section 2.3.2**. However, we found that the Ministry never shared the final report of this mandate review with Public Health Ontario, despite some of the recommendations being directed to the agency; many of the recommendations are still outstanding seven years later. When we asked the Ministry why it has withheld the final report, it informed us that it is common practice to not share final mandate review reports with provincial agencies. The Ministry noted that the recommendations in the final report directed toward Public Health Ontario were shared through other mechanisms and processes, including through the issuing of mandate letters. However, this did not give Public Health Ontario an opportunity to provide input into the mandate review process or address specific recommendations from this review.

The mandate review noted areas for improvement that spanned different areas including revising Public Health Ontario's mandate and refining the agency's activities and operations. Notably, the review recommended the following, which remain outstanding more than seven years later:

- the Ministry to update the MOU to incorporate the respective roles, responsibilities and accountabilities of Public Health Ontario with Ministry communications with the public;
- the Ministry to decide whether or not to amend the *Ontario Agency for Health Protection and Promotion Act, 2007* or develop a new regulation to clarify how the agency's services will be directed; and
- Public Health Ontario and the Ministry to confirm alignment of the agency's functions for supporting Ministry priorities and programs for health promotion and reducing health inequities.

Furthermore, as per the Directive, Public Health Ontario should have undergone another mandate review in 2022. However, the Ministry indicated to us that this was put on hold due to the COVID-19 pandemic, with no expected date for completion.

Mandate Letters Either Provided Late or Not Provided at All to Public Health Ontario, Contrary to Government Directive Requirement

Every year for the last six years (2018/19–2023/24), the Ministry has not complied with the Agencies and Appointments Directive requirement to provide Public Health Ontario with a mandate letter 180 days before the start of its fiscal year. The mandate letter is issued by the Minister of Health, and lays out the focus, priorities, objectives, opportunities and challenges that the Minister has set for the agency for the coming year. The Ministry transmitted Public Health Ontario's mandate letters as late as six days before the start of the next fiscal year in 2021/22, making it difficult for the agency to set priorities for its annual business and strategic plans, and not providing sufficient time to plan activities prior to the start of the fiscal year. When we asked the Ministry why it had not complied with this requirement, the Ministry acknowledged that the timing to issue mandate letters to Public Health Ontario had not always met the 180-day requirement due to competing public health demands and priorities. The Ministry also indicated that the Chief Medical Officer of Health routinely shares Ministry priorities with Public Health Ontario through Board and committee meetings to help inform the agency's development of its annual business plan.

As well, the Ministry did not provide a mandate letter to Public Health Ontario in 2019/20 or 2020/21. The Ministry's explanation was that it was planning for public health modernization (explained in **Section 2.1.1**), and the public health system could have potentially changed.

RECOMMENDATION 4

To allow Public Health Ontario to more effectively plan its activities, we recommend that the Ministry of Health:

- share any review reports with Public Health Ontario and follow up on the implementation of any outstanding recommendation at least on an annual basis; and
- provide annual mandate letters to the agency on a timely basis in accordance with the Agencies and Appointments Directive.

MINISTRY RESPONSE

The Ministry of Health agrees with this recommendation and will continue to work closely with Public Health Ontario to ensure that agency goals, objectives and strategic directions align with government's priorities and direction. This includes, but is not limited to, providing annual mandate letters to the agency in accordance with the Agencies and Appointments Directive and sharing any relevant review recommendations with Public Health Ontario and following up on the implementation on any outstanding recommendations on a timely basis.

4.2 Public Health Ontario Laboratory Not Operating Efficiently

4.2.1 Streamlining of 11 Public Health Ontario Laboratory Sites Not Yet Implemented

In addition to its main Toronto laboratory, Public Health Ontario has 10 regional laboratory sites across Ontario to provide regional coverage for public health units and hospitals. However, we found that some regional laboratory sites are unable to perform a large proportion of the tests on the samples and specimens they receive. The agency provided the Ministry with the recommendation to consolidate some of these laboratory sites, in 2017 and again in early 2023, based on factors that included test volume and productivity, stating that the consolidation can save $6 million in its budget. Although a 2020 consultant report had reached similar conclusions, the Ministry had not approved the consolidation of these sites at the completion of our audit.

According to an internal agency document, from September 2021 to September 2022, three public health laboratory sites transferred out more than 90% of the non-COVID-19 tests they received. We expanded this analysis to include all laboratory tests, including

COVID-19, that Public Health Ontario laboratory sites received and performed from 2018/19 to 2022/23. As shown in **Figure 10**, we found that:

- regional laboratory sites were completing wide ranges of between 9% and 80% of the tests they received and transferring the remainder to other laboratory sites;
- three laboratory sites—Peterborough, Sault Ste. Marie and Sudbury—transferred between 80% and 91% of all tests to other sites; and
- Toronto was the largest receiver of these transfers, receiving about 19 million tests from regional laboratory sites, with the London site receiving the next most tests, at over four million tests.

The three laboratory sites that transferred between 80% and 91% of the tests they received each had operating costs ranging from $5 million to $10 million over the last five years.

Public Health Ontario explained to us that the reasons for these transfers could include capacity issues, lack of expertise or sufficient volume to maintain competency of laboratory personnel in a specific test, lack of equipment to conduct certain tests, or efficiencies to achieve economy of scale. For example, only one of the 11 public health laboratory sites has the equipment necessary to test for *H. pylori*, a bacterium that affects the stomach.

In 2017, Public Health Ontario proposed a joint modernization plan to update its public health laboratory, collaboratively with Ministry staff at the request of the Deputy Minister, that would have resulted in:

- gradually closing six of its 11 public health laboratory sites (Hamilton, Kingston, Orillia, Peterborough, Sault Ste. Marie and Timmins), while maintaining coverage across the province through five geographic areas; and
- changing the types of tests offered at the Public Health Ontario laboratory that would remove 20 tests and restrict eligibility for 12 additional tests, as well as the gradual discontinuation of private drinking water testing.

According to the agency, this plan was needed to mitigate rising costs of repairs and upgrades in existing laboratory sites, and would result in a more efficient operating model to address issues such as sites needing to reroute the majority of samples and specimens they receive to other sites.

Figure 10: Number of Tests Received, Completed and Transferred Out by Public Health Ontario Laboratory Sites, 2018/19–2022/23

Source of data: Public Health Ontario

Laboratory Site	# Received[1]	# Completed	# Transferred Out	% Transferred Out
Sudbury	670,052	57,935	612,994	91
Sault Ste. Marie	251,953	87,116	223,915	89
Peterborough	839,389	192,579	668,436	80
Ottawa	3,163,981	1,578,148	2,034,978	64
Timmins	415,938	276,814	203,773	49
Hamilton	2,769,143	1,484,913	1,301,497	47
Thunder Bay	1,027,948	603,753	433,203	42
London	4,211,543	3,224,316	1,199,701	28
Kingston	1,695,958	3,240,155[2]	366,121	22
Orillia	1,044,555	1,599,189[2]	213,330	20
Toronto	19,040,243	22,785,785[2]	233,173	1

1. Refers to the laboratory location that originally logged the sample or specimen in the laboratory information system; includes those tests that hospital and community laboratories and public health units send to this location.
2. Number of laboratory tests completed is greater than number of laboratory tests received mainly due to additional tests that other regional laboratory sites transferred to these laboratory sites.

The most recent iteration of this modernization plan, presented by Public Health Ontario to the Ministry in January 2023, included the same plan to consolidate sites, but instead focused on discontinuing its testing for *H. pylori*, which is not a disease of public health significance, and again recommended the gradual discontinuation of private drinking water testing. This updated plan also showed that current test volumes per full-time-equivalent staff ranged widely between all 11 existing sites, from 775 in Timmins to 13,523 in Hamilton.

A 2020 laboratory facilities report by a private-sector consultant commissioned by the Ministry of Government and Consumer Services (now the Ministry of Public and Business Service Delivery) and Infrastructure Ontario had findings consistent with Public Health Ontario's proposed plan, and made identical recommendations with respect to Public Health Ontario laboratory sites. Our 2020 audit on COVID-19 preparedness and management, Laboratory Testing, Case Management and Contact Tracing, recommended that the Ministry of Health immediately review Public Health Ontario's laboratory modernization plan, and consult with the agency to determine and provide the level of base funding that would allow the agency to fulfill its mandate.

Despite this, at the time of our audit, the Ministry of Health was still in the process of obtaining necessary internal approvals for the plan. We asked the Ministry why the plan was not yet implemented; it informed us that in the 2019 Ontario Budget, the government committed to modernize Ontario's public health laboratory system by developing a regional strategy. However, implementation of this plan was put on hold due to the construction of the new London public health laboratory, as well as increased capacity required from all Public Health Ontario laboratory sites for COVID-19.

RECOMMENDATION 5

To more efficiently deliver public health laboratory services, we recommend that Public Health Ontario, in conjunction with the Ministry of Health, update and implement a plan within 12 months to streamline public health laboratory operations.

PUBLIC HEALTH ONTARIO RESPONSE

Public Health Ontario accepts the recommendation, and will continue to work in conjunction with the Ministry of Health to update the plan to streamline and modernize the agency's laboratory operations. Upon receipt of Ministry approval to proceed, Public Health Ontario will commence the phased implementation of the plan. We will work closely with our stakeholders throughout the implementation process to communicate changes in service delivery and minimize service disruptions.

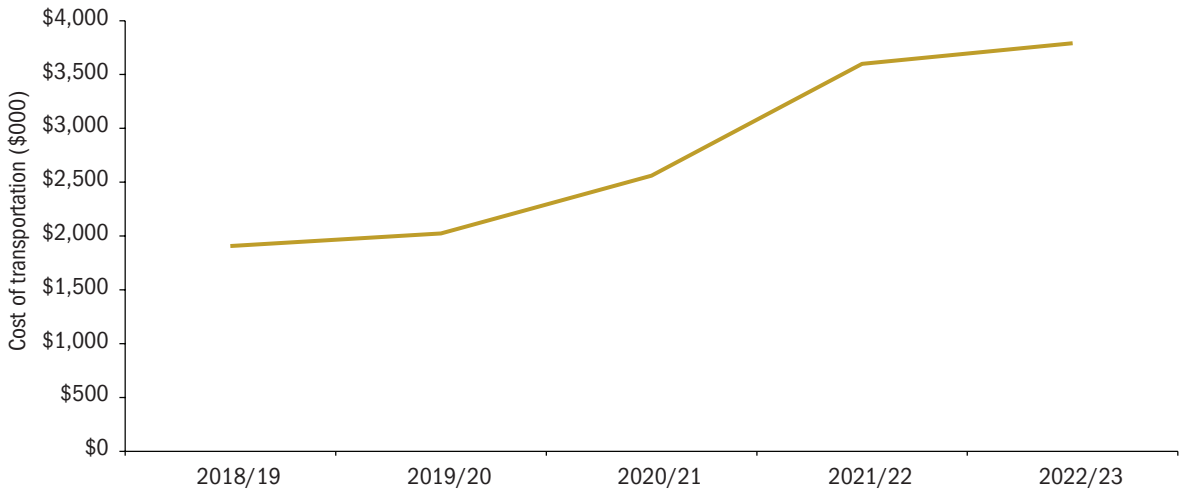
4.2.2 Courier Services That Deliver Samples and Specimens Do Not Cover All Regions of the Province

Primary-care clinicians, hospitals and public health units are just some examples of places that send specimens (such as blood, phlegm and stool) to Public Health Ontario laboratory sites across the province for testing. Private citizens also send samples (such as well water) to these sites. Public Health Ontario co-ordinates courier services that pick up and deliver samples and specimens, most of which are sensitive to time and temperature during transit, to and from these locations as well as among its own network of 11 public health laboratory sites. For example, in the five-year period between 2018/19 and 2022/23, 21% of the tests received by public health laboratory sites were transported to other public health laboratory locations for testing.

Over the last five years, Public Health Ontario has relied on a roster of up to 18 courier companies to transport samples and specimens, and has established formal contracts with four of them. Currently, there are two contracted couriers providing the majority of these services to the agency. One company covers the Greater Toronto Area, southwestern Ontario and eastern Ontario; the other company focuses on Northern Ontario. Public Health Ontario engaged the other courier companies on its roster only when needed, such as to supplement any shortfalls of the two contracted courier companies.

Public Health Ontario's spending on courier services has increased by $1.6 million, or 99%, in the last five years. The majority of this increase is attributable to the change in market pricing for this specialized service, and the remainder is attributable to an 8% increase in overall test volumes over the same period. In 2022/23, Public Health Ontario spent about $3.8 million on courier services for samples and specimens, up from $1.9 million in 2018/19, as shown in **Figure 11**.

We could not determine whether Public Health Ontario's courier services fully cover all primary-care clinician offices and hospitals that send samples and specimens to the public health laboratory, because the total number of these collection sites is not readily available. We found, however, that Public Health Ontario does not provide courier services to nine, or 26%, of the 34 public health units. We surveyed these nine public health units, and another random sample of nine geographically dispersed public health units that use Public Health Ontario's contracted courier, of which seven responded. We noted the following:



- Five of the nine public health units that do not use Public Health Ontario's courier were not even aware that this service exists; these public health units therefore had to co-ordinate their own couriers to send samples and specimens to the public health laboratory.
- Of the public health units that use the agency's courier, some cited challenges with the courier services including delayed, missed and/or infrequent pickups; this can sometimes result in samples and specimens being rejected by the public health laboratory as they did not arrive within the time frame required for testing. Public Health Ontario and some public health units also have had to use external couriers to cover the shortfalls of the current courier routes so that samples and specimens can be delivered on time to be suitable for testing.

RECOMMENDATION 6

To achieve better value for money for the province's use of couriers for the public health laboratory, we recommend that Public Health Ontario, in conjunction with the Ministry of Health, consult with all public health units to determine whether centrally procured courier services for laboratory samples and specimens would be beneficial, and make centrally co-ordinated courier services available to all public health units.

Figure 11: Public Health Ontario Courier Expenses for Transportation of Laboratory Samples and Specimens, 2018/19–2022/23

Source of data: Public Health Ontario

PUBLIC HEALTH ONTARIO RESPONSE

Public Health Ontario accepts the recommendation, and recognizes the importance of better value for money with respect to laboratory courier services across the public health sector. We will work with the Ministry of Health, public health units and other partners, including the Ontario Laboratory Medicine Program, to determine the feasibility of making centrally co-ordinated courier services available to all public health units, including a collaborative procurement approach.

4.2.3 Some Laboratory Tests for Diseases of Public Health Significance Not Offered at the Public Health Laboratory

Public Health Ontario provides surveillance of communicable diseases based on data it collects through its laboratory or obtains from other sources. It provides over 270 tests, and is often the only laboratory in Ontario to test for certain diseases, for example, HIV. Providing comprehensive laboratory tests to detect and identify diseases of public health significance in its role as the provincial public health laboratory is therefore critical to effectively protect the health of Ontarians. We compared testing menus from Public Health Ontario to those of other provincial health agencies, and found some examples of tests not done through public health laboratories for diseases of public health significance, such as certain types of testing for latent tuberculosis, and wastewater testing that can identify COVID-19 transmission in geographic areas.

Interferon Gamma Radiation Assay for Latent Tuberculosis

One of Public Health Ontario's legislated responsibilities is "to provide scientific and technical advice and support to the health care system and the Government of Ontario in order to protect and promote the health of Ontarians and reduce health inequities." Despite this, we found that the Public Health Ontario laboratory does not offer a test that is specifically beneficial for the detection of latent tuberculosis in at-risk populations such as Indigenous communities and foreign-born populations.

Latent tuberculosis is a dormant form of tuberculosis, meaning the person does not feel sick or have symptoms, but has the potential to progress to active tuberculosis later in life due to weakened or compromised immune systems. Approximately 15% of people with latent tuberculosis progress to the active disease, which is preventable, as latent tuberculosis can be treated with antibiotics, through shared decision-making between the health-care providers and patients. Statistics from the Government of Canada showed that in 2020, there were 1,772 cases of active tuberculosis in Canada, with more than 80% of these cases found in foreign-born individuals and Indigenous people.

In Ontario, the only publicly funded test to detect latent tuberculosis is a skin test, which public health units and other health-care clinics conduct. Another testing method—interferon gamma release assay (IGRA)—involves blood testing done by laboratories. The last Ministry guidelines on tuberculosis, from 2018, stated that Ontario was assessing the use of IGRA in select communities. However, at the time of our audit, this test was still not publicly funded across Ontario. IGRA is currently available in Ontario at one children's hospital under specific eligibility, as well as selected private laboratories at a cost of around $90 per test to the patient. Public Health Ontario's laboratory currently does not perform any laboratory tests to detect latent tuberculosis.

Public Health Ontario published a report in 2019 that looked at testing for tuberculosis infection using IGRA as compared to the conventional skin testing method. The report did not look into the estimated costs of delivering IGRA versus the skin test method, but noted the pros and cons of each method as follows:

- The conventional skin test method requires a second clinic visit 48 to 72 hours after the first, which may result in patients, especially those living in rural and northern communities, not making that follow-up visit.

- IGRA is more specific to obtain the right diagnosis but also costlier due to the need for new equipment, training and processing time.
- IGRA requires specimens to be processed within a specific window of time after collection; Public Health Ontario's laboratory does not have co-located facilities to support timely blood specimen collection and submission for assay testing, though one commercially available test can be processed up to 53 hours after specimen collection.

The agency has not more recently analyzed the full costs and benefits of IGRA versus the skin test to detect latent tuberculosis, and does not have plans to do so in the near future. Such an analysis could include the potential impact of not diagnosing and treating someone with latent tuberculosis. For instance, a recent study, using data obtained at a treatment centre in Ontario as well as two other centres in Canada, found that the median cost to treat patients with tuberculosis infection was $804 for the most easily treatable varieties and ranged as high as $119,014 for highly drug-resistant tuberculosis infections.

In contrast, the British Columbia Centre for Disease Control has co-ordinated with hospitals to offer IGRA for the diagnosis of latent tuberculosis. It controlled for some of the limitations of this test, such as time from sample collection to processing, by co-ordinating sample collection times with lab availability, to ensure that samples will be tested before spoiling.

Wastewater Testing

Public Health Ontario does not perform wastewater testing in Ontario, which can identify COVID-19 transmission in geographic areas and supplement other clinical data sources. Currently, wastewater testing is led by the Ministry of the Environment, Conservation and Parks, through its Wastewater Surveillance Initiative. Through this initiative, laboratory tests are conducted through 13 different Ontario universities, as well as the Public Health Agency of Canada's National Microbiology Laboratory.

In contrast, the British Columbia Centre for Disease Control collects samples two to three times a week for testing from wastewater treatment plants in urban regions across British Columbia, to identify respiratory pathogens such as influenza and COVID-19. At the time of our audit, the Ministry of Health informed us that it was working collaboratively with Public Health Ontario to develop a proposal for a public health model for wastewater surveillance in Ontario.

RECOMMENDATION 7

To help ensure the public health laboratory in Ontario applies current and best practices to conduct surveillance on diseases of public health significance, we recommend that Public Health Ontario, together with the Ministry of Health:

- perform a jurisdictional scan to compare public health laboratory test menus;
- conduct a cost/benefit analysis on the tests not conducted by the public health laboratory in Ontario to determine whether the alternative tests would yield more accurate and timely results; and
- develop a plan to incorporate new tests into the Ontario public health laboratory test menu.

PUBLIC HEALTH ONTARIO RESPONSE

Public Health Ontario accepts the recommendation, and will work with the Ministry of Health to ensure that our test menu supports the evolving public health needs and ensures fiscal responsibility. We will continue our work to finalize the public health laboratory test menu for Ontario, which will be informed by a jurisdictional scan of other public health laboratory test menus in Canada and the findings of test cost/benefit analyses.

4.3 Weaknesses in Corporate Procurement Policy and Lack of Enforcement, Resulting in Poor Procurement Governance

The Ontario Public Service Procurement Directive (Directive), developed by the Management Board of Cabinet in March 2019, sets out the responsibilities of organizations throughout the procurement process. The purpose of the Directive is to ensure that goods

and services are acquired through an open, fair and transparent process, to reduce purchasing costs, and to ensure consistency in the management of procurement. Public Health Ontario's internal corporate procurement policy, originally drafted in July 2010 and last updated in November 2022, is based on this Directive.

During our audit, we reviewed details of procurement projects that were active as of May 31, 2023, and examined a sample of them. We found that Public Health Ontario did not always follow its own corporate procurement policy, which contributed to weaknesses in procurement governance and could have prevented the agency from achieving value for money. From 2018/19 to 2022/23, Public Health Ontario spent, on average, $207 million per year in goods and services to operate its laboratory and deliver its science and public health programs.

4.3.1 Agency Staff Purchased Goods and Services from Vendors Using Purchasing Cards Rather than Procuring Them Competitively

We found that Public Health Ontario's laboratory staff were using purchasing cards (P Cards) in ways that are contrary to their intended purposes. As a result, we found instances where the agency did not acquire goods or services through an open, fair and transparent process.

According to the agency's procurement policy, P Cards are "primarily used for low value purchases" and may only be used for individual purchases valued under $5,000 (or $10,000 for senior staff) that are "not recurring transactions with a single vendor." The policy further clarifies that "a series of reasonably related transactions shall be considered as a single transaction for purposes of determining the required approval and authority levels." At the time of our audit, the agency had issued P Cards to 126 of its staff, 68 of whom were responsible for laboratory operations.

The corporate procurement policy further states that program areas are required to work with the procurement team "to assist in the planning and coordination of all procurement activities." However, the agency has not been enforcing this requirement. In fact, laboratory staff at Public Health Ontario can procure goods and services on their own without having to go through the procurement team.

We found that staff from various laboratory sites at Public Health Ontario were using their P Cards to make recurring purchases of laboratory and health-care supplies from the same vendor between 2018/19 and 2022/23. Although the individual purchases were under $5,000, the cumulative value of the recurring transactions exceeded $25,000—the amount above which purchases must be procured competitively according to procurement policies. As shown in **Figure 12**, we found that from 2018/19 to 2022/23, Public Health Ontario staff made almost 17,000 transactions on their P Cards with 30 different vendors, for a combined purchase value of over $11 million over five years. Over $4 million of this amount related to purchases from two vendors. According to Public Health Ontario, the use of P Cards is required for purchases below $5,000 in the User Guide for the Vendor of Record arrangement with the top vendor. The User Guide was prepared by the then Ministry of Government and Consumer Services (now Ministry of Public and Business Service Delivery), Ontario Shared Services and Supply Chain Ontario. As a result, its staff have to follow this User Guide, resulting in recurring transactions using their P Cards. Regarding the second vendor, agency staff told us that, until recently, it accepted only P Cards as payment. Excluding the top two vendors, annual transaction values ranged from $25,133 to $222,283. Agency staff purchased laboratory equipment and supplies on a recurring basis from these vendors using their P Cards, when they should have instead procured these supplies and equipment competitively.

Our review of the individual transactions found that this practice, although limited to the agency's laboratory operations, was widespread across several laboratory sites. For example, in 2022/23, 35 staff across various laboratory sites cumulatively made 1,339 recurring purchases of medical laboratory and health-care supplies from a single vendor totalling over $554,000. This is equivalent to an average of 39 recurring transactions per staff member for that year alone. According to Public Health Ontario, these recurring P Card transactions were done in accordance

1–30	1–5	**11,104,934**	3,286,409	**16,961**	4,111

with the User Guide for the agency's arrangement with this vendor. We noted that the agency's P Card guidelines state that they are used to acquire goods and services that are not required frequently. According to Public Health Ontario, it has to follow this User Guide as opposed to its own procurement policy. This practice was also not limited to a single year. As shown in **Figure 12**, recurring P Card purchases exceeded $25,000 in all the five years we analyzed.

The agency's finance team explained that for low-dollar and low-risk routine purchases, laboratory operations used P Cards instead of going through competitive procurement in these circumstances either because they needed to acquire the goods urgently, or, in cases where a contract existed between the agency and the vendor, because the contract did not cover the goods they needed. Additionally, they used P Cards for low-dollar and low-risk routine purchases when they needed to source from an alternative vendor if there were unforeseen supply shortages with the existing vendor. The dollar value of these recurring purchases, whether taken per year or cumulatively over the five years, should have required staff to procure the goods and services competitively, either by soliciting quotes from at least three vendors or requesting bids from vendors. In either process, the procurement would have resulted in formal contracts with the chosen vendors, stipulating deliverables, payments and performance monitoring. However, because these transactions were made through P Cards, the agency's procurement team was not involved in these procurements, even though the team is responsible for monitoring the agency's compliance with both internal and public-sector procurement policies. At the time of our audit, the finance team did not periodically review P Card use across the agency to identify recurring transactions for which central procurement might be used without the need to use P Cards.

Our review of individual P Card limits noted that six of the cards have spending limits that range from $35,000 to $60,000, and one card has a limit of $200,000 specifically for urgent COVID-19 pandemic-related purchases. According to Public Health Ontario, these exceptions were granted to meet operational needs resulting from the pandemic.

4.3.2 Vendor Progress and Performance Not Measured or Monitored

We found that Public Health Ontario does not have a formal process to track vendor performance and non-compliance, and does not always evaluate whether vendors have accomplished deliverables before it makes payment. As a result, procurement staff cannot easily verify, as part of their responsibilities to manage contracts, whether the vendor's work has been completed satisfactorily and whether the vendor met agreed upon terms before making payments.

Public Health Ontario's corporate procurement policy does not outline how to periodically monitor vendor performance and how to resolve matters of poor performance or non-compliance, even though the Directive outlines that vendor performance must be managed and documented, and any performance issues must be addressed.

Nonetheless, over half of the contracts we reviewed included requirements for the vendor to submit mandatory quarterly activity reports to Public Health Ontario that reflect all activities pertaining to the provision of goods and services. We requested copies of these reports submitted to Public Health Ontario for all contracts we reviewed, but the agency could not provide these reports for any contracts in our sample.

We also found that over half of the contracts we reviewed required the creation of a Contract Management Committee with representatives from Public Health Ontario and the vendor. The contract terms require the committee to meet regularly and conduct quarterly or semi-annual reviews of the vendors' fulfillment of the deliverables. We requested minutes of committee meetings; the agency informed us that the committees, though mentioned in the contracts, were never struck or acted upon. As a result, these reviews had not been completed at the time of our audit.

The procurement team told us that they regularly met with program staff to review contracts and discuss procurement issues, and that they had not identified performance issues with any of the vendors in our sample. However, they could not provide us with supporting documentation for 35% of our sample. In all cases where the agency provided us with documentation, the communication between procurement staff and program area staff centred around clarification about contract terms and renewal options, with no discussion of the vendor's performance.

We noted that, as of May 31, 2023, 43 vendors had between two and seven active contracts with Public Health Ontario, with one vendor accounting for $32 million in contracts. The value of the contracts with just these 43 vendors totalled $108 million, which comprised 78% of the total value of all active contracts at the time. The multiple contracts with certain vendors highlight the importance of having a system in place to monitor and document vendor performance across different contracts.

The consequences of not monitoring vendor performance were evident in 2022 when Public Health Ontario paid a consulting firm almost $50,000 to conduct a survey of staff to assess burnout, and recommend policies and practices to address agency staff burnout resulting from the COVID-19 pandemic. At the conclusion of the contract, the vendor recommended that Public Health Ontario develop initiatives to help staff become involved with self-help activities such as exercise and meditation. The vendor also recommended that the agency implement policies that would provide staff with sufficient time off to allow meaningful recovery from work stress. However, the agency already had these initiatives and policies in place at the time; it had provided the consultant with its existing initiatives and policies, but the consultants still made these recommendations. With proper vendor performance monitoring, this lapse would have been identified earlier, thereby preventing the redundant recommendations.

The lack of vendor performance tracking also hinders Public Health Ontario's ability to review its history with vendors to help inform its decision-making process when engaging a vendor for a new project. In our review of a sample of contracts, we noted that in 73% of cases, there was no discussion of the vendors' historical performance with the agency or evidence of reference checks to inquire about other organizations' past experience with the vendors. For example, four

of the contracts we reviewed, with a combined value of over $32 million, were awarded to one vendor. The contracts had effective dates between March 2020 and April 2022 for terms of three to over six years. None of the documentation for any of the four contracts discussed the vendor's historical performance.

RECOMMENDATION 8

To help ensure that Public Health Ontario is using taxpayer money to procure goods and services in an open and transparent manner and is receiving value for money, we recommend that Public Health Ontario:

- review the use of purchasing cards at least on an annual basis to identify recurring transactions with vendors, and take corrective actions as necessary;
- monitor that payments to vendors are made only when goods and services have been satisfactorily delivered and within the contract ceiling price;
- evaluate vendor progress and performance in accordance with contract terms; and
- develop and implement a process to include evaluation results in the consideration of vendor selection in future projects.

PUBLIC HEALTH ONTARIO RESPONSE

Public Health Ontario accepts the recommendation. Prior to the pandemic, we had initiated a purchasing card (P Card) project to reduce P Card usage in Laboratory Operations. The project, which was paused during the COVID-19 pandemic, was restarted in April 2023 and is now expected to be completed by February 2024. Public Health Ontario also plans to augment our procurement practices to ensure that processes are in place to evaluate vendor progress and performance. We will develop and implement a risk-based vendor performance framework to support these processes.

4.4 Public Health Ontario Has No Succession Plan in Place for Specialized Management Roles

Public Health Ontario does not have a formal succession plan in place to identify when key roles may need to be filled, such as in the case of retirement. This leaves Public Health Ontario at risk of being without senior leadership and/or key specialized roles for long periods before the positions are filled, potentially affecting its ability to appropriately respond to public health risks, especially during times of emergency.

The agency employs a wide variety of specialized roles, such as medical laboratory technologists, public health physicians, epidemiologists, clinical microbiologists, scientists and more. The scientific and technical advice Public Health Ontario provides to its clients is dependent on having a skilled workforce and anticipating any changes in these highly specialized roles, so that the agency can continue to carry out its mandate without any setbacks.

The impact of not having a succession plan was felt during the COVID-19 pandemic, when between April 2020 and September 2021, Public Health Ontario lost its President and CEO, Chief Health Protection Officer, and Chief of Microbiology and Laboratory Science all in the span of 17 months. Except for the President and CEO role, which was filled temporarily by an existing executive, these positions were filled by promoting internal senior leaders at a time when Public Health Ontario was looked to for leadership. The position of President and CEO was filled in July 2022, more than two years after its temporary holder took on the role.

In its 2017/18 annual business plan, Public Health Ontario outlined a strategic direction to continue to improve employee engagement, which included piloting a succession planning process for senior leadership positions. Work on this had begun in 2019 prior to the pandemic, specifically with the laboratory, such as developing guiding documents to support the succession planning process. More recently, in its 2020/23 strategic plan, Public Health Ontario outlined a

goal to build leadership capacity, by developing and implementing a proactive approach to workforce and succession planning that enhances diversity and inclusion and improves continuity and consistency of services. At the time of our audit, Public Health Ontario had not fully realized this goal.

Public Health Ontario also does not track which senior leadership or specialized positions have had a successor identified internally, and has not set a target for when a successor should be identified before an anticipated departure. Further, the agency does not have a formal process to identify which staff, including those in senior leadership or specialized positions, are about to retire and therefore would leave a position vacant or without effective leadership. During our audit, in June 2023 the agency's new Chief of Health Promotion and Environmental Health Officer assumed the full responsibilities of the position only after a transition period that had begun with her predecessor's retirement in January 2023. The predecessor's retirement was known from May 2022, at which point a formal public recruitment began. However, this role required an experienced public health physician executive, and there was a limited pool of qualified candidates. Although the successful candidate accepted the position in March 2023, the responsibilities of the position were still being covered by agency executives for an additional three months, during which the successful candidate was transitioning to her new role.

Other jurisdictions have targeted goals in their strategic plans and annual reports for the proportion of prioritized positions they want to have a successor identified for internally. For example, Quebec's Institut national de santé publique has a stated objective to anticipate the retirement of staff members whose expertise plays a key role in the pursuit of the institute's mission, and to develop succession plans to offset the impact of such departures by focusing on the full potential of its personnel. The Quebec institute targeted 60% of its prioritized positions to have an internal successor identified in 2020/21.

RECOMMENDATION 9

To better prepare Public Health Ontario in continuing to deliver its mandate with the support of skilled staff and management, we recommend that Public Health Ontario:

- conduct an analysis to determine when senior positions and specialized roles are expected to become vacant;
- identify and develop potential talent from within the organization, or identify the need to recruit;
- develop and track key performance indicators that support succession planning; and
- develop and implement a succession plan for senior leadership and specialized roles.

PUBLIC HEALTH ONTARIO RESPONSE

Public Health Ontario accepts the recommendation. We are currently in the process of developing a new human resources strategy, which will include a focus on succession planning for the organization and will incorporate the elements described in the recommendation.

4.5 Continuous Improvement Efforts Needed to Collect Better Data on Performance Indicators

4.5.1 Public Health Ontario's Performance Indicators Mostly Measure Output Volume Instead of Client Satisfaction or Service Quality

Public Health Ontario establishes performance indicators as well as targets in its annual business plans; however, these indicators mostly focus on quantifying the output of the agency's operational activities rather than client satisfaction and actual performance of its core activities, making it difficult for the agency to demonstrate that it has been effective in meeting the needs of its clients.

As early as 2018/19, Public Health Ontario acknowledged in its annual report that the performance of public health organizations is often difficult to assess quantitatively. The agency noted that it continued to explore new approaches to performance measurement to incorporate additional impact, value and outcome considerations. Its 2018 peer review also recommended that the current performance indicators could be reoriented to capture service quality rather than focusing largely on volume of services delivered. However, the agency has made little progress on this. It stated in its 2021/22 annual report that it did not advance this work substantively due to focusing on requirements relating to the COVID-19 pandemic.

At the time of our audit, Public Health Ontario was tracking performance indicators that are mostly volumetric. These include the number of knowledge products published on the agency's website, the number of visits to the agency's online data and analytic tools, and the number of scientific and technical support activities and data requests completed in response to clients and stakeholders.

With respect to measuring client satisfaction, the only performance indicator where satisfaction is directly measured is the percentage of professional development sessions achieving a client/stakeholder rating of at least 3.5 out of 5. The agency noted that it also measures the quality of its core activities and services through indicators of the percentage of laboratory tests completed within the target turnaround time that it has established, and the percentage of multi-jurisdictional outbreaks of diseases of public health significance that it assesses for further investigation within one day of being notified. In our view, these are indirect measures of client satisfaction. Public Health Ontario also noted that it frequently receives client feedback; however, these results are not shared publicly.

The agency informed us that, historically, it has conducted client satisfaction surveys via third-party marketing firms on a two-year cycle, with its last survey completed in 2016. Since then, the agency has not sought these services due to government-imposed expenditure constraints.

In contrast, the Institut national de santé publique du Québec reported on more client-focused performance indicators such as clients' satisfaction with the usefulness of the institute's scientific productions to support them in their work, and satisfaction with its support for intervention with public health departments in the event of a public health threat (for more examples of these indicators, see **Appendix 5**).

Public Health Ontario informed us that it last fully reviewed its performance indicators during the development of its 2014–19 strategic plan. At that time, the agency reframed the performance scorecard reported in its annual reports to better align with its strategic direction. While it continues to review them on an annual basis, it plans to conduct its next full review of organizational performance measurement when it develops its next strategic plan, covering 2024–29.

4.5.2 Public Health Ontario Does Not Track or Report on Performance of Several Key Functions or Programs

Public Health Ontario's suite of performance indicators do not cover all its key functions, for example, the performance of its research ethics committee, environmental and occupational health program consults, or the agency's Locally Driven Collaborative Projects, explained in **Section 2.2.5**.

Public Health Ontario has contracts with 26 public health units to perform ethics reviews for local research these health units plan and conduct. According to the World Health Organization's Tool for Benchmarking Ethics Oversight of Health-Related Research with Human Participants, among the criteria research ethics committees should select to evaluate is time from a project application's submission to its approval. Public Health Ontario confirmed with us that it had not established clear definitions for the submission date of a project application for the purposes of tracking turnaround time.

We reviewed ethics reviews conducted by Public Health Ontario's research ethics committee for public health units from 2017/18 to 2022/23 using the date of receipt or, in lieu of that, the earliest indicated date, and found that on average it completed the reviews in seven weeks, ranging from one week to 18 weeks. When asked why this was not reported as a performance indicator, the agency informed us that it was still in the process of determining an appropriate performance indicator for ethics reviews, as the time it takes to grant approval may vary due to the quality of the application, including missing information or necessary follow-up with the applicants.

We looked to other public health agencies, and found that the joint ethics review board for Health Canada and the Public Health Agency of Canada reported on its review board turnaround time, citing an average of 42 days (six weeks) in 2021/22 from time of application submission to approval, and this was reported in its ethics review board's annual report. Tracking this metric and publicly reporting on it may allow Public Health Ontario to identify education opportunities for the agency to train public health units on best practices relating to the development of project applications, and a demonstrated record of efficiency will help as the agency works toward bringing the remaining public health units into agreements for its services.

4.5.3 Public Health Ontario Does Not Track or Report Uptake of Its Services by Public Health Issue

Between 2020/21 and 2022/23, Public Health Ontario on average received about 1,630 requests annually from all clients, including public health units, which represent about 50% of those requests. The agency internally tracks the number of requests by the responsible lead program areas that handle them, but not by public health issue. Tracking and reporting on incoming requests by public health issue, such as alcohol, cannabis, dental health, food safety and healthy eating, could help the agency better inform and advise the Ministry on the most topical issues on which public health units require assistance from Public Health Ontario throughout the year, which would in turn provide the Ministry with a more complete picture of public health events that require intervention throughout the year across all three pillars of the public health system.

As shown in **Figure 13**, between 2020/21 and 2022/23, Public Health Ontario's "health protection" was assigned as the lead program area for most of these requests, which includes communicable diseases, emergency preparedness and response. The high volume of requests in this program area likely corresponded with the COVID-19 pandemic and can

Figure 13: Lead Program Areas Where Public Health Ontario Received Requests from All Clients, 2020/21–2022/23

Source of data: Public Health Ontario

Lead Program Area	2020/21	2021/22	2022/23
Health Protection[1]	1,540	1,441	980
Environmental and Occupational Health	216	120	122
Health Promotion, Chronic Disease and Injury Prevention	77	35	57
Laboratory[2]	126	115	49
Other[3]	11	7	14
Total	**1,970**	**1,718**	**1,222**

1. Includes communicable diseases, emergency preparedness and response, infection prevention and control and antimicrobial stewardship.
2. Reflects the requests made primarily by public health units and the Ministry of Health; separate from support requests to the laboratory customer support centre.
3. Includes knowledge exchange and communications, strategy stakeholder relations, and legal and privacy.

be readily linked to that public health issue. However, program areas such as "environmental and occupational health" and "health promotion, chronic disease and injury prevention" cover a wide range of potential public health issues and yield less specific information to inform the full scope of issues raised by requestors. Public Health Ontario noted that the title and description of the request can be filtered for key words. However, this is not done regularly, and can result in inconsistency.

In addition, the agency reports publicly only on total volume of outputs but does not break down the total into program areas. For example, one of its performance indicators is "responses to client and stakeholder requests," which includes all program areas.

RECOMMENDATION 10

To increase its value and impact on public health units and other clients, we recommend that Public Health Ontario:

- conduct a jurisdictional scan of key performance indicators used by other public health agencies, focusing on those that measure client satisfaction;
- establish and collect data on key performance indicators that are focused on client satisfaction and outcomes;
- update the request tracking database to categorize requests according to public health issue, and report on this in its annual report; and
- publicly report on key performance indicators, including those that relate to client and stakeholder requests, broken down by program areas.

PUBLIC HEALTH ONTARIO RESPONSE

Public Health Ontario accepts the recommendation. As described in the report, we intend to complete a fundamental review of organization-wide performance measurement as part of the implementation of our new Strategic Plan for 2024–29. We will use that review as an opportunity to introduce additional performance indicators that are focused on client satisfaction and outcomes, informed by a jurisdictional scan of performance indicators used by other public health agencies. We also plan to make updates to our request tracking database at the start of the next fiscal year, which will enable reporting on client request performance indicators broken down by the lead program area and public health issue.

4.6 IT Governance and Operations of Public Health Ontario

We examined Public Health Ontario's information technology (IT) controls and processes related to user account management, cybersecurity and software management. Due to the nature of these findings and so as to minimize the risk of exposure for Public Health Ontario, we provided relevant details of our findings and recommendations directly to Public Health Ontario. Public Health Ontario agreed with the recommendations and committed to implementing them.

Appendix 2: Mandatory Requirements for Board-Governed Agencies per Agencies and Appointments Directive

Prepared by the Office of the Auditor General of Ontario

Requirement	Details
Directives	• Must comply with all Treasury Board/Management Board of Cabinet (TB/MBC) directives whose application and scope cover board-governed agencies, unless exempted
Mandate reviews	• Required once every six years
Mandate letter	• Provided to the agency in time to influence business plan, no later than 180 calendar days prior to the start of the agency's next fiscal year
Business plan	• Must be submitted to Minister no later than one month before the start of the provincial agency's fiscal year • Must be Minister approved • Must be submitted to Chief Administrative Officer or executive lead three months prior to the beginning of the agency's fiscal year
Annual Report	• Must be submitted to Minister: · no later than 120 calendar days after the provincial agency's fiscal year-end, or · where the Auditor General is the auditor of record, within 90 calendar days of the provincial agency's receipt of the audited financial statement • Minister must approve within 60 calendar days of the Ministry's receipt of the report • The Ministry must table an agency's annual report in the Legislative Assembly within 30 days of Minister's approval of the report
Compliance attestation	• Chairs of board-governed agencies must send a letter to the responsible Minister, at a date set by annual instructions, confirming their agency's compliance with legislation, directives and accounting and financial policies • To support the Chair, Chief Executive Officers of provincial agencies should attest to the Chair that the provincial agency is in compliance with mandatory requirements
Public posting	• MOU, business plan and annual report must be made available to the public on a government or provincial agency website within 30 calendar days of Minister's approval of each • Agency mandate letter must be made available to the public on a government or provincial agency website at the same time as the agency's business plan • Expense information for appointees and senior executives must be posted on a government or provincial agency website
Memorandum of understanding (MOU)	• Must have a current MOU signed by the Chair and Minister • Upon a change in one of the parties, an MOU must be affirmed by all parties within six months
Risk assessment evaluation	• Ministries are required to complete risk assessment evaluations for each provincial agency • Ministries must report high risks to TB/MBC on a quarterly basis
Financial audit	• Financial statements must be audited and reported based on meeting audit threshold criteria

Appendix 3: Jurisdictional Scan of Public Health Agencies in Canada

Prepared by the Office of the Auditor General of Ontario

	Canada: Public Health Agency of Canada	**British Columbia:** BC Centre for Disease Control	**Quebec:** Institut national de santé publique du Québec
Mandate and function	• Contributes to disease and injury prevention and health promotion. • Enhances sharing of surveillance information and knowledge of disease and injury. • Provides federal leadership and accountability in managing public health events. • Strengthens intergovernmental collaboration and facilitates national approaches to public health policy and planning. • Serves as a central point for sharing public health expertise across Canada and with international partners, and for using this knowledge to inform and support Canada's public health priorities.	Provides surveillance, detection, prevention, treatment, policy development, and health promotion programming to promote and protect the health of British Columbians.	Offers expertise and support to Quebec's Ministre de la Santé and the health sector.
Governing document(s)	*Public Health Agency of Canada Act, 2006* *Department of Health Act, 1996* *Quarantine Act, 2005* *Human Pathogens and Toxins Act, 2009*	*Societies Act, 2015* Provincial Health Services Authority (Authority) Constitution and By-Laws	*The Act respecting Institut national de santé publique du Québec, 1998*
Organization type	Agency	Non-profit/Agency	Agency
Governed by Board	No	Yes—part of the Authority	Yes

	Canada: Public Health Agency of Canada	**British Columbia:** BC Centre for Disease Control	**Quebec:** Institut national de santé publique du Québec
Reporting relationship	The President is the deputy head of the agency and reports to the Minister of Health. As part of the agency, the Chief Public Health Officer provides the Minister of Health and the President of the agency with scientific public health advice.	The Vice President, Population and Public Health, is the lead for the agency and reports to the CEO of the Authority. The CEO of the Authority reports to the Authority's Board Chair. The Board Chair of the Authority is the interface between the CEO and the Minister. The Provincial Health Officer reports to the Ministry of Health and is external to the agency but works with it on disease control, health protection and population health.	All Board members, including the Président-directeur général and Chair of the Board, are appointed by the government. The Board reports to the Minister. The province's Directeur national de santé publique reports to the sous-ministre à la Santé et aux Services sociaux and is external to the agency.
Board appointment process	Governor-in-Council appointment	Appointed by the government	Appointed by the government
# of full-time-equivalent employees	4,565	444	666

Appendix 4: Audit Criteria

Prepared by the Office of the Auditor General of Ontario

1. Effective governance and accountability structures are in place and operating to ensure Public Health Ontario operates cost-effectively.
2. Public Health Ontario's role in Ontario's public health system is clearly defined, and understood by its clients, stakeholders and the public.
3. Public Health Ontario has access to and collects relevant data and provides timely and objective data analyses and advice to its clients that meet their needs.
4. Public Health Ontario has effective processes in place to support public health units in developing programs and capacity to help deliver public health services locally, and seeks to identify opportunities for minimizing duplication of efforts in the public health system and achieving efficiencies in the laboratory system.
5. Public Health Ontario has resources available to fulfill its mandate and allocates and uses them efficiently and effectively.
6. Performance measures and targets are established, monitored and compared against actual results to ensure that the intended outcomes are achieved, and are publicly reported.
7. Processes are in place to identify areas of improvement and to operate more efficiently and effectively, and changes are made on a timely basis.

Appendix 5: Institut national de santé publique du Québec Examples of Strategic Objectives Performance Measures, 2021/22

Source of data: Institut national de santé publique du Québec

	Indicators	Target (%)
Participate in relevant legislative and governmental processes	Rate of participation in parliamentary committees and selected public consultations	**80**
Support public departments in their regional partnerships	Response rate to requests for support from public health departments in health impact assessment	**90**
Support public health actors in integrating knowledge into their practices	Client satisfaction rate on the usefulness of scientific productions to support clients in their work	**95**
Continuously capture the needs of regional partners	Satisfaction rate regarding support for intervention with public health departments in the event of a threat to the health of the population	**90**
Deliver scientific products in a timely manner for decision-makers	Rate of compliance with the deadlines set out in the charter of prioritized projects	**80**

Ministry of Tourism, Culture and Sport

Science Centres

1.0 Summary

A science centre is an educational facility that uses hands-on exhibits and activities to educate the public about science, technology, engineering and mathematics. Ontario is home to the two largest science centres in Canada—the Ontario Science Centre (opened in 1969) in Toronto and Science North (opened in 1984) in Sudbury. The two science centres are provincial agencies with a legislated mandate to stimulate public interest in science and technology, collect and display exhibits, and deliver educational programs. The Ministry of Tourism, Culture and Sport (Ministry) has oversight responsibility for both science centres.

Our audit reviewed the operations for both provincial science centres, focusing on their financial sustainability, educational programming and exhibits. In 2022/23, children and youth under the age of 18 made up more than 50% of visitors at both science centres. Based on our discussions with school boards in the Greater Toronto Area and Sudbury and a survey of science teachers we conducted, the science centres performed consistently well in delivering educational programs to students. In surveys conducted by the science centres, the majority of visitors said they were satisfied by their experience at the centre they attended. Yet attendance and memberships for both science centres have been declining over the past decade. Pre-pandemic attendance for the Ontario Science Centre had fallen by 12.5% from peak attendance in 2013/14, while pre-pandemic attendance at Science North had decreased by 8% from its peak in 2016/17. In both cases, the science centres have done relatively well recovering from the pandemic, with the Ontario Science Centre recovering to 80% of pre-pandemic levels and Science North surpassing pre-pandemic levels by 3% in 2022/23.

We also assessed the major initiatives under way at each science centre. Science North was in the midst of a major expansion project, at an overall estimated cost of $15 million as of October 2023. After our audit was under way, the Ontario government announced plans to relocate the Ontario Science Centre to Ontario Place. We therefore reviewed the relocation project as well.

Ontario Science Centre Relocation

The decision to relocate the Ontario Science Centre comes at a time when the centre is facing significant challenges, including a decline in attendance and memberships, a key pedestrian bridge connecting the main entrance to the exhibition halls deemed unsafe and therefore not in use, capital repairs and maintenance increasingly mounting to about $370 million, and aging exhibits in need of a refresh.

On April 18, 2023, the government announced that a new Ontario Science Centre would be built as part of the redevelopment of Ontario Place, making use of the “pods” (five interconnected pavilions) and Cinesphere (an IMAX movie theatre) on site. The Minister of Infrastructure noted that it was ultimately more cost-effective to build a new science centre at Ontario Place than to repair and upgrade the existing building.

We noted that the recent relocation decision was not fully informed and based on preliminary and incomplete

costing information, and had proceeded without full consultation from key stakeholders or a clear plan for the existing site.

Moving the Ontario Science Centre to a revitalized Ontario Place is not a new idea. In 2016, the Ministry of Tourism, Culture and Sport first engaged Infrastructure Ontario (a provincial agency under the Ministry of Infrastructure) to complete a business case on how to modernize the Ontario Science Centre, with one option being to reopen at Ontario Place with a new building and new exhibits. The business case at that time estimated that relocating to Ontario Place would save the Province around $250 million on a net present value basis over a 50-year period. This business case was shared with the Ontario Science Centre Board, which noted that, due to deferred maintenance, the status quo was no longer sustainable. However, no action was taken at that time.

In 2020, direction was once again given to develop a strategy for the relocation of the Ontario Science Centre to Ontario Place. In 2021, the then Ministry of Heritage, Sport, Tourism and Culture Industries (now the Ministry of Tourism, Culture and Sport) was asked to undertake detailed project planning for a relocation of the science centre to Ontario Place, including working with Infrastructure Ontario on a delivery model analysis. In March 2023, Infrastructure Ontario completed its work with the information that it had at that time, which was used to inform the government's April 2023 decision to relocate the science centre.

The following are some of our significant audit findings with respect to the relocation project:

- **The 2023 cost/benefit analysis used to support the decision to relocate the Ontario Science Centre did not include all costs for both options assessed—relocation and the rehabilitation of the current site.** A business case prepared by Infrastructure Ontario in March 2023 with assistance from an external consultant incorporated a cost/benefit analysis that concluded the relocation would save the Province $257 million (net present value) over a 50-year period, which is consistent with the 2016 business case. This analysis was included in the April 2023 proposal to government decision-makers. In our review of the cost/benefit analysis, we found that costs for both options were not fully identified and determined. For example, financing, transaction and legal costs projected under the public-private partnership (P3) model to design, build, finance and maintain (DBFM) the new site at Ontario Place were not included in the analysis. Similar costs for the repairs and upgrade of the science centre were also not included, since an assessment for the delivery model for the repairs and upgrade of the current site was not done. At the time of the finalization of this report, Infrastructure Ontario informed us that it was reassessing whether the DBFM model would be the approach used for the project. In addition, the incremental parking costs were not included in the cost/benefit analysis.
- **The April 2023 relocation proposal to government decision-makers did not include concerns raised about expected attendance, travel times and car access to the Ontario Place location, especially for suburban families and certain school groups.** A 2016 environmental scan and market assessment concluded that, although overall attendance figures were anticipated to improve at the new location, school group and suburban family attendance was expected to decline. An attendance study conducted in 2022 noted that suburban families and repeat visitors, a core market for the Ontario Science Centre, would have a longer travel distance to Ontario Place than to the current site. The study also concluded that, until the implementation of subway or light rail links to Ontario Place, access by car and difficulty with parking would be a "limiting factor" on attendance. By contrast, the study found the new location would give the science centre better access to tourists staying in downtown Toronto and projected that total attendance would increase to about one million visitors. We found that, while the information about increased tourist attendance was included

in the proposal to government decision-makers, the information about decreased local attendance was not included.

- **Discussions with the City of Toronto before the decision was made to relocate were limited in any substance or detail and the Toronto and Region Conservation Authority and large school boards within the Greater Toronto Area directly impacted by the relocation were not consulted.** The science centre has a 99-year lease with the City of Toronto and the Toronto and Region Conservation Authority and does not have the right to terminate the lease. The Province would first have to enter into negotiations with the City and the Conservation Authority to terminate the lease. Staff of the large school boards within the Greater Toronto Area that would be directly impacted by the relocation (Toronto District School Board, Toronto Catholic District School Board, Durham District School Board, Peel District School Board, and Halton District School Board) told us that the Boards were not asked for input on relocating the science centre. Students from elementary and high schools make up approximately 25% of visitors to the Ontario Science Centre.
- **Plans to continue to construct, sell and rent exhibits—legislated objectives—remain uncertain with the relocation announcement.** The construction, sale and rental of exhibits is a source of self-generated revenue for the Ontario Science Centre and is required under the legislation that governs the science centre. However, no fabrication facility was included in the functional plan of the relocated Ontario Science Centre, and it is unclear if this will continue at an alternative facility.
- **Current Ontario Science Centre lands considered for a Transit-Oriented Community since 2020.** A May 2020 proposal submitted to government decision-makers by the then Ministry of Heritage, Sport, Tourism and Culture Industries noted that the relocation of the Ontario Science Centre would unlock the site at Don Mills Road and Eglinton Avenue for Transit-Oriented Communities–related development. According to the Ministry of Infrastructure, planning for a Transit-Oriented Community on the Ontario Science Centre site is premature until the transit needs in the area are finalized by Metrolinx, an agency of the Province responsible for all modes of transportation in the Greater Toronto and Hamilton Area.
- **The decision to relocate the Ontario Science Centre was presented to government decision-makers as contributing to a site-wide parking solution integrated with the new building at Ontario Place.** The Ministry of Infrastructure proposal to government decision-makers submitted in April 2023 noted that a site-wide parking solution integrated with the new Ontario Science Centre would contribute to meeting the Province's existing legal obligations under the lease it had signed with Therme Group and for its potential lease obligations with Live Nation.

Ontario Science Centre Operations

The following are some of our significant audit findings with respect to the operations of the Ontario Science Centre:

- **Deferred maintenance projects that were at risk of critical failure have been repeatedly denied funding.** Based on the most recent engineering assessment conducted in April 2022, the overall cost of deferred maintenance and critical repairs needed for the Ontario Science Centre building is about $370 million, not including costs for fixing a bridge currently closed due to structural issues. Since 2017, due to a lack of funding, 42 projects deemed critical and at risk of failure had not been repaired. Of these 42 projects, seven had been put forward in at least three of the past five years and were denied funding each time. One was a $4 million request to renew the water distribution of the plumbing systems throughout the kitchens, restaurants, workshops, labs and washrooms.

According to Infrastructure Ontario, there was a lack of funding available to manage the Province's real estate portfolio, so the repairs could not be paid for. In addition to deferred maintenance, the centre's planetarium has been closed to the public since September 2022 because of outstanding capital repairs and ongoing technical issues with equipment that had reached the end of its useful life.

- **The cost of shuttling visitors as a result of the closure of the pedestrian bridge connecting the main entrance to the exhibition halls was $2.4 million in 2022/23 and has negatively impacted visitor experience.** Before it was closed in June 2022, the centre's pedestrian bridge took visitors from the main entrance across a wooded ravine. Infrastructure Ontario has cited an estimated cost of $16 million just to stabilize the bridge. We found the agency had not obtained a cost estimate for fixing the bridge so visitors could use it. In February 2023, Infrastructure Ontario procured an engineering firm to conduct a feasibility study to evaluate the bridge's condition prior to repair. At the time of our audit, the feasibility study had not been completed and there was no targeted timeline for actually repairing the bridge. Therefore, these costs were not included in the $370 million needed for critical repairs and deferred maintenance mentioned earlier. Until the bridge is fixed, the Ontario Science Centre needs to shuttle visitors by bus from the entrance, where the OMNIMAX theatre is located, to a temporary entrance at the back of the building. Waiting in line and riding a bus to enter at the rear has had a significant impact on the visitor experience. The bridge closure has also presented an obstacle to venue rental.
- **Pre-pandemic attendance declined by 12.5% from 2013/14 to 2018/19.** Total attendance for the Ontario Science Centre peaked during the last decade in the fiscal year 2013/14, when the centre attracted 920,000 visitors. Overall attendance had dropped to 805,000 visitors in 2018/19 (the last fiscal year not impacted by the COVID-19 pandemic), a decrease of 12.5%. The COVID-19 pandemic and provincial response measures significantly impacted the centre in the last month of 2019/20, and in 2020/21 and 2021/22. Attendance recovered to about 80% of pre-pandemic levels in 2022/23. Further, the total number of Ontario Science Centre memberships has decreased 31% in the past decade, from 20,677 in 2012/13 to 14,312 in 2022/23. According to the Ontario Science Centre, changing demographics and increased competition from other attractions in the City (for example, Ripley's Aquarium, the Royal Ontario Museum, the Art Gallery of Ontario) were factors contributing to lower attendance and membership levels. The science centre also noted that the reduced lanes and closures from the construction of the Eglinton LRT at the corner of Don Mills Road and Eglinton Avenue impacted traffic flow and, hence, attendance (including school visits).
- **Exhibits were not always evaluated for effectiveness (for example, for their popularity and educational value).** Exhibits are integral to carrying out the science centre's key objective to stimulate public interest in science and technology. The average age of the exhibits at the Ontario Science Centre at the time of our audit was about 14 years. Only the KidSpark, Science Arcade, HotZone, Community Reef and the Weston Family Innovation Centre have changed significantly since 2018. The Ontario Science Centre uses visitor satisfaction surveys to evaluate the effectiveness of its exhibits. In our review of surveys from 2012/13 to 2021/22, we found that the questions in some years did not ask the visitors to rate all permanent and temporary (travelling) exhibits. Also, in 2022/23, the Ontario Science Centre did not conduct any visitor satisfaction surveys due to a staff shortage in the research group. We also noted that there was limited assessment of the feedback received from surveys by the Ontario Science Centre, resulting in little improvement to the existing exhibits.

- **Ontario Science Centre could be doing more to improve its financial sustainability.** The Ontario Science Centre does not allocate its indirect operating costs to their various lines of business. Without allocating these costs, it is difficult to assess which lines of business are profitable and which need to manage costs more effectively. In addition, the science centre had not assessed its potential for other revenue sources as compared to other science centres, such as through expanding its retail operations and venue rental opportunities. In November 2022, the Ministry of Tourism, Culture and Sport asked the Ontario Science Centre to submit a cost management plan for the remainder of 2022/23.

Science North

At the time of our audit, Science North was undergoing an expansion. It had undertaken a multi-million-dollar project to expand its model mine in Sudbury, and had sought Board approval for the construction of two new science centres in Thunder Bay and Kenora.

We found that costs for the first project (Go Deeper project) had substantially increased—from an initial budget of $5 million in October 2020 to $15 million by October 2023—primarily due to increases in excavation and construction costs. The cost had increased despite a reduction in the project's scope to alleviate the increasing expenses.

The project had also run into significant delays. In 2019 Science North proceeded with the project, setting an initial completion date of February 2023. At the time of our audit, the project was expected to be completed by winter 2024. The delay was mostly due to the COVID-19 pandemic, the City of Greater Sudbury identifying additional requirements for site remediation, which delayed municipal permit approvals, and a lack of available funding.

We found that the cost overrun and delay were caused by poor planning and ineffective project management. For example, no reliable third-party estimate was completed during the planning phase to assess the reasonableness of the cost projections. A more reliable cost estimate would have been produced if a consultant with an engineering and construction background had been engaged during the planning phase. Science North also failed to involve its project management team during the planning phase of the project. The project management team at Science North is responsible for managing projects that include co-ordinating with internal and external stakeholders, managing the progress and deadlines of projects, and resolving any issues that might arise during the project.

With costs increasing and no funding available, key elements of the project have been paused and Science North has further reviewed the project to identify areas to reduce scope and costs.

Based on preliminary estimates from a construction consulting firm, the northwestern Ontario expansion to Thunder Bay and Kenora was estimated to cost over $90 million. Science North sought Board approval for this expansion without the benefit of a business case that would include a cost/benefit analysis and assessment of alternative options. At the time of our audit, Science North had received only conditional Board support for the expansion and had not yet sought funding for the expansion from any level of government or from the private sector.

Science North estimated that the annual operating budget for the two new science centres would total $5.5 million, and at the time of our audit was in discussion with the Ministry to request $4 million in annual operating funding for these facilities and projects. Centre management projected that self-generated revenue would cover the remaining $1.5 million. The Ministry had not assessed the feasibility and financial sustainability of the expansion to Thunder Bay and Kenora.

The following are some of our other significant audit findings for Science North:

- **Pre-pandemic attendance declined by 8% from 2016/17 to 2018/19.** Total attendance for Science North declined by 8% in 2018/19 (the last fiscal year not impacted by the COVID-19 pandemic) from its peak in the last decade in 2016/17. The COVID-19 pandemic and provincial response measures severely impacted the centre

in 2019/20, 2020/21 and 2021/22. According to Science North, the decrease in overall attendance reflected fewer visitors to the IMAX theatre, where attendance fell by 26% from 2015/16 to 2018/19. In 2022/23, attendance has increased by 3% from pre-pandemic levels. Science North projected attendance to remain at this level in the upcoming three fiscal years.

- **Feedback on Science North's educational and outreach programs was positive, but attendance has also dropped.** Sudbury's Rainbow District School Board and the Sudbury Catholic District School Board, the two main boards served by Science North in the City of Sudbury, were both satisfied with the school programs offered by Science North. The school boards said Science North had been very responsive to their needs and was working effectively with teachers in delivering programs to their students. The Canadian Association of Science Centres noted that Science North was successful in its outreach to Northern Ontario communities for schools that did not have access to the science centre due to high transportation costs. However, total attendance for on-site school programs has decreased 32% in the past five years. Similarly, student attendance at public school outreach programs has decreased by 62%. Fiscal year 2022/23 was the first year since the onset of the COVID-19 pandemic when Science North was fully open year-round. Staff at Science North told us that some schools were still hesitant to attend public programs and some schools still had COVID-19 measures in place as of spring 2022.
- **Science North could better evaluate the effectiveness (for example, the popularity and educational value) of its exhibits.** The average age of Science North's exhibits was 11 years. Similarly, the average age of exhibits at Dynamic Earth was 11 years, and no major exhibits had changed significantly since 2017. The mining technology showcased at Dynamic Earth is from early 2000; mining operations have changed significantly since. At the time of our audit, Science North was in the process of expanding its model mine at Dynamic Earth to better showcase modern mining and the future of mining. Science North evaluated some of its exhibits through a behavioural assessment tool. For a sample of visitors, staff reviewed video footage to examine the learning behaviours of visitors. However, over the last 10 years, only 90 out of the total 338 exhibits (27%) were evaluated in this manner.
- **A contractor that committed to a sponsorship agreement for the Go Deeper project was awarded an excavation contract.** A $2 million excavation contract for the Go Deeper project was awarded to a mining company that committed to providing $1.5 million in conditional sponsorship funding from 2022 to 2026. As of September 2023, Science North had received $600,000 from the company with a balance of $900,000 remaining. The sponsorship agreement allows for the termination of the contract if the company ceases to carry on business.
- **Science North could be doing more to improve its financial sustainability.** Science North does not allocate its indirect operating costs to their various lines of business. Without allocating these costs, it is difficult to assess which lines of business are profitable and which need to manage costs more effectively.

This report contains 16 recommendations, with 42 action items, to address our audit findings.

Overall Conclusion

Our audit concluded that the science centres performed well in delivering educational programs to students, based on our discussions with school boards in the Greater Toronto and Sudbury areas and on the feedback collected from science teachers in Ontario.

However, we also found that attendance for both science centres had declined in 2018/19 (the last fiscal year not impacted by the COVID-19 pandemic) by 8% (Science North) from a peak in 2016/17 and 12.5%

(Ontario Science Centre) from a peak in 2013/14. The COVID-19 pandemic and provincial response measures significantly impacted the two centres in the last month of 2019/20, and in 2020/21 and 2021/22. However, attendance at both centres is on the road to recovery post-pandemic.

Higher costs have added pressure to generate revenues. We found that both science centres could do more to improve financial sustainability, such as assessing which existing lines of business are profitable and where costs need to be managed more effectively, and exploring new opportunities to generate revenue.

The future may look much different, particularly for the Ontario Science Centre, due to the Province's recent decision to relocate it to Ontario Place. Although the Province has been assessing this relocation since 2016, our audit found that the recent decision for the relocation was made without the benefit of input from all stakeholders and with preliminary and incomplete cost information. Also, in some instances where information was available, it was not included in the proposal to government decision-makers.

Multiple qualitative and quantitative factors need to be taken into consideration for decisions for both the new science centre at Ontario Place and the existing site moving forward.

Our audit concluded that Science North's expansion project had proceeded without proper planning and consultation, resulting in substantial cost overruns and delays. The Go Deeper project to expand its model mine had, at the time of our audit, been delayed by almost two years, and even with a reduced scope its costs had increased by $10 million in a three-year period (from $5 million in October 2020 to $15 million by October 2023). The lessons learned from the Go Deeper project should be applied to all capital projects moving forward.

OVERALL MINISTRY OF INFRASTRUCTURE RESPONSE

The Ministry of Infrastructure (Infrastructure Ministry) welcomes and appreciates the Auditor General's review into this matter. The Infrastructure Ministry believes sound planning occurred based on best information available with reliance on third-party experts and is committed to taking into consideration the improvement opportunities identified in this audit report. Although the decisions around the future of the existing Ontario Science Centre site are still pending, many activities and business processes are currently in place; the Infrastructure Ministry will advance the implementation of Auditor General's recommendations, including the improvement opportunities identified in the audit report across the Infrastructure Ministry and other responsible parties.

OVERALL MINISTRY OF TOURISM, CULTURE AND SPORT RESPONSE

The Ministry of Tourism, Culture and Sport (Ministry) will work with the Ontario Science Centre and Science North to enhance the already world-class science-based programming offered by the two centres.

The Ministry will explore opportunities to improve efficiencies, performance assessment and collaboration between the two science centres, as well as continuing to assess critical capital projects.

The existing Ontario Science Centre located at Don Mills Road and Eglinton Avenue is open and continues to welcome guests. The government will continue to work with and support the Ontario Science Centre in its current location and will share more details about the move as decisions are made.

OVERALL ONTARIO SCIENCE CENTRE RESPONSE

The Ontario Science Centre welcomes the recommendations made by the Auditor General of Ontario. The Ontario Science Centre is committed to enhancing operational improvements and continuing to provide value for money for the people of Ontario. As a vibrant hub for innovative and accessible science education, the Ontario Science Centre will continue to spark curiosity and inspire

children and families, teachers and students, and visitors from across Canada and around the world.

OVERALL SCIENCE NORTH RESPONSE

Science North would like to thank the Office of the Auditor General of Ontario for preparing this report and conducting a review of the value for money that Science North delivers for the people of Ontario. Science North agrees with the recommendations outlined in this report and will seek to implement the recommendations as resources allow. With a vision to be the leader in engaging audiences with entertaining, educational, and inclusive science experiences, Science North is committed to a culture of continuous learning and improvement and will seize the opportunities presented in this report for continued growth.

In leveraging new technology, Science North will improve its current process for allocating appropriate costs to lines of business where able and will continue to seek and analyze new opportunities for self-generated revenue. The organization will take additional measures to ensure visitor feedback informs all major exhibits and their renewals, while further leveraging memberships with Canadian and international science centre associations to streamline research and best practices.

Science North will work with the Ministry of Tourism, Culture and Sport and its Board of Trustees to improve performance measures, taking into consideration metrics that include all legislated mandates and further enhancing the organization's transparency and accountability through its business plans and annual reports.

Science North values innovation, collaboration, accountability, inclusiveness, respect and striving towards excellence. This value-for-money audit provided Science North with the unique opportunity to review and modify its documentation processes and authorization thresholds. The organization will apply applicable lessons learned and is grateful for the opportunity to further improve its operations and enhance its organizational impact. Through continued service to the vast 800,000 square kilometres that make up Northern Ontario, Science North endeavours to inspire all people to be engaged with science in the world around them.

2.0 Background

2.1 Overview

Science centres develop or acquire displays and exhibits of scientific and technological importance and present these to the public for the purposes of education, research and enjoyment. Ontario has two science centres: the Ontario Science Centre, located in Toronto, and Science North in Sudbury.

The Ontario Science Centre (whose legal name is Centennial Centre of Science and Technology), a 568,000-square-foot facility, opened in 1969. It is a provincially funded agency that is overseen by a Board of Trustees. Employees of the Ontario Science Centre are part of the Ontario Public Service. The organization's CEO reports into both the Board of Trustees and the Deputy Minister as an Assistant Deputy Minister equivalent.

Science North, a 200,000-square-foot facility, opened 15 years later, in 1984. It was established as a provincially funded agency, overseen by a Board of Trustees. This centre's employees are not part of the Ontario Public Service. Science North CEO's direct reporting responsibility is to the Board of Trustees.

The Ministry of Tourism, Culture and Sport (Ministry) oversees both science centres and provides them with annual funding. As provincial agencies, the board chairs of the science centres are required to report to the Minister. In fiscal year 2022/23, $19.4 million in operating funding went to the Ontario Science Centre and $6.8 million to Science North.

2.1.1 Mandates and Missions

The Ontario Science Centre and Science North each have their own governing legislation: the *Centennial Centre of Science and Technology Act* and the *Science North Act*, respectively. Each organization's legislation specifies its mandate, as shown in **Figure 1**.

The Ontario Science Centre states that its mission is "to inspire passion for the human adventure of discovery." Science North sets out a similar mission: "to inspire all people to interact with science in the world around them."

The 2023/24 mandate letters provided to the Board Chairs of the science centres by the Minister of Tourism, Culture and Sport laid out expectations that the science centres focus on the following general government priorities: Competitiveness, Sustainability and Expenditure Management; Transparency and Accountability; Risk Management; Workforce Management; Diversity and Inclusion; Data Collection; and Digital Delivery and Customer Service. In addition to the general government priorities, there were specific priorities and expectations in the 2023/24 mandate letters from the Minister, which are outlined in **Appendix 1**.

2.2 Lines of Business

The science centres have several business lines relating to on-site exhibits and visitor programs; school outreach programs; IMAX theatres, planetarium and film production; the sale and rental of fabricated exhibits; and facility rentals and concessions.

The centres offer general admission pricing for adults, youth, seniors and children and various admission packages, as shown in **Figure 2**.

2.2.1 On-Site Exhibits and Programs for Visitors

The Ontario Science Centre is located on Don Mills Road in the Flemingdon Park community of Toronto, situated in wooded ravine lands of the Don Valley. There are 19 main halls and spaces (indoors as well as outdoors), with a total of 402 exhibits. Different types of science topics are presented—anatomy, astronomy, physics, environmental biology, and others—along with important and interesting discoveries in these fields.

Science North has 338 exhibits in its two Sudbury locations, a main building on the shores of Ramsey

Figure 1: Legislative Objectives of the Science Centres

Source of data: *Centennial Centre of Science and Technology Act* and *Science North Act*

Ontario Science Centre*	Science North
a) to depict to the public and to conduct a program of education in the origins, development and progress of science and technology, and their relationship to society;	a) to depict to the public and to conduct a program of education, throughout northern Ontario, in the origins, development and progress of science and technology and their relationship to society;
b) to depict the role of Ontario in the furtherance of science and technology;	b) to operate and maintain a model mine;
c) to stimulate the interest of the public in matters depicted by the Centre;	c) to collect, develop and exhibit objects and displays and to maintain and operate a museum, science centre and related facilities for the furtherance of the objects of the Centre;
d) to collect, manufacture, market, exhibit and sell objects and displays; and	d) to stimulate the interest of the public, throughout northern Ontario, in matters depicted by the Centre; and
e) to maintain and operate a science centre and related facilities for the furtherance of the objects set out in clauses (a) to (d) and to provide consulting services in relation to all the matters set out in this section.	e) to develop, produce and market exhibits and to sell exhibits and provide consulting services.

* Legal name for the Ontario Science Centre is Centennial Centre of Science and Technology.

Figure 2: General Admission Fees at Ontario Science Centre and Science North as of March 2023 ($)

Source of data: Ontario Science Centre and Science North

	Ontario Science Centre			Science North			
Age Category	Science Centre	OMNIMAX Film	Science Centre + OMNIMAX Film	Science Centre	Dynamic Earth (without Underground Tour)	Dynamic Earth + Underground Tour	IMAX[1]
Child[2] (3–12 or 4–12)	13	9	19	21	16	21	7
Youth (13–17)	16	9	22	23	18	23	8
Adult (18–64)	22	12	28	25	20	25	9
Senior (65+)	16	9	22	23	18	23	8

1. Science North also offers IMAX Remastered films (regular movies that have been refined and converted into IMAX films) at a higher price: $10 for child, $11 for youth, $12 for adult, $11 for senior.
2. Child admission is for ages 3 to 12 at Ontario Science Centre and ages 4 to 12 at Science North. Admission is free for children under the age of three at the Ontario Science Centre and free for children under the age of four at Science North.

Lake, and Dynamic Earth, which includes a model mine. Science North's main centre is a five-storey snowflake-shaped building embedded in the Canadian Shield.

Both centres were designed by the renowned Canadian architect Raymond Moriyama.

The main attraction at Dynamic Earth is an underground mine tour that takes visitors seven storeys below the surface. Created from the former Big Nickel Mine, Dynamic Earth opened in 2003. At the time of our audit, it was undergoing an expansion (called "Go Deeper"), with the purpose of showcasing more modern mining technology and the future of mining. The project had been delayed due to the COVID-19 pandemic and funding shortfalls. It was scheduled to open in 2025.

On-Site Events and Demonstrations

The Ontario Science Centre and Science North offer a variety of personalized experiences to visitors throughout the year. The Ontario Science Centre offers public programs delivered by staff or with a variety of partners (for example, the Toronto Beekeepers Collective demonstrations), recreational and family programs and demonstrations (such as the hair-raising experience from the Van de Graaff generator) as well as summer camps, winter and March Break camps. Science North offers after-school day care, professional activity day programs, summer camp programs, adult-only events (Nightlife on the Rocks), and specialist high-skills major certification programs.

2.2.2 School Programs

Both centres offer a variety of school programs for teachers and students from kindergarten to Grade 12. The purpose of school programs is to teach students scientific principles through demonstrations and hands-on activities. As of March 2023, the Ontario Science Centre offered eight types of school programs and Science North offered seven types of school programs. **Appendix 2** shows the different types of school programs offered by the science centres for the 2022/23 fiscal year. Some programs occur on-site, at the science centre; in others, science centre staff host workshops and classes at schools or online.

According to the Ministry of Education, science centres are main hubs for expertise around science education, and it has been providing the Ontario Science Centre and Science North with grant funding for educational programs to make them more accessible to students. In an August 2023 announcement, the Province further committed to fund the Ontario Science Centre, through the Ministry of Education, $1 million per year for two years beginning in 2024, for the science centre to create hands-on learning experiences and virtual lesson plans for students, as well as STEM (science, technology, engineering and mathematics) teaching materials for educators.

The Ontario Science Centre also operates a science school on its premises, where about 30 Grade 12 students from across the province attend one semester of classes. The science school is open to all students in Ontario and is funded by the Ministry of Tourism, Culture and Sport in partnership with school boards in the Greater Toronto Area.

2.2.3 IMAX Theatres, Planetarium and Film Production

The IMAX theatres at both science centres provide visitors with giant-screen film adventures. The OMNIMAX theatre (Ontario Science Centre) seats 324 people and is the only IMAX dome screen in Ontario that provides an immersive experience. It has 44 speakers delivering 13,000 watts of wrap-around sound.

The planetarium at the Ontario Science Centre has been closed to the public since September 2022 because of outstanding capital repairs and ongoing technical issues with equipment that is at the end of its useful life. When it was operational, the planetarium was used to demonstrate space and astronomy programming through projections and live demonstrations. At the time of our audit, the Ontario Science Centre was in the process of purchasing equipment to reopen the planetarium.

Science North opened an IMAX theatre in 1994 and started developing its own IMAX films. Over the years, Science North has become one of Canada's leading producers of giant-screen films focused on environmental and natural history. It produces films in its own large-format film production unit and uses a combination of in-house and third-party distributors to sell films to other attractions. The IMAX theatre at Science North seats 200 people, features a 26-metre by 20-metre screen and digital surround sound, and can show IMAX 2D and 3D films.

Science North also has a planetarium that features films and live presentations about astronomy and other space topics, projected on an 8.4-metre dome.

2.2.4 Exhibit Design, Production and Sales

The Ontario Science Centre and Science North not only display exhibits, but design and produce them as well. The former has on-site facilities to design and manufacture unique and bespoke science exhibits of all kinds, for example, the popular MindWorks psychology travelling exhibit completed in 2019. It won the award for Best Show or Exhibit in 2020 from the Canadian Association of Science Centres. The Ontario Science Centre's fabrication department can create customized exhibits, modify exhibits, fabricate and install exhibits. The construction of an exhibit involves everything from creating the concept to installing the finished display and all of its components. The way that visitors interact with an exhibit is envisioned, mapped out and incorporated in the material production of the exhibit.

The fabrication facility includes electricians, woodworkers and painters. As of March 31, 2023, the design and fabrication departments had 34 full-time-equivalent staff.

These exhibits are sold to other centres and organizations across the country and internationally. When the Ontario Science Centre sells an exhibit, it remains involved with setting the exhibit up, training any staff who will participate in the exhibit, and maintaining the exhibit. The centre was one of the first interactive science museums in the world and is recognized internationally. It has offered consultation services for other

science centres that are developing their own exhibits in China, Japan, the United States, Thailand, South Africa, Singapore and Ireland, among other places.

Exhibits can also be rented out to other locations, and become travelling exhibits. As of May 2023, the Ontario Science Centre had created five travelling exhibits for rent: MindWorks; Imaginate; Circus!; Motion Mania; and Behind Racism. Three of the five were being rented out at the time of our audit, while the remaining two were in storage.

Science North employees also design exhibits, though the majority are fabricated by third-party providers since that centre's in-house workshop is suitable only for small-scale projects. As part of its exhibit sales, Science North offers consulting services in conceptual program development, business planning, feasibility studies, interpretive staff training, evaluating exhibits and experiences, and creating educator guides and marketing plans. Science North has also produced and sold films internationally on topics such as climate change and human biology.

As of March 2023, Science North had nine travelling exhibits on tour: The Science of Guinness World Records; Beyond Human Limits; Beyond Human Limits Lite; Arctic Voices; Our Climate Quest (small and large); Game Changers; Wild Weather; and Trailblazing: Women in Canada Since 1867.

2.2.5 Facility Rentals and Concessions

In addition to the above key lines of business, both science centres offer rental spaces for private events such as meetings, birthday parties, trade shows, product launches, holiday parties, conferences, networking events, gala dinners, weddings, media events, speaker event and film shoots.

Both science centres have on-site gift shops, cafes and restaurants that provide a variety of food and gift options to visitors. The restaurants at the Ontario Science Centre are outsourced to third parties, while the gift shop is managed in-house. All restaurants and gift shops at Science North are managed by Science North staff.

2.3 Boards of Trustees

The Ontario Science Centre and Science North are each governed by a Board of Trustees, both of which are accountable to the Ministry through their Board Chair. The Boards' responsibilities include:

- setting goals, objectives and strategic direction for the agency; and
- ensuring that senior management carries out the roles and responsibilities assigned to it by the organization's governing legislation and by applicable government policies and directives.

Appendix 3 shows the composition and committees for each Board of Trustees as of March 2023. The trustees are appointed by the Lieutenant Governor in Council based on the Minister's recommendations. According to the memorandum of understanding (MOU) between the Ministry and Ontario Science Centre, the Board Chair is to engage with the Deputy Minister and seek input from the members of the Board on the recruitment, selection and appointment of a chief executive officer (CEO). In contrast, as outlined in the *Science North Act* and the MOU between the Ministry and Science North, Science North's CEO is hired by its Board without Deputy Minister input.

2.4 Ministry's Responsibilities

The Ministry of Tourism, Culture and Sport (Ministry) is responsible for ensuring that the Ontario Science Centre and Science North fulfill their legislated mandates and comply with applicable government directives and policies. The Ministry's responsibilities are carried out by the Agency Relations and Accountability Division (Division). The Division's key responsibilities include:

- outlining, through the government's mandate letter, the expectations, key commitments and performance priorities of each science centre (see **Appendix 1**);

- reviewing and approving the science centres' annual business plans;
- recommending to the Treasury Board each science centre's provincial funding allocation;
- reporting and responding to the Treasury Board on the science centres' performance and compliance with applicable government policies and directives;
- reviewing, approving and tabling in the Legislature the science centres' annual reports; and
- when appropriate or necessary, taking action or directing that the science centres take corrective action with respect to their administration or operations.

3.0 Audit Objective and Scope

The objective of our audit was to assess whether the Ministry of Tourism, Culture and Sport (Ministry), the Ontario Science Centre and Science North had effective systems and procedures in place to:

- meet legislated requirements, comply with government directives, and adhere to best practices for the operation of the science centres in a cost-effective manner that educates and stimulates the interest of students and the public in science and technology; and
- measure, evaluate, and publicly report on the effectiveness of the science centres.

In planning our work, we identified the audit criteria we would use to address our audit objective (see **Appendix 4**). These criteria were established based on a review of applicable legislation, policies and procedures, internal and external studies, and best practices. Senior management at the science centres and the Ministry reviewed and agreed with the suitability of our objectives and associated criteria.

We conducted our audit between January 2023 and September 2023. We obtained written representation from the Ministry and the science centres' management that, effective November 27, 2023, they had provided us with all the information they were aware of that could significantly affect the findings or the conclusion of this report.

Our audit work was conducted at the Ontario Science Centre and Science North, and included an analysis of policies and procedures, as well as discussions with senior management and staff responsible for managing overall operations, managing exhibits, delivering education programs, and measuring and reporting on the performance of the centres. We also assessed whether the two centres comply with applicable legislative requirements, government directives, their own policies, and applicable best practices.

We also assessed whether the Ministry provided effective oversight of the two science centres.

We reviewed the proposal to government decision-makers to relocate the Ontario Science announced by the Province on April 18, 2023, and the decision-making process that led up to it, including all relevant proposals, business cases and studies, as well. We met with representatives of the City of Toronto, Toronto and Region Conservation Authority, Infrastructure Ontario, and the Ministry of Infrastructure to understand the planned changes and their impacts on the Ontario Science Centre; and long-term plans for the current science centre site.

We also met with the Toronto District School Board, Toronto Catholic District School Board, Durham District School Board, Peel District School Board, Halton District School Board, Sudbury Rainbow District School Board, Sudbury Catholic District School Board and the Science Teachers' Association of Ontario (STAO) to get their views on the school programs offered by the science centres and the relocation of the Ontario Science Centre to Ontario Place. We also surveyed the members of STAO about the effectiveness of programming offered by the science centres and for their views on the relocation.

We engaged in discussions with the Canadian Association of Science Centres and the Association of Science and Technology Centers to obtain their perspectives on best practices and the challenges of operating science centres.

We also met with the Ministry of Education to get its input on the role of the science centres in the Ontario elementary and secondary school curriculum.

On November 16, 2023, the Ontario government introduced Bill 151, *Improving Real Estate Management Act, 2023* (Real Estate Act). If the Real Estate Act is passed, this will prohibit both science centres from acquiring or disposing of a freehold interest in real estate property without approval from the Minister of Infrastructure. Therefore, this Act could have an impact on some of our findings and recommendations (such as the planned relocation of the Ontario Science Centre, discussed in **Section 4.0**, and the northwestern expansion project at Science North, discussed in **Section 6.2.2**). We will consider the impact of this legislation on our recommendations when we perform our follow-up audit on this report.

We conducted our work and reported on the results of our examination in accordance with the applicable Canadian Standards on Assurance Engagements—Direct Engagements, issued by the Auditing and Assurance Standards Board of the Chartered Professional Accountants of Canada. This included obtaining a reasonable level of assurance.

The Office of the Auditor General of Ontario applies Canadian Standards on Quality Management and, as a result, maintains a comprehensive system of quality management that includes documented policies and procedures with respect to compliance with rules of professional conduct, professional standards, and applicable legal and regulatory requirements.

We have complied with the independence and other ethical requirements of the Code of Professional Conduct of the Chartered Professional Accountants of Ontario, which are founded on fundamental principles of integrity, objectivity, professional competence, and due care, confidentiality and professional behaviour.

4.0 Detailed Audit Observations—Proposal to Relocate Ontario Science Centre

On April 18, 2023, the Premier of Ontario, the Minister of Infrastructure, and the Minister of Tourism, Culture and Sport announced publicly that the Ontario Science Centre would be shut down and redeveloped at Ontario Place on Toronto's waterfront. Plans for the existing site were not firm, although the government suggested that the relocation presented an opportunity for housing and community infrastructure on the site of the Ontario Science Centre.

Construction of a new 275,700-square-foot science centre at Ontario Place was promised to begin in 2025 using the public-private partnership (P3) design, build, finance and maintain model. A request for proposal (RFP) deadline for planning and design was set for October 26, 2023. A second RFP for the construction phase was scheduled for 2024 for construction starting in summer 2025 and a scheduled opening of 2028. **Figure 3** shows the two locations, which are 15 kilometres apart.

The announcement caught many stakeholders by surprise; they said they were never consulted. The Toronto and Region Conservation Authority (TRCA), which owns the majority of the land for the existing site of the Ontario Science Centre, issued a press release days after the Premier's that clarified: "To date, no conversations have been held between the Province, City of Toronto, and TRCA regarding the Province's desire to move the Science Centre, build housing on the lands, and/or cancel the Science Centre lease agreement."

In this section of the report, we present our audit findings related to the proposed relocation and redevelopment of the Ontario Science Centre.

Section 5.0 presents the results of our audit of the ongoing operations of the Ontario Science Centre, which is also relevant for an analysis of relocation. In that section, we analyze admission trends and the financial picture of the centre, deferred maintenance costs, and infrastructure challenges faced by the Ontario Science Centre.

Source of data: City of Toronto

4.1 Decision-Making Was Based on Incomplete Information and Excluded Important Stakeholders

4.1.1 Relocation First Assessed as an Option by Government in 2016

The idea of moving the Ontario Science Centre to a revitalized Ontario Place is not a new idea. However, our audit found that the Province held no discussions with key stakeholders before arriving at the decision to downsize and relocate the science centre (see **Section 4.1.2**). **Appendix 5** sets out a timeline of significant events surrounding the Premier's announcement of the decision.

In 2009, the Province commissioned a study to develop a plan to support the growth and long-term viability of tourism in Ontario. The report noted the potential to move the Ontario Science Centre to Ontario Place as part of a revitalization project. In 2016, the Ministry of Tourism, Culture and Sport first engaged Infrastructure Ontario (an agency of the Province under the Ministry of Infrastructure) to complete a business case on how to modernize the Ontario Science Centre. The two options under consideration were to: (A) remain on site with a plan to renovate exhibits and address repairs and deferred maintenance; or (B) reopen at Ontario Place with a new building and new exhibits on provincially owned land.

Infrastructure Ontario worked with management of the Ontario Science Centre on a business case. The 2016 business case proposed that redeveloping the Ontario Science Centre in a 318,000-square-foot building at Ontario Place with significantly reduced maintenance and operating costs would save the Province around $250 million on a net present value basis over a 50-year period. The document noted that the relocation option would provide the government with an opportunity to simultaneously revitalize two provincial assets, Ontario Place and the Ontario Science Centre, with one financial investment. This 2016 business case was shared with the Ontario Science Centre Board. In November 2016, the Board, in a letter to the Minister, acknowledged that due to deferred maintenance, the status quo was not sustainable. While

supportive of options presented in the business case, the Board put forward a third option to build a new science centre at its current site and move it closer to the Eglinton Crosstown LRT, and to finance the project by mixed development in the remaining lands. No action was taken on the recommendations of this business case.

In 2019, Ontario Science Centre's Board and management again assessed options for addressing the need for capital investments and critical repairs needed for the centre. In a June 2019 presentation to the Ministry of Tourism, Culture and Sport, management stated, "After 20 years of limited investment, aging exhibits and outdated infrastructure, the [Ontario Science Centre] is less able to fulfill its mission." Management and the Board were considering three options: (1) reinvest in the existing Don Mills site; (2) relocate closer to the Eglinton LRT station (corner of Don Mills Road and Eglinton Avenue); or (3) relocate to Ontario Place. In December 2019, the then CEO of the Ontario Science Centre also asked the Deputy Minister to request the investments needed for the existing centre through the Ministry's multi-year planning process. However, the COVID-19 pandemic then shifted the focus of the Board and management toward relief funding to sustain operations and to open the centre safely during provincial health restrictions.

In May 2020, government decision-makers approved redeveloping Ontario Place using a multi-partner approach, consisting of the Therme Group, Live Nation and Écorécréo Group, and asked the Ministry to report back on a strategy for the potential relocation of the Ontario Science Centre. The May 2020 proposal submitted by the then Ministry of Heritage, Sport, Tourism and Culture Industries noted that the use of the pods and Cinesphere at Ontario Place was a potential option for a new Ontario Science Centre. The proposal also noted that the Ministry was engaged with the Ministry of Transportation and Infrastructure to ensure that the potential Ontario Science Centre relocation is consistent with the government's Transit-Oriented Communities initiatives (see **Section 4.5.1**). The relocation of the Ontario Science Centre would unlock the site at Don Mills Road and Eglinton Avenue for Transit-Oriented Communities–related development.

In August 2020, the Minister of Infrastructure asked Infrastructure Ontario to develop a proposal that identified capital costs and general benefits associated with the Ontario Science Centre relocating to the Ontario Place site, in consultation with the then Ministry of Heritage, Sport, Tourism and Culture Industries, and the Ontario Science Centre.

In June 2021, the Ministry informed management of the Ontario Science Centre that relocating the centre to Ontario Place was a "priority project" and that it planned to submit a proposal to government decision-makers in summer 2022. In July 2021, the Ministry of Heritage, Sport, Tourism and Culture Industries submitted a proposal to government decision-makers to request planning approval for a potential relocation of the Ontario Science Centre to Ontario Place. The proposal updated the analysis prepared in 2016 and identified a potential savings from the relocation of more than $200 million (net present value basis over a 50-year period). In the proposal, the Ministry noted that a new Ontario Science Centre at Ontario Place could also incorporate potential satellite locations in Toronto (including retaining programming at the Don Mills Road site) and elsewhere in the province along with expanded travelling exhibits. The Ministry proposed reporting back to the decision-makers with details on potential satellite locations at a future date.

In December 2021, government decision-makers approved funding for the Ministry of Heritage, Sport, Tourism and Culture Industries to undertake detailed project planning for a relocation of the science centre to Ontario Place, including working with Infrastructure Ontario on a delivery model analysis. It did not request the Ministry to report back on potential satellite locations. Between April 2022 and March 2023, Infrastructure Ontario conducted an attendance study and an Economic Impact Assessment, and prepared a business case. This planning and analysis informed the April 2023 proposal submitted by the Ministry of Infrastructure to government decision-makers, which led to the April 18 announcement of the relocation of the Ontario Science Centre to Ontario Place.

From September 2021 to April 2023, leading up to the provincial announcement, Ontario Science Centre

senior management provided updates to the Board on the Ministry requests for input associated with the potential relocation. In a March 2023 meeting, the CEO informed the Board that a business case for relocation was expected to be submitted to government decision-makers in the spring, followed by a public announcement, but no dates were yet confirmed. On April 17, 2023, one day before the public announcement of the relocation, the Board approved, in principle, the relocation of the Ontario Science Centre to Ontario Place.

At the same time, over the years, various parties have been interested in development on the Ontario Science Centre site. **Appendix 5** contains the timelines and details of the proposals for development received by the City and the science centre.

4.1.2 Decision-Making Process Was Not Fully Informed

Limited Public Consultations about Science-Based Programming at Ontario Place Did Not Mention Relocating Ontario Science Centre

In August 2021, the Ministry of Heritage, Sport, Tourism and Culture Industries and Infrastructure Ontario were directed to conduct preliminary planning to evaluate relocating the Ontario Science Centre.

As part of an Ontario Place public survey conducted between August and October, the Ministry of Infrastructure asked Ontarians about the types of science-based programming and activities they might like at Ontario Place. We noted that the survey contained no questions related to a potential relocation of the Ontario Science Centre.

A few months later (December 2021), the Ministry of Heritage, Sport, Tourism and Culture Industries received Stage 1 planning approval for a proposed relocation. However, the project was later put on hold. The science centre proposed a 353,000-square-foot facility in September 2022 for Ontario Place at a cost estimated at up to $610 million. The government instead requested that a smaller facility be explored. In June 2022, the ministry division leading the Ontario Place Revitalization (including the Ontario Science Centre relocation) was transferred from the Ministry of Tourism, Culture and Sport to the Ministry of Infrastructure by the government, as it decided that the Ministry of Infrastructure would lead the redevelopment of Ontario Place.

In April and October of 2022, the Ministry of Infrastructure hosted two consultations with the public, held as live virtual events. In total, 370 members of the public responded to design concepts for Ontario Place. The presentations at these events promised that the Province would lead the development and execution of science-related programming in collaboration with the Ontario Science Centre. No mention was made of a potential relocation of the Ontario Science Centre itself.

Discussions with the City of Toronto Were Limited in Any Substance or Detail Regarding the Relocation Announcement

In April 2022, the Minister of Infrastructure requested the Chair of Infrastructure Ontario to provide support to the then Ministry of Heritage, Sport, Tourism and Culture Industries in engaging the City of Toronto in negotiations to relocate the Ontario Science Centre to the Ontario Place site. The Minister's mandate letter instructed Infrastructure Ontario, at the same time, to provide support to the Province as it negotiated with the City of Toronto to open the existing Ontario Science Centre lease for the Don Mills Road and Eglinton Avenue site.

According to Infrastructure Ontario, discussions with the City of Toronto took place in July and August 2022 and touched on the opportunity that could be created for affordable housing on the Don Mills Road site.

At the time of the finalization of this report, however, City staff told us the focus of the July and August 2022 meetings was the Province's redevelopment of Ontario Place. While the Ontario Science Centre was on the agenda for these meetings, the item was framed as a medium- to long-term priority. City staff had Council direction to engage with provincial officials on the Ontario Place redevelopment, but did not have Council direction to engage with provincial officials on repurposing or redeveloping the Ontario

Science Centre at its Don Mills Road site. According to the City of Toronto, the Province approached the City about the possibility of incorporating science programming at Ontario Place. The scenario of shutting down or relocating the existing Ontario Science Centre facility was not discussed in any substance or detail.

On July 20, 2023, Toronto City Council voted 21 to 3 in favour of exploring the feasibility for the City of Toronto to take over operations of the science centre or create another public-facing attraction in the existing facility and location. City staff planned to report back to Council on this during the second half of 2024. Subsequent to the finalization of this report, the Province had agreed to discuss partnership opportunities with the City for maintaining public, community-oriented science programming at the existing site of the science centre.

The Ministry of Infrastructure did host a town hall event for the public on April 27, 2023, after the relocation was announced. The event was attended by 265 members of the public. The Ministry presented concept designs for the Ontario Science Centre and asked for feedback on them.

The feedback from participants was mainly negative. Participants voiced concerns about the project, including:

- the lack of transparency in the government's decision-making;
- the projected costs of relocation;
- the negative impact that closing the existing Ontario Science Centre would have on nearby communities;
- the traffic congestion in the Ontario Place area;
- the lack of consultation with employees of the Ontario Science Centre and members of the public; and
- the smaller size of the new science centre, possibly impacting staffing and the quality of exhibitions.

Participants also voiced strong support for maintaining the current building and the existing Ontario Science Centre.

According to the Ministry of Infrastructure, the concerns raised at its April 27, 2023 event were addressed as part of the environmental assessment of the redevelopment of Ontario Place conducted in June 2023. Infrastructure Ontario also told us that certain views were taken into consideration as part of the assessment. However, when we reviewed the environmental assessment report, we found that commentary regarding the decision to relocate the Ontario Science Centre to Ontario Place was determined as outside the report's scope and therefore was not considered.

Large School Boards within the Greater Toronto Area Directly Impacted by the Relocation Were Not Consulted Prior to the Announcement

Students from elementary and high schools make up approximately 25% of visitors to the Ontario Science Centre. We met with members of the large school boards within the Greater Toronto Area that would be directly impacted by the relocation (Toronto District School Board, Toronto Catholic District School Board, Durham District School Board, Peel District School Board, and Halton District School Board). All of these school boards told us they were not asked for their input on relocating the science centre.

4.1.3 All Costs Were Not Considered in the Estimate to Relocate the Ontario Science Centre

The decision to relocate the Ontario Science Centre was informed by a cost/benefit analysis contained in the March 2023 business case completed by Infrastructure Ontario, prepared with assistance from an external consultant. The analysis compares the net present value of revenues and costs over a 50-year period (2023/24–2072/73) for two options: (A) remain at the current location; or (B) downsize and relocate to Ontario Place. According to this financial analysis, remaining on site would cost the Province $1.304 billion, while the cost of relocating would be $1.047 billion, a savings of $257 million. See **Figure 4** for a reproduction of the cost/benefit analysis created by Infrastructure Ontario.

Option A assumed a one-year closure of the Don Mills site for renovations and projected a slight increase

Figure 4: Infrastructure Ontario's Cost/Benefit Analysis[1] for Ontario Science Centre Relocation ($ million)

Source of data: Infrastructure Ontario

Financial Impact	Option A: Remain on Site	Option B: Relocate[4]	Difference: B minus A
General admissions	213	243	30
Ancillary operations[2]	406	378	(28)
Interest income	7	8	1
Interim revenue impacts[3]	–	(26)	(26)
Total revenue	**626**	**603**	**(23)**
Operating expense[3]	(1,221)	(984)	237
One-time expenses – severance	–	(7)	(7)
Total operating expense	**(1,221)**	**(991)**	**230**
Don Mills building repairs	**(306)**	**(31)**	**275**
Ontario Science Centre lifecycle maintenance	(297)	(231)	66
Ontario Place common area maintenance	–	(11)	(11)
Total maintenance	**(297)**	**(242)**	**55**
Ontario Science Centre capital – exhibits	(65)	(64)	1
Ontario Science Centre construction – Don Mills cosmetic upgrades	(41)	–	41
Ontario Science Centre construction – buildings and pods at Ontario Place	–	(290)	(290)
Ontario Science Centre one-time relocation expenses	–	(32)	(32)
Total capital expenses	**(106)**	**(386)**	**(280)**
Total project surplus/(shortfall)	**(1,304)**	**(1,047)**	**257**

Note: As noted in **Section 4.1.3**, the analysis does not consider all relevant costs associated with the relocation and rehabilitation of the Ontario Science Centre. Costs not considered include the financing and transaction costs relating to a public-private partnership (P3) model proposed for the construction of the new science centre. Similar costs may also be incurred for rehabilitating the existing site. Parking costs for the new science centre at Ontario Place are also not included in the analysis.

1. The cost/benefit analysis prepared by Infrastructure Ontario used the net present value of revenues and costs over a 50-year period (April 1, 2023–March 31, 2073), with a 3% discount rate, for two options: (A) remain at the current (Don Mills) location; and (B) relocate to Ontario Place.
2. Ancillary operations include revenue from concessions, donations and sponsorship, external sale and rental of exhibits, facility rentals, memberships, OMNIMAX theatre, programming (educational and recreational), and other revenue.
3. The Ministry of Tourism, Culture and Sport proposed an interim operating solution for the relocation scenario whereby the Ontario Science Centre operations would be reduced to one building at the existing site for a maximum of five years (April 1, 2023–March 31, 2028). Interim revenue impact of $26 million (net present value) represents estimated revenue loss associated with the period between the Ontario Science Centre exiting its current site and relocating to the proposed new facility at Ontario Place. Included in operating expense under the relocation scenario is interim expense savings of $33 million (net present value) which represents estimated expense reduction associated with the period between the Ontario Science Centre exiting its current site and opening at the proposed new facility at Ontario Place.
4. No fabrication facility was included in the proposed relocated Ontario Science Centre and the analysis assumed that revenues and expenses from external sale and rental of exhibits would not continue after March 31, 2028 under the relocate scenario.

in attendance. It treated costs as consistent with current operations. Option B proposed a combination of a new four-storey, 275,700-square-foot building and renovation of the existing Ontario Place pods, Cinesphere and connecting bridges. The revenues projected for Option B assumed the Ontario Science Centre would remain open at its Don Mills location for five years until construction at Ontario Place was completed. This scenario estimated an increase in attendance to a total of approximately one million visitors per year (up 54% from the level in 2022/23) in the first year of operation at the Ontario Place site. The attendance was projected based on comparable attractions in Canada and the US.

We could not conclude on the reasonableness of the cost/benefit analysis, since all relevant costs associated with the relocation and rehabilitation of the Ontario Science Centre were not available and included in the analysis. Examples of costs not considered are detailed in the sections below.

Transaction and Financing Costs Associated with P3 Delivery Were Omitted

From our review of the analysis, we noted that certain costs that could impact the calculation were not included. The cost/benefit analysis did not include financing costs projected under the public-private partnership (P3) model to design, build, finance and maintain (DBFM) the new site at Ontario Place. In addition, the analysis did not include transaction costs (legal fees, proposal fees and other project management fees associated with using the P3 model) or special purpose vehicle (SPV) costs (such as company start-up costs, legal costs, overhead, salaries, and administrative costs for the project company during construction).

Similar costs could also be incurred under the option to repair and upgrade the science centre. However, at the time of our audit, an assessment of the delivery model for the repairs had not been done.

Infrastructure Ontario told us that it did not include the financing, transaction and SPV costs related to a P3 build because the cost/benefit analysis was silent as to which delivery model to use for the new Ontario Place build, and also because a similar level of cost details was not available for remaining on the existing site. At the time of the finalization of this report, Infrastructure Ontario informed us that it was assessing whether the DBFM model was appropriate for the project. Specifically, it was assessing whether the model will result in sufficient competition by generating interest among prospective bidders.

Costs for Parking Were Not Included

At the time of our audit, the redevelopment of Ontario Place planned to involve three tenants: Therme Group Canada Inc. (Therme), which plans to build and operate an indoor waterpark and spa, Live Nation Canada, which is redeveloping the existing Budweiser Stage amphitheatre, and the Ontario Science Centre. According to the proposal submitted to government decision-makers, the parking needs for the revitalized Ontario Place were approximately 2,700 spaces. Of that total, a portion of the parking spots were assumed to be allocated to Therme as per its lease agreement with the Province. The lease signed with Therme obligates the Province to provide a number of dedicated parking spaces for Therme between 2028 and 2030. If the Province does not meet its obligations to Therme, as per the contract, it faces a financial penalty.

According to the 2023 proposal submitted to government decision-makers, a site-wide parking solution was needed to meet the Province's existing legal obligations under the lease it had signed with Therme Group and for its potential lease obligations with Live Nation (pending approval of a final agreement), as well as to meet the needs of future tenants, such as the science centre. The submission proposed that the new parking be integrated with the new Ontario Science Centre building in order to dispel public/stakeholder concerns relating to cost and impact on the environment. The recommended plan in the proposal to the government decision-makers was to use 700 of the existing parking spaces at Ontario Place and to build a multi-storey parking garage under the new Ontario Science Centre for the remaining 2,000 parking spaces. The Ministry of Infrastructure had obtained a high-level preliminary estimate of $307 million ($277 million net present value) to build the remaining 2,000 parking spaces, which its proposal noted would result in capital savings to the government. The proposal further noted that if the parking structure were to be built as a standalone structure, there was a risk that future development opportunities above the parking structure could be limited. Subsequent to the finalization of this report, the Province had agreed with the City of Toronto to explore relocating the parking structure to the grounds of Exhibition Place in order to improve public access to the shoreline.

Incremental parking costs were not included in Infrastructure Ontario's cost/benefit analysis. Infrastructure Ontario told us that the parking costs were not included because parking was not dedicated to the

Ontario Science Centre but was, rather, required for the overall redevelopment of Ontario Place.

4.2 Ontario Science Centre Relocation Was Being Planned Irrespective of Another Anchor Tenant Pulling Out of Ontario Place

News came in September 2022 that the Quebec-based company Écorécréo, which was to have built an adventure park at the Ontario Place redevelopment, would no longer be involved with the Ontario Place redevelopment. According to the Ministry of Infrastructure, Écorécréo was no longer in a position to pursue the opportunity at Ontario Place due to unforeseen challenges and prior commitments to its existing operations. The Ministry said at the time that the loss of Écorécréo, one of three future tenants for the project, would have no impact on the timeline for Ontario Place.

The April 2023 relocation proposal drew the conclusion that relocation of the Ontario Science Centre would expedite the redevelopment of Ontario Place by delivering a third anchor tenant to provincially owned lands, occupy the vacant pods and Cinesphere, and help make Ontario Place a year-round family destination.

However, we noted that in addition to the three other future tenants, the Ontario Science Centre was being planned as a viable option to occupy the Cinesphere and the pods at Ontario Place in 2020.

As for the existing site, the 2023 proposal to government decision-makers requested permission to engage the City of Toronto to finalize a lease break at this site. The document highlighted that relocation also created a "unique opportunity" to reconsider the future function of the Don Mills Road site to meet other government priorities, such as housing. The proposal noted that, through Infrastructure-Ontario-led negotiation with the City, the government could explore future use of the site and redevelopment opportunities.

The proposal, however, noted that there was a risk that full closure of the existing Ontario Science Centre facility would draw criticism, and there may also be criticism that the public was not consulted on this decision, as noted in **Section 4.1.2**.

4.3 Proposed Science Centre Will Have Less Space for Exhibits and No Facilities for the Fabrication of Exhibits

4.3.1 New Science Centre Would Have 18% Less Indoor Exhibit Space, Outdoor Space Remains Unplanned

We compared the proposed new centre's interior (building) space to the existing space at the Ontario Science Centre and determined that the proposed centre would be approximately half (49%) the existing centre's size, in square footage. Specifically, at 770 Don Mills Road, the buildings provide a total of 568,000 square feet. The proposed space within the Ontario Place location—comprising the mainland building, pods, bridges and the Cinesphere—is 275,700 square feet.

The proposed centre contains 110,000 square feet of indoor exhibit space, which is 18% less when compared to 134,000 square feet (which includes the rainforest, planetarium and travelling exhibit space) at the existing Don Mills site. Infrastructure Ontario's request for proposal (RFP) indicated that the new site would not have certain core exhibits that are part of the current centre, such as the indoor immersive rainforest or a planetarium.

The outdoor adventure playground was also not intended to be reproduced. The existing Ontario Science Centre offers an outdoor area where visitors can enter into the Don River valley ravine. At the time of our audit, there was no information available about the nature of the outdoor space that would be part of the new Ontario Science Centre.

The project's RFP states that "during development of the Functional Program, a number of program elements were not included in the Functional Program due to a required reduction in the size of the building/square footage, requiring rationalization of the current activities." And, in the April 2023 proposal to government decision-makers, the Don Mills Road site was

described as "oversized and inefficient, with significant ongoing operating expenses" compared to which "the new modernized facility will operate more efficiently." According to the cost/benefit analysis performed by the Ministry of Infrastructure (see **Section 4.1.3**), 90% of the projected savings from the redevelopment ($257 million in net present value) are based on lower operating expenses at the smaller facility.

4.3.2 Plans to Continue to Construct, Sell and Rent Exhibits—Legislated Objectives—Remain Uncertain with the Relocation

We noted that in the March 2023 business case on the modernization of the Ontario Science Centre prepared by Infrastructure Ontario the business line associated with the fabrication and sale of exhibits was not part of the functional plan of the new science centre at Ontario Place, but remains an option outside of the new science centre. Infrastructure Ontario confirmed with us that no fabrication facility was included in the design requirements of the relocated Ontario Science Centre. The business case was used to inform the April 2023 proposal to government decision-makers, although the proposal did not mention that fabrication and sale of exhibits were not part of the relocation option.

As discussed in **Section 2.2.4**, the construction, sale and rental of exhibits is a source of self-generated revenue for the Ontario Science Centre. From 2012/13 to 2018/19 (the last complete fiscal year in which operations were not impacted by the COVID-19 pandemic), the external sales and rental of exhibits earned the centre an average annual revenue of $2 million and incurred an average of $1.7 million in annual direct costs, resulting in a 15% profit margin.

Further, one of the Ontario Science Centre's legislated objectives is "to collect, manufacture, market, exhibit and sell objects and displays and to provide consulting services." To fulfill this mandate, the Ontario Science Centre has developed expertise in designing and fabricating exhibits that are rented out or sold to clients around the world, and expertise in consulting services for the development of exhibits. It is unclear how the proposed redeveloped science centre would be able to fully meet this legislated objective without hosting exhibit fabrication services. It is also unclear if there is a possibility for the existing site to continue with this fabrication facility. At the time of our audit, the science centre informed us that it was exploring options on how to continue or evolve these services.

4.4 Waterfront Location Deemed Better for Tourists

The 2021 Ministry of Heritage, Sport, Tourism and Culture Stage 1 planning documents for the relocation of the Ontario Science Centre to Ontario Place acknowledged that, "given a greater distance for most residents and school groups in suburban areas, these two market segments may witness a decline in percentage terms." It was noted that, by comparison, the Ontario Place location and venue was more likely to provide the centre with access to a larger slice of the tourist and events rental markets.

Similarly, a December 2022 qualitative analysis of Ontario Science Centre attendance, completed by a consultant hired by Infrastructure Ontario, observed that suburban families would have, on average, a longer travel distance to Ontario Place than to the current site at Don Mills and Eglinton. (In 2020, 1.54 million people lived within a 10-kilometre radius of the existing science centre compared to about 1.10 million people living within a 10-kilometre radius of Ontario Place.) However, the new location was described as easier to access for tourists staying in downtown hotels or driving in for day trips. The analysis thus projected total attendance to increase to about one million at the Ontario Place location.

4.4.1 Proposal to Government Decision-Makers Did Not Include Concerns Raised About Expected Attendance, Travel Times and Car Access to the Ontario Place Location, Especially for Suburban Families and Certain School Groups

Transportation to the Ontario Place location was assessed as problematic in Infrastructure Ontario's 2022 attendance study. It noted that car access and parking were limiting factors, meaning that, until the implementation of subway or light rail links to Ontario Place, driver/road access to the site would limit attendance. The Ontario Line subway, connecting the existing Don Mills site to Ontario Place, has a projected completion date of 2031, at least three years after the projected opening of the relocated Ontario Science Centre.

Despite the evidence gathered in the attendance analysis, the March 2023 business case assumed that "school group attendance would remain consistent with current levels" based on the idea that school visits from the west and northwest of the Greater Toronto Area would balance any decrease in school visits from the east and northeast. There was no market assessment provided to support this assumption, however, and neither were the schools in these regions asked to provide input. Indeed, none of the concerns raised in the attendance analysis about suburban families, travel times or car access as a limiting factor were included in the proposal to government decision-makers in April 2023.

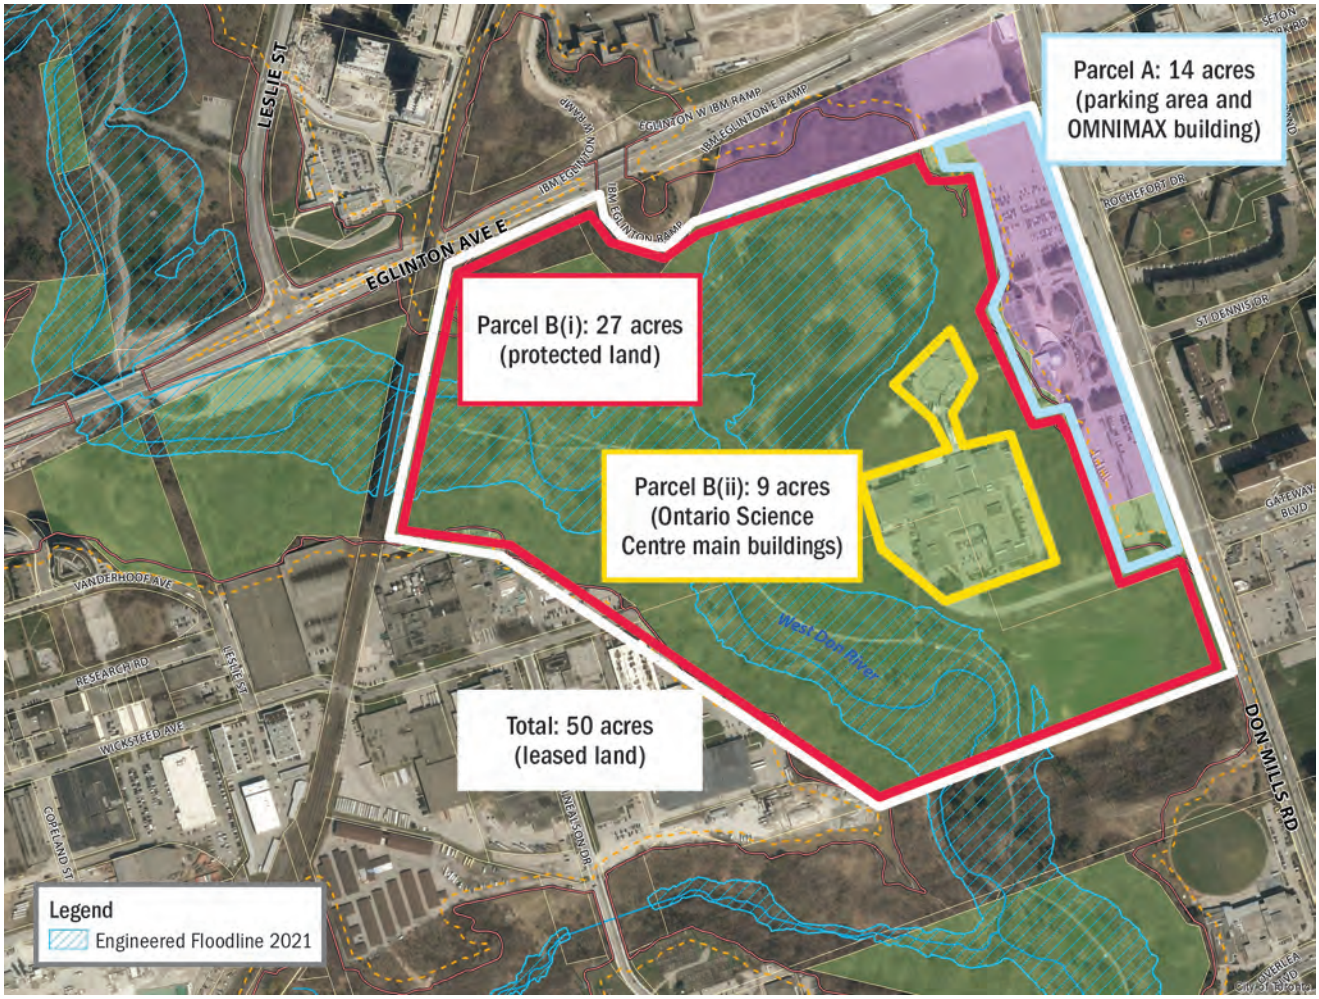
A key legislated objective of the Ontario Science Centre is "to depict to the public and to conduct a program of education in the origins, development and progress of science and technology, and their relationship to society." To fulfill this mandate, the Ontario Science Centre currently offers a variety of educational programs to schools, students, and teachers, as shown in **Appendix 2**. In 2022/23, schools from 36 of the 72 public school boards in Ontario visited the current Ontario Science Centre location. For the seven-year period from 2012/13 to 2018/19 (the last complete fiscal year before COVID-19 impacted attendance), school groups made up about 25% of Ontario's Science Centre's attendance on average. Fewer schools were located in the area of the new Science Centre at Ontario Place than the current site. According to an analysis prepared by the Ontario Science Centre in 2019, 135 elementary and 26 secondary schools were in the vicinity of the current site of the science centre, compared to 74 elementary and 19 secondary schools (a total of 93 schools) near Ontario Place.

We spoke to school boards in the Greater Toronto Area (Toronto District School Board, Toronto Catholic District School Board, Durham District School Board, Peel District School Board and Halton District School Board) about the potential relocation of the Ontario Science Centre to Ontario Place. We asked whether the change in location would impact their schools' attendance at the centre. The Toronto Catholic District School Board and Durham District School Board noted that relocation would negatively impact their schools' attendance due to longer distances and higher transportation costs.

The Toronto District School Board told us the impact of the relocation on its schools was unknown, stating that there may be some shifts in the students who go from different areas but overall, schools would continue to go. The Peel District School Board did not view the new location as more or less convenient, it said, because it might be more convenient for Mississauga schools but less convenient for schools in the northern part of the district. The Halton District School Board indicated that since the new location was closer to a GO Transit station it would be more accessible and convenient for their students.

The Science Teachers' Association of Ontario told us the educators they had spoken with had expressed concerns about the relocation because of the traffic in the Ontario Place area, which was already difficult to access. Some school boards and the association noted that school buses have a limited run time for field trips, and increased traffic would decrease the window of time spent at the destination.

Further, we surveyed members of the Science Teachers' Association of Ontario and received responses from over 300 teachers from 53 school boards. We asked how the new location would impact the likelihood of their attending the Ontario Science Centre with their classes. Of the respondents:



- 46% indicated they were less likely to attend the new location due to distance and transportation concerns;
- 18% indicated that the existing and/or new location are too far or not affordable for them to attend;
- 17% indicated that the relocation would have no impact on their attendance;
- 14% indicated that they were more likely to attend at the new location; and
- 5% indicated they were indifferent, unsure or did not provide an opinion.

4.5 Redevelopment Plans for Existing Don Mills Site Unclear

The Toronto and Region Conservation Authority (TRCA) and the City of Toronto (City) each own portions of the land on which the Ontario Science Centre currently sits, and lease it to the Province for a nominal amount. **Figure 5** offers an aerial view of the land owned by the City and the TRCA. Parcel A on this map,

Figure 5: Map of Lands Owned by City of Toronto and the Toronto and Region Conservation Authority

Source of data: Toronto and Region Conservation Authority

Note: Toronto and Region Conservation Authority owns 81 acres of land, under management with the City of Toronto, at the southwest corner of Don Mills Road and Eglinton Avenue, including the lands referenced above.

approximately 14 acres, is owned by the City. Parcels B (i) and B (ii), approximately 36 acres in total, are owned by the TRCA.

The Ontario Science Centre building itself, at 770 Don Mills Road, is owned by the Province and managed by Infrastructure Ontario. It charges an annual occupancy cost of $4.8 million to the Ontario Science Centre. The occupancy cost covers maintenance, taxes, operating and management fees, utilities and leasehold improvements. Infrastructure Ontario outsources the management of the property and facilities to a property management company.

Infrastructure Ontario's March 2023 business case for relocation cited a 2023 Economic Impact Assessment commissioned from a consulting firm, which noted that "relocating the [Ontario Science Centre] to Ontario Place would enable OSC land at Don Mills to be redeveloped into mixed-use residential and commercial space and provide approximately 2,500 to 3,000 new dwellings." The economic assessment also noted that, based on land valuation and property tax revenue estimates, the present value of future tax revenue accruing to the City of Toronto over a 50-year period would range from $601 million to $785 million if a range of 30- to 45-storey mixed-use buildings were built along Don Mills Road.

The Ontario Science Centre leases the land for $1 per year. The rental agreement is for a 99-year term expiring on June 30, 2064 with an option to extend for another 99 years if conditions are met. Under the lease, the Province is only allowed to operate and maintain a museum and related facilities and the site cannot be used for other purposes. The lease has two components: the parking lot lands (Parcel A) and the main site lands (Parcel B). (These are visible in **Figure 5**.) There are no termination rights for either the landlord or the tenant for the site unless the majority of the centre is destroyed by fire, lightning or any other cause, which allows the landlord to end the lease. Therefore, the Province would first have to enter into negotiations with the City as well as the TRCA for an early termination of the lease. According to the agreement, when the lease ends, at the discretion of the City or the TRCA, all buildings or installations on the site become the property of the City or the TRCA or will be demolished and the site restored to its original condition at the expense of the Province.

Development is likely possible only on Parcel A because much of Parcel B is located within a ravine and includes a floodplain, a low-lying area next to a waterbody where flooding is a risk. The Toronto and Region Conservation Authority has publicly noted that the floodplain, watercourses, wetlands and steep ravine slopes make construction impractical and potentially inadvisable around the Don River ravine lands and sensitive habitats (for multiple bird and mammal species, turtles and amphibians) at the Ontario Science Centre's current location.

4.5.1 Transit-Oriented Community First Considered on Ontario Science Centre Land in 2020

A May 2020 proposal for the redevelopment of Ontario Place, submitted to government decision-makers by the then Ministry of Heritage, Sport, Tourism and Culture Industries, noted that the Ministry would ensure that the potential relocation of the Ontario Science Centre is consistent with the government's Transit-Oriented Communities program. For Transit-Oriented Communities, the Province works with developers to build mixed-use communities (higher density housing, retail, public amenities and entertainment) connected to or within a short distance of transit stations. The proposal further noted that the relocation of the Ontario Science Centre would unlock the site at Don Mills Road and Eglinton Avenue for Transit-Oriented Community–related development.

The Ministry of Infrastructure informed us that planning for the Transit-Oriented Community at the Ontario Science Centre site is premature until the transit needs in the area are finalized by Metrolinx,

an agency of the Province responsible for all modes of transportation in the Greater Toronto and Hamilton Area. Infrastructure Ontario also informed us that it would be years before the project goes to market for the competitive selection of a developer.

4.5.2 Heritage Status of the Ontario Science Centre's Current Property May Require Exemption to Allow Alternative-Use Development

The Ontario Science Centre was built in 1969 and designed by renowned Canadian architect Raymond Moriyama.

At the time of our audit, the cultural heritage status of the Ontario Science Centre's Don Mills property was under review by Infrastructure Ontario and the Ministry of Infrastructure. In August 2022, Infrastructure Ontario retained an architecture firm to provide a Cultural Heritage Evaluation Report for the Ontario Science Centre. In June 2023, the draft report concluded that the Ontario Science Centre property met the criteria for both "cultural heritage value or interest" under O. Reg. 9/06 and "cultural heritage value or interest of provincial significance" under O. Reg. 10/06 of the *Ontario Heritage Act*. The report recommended ongoing engagement with the City of Toronto and the Toronto and Region Conservation Authority to ensure careful conservation of the setting and the property's three buildings. However, at the time of our audit, the government was still determining next steps and associated timelines with respect to the heritage status of the property.

The City of Toronto has also listed the Ontario Science Centre as a heritage property since April 2006. However, being listed does not in itself offer heritage protection. Rather, a heritage evaluation by a qualified person needs to be performed to determine whether the criteria to determine "cultural heritage value or interest" are met so that the property can be designated under the *Ontario Heritage Act*. An evaluation of the Ontario Science Centre was in process at the time of our audit, to be completed in the first quarter of 2024. If, based on the evaluation, the City designates the Ontario Science Centre under the *Ontario Heritage Act*, any changes to the "heritage attributes" of the centre that are inconsistent with the reasons for the heritage designation would require approval from the City.

However, in January 2023, the Province amended the *Ontario Heritage Act*, adding section 25.2 (7), which allows the Lieutenant Governor in Council to make Orders that exempt provincial heritage properties (owned or occupied by the Crown or a prescribed public body) from having to comply with heritage standards and guidelines. This would have to be done by Order in Council, and the Cabinet would have to be of the opinion that the exemption could potentially advance a provincial priority (specifically, transit, housing, health and long-term care), other infrastructure, or other priorities as may be prescribed. As the Province has an ownership interest in the Ontario Science Centre building, the Province could exempt the buildings, even if the property has been designated by the City, from complying with provincial heritage standards and guidelines.

RECOMMENDATION 1

To ensure that all decisions going forward on a relocation of the Ontario Science Centre and future use of the existing site are based on complete information, we recommend that the Ministry of Infrastructure, in conjunction with Infrastructure Ontario and the Ministry of Tourism, Culture and Sport:

- consult all key stakeholders (including the City of Toronto, Toronto and Region Conservation Authority and impacted school boards) on potential options for the existing Ontario Science Centre site and to inform decisions on exhibits and programming for the new Ontario Science Centre at Ontario Place;

- conduct a detailed study on the impact that relocating the Ontario Science Centre might have on access to educational programming by school groups and suburban families with young children, and devise strategies to maintain and increase attendance of these groups at a new Ontario Place location; and
- include all relevant costs in the cost/benefit analysis with respect to the options to relocate and rehabilitate the existing site.

MINISTRY OF INFRASTRUCTURE AND MINISTRY OF TOURISM, CULTURE AND SPORT RESPONSE

While decisions around the future of the existing Ontario Science Centre site have not been made, the ministries will look to identify and consult with key stakeholders as appropriate.

The Ministry of Tourism, Culture and Sport (Ministry) will continue to work closely with the Ontario Science Centre and key stakeholders as it moves forward with this opportunity. The Ministry would note that no decisions with respect to specific exhibits or programming at Ontario Place have been made. The Ministry will work with the Ontario Science Centre to engage stakeholders to ensure program offerings at the new science centre are topical, engaging and of interest to its current and future users. This will include developing strategies to maintain and increase attendance of these groups at the new location.

The ministries will work together as appropriate to continue to bring forward business cases that are robust, well informed, and bring together all relevant costs in a cost/benefit analysis with respect to options for the Ontario Science Centre.

RECOMMENDATION 2

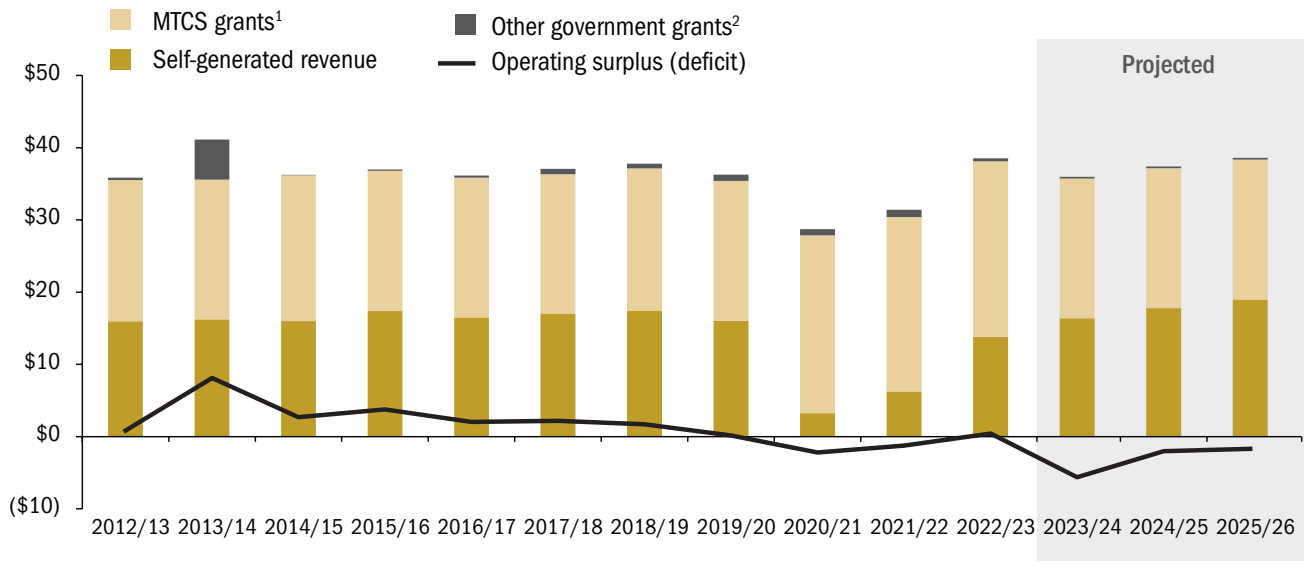
To ensure that the selection of the developers for any future Transit-Oriented Community on the existing Ontario Science Centre site is fair and transparent, we recommend that Infrastructure Ontario conduct an open and competitive selection process when this project is ready to go to market.

INFRASTRUCTURE ONTARIO RESPONSE

Infrastructure Ontario will conduct open and competitive selection process for any future Transit-Oriented Community site on the existing Ontario Science Centre site. This is consistent with Infrastructure Ontario's advice already provided to government. Presently, the agency is conducting open and competitive selection processes for the first two such sites that have been publicly announced.

5.0 Detailed Audit Observations—Ontario Science Centre

5.1 Financial Sustainability of the Ontario Science Centre

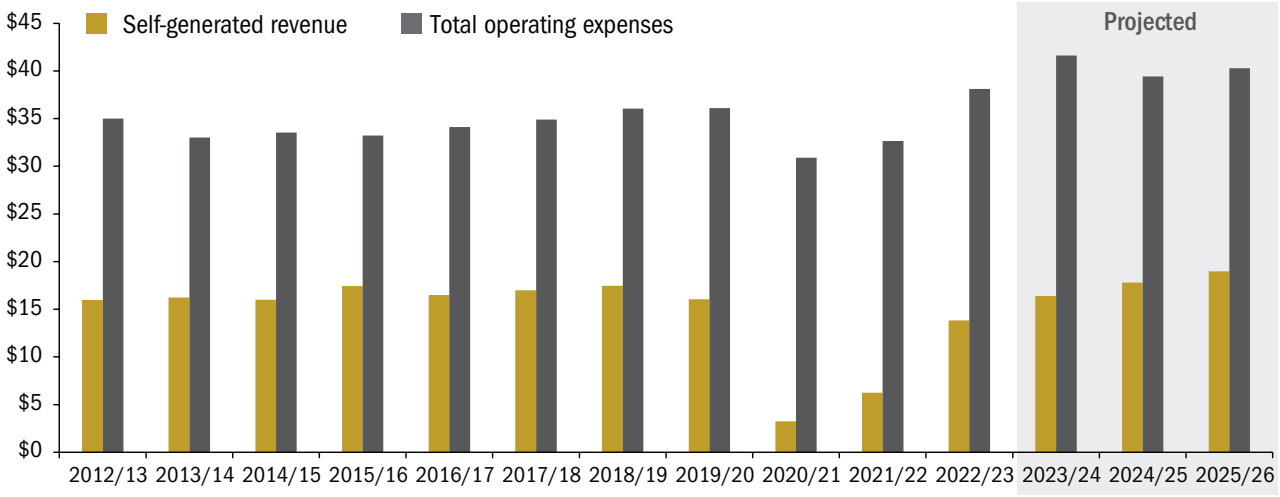


The Ministry of Tourism, Culture and Sport (Ministry) provides an annual operating grant of $19.4 million to the Ontario Science Centre. The centre periodically receives grants from various provincial ministries for specific projects. The rest of its revenue is self-generated, through admission fares and other lines of business.

As shown in **Figure 6**, government funding accounted for an average of 55% of the Ontario Science Centre's total revenues between 2012/13 and 2018/19 (the last complete fiscal year where operations were not impacted by the COVID-19 pandemic). In 2022/23, the Ontario Science Centre received $24.7 million in government funding, accounting for 64% of its overall revenue.

Figure 7 shows the operating expenses of the Ontario Science Centre, which remained stable from

Figure 6: Ontario Science Centre Self-Generated Revenue, Government Grants and Operating Surplus/Deficit, 2012/13–2025/26 ($ million)

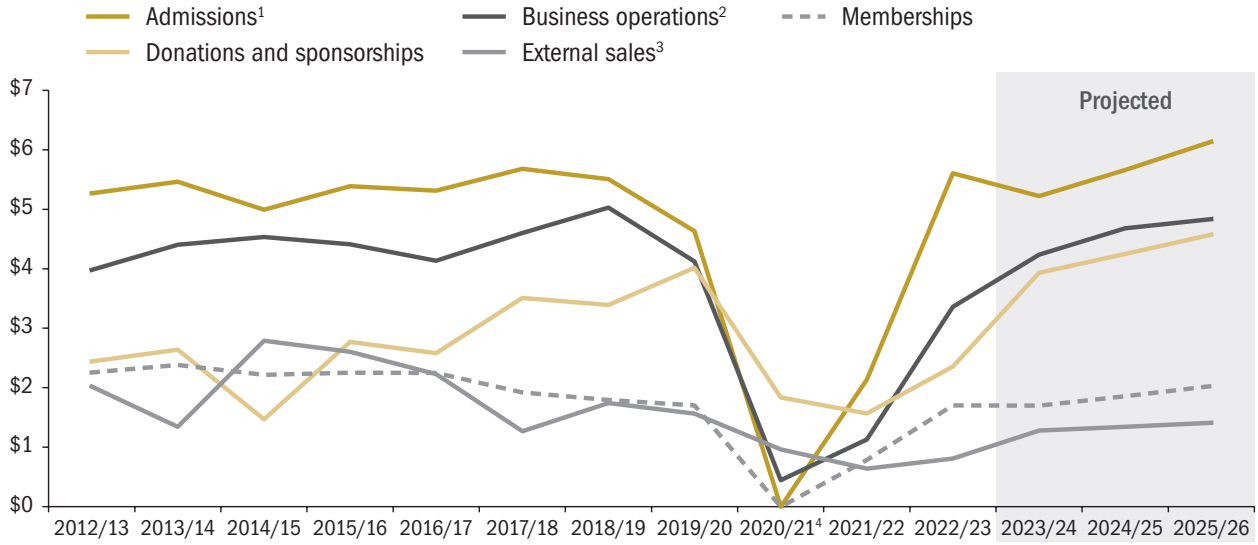


Source of data: Ontario Science Centre

1. Ministry of Tourism, Culture and Sport (MTCS) grant revenue includes operating grant, Emergency Stabilization Fund received in 2020/21 and 2021/22 and funding for the pedestrian bridge closure received in 2022/23.
2. Other government grants include funding from the Ministry of Education to support educational school programs and from the Ministry of Tourism, Culture and Sport for special initiatives and the forgiveness of the OMNIMAX theatre construction loan of $5.3 million in 2013/14.

Figure 7: Ontario Science Centre Self-Generated Revenue and Total Operating Expenses, 2012/13–2025/26 ($ million)

Source of data: Ontario Science Centre



2012/13 to 2018/19. Over this same period, revenue from memberships declined steadily, whereas donations and sponsorship money increased. **Figure 8** offers a breakdown of the self-generated revenue streams of the Ontario Science Centre by line of business.

5.1.1 Higher Operating Costs Added Pressure to Generate Revenue

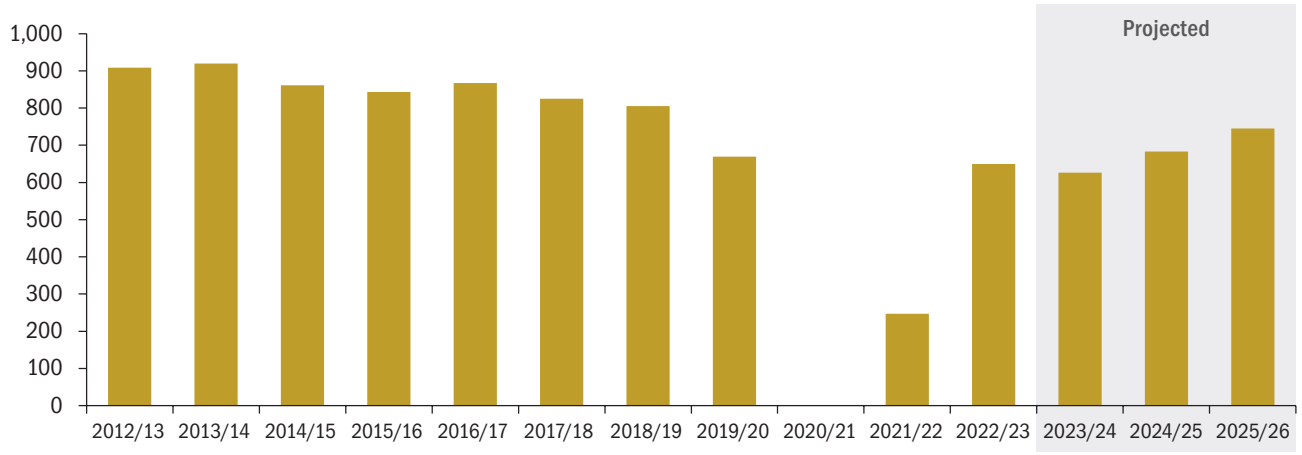
Our audit found that the Ontario Science Centre's pedestrian bridge closure in June 2022 (see **Section 5.2.1**), was creating additional operational pressures for the

Figure 8: Ontario Science Centre Self-Generated Revenue by Lines of Business, 2012/13–2025/26 ($ million)

Source of data: Ontario Science Centre

1. Admissions revenue includes general admission to the Ontario Science Centre exhibits and OMNIMAX theatre.
2. Business operations include revenue from concessions (food and retail), facility rentals, parking, programming (educational and recreational), interest, and other income.
3. External sales include the sale and rental of exhibits to Canadian and international clients.
4. No admission and membership revenue was recorded in 2020/21 because the Ontario Science Centre was closed for the entire fiscal year due to the COVID-19 pandemic.

centre. To address these unexpected pressures, the centre applied for additional funding. The Ministry approved $3.7 million and another $3.9 million in operating funding in June 2022 and November 2022 to address the incremental operating costs and revenue losses. After the 2022/23 fiscal year, the Centre was able to return $2.7 million to the Ministry primarily due to its cost saving measures and increase in self-generated revenues.



In November 2022, the Ministry requested that the Ontario Science Centre submit a Pressure Management Plan for the remainder of 2022/23. The Ministry's expectation was that the centre tackle its fiscal challenges by diversifying revenue streams, increasing self-generated revenue and identifying strategies to ensure the continued viability of its operations and facilities. The Ontario Science Centre submitted a Pressure Management Plan to the Ministry in December 2022. It identified ways to diversify its revenue streams along with increasing self-generated revenues, while limiting cost increases by freezing all discretionary spending and imposing hiring restrictions.

Measures from this plan resulted in a temporary dip in operating expenses and an increase in self-generated revenues for 2022/23. However, as shown in **Figure 7**, the Ontario Science Centre projected even higher operating expenses for 2023/24 to 2025/26 than in the past 10 years. The projected cost increases were based on the incremental costs associated with the bridge closure, primarily of providing shuttle buses to visitors and additional staffing needed to direct pedestrian traffic as a result of the bridge closure.

The Ministry's operating grant has stayed at $19.4 million for more than 10 years, since 2012/13. If the Ontario Science Centre is unable to effectively reduce operating expenses or even maintain the current operating expenses, there is likely to be greater pressure to increase self-generated revenue to cover expenses. Even though self-generated revenue is projected to increase from 2023/24 to 2025/26 and the Ontario Science Centre was exploring other revenue-generation opportunities, there were no known detailed cost management plans in its 2023/24 business plan aside from continuing its efforts to reduce discretionary spending and scrutinizing recruitment activities.

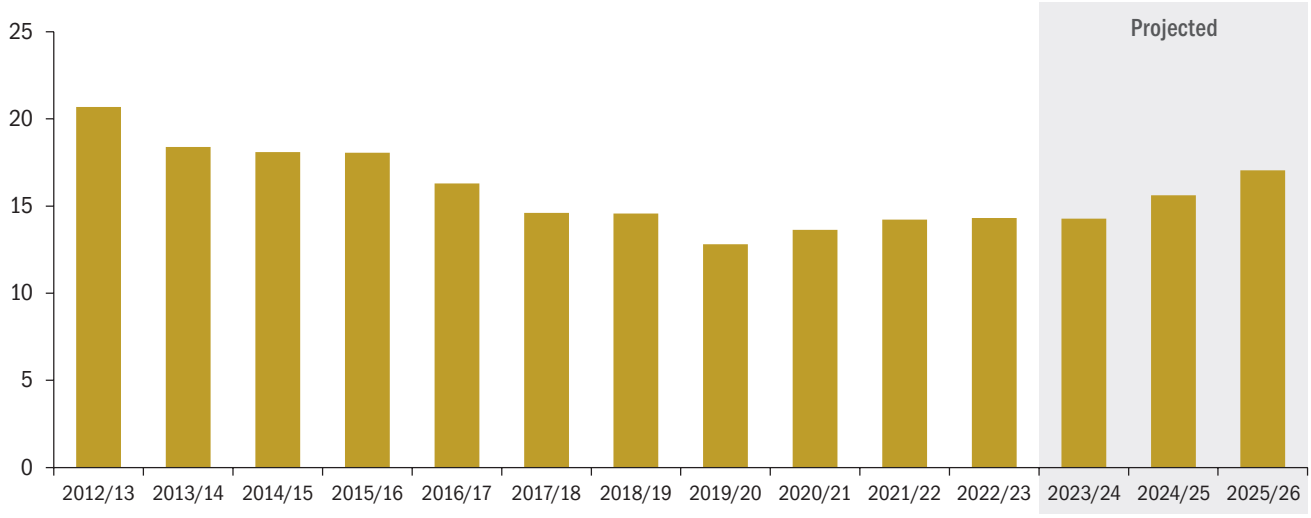
Figure 9: Ontario Science Centre Admissions Attendance, 2012/13–2025/26 (000)

Source of data: Ontario Science Centre

Note: Admissions attendance includes general visitors, school groups and members who visited the Ontario Science Centre exhibits and OMNIMAX theatre. A visitor who purchased a bundle ticket to visit the Ontario Science Centre exhibits and the OMNIMAX theatre is considered as one visitor in the total admissions attendance.

The Ontario Science Centre did not allocate its indirect general operating costs to its various lines of business. When we asked its finance department about allocation of costs, the group told us it did not see value in the exercise. Without allocating all of its costs to its lines of business, it is difficult to assess which lines of businesses are profitable and which need to manage costs more effectively.

5.1.2 Decline in Admissions and Membership



Admission revenues (including general admissions and OMNIMAX theatre sales) were the highest source of self-generated income for the Ontario Science Centre, accounting for about 32% of its self-generated revenues from 2012/13 to 2018/19, the last fiscal year where operations were not impacted by the COVID-19 pandemic. As shown in **Figure 9**, total attendance for the Ontario Science Centre peaked in 2013/14, with 920,000 visitors. Overall, attendance had dropped to 805,000 visitors in 2018/19 (last complete year not impacted by the COVID-19 pandemic). This reflected an overall decrease of 12.5%. The COVID-19 pandemic and provincial response measures severely impacted the centre during the final month of 2019/20, and in 2020/21 and 2021/22. Attendance recovered to about 80% of pre-pandemic levels in 2022/23, and the Ontario Science Centre is projecting moderate increases in attendance for 2023/24 to 2025/26. Admission revenue has remained relatively steady at $5.5 million, excluding the fiscal years impacted by the COVID-19 pandemic. This is because there was a shift to more full-price regular admission tickets versus discounted and group tickets and memberships.

Further, the total number of Ontario Science Centre members has decreased 31% in the past decade, from 20,677 at its peak in 2012/13 to 14,312 in 2022/23, as shown in **Figure 10**. Membership revenue has decreased 25% during the same period, from $2.3 million in 2012/13 to $1.7 million in 2022/23.

The Ontario Science Centre noted changing demographics, the uncertain economic climate and increased competition from other attractions in the City (for example, Ripley's Aquarium, the Royal Ontario Museum, the Art Gallery of Ontario) as factors contributing to lower attendance and membership levels. The science centre also noted that reduced lanes and closures from the construction of the Eglinton LRT at the corner of Don Mills Road and Eglinton Avenue impacted traffic flow and, hence, attendance (including school visits).

Figure 10: Ontario Science Centre Memberships, 2012/13–2025/26 (000)

Source of data: Ontario Science Centre

Note: One membership may include up to six household members (two adults and four children).

We noted that the Ontario Science Centre had not changed its general admission ticket prices since 2010. We reviewed the general admission ticket prices and IMAX ticket prices for science centres across Canada and saw that the Ontario Science Centre had the lowest tickets prices for each category compared to other large Canadian science centres, where adult prices ranged from $23.95 to $34.50. As shown in **Figure 11**, the Ontario Science Centre charged $22 for general adult admission in 2022/23.

Ontario Science Centre management told us they had not requested any general admission ticket price changes from the Ministry in order to continue to be affordable to visitors.

5.1.3 Retail Sales Remained Steady but Venue Rental Decreased 16%

The Ontario Science Centre's revenue from its concessions (gift shops and restaurants) averaged approximately $420,000 from 2012/13 to 2018/19, the last complete fiscal year not impacted by the COVID-19 pandemic. In contrast, the retail operations revenue of Science North (Sudbury), Science World (Vancouver, British Columbia), TELUS Spark Science Centre (Calgary, Alberta) and TELUS World of Science (Edmonton, Alberta) ranged from approximately $1.2 million to $1.7 million in their 2018 or 2019 fiscal years, with numbers of visitors similar to or lower than the Ontario Science Centre. For example, Science North had 65% lower attendance than the Ontario Science Centre in 2018/19 (the last fiscal year when operations were not impacted by the COVID-19 pandemic), but generated about three times more revenue from its gift shops and restaurants than the Ontario Science Centre. Science North had permanent gift shops at both of its locations, totalling over 3,000 square feet. In comparison, the Ontario Science Centre had a kiosk that functioned as a gift shop and had additional retail sales at its membership desks.

There was also a declining trend in Ontario Science Centre facility rental revenue, which decreased from $524,000 in 2012/13 to $441,000 in 2022/23—a 16% decrease—despite having 568,000 square feet of facility space with 183,000 square feet available for rent. In contrast, TELUS Spark in Calgary has a facility size of 153,000 square feet but was able to generate $1.5 million of revenue from facility rentals during its 2019 fiscal year.

Figure 11: General Admission Fees for Canadian Science Centres, as of July 2023

Prepared by the Office of the Auditor General of Ontario

	Ontario Science Centre (Toronto)	Science North (Sudbury)	Science World (Vancouver)	Telus Spark (Calgary)	Telus World of Science (Edmonton)	Montreal Science Centre—Domestic	Montreal Science Centre—International[1]
General Admission							
Child[2]	13.00	21.00	22.50	19.00	18.95	17.50	22.00
Youth/Student[3]	16.00	23.00	26.75	22.00	21.95	18.00	23.00
Adult[4]	22.00	25.00	33.20	26.00	23.95	27.00	34.50
Senior[5]	16.00	23.00	26.75	24.00	21.95	24.50	31.50
OMNIMAX/IMAX Film							
Child[2]	9.00	7.00	n/a[6]	n/a[7]	10.50	9.25	9.25
Youth/Student[3]	9.00	8.00	n/a[6]	n/a[7]	12.95	11.25	11.25
Adult[4]	12.00	9.00	n/a[6]	n/a[7]	14.95	12.75	12.75
Senior[5]	9.00	8.00	n/a[6]	n/a[7]	12.95	11.25	11.25

– lowest price in the category.

1. Montreal Science Centre has separate pricing for international visitors during the peak season, from May to September.
2. Child admission age ranges vary slightly for each centre. At Ontario Science Centre, Science World (Vancouver) and Telus World of Science (Edmonton), child admission is for ages 3 to 12. At Montreal Science Centre, child admission is for ages 2 to 12 years. At Telus Spark (Calgary), child admission is for ages 3 to 17 years. At Science North child admission is for ages 4 to 12 years. At all of these venues, children below the minimum admission age attend for free.
3. Youth/Student admission is for ages 13 to 17 at Ontario Science Centre, Science North, Telus World of Science (Edmonton) and Montreal Science Centre, and ages 13 to 18 at Science World (Vancouver).
4. Adult admission is for ages 18 to 64 at Ontario Science Centre, Science North, Telus Spark (Calgary), Telus World of Science (Edmonton) and Montreal Science Centre, and ages 19 to 64 at Science World (Vancouver).
5. Senior admission is for ages 65 and over at the above noted science centres.
6. OMNIMAX Theatre is temporarily closed at Science World in Vancouver.
7. IMAX (Infinity Dome) is included with general admission or membership at Telus Spark Science Centre in Calgary.

RECOMMENDATION 3

To increase self-generated revenue and improve the financial sustainability of educational programming that promotes science and technology to Ontarians, we recommend that the Ontario Science Centre:

- determine the root causes of declines in attendance and membership;
- analyze ways to increase attendance and membership, through visitor feedback and by contacting former members, and take necessary corrective actions;
- allocate costs to each line of business to effectively measure financial returns from each line of business and focus resources on maximizing self-generated revenues from businesses with the greatest financial return;
- compare its self-generated revenue initiatives (such as retail operations and facility rentals) with peers in other jurisdictions to identify and implement favourable self-generated revenue initiatives;
- research and assess options for admission pricing (including variable pricing models for domestic and international visitors) that would maximize admission revenue while maintaining or increasing attendance levels, especially for domestic visitors and students; and
- make recommendations to the Ministry of Tourism, Culture and Sport on any changes to admission pricing based on the research above, noting the potential impacts of price changes on attendance.

ONTARIO SCIENCE CENTRE RESPONSE

The Ontario Science Centre is committed to transparency and data-driven decision-making. Management will broaden its efforts to collect information and conduct research to improve attendance and membership results.

Management will review general operations and administration to determine if any indirect costs can be allocated to the lines of business. Changes to the chart of accounts will be considered as part of the future state planning efforts.

Management will compare its self-generating revenue initiatives with science centres in other jurisdictions, where appropriate.

Management will conduct research and assess options for admission pricing before seeking any approvals for changes.

5.2 Operations of the Ontario Science Centre

5.2.1 Closure of Pedestrian Bridge Has Increased Operating Costs and Detracted from Visitor Experience

At the time of our audit, Ontario Science Centre's pedestrian bridge, which connects the main entrance building to the building with exhibition halls, was closed to the public. An expected reopening timeline was unknown. See **Figure 12** for a photograph of the bridge and the ravine that it spans.

During a routine building condition assessment in September 2021, a consultant hired by Infrastructure Ontario discovered a problem with the bridge. After spotting visible cracks in the bridge, Infrastructure Ontario advised further investigation. A thorough examination and detailed review commenced in

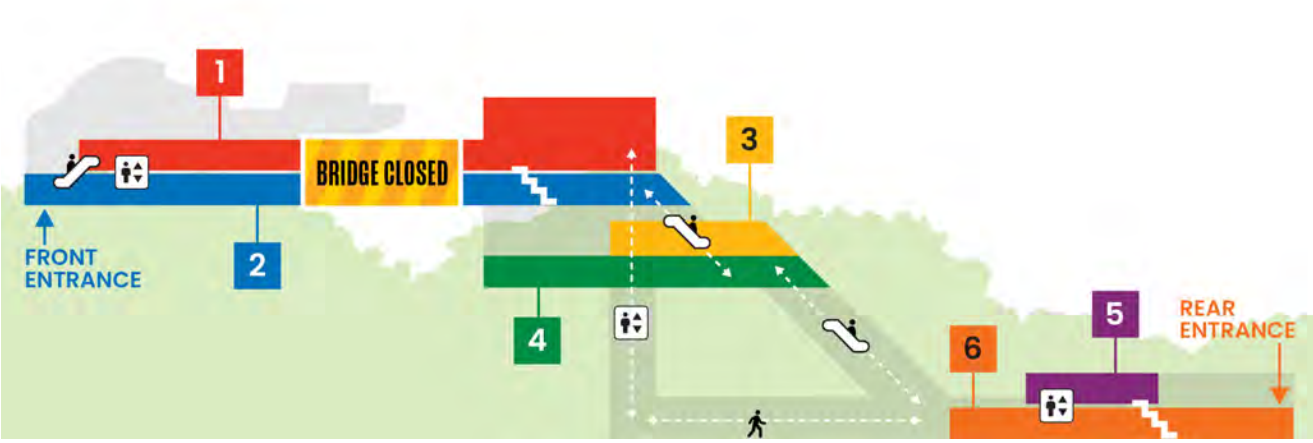


Figure 12: Ontario Science Centre Pedestrian Bridge and Ravine, June 2023

Prepared by the Office of the Auditor General of Ontario

Figure 13: Map of Ontario Science Centre's Six Levels, Showing Entrances and Bridge

Source: Ontario Science Centre

February 2022. The bridge was closed on June 3, 2022, after the review by structural specialists hired by Infrastructure Ontario concluded there was a significant risk of structural failure.

An engineering consultant hired by Infrastructure Ontario started the preliminary work to move forward with stabilizing the bridge. This included requesting permission from the City of Toronto to build an access road. However, Infrastructure Ontario terminated its contract with the company in December 2022, and the permission application was put on hold. The contract was terminated because Infrastructure Ontario had underestimated the amount of funding needed to stabilize the bridge ($16 million). This amount of funding required that an open procurement process be conducted, according to the government's procurement directive. The request for proposal (RFP) for this work closed on February 7, 2023. On February 13, Infrastructure Ontario granted the contract to another engineering firm to conduct a feasibility study to evaluate the options for bridge repair and stabilization. In June 2023, the Toronto and Region Conservation Authority (TRCA) received a request from the firm, on behalf of Infrastructure Ontario, for permission to install scaffolding at the bridge while it completed bridge investigations. At the time of our audit, discussions were ongoing between the firm and the TRCA with respect to the structural condition of the bridge.

Infrastructure Ontario informed Ontario Science Centre management that "the bridge repair is going to take a while because further investigation is needed and it may be necessary to cut trees or impact the environment to get equipment to the site."

Infrastructure Ontario told us that the $16 million contract was to provide a temporary solution to stabilize the bridge. The cost to actually fix the bridge was unknown and would require further investigation. Infrastructure Ontario also told us that, although the lease with the City of Toronto and the Toronto and Region Conservation Authority does not specify any obligation for the Province to fix the bridge, the Province will likely need to stabilize the bridge for safety reasons.

The closure of the pedestrian bridge has impacted operations at the Ontario Science Centre, not to mention the visitor experience. The Ontario Science Centre relocated the public entrance to the rear entrance and is shuttling visitors by bus from the main front entrance to this new rear entrance (see **Figure 13**). The shuttle bus services have increased operating expenditures by $2.4 million for the 10-month period in 2022/23 and is expected to increase by $2.7 million in 2023/24. In addition, the Ontario Science Centre is now unable to host certain events, impacting its self-generated revenues.

Figure 14: Summary of Ontario Science Centre Capital Maintenance Projects, 2016/17–2022/23

Source of data: Infrastructure Ontario

Fiscal Year	# of Funded Projects	Value of Funded Projects ($ 000)	# of Deferred Projects	Value of Deferred Projects ($ 000)*
2016/17	14	2,496	6	694
2017/18	9	8,475	8	1,347
2018/19	2	60	1	73
2019/20	1	65	7	1,489
2020/21	5	851	9	5,398
2021/22	0	0	4	1,510
2022/23	3	59	7	5,779
Total	**34**	**12,006**	**42**	**16,290**

* For projects with repeated funding requests, deferred value is included at the initial requested cost.

5.2.2 Deferred Maintenance Projects at Risk of Critical Failure Were Repeatedly Denied Funding

Based on the most recent engineering assessment conducted in April 2022, the overall amount of deferred maintenance and critical repairs needed for the Ontario Science Centre building is about $370 million. The planetarium at the Ontario Science Centre has been closed to the public since September 2022 because of outstanding capital repairs and ongoing technical issues with equipment that was at the end of its useful life. At the time of our audit, Ontario Science Centre was in the process of purchasing equipment to reopen the planetarium in early 2024 using funding from its exhibit renewals.

Since 2017, some Ontario Science Centre maintenance projects have been deferred by Infrastructure Ontario, resulting in further deterioration of the building. **Figure 14** lists the funded and deferred projects identified as critical in the annual base building condition assessments completed by the property manager. Since 2017, 34 projects with a total cost of $12 million have been approved for funding, while 42 projects totalling over $16 million were deferred due to insufficient funds.

Of these 42 deferred projects, seven projects had been put forward in at least three of the past five years and did not meet the prioritization criteria for funding from the portfolio managed by Infrastructure Ontario on behalf of government. One major request for $4 million related to renewing the water distribution of regular plumbing systems (for example, in kitchens, restaurants, labs, workshops, washbasins and washrooms). This asset has been categorized as at risk of critical failure in each of the last three years. Infrastructure Ontario did not approve the project for funding, citing overall funding limitations for deferred maintenance.

Infrastructure Ontario periodically reviews the building condition audits and base building assessment reports prepared by its third-party property and land management service providers in order to gather information on the condition of the Province's buildings that it manages. Applicable government organizations also develop business cases to justify funding requests for their respective projects. Infrastructure Ontario uses this information to decide whether to approve or deny the requests. Based on the funds available, it selected the highest-priority repairs at the Ontario Science Centre.

RECOMMENDATION 4

We recommend that the Ministry of Infrastructure and the Ministry of Tourism, Culture and Sport, with Infrastructure Ontario, determine the extent

of critical repairs, including repairs to the pedestrian bridge, that need to be undertaken to enable the Ontario Science Centre to operate efficiently and improve the visitor experience during the transition period.

MINISTRY OF INFRASTRUCTURE AND MINISTRY OF TOURISM, CULTURE AND SPORT RESPONSE

While government determines the planned usage of the current Ontario Science Centre site, Infrastructure Ontario will continue to ensure the health and safety of operating the Ontario Science Centre and employ its asset management prioritization for projects that are necessary prior to Ontario Science Centre relocation. During the transition period the Ministries and Infrastructure Ontario will ensure that areas open to the public and staff continue to remain safe and will explore ways to ensure that the Ontario Science Centre can continue to operate efficiently and prioritize visitor experience.

5.2.3 IT Infrastructure Is Inadequate at Ontario Science Centre

The Ontario Science Centre's information technology (IT) team identified areas of improvement and submitted funding requests to the Ministry for eight projects between 2022/23 and 2023/24, totalling approximately $3.4 million.

Only two projects, totalling $0.63 million, which relate to the migration to Microsoft Office 365 and on-site server updates, were approved for funding. The projects that were denied funding by the Ministry relate to updates to the financial system, ticketing system, telecommunication system, and the replacement of network cables and printers. These projects address areas that are critical to business or address asset integrity risks. According to the Ontario Science Centre, all point-of-sale (POS) machines and connected printers reached the end of their useful life in 2017 and some technology used for exhibits has been outdated for years.

If the existing systems and physical IT assets are not updated as needed and are continually used after their end-of-life, operations—such as ticketing, admissions, program delivery and exhibits—could be at risk. According to Ontario Science Centre management, the science centre's ability to collect data for research and development is also limited by outdated IT systems.

RECOMMENDATION 5

We recommend that the Ministry of Tourism, Culture and Sport (Ministry), based on planned usage of the current Ontario Science Centre site, prioritize funding and implementation of information technology projects that are critical to the Ontario Science Centre's business operations during the transition period.

MINISTRY OF TOURISM, CULTURE AND SPORT RESPONSE

The Ministry administers a Capital Repair and Rehabilitation program to support the capital repair needs of its diverse group of entities. The Ministry will continue to assess the Ontario Science Centre's critical capital projects through the risk-based prioritization framework of this program and to support the agency as it embarks on this opportunity.

5.2.4 Environmental Sustainability Commitments Were Vague, Except for Exhibit Fabrication Enterprise

We reviewed the Ontario Science Centre's 2023/24 business plan and noted that it outlines its commitment to the environment "through the use and conservation of natural resources … and [by] supporting the Province's initiatives to conserve energy and water and wisely use air and land resources to benefit the environment, the health of our community and the health of our economy for present and future generations." However, we noted that the Ontario Science Centre did not have a comprehensive environmental strategy.

In contrast, the business plan for Science North highlights environmental sustainability through implementation of a net-zero strategy (net-zero emissions by 2050), removal of all single-use plastics, offering sustainable and healthy food options, and engaging youth in climate action through programming that focuses on climate change, including hands-on experiments and exhibits.

We found that the exhibit-making department at the Ontario Science Centre (see **Section 2.2.4**) was more progressive in its sustainability commitments. Since 2011, the design, graphic production and fabrication department has been implementing environmentally sustainable practices such as using locally sourced materials; conducting research into new sustainable materials and their performance in exhibitions; eliminating the use of solvent-based paints; using biodegradable substrate: replacing plastic laminate products with recyclable laminates; eliminating the use of paints with volatile organic compounds; recycling scrap; using energy-efficient exhibit lights; and shutting down exhibits during non-operating hours. In addition, the Ontario Science Centre offers free electrical vehicle charging stations to visitors and staff; has worked with a vendor to implement changes in food services such as the use of recyclable containers and utensils, and elimination of plastic straws; and is committed to the use of LED lighting and sustainable materials on new flooring.

RECOMMENDATION 6

To minimize the environmental impact of its operations, we recommend that the Ontario Science Centre:

- develop and implement a strategy to continually improve the environmental sustainability of its operations; and
- collaborate with Science North to explore environmental best practices that can be implemented at both science centres.

ONTARIO SCIENCE CENTRE RESPONSE

The Ontario Science Centre is implementing a comprehensive environmental strategy that improves our current and future operations and leverages our platform to engage our core audiences in climate-focused initiatives.

As an early step, the Ontario Science Centre has joined the Association of Science and Technology Centres (ASTC) Seeding Action Network, which is a network of institutions committed to prioritizing planetary health through content, exhibits, and programming; community relationships and partnerships; and operational decisions. The three components of membership are an annual self-assessment to identify achievements and areas for growth and set goals for future; knowledge-sharing in forums such as working groups, communities of practice; and strengthening public programming, partnerships and institutional impact through proactively seeking out opportunities to enhance planetary health-focused decisions.

5.3 Exhibits and Programs

A 2019/20 survey (the latest year with full survey feedback) asked visitors to rate their overall satisfaction. Of the 1,988 respondents, 49% were "satisfied," 41% were "moderately satisfied" and 10% were "not satisfied."

We surveyed members of the Science Teachers' Association of Ontario. Of the 314 teachers who responded, 184 teachers indicated that they had visited the Ontario Science Centre in the last 10 years. Of the respondents, 78% of the teachers said they were "very satisfied" with their overall experience while 21% said they were "somewhat satisfied" with their visit. Also, 82% of the teachers who responded said the Ontario Science Centre's school programming was effective in engaging students and supporting Ontario's science curriculum, while 17% said the programming was

"somewhat effective." In addition, 67% of the teachers that responded said the Ontario Science Centre's exhibits were effective in supporting hands-on learning outlined in Ontario's science curriculum while 29% said the exhibits were somewhat effective.

While overall visitor satisfaction has been positive, based on the above surveys, we found that there was still room to improve the visitor experience.

5.3.1 Many Science Exhibits Have Not Been Changed for Over Eight Years

Exhibits are integral to carrying out the science centres' key objective to stimulate public interest in science and technology. **Appendix 6** shows the number of exhibits in the various exhibition halls at each level of the Ontario Science Centre. We noted that many of the permanent exhibits at the Ontario Science Centre have not changed since 2015—that is, for over eight years. As shown in **Figure 15**, the average age of exhibits at the time of our audit was about 14 years. Only the Science Arcade, KidSpark, HotZone, Community Reef and Weston Family Innovation Centre exhibitions have been changed significantly since 2018.

We reviewed the comments of the 734 respondents of the 2019/20 survey who were moderately satisfied or not satisfied with their visit to the Ontario Science Centre and noted that over two-thirds (517) of these respondents noted the following:

- exhibits were out-of-service or closed due to aging technology;
- exhibits or science content was outdated; or

Figure 15: Average Age of Permanent Exhibits at Ontario Science Centre as of March 2023

Source of data: Ontario Science Centre

Name of Exhibition Hall	Opening Year	Significant Renewal Year	Age of Exhibit/ Exhibition Hall
Great Hall	1969	–	n/a*
Mindworks Corridor	1991	–	32
Space Hall	1969	1992	31

Average Age			**14**

* Great Hall hosts travelling exhibits and has no permanent exhibits.

- other factors were to blame, such as overcrowding and exhibits not geared toward adults.

5.3.2 Not All Exhibits Were Always Evaluated for Effectiveness

In order to maintain its relevance in science and technology and assure attendance levels, the Ontario Science Centre exhibits must generate public interest. If the science content of the exhibits is not updated and the exhibits are not modernized regularly to reflect innovations in science and technology, this may impact the public's interest.

Our audit found that the Ontario Science Centre used visitor satisfaction surveys to evaluate the effectiveness of its exhibits. We noted, though, that the data collected in the surveys was either inconsistent or incomplete. In our review of the centre's visitor satisfaction surveys from 2012/13 to 2021/22, we found that the survey questions from 2012/13 to 2016/17 did not ask the visitors to rate permanent or temporary (travelling) exhibits. Also, although the survey questions from 2017/18 to 2021/22 did ask the visitors to rate some permanent and temporary (travelling) exhibits, not all exhibits at the Ontario Science Centre were identified to be rated, with the exception of 2018/19, when all temporary (travelling) exhibits were identified to be rated. In 2022/23, the Ontario Science Centre did not conduct visitor satisfaction surveys because the individual responsible for surveys was on leave.

We also noted that there was limited assessment of the feedback received from surveys by the Ontario Science Centre, resulting in little improvement to its existing exhibits. Further, the science centre did not have a comprehensive strategy for the regular renewal of exhibits and the introduction of new exhibits that took visitor feedback into consideration.

The effectiveness of exhibits is most commonly evaluated through visitor satisfaction surveys. However, we noted that Science North has been using other forms of evaluation, such as observational behavioural analysis through video recording, focus groups and interviews. Collecting visitor feedback in a range of ways could help the Ontario Science Centre to understand visitors' perceptions and gauge interest in its exhibits. Although the Ontario Science Centre attempted to measure the effectiveness of a few of its exhibits over the years, it did not have a way to track the number of visitors to specific exhibits, or the length of their stay at each exhibit. Such information could enhance the ability of the centre to determine the public's interest and the relative effectiveness of exhibits.

RECOMMENDATION 7

To ensure exhibits are up to date with current trends in science and technology, and to improve visitor experience, public interest and understanding, we recommend that the Ontario Science Centre:

- work with the Ministry of Tourism, Culture and Sport to develop a comprehensive plan for the regular renewal of exhibits and the introduction of new exhibits, taking visitor feedback into consideration; and
- conduct research on how other science centres and cultural attractions, such as museums, track visitors' perception and interest in exhibits.

ONTARIO SCIENCE CENTRE RESPONSE

Management is planning to implement a new multi-year renewal strategy and plan for exhibits and experiences beginning in 2024/25 that takes into consideration visitor feedback and asset condition. Management will use the rolling multi-year plan to present incoming exhibitions and films that supplement and complement the permanent offerings.

Management agrees to enhance its research through various methodologies and collaborating with others.

5.3.3 Many Exhibits Did Not Depict Ontario's Role in Science and Technology

We determined that 371 (92% of the exhibits we reviewed) did not depict Ontario's role in furthering science and technology. A legislated objective for the Ontario Science Centre is "to depict the role of Ontario in the furtherance of science and technology." It would be impactful and inspiring for students and the public to learn more about Ontario's role. The Ontario Science Centre could reach out to provincial ministries that are conducting and funding science and technology research (such as the Ministry of Environment, Conservation and Parks; Ministry of Natural Resources and Forestry; Ministry of Economic Development, Job Creation and Trade; and the Ontario Centre of Innovation) to showcase their interesting and impactful research and development.

RECOMMENDATION 8

To stimulate public interest in science and technology, and in Ontario's role in furthering these fields, we recommend that the Ontario Science Centre research the key Ontario contributions that can be used as exhibits to show Ontario's role in furthering science and technology.

ONTARIO SCIENCE CENTRE RESPONSE

Management will broaden its current relationships and seek new partnerships that advance the Ontario Science Centre's ability to showcase Ontario's role in furthering science and technology.

5.4 Performance Measures Did Not Include Key Mandate Items

We reviewed the performance measures in the Ontario Science Centre's 2019/20–2023/24 business plans and compared them to the centre's legislated mandate and key priorities in the minister's mandate letter that aligned with its mandate. From our review, we noted that some key items of the legislated mandate and key priorities were not being measured. For example, there were no measures for delivering programming that provides young people with skills for education and careers in science, technology, engineering and mathematics (STEM). Further, there were no measures concerning collaboration; data collection; depicting the role of Ontario in science and technology; or collecting, manufacturing and selling exhibits. In addition, there were no performance measures to assess how well exhibits, educational programs or travelling exhibits improved science literacy. None of the measures listed in **Appendix 7** for the Ontario Science Centre (using 2022/23 as an example) applied performance targets to the exhibits or the programming that was being delivered.

We also compared the performance measures in the Ontario Science Centre's 2019/20–2023/24 business plans to the 2022/23 performance measures of the Canada Agriculture and Food Museum, the Canada Aviation and the Space Museum, and Canada Science and Technology Museum (collectively known as "Ingenium"). In our review, we noted that some relevant performance measures used by Ingenium were not used by the Ontario Science Centre. For example, the Ontario Science Centre did not measure annual active memberships; general and tourism market share among the national museums and science centres; and percentage of budget spent on exhibition renewals.

We reviewed the Ontario Science Centre's annual reports from 2017/18 to 2021/22 (most recent available) and noted that when targets were not achieved for performance measures such as physical attendance, social media reach and virtual event engagement, there was no evidence of any remediating action to address the underachievement. We reviewed the Ontario Science Centre's 2019/20–2023/24 business plans and noted that there was also no benchmarking against other science centres to assess how its performance compares with other centres.

RECOMMENDATION 9

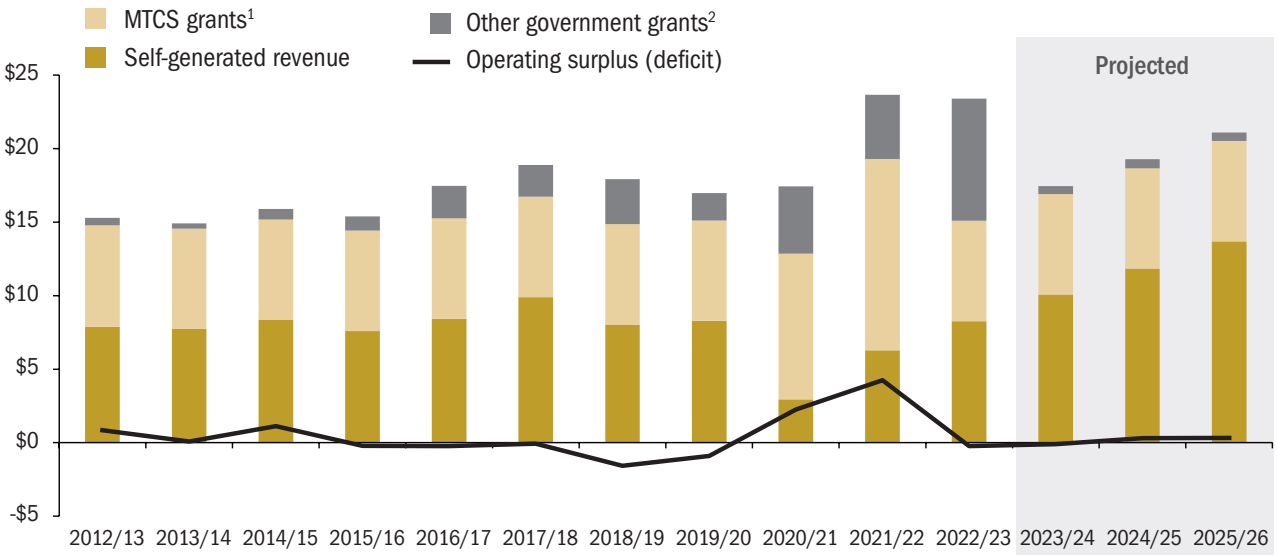
To improve performance measurement, transparency and accountability of its organizational activities, we recommend that the Ontario Science Centre:

- develop performance measures to assess progress against all legislated mandates;
- publicly report on its performance against its established measures and targets;
- document in annual reports any planned actions to be taken when established targets are not met; and
- include a discussion of peer benchmarking with other science centres in its business plans.

ONTARIO SCIENCE CENTRE RESPONSE

Management reports its performance against established measures and strategic priorities in the annual report, which is a public document. It will review the measures and priorities to assess whether any key legislated mandates are not addressed.

Management will include planned actions to be taken when targets are not met and explore opportunities to include a discussion on peer benchmarking in its business plans.

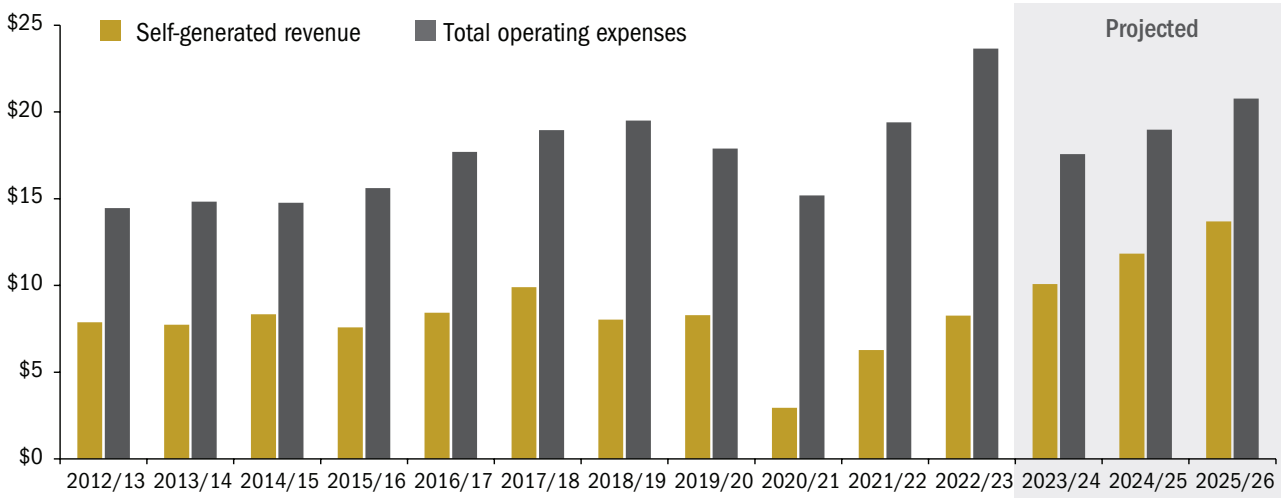


6.0 Detailed Audit Observations—Science North

6.1 Financial Sustainability of Science North

The Ministry of Tourism, Culture and Sport (Ministry) provides an annual operating grant of $6.83 million to Science North, which accounted for 36% to 46% of its total revenue between 2012/13 and 2018/19 (the last complete fiscal year not impacted by the COVID-19 pandemic). See **Figure 16** for details. The centre also receives other grants for specific initiatives from various provincial ministries, the federal government and the municipal government. Science North's revenue also comes from self-generated activities such as admission and membership, external sales of

Figure 16: Science North Self-Generated Revenue, Government Grants and Operating Surplus/Deficit, 2012/13–2025/26 ($ million)



Source of data: Science North

1. Ministry of Tourism, Culture and Sport (MTCS) grants revenue includes operating grant and the Pandemic Relief Fund received in 2020/21 and 2021/22.
2. Other government grants include funding from the Ministry of Education to support educational school programs and funding from the Ministry of Tourism, Culture and Sport, Government of Canada, City of Greater Sudbury, and City of Kenora for special initiatives.

Figure 17: Science North Self-Generated Revenue and Total Operating Expenses, 2012/13–2025/26 ($ million)

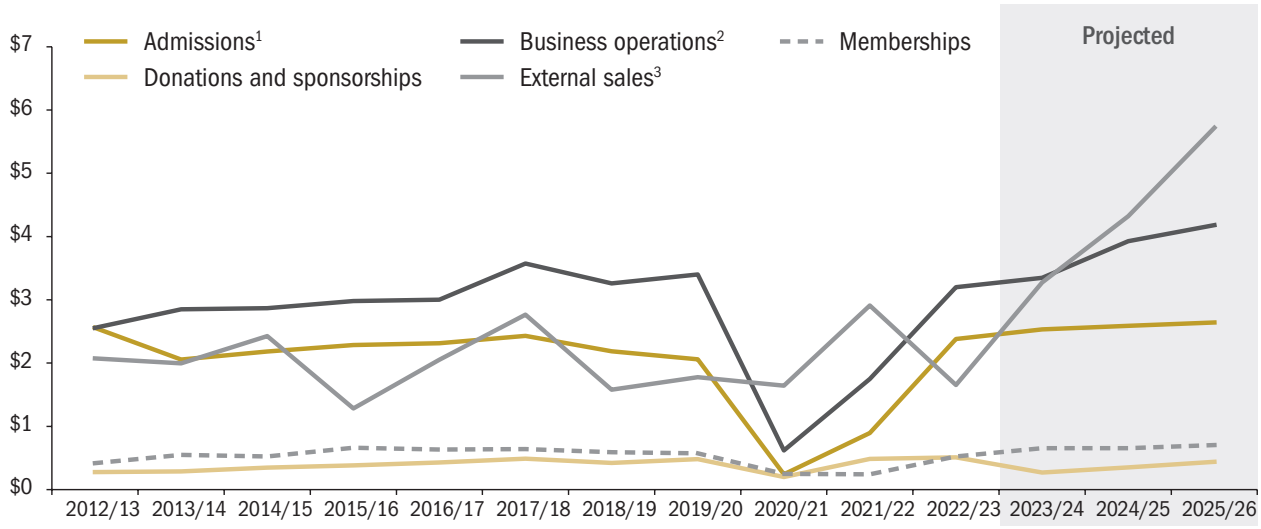
Source of data: Science North

exhibits, educational programs, facility rentals, donations and sales from concessions.

In 2018/19, total provincial government funding accounted for 46% of Science North's total operating revenue of $18 million. Science North's reliance on government funding was largely due to its revenues from self-generated activities not being sufficient to fully sustain its operations. **Figure 17** compares the total revenue from self-generated activities to the total operating expenses of Science North from 2012/13 to 2025/26. Science North's self-generated revenues have recovered to pre-pandemic levels.

Science North projected its operating expenses to drop from $23.6 million in 2022/23 to $17.6 million in 2023/24. The $6 million decrease was from anticipated lower costs for school programs, fundraising expenses, and overall expenses related to general operations. For example, Science North projected a decrease in educational program delivery expenses from $6.5 million in 2022/23 to $2.3 million in 2023/24. According to Science North, over $4 million of expenses related to educational programming in 2022/23 were associated with grant funding specific for that year, which the centre did not receive in 2023/24.

Similarly to the Ontario Science Centre, Science North does not allocate its indirect operating costs to its various lines of business. Consequently, it was difficult for us to assess which business lines were profitable and could help provide greater funding flexibility to the agency, and in which areas costs could be managed more effectively. **Figure 18** delineates the self-generated revenue at Science North by line of business. We noted that its projected external sales for the years 2023/24–2025/26 may be unrealistic; revenue from external sales for 2022/23 was $1.65 million and was projected to reach $5.72 million by 2025/26, a 247% increase. To increase external sales, Science North plans to conduct extensive research into target markets for turnkey exhibits and travelling exhibitions, and develop focused marketing strategies for its export products and services, as noted in its 2023/24 business plan.

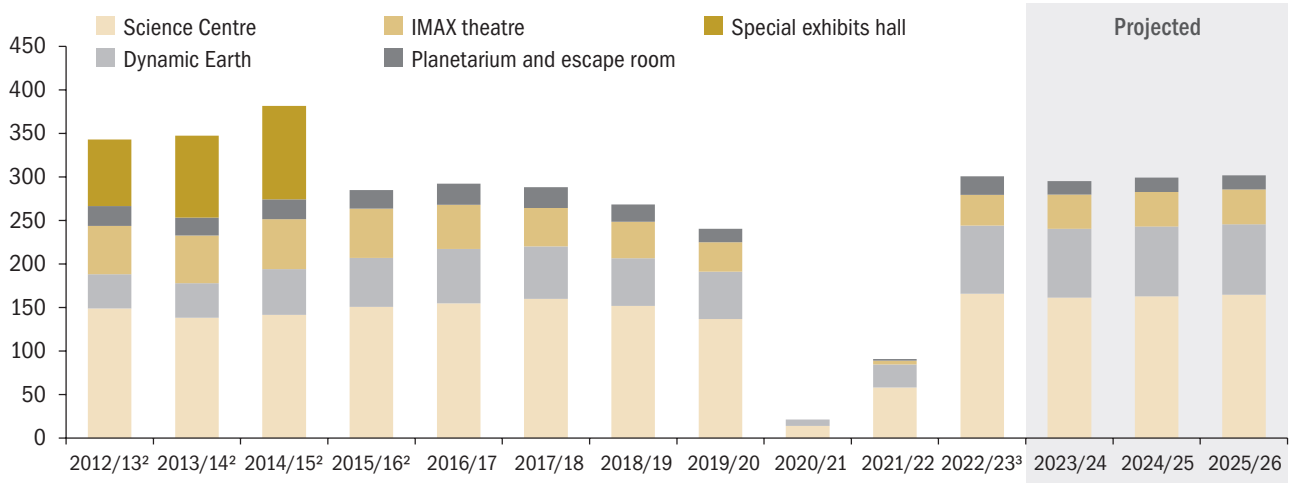


Attendance and Membership Have Declined

Admission revenue was, generally, the highest source of self-generated revenue for Science North, accounting for about 28% of its self-generated revenue between 2012/13 and 2018/19 (the last fiscal year when operations were not impacted by the COVID-19 pandemic).

In 2018/19, total attendance for Science North was 268,000. As shown in **Figure 19**, total attendance for Science North declined by 8% from a peak of 292,000 visitors in 2016/17. In 2022/23, attendance increased by 3% from pre-pandemic levels. Science North projected attendance to remain at this level from 2023/24 to 2025/26. The COVID-19 pandemic and provincial response measures severely impacted the centre in 2019/20, 2020/21 and 2021/22. Science North was

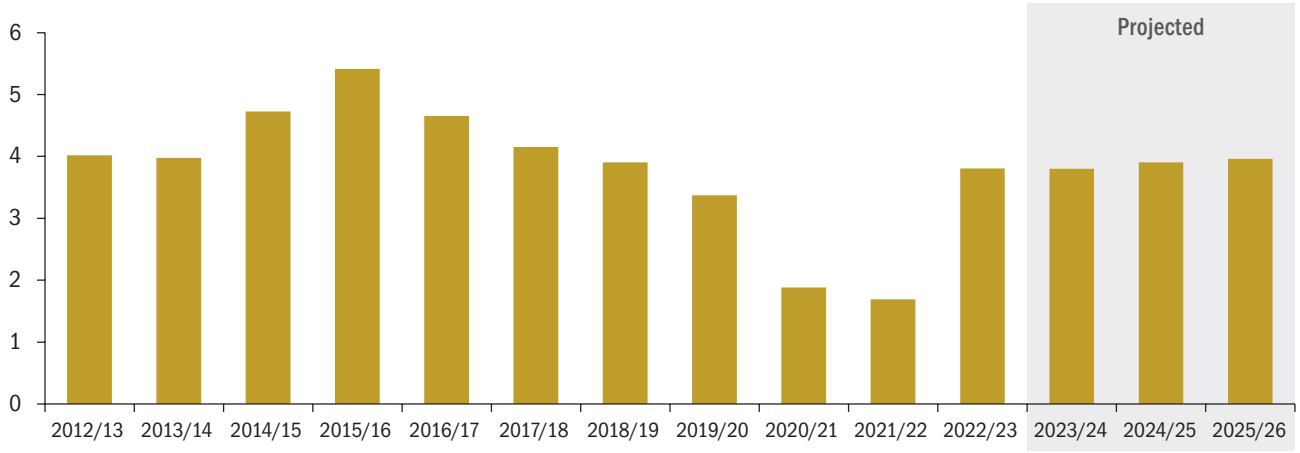
Figure 18: Science North Self-Generated Revenue by Lines of Business, 2012/13–2025/26 ($ million)



Source of data: Science North

1. Admissions revenue includes general admission to Science North, Dynamic Earth, IMAX theatre, planetarium, special exhibit halls, and the escape room.
2. Business operations include revenue from concessions (food and retail), facility rentals, film production services, parking, programming (educational and recreational), interest, and other income.
3. External sales include exhibit and theatre production sales and rentals to Canadian and international clients.

Figure 19: Science North Admissions Attendance,[1] 2012/13–2025/26 (000)



Source of data: Science North

1. Admissions attendance includes general visitors, school groups and members that visited Science North, Dynamic Earth, IMAX theatre, planetarium, special exhibit halls, and the escape room. A visitor who attended multiple attractions using a bundle ticket is counted separately in the attendance for each attraction visited.
2. Beginning in 2015/16, Science North changed its ticketing practices by requiring only one ticket for the permanent exhibits at the science centre and special exhibitions. Previously, two separate tickets were required, inflating attendance numbers.
3. In 2022/23, Science North changed its ticketing practices at Dynamic Earth by requiring two separate tickets for the exhibits and underground mine tour. Previously, only one ticket was required, inflating attendance numbers in 2022/23. The estimated total admissions attendance in 2022/23 is 276,000 if only one ticket was required for the exhibits and underground mine tour at Dynamic Earth.

Figure 20: Science North Memberships, 2012/13–2025/26 (000)

Source of data: Science North

initially closed from March 13, 2020 to July 11, 2020 due to public health restrictions associated with the COVID-19 pandemic. Science North closed again on December 23, 2020 due to further restrictions, and reopened on July 2, 2021. These closures had substantial impacts on Science North's attendance and associated revenues during this period.

According to Science North, the decrease in attendance is also attributable to a decrease in visitors to the IMAX theatre, where attendance fell by 26% from 2015/16 to 2018/19. A 2019 assessment commissioned by Science North on the decline in attendance for the IMAX theatre noted one or more potential causes for the decline: less desire from the Northern Ontario market to view films at the theatre; film content being perceived as unappealing; and fewer show times, resulting in fewer viewing opportunities. At the time of our audit, Science North was showing more mainstream movies in its IMAX theatre.

From 2011/12 to 2018/19, Science North kept its general admission ticket prices stable (with $1 increases). Then, in response to the pandemic, it decreased ticket prices for all categories from 2019/20 to 2021/22. For example, adult tickets were lowered to $18 from $26. In 2022/23, admission prices were returned to their pre-pandemic levels, as shown in **Figure 2** (cited in **Section 2.2**).

Membership revenue accounted for about 7% of Science North's self-generated revenue between 2012/13 and 2018/19 (the last complete fiscal year where operations were not impacted by the COVID-19 pandemic). As shown in **Figure 20**, memberships peaked in 2015/16, at 5,413. The number of members in 2022/23 was 3,805, a 30% decline. Revenue from memberships has mirrored membership levels, peaking in 2015/16 at $660,000.

RECOMMENDATION 10

To increase self-generated revenue and improve the financial sustainability of educational programming that promotes science and technology to Ontarians, we recommend that Science North:

- allocate costs to each line of business to effectively measure financial returns from each line of business and maximize self-generating businesses with the greatest financial return;
- determine the root causes of declines in attendance and membership;
- analyze ways to increase attendance and membership, through visitor feedback and by contacting former members, and take necessary corrective actions;

- research and assess options for ticket prices (including variable pricing models for domestic and international visitors) that would maximize admission revenue while maintaining or increasing attendance levels, especially for domestic visitors and students; and
- compare its attendance and membership revenue-generating initiatives with its peers in other jurisdictions to identify and implement best practices in such initiatives.

SCIENCE NORTH RESPONSE

Science North agrees with the recommendations and, in leveraging new technology, will improve its current process for allocating appropriate costs to lines of business where able.

Science North will regularly assess and analyze results for continuous learning and improvement. Resource dependent, we agree to review declines in attendance and membership and analyze ways to subsequently improve attendance and membership.

Science North will conduct a survey of its membership and assess how their responses correlate to membership acquisition and retention. We will set a process in place to annually survey members who do not renew to determine the reasons for their non-renewal.

Science North will review its ticketing options by building off the successes of strategies to date, including variable ticket pricing for our signature Halloween event (Pumpkinferno), revised dual ticketing options implemented at Dynamic Earth, and the dual Kivi Park promotion for local memberships.

We will review our strategies in order to implement changes that can help increase our admission and membership revenue, including comparing our initiatives to others. Comparisons will take into consideration Science North's location within the Northern Ontario market, differentiating its selling proposition from peers in other jurisdictions who may be in a metropolitan/downtown location. We will further leverage our memberships with the Canadian Association of Science Centres and the Association of Science and Technology Centers to research best practices.

6.2 Capital Planning and Analysis for Major Expansion Initiatives

6.2.1 COVID-19 Pandemic and Planning Failures in the Go Deeper Project Led to Significant Cost Overruns and Delays

"Go Deeper" is an expansion project at Dynamic Earth, Science North's model mine. The objective for the Go Deeper expansion is to showcase modern mining and the future of mining. There are two major components of the expansion:

- a new 2,583-square-foot underground multi-purpose theatre for shows, programming, special events and functions; and
- a display of drifts (openings made in the mine), which would exhibit modern mining equipment.

We observed that the Go Deeper expansion project has run into significant delays and cost overages. In 2019, Science North management received Board approval to proceed with the expansion project, setting an initial completion date of February 2023. A first cycle of underground construction was planned to start in fall 2021, followed by a second cycle of construction in 2022—to install mining equipment, the multi-purpose theatre space, mining shows in the theatre space, and exhibits. However, the new underground multi-purpose space has been delayed and is now expected to be completed by winter 2024. As of September 2023, the excavation was completed to open a new area of the mine.

The delay was mostly due to the COVID-19 pandemic, the City of Greater Sudbury identifying additional requirements for site remediation, which delayed municipal permit approvals, and a lack of funding available. The permit application was submitted on March 29, 2022 and approved in July 2022.

As of October 2023, Science North had spent about $5 million on the Go Deeper project. The initial capital budget for the Go Deeper project was $5 million, set in October 2020. As of October 2023, the budget had increased to $15 million—triple the initial cost projections. **Figure 21** shows a timeline of the revisions in the capital budget.

The cost increase has occurred despite a reduction in the project's scope. The amount of seating, size of the catering area and washrooms in the theatre have all been scaled back. **Figure 22** summarizes the various components of the capital budget for the Go Deeper project and their status as of October 2023.

The capital budget increases were largely due to increases in excavation and construction costs—from $2.3 million in 2020 to $11.2 million as of October 2023. Based on our review, the excavation and construction costs were higher than initially estimated because some costs were not included in the initial budget, such as waste rock and waste water removal, winter excavation costs, site remediation, as well as legacy issues such as fixing roadways to meet the requirements of the City of Greater Sudbury.

Our review determined that the Go Deeper project lacked appropriate capital planning when it was initiated. For example, no reliable third-party estimate, such as a "Class C" estimate, was completed during the planning phase to assess the reasonableness of the cost projections. A "Class C" estimate is a conceptual cost estimate based on the square-foot costs of similar construction and is expected to be accurate within 30% of actual costs.

Science North had not completed a major construction project since 2003, when the existing building for Dynamic Earth was constructed. Despite this, before initiating the Go Deeper project, Science North management did not consult with any construction experts. Management told us that a more reliable cost estimate would have been produced if a consultant with an engineering and construction background was engaged during the planning phase.

During the planning phase of the project, Science North failed to involve its project management team. While the project management team is responsible for managing projects, including co-ordination with internal and external stakeholders, managing the progress and deadlines of projects, and resolving any issues that might arise during the projects, it did not have the capacity to manage a large project such as the Go Deeper project. At the time of our audit Science North was in the process of recruiting a Director with project management experience.

Even more importantly, Science North's project team did not prepare a business case that included a detailed breakdown of cost projections for its Board to review. Instead, only a concept plan was prepared, which focused on describing potential visitor experiences and had minimal information about the capital costs. The concept plan, furthermore, did not assess the potential financial impact of the project on the revenues and profitability of Dynamic Earth. In addition, we found that Science North did not evaluate the potential risks for the project or how to mitigate those risks.

For its part, the Board approved the project based solely on the concept plan. As of September 2023, the Go Deeper project had received $900,000 in donations from private sources and $3.6 million in grants from different federal ($2.3 million), provincial ($1.0 million) and municipal ($0.3 million) government organizations.

Contractor Was Awarded Excavation Contract After Committing to a Sponsorship Agreement for the Go Deeper Project

The excavation contract for the Go Deeper project was given to a mining company after it committed to providing $1.5 million in conditional sponsorship funding from 2022 to 2026 toward the Go Deeper project in the form of five annual payments of $300,000 to be received in June of each year. As of September 2023, Science North had received $600,000 from the company with $900,000 remaining to be paid. The funding from the mining company was received in two payments of $300,000 in February and June 2023. The sponsorship agreement allows for the termination of the contract if the company ceases to carry on its business.

Figure 21: Timeline of Revisions to the Capital Budget for the Go Deeper Project

Source of data: Science North

Date	Capital Budget ($ million)	Capital Budget Increase ($ million)	Reason for Increase
October 2020*	5.0	n/a	n/a
June 2021	6.7	1.7	Two new components (Northern Outreach and Digital Game).
June 2022	7.4	0.7	Projected construction costs increased due to inflation and labour for excavation and construction phase, plus new component (Pathways Fund).
July 2022	10.2	2.8	Various costs (not previously included) for excavation and construction phase, such as allowance for waste water removal, waste rock removal, allowance for winter excavation, allowance for construction inflation and scope changes.
March 2023	11.9	1.7	Changes in construction scope and allowance for costs such as site remediation in the excavation and construction phase.
June 2023	13.9	2.0	Changes in the scope affecting the excavation and construction phase.
August 2023	14.9	1.0	Projected construction costs increased according to Class A estimates (based on completed construction drawings).
October 2023	15.0	0.1	Projected costs increased for construction, administration, Chasm Elevator Show, Digital Game and Northern Outreach components, offset by projected cost decrease for the Regreening Film component due to estimated cost savings.
Total Budget Increase		**10.0**	

* Initial capital budget.

Figure 22: Components of the Capital Budget for the Go Deeper Project, October 2023

Source of data: Science North

Component	Capital Budget ($ million)	Status as of October 2023
Excavation and Construction	11.2	In progress. Estimated completion date is winter 2024.
Big Impact	1.1	In progress. Estimated completion date is winter 2024.
Digital Game	1.0	In progress. Estimated completion date is November 2023.
Innovation Gallery	0.5	Paused as of June 30, 2023. Estimated completion date is spring 2025.
Regreening Film	0.5	Paused as of June 30, 2023. Estimated completion date is summer 2024.
Administration Costs	0.3	This is an additional cost incorporated in the total capital budget. It is not a separate project component.
Northern Outreach	0.3	In progress. Estimated completion dates are March 2025 for Part 1 and August 2025 for Part 2.
Chasm Elevator Show	0.1	Complete.
Total	**15.0**	

The contract was single-sourced using an exemption approved by the CEO without Board input as Science North's procurement policy provides unlimited purchasing authority to the CEO. According to Science North, the company provided exceptionally advantageous conditions since the mining company was previously a partner in the design of the project and the work required was highly specialized.

According to the sponsorship agreement, the contractor gets "recognition" (such as name displayed on donor wall, logo on website, speaking opportunities at campaign launch and opening events of the Go Deeper project) and Science North is required to provide the following "benefits" to three local First Nation communities for a period of 10 years: in-community STEM path summer camps; internship opportunities; family membership to community members; and community appreciation days.

To be precise, Science North simultaneously negotiated two contracts with this mining company—one for the sponsorship itself and one for excavation work on the Go Deeper project. The sponsorship contract was executed in June 2022 while the excavation work contract was executed in May 2022.

The mining company was paid about $2.0 million by Science North for the excavation work as of June 2023, resulting in a net payment of $1.4 million after accounting for the sponsorship payments of $600,000.

6.2.2 Science North Had Not Yet Prepared a Business Case or Secured Funding for the $90 Million Northwestern Ontario Expansion Project

In 2010, Science North established a 2,500-square-foot office in Thunder Bay, from which its staff plan and deliver science-related outreach programs for people in northwestern Ontario. As discussed in **Section 6.3.2**, outreach consists of different programs, such as visits to First Nations schools; community events; school and public programs; e-workshops; and science summer camps.

In 2017, Science North hired a consultant to conduct a market analysis of establishing a permanent science centre in Thunder Bay. A key finding of the stakeholder engagement phase of the market analysis was that the establishment of a permanent science centre would draw new partners and interest to Science North.

To determine the financial implications of a potential expansion, Science North engaged an accounting firm in May 2019 to conduct a feasibility study of the proposed expansion in northwestern Ontario. The feasibility study projected attendance under three different scenarios for a science centre in Thunder Bay. Expansion of an existing location in Kenora was also included in the feasibility study. The feasibility study concluded that northwestern Ontario has numerous cultural and entertainment activities but science-based education and activities are missing, other than the outreach programs offered through Science North's satellite programming.

Based on the feasibility study Science North sought Board approval to build a permanent 34,000-square-foot science centre in Thunder Bay and double the existing 4,000-square-foot Lake of the Woods Discovery Centre owned by the City of Kenora. Science North projected the capital costs for its northwestern Ontario expansion based on preliminary estimates from a construction consulting firm: $75 million for the Thunder Bay science centre and $15 million for the Kenora science centre. According to Science North estimates, the annual operating budget for the new facilities would total $5.5 million. At the time of our audit, Science North was in discussion with the Ministry to request $4 million in annual operating funding for these facilities and projects. Management projected that self-generated revenue would cover the remaining $1.5 million. The Ministry had not assessed the feasibility and financial sustainability of the expansion to Thunder Bay and Kenora.

At the time of our audit, Science North management had not yet prepared a business case for either of these proposed centres. Business cases lay out critical factors for project planning and management, such as a cost/

benefit analysis of all options; potential risks and mitigation plans; and projected societal and environmental impacts.

The Board provided only conditional approval for the projects. Final approval was contingent, based on: (1) the schematic designs for the projects being completed and presented to the Board; (2) Science North securing a commitment of $3 million in operating funding from the Province; and (3) securing capital funding for the construction and development of the projects. At the time of our audit, only the schematic designs for the projects had been presented to the Board. Science North had not met the other two criteria for Board approval. It had not yet secured capital funding for the construction and development of the projects and a commitment from the Province on operating funding.

RECOMMENDATION 11

To ensure large capital projects, including the Go Deeper and northwestern expansion projects, are appropriately approved by its Board and completed without delays and cost overruns, we recommend that Science North:

- prepare comprehensive business cases that ensure key risks and mitigation strategies are identified and assessed, and present these to the Board for approval before initiating major projects;
- consult with relevant experts and stakeholders during the planning phase of construction projects;
- co-ordinate with the relevant government authorities during the planning phase to obtain regulatory approvals;
- assign the management of projects to those with knowledge of overseeing significant projects, including co-ordination with internal and external stakeholders, managing the progress and deadlines of projects, and resolving any issues that might arise during construction; and
- reassess the CEO's unlimited signing authority under the procurement policy.

SCIENCE NORTH RESPONSE

Science North agrees with the recommendation and takes its responsibility for accountability and transparency seriously and consistently follows all legislated mandates and applicable directives. Science North will seek to develop authorization thresholds for sole-sourcing and procurement on which the Board of Trustees will have final approval.

It is important to note that relevant government priorities can shift, and acts and directives are regularly changing, thereby creating an environment where delays are possible, even when prior co-ordination is in place. Science North recognizes opportunities exist to better manage capital projects and, as such, project management teams have been enhanced including the hiring of a director with capital project oversight experience.

Science North has already begun applying applicable lessons learned, including in the Northwest Expansion, which is still in its infancy, and has begun implementing the recommended actions to ensure future projects are appropriately approved and risks of delays and cost overruns are mitigated. Once all data is gathered for the Northwest Expansion, a business case will be developed and presented to the Board of Trustees for approval. This business case will include major risks, an assessment of alternative options and cost projections informed by relevant experts. An initial risk workshop for this project with external experts was held in November 2023.

6.3 Exhibits and Programs

Science North uses visitor satisfaction surveys to obtain feedback from visitors. In our review of the visitor satisfaction surveys from 2018/19 to 2022/23, we found that of the 8,923 visitors who responded in these years, 95% said that they enjoyed their visit. That is, they responded "Yes" to the question, "Did you enjoy your overall experience today?"

6.3.1 On-Site Educational Programs Received Very Positive Feedback from Teachers

Science North offers a variety of educational programs for teachers and students from kindergarten to Grade 12. For example, the overnight camp-in program lets students spend the entire night at Science North to explore the science centre, take part in different programs, and experience a movie in IMAX. This program was aimed at children in Grades 4–12 and offered a combination of education and entertainment.

The purpose of school programs is to teach scientific principles through demonstrations, and hands-on programming using inquiry-based and problem-based learning techniques with the goal to develop students' interest in science, technology, math and engineering subjects. **Appendix 2** shows the different types of school programs offered by Science North. In 2022/23, Science North offered seven school programs.

Total attendance for on-site school programs decreased 32% in the past five years, from 41,737 students in 2018/19 to 28,289 in 2022/23. Fiscal year 2022/23 was the first fiscal year since 2018/19 in which Science North did not suffer from closures since the onset of the COVID-19 pandemic. Staff at Science North told us that some schools were still hesitant to attend school programs.

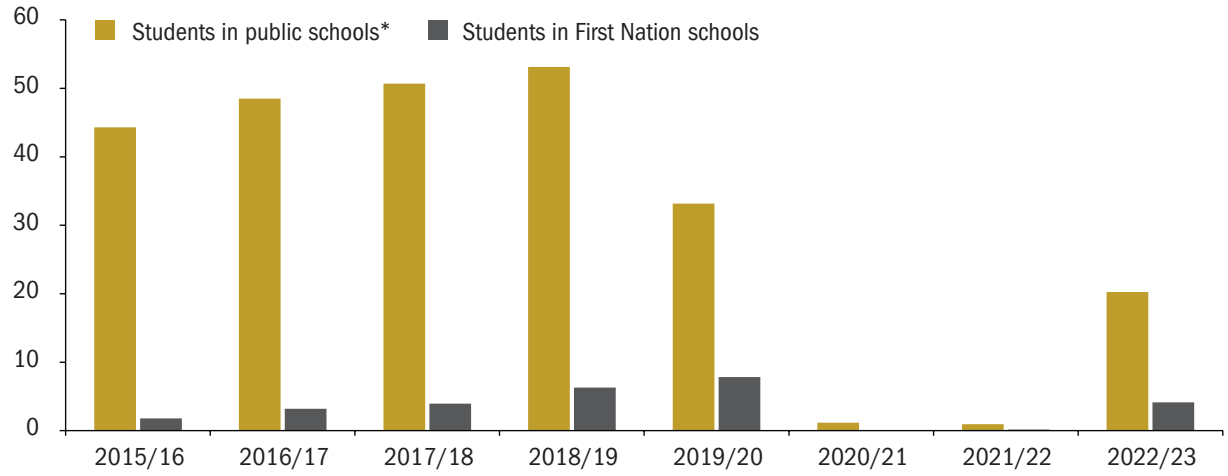
From 2013/14 to 2022/23, Science North surveyed teachers to obtain feedback on the quality of the on-site programs. When teachers were asked whether the program supported their classroom's learning (on a scale of 1 to 5, where 1 is "not at all" and 5 is "exceeding expectations"), more than 90% of the teachers responded that the program met or exceeded expectations for learning support.

During our audit we met with the Rainbow District School Board and Sudbury Catholic District School Board to obtain their feedback on Science North's educational programs for their students and to discuss impact of Science North's programs on learning. The school boards told us they were satisfied with the school programs offered by Science North, the programs were aligned with the provincial curriculum, and they felt Science North was very responsive to their needs and was working well with teachers to deliver programs to their students.

6.3.2 Outreach Program Attendance Has Dropped 62% Since 2018

Science North staff deliver outreach programs off-site, in the form of school and community visits and through the centre's satellite offices. The programs are aimed at students and members of the public who live at least 100 kilometres outside Sudbury and do not have ready access to the science centre. We spoke to the Canadian Association of Science Centres, who noted that Science North was effective in its outreach programs by going to Northern Ontario communities and schools that did not have access to a science centre due to high transportation costs.

Figure 23 shows student attendance for outreach programs from 2015/16 to 2022/23. Student attendance from public schools has declined by 62% from its peak of 53,137 in 2018/19 to 20,249 in 2022/23. As noted earlier, 2022/23 was the first fiscal year that Science North returned to in-school programs since 2019 due to the COVID-19 pandemic. In spring 2022, some schools still had COVID-19 measures in place, impacting attendance. Student attendance for public school outreach also decreased because Science North received $1.3 million less in grants for public school outreach programs in 2019/20 than in 2018/19.



We found that Science North offered three virtual programs for students: Virtual School science shows; e-workshops for First Nation schools; and e-workshops for public schools. All virtual programs were fee-based and covered a range of topics. The popularity of virtual programming grew during the pandemic and peaked in 2021/22 at 92,664 students, up significantly from 10,421 students in 2018/19.

6.3.3 No Major Changes in Exhibits Since 2017

In our review of the permanent (floor) exhibits at Science North, we noted that 114 exhibits (51%) at

Figure 23: Student Attendance for School Outreach Programs, Science North, 2015/16–2022/23 (000)

Source of data: Science North

* Includes students in public school in Northeastern Ontario and Northwestern Ontario.

the main science centre location had not substantially changed for over seven years. The average age of the exhibits was 11 years. Only the exhibits on the centre's fourth floor had changed significantly since 2018. **Appendix 8** provides a summary of the exhibits at Science North and Dynamic Earth.

Similarly, we noted that the average age of exhibits at Dynamic Earth was 11 years and no major exhibits had changed significantly since 2017. The mining technology showcased at Dynamic Earth is from early 2000; mining operations have changed significantly since. At the time of our audit, Science North was in the process of expanding its model mine at Dynamic Earth to better showcase modern mining and the future of mining. (See **Section 6.2.1**.)

6.3.4 Exhibits at Science North Could Be Evaluated More Robustly

We discovered that Science North evaluated some of its exhibits through a behavioural assessment tool. For a sample of visitors, science centre staff reviewed video footage to examine the learning behaviours of visitors. However, in our review of Science North's exhibit evaluations over the last 10 years, we found that only 90 out of the total 338 exhibits (27%) were evaluated in this manner.

Science North did not have a way to track the number of visitors to specific exhibits, or the length of their stay at each exhibit. Such information could enhance the ability of Science North to determine the public's interest and the relative effectiveness of exhibits. Tracking data would make it easier to proactively identify exhibits that ought to be kept on the floor, improved or replaced.

In our review of Science North's business plans from fiscal year 2013/14 to 2023/24, we found that the centre had limited documented research regarding the latest topics and trends in science and technology to use in the development of its exhibits. We did note that one of the goals in the 2021/22 business plan was to "research best practices in industry." However, we found no evidence of this research.

In addition, Science North did not carry out any benchmarking exercises to compare its exhibits with those of other science centres, nationally or internationally, in order to determine whether its exhibits should be updated to reflect the recent trends and topics in science and technology.

RECOMMENDATION 12

To ensure that exhibits are up to date with current trends in science and technology, and to improve visitor experience, public interest and understanding, we recommend that Science North:

- develop a comprehensive strategy and plan for the regular renewal of exhibits and the introduction of new exhibits, taking visitor feedback into consideration; and
- conduct research into how other science centres and cultural attractions, such as museums, track visitors' perceptions and interest in exhibits.

SCIENCE NORTH RESPONSE

Science North agrees with the recommendation and will take additional measures to ensure its exhibits align with our visitors' needs. Science North will ensure it assesses and considers visitors' interests in the selection of all major exhibits and their renewals, similarly to how feedback is received for incoming travelling exhibits. As a part of its regular environmental scanning, Science North has already identified a gap in incorporating visitor feedback to inform exhibits and is actively working on addressing this. Science North commits to better documenting the assessment process, giving appropriate weight to topic assessment to select exhibits, in order to inform and improve both the selection and ongoing evaluation of exhibit performance. Considerations will be given on how to document tactical decisions and learnings to bring them forward for future planning.

We note that developing a comprehensive exhibit strategy is a complex process that is labour, time and expertise intensive. We will take steps to implement the recommendations as resources allow. Upon development, the exhibit strategy will be presented to the Science Program Committee, a standing committee of the Board of Trustees, for ratification. We will further leverage our memberships with the Canadian Association of Science Centres and the Association of Science and Technology Centers to streamline research on tracking visitor interaction with exhibits.

6.4 Performance Measures Did Not Address All Mandate Items

We reviewed Science North's key performance measures from 2019/20 to 2022/23 and compared them to its legislated mandate and key priorities in the Minister's 2023 mandate letter that aligned with its mandate. We noted that some key items in the legislated mandate are not measured. For example, there were no measures for diversifying self-generated revenues or for collaboration, a key provincial priority. In addition, there was no performance measure to assess the effectiveness of exhibits, educational programs or travelling exhibits.

Although Science North has met 76% of its performance measures targets, as shown in **Appendix 9**, we noted that from 2019/20 to 2022/23, where performance targets were not achieved—such as in overall visitor satisfaction target of 95%; school outreach; student reach at Science North and Dynamic Earth; membership renewal; and leadership capacity-building sessions—there was no evidence of remediating action to improve performance.

Further, although Science North had informative measures—such as visitor satisfaction and membership renewals—not all of this information was made public, according to our review of Science North's annual reports from 2017/18 to 2022/23 (most recent available). In addition, we reviewed Science North's 2019/20–2023/24 business plans and noted that there was no benchmarking against other science centres. We compared Science North's performance measures to the 2022/23 performance measures of the Canada Agriculture and Food Museum, the Canada Aviation and Space Museum, and Canada Science and

Technology Museum (collectively known as "Ingenium"). We noted that some relevant performance measures used by Ingenium were not used by Science North. For example, Science North did not measure annual active memberships; general and tourism market share among the national museums and science centres; or percentage of budget spent on exhibition renewals.

RECOMMENDATION 13

To improve performance measurement, transparency and accountability of its organizational activities, we recommend that Science North:

- develop performance measures to assess progress against all legislated mandates;
- publicly report on its performance against all of its established measures and targets;
- document in annual reports any planned actions to be taken when targets were not met; and
- include a discussion of peer benchmarking with other science centres in its business plans.

SCIENCE NORTH RESPONSE

Science North agrees with the recommendation and as part of performance measurement will work with the Ministry of Tourism, Culture and Sport to explore opportunities so that its performance measures are aligned with other science centres to support benchmarking.

Science North commits to improving performance measures by considering metrics that include all legislated mandates, attendance figures, event and program attendance, press coverage, visitor response (comment cards, emails, online engagement/comments, anecdotes from educators and guides, and others) and self-generated revenue.

We will amplify the inclusion of results in annual reports and business plans and commit to analyzing the results to apply the applicable lessons learned for our future planning.

7.0 Detailed Audit Observations—Ministry of Tourism, Culture and Sport

7.1 Ministry Oversight of the Science Centres

7.1.1 Lack of Action on Mandate Review and Agency Review Task Force Recommendations

The Ministry of Tourism, Culture and Sport (Ministry) reviews the annual reports and business plans of the two science centres as required under the Agencies and the Appointments Directive. The Ministry relies on annual attestations from Board Chairs and CEOs of the two science centres to ensure that the centres are complying with legislation, directives and government policies. This attestation includes compliance with Broader Public Sector Procurement Directives. Aside from a mandate review of the Ontario Science Centre and Science North in 2017 commissioned by the Ministry, the Ministry does not conduct regular reviews of the science centres' operations for compliance with legislation or directives.

The 2017 mandate review concluded that the Ontario Science Centre's and Science North's mandates continued to be relevant to government goals and priorities in providing economic development, innovation, STEM education and science culture to Ontarians. In addition, the mandate review made recommendations:

- modernize the mandates to be outcome-based/purpose-driven;
- eliminate the Ontario Science Centre's legislated requirement to manufacture exhibits;
- review and clarify the geographic scope of the centres to reduce redundancy;
- remove designation of the Ontario Science Centre as a Commission Public Body, under the *Public Service of Ontario Act, 2006*, to make its classification consistent with Science North; and

- improve the level of collaboration between the Ministry, Ontario Science Centre and Science North.

The 2019 Agency Review Task Force, established by the Province to undertake a comprehensive review of all government agencies, endorsed the mandate review's recommendations and added that the Ministry should explore opportunities for immediate efficiencies based on the findings of the review. However, at the time of our audit, the Ministry had not taken any action on many of the recommendations of the mandate review.

The review noted the following impacts of the Commission Public Body designation on the Ontario Science Centre:

- The CEO has a dual reporting relationship to the Deputy Minister and the Board. This blurs the lines of accountability.
- The requirement to follow the Ontario Public Sector HR-framework and collective bargaining agreements challenges organizational flexibility.
- A misalignment exists with peer organizations such as Science North and the Royal Ontario Museum (for example, autonomy and reporting relationships).

RECOMMENDATION 14

We recommend that the Ministry of Tourism, Culture and Sport revisit the recommendations of the 2017 mandate review and implement those recommendations that will improve the efficiency and effectiveness of the science centres.

MINISTRY OF TOURISM, CULTURE AND SPORT RESPONSE

The Ministry will review the 2017 mandate review to assess whether further actions can be taken to improve the efficiency and effectiveness of the Ontario Science Centre and Science North.

The Ministry notes that many of the recommendations from the 2017 mandate review relate to governance of the Ontario Science Centre. As part of the work on the Ontario Science Centre relocation to Ontario Place, the Ministry and the Ontario Science Centre will work together to evaluate any potential updates to the agency's mandate, legislation and operating model that would be beneficial.

7.1.2 Ministry Did Not Provide Clear Guidelines to the Science Centres about Performance Measures

We reviewed the performance measurement and reporting requirements and the memorandums of understanding (MOUs) between the Ministry and each science centre. In our review, we noted that both science centres were required to report to the Ministry on how effectively they were delivering their mandates by submitting the results of their performance measures in their quarterly governance packages, business plans and annual reports to the Ministry.

However, our audit found that the agency directives and MOUs for both science centres did not have clear guidelines or specify the key performance measures required to be included in the science centre's annual reports. Also, the MOUs did not specify which criteria the Ministry used to assess the performance and success of the science centres.

We found, further, that the 2023/24 mandate letter from the Minister to the science centres did not specify any performance measures that were expected by the Ministry. Currently, the management of the science centres determines the performance measures to be reported publicly and to the Ministry.

RECOMMENDATION 15

To receive data on useful and meaningful performance measures that accurately assesses the science centres' performance with respect to their legislated mandate and ministerial direction, we recommend that the Ministry of Tourism, Culture and Sport:

- work with the science centres to establish measures to assess their performance;

- provide guidelines to the science centres on the performance measures, such as targeted expectations, and monitor actual results against the targets; and
- provide regular communication and feedback to help the science centres clarify expectations and refine their performance measures.

MINISTRY OF TOURISM, CULTURE AND SPORT RESPONSE

The Ministry will consult with the Ontario Science Centre and Science North to review existing performance measures and explore opportunities to strengthen measures where appropriate.

The Ministry will work with partner ministries and the two science centres to consider any improvements to the performance measures as well as the evaluation tools which can be used to assess the measures.

7.1.3 Ministry Guidance Could Ensure Collaboration between Ontario Science Centre and Science North

As the two science centres have very similar mandates within different geographical regions, there is an opportunity to pool resources and collaborate to produce innovative programming and exhibits while minimizing costs. However, we found there was almost no collaboration between the Ontario Science Centre and Science North on program development, research and evaluation, or the external sales of exhibits (within Canada and internationally). There had been only one collaborative effort to deliver virtual programs during the pandemic in 2020/21.

An expectation in the Minister's mandate letters, which also aligns with the objectives of the Ontario Science Centre and Science North and a recommendation of the 2017 mandate review noted in **Section 7.1.1**, is that the science centres continue to seek opportunities for collaboration with each other to develop and market made-in-Ontario programming and exhibits for export. **Figure 24** shows some of the collaborations between the Ontario Science Centre and Science North during the last five fiscal years (2018/19–2022/23). From our audit we observed the Ministry was not ensuring collaboration between the Ontario Science Centre and Science North; it was left up to the science centres themselves to initiate any meaningful collaboration.

We found that the Ontario Science Centre and Science North could seek more opportunities for collaboration where they can benefit from the expertise of one another. Since the Ontario curriculum for science and technology is the same throughout the province, science centres could develop school programs jointly rather than duplicating programs at each science centre. Similarly, they could work together to identify more opportunities for external sales of exhibits (within Canada and internationally). The Ontario Science Centre could also work with Science North regarding research and evaluation of exhibits, since Science North already has an established research and evaluation unit.

RECOMMENDATION 16

To increase collaboration between the Ontario Science Centre and Science North, we recommend that the Ministry of Tourism, Culture and Sport work with the science centres to identify areas for collaboration that could benefit both science centres.

MINISTRY OF TOURISM, CULTURE AND SPORT RESPONSE

Following consultation and through the Minister of Tourism, Culture and Sport's annual letter of direction to each agency and as part of the approval of each agency's annual business plan, the Ministry will provide further direction on areas for collaboration that could benefit each agency.

Figure 24: Some Collaborations between Ontario Science Centre and Science North, 2018/19–2022/23

Committees of the Board	· Executive · Development · Finance and Operations[2] · Governance and Governmental Relations · Strategic Oversight	· Executive · Audit · Business Affairs · Fundraising · Governance and Nominating Committee · Science Program Committee

1. All Board trustees are provincially appointed.
2. The finance and operations committee also function as the audit committee.

Appendix 4: Audit Criteria

Prepared by the Office of the Auditor General of Ontario

1. Board and Ministry oversight processes and accountability structures aligned with best practices to ensure that science centres manage their operations and facilities economically, efficiently, and effectively, with minimal environmental impact, in order to achieve their legislative mandates and complying with government requirements and guidelines. Timely corrective action is taken when necessary.
2. Science centres operate cost-effectively and have diverse self-generated revenue streams to ensure long-term financial sustainability.
3. Science centres deliver effective educational programs that support the Province's curriculum and provide people with experiences that will stimulate interest and further knowledge in science, technology, engineering and math (STEM).
4. Science centres develop, procure and display exhibits that effectively engage and educate the public on relevant and current science and technology topics to maximize attendance and membership and to cultivate learning and interest in science.
5. Science centres measure and assess the impact of exhibits and educational programs on the audience and make changes necessary to maximize the expected learning.
6. Science centres identify and enter into appropriate partnerships to drive economic activity in their respective regions and innovation across all lines of business.
7. A thorough cost/benefit analysis is conducted before undertaking any significant initiative, such as the relocation of the Ontario Science Centre to Ontario Place and the Northwest expansion project at Science North. Only initiatives that yield the greatest positive benefits are accepted.
8. Meaningful performance indicators and targets are established, monitored and compared against actual results to ensure goals, legislative requirements and guidelines are achieved. Results are publicly reported and timely corrective action is taken when necessary.

Appendix 5: Timeline Leading to Announcement of the Relocation of Ontario Science Centre to Ontario Place

Prepared by the Office of the Auditor General of Ontario

Date	Event
2006	
Apr	The City of Toronto lists the Ontario Science Centre as a heritage property.
2009	
Feb	The Province commissions a study to develop a plan to support the growth and long-term viability of tourism in Ontario. The report notes the potential to move the Ontario Science Centre to Ontario Place as part of a revitalization project.
2012	
Jul	Minister's Advisory Panel—with a key mandate to "Provide strategic advice to the government to move forward with a full revitalization of Ontario Place"—presents a report to the Minister of Tourism, Culture and Sport on the Ontario Place Revitalization, noting that "Ontario Place should position itself as an ideal site for a research or education centre for excellence."
2015	
Jun	Engineer's assessment of Ontario Science Centre by a consultant of Infrastructure Ontario, recommends pedestrian bridge roof be replaced due to its age. As of September 2023, the bridge roof had not been replaced.
2016	
Apr	Minister of Tourism, Culture and Sport requests the Ministry to prepare a business case for the capital investment needed to make the Ontario Science Centre a premier culture attraction. The business case would consider the options of major repair and renovation of the existing site or moving to a new facility at Ontario Place.
Jul	An architecture firm approaches Ontario Science Centre, unsolicited, to build a 250,000-square-foot "innovation centre" free of cost and redevelop a part of the parking lot into a community centre and mixed-used housing towers of 1,000,000 square feet.
Oct	Under the instructions of the Ministry of Tourism, Culture and Sport, Infrastructure Ontario completes a business case on modernizing Ontario Science Centre. The case recommends moving Ontario Science Centre to Ontario Place, stating that would save the government $250 million (net present value) over a 50-year period.
Nov	After reviewing the business case, the Board acknowledges in a letter to the Minister of Tourism, Culture and Sport that due to deferred maintenance, the status quo is not sustainable. While supportive of options presented in the business case, the Board puts forward a third option to build a new science centre at its current site and move it closer to the Eglinton Crosstown LRT, and to finance the project through mixed development in the remaining lands.
2018	
Jun	CreateTO, an agency of the City of Toronto, applies for an Official Plan and zoning amendment for corner of the parking lot location at Don Mills and Eglinton. The current site would become a mixed-use development of three residential towers with 1,254 residential units and a Toronto District School Board school. The development would not impact the operations of the science centre.
2019	
Apr	A private infrastructure investment firm circulates a concept document called OPX (dated March 2019) that proposes to "re-invent the [Ontario Science Centre] on the waterfront." The document notes the existing Don Mills site, owned by the City, is of "great redevelopment value" as the flat lands can be developed as purpose-built affordable rental housing, all connected to transit via the new Eglinton Crosstown LRT (which is not expected to be operating until 2024). Ontario Science Centre's then CEO (Maurice Bitran) presents a proposal to the Ontario Science Centre (OSC) Board for the relocation.

Date	Event
May	Province announces it is seeking to redevelop Ontario Place through a formal Call for Development, which closes in September 2019.
Jun	In a presentation to the Ministry of Tourism, Culture and Sport, the Ontario Science Centre's management states, "After 20 years of limited investment, aging exhibits and outdated infrastructure, the [Ontario Science Centre] is less able to fulfill its mission." Management and the Board are considering three options: (1) reinvest in the existing Don Mills site; (2) relocate closer to the Eglinton LRT station (corner of Don Mills Road and Eglinton Avenue); or (3) relocate to Ontario Place.
Dec	The then CEO of the Ontario Science Centre asks the Deputy Minister of Heritage, Sport, Tourism and Culture Industries to request the investments needed for the existing centre through the Ministry's multi-year planning process.
2020	
May	Government decision-makers approve the multi-partner approach to redevelop Ontario Place and ask Ministry of Heritage, Sport, Tourism and Culture Industries to report back on strategy for the potential relocation of the Ontario Science Centre.
Aug	Based on the May 2020 approval by government decision-makers, Ministry of Infrastructure, Infrastructure Ontario and Ministry of Heritage, Sport, Tourism and Culture Industries begin working together to identify order-of-magnitude and capital requirements associated with relocating Ontario Science Centre to the Ontario Place site.
2021	
May	Infrastructure Ontario starts working with the Ontario Science Centre on programming space requirements for the new science centre site at Ontario Place.
Jun	The Ministry of Heritage, Sport, Tourism and Culture Industries informs management of the Ontario Science Centre that relocating the centre to Ontario Place is a "priority project" and the Ministry plans to submit a proposal to government decision-makers in summer 2022.
Jul	The Province announces details of its plan for the Ontario Place redevelopment. Three successful participants from the 2019 "Call for Development" process, Therme Group, Live Nation and Écorécréo Group, will partner with the Province. The Province will also work with the Ontario Science Centre to explore opportunities for science-related tourism and educational programming at the Cinesphere and pod complex. Ministry of Heritage, Sport, Tourism and Culture Industries requests Stage 1 planning approval from government decision-makers for Ontario Science Centre relocation.
Aug	Government decision-makers approve the Ministry of Heritage, Sport, Tourism and Culture Industries' request for $12 million in capital funding for site investigations and project planning activities related to Ontario Place redevelopment. Government decision-makers also authorize the Ministry of Heritage, Sport, Tourism and Culture Industries to work with Ministry of Government and Consumer Services and Infrastructure Ontario to proceed with preliminary planning to evaluate and develop potential relocation of Ontario Science Centre to Ontario place.
Dec	Government decision-makers approve Ministry of Heritage, Sport, Tourism and Culture Industries' request for $2.9 million in funding for Stage 1 planning of a new Ontario Science Centre facility at Ontario Place.
2022	
Jan	Engineering consultant hired by Infrastructure Ontario identifies a crack and a leak in the pedestrian bridge and advises a more detailed structural investigation is needed.
Feb	Drawings from the structural specialist indicate that the bridge could fail. The Ontario Science Centre's property manager notifies Ontario Science Centre via email that they are initiating an emergency project on the bridge to determine the scope of repair work needed.

Date	Event
Apr 6	Minister of Infrastructure directs Infrastructure Ontario to support Ministry of Heritage, Sport, Tourism and Culture Industries in negotiations with the City of Toronto and in seeking Stage 2 (construction) approval for the relocation project (no negotiations between the City and the Province related to relocation occurred). The Minister notes potential options for the existing site as housing or long-term care.
Apr 20	Government decision-makers approve a government ground lease agreement with Therme Group Canada Inc. (Therme) toward the redevelopment of Ontario Place. The term of the lease is 95 years (75 years plus 20-year extension) with a targeted construction period of 24 months. As part of the lease, the Province commits to providing a number of dedicated parking spaces to Therme located within 650 metres of its entrance.
Apr 26	A structural investigation at the Ontario Science Centres notes that, for the pedestrian bridge's cast-in-place concrete walls, "exterior walls are showing significant signs of cracking on the north elevation below the windows."
Jun	The City of Toronto Council approves the redevelopment of the 5-acre City-owned property located at the southwest corner of Don Mills and Eglinton as part of the City's "Housing Now Initiative" to build affordable housing near transit. The development will not impact the operations of the science centre.
	Ontario Science Centre closes its pedestrian bridge connecting the entrance facility to exhibition spaces due to high risk of structural failure.
Aug	Infrastructure Ontario retains an architectural firm to provide a Cultural Heritage Evaluation Report on the Ontario Science Centre.
Sep 1	Quebec-based company Écorécréo Group, one of the three private partners involved in the Ontario Place redevelopment, exits due to "unforeseen challenges," according to the Ministry of Infrastructure. Écorécréo Group says they failed to come to an agreement on a long-term lease.
Sep 7	Infrastructure Ontario' engineering consultant reaches out to the Toronto and Region Conservation Authority to discuss accessing the pedestrian bridge at the science centre for potential repairs. However, no detailed repair plan is provided to the Toronto and Region Conservation Authority.
Sep 28	Infrastructure Ontario presents briefing to the Premier of Ontario's office on the relocation of Ontario Science Centre.
	The submission of the Stage 2 (construction approval) to government decision-makers for construction-related funding for the new Ontario Science Centre facility at Ontario Place is targeted by the Ministry of Infrastructure for April 2023, in order to align with Ontario Place Redevelopment planning and approvals.
Oct–Dec	Infrastructure Ontario continues to work with Ontario Science Centre to update the functional programming needs for the new science centre site at Ontario Place.
2023	
Jan	The Province amends the *Ontario Heritage Act*, adding section 25.2 (7) which allows the Lieutenant Governor in Council to make Orders that exempt provincial heritage properties owned or occupied by the Crown or a prescribed public body from having to comply with heritage standards and guidelines if properties are deemed to potentially advance provincial priorities, including transit, housing, health and long-term care and other infrastructure.
Mar 30–Apr 6	Ministry of Infrastructure submits a business case to government decision-makers for approval of construction funding for the relocation of the Ontario Science Centre and planning for a site-wide parking solution. Approval is provided in one week, which is one-third the normal time frame.
Apr 17	Ontario Science Centre Board of Trustees approves, in principle, the relocation of the Ontario Science Centre to Ontario Place.
Apr 18	Provincial government publicly announces the relocation of Ontario Science Centre to Ontario Place.
Apr 27	Environmental Assessment public consultation on Ontario Place redevelopment.

Date	Event
Jun 23	Infrastructure Ontario issues a request for proposal (RFP) for the planning, design and conformance consulting services for the new Ontario Science Centre at Ontario Place. The initial bid closing date is August 22, 2023, which is extended to October 26, 2023.
Jun	Infrastructure Ontario releases Draft Environmental Study Report on Ontario Place Redevelopment project for public feedback.
	The draft Cultural Heritage Evaluation Report prepared by an architectural firm retained by Infrastructure Ontario concludes that the Ontario Science Centre meets the criteria for a Provincial Heritage Property of Provincial Significance and Provincial Heritage Property under *O. Reg. 10/06* and *9/06* of the *Ontario Heritage Act*, and is therefore provincially and locally significant. The Report recommends ongoing engagement with the City of Toronto and the Toronto and Region Conservation Authority to ensure careful conservation of the setting and building.
Jul	The City of Toronto Council votes 21:3 in favour of exploring the feasibility of the City of Toronto operating the science centre or other public-facing attraction at its current location.
Sept	Infrastructure Ontario re-submits Ontario Place redevelopment application (originally submitted in November 2022).
	Government decision-makers approve the following funding requests by Ministry of Infrastructure: • $5.2 million for the Ontario Science Centre relocation to support planning, third-party advisors, and IO fees to support the procurement process for construction; • $1.4 million to advance planning and design work for the parking solution; and • $47.7 million to secure a construction manager and make repairs to the pods, Cinesphere and bridge.
Nov	Infrastructure Ontario releases final version of the Environmental Study Report on Ontario Place redevelopment project.

Note: In November 2019, the Ministry of Tourism, Culture and Sport changed its name to the Ministry of Heritage, Sport, Tourism and Culture Industries. In August 2022, the Ministry changed its name back to the Ministry of Tourism, Culture and Sport.

Appendix 6: Summary of Permanent Exhibits at Ontario Science Centre, June 2023

Source of data: Ontario Science Centre and Office of the Auditor General of Ontario (OAGO)

Level[1]	Exhibition Hall	# of Exhibits Observed by OAGO
1 and 2	**Geo Bridge: Celebration Way**[2]	0
2	**Great Hall** (open hall to display travelling exhibits or display exhibits of various science topics)	0
2	**Outdoor Experience Area**[3]	0
2	**Unilever Science Plaza** (outdoor)	6
2	**OMNIMAX and Entrance**	4
4	**Amateur Radio** (exhibit and live demonstration of the radio)	1
4	**Space Hall**[4] **and Saturn V** (exhibits related to space, physics and engineering)	46
4	**KidSpark** (learning-based play space of various science topics, for kids 8 and under)	61
4	**Mindworks Corridor** (artifacts on art and psychology)	5
5	**A Question of Truth** (exhibits related to psychology and perceptions)	31
5 and 6	**Stairwell Artifacts** (exhibits and artifacts of various science topics)	6
6	**Cohon Family Nature Escape** (outdoor)	4
6	**AstraZeneca Human Edge** (exhibits related to human biology)	69
6	**Forest Lane** (Exhibits related to ecology, forests and natural environment)	18
6	**Rock Paper Science** (open hall for live demonstrations and exhibits of various science topics)	4
6	**Weston Family Innovation Centre** (exhibits related to technology, physics, engineering and psychology)	36
6	**Science Arcade** (exhibits related to physics and engineering)	50
6	**HotZone and Community Reef** (open hall for live demonstrations and exhibits of various science topics)	5
6	**Bruce Poon Tip Living Earth Hall and TELUS Rain Forest** (exhibits related to the natural environment)	56
Total		**402**

1. See **Figure 13** for a map showing all six levels. Level 3 is the seasonal outdoor terrace (TD Green Terrace) and does not have any exhibits on display.
2. Located inside the Ontario Science Centre bridge but currently closed to the public.
3. Located outside of the Ontario Science Centre's front entrance and formerly known as Teluscape.
4. Space Hall includes the planetarium, which is currently closed to the public.

Appendix 7: Key Performance Indicators for Ontario Science Centre, 2022/23

Source of data: Ontario Science Centre

Strategic Priorities	Performance Measure	Target	Actual
Be a hub focused on science education and engagement	New content delivery (%)[1]	50–60%	80%
	Digital transformation strategy	Finalize strategy and implementation of Phase 1	Digital strategy developed
	Science-related ticketed events	n/a[2]	n/a[2]
Help build science capital	Percentage of programs with fully integrated 21st-century learning skills	n/a[2]	n/a[2]
	Youth Innovation programs, platforms and activities with partners—to develop, mentor and celebrate youth innovation	5+ partner-based events	7 partner-based events
Broaden our reach	New products/services for International Sales clients	n/a[2]	n/a[2]
	Total admissions attendance[3]	727,597	649,755
	Access Programs (as a % of total attendance)[4]	10%	8%
	Social media followers/subscribers	134,460	135,124
	Virtual event engagement[5]	27,772	Public virtual events not offered
	Virtual event reach[6]	123,612	Public virtual events not offered
	Website traffic	2,777,308 page views and 2,074,342 unique page views	6,160,734 page views and 4,681,234 unique page views
	Net Promoter Score (NPS)—survey measure of likelihood to recommend	41%	n/a[2]
Organizational Resilience	Science Centre self-generated revenues	$15,017,000	$13,836,000
	Maintain or improve employee experience index[7]	70.9	n/a[2]

1. New content (delivered by partners) as a percentage of the overall content that is delivered annually.
2. For targets and actuals marked n/a, performance was not measured.
3. Total attendance (target and actual) includes visitors to the Ontario Science Centre exhibit halls and OMNIMAX theatre only and does not include visitors that attended special events and programs at the Ontario Science Centre.
4. For underserved communities, attendance is tracked as a percent of total attendance.
5. For social media events: number of interactions, likes, comments, shares.
6. For social media events: number of views and how many users had the post on their timelines.
7. Index measures four key aspects of employee experience as identified by Ontario Public Service: commitment, organizational satisfaction, job satisfaction, and motivation.

Appendix 8: Summary of Permanent Exhibits at Science North and Dynamic Earth, June 2023

Source of data: Science North

Science North

Floor	Area	Exhibits
1–4 above ramp	**Fin Whale and Beluga Whale** (whale skeletons hanging from the ceiling)	5
Ramp	**Environmental Stories**	2
Ramp	**Geological Stories**	4
Between 1 and 2	**TD Toddler Treehouse** (educational play area dedicated to young children, newborn to age 5)	10
2	**Nature Exchange** (visitors can bring natural items they collected and exchange them for points or other items onsite)	26
	Lapidary Lab (visitors can learn how to cut, grind, and polish rocks by hand)	2
	Butterfly Gallery (a glass enclosure that is home to various butterflies)	19
3	**Wetland Lab** (an area displaying frogs, turtles and rattlesnakes)	19
3	**Forest Lab** (area displaying different types of trees)	26
3	**Lakes and Rivers Lab** (an area for animals, including beavers, snapping turtles, water snakes, and various fish species native to Northern Ontario)	10
3	**Animal Habitat**	22
3	**Outdoor 3rd floor** (display of several plant species native to Northern Ontario)	4
4	**Body Zone** (focused on science surrounding DNA and human bodies)	18
4	**Space Place** (a laboratory that includes information on Canadian space exploration and an object theatre related to dark matter)	33
4	**TechLab** (visitors can take apart and build electronics, create circuits, and play with a variety of gears and pulleys)	9
4	**Data Base** (visitors can use onsite tools to experiment and test their own innovative ideas in computer sciences, engineering, mechanics, technology, physics and optics)	8
4	**Prototype and Fab Lab** (visitors can learn how to use equipment such as laser cutters, t-shirt printers, 3D printers and waterjet cutters, and can participate in workshops)	8
Subtotal		**225**

Dynamic Earth

Floor	Area	Exhibits
Underground	**Underground Tour** (model mine)	16
1	**McLeod Rock Gallery** (display of information related to rocks, metals)	14
1	**McLeod Rock Gallery—Mine Training Centre** (simulation of the interior of a mine, with chairs and controllers)	5
1	**McLeod Rock Gallery—Hallway** (display of information related to coins, historical mining images throughout Sudbury's history)	8
1	**Explora Mine** (simulation of mining processes and display of minerals)	8
2 (main)	**Lobby** (an area displaying different types of coins and minerals found around the world; and story of the regreening efforts in Sudbury)	9

Dynamic Earth		
Floor	**Area**	**Exhibits**
2	**Earth Gallery** (an area focused on geology and mining)	3
2	**Earth Gallery—Rockhound Lab** (an area where minerals are traded for points and different minerals can be examined using a microscope)	5
2	**Earth Gallery—Mineral Identification** (to identify minerals using different methods)	6
2	**Earth Gallery—Canadian Diamonds** (displays about diamonds, including a brief history and current locations of diamond mining in Canada, and how to evaluate the quality of a diamond)	3
2	**Earth Gallery—Sudbury Impact Story** (exhibits showing a satellite image of Sudbury, impact structure, and geological map of Sudbury)	5
2	**Earth Gallery—Earthquakes** (exhibits about earthquakes, including an interactive table in which visitors can simulate an earthquake and learn about the related tectonic processes)	4
2	**McLean Engineering Gallery** (temporary travelling exhibit hall with changing exhibits)	1
Stairwell	**Stairwell** (display of pictures related to geological processes)	1
Grounds	**Outdoor Science Park** (display of mining-related equipment and toys)	12
Grounds	**Big Nickel** (Big Nickel site and its creation story)	3
Grounds	**Outdoor pathway** (display of information related to Sudbury's regreening)	8
Grounds	**Big Nickel Trail** (display of information related to nickel)	2
Subtotal		**113**
Total		**338**

Appendix 9: Key Performance Indicators for Science North, 2022/23

Source of data: Science North

Strategic Priorities	Performance Measure	Target	Actual
The Leader in Science Engagement	Overall visitor satisfaction (%)	95%	95% for Science North 91% for Dynamic Earth 95% for outreach 95% for science camps 98% for school programs 96% for online engagement
	Science social media posts	n/a[1]	n/a[1]
Science North in all of Northern Ontario	Public outreach	a. Reach 10,000 people in 12 communities through public outreach activities, Science Festivals, and Northern Initiatives. b. Reach 60,000 participants with the Great Northern Ontario Roadshow in 30 communities	a. 53,622 people reached b. 51,949 reached in 50 communities across Northern Ontario
	Number of students in virtual education programming	100,000	86,277
	School reach	Engage 10,000 students through in-person school visits at Science North and Dynamic Earth	24,902 students reached through in-person school visits at Science North and Dynamic Earth
	Camps	Provide summer camp experiences for 2,800 students in 30 Northern communities	Provided summer camp experiences for 2,979 students in 31 Northern communities
	Number of e-workshops delivered to First Nation schools	30	69
	Distribute STEM kits to First Nations students and families in Northern Ontario	5,000	5,867
Ultimate Customer Journey	Total admissions attendance	190,856	276,000
	Digital presence	3% engagement on social media channels	6% engagement on social media channels
	New visitor or digital audience experiences	Develop and implement digital science content on all social media channels	n/a[1]

Strategic Priorities	Performance Measure	Target	Actual
Awesome Organizational Culture	Equity, Diversity and Inclusion forums[2]	12	12
	Employee engagement score	n/a[1]	n/a[1]
	Leadership capacity building sessions[3]	10 sessions	10 sessions
	Mentorship/coaching program session	1	1
Financial Resilience and Growth	Admissions, memberships, and associated revenues	a. Admissions and memberships revenue: $2 million b. On-site business and parking revenue: $598,757	a. Admissions and memberships revenue: $2.9 million b. On-site business and parking revenue: $1.7 million
	External sales net profit (including travelling exhibit leases and administrative expenses)	$638,849	$42,954
	Grants revenue	$4 million in government-funded commitments in capital grant revenue for visitor experience renewal.	$1.6 million in government-funded commitments in capital grant revenue for visitor experience renewal.
	Budget achievement	Reduce projected $1 million deficit	Achieved a $285,004 deficit
	Philanthropy	Corporate sponsorship revenue of $825,000	Corporate sponsorship revenue of $500,071

1. For targets and actuals marked n/a, performance was not measured.
2. Equity, Diversity and Inclusion forums: a monthly staff forum to enhance organizational and individual skills that promote an inclusive environment and provide opportunities for dialogue and conversation around sensitive topics at Science North.
3. Leadership capacity building sessions: Leadership series about strategic thinking; program management; service mindset; project management; building resiliency; leading teams; influence without authority; and mentorships.

Security and Operations of IT Systems

1.0 Summary

The government of Ontario has an expansive portfolio of more than 1,200 Information Technology (IT) systems that are responsible for the operation of provincial programs across the Ontario Public Service (OPS). These IT systems have become increasingly important for the people and businesses of Ontario, providing government services in areas such as education, child welfare, social assistance and financial reporting.

To more efficiently manage these systems, the government has organized the IT operations at its 29 ministries into eight groups called IT clusters. The clusters provide day-to-day operational support to their associated ministries, including implementation of IT systems, technical support, securing confidential data, granting access to staff based on their job function, reviewing critical IT events (audit logs), monitoring the health of IT systems, and managing IT vendors and their performance. Each of the eight IT clusters is headed by a Chief Information Officer (CIO), who is responsible for supporting the IT needs of the ministries in each cluster. The IT clusters also indirectly (administratively) report to the Office of the Corporate Chief Information Officer (CCIO), which is responsible for province-wide IT needs.

This audit focused on four of the eight IT clusters to assess the security and effectiveness of the IT systems and processes used to deliver government programs and services. We selected a sample of IT systems across the four clusters.

The audit reviewed and examined security controls such as password policy and password settings to assess adherence and compliance with the OPS-wide password policy and industry standards. In addition, the audit also assessed whether the IT clusters had a process in place to apply critical security patches to its IT systems and databases on a timely basis to mitigate the risk of cybersecurity vulnerabilities. We also reviewed system access to assess whether controls were designed and operating effectively for the segregation of duties, timely removal of terminated staff's access, and periodic review of superuser access to ensure access to the privileged accounts was appropriately segregated and restricted to authorized staff.

In addition, we reviewed the controls in place to maintain audit logs for highly confidential information, including whether these audit logs were appropriately monitored, whether the audit logs captured all critical events necessary to track activities performed by staff, and whether the retention procedures were in accordance with OPS regulations.

We also reviewed various operational Key Performance Indicators identifying the performance of IT systems to ensure they were being measured and reported consistently. Further, we reviewed the controls to monitor IT vendors' performance and reviewed documents to assess whether the IT clusters were sharing vendor performance reports and leveraging existing contracts for IT vendors in an effort to prevent duplicated and redundant services.

Limited Publication

Due to the nature of our findings in this audit, details were not published in the *2023 Annual Report* to minimize the risks to the OPS. However, all of the relevant details of our findings and recommendations were provided to the CCIO and respective IT clusters for remediation. The CCIO and clusters were in agreement with the recommendations and we have received a commitment from them to act on a timely basis to implement our recommendations in full.

Because our findings were systemic in nature, we believe they are relevant to all IT clusters in the OPS. Therefore, we also recommend that the CCIO work with the clusters that were not reviewed as part of our audit to identify if our recommendations are applicable to them and implement the relevant recommendations.

The audit identified 11 recommendations, with 31 action items, to address our audit findings.

2.0 Background

2.1 Overview

The provincial government uses more than 1,200 Information Technology (IT) systems to operate its programs and deliver services to the people of Ontario. Management of these systems for the government's 29 ministries has been organized into eight groups known as IT clusters. These clusters are responsible for day-to-day IT operations at the ministries they support, implementing new IT systems, and providing oversight to manage IT operations for existing systems to deliver government programs and services. The clusters also are accountable for ensuring the security and integrity of the data processed and stored on its systems and databases.

Each of the eight IT clusters is headed by a Chief Information Officer (CIO), who reports to the deputy minister of one of the ministries in the cluster. The clusters also indirectly report to the Office of the Corporate Chief Information Officer (CCIO), which is responsible for province-wide IT needs. The CCIO, through its enterprise divisions, provides guidance to clusters by establishing policies and procedures for areas such as cybersecurity, password policies, monitoring the health of IT systems, and the measurement of IT vendor performance. The clusters are responsible for ensuring data security and operational processes are aligned and comply with requirements outlined within CCIO-established policies and standards. Our Office audited the CCIO and its three enterprise divisions as a part of our 2022 value-for-money audit Office of the Corporate Chief Information Officer.

2.2 Role of IT Clusters

Clusters are responsible for providing technology services to ministries that support specific government programs for Ontarians. Their specific responsibilities include:

- securing IT systems through enforcing strong passwords;
- managing access to IT systems by performing regular attestation reviews;
- ensuring privileged superuser access to IT systems is appropriate;
- maintaining critical audit logs, and reviewing them on a timely basis;
- measuring the health of IT systems through established metrics and service targets;
- managing vendors that provide IT services and monitoring their performance; and
- developing standard operating procedures to equip staff with knowledge and tools to promote consistent delivery of operations.

The clusters rely on CCIO for guidance on managing and conducting these operations through CCIO-established IT policies and standards.

2.3 Security and Integrity of IT Systems

Poorly designed IT systems or a lack of robust controls can result in unauthorized access and disclosure of confidential information, data breaches and unsatisfactory services delivered by vendors. In response, IT clusters put in place controls to detect and prevent risks of collusion and fraud and to assess whether IT systems are managed effectively. These controls include strong passwords, restricted and controlled access to IT systems, and periodic monitoring of audit logs. The following briefly describes the key IT controls.

2.3.1 Security of Data (Password Controls)

Passwords act as a first line of defence against cybersecurity threats and help IT teams keep confidential data secure and reliable. It is imperative for organizations to adhere to their established password policy, which at a minimum should define password requirements for IT systems. Below are some common attributes of a strong password policy:

- **Password complexity:** Password policies often require that passwords meet specific complexity criteria, which may include a combination of the following:
  - A minimum number of characters is required for a password (eight character length).
  - Use of a mix of uppercase (A-Z) and lowercase letters (a-z), numbers (0-9), and special characters (!@#$&).
- **Password expiration:** Passwords may have a defined expiration period, after which users are required to change their passwords. This helps prevent long-term exposure in case of a security breach.
- **Password reuse:** Password policies often include a rule that prevents users from reusing their previous passwords for a certain number of times.

Having weak passwords can pose a significant security risk. For instance, recycling passwords, where users repeatedly use the same or similar passwords across multiple accounts, makes it easier for attackers to gain unauthorized access. Implementing password history policies is a fundamental security measure to help protect user accounts and confidential information from unauthorized access and breaches.

2.3.2 Multi-Factor Authentication

Multi-factor authentication (MFA) is a multi-step account log-in process that adds a security mechanism such as a one-time code sent to a user's registered email address or mobile phone. MFA makes it more difficult for unauthorized individuals to access IT systems because hackers would need to possess multiple pieces of information or devices—and is an effective way to enhance security and protect confidential information from cyber threats.

2.4 Privileged User Accounts or IT Superusers

Privileged User Accounts, also referred to as superuser accounts, are used by IT staff to administer and manage IT systems, and they typically have unrestricted access to all data and permissions on an IT system. These accounts are also used to make changes to IT systems. As such, access to superuser accounts should be controlled so that activities performed by superuser accounts can be tracked, monitored and traced back when required, such as in the event of fraud.

2.5 Attestation of Privileged IT Accounts

By virtue of their role, staff with privileged IT access are able to add, modify or delete records and transactions, and in some cases even alter audit logs. For these reasons, organizations need to control or

limit which staff receive access to superuser roles, and perform periodic reviews of users' access to IT systems to ensure that access is limited to staff with specific job functions. As per industry best practices, such attestations should be performed at least annually or whenever there are staffing changes within the department.

2.6 Audit Logging

Audit logs are systems-generated trails that capture detailed chronological events and activities performed by a user on an IT system. Audit logs include activities such as user log-in timestamps, type of data accessed, transactions modified or deleted, and anomalies or exceptions identified. It is essential for organizations to enable audit logging for critical events within IT systems so that they are able to establish accountability, identify unauthorized data modification, and detect fraud-related activities.

2.7 Availability of Data—Performance of IT Systems

In order to reduce the risk of disruptions to business operations from IT-related outages, organizations need to continuously monitor the performance of IT systems. Monitoring IT controls using defined performance metrics provides insight to IT teams and management to assess whether IT systems are performing at optimal capacity. These metrics range from monitoring the IT system's capacity to backing up data successfully and applying security patches in a timely manner.

2.8 Monitoring of Service Delivery

Key Performance Indicators (KPIs) are used to measure the service being delivered. They are critical for assessing performance and the benefits provided by an IT asset such as software or hardware. Organizations also use and monitor KPIs to ensure the expected level of service is being delivered.

2.9 Patch Management

Applying up-to-date security patches (security fixes) for IT systems and databases is critical for an organization to ensure that IT vulnerabilities are not exploited to cause data breaches and outages and ensure that confidential data remains secure.

The OPS has established a security standard that lists requirements about how and when to apply security patches for cybersecurity-related vulnerabilities.

The cybersecurity division of the CCIO is responsible for the identification of vulnerabilities on IT systems and databases. This is done through a security software that scans all IT systems and databases on a real-time (continuous) basis to identify cybersecurity-related vulnerabilities against publicly known vulnerabilities identified by vendors and security experts.

Once a vulnerability is identified, the cybersecurity division informs the IT cluster of the issue so that they can apply necessary security patches, which can also be provided by the vendor. Vulnerabilities are assigned a severity score from zero to four based on their risk of occurrence and potential impact. The severity score indicates how quickly patches should be installed, with severity zero being the most urgent (within two calendar days) and severity four being the least (within 90 calendar days). IT clusters are responsible for applying these patches within these timelines, as outlined in the Government of Ontario Information Technology Standards (GO-ITS).

2.10 Vendor Management by Clusters

While the CCIO is responsible for procuring goods and services used across the entire OPS, IT vendors that provide services and support for IT systems used by ministries are engaged directly by their respective IT clusters. The management of vendors for the delivery of goods and services is done at the individual engagement or contract level by the particular ministry or IT cluster that owns the contract.

3.0 Audit Objective and Scope

Our audit objective was to assess whether the selected Information Technology (IT) systems at four IT clusters in the Ontario Public Service (OPS) have effective systems and processes in place so that:

- Ontarians' data and IT systems that deliver critical government programs and services are secure and reliable, including the restricted use of privileged access and the monitoring of it to prevent unauthorized access to information systems;
- IT systems are effectively monitored, utilized at optimal capacity, and are assessed against established performance metrics; and
- systems and processes prevent the IT clusters from procuring duplicate IT vendors that provide similar services, and that vendors are effectively monitored so that services are rendered with due regard for economy, and that corrective action is taken on a timely basis when necessary.

In planning for our work, we identified the criteria we would use to address our audit objective. These criteria (see **Appendix**) were established based on a review of applicable legislation, policies and procedures, IT risk factors, internal and external studies, and best practices. Senior management at the IT clusters and the Office of the Corporate Chief Information Officer (CCIO) reviewed and agreed with the suitability of our audit objective and related criteria.

We conducted our audit between January 2023 and September 2023. We obtained written representation from management that, effective November 17, 2023, they had provided us with all the information they were aware of that could significantly affect the findings or the conclusion of this report.

We interviewed Chief Information Officers (CIOs), IT staff and relevant stakeholders at the four IT clusters at various positions to review their roles and responsibilities related to the management of IT systems they were responsible for and processes established to deliver government programs. We reviewed established procedures that define the objectives and mandate of the clusters.

We selected a sample of key IT systems across the four clusters. We reviewed security controls such as password policy and password settings to assess adherence and compliance with OPS-wide password policy in the form of the Government of Ontario Information Technology Standards (GO-ITS) and industry security standards.

We reviewed the system access listing to assess if superuser access was appropriately segregated and restricted to authorized staff. We also assessed if the clusters had controls in place to review superuser access periodically and whether access for inactive accounts was removed in accordance with GO-ITS security standards.

We reviewed the controls in place to maintain audit logs for highly confidential information, including the monitoring of these audit logs and retention in accordance with OPS regulations. We also reviewed various operational Key Performance Indicator reports identifying the performance of IT systems to ensure they were being correctly utilized and were performing at optimal capacity. Further, we reviewed the controls to monitor IT vendors' performance and reviewed documents to assess if the clusters were sharing performance reports with each other. We also assessed if the clusters were collaborating and leveraging existing contracts for IT vendors in an effort to prevent duplicated and redundant services.

We conducted our work and reported on the results of our examination in accordance with the applicable Canadian Standards on Assurance Engagements—Direct Engagements issued by the Auditing and Assurance Standards Board of the Chartered Professional Accountants of Canada. This included obtaining a reasonable level of assurance.

The Office of the Auditor General of Ontario applies the Canadian Standards on Quality Management and, as a result, maintains a comprehensive quality control system that includes documented policies

and procedures with respect to compliance with rules of professional conduct, professional standards and applicable legal and regulatory requirements.

We have complied with the independence and other ethical requirements of the Code of Professional Conduct of the Chartered Professional Accountants of Ontario, which are founded on fundamental principles of integrity, objectivity, professional competence and due care, confidentiality and professional behaviour.

Out of Scope

This audit did not specifically focus on OPS-wide centralized IT functions such as cybersecurity, the Enterprise Risk Management process, procurement of IT contractors, IT assets such as laptops and vendors valued over $2 million, and service level agreements and key performance metrics for IT incidents. Those topics were reviewed as part of our 2022 value-for-money audit Office of the Corporate Chief Information Officer.

Appendix: Audit Criteria

Prepared by the Office of the Auditor General of Ontario

1. Privileged access to key Information Technology (IT) systems critical for delivery of government programs and services is restricted to staff on a need-to-know basis to prevent unauthorized access to personal and sensitive data.
2. Performance indicators of key IT systems such as system availability, capacity utilization, patching status, aging, and system downtime are established, measured against targets, and monitored for effective system performance oversight.
3. Existing IT vendor contracts are leveraged before procuring new vendors to avoid procuring duplicate services, and vendor performance is monitored.
4. Controls are in place to prevent the procurement of duplicate IT vendors that provide the same services and software.
5. Clusters review vendor performance on an ongoing basis as per established criteria.

Tourism Support Programs

1.0 Summary

Ontario tourism impacts a number of different sectors of the economy, such as the transportation, accommodation, food and beverage, recreation and entertainment, and retail sectors. About 90% of the tourism-related businesses in Ontario are small businesses that employ fewer than 20 employees. In 2019, the Ministry of Tourism, Culture and Sport (Ministry) estimated that tourism represented 4% of Ontario's gross domestic product (GDP), amounting to about $37 billion, and 5% of Ontario's total employment—about 396,000 jobs.

The Ministry provides financial and non-financial support to promote economic growth in Ontario through the tourism sector. This includes direct support to tourism operators with the objective of attracting more tourists to Ontario, such as grants to help with the costs of hosting events that encourage visits to a city. In 2022/23, the Ministry spent $45 million in total on funding programs in the tourism sector. In addition to direct funding to tourism operators, the Ministry also funds Destination Ontario (a provincial agency) and regional tourism organizations (RTOs—non-profit organizations with annual funding agreements with the Ministry), with $52 million provided to them in 2022/23. Destination Ontario is responsible for marketing Ontario as a destination to tourists, and the RTOs are responsible for leading the co-ordination of tourism in each region (13 regions across Ontario, of which 11 are funded by the Ministry) and attracting tourism spending from their key markets.

The number of tourists in Ontario consistently exceeded 130 million each year in the decade prior to the pandemic, and was almost 132 million in 2019. In 2020, the COVID-19 pandemic significantly impacted Ontario's tourism industry, with the number of tourists in Ontario dropping by about 41% from the year prior (and with more of them being Ontarians travelling within Ontario as opposed to visitors from outside the province), leading to a 65% reduction in the tourism sector's contribution to GDP. In response, the Province launched one-time funding programs ($131.9 million in total in 2021/22) to help the tourism industry manage COVID-19–related public health restrictions and the associated impacts on its operations.

Overall, we found that the Ministry does not have an effective long-term strategic plan for supporting and growing tourism in the province, especially as the industry recovers from the impact of the COVID-19 pandemic. The last strategic plan was released in 2016, with a goal of achieving average annual tourism growth of about 3% through 2021, but the province did not achieve this, as tourism in Ontario grew at less than 2% per year prior to the COVID-19 pandemic. While other provinces, such as British Columbia, Alberta and Quebec have released tourism strategies for the recovery and growth of the tourism sector

following the effects of the COVID-19 pandemic, Ontario has not yet released a new long-term strategic plan. Having a tourism strategy is important for delivering effective tourism support programs that are co-ordinated to achieve clear goals for the province's tourism industry, obtain value for money spent, and ultimately maximize the economic impact of tourism in Ontario, including the contribution to the provincial GDP, the number of jobs supported and tax revenues generated.

The Ministry-funded organizations (Destination Ontario and the RTOs) have overlapping responsibilities, as both dedicate resources to marketing Ontario tourism to Ontarians. This decreases the amount of funding that is left for Destination Ontario to advertise in other markets, such as the United States and overseas, even though its marketing data shows that allocating more advertising dollars to the United States rather than Ontario would lead to a greater number of tourist visits and increased spending. This would result in greater economic benefits for Ontario.

Our audit also reviewed four annual, recurring funding programs, and two one-time funding programs to support businesses during the COVID-19 pandemic. We found that two of the annual programs, the Tourism Economic Development and Recovery Fund and the Pan-Regional Fund, support tourism projects with similar purposes, yet complementary projects funded through the two programs are not required to collaborate for more efficient use of the funding.

We also found that the design of one of the Ministry's one-time COVID-19 funding programs (Ontario Tourism Recovery Program) resulted in inconsistencies in the number of grants companies could receive, based solely on the ownership structure of the business. Subsidiaries of companies with multiple owners were eligible for more funding at times than subsidiaries of companies with only one owner. About one-quarter of the approximately $98 million disbursed was paid to only 28 groups (representing 94 businesses), with the remainder paid to 476 businesses. In addition, we found that approximately $1.5 million was paid to 14 businesses that were ineligible for funding or that had potentially fraudulent applications submitted on their behalf.

The following are some of our significant findings relating to the Ministry's strategy and approach for supporting the tourism sector:

- **The Ministry has not developed an effective long-term strategic plan for tourism recovery and growth following the COVID-19 pandemic.** The last long-term strategic plan released by the Ministry was in 2016 with an objective of growing tourism at an average rate of 3.3% annually over five years (through 2021). The tourism sector in Ontario did not achieve this growth after 2016, and then was significantly impacted by the COVID-19 pandemic. In 2020 and 2021, two reports with broad actions and recommendations were developed, one by the Ministry and one by tourism stakeholders at the direction of the Minister of Tourism, Culture and Sport, to support the tourism industry during the pandemic while health restrictions were in place. However, unlike other provinces such as British Columbia, Alberta and Quebec, Ontario has not developed a strategic plan outlining its main goals and planned actions to support this sector in the pandemic recovery.
- **Tourism marketing in Ontario is not always in partnership with regional organizations, resulting in less funding available for international marketing and fewer potential tourist visits.** In the five years from 2015/16 to 2019/20 (the years before the COVID-19 pandemic), Destination Ontario spent about $4 million on average annually to advertise Ontario tourism within Ontario, and the 11 RTOs that receive Ministry funding collectively spent about $11.7 million, on average, annually for the same purpose. While both Destination Ontario and the 11 provincially funded RTOs invest in marketing to encourage Ontarians to travel within the province as part of their mandates, we noted that the majority of Destination Ontario's advertising in Ontario was not done in partnership with regional organizations. However, Destination Ontario's own analysis indicates that it could attract more

tourists and tourist dollars if it spent more on marketing Ontario to international tourists as opposed to tourists within Ontario; promoting Ontario to the rest of Canada and internationally is part of Destination Ontario's mandate. Using Destination Ontario's analysis on the impact of past marketing campaigns, we estimate that in 2022/23, if Destination Ontario had allocated $2 million of the amount it spent marketing within Ontario to advertising in the United States, Ontario could have seen an estimated 86,000 more tourists and an estimated $38 million more in tourist spending in 2022/23.

- **The Ministry is not collecting necessary information to determine the impact that regional tourism organizations have on tourism in their region.** The RTOs are required to set goals and report to the Ministry on these goals and the activities they undertook to achieve them at the end of each year. However, from our review of the RTOs' reporting, the RTOs do not always establish targets for the activities they plan to perform. For example, one RTO planned to participate in partnership projects, but did not set any targets for the number of partners, and another RTO did not establish required performance targets for all of its activities. The Ministry also does not require the RTOs to report back on tourist trends for their regions to help it understand the impact of the RTOs' activities and more effectively target funding to RTOs. For example, we noted that four of the 13 tourism regions in Ontario experienced a decrease in tourists from 2013 to 2017, and the Ministry did not collect data from the RTOs to understand this trend in their tourism.
- **Limited provincial funding has been provided in the past five years to attract private investment in the tourism sector, which is part of the Ministry's mandate.** From 2012/13 to 2017/18, the Ministry, along with the Ministry of Economic Development, Job Creation and Trade, provided total funding of $19 million to attract tourism sector investment, which led to total private investment of approximately $288 million. They have made no such investment in the past five years. In contrast, British Columbia ($30 million over three years) and Alberta ($51.6 million over three years) have established current funding programs to develop tourism experiences, which in turn attract private investment to the tourism sector. Although the Ministry has assigned some of the responsibility for attracting private investment to the RTOs through their annual funding agreements, the RTOs informed us that they do not have the budget to achieve this in an effective manner, and this work is generally organized at the provincial and/or municipal levels, whereas RTOs support multiple municipalities.

The following are some of our significant findings relating to the Ministry's funding programs:

- **Ineligible and potentially fraudulent applications to a COVID-19 funding program resulted in approximately $1.5 million paid.** The Ontario Tourism Recovery Program was a one-time grant provided to eligible tourism businesses that experienced a 50% or greater revenue decline as a result of the COVID-19 pandemic. From the 570 total recipients of the program's grants, we tested 90 applications and found that six applicants received approximately $1.1 million that should not have been awarded. When reviewing the information reported in the applications, we noted errors that would have made them ineligible based on the application guidelines, such as not meeting the requirement to have experienced a 50% decrease in revenue when comparing 2020 or 2021 to 2019. An additional eight companies applied for the grant and received about $460,000 before the Ministry identified these as potentially fraudulent submissions as they used incorrect corporate information. Overall, this resulted in

approximately $1.5 million paid to ineligible or potentially fraudulent recipients.

- **Similar tourism businesses received different levels of funding from a COVID-19 funding program based on their ownership structures.** The Ministry's design of the Ontario Tourism Recovery Program allowed businesses of similar size and type to get different funding support based solely on their ownership structure. For instance, if two corporations jointly owned three companies they could apply for three grants, but if one corporation owned three companies it could apply for only one grant. For example, we found that eight companies were able to apply for a total of eight grants totalling $2.75 million because each company owned a hotel and had more than one owner. However, these companies were all part of the same group of hotels that share the same senior management and have many owners in common. In contrast, over 20 companies, each of which owned a hotel, were eligible to receive in total only one grant of $695,000 (the maximum grant available) because they were all owned by a single corporate owner. Ultimately, 28 groups (consisting of 94 businesses) received almost a quarter of the $98 million total funding, with 476 businesses receiving the remainder.
- **The Pan-Regional Fund is not publicly advertised, funds projects that do not meet the original program criteria and duplicates other funding programs.** The Pan-Regional Fund provides annual grant funding to applicants for promoting tourism across multiple regions (pan-regionally). The Pan-Regional Fund is not advertised publicly and there is no formal application process, so only organizations that have become aware of the program through the RTOs or the Ministry have submitted proposals to the Ministry for funding. There are also no defined criteria for evaluating applications. This results in the Ministry awarding funding at its discretion, with some projects' objectives overlapping with objectives of other Ministry funding programs meant for the same purpose. For example, when the Pan-Regional Fund was first established in 2013, RTOs were expected to continue to collaborate across the province (pan-regionally) out of their annual funding allocation and not from this fund. However, the Ministry provided one RTO with additional funding through the Pan-Regional Fund in 2021/22 and 2022/23 to deliver certain projects in collaboration with four other RTOs. This funding is contrary to the original program design of the Pan-Regional Fund and existing expectations for RTOs; all other RTOs are already expected to collaborate with other regions across the province as part of their mandate through their annual RTO funding from the Ministry.
- **Late funding approvals by the Ministry led to cancelled festivals and events.** The Ministry delivers annual funding to organizations that host festivals and events to attract tourists to a region through the Reconnect Ontario program, but delays in notifying recipients of funding decisions have resulted in events being cancelled, including seven events in 2022/23. The Ministry accepted applications for Reconnect Ontario from January 6, 2022 to February 2, 2022, and notified successful applicants of their approved funding on July 28, 2022; this was over five months after the application period ended and nearly four months after the start of the funding year, April 1. Three of the cancelled events were planned to start between May 2022 and July 2022, including one that was expected to generate $1.3 million in tourist spending. By the time the Ministry communicated the funding notifications, organizations had already cancelled their events or reduced their scale, with some cancelling at a later date.

This report contains 17 recommendations, with 39 action items, to address our audit findings.

Overall Conclusion

Our audit concluded that the Ministry of Tourism, Culture and Sport (Ministry) has not developed and executed on a long-term strategic plan since its five-year plan released in 2016 (covering 2016 to 2021) to grow Ontario's tourism industry and maximize its contribution to the economic growth of the province. British Columbia, Alberta and Quebec all released long-term strategic plans for tourism growth and recovery between 2021 and 2023 to support the tourism industry following the COVID-19 pandemic. However, Ontario has not developed a long-term plan for supporting its tourism sector since the pandemic.

We also found that not all tourism funding programs were designed or delivered efficiently and effectively to support the tourism industry. For example, one funding program is not publicly advertised and does not have defined criteria for evaluating applications. We noted that the program awarded funding, at the Ministry's discretion, to projects whose purpose duplicates purposes of other funding programs.

Additionally, the Ministry has not collected information to evaluate the effectiveness of provincial tourism supports in growing the tourism industry and reported the results to the public or tourism stakeholders.

OVERALL MINISTRY RESPONSE

The Ministry appreciates the work of the Auditor General and welcomes the recommendations for the Ministry's tourism support programs for Ontario.

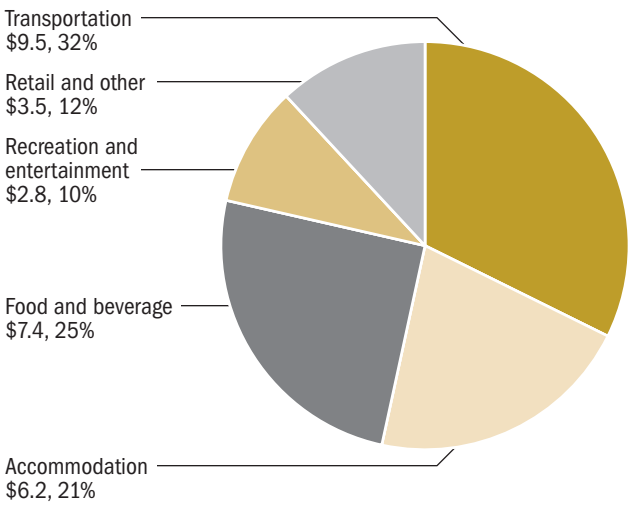
The government is focused on rebuilding the economy and creating good jobs for Ontarians. Tourism is an important economic driver, and strengthening this sector plays a significant role in delivering on these priorities and promoting communities throughout Ontario.

The Auditor General's recommendations provide useful feedback to help build on the Ministry's current and ongoing support for the tourism sector. These recommendations will assist us in:

- growing the tourism industry;
- co-ordinating efforts between regional tourism organizations and Destination Ontario to ensure efficiency and an effective regional approach to promoting tourism;
- improving program design, funding criteria and evaluation to ensure the best return on investment; and
- improving data sharing and research to facilitate planning and strategy.

The Ministry will continue to work with Ontario's tourism industry to welcome visitors and showcase all that Ontario has to offer.

2.0 Background



2.1 Impact of the Tourism Industry in Ontario

A tourist is defined by Statistics Canada and the Ministry of Tourism, Culture and Sport (Ministry) as anyone who travels 40 kilometres or more to a destination for anything other than work, school, going to appointments, or shopping as part of regular activity. Spending by tourists impacts many sectors within the province, including transportation, accommodation, and food and beverage sectors (see **Figure 1** for tourism spending by sector in Ontario in 2019). Statistics Canada conducts two annual surveys of tourism activities in Canada—one surveying international tourists travelling to Canada, and one surveying Canadian residents on their travel plans within and outside Canada. The surveys were paused in March 2020 as a result of travel restrictions during the pandemic. The national travel survey of Canadian residents resumed in July 2020, but the international travel survey was not restarted until April 2023 at most major airports due to ongoing travel restrictions in 2021 and 2022.

In addition to the economic value of tourism through tourist spending, the tourism industry also contributes to social benefits in the province and its

Figure 1: Tourist Spending by Sector in Ontario, 2019 ($ billion)

Source of data: Ministry of Tourism, Culture and Sport

regions. According to the Ministry, most tourism-related businesses in Ontario are small businesses, with 90% employing fewer than 20 employees; they employ many youths and students, as well as a larger proportion of part-time workers and visible minorities than other industries. The tourism industry also promotes local culture, and the infrastructure and experiences built for tourists also benefit the local residents.

In 2019, the Ministry estimated that Ontario attracted approximately 132 million tourists; 13% of them arrived from outside Canada, with the remainder travelling within Ontario (82%) or from other Canadian provinces and territories (5%). Between 2011 and 2019, Ontario consistently attracted more than 130 million tourists (see **Appendix 1** for the breakdown of tourists by place of origin, per year, between 2011 and 2021). On average, between 2011 and 2019, 85% of tourists were travelling from within Ontario, 5% were travelling from other provinces and territories in Canada, and 10% from other countries. In 2020, this changed to 93% of tourists travelling from within Ontario, 4% travelling from the rest of Canada and 3% from outside Canada.

In 2019, spending by tourists generated $38 billion in tourist receipts, which contributed almost $37 billion to Ontario's gross domestic product (GDP) (about 4% of total provincial GDP) and supported about 396,000 jobs (about 5% of total provincial employment) across approximately 88,000 tourism-related businesses. The tourism industry also generated about $13 billion in tax revenue for the federal, provincial and municipal governments.

Starting in 2020, the tourism industry was negatively impacted by the COVID-19 pandemic as public health restrictions significantly limited travel. The tourism sector added about $15 billion to Ontario's GDP in 2021 ($13 billion in 2020), which was a decrease of about 59% from 2019. Tourism stakeholders estimate that the tourism sector in Ontario will not recover to 2019 levels until at least 2025.

2.1.1 Measuring the Economic Impact of Tourism

The Ministry relies on Statistics Canada survey data described in **Section 2.1** to determine the number of tourists in Ontario each year and total tourism receipts in Ontario (see **Appendix 1** for these statistics for 2011 to 2021). Tourism receipts are one of the Ministry's main performance indicators to assess the trend of tourism activity in Ontario. **Appendix 2** provides the breakdown of tourism receipts, which represents the total spending of tourists in Ontario plus spending in Ontario for trips outside the province, plus profits from Ontario travel firms.

In the 1980s, the Ministry developed the Tourism Regional Economic Impact Model (Economic Impact Model). A web-based version of the model was launched in 2005. The Ministry uses the Economic Impact Model and its calculation of tourism receipts to estimate the value added to Ontario's GDP from tourism activities, the number of jobs created and government tax revenue generated.

The Economic Impact Model is also used by tourism organizations and operators to estimate the economic impact of specific tourism activities in Ontario such as hosting a festival, a convention centre event, or investment in building a new tourist attraction. Organizations can calculate the economic impact of their

events by inputting information such as estimated or actual number of tourists, length of each tourist's stay in the region, and where they arrived from.

Statistics Canada also conducts an analysis of provincial and territorial GDP and employment generated by tourism. Its calculation method differs from Ontario's calculation in that Statistics Canada includes only the direct impact to GDP and not the indirect or induced impact of re-spending in the economy (such as the reinvestment of profits by tourism businesses to expand their operations by providing more services and hiring more employees). **Appendix 3** shows the percentage of GDP and jobs that tourism represents in each province and territory.

2.1.2 Ministry's Performance Indicators for the Tourism Sector

The Ministry has two internal performance indicators to track the impact of the tourism sector in Ontario:

- number of jobs generated by tourism in Ontario; and
- dollar amount of Ontario tourism receipts.

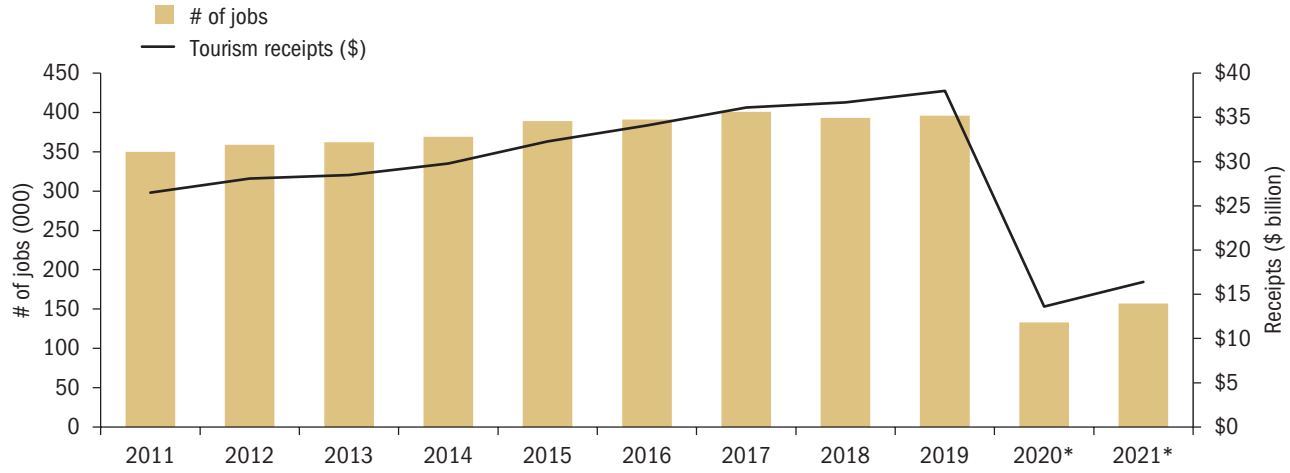


Figure 2 shows the trend in these performance indicators from 2011 to 2021. In 2019, the Ministry's targets for these performance indicators were to achieve 439,462 jobs generated by tourism in Ontario by 2021, and $51 billion in tourism receipts by 2027. These targets were initially set in 2017. By 2022, the COVID-19 pandemic had led to significant restrictions on tourism activity, so the Ministry set new internal targets to reflect its expectations for Ontario's tourism sector to recover to the 2018 level of jobs and tourism receipts by 2025 (392,777 jobs generated and $36.7 billion in tourism receipts).

2.2 Role of the Ministry and Other Key Players

There are many organizations—federal, provincial and municipal—that support tourism in Ontario (see **Figure 3** for some of the main organizations that support Ontario tourism). The Ministry provides financial and non-financial support to the tourism industry. This includes the Ministry's direct funding programs for tourism operators. Some of the funding programs are annual and recurring, such as funding for events that attract tourists to Ontario. Other funding programs are designed to provide one-time financial support, such as grants to operators who could not operate normally during the COVID-19 pandemic.

Figure 2: Ministry of Tourism, Culture and Sport Key Performance Indicators for Tourism Sector, 2011–2021

Source of data: Ministry of Tourism, Culture and Sport

* The COVID-19 pandemic interrupted Statistics Canada's travel survey collection operations, and therefore data for 2020 and 2021 includes travel estimates produced by Statistics Canada. At the time of our audit, data was available only up to 2021.

Figure 3: Key Players That Support Ontario Tourism

Prepared by the Office of the Auditor General of Ontario

Federal

Federal government

- Several departments and agencies within the federal government provide funding and/or support to the tourism industry in Canada, such as Innovation, Science and Economic Development Canada, the Federal Economic Development Agency for Southern Ontario and the Federal Economic Development Agency for Northern Ontario

Destination Canada

- Federally funded Crown corporation
- Tourism organization responsible for sustaining Canada's tourism industry, marketing Canada as a tourist destination, and supporting the co-operation between the private sector, Canada and provinces and territories

Provincial

Ministry of Tourism, Culture and Sport (Ministry)

- Helps grow Ontario's economy through strategic support and investment in the tourism sector by working with stakeholders
- Operates funding programs that provide funding directly to tourism operators (businesses, not-for-profit organizations) that attract visitors to communities across the province

Ontario Tourism Marketing Partnership Corporation (operating as Destination Ontario)

- Provincially funded agency of the Ministry
- Tourism marketing organization with a mandate to promote Ontario as a travel destination to individuals within Ontario, Canada and internationally

Regional

Regional Tourism Organizations (RTOs)

- 11 not-for-profit organizations that are independent of the Ministry and are provincially funded to lead within their tourism region (see **Appendix 5a** for the 13 regions, two of which are not provincially funded)
- Lead tourism development in the region by increasing co-ordination of businesses impacted by tourism, marketing the region, and working collaboratively with the industry to enhance tourism experiences available

Municipal

Destination Marketing and Management Organizations (DMOs)

- Funded by municipal governments and Municipal Accommodation Taxes, and/or the DMOs' members
- Responsible for increasing tourism at the sub-regional level (e.g., municipal) through marketing, such as promoting a location and experiences it offers or increasing awareness of a destination

Note: The activities of the Ministry, Destination Ontario and the RTOs to support the tourism industry are included in this audit.

In addition to these funding programs, the Ministry is also responsible for providing strategic support, developing tourism policy in partnership with other ministries and governments, attracting private-sector investment, and performing research and analysis of tourism statistics to support its activities and policy decisions.

The activities of the Ministry are also supported by other provincially funded organizations that are mandated through their funding agreements to promote Ontario as a tourist destination and work with the tourism industry to increase economic growth in Ontario. These include Destination Ontario and regional tourism organizations (RTOs), which both receive provincial funding. Destination Ontario is a provincial agency responsible for marketing and promoting Ontario tourism. RTOs are not-for-profit organizations that operate independently of the Ministry and are responsible for providing strategic and advisory support to tourism businesses in their region and promote collaboration within their region and among the RTOs to develop better tourism experiences for tourists.

2.2.1 Destination Ontario

The Ontario Tourism Marketing Partnership Corporation (operating as "Destination Ontario") is an agency of the government of Ontario. Formed in 1999 under the *Development Corporations Act* (Ontario Regulation 618/98: Ontario Tourism Marketing Partnership Corporation), Destination Ontario's role is to promote Ontario as a travel destination in order to benefit the province through increased domestic and international visits and spending. Destination Ontario's key strategic priorities include:

- focused marketing campaigns direct to the consumers who would be most likely to travel to Ontario and/or result in the most tourist spending;
- partnering with tourism stakeholders such as Destination Canada (a federal Crown corporation responsible for supporting the tourism industry in Canada and promoting Canada as a tourist destination) to grow tourism in Ontario; and
- conducting research on consumer behaviour and tracking advertising impacts to identify the most effective activities to pursue in the future to increase tourism.

The agency is accountable to the Ministry and is governed by a board of directors whose members are appointed by Ontario's Lieutenant Governor in Council. The Ministry provides Destination Ontario with its mandate and annual funding to carry out its objectives.

In 2022/23, Destination Ontario received $33 million of funding from the Ministry. About half of its annual expenses are costs for advertising and marketing campaigns to promote Ontario and/or specific destinations or attractions in Ontario as tourism destinations on the Internet, radio and other media channels. The remaining annual expenses include offering travel information services, partnerships with industry, and other direct operating costs.

As of August 2023, Destination Ontario operated nine Travel Information Centres across Ontario (see **Appendix 4** for the location of these centres), located near border crossings and along major routes to offer travel advice, tickets for select attractions and events, and souvenirs. These are provincially run and separate from the over 200 municipally owned or community-operated visitor information centres. In 2022/23, these centres cost approximately $5 million to operate.

2.2.2 Regional Tourism Organizations (RTOs)

RTOs are independent, not-for-profit organizations that promote tourism at the regional level. In 2010, the Ministry divided the province into 13 tourism regions, with one organization for each region. Many different business sectors are part of the tourism industry (such as accommodations, food and beverage, entertainment and attractions), and tourism-related businesses in Ontario are predominantly small businesses. The RTOs were established at the Ministry's direction to increase co-ordination of all the businesses impacted by tourism, market the region, promote the unique

potential of each region, and work collaboratively with the industry to enhance the tourism experiences available. See **Appendix 5a** and **Appendix 5b** for maps of the tourism regions in Ontario.

Even though RTOs are governed by their own boards of directors and are independent of the Ministry, they are each accountable to the Ministry through the annual funding agreement that outlines the objectives and activities that each RTO must perform. The RTOs are expected to support the tourism sector through five priority areas. See **Figure 4** for a description of the objectives of each priority area. For example, an RTO may create marketing campaigns highlighting a regional attraction, work with tourism operators to collaborate on providing joint experiences that attract more tourists to the region, and provide business coaching and support to small business operators that may not have the expertise on how to expand their attraction.

As of 2019/20, the Ministry provides annual funding to 11 of the 13 RTOs, amounting to approximately $19 million in total (see **Appendix 6** for a breakdown of funding by RTO between 2018/19 and 2022/23). The remaining two RTOs (RTO 5, Greater Toronto Area and RTO 10, Ottawa and countryside) stopped receiving annual funding from the Ministry in 2019; the Ministry's rationale for this change in funding was that these two RTOs earned revenue from the collection of the Municipal Accommodation Tax, which is an additional fee that municipalities can levy on short-term accommodations such as hotels, to generate revenue for tourism marketing in the municipality (see **Section 2.2.3**).

2.2.3 Municipal Tourism Organizations

In addition to Destination Ontario (working at the provincial level) and RTOs (working at the regional level), municipalities may also have tourism organizations that promote tourism for the city, town or county. These organizations are called destination marketing organizations or destination management organizations, both of which can be referred to as DMOs. RTOs are expected to work collaboratively with all industry partners, including the DMOs in their region.

DMOs focus on developing tourism at a sub-regional level, such as within municipal boundaries, particularly through marketing. This can include promoting a location and the experiences it offers, increasing awareness of a destination, and improving the overall reputation of the destination as a desirable place to visit, such as through social media advertising. Often, multiple

Figure 4: Five Priority Areas of Regional Tourism Organizations (RTOs) Required by Ministry of Tourism, Culture and Sport (Ministry) Funding Agreements

Source of data: Ministry of Tourism, Culture and Sport

Priority Area	Objective
Investment Attraction/ Investor Relations	Increase investment in the tourism industry to enhance visitor experience.
Marketing	Increase awareness of Ontario as a travel destination and increase conversion[1] in target markets.
Partnerships	Become a catalyst in building strategic alignment and promoting collaboration within the industry.[2]
Product Development	Enhance visitor experience through well-designed tourism products that meet current and future visitor demand.
Workforce Development and Training	Facilitate and support the attraction, development and retention of a tourism workforce to enhance the visitor experience.

1. Conversion represents desired consumer action or behaviour taken as a result of the marketing or advertising campaign, such as travel by an individual to a region in Ontario after viewing an advertisement.
2. Additional guidance in the Ministry's 2017 RTO Guide specifies undertaking projects with third parties (any partner other than the Ministry).

DMOs operate in each region that an RTO supports; there are about 200 DMOs compared with 13 RTOs.

A DMO can be funded annually by the municipality it serves, by its members, and sometimes through a Municipal Accommodation Tax.

Municipal Accommodation Tax

On December 1, 2017, Ontario Regulation 435/17: Transient Accommodation Tax (O. Reg. 435/17) was introduced. The regulation gives municipalities the authority to impose a tax, usually called the Municipal Accommodation Tax, on the purchase of short-term accommodations (such as hotels) in the municipality. This regulation was developed by the Province, but it is up to each municipality to decide if it will implement a Municipal Accommodation Tax and what rate to charge. For example, the City of Toronto charges a 6% Municipal Accommodation Tax on the price of a room as of May 1, 2023, compared to the City of Niagara Falls that charges $2 tax per night of occupancy. As of March 31, 2023, there are approximately 50 municipalities that have implemented, or are in the process of implementing, a Municipal Accommodation Tax.

The regulation requires the revenue earned through a Municipal Accommodation Tax to be shared between the municipality and one or more tourism entities. It is generally shared with a DMO or an economic development office of the municipality, so that the funds are reinvested in promoting tourism within the municipal boundaries and not in a broader region (such as with an RTO).

The amount of revenue sharing depends on whether the municipality had a prior destination marketing fee program in place before O. Reg. 435/17 was introduced. If the municipality did not have a destination marketing fee program prior to the Municipal Accommodation Tax, the municipality must share at least 50% of the Municipal Accommodation Tax revenue annually with the DMO. For municipalities that had a similar charge in place before the Municipal Accommodation Tax, the DMO is entitled to the revenue it would have otherwise earned under the previous program. As a result, RTO 5 (Destination Toronto) and RTO 10 (Ottawa Tourism), which received the Municipal Accommodation Tax revenue prior to 2017 and were also the DMOs for their cities, continued to receive revenue from this tax after they stopped being funded as RTOs in 2019/20 (see **Section 2.2.2**).

2.3 Annual Tourism Funding Programs

The Ministry operates provincial funding programs to support the tourism sector, including four ongoing grant programs, financial support to provincial and regional tourism organizations, and one-time funding that it provided during the COVID-19 pandemic (refer to **Figure 5** for a summary of the Ministry's 2021/22 funding programs). From 2015/16 to 2018/19, annual funding was $106.4 million on average each year across all these areas, decreasing to $76.5 million in 2019/20 and $79.9 million in 2020/21. The decrease in funding from 2018/19 to 2019/20 included $5 million less to Destination Ontario, $14 million less to the RTOs and $4 million less in funding for festivals and events.

To help tourism businesses during the COVID-19 pandemic, the Ministry provided additional funding programs resulting in a total of $239.4 million in tourism supports for 2021/22. Of this amount, $172.3 million was paid directly to tourism operators—$40.4 million from annual support programs and $131.9 million in one-time funding to help the industry respond to the impact of the COVID-19 pandemic (see **Section 2.4**).

The next year, for 2022/23, the Ministry provided $45 million through funding programs and $52 million to Destination Ontario and the 11 RTOs.

2.3.1 Reconnect Ontario and the Marquee Event Fund (Funding for Festivals and Events)

Reconnect Ontario is an annual funding program that supports festivals and events that attract tourists to attend in person and that increase tourism spending and create jobs. This program has been in place since 2007; its previous names were Celebrate Ontario,

Figure 5: Tourism Support Programs Funded in Ontario,[1] 2021/22

Prepared by the Office of the Auditor General of Ontario

Program Name	Type of Funding	Description/Purpose	# of Organizations	2021/22 Funding ($ million)
Reconnect Ontario	Annual (ongoing)	To support festival and event organizers to hold events that attract visitors.	404	35.3
Reconnect Ontario—Marquee Event Fund	Annual (ongoing)	To support festival and event organizers of large, high-impact, one-time non-recurring events.	7	3.7
Tourism Economic Development and Recovery Fund	Annual (ongoing)	For projects that encourage development of tourism experiences and investment, to ultimately increase Ontario's tourism industry capacity.	19	0.6
Pan-Regional Fund	Annual (ongoing)	To support projects that promote tourism and develop tourism experiences that are aimed at benefiting multiple regions.	4	0.8
Total annual funding programs				**40.4**
Ontario Tourism Recovery Program	One-time	To support tourism businesses (including accommodations and attractions) that experienced significant revenue loss during the COVID-19 pandemic.	570	98.4
Ontario Tourism and Travel Small Business Support Grant[2]	One-time	For small tourism and travel businesses (fewer than 100 employees) that experienced a significant decrease in revenue as a result of the COVID-19 pandemic, to support their operating costs.	2,111	33.5
Total one-time funding programs				**131.9**
Regional Tourism Organizations (RTOs)[3]	Annual (ongoing)	Funding to independent, not-for-profit organizations that promote tourism at a regional level (13 regions across Ontario are identified in **Appendix 5a**).	13	34.1
Ontario Tourism Marketing Partnership Corporation (operating as Destination Ontario)	Annual (ongoing)	Funding to the provincial tourism marketing organization responsible for marketing Ontario as a travel destination to individuals within Ontario and Canada, and internationally.	1	33.0
Total for provincially funded tourism organizations				**67.1**
Total				**239.4**

1. The total funding summarized for 2021/22 does not include the $270 million estimated cost of the Staycation Tax Credit program, which spans 2021/22 and 2022/23 fiscal years (2022 personal tax year). As of August 2023, Ontarians received approximately $170 million under this tax credit.
2. The Ontario Tourism and Travel Small Business Support Grant was delivered by the Ministry of Economic Development, Job Creation and Trade, with support from the Ministry of Tourism, Culture and Sport.
3. Includes $15 million one-time funding to two RTOs to support the organizations during the COVID-19 pandemic. See **Appendix 6** for the breakdown of funding to each RTO, 2018/19–2022/23.

and then the Reconnect Festival and Event Program in 2020/21, and in 2022/23 it became Reconnect Ontario. (Starting in 2023/24, the program will be known as Experience Ontario.) In 2021/22, a total of $35.3 million was paid through this program to support 404 festivals and events.

In 2022/23, event organizers could receive up to 50% of their total eligible expenses, to a maximum of $185,000 (reduced to $125,000 for 2023/24). Eligible expenses include those relating to the delivery of the festival or event, including performance fees to artists, programming costs and wages for staff.

The Ministry had not completed an evaluation of the 2022/23 program at the time of our audit, as event organizers were still submitting final reports and performance measures. For the 2021/22 funding program, using the Economic Impact Model (**see Section 2.1.1**), the Ministry estimated that every $1 of funding provided to festivals and events contributed about $8.67 to the provincial GDP and $3.39 in government tax revenue, of which $1.55 is provincial tax revenue.

The Marquee Event Fund exists for major national or international festivals or events taking place in Ontario that have operating expenses of at least $1 million and are not held in Ontario annually or biannually. For example, in 2022/23, the Tim Hortons Brier (Canada's national men's curling championship) received funding under the Marquee Event Fund. Eligible events can receive funding up to 50% of total eligible cash operating expenses. In 2021/22, a total of $3.7 million was funded through this program to support seven festivals and events.

2.3.2 Tourism Economic Development and Recovery Fund (Funding for Creating New Tourism Products)

The Tourism Economic Development and Recovery Fund (Economic Development and Recovery Fund) is an annual grant program designed to support non-capital costs for tourism projects that are innovative, create tourism investment, or build the capacity of Ontario's tourism industry. This funding program was delivered under this name between 2020/21 and 2022/23, but was previously called the Tourism Development Fund (which was in place since 2008), and it will be resuming with this name in 2023/24. For 2022/23, a total of $428,500 was approved through this program to support 18 projects.

Eligible recipients include municipalities and not-for-profit organizations that have a defined tourism focus, such as tourism industry associations. For example, a municipality can apply for funding to develop a tourism strategy or develop a new tourism attraction or experience. Up to 50% of total cash expenses for a project can be funded.

In 2020/21, eligibility under the program was expanded to provide broader support to the tourism industry during the COVID-19 pandemic. This included support to for-profit organizations with projects designed to increase domestic tourism, as well as membership support to tourism associations.

2.3.3 Pan-Regional Fund (Funding for Tourism Development)

The Pan-Regional Fund is an annual grant program operating since 2013, designed to support projects that promote tourism and destination development across multiple tourism regions. For 2022/23, a total of $750,000 was approved to support five projects.

There are no formal program guidelines for this funding program. Past recipients have been not-for-profit tourism sector associations that promote specific tourism activities across Ontario, such as Indigenous Tourism Ontario. The amount of funding a project receives is dependent on the Ministry's review of the project and its alignment with Ministry priorities.

2.4 Support Programs Created to Respond to COVID-19's Impact on the Tourism Industry

Tourism businesses were significantly impacted by public health restrictions after the COVID-19 pandemic was declared in 2020. According to Statistics Canada, 84% of tourism businesses reported a decrease in revenues in 2020, compared to 60% of all businesses in Canada. Tourism-related employment decreased by more than 28% in 2020, whereas total employment across all businesses fell by about 6%.

In March 2020, the Minister of Tourism, Culture and Sport (Minister) convened 13 Ministerial Advisory Councils to provide advice on the pandemic's impact on the tourism sector. This advice informed a report issued by the Ministry in December 2020, containing a broad plan for economic and social recovery from the pandemic (see **Appendix 7** for a description of the recommended action items). Proposals included making strategic investments in festivals and events, offering a travel incentive to Ontarians to encourage local tourism, and working with tourism operators to create new experiences that lead to year-round tourism in Ontario. In March 2021, the Minister formed a Tourism Economic Recovery Ministerial Task Force (Task Force) to further provide strategies and advice to support the recovery of Ontario's tourism industry. The Task Force report was released in June 2021 with 10 recommendations, summarized in **Appendix 8**, which include giving direct support to the industry to create attractions and experiences, and using research and analytics to create itineraries to generate interest in new markets.

Of the approximately $172.3 million of funding the Province paid directly to tourism organizations in 2021/22, $131.9 million was in one-time support (see **Figure 5** for a summary of the Ministry's 2021/22 funding programs). An additional $270 million was budgeted through the Ontario Staycation Tax Credit between 2021/22 and 2022/23 to incentivize Ontarians to travel within Ontario in 2022 so that they could receive a personal income tax credit.

2.4.1 Ontario Tourism Recovery Program (Financial Support for Tourism Businesses)

The Ontario Tourism Recovery Program (Tourism Recovery Program) was a one-time grant program to help tourism businesses that had experienced significant negative impacts on their operations from the COVID-19 pandemic and public health restrictions. The businesses had to be historically successful and to have helped drive employment and visits to their regions. The program was initially announced in March 2021, and the first payment was made in May 2022. In total, $98.4 million was distributed through this program to 570 businesses.

Eligible businesses included those in the accommodations, attractions and transportation sectors. **Appendix 9** lists the business types that were eligible for funding in these sectors. Businesses had to demonstrate a 50% or greater loss in revenues in 2020 or 2021 compared to 2019. Businesses received up to $695,000, depending on the amount of revenue lost, and salaries and wages paid. They could use the funding for reopening and operating costs, implementing health and safety measures, and/or marketing.

2.4.2 Ontario Tourism and Travel Small Business Support Grant (Financial Support for Small Businesses in the Tourism Sector)

The Ontario Tourism and Travel Small Business Support Grant (Tourism Small Business Grant) was a one-time grant provided to small tourism and travel businesses starting in May 2021. This grant was available to businesses that were not eligible to receive the Ontario Small Business Support Grant provided in January 2021. The Ontario Small Business Support Grant was audited as part of the COVID-19 Economic Response and Supports for Businesses audit, which was part of our Office's *2021 Annual Report*. The businesses excluded from this previous grant included hotels, bed-and-breakfasts, indoor attractions, recreational rental services, and travel agents and wholesalers.

These businesses did not meet the earlier grant's eligibility criteria because they were not closed or did not significantly restrict their operations during the province-wide shutdown announced on December 26, 2020. Although they were not required to close, many of these businesses still had their operations significantly impacted as a result of the shutdown. Eligible businesses, along with any affiliated businesses, had to have 99 or fewer employees and to have experienced a revenue loss of at least 20%.

The Ministry of Economic Development, Job Creation and Trade, which also delivered the original Ontario Small Business Support Grant, delivered this program with support from the Ministry of Tourism, Culture and Sport. In total, $33.5 million was paid to 2,111 businesses. There were no restrictions on the use of the funding by eligible businesses.

2.4.3 Staycation Tax Credit (Personal Tax Credit for Accommodation Expenses)

The Staycation Tax Credit was a one-time, refundable personal income tax credit for 2022. It was designed to encourage Ontarians to travel and explore the province and support the tourism and hospitality sector's recovery from the financial impacts of the COVID-19 pandemic.

Ontario residents could claim up to $1,000 as an individual, or $2,000 for families, of eligible accommodation expenses on their personal income tax return in 2022 (resulting in a tax credit of up to $200 and $400, respectively). Eligible accommodation expenses included short-term accommodations paid for hotel, motel, bed-and-breakfast, cottage or campground visits. When the tax credit was initially introduced, the Ministry estimated that the program would be used by over 1.8 million families and cost $270 million. As of August 2023, Ontarians have received approximately $170 million to date under this tax credit.

3.0 Audit Objective and Scope

Our audit objective was to assess whether the Ministry of Tourism, Culture and Sport (Ministry) had effective systems and processes to:

- develop and execute on a strategic plan and oversee Destination Ontario and regional tourism organizations to support and grow Ontario's tourism industry;
- design and deliver funding programs that efficiently and effectively support the tourism industry and maximize the industry's economic impact; and
- collect information to evaluate the effectiveness of provincial tourism supports in growing the tourism industry and report the results to the public or tourism stakeholders.

In planning for our work, we identified the audit criteria (see **Appendix 10**) we would use to address our audit objective. These criteria were established based on a review of applicable legislation, policies and procedures, internal and external studies, and best practices. Senior management at the Ministry reviewed and agreed with the suitability of our objectives and associated criteria.

We conducted our audit between January 2023 and August 2023. We obtained written representation from Ministry management that, effective November 17, 2023, they had provided us with all the information they were aware of that could significantly affect the findings or the conclusion of this report.

Our audit work was conducted at the Ministry's office in Toronto. In performing our work, we interviewed senior management and appropriate staff at the Ministry, and examined data and documentation provided by the Ministry. For tourism support funding programs, we:

- selected a sample of funding recipients and tested their eligibility for the program by reviewing their application information (such as their application form, financial information and incorporation documents) against the eligibility criteria;

- discussed with Ministry staff how funding decisions were made in their review process; and
- assessed how these funding decisions aligned with the program design and the Ministry's program objectives.

Our audit work relating to the Reconnect Ontario funding program was for the 2021/22 and 2022/23 funding years, as prior years of the similar Celebrate Ontario funding program were audited as part of the audit of Oversight of Time-Limited Discretionary Grants in **Chapter 3, Section 3.11** of our Office's *2019 Annual Report*.

Our audit did not examine the effectiveness and results of the Staycation Tax Credit program that the Ministry budgeted to cost $270 million over 2021/22 and 2022/23. This tax credit was available to Ontarians in the 2022 personal tax year, but detailed information on how many individuals or families utilized this tax credit was not available during the period of our audit work. Two other areas related to the tourism sector were not examined, as they were audited in separate value-for-money audit reports on the Travel Industry Council of Ontario and the Metropolitan Toronto Convention Centre and Ottawa Convention Centre (provincial convention centres) in our *2023 Annual Report*. These include the Travel Industry Council of Ontario and how it administers the *Travel Industry Act, 2002*, and the role of the provincial convention centres in growing tourism in Ontario.

We also held meetings with Destination Ontario and all 13 regional tourism organizations (RTOs), and reviewed how these organizations operated to meet their mandates with the Ministry and support the tourism industry. We examined Destination Ontario and the RTOs' internal reporting as well as reporting to the Ministry, including business plans, progress reports, financial statements and final reports to assess whether Destination Ontario and the RTOs' activities are effective at growing tourism in Ontario.

To better understand the role of tourism organizations in Ontario and the effectiveness of the Ministry's tourism supports, including in comparison to other jurisdictions, we had discussions with a number of tourism stakeholders, including:

- tourism associations within Ontario and Canada that support the tourism sector, such as Attractions Ontario, Festivals and Events Ontario, Indigenous Tourism Ontario, Ontario Tourism Education Corporation, Tourism Industry Association of Canada, and Tourism Industry Association of Ontario;
- tourism organizations working at the municipal or sub-regional level, including destination marketing organizations such as Tourism Mississauga, municipalities including the City of Brampton, and associations such as the Eastern Ontario Agri-Food Network; and
- other tourism organizations in Canada, such as Destination Canada, Destination BC and Travel Alberta.

We conducted our work and reported on the results of our examination in accordance with the applicable Canadian Standards on Assurance Engagements—Direct Engagements issued by the Auditing and Assurance Standards Board of the Chartered Professional Accountants of Canada. This included obtaining a reasonable level of assurance.

The Office of the Auditor General of Ontario applies Canadian Standards on Quality Management and, as a result, maintains a comprehensive system of quality management that includes documented policies and procedures with respect to compliance with rules of professional conduct, professional standards and applicable legal and regulatory requirements.

We have complied with the independence and other ethical requirements of the Code of Professional Conduct of the Chartered Professional Accountants of Ontario, which are founded on fundamental principles of integrity, objectivity, professional competence and due care, confidentiality and professional behaviour.

4.0 Detailed Audit Observations

4.1 The Ministry Has Not Developed an Effective Long-Term Strategic Plan for Tourism Recovery and Growth after the COVID-19 Pandemic

The Ministry of Tourism, Culture and Sport (Ministry) has not developed a long-term strategic plan for tourism since the one it developed in 2016 (see **Appendix 11** for a summary of key actions it included). This was a five-year plan covering the years 2016–21. During these years, tourism growth in Ontario did not meet the Ministry's target of 3.3% per year.

The Ministry's 2016 strategic plan set the goal to grow tourism at an average rate of 3.3% annually over five years to match the average global tourism industry growth estimated by the World Tourism Organization. From 2016 to 2017, the number of tourists in Ontario decreased by 0.8%, and between 2018 and 2019, the number of tourists increased less than 1%. (In 2018, Statistics Canada changed its reporting methodology for collecting tourism data, so the measures beginning with 2018 are not comparable to the years prior. See **Figure 6** for the percentage change in the number of tourists in Ontario each year.) Before the Ministry released its strategic plan in 2016, the number of tourists in Ontario was growing at less than 2% per year—the year-to-year change between 2011 and 2016 ranged from a 0.9% decrease (2014) to a 1.7% increase (2015).

When the COVID-19 pandemic caused tourism activity to decrease, two reports were completed, one by the Ministry and one by tourism stakeholders at the direction of the Minister of Tourism, Culture and Sport (in December 2020 and June 2021, respectively). These reports contained actions and recommendations directed to the Ministry to support the tourism sector through the pandemic, and are summarized in **Appendix 7** and **Appendix 8**. The reports were meant to inform the Ministry's development of a five-year strategic plan for the tourism, culture and sport sectors, but no plan has been developed. In August 2023, the Ministry received direction from the Minister of Tourism, Culture and Sport to develop a tourism growth plan, but the Ministry does not have an estimated completion date for the plan.

Other provinces (including British Columbia, Alberta and Quebec) published multi-year strategic plans between 2021 and 2023 to communicate their strategy for growing tourism, with a specific focus on economic recovery after the pandemic. We compared the tourism strategic plans released by British Columbia, Alberta and Quebec between 2021 and 2023 to Ontario's 2016 plan. We found that Ontario's plan did not specify how the Ministry plans to make strategic investments in the tourism sector or establish multiple key performance measures. The strategic plans from the other three provinces also include elements such as provincial objectives, planned actions and strategic investments that will be made to achieve the objectives, and performance measures and targets for tourism growth.

Figure 6: Total Tourist Visits in Ontario, 2011–2021

Source of data: Ministry of Tourism, Culture and Sport

Year	# of Tourists (millions)	% Change
2011	139.0	n/a
2012	141.2	1.6
2013	140.8	(0.3)
2014	139.5	(0.9)
2015	141.9	1.7
2016	144.1	1.6
2017	142.9	(0.8)
2018[1]	131.8	n/a[1]
2019	131.8	–
2020[2]	78.2	(40.7)
2021[2]	79.2	1.3

1. In 2018, there was a change in methodology of how the travel surveys were conducted by Statistics Canada to collect tourism data. For example, to collect domestic tourism data, a new online survey was started to ask Canadians about their travel spending in the year, as opposed to the prior telephone travel survey that respondents were invited to complete following a different telephone survey of their participation in the workforce.

   This impacted the reach and response rate of the survey, so the data prior to 2018 is not comparable to data for the years after.
2. The COVID-19 pandemic interrupted Statistics Canada's travel survey collection operations, and therefore data for 2020 and 2021 includes travel estimates produced by Statistics Canada.

A long-term strategic plan can establish priorities and objectives, co-ordinate provincially funded tourism organizations, and align the Ministry's funding and activities to maximize tourism growth and its contribution to the economic recovery in Ontario. This is especially important given the negative effect the COVID-19 pandemic had on tourism and businesses.

Without a set of current targets and performance measures, the Ministry also cannot determine if its activities and spending are effective at achieving their objectives. This is important to determine which of the current support programs are effective and should continue, and which should be modified to better support the tourism industry. We have also identified areas where the support that the Ministry currently provides to the tourism sector can be improved. This information should be incorporated into the Ministry's long-term strategic plan so that the Ministry, the organizations it funds and the Ministry's tourism funding programs can work together to provide effective support for the tourism sector and maximize the economic impact on Ontario. For example, as we note in **Section 4.1.3**, the information the Ministry collects does not let it evaluate whether the regional tourism organizations (RTOs) it funds are effective in increasing tourism in their regions. The Ministry also provides the mandate to perform marketing activities both to the RTOs and to Destination Ontario (the provincial marketing agency), which leads to the two having overlapping responsibilities. As we discuss in **Section 4.1.1**, the money that Destination Ontario spends on advertising could have greater impact in attracting more tourists if it was spent on marketing campaigns outside Ontario.

The Ministry also has not considered the role of two tourism regions, the Greater Toronto Area and Ottawa and countryside, as part of a provincial tourism strategy after ending their annual RTO funding. As we discuss in **Section 4.1.4**, since 2019 these regions are no longer accountable to the Ministry and therefore are not directly tied to Ministry priorities. This has decreased the collaboration within and across these regions, which is one of the main purposes of the RTOs, and has created gaps in support for local tourism operators. There is also no plan for how to use these two tourism gateway cities to attract international tourists to Ontario.

RECOMMENDATION 1

To establish and publicly communicate its priorities in maximizing the economic impact of tourism in Ontario and supporting the tourism industry in recovering from the COVID-19 pandemic, we recommend that the Ministry of Tourism, Culture and Sport:

- develop a long-term strategic plan for tourism that includes action items, key performance measures and targets to be able to track outcomes; and
- publicly report annually on performance against the performance measure targets in the plan.

MINISTRY RESPONSE

We thank the Auditor General for the recommendation. The Ministry will continue to provide strategic support for the tourism industry by evaluating trends and will consider developing a strategic course of action that continues to grow the sector.

The Ministry is encouraged by strong signs of growth in tourism across the province and will investigate appropriate performance measures for the sector and publicly report on these measures.

4.1.1 Tourism Marketing in Ontario Is Not Always in Partnership with Regional Organizations, Resulting in Less Funding Available for International Marketing and Fewer Potential Tourist Visits

As the provincial tourism marketing agency, Destination Ontario's mandate includes marketing Ontario as a travel destination to tourists within Ontario, throughout Canada and internationally. Within this mandate is a principle that "Destination Ontario and regional organizations are to work together to market travel within Ontario." We found that Destination Ontario's

marketing within the province is not always done in partnership with other tourism organizations, such as RTOs and DMOs. In 2022/23, Destination Ontario spent about $7 million on marketing to Ontarians, of which only $1 million was matched funding in partnership with RTOs and DMOs. Destination Ontario's own marketing spend inside Ontario was comparatively higher in 2022/23 specifically because the agency was promoting the Staycation Tax Credit, but its spending to market travel within Ontario in prior years was also not done in partnership. For the five years preceding the COVID-19 pandemic, 2015/16 to 2019/20, Destination Ontario spent about $4 million on average each year marketing within Ontario, none of which was in partnership with regional organizations.

Separately, the 11 RTOs that receive Ministry funding spent about $11.7 million annually on average on marketing in the five-year period prior to the COVID-19 pandemic, and $7.9 million in 2022/23. The approximately 200 DMOs across Ontario also invest in marketing, but the Ministry does not collect details of their spending, as the DMOs are generally funded by the municipality they serve, directly by their members or through the Municipal Accommodation Tax. Many of these organizations advertise mostly to Ontarians, since it is more cost-effective for them to focus on attracting Ontario tourists than international tourists. For example, many RTOs informed us that, given that their annual funding from the Ministry ranges from approximately $1 to $4 million, it is too costly for them to market separately within Ontario along with marketing to other parts of Canada and/or internationally. In contrast, Destination Ontario, with its larger budget relative to each individual RTO, and its sole mandate to promote Ontario as a tourism destination, is better suited to attracting tourists from outside of Ontario.

Destination Ontario's own analysis supports that marketing Ontario tourism to the United States provides better value for money than if it spent the same dollars marketing to other Ontarians. For example, in 2022/23, in addition to the $7 million spent on marketing to Ontarians, Destination Ontario spent $5 million marketing to tourists from the United States. Based on Destination Ontario's analysis of incremental tourist numbers and tourist spending it could attract by advertising in the United States (estimated from tourism activity as a result of Destination Ontario's past marketing campaigns between 2012 and 2022), we estimated that Ontario could benefit from about 86,000 more tourists and $38 million more in tourist spending if $2 million was deducted from marketing to Ontario tourists and spent on marketing in the United States.

As part of developing a long-term strategic plan for tourism, a strategy to align the marketing activities for promoting Ontario tourism within the province, and oversight of these processes for better co-ordination between Destination Ontario and the RTOs, would create more value for Ontario that could lead to more tourists and economic benefit.

RECOMMENDATION 2

To maximize the return on marketing investment and avoid duplication of marketing efforts, we recommend that the Ministry of Tourism, Culture and Sport:

- work with Destination Ontario to align strategies to maximize tourist visits and spending in Ontario based on the available marketing budget;
- work with Destination Ontario and regional organizations to develop processes and performance measures for effectively working together to market travel within Ontario; and
- receive and evaluate annual report-backs on the results of the partnerships between Destination Ontario and regional organizations, including marketing campaigns developed and dollars contributed.

MINISTRY RESPONSE

The Ministry accepts this recommendation and will continue to work with Destination Ontario and Regional Tourism Organizations to better co-ordinate efforts to grow tourism in the province.

This includes looking for opportunities to enhance partnerships, align strategies, determine effective performance measures and develop a process to better utilize marketing budgets to build tourism in Ontario and report back on the results of this work to the Ministry.

4.1.2 Travel Information Centre Locations Cost $5 million to Operate Annually, Yet Are Underutilized and Do Not Align with Modernization Strategy

Destination Ontario operated nine Travel Information Centres as of August 2023, which offer tourists travel advice, tickets for select attractions and events, and souvenirs (see **Appendix 4** for the locations of these centres). In 2022/23, the centres cost $5 million to operate. These Travel Information Centres have seen a significant decline in the number of visitors, from about 1,058,000 in 2016/17 to approximately 180,000 in 2022/23 (about 17% of the 2016/17 number). Not all of these visitors go to the Travel Information Centres for information; for example, some may only stop to use their washrooms. Therefore, Destination Ontario also tracks the number of groups that visit to use the centres' core services, primarily distributing travel information. Of the total visitors in 2016/17, approximately 446,000 parties were counselled and received travel information, a number that decreased to about 69,000 in 2022/23 (about 15% of the 2016/17 amount). **Figure 7** shows the trend in number of parties counselled, annual operating costs, and the average cost of operations per party counselled between 2015/16 and 2022/23.

The COVID-19 pandemic caused many of the Travel Information Centres to temporarily close when travel restrictions were in place, which contributed to the significant decline in visitors for 2020/21. However, the pandemic accelerated the declining visitor trend that had already begun before 2020/21.

In 2019, Destination Ontario conducted research through focus groups and found that the majority of those surveyed would not go out of their way to visit a Travel Information Centre, and those who had never visited one did not see their value because online resources are available. Visitors to Travel Information Centres mainly intended to use the washrooms, or to get maps or directions, or advice on what to do at the destination. However, as a result of public health restrictions on gatherings during the COVID-19 pandemic, these services have also shifted to other delivery methods as part of Destination Ontario's modernization strategy. These include mobile pop-up information service booths that have lower fixed costs and can be operated near events and attractions, and digital travel consulting services for people looking for travel ideas.

With Ministry approval, Destination Ontario closed some underused Travel Information Centres. For example, in October 2021, it closed the centre in St. Catharines, and then in April 2023 it closed the

1. Total number of groups that visit for the core services of the Travel Information Centres, such as receiving travel information.
2. Operating cost of Ontario Travel Information Centres includes salaries and wages, lease expense and other operating expenses, net of any revenue earned from souvenirs and tickets sold.

Sarnia centre when its lease expired. As of August 2023, nine centres that continue to see a low number of visits were still operating.

Destination Ontario and the Ministry have had ongoing communication regarding the future operations of the Travel Information Centres. Destination Ontario has informed the Ministry that even if the nine centres were closed, travel information services could continue through other methods such as virtual video counselling and pop-up locations. As well, there are municipally owned and community-operated visitor travel information centres (about 200 across Ontario in total), resulting in duplication of services and oversaturation in some locations.

Since Destination Ontario's main role as the provincial marketing organization is to promote Ontario as a travel destination, the $5 million that it allocates to operate these centres may be able to be used more effectively to grow tourism. The Travel Information Centres represent approximately 15% of Destination Ontario's current budget (approximately $5 million of $33 million annual funding), which the organization could use to attract more visitors through advertising outside of Ontario instead of providing information to travellers who have already entered the province. This would be similar to the trend in other provinces. British Columbia's visitor centres are owned and operated by community-based organizations (such as chambers of commerce or economic development offices), with some provincial co-ordination by its provincial tourism agency, Destination BC. New Brunswick has closed its visitor centres completely, and Nova Scotia and Manitoba are closing some of their centres or reducing hours of operation for centres that receive few visits.

RECOMMENDATION 3

To align with trends on how visitors look for information services and to more effectively utilize tourism support funding, we recommend that the Ministry of Tourism, Culture and Sport work with Destination Ontario to:

- develop and execute a cost-effective plan for the future operations of Travel Information Centres, with consideration of whether the locations are providing value in promoting tourism, and take action (such as changing services provided or operating hours, or closing locations) if locations are not providing value; and
- identify, through analysis of other jurisdictions, and implement alternative methods of providing travel information services (in addition to virtual video counselling and pop-up locations) that improve engagement with individuals to promote travel, length of stay, and/or spending, as part of Destination Ontario's modernization strategy.

MINISTRY RESPONSE

The Ministry accepts this recommendation and will continue to engage with Destination Ontario on the strategy for modernizing Travel Information Centres and services.

Evidence-based, cost-effective options will be considered and pursued to modernize the current delivery of travel information services, taking into account the cost of operations and facilities, location of centres and number of visitors, consumers' preferences in receiving travel information, data from research and trends (including those from other jurisdictions), and use of current technology.

Options, alternatives, plans and implementation will be explored over upcoming business planning cycles.

4.1.3 Ministry's Regional Approach Is Inconsistent in Monitoring Tourism Activity and Collects Insufficient Data to Understand Local Trends

In 2010, the Ministry set up 13 regional tourism organizations (RTOs) to lead the development of the tourism industry within their regions. These RTOs are independent of the Ministry and governed by their own boards of directors, but are accountable to the Ministry through funding agreements that require the RTOs to perform and report on activities in five priority areas (see **Figure 4**). Despite the planned activities,

performance measures, and targets specified in these funding agreements, the information collected by the Ministry does not demonstrate whether each RTO is effective in increasing tourism to its region. We noted that the Ministry does not perform a comprehensive review of the targets that the RTOs establish, whether these targets were achieved at the end of the year, and ultimately, how each RTO's activities contributed to the trend in visits to its region.

We reviewed the 11 business plans submitted by the RTOs that received Ministry funding for 2022/23 and found that RTOs do not always establish a detailed plan for how they will support the tourism operators in their region. Specifically, the business plans of seven RTOs did not include targets for all their identified performance measures. For example, one RTO included the number of partnership projects to be completed as a performance measure for the year without stating targets for the number of partners or projects. Another RTO listed several performance targets as "to be determined," and the Ministry did not follow up to require specific targets to be set. The Ministry indicated to us that this was due to the COVID-19 pandemic, which made it difficult to set specific performance measures.

We also noted that the business plans differ in their level of specificity. This includes the quality of activities, outputs and outcomes, all of which form the basis for developing each RTO's funding agreement with the Ministry. Some RTOs provide detailed information on their planned activities, while others outline the activities broadly. For example, one of the five priority areas in the funding agreements is product development—the creation or enhancement of tourism experiences to meet tourist needs and grow demand. One RTO stated that it would lead and support the development of more inclusive tourism experiences, but gave no expected outcomes or performance targets, or details of how it planned to achieve this. In contrast, another RTO stated that it would increase mid-week tourism spending in the spring and fall by offering product experiences that extend a tourist's stay, and it identified a plan to achieve this. It planned to develop four cross-regional itineraries that include attractions, and culinary and overnight components, to generate awareness of the destination.

When clear targets are not set at the beginning of the year, the Ministry does not know how an RTO plans to support each of the five priority areas, and it cannot assess whether the RTO has been effective in fulfilling its plan. The result is that the Ministry cannot hold RTOs accountable to their funding agreements, nor can it determine whether the RTOs' activities are effective in increasing tourism in their regions.

One of the Ministry's main measures for assessing tourism growth is the number of tourists to Ontario each year. The Ministry collects this data annually for each tourism region, but the RTOs do not report back on this trend over the years as part of their performance measures. This means the Ministry does not obtain an understanding of the overall impact that all of the RTOs' activities had on the tourism industry in their region, to explain the extent to which the RTOs' activities were effective at promoting and increasing tourism in their region or what factors resulted in a decrease in tourism. This includes whether the RTOs are effective at working with other regional stakeholders, including municipal governments and DMOs, to promote tourism.

Appendix 12 shows an eight-year trend in the number of tourists by region. For example, four RTOs had a net decrease in total tourists from 2013 to 2017 (the year prior to a change in data collection methodology, so tourist numbers are not comparable to 2018 and onwards). One of these RTOs experienced a decrease most years from 2013 to 2017. In these RTOs' annual reports to the Ministry, there is no explanation for the decreased numbers of tourists; only successes relating to individual activities are highlighted. Requiring more specific and informative performance measures and reporting can be useful to determine any additional actions that the Ministry, Destination Ontario or the RTOs themselves should be taking to grow tourism in these regions.

RECOMMENDATION 4

To improve the performance measurement of regional tourism organizations (RTOs) and increase accountability to their funding agreements, we recommend that the Ministry of Tourism, Culture and Sport (Ministry):

- require RTOs to include in their business plans performance measures and targets for each priority area that are specific, measurable, achievable and relevant;
- require RTOs to report on actual results at the end of the year for each performance measure included in their business plans, provide details of the activities undertaken each year to attain these measures, explain any targets that are not met, and detail the corrective actions taken; and
- in their final annual report to the Ministry, require RTOs to report the multi-year trend in tourists to their region, and explain the impact of their activities on the trend.

MINISTRY RESPONSE

The Ministry accepts this recommendation and will work with Regional Tourism Organizations (RTOs) to develop targets and common performance measures for annual business plans and annual reports. This includes requiring detailed reporting on the specific impact of the activities that the RTOs undertake annually, and how their activities have impacted tourist visits to their regions over time.

These improved performance measures and reporting will be used to assess the effectiveness of the support the Province provides to the 11 RTOs who play an important part in Ontario's tourism economy to attract more visitors, generate more economic activity and create more jobs.

4.1.4 The Two Regions That Attract Many of the International Tourists to Ontario Are the Only Two Regions No Longer Funded by or Accountable to the Ministry for Growing Tourism

The Ministry created 13 RTOs in 2010 to provide leadership and strategic support, and increase collaboration between tourism operators within the regions. However, as of 2019, the Ministry no longer provides annual funding to two RTOs—RTO 5 representing the Greater Toronto Area and RTO 10 representing Ottawa and its countryside. These two regions bring in many of the international tourists to Ontario, but are no longer accountable to the Ministry. Municipalities in those regions no longer have support from a regional organization that is mandated to foster collaboration within the region or across regions, which was one of the main purposes of the RTOs when they were established. Since the Ministry does not invest in or establish priorities for the growth of these regions through its funding agreements, the regions are not directly tied to Ministry priorities for the tourism sector, unlike all other regions of the province.

The Ministry's rationale for this withdrawal of funding was that all other RTOs were having their annual Ministry funding reduced by about 20% as a result of a planned overall decrease in Ministry expenditure in 2019. The 11 RTOs that continued to receive Ministry funding saw a $4.6 million decrease in their funding in total across all 11 RTOs (a decrease ranging from $0.2 million to $1 million for each RTO), whereas RTOs 5 and 10 no longer received $12.9 million of funding in total. This resulted in a total decrease in RTO funding of $17.5 million. The Ministry expected that even with the complete loss of its funding, the Toronto and Ottawa regions would not be as much affected as the other RTOs, as these cities could generate revenues through the Municipal Accommodation Tax. The net decrease in total revenue for each of these RTOs was estimated at only about 15% without the Ministry's funding.

Impact on Growing International Tourism

The Greater Toronto Area and Ottawa regions act as gateway cities for international tourists entering Ontario through two of the province's largest international airports. Tourists landing here may also travel to other destinations, so these regions are important for moving international tourists to other tourism regions. A study conducted by RTO 5 (Greater Toronto Area) in 2018 found that tourists to Toronto accounted for $12.6 billion of spending in Ontario overall, of which $10.6 billion was spent within the Greater Toronto Area and $2 billion, or 16%, was spent outside Toronto, in other tourism regions. This highlights the benefits of keeping these regions aligned with province-wide tourism priorities and collaborating with other RTOs, as it ultimately results in tourism for other regions.

About 55% of all tourist spending in Toronto was from international tourists (US and overseas). In addition to bringing foreign money into the Ontario economy, international tourists also spend more per visit, on average, than domestic tourists. Tourism data from Statistics Canada showed that in 2019, the average spending per person visiting Ontario varied from $142 for an Ontario tourist, to $160 for a Canadian tourist, to $391 for a US visitor, and to $1,597 for an international tourist—more than 10 times the spending of an Ontario tourist. Therefore, attracting international tourists is important for the economic growth in Ontario.

Gaps in Regional Support Provided

Removing Ministry funding from RTOs 5 and 10 also changed their mandates, resulting in some areas being left without any regional tourism support and creating gaps in support for some tourism operators. The 13 RTOs were originally established to promote tourism in their broader regions, which include several municipalities (see **Appendix 5a** and **Appendix 5b** for maps of the regional boundaries), and the Ministry provided annual funding to foster collaboration across the regions. In contrast, the Municipal Accommodation Tax revenue that RTO 5 and RTO 10 receive can be used only to promote tourism in the municipality it was generated in. When RTO funding was eliminated for two RTOs, these organizations reverted back to acting as DMOs for their municipality rather than serving the broader region. These two organizations no longer had the mandate to provide tourism support to operators in the broader Greater Toronto Area and the Ottawa and countryside regions, as the Municipal Accommodation Tax became these RTOs' main revenue source and had to be spent on marketing tourism exclusively in the cities of Toronto and Ottawa.

When the Greater Toronto Area's RTO 5 eliminated direct regional support to Brampton and Mississauga, it resulted in withdrawing from all business development efforts to attract sports tourism in those municipalities, and RTO 5 no longer funded business events to be held there. The RTO transitioned to a destination marketing organization (DMO) role for only Toronto. The remaining municipalities of RTO 5, Brampton and Mississauga, had to establish their own tourism offices after they lost the provincial support. This resulted in reduced regional collaboration.

During the COVID-19 pandemic, RTO 5 received one-time funding to support tourism for the region. We heard from the municipalities it supported that this funding led to improved collaboration across the Greater Toronto Area. This included the joint development of marketing content featuring all three municipalities, which they used to advertise at Toronto Pearson International Airport. Some of the municipalities would not have been able to invest in the same content on their own.

When Ottawa (RTO 10) lost Ministry funding in 2019, the United Counties of Prescott and Russell lost tourism support. This area's eight small counties are unable to generate significant revenues individually from the Municipal Accommodation Tax because of their lack of short-term accommodations such as hotels. To the south of Prescott and Russell are the United Counties of Stormont, Dundas and Glengarry, which are part of RTO 9 (Southeastern Ontario). The tourism operators in Stormont, Dundas and Glengarry are able to access tourism support from RTO 9, such as training and research and analytics. They can also

apply for additional funding to grow their tourism activities through RTO 9's partnership fund. However, similar tourism operators located just north of this area in Prescott and Russell do not have the same access, since RTO 10 no longer has the funding or mandate to support the region. The Ministry recognized that this area of Ontario was excluded from regional tourism support, and in July 2023 it changed the boundaries of the tourism regions so that Prescott and Russell was moved from RTO 10 to RTO 9, and RTO 9 received additional funding to support this additional area.

A third region, Niagara Canada, also acts as an important gateway for tourists to enter Ontario. This region continues to receive annual RTO funding, and the Province's 2022 Budget stated that support for tourism recovery in Niagara Falls was a priority. It was identified as a priority because the region is a popular international tourism destination, and so it is important to work with affected sectors there to recover to pre-pandemic tourism levels. Toronto and Ottawa are also important in attracting international tourism, but other than one-time funding during the pandemic, there is no continued annual funding for these regions, unlike Niagara.

Other than expressing this support for Niagara Falls in the 2022 Budget, the Ministry does not have an overall long-term strategy on what specific actions it will undertake to support tourism recovery and growth, as noted in **Section 4.1**. As a result, there is no plan outlining how to use the gateway cities to attract tourists to Ontario. For tourism growth and recovery, especially after the COVID-19 pandemic, it is important that the Ministry have a strategy and align provincial activities and tourism programs across all regions in Ontario, including those that draw in many international tourists.

RECOMMENDATION 5

To provide tourism operators in all regions of Ontario with access to support from a regional tourism organization (RTO) and to foster collaboration between tourism operators across all regions, we recommend the Ministry of Tourism, Culture and Sport evaluate the role of gateway cities for attracting international tourists to Ontario and how they contribute to the growth of tourism in Ontario.

MINISTRY RESPONSE

The Ministry accepts this recommendation and will evaluate the role of gateway cities for attracting international tourists and their impact on the growth of tourism in Ontario.

4.1.5 Ministry Has Provided Limited Funding in the Past Five Years to Attract Private Investment to the Tourism Sector, Which Is Part of Its Mandate

Although the Ministry's mandate to support the tourism sector includes attracting international investment to Ontario, it has provided limited funding to encourage private investment in the tourism sector since 2017/18. **Figure 8** shows the number of businesses supported and amount of funding provided in the past 11 years by the Ministry and by the Ministry of Economic Development, Job Creation and Trade—the two ministries primarily responsible for attracting private investment to the tourism sector. In total, they provided $19 million to encourage businesses to invest or increase their investment in Ontario's tourism sector, resulting in private-sector investment totalling $288 million to Ontario's economy from 2012/13 to 2017/18, but the Ministry made no further investments between 2018/19 and 2022/23.

Even though the Ministry's Tourism Economic Development and Recovery Fund (**Section 2.3.2**) can support many types of tourism projects, including attracting investment, its budget averages less than $1 million annually. Further, since 2020/21, the projects it has funded have mostly supported not-for-profit organizations, tourism associations and municipalities, reducing the focus on attracting private investment to stimulate economic growth in the sector through tourism infrastructure and activities.

Figure 8: Provincial Grants[1] to Attract Private Investment to the Tourism Sector, 2012/13–2022/23

Source of data: Ministry of Tourism, Culture and Sport and Ministry of Economic Development, Job Creation and Trade

	Ministry of Tourism, Culture and Sport[2]		Ministry of Economic Development, Job Creation and Trade		Total

Total	**3**	**10,395,000**	**13**	**8,826,037**	**16**	**19,221,037**

– years during which no grants to attract private investment were made by either ministry.

1. Provincial grants include those funded by the Ministry of Tourism, Culture and Sport and the Ministry of Economic Development, Job Creation and Trade, which are the two main ministries responsible for attracting private investment related to tourism across Ontario. Only grants provided with the purpose of attracting new or increased investment from private sector businesses to establish or expand operations have been included. Other grants may have been provided by other government ministries to tourism businesses that have not been included in the figure. For example, tourism businesses may receive funding from the Ministry of Northern Development, which supports the overall economic and community development in Northern Ontario.
2. Only grants provided directly to private sector businesses with the goal of attracting private sector investment into Ontario have been included.

Other provinces such as British Columbia and Alberta have established funding programs to develop tourism experiences, which in turn attract private investment to the tourism sector to stimulate its recovery following the COVID-19 pandemic. In British Columbia, a $30 million Destination Development Fund supports the development of tourism infrastructure, assets and experiences. Travel Alberta, a provincial Crown agency, intends to invest $18.3 million annually in 2023/24 and 2024/25, and $15 million in 2025/26 (or $51.6 million over these three years), through its Tourism Investment Program to support businesses and communities with product and experience development. British Columbia launched its three-year program in late 2022, and Alberta revised an existing funding program in 2022 to include a focus on building new tourism experiences and infrastructure. These programs are in addition to funding provided for tourism businesses during the COVID-19 pandemic (which Ontario also delivered) that was meant to support the provinces' respective strategic plans for growing tourism after the pandemic.

In Ontario, the Ministry of Economic Development, Job Creation and Trade and its agency Invest Ontario promote economic development through three priority sectors: advanced manufacturing, life sciences and technology. They market Ontario as a destination for business investment, and work with the businesses that are considering establishing operations in Ontario by providing incentives such as grants, loans, tax credits and other support. It is the Ministry of Tourism, Culture and Sport's responsibility to perform a similar role for the tourism sector. The Ministry itself identified in its 2023/24 budgeting process that no provincial program currently exists to encourage private-sector investment, innovation and expansion in the tourism industry, even though it has identified potential investment projects that could be secured through funding support. At that time, the Ministry had identified 12 potential attractions that had expressed interest in Ontario and estimated that with government support ranging from $800,000 to $30 million, each project could attract investment to Ontario ranging from $10 million to $350 million.

The Ministry has also assigned some of the responsibility for attracting tourism investment to the RTOs at the regional level. As noted in **Section 2.2.2** and **Figure 4**, this is one of the five priority areas for RTOs to address through their funding. However, the RTOs informed us that they generally do not have the budget to provide one-time grants to incentivize private businesses to establish operations in their region. They noted that activities relating to economic development are usually performed at the municipal and provincial levels, instead of the regions that the RTOs operate in.

The RTOs' reports to the Ministry differ significantly on their achievements in the investment attraction priority area. One RTO mentioned that they "do not have the internal capacity to approach investment attraction in a similar manner as the [municipal] economic development offices." Another RTO referred to some of the activities it performed as part of product development, which is a different one of the RTOs' five priority areas. This RTO identified that it supported attraction of investment by providing timely, relevant research to demonstrate the potential audience that prospective investors can attract with new tourism attractions. It also noted that the lack of timely and relevant data continues to be a challenge for the tourism industry and an area of improvement to meet investor demands (see **Section 4.1.7**). A third RTO reallocated its funding budgeted for investment attraction to the four other priority areas.

The Ripley's Aquarium of Canada is an example of successful provincial investment that has led to large private investment with the development of a major tourism attraction within the last 10 years. Ontario provided $10 million to support its construction, in addition to other investments made by the federal and municipal governments. The Ministry estimated that the economic impact of this attraction includes over $220 million of tax revenues generated for all three levels of government, and almost 350 jobs supported.

RECOMMENDATION 6

To more effectively attract and leverage private investment in tourism, we recommend that the Ministry of Tourism, Culture and Sport:

- evaluate the past activities of regional tourism organizations (RTOs) to identify the activities that have been effective in attracting private investment in tourism to a region;
- redefine the investment attraction priority area of the RTO funding agreement so that it is better aligned with the regional approach in which RTOs operate;
- analyze the programs and investment attraction strategies that other jurisdictions use; and
- develop a plan for supporting private investment in the tourism sector through the Ministry's strategic planning initiative identified in **Recommendation 1**.

MINISTRY RESPONSE

The Ministry accepts this recommendation and will evaluate the past investment attraction activities of Regional Tourism Organizations (RTOs) as well as other jurisdictions to identify the potential activities that would most effectively attract private investments to Ontario. This evaluation will be used to consider potential changes to the investment attraction priority area for RTOs.

The Ministry will also continue to work across government and with government agencies, such as Invest Ontario, to support attracting and leveraging private investment in tourism.

4.1.6 Ministry's Regional Approach to Increasing Tourism Does Not Focus on Destination Development and Is Behind Other Jurisdictions

Other jurisdictions have placed a stronger focus than Ontario on destination development as part of their strategic plans for tourism recovery after the COVID-19 pandemic. Destination development is the strategic planning and creation of activities with a focus on developing the tourism product and experience, as opposed to marketing existing attractions. For example, destination development in Ontario's Niagara Wine Region, the largest wine production region in Canada, involved collaboration between tourism businesses to create a major destination experience highlighting the

region's wineries. Destination development has been identified as a best practice by other jurisdictions and in the tourism sector for growing and creating a sustainable tourism industry.

RTOs are the main provincially funded organizations that lead collaboration within their regions to grow tourism. The Ministry's funding agreements do not require the RTOs to support destination development in their regions, even though, as a potential revision to future funding agreements, it has recognized the benefits that could flow from focusing on destination development as a strategic approach.

In our review of 2021/22 final reports submitted by the 11 RTOs that are funded by the Ministry, we noted that six RTOs have promoted destination development by fostering collaboration between tourism operators to create a new tourism product and experience and the remaining five RTOs did not. The omission of support for destination development from the RTOs' funding agreements is one reason for this inconsistent approach among regions.

One RTO supported the collaboration of six distilleries and various municipal and tourism stakeholders in creating a self-guided tour of the different distilleries located across three municipalities in the tourism region. The tour attracts visitors to each participating distillery and to explore the towns where they are located, and the program provides additional opportunities to increase visits to each region by running contests for visiting multiple distilleries. Another RTO collaborated with a local film festival to collect data on the locations that attendees travelled from and their common interests. Using this data, the film festival introduced new programming, including a new art exhibit, to reflect visitors' interests and attract more tourists with similar interests. The RTO led the strategic collaboration with other tourism businesses, which created new programming and resulted in an increase in visitors to the film festival by about 5% over two years.

Since RTOs are not required to take a destination development approach to supporting tourism in their regions, the alternative that some RTOs have chosen has been to focus on partnerships with individual operators. For example, an RTO helped an organization add a new disc golf experience to its property and also partnered with a performing arts theatre to conduct an operations audit and construct signage to increase awareness and bring visitors to its new theatre locations. While this is effective in supporting tourism in the region, other jurisdictions and the tourism sector have identified moving toward a destination development approach as a best practice to create a sustainable tourism industry.

In 2022, the Ministry proposed changes to the guidance provided to RTOs, to require them to invest more in destination development. However, as of August 2023, the Ministry had not finalized these proposed changes for implementation, as it is still considering further updates.

Other jurisdictions provincially, nationally and internationally have placed a stronger focus on destination development. As noted in **Section 4.1.5**, British Columbia has a $30 million Destination Development Fund to support the development of tourism infrastructure, assets and experiences. British Columbia's 2022–24 strategic framework for tourism includes sustainable growth of visitors as one of its objectives, which prioritizes destination development support and attraction of new investment as one of its strategies. Ireland has a Regional Tourism Development Strategy (2023–27) for Dublin with similar objectives, which aims to support the industry in building a pipeline of future international business. Destination Canada, the federal tourism agency, launched the Tourism Corridor Strategy Program in 2023 with a goal of accelerating the destination development of three selected corridors. It intends to promote interprovincial collaboration across Canada, attract investment and raise awareness of further development opportunities.

RECOMMENDATION 7

To promote destination development and continued collaboration between tourism operators across regions, we recommend that the Ministry of Tourism, Culture and Sport (Ministry):

- analyze programs and destination development strategies that have been adopted in other jurisdictions, including best practices and strategies

developed by various regional tourism organizations (RTOs) in Ontario; and

- use this analysis to evaluate the Ministry's and RTOs' role in destination development, and incorporate the best practices into the guidance provided to RTOs, funding agreements and business plan requirements.

MINISTRY RESPONSE

The Ministry accepts this recommendation and supports a collaborative approach to destination development. In October 2023, the Ministry released an updated program guide to the Regional Tourism Organizations that includes additional guidance on destination development.

The Ministry will continue to review strategies and approaches to destination development and will incorporate additional best practices and strategies into future updates of the guide, funding agreements and business plan requirements, where applicable.

4.1.7 Ministry's Tourism Research Data Is Several Years Delayed, so Tourist Trend Information Is Less Useful to Tourism Operators

Many of the tourism statistics that the Ministry reports are based on tourist trend information from several years prior. As a result, this information is not sufficient or useful for tourism operators that require current data to inform their strategic planning and decision-making.

The Ministry publishes tourism statistics such as number of tourists, tourist spending and economic impact of tourism in Ontario, but as of August 2023, its latest data was based on results prior to December 2021. The Ministry relies on several sources of information from Statistics Canada, some of which are released several years after the period the information relates to, such as the National Travel Survey and Visitor Travel Survey, which survey Canadian and international visitors, respectively, for details of their travel expenditures.

Timely research and data are important to support the tourism industry in making informed decisions. For example, stakeholders use tourism data to decide whether to make investments in tourism infrastructure or events. RTOs can also use this information to help their stakeholders (such as municipalities) communicate the economic impact of tourism in their region for attracting future development.

To obtain more timely tourism data, Destination Ontario and the RTOs have conducted their own research. This includes using information sources other than Statistics Canada to gain insight into travel behaviours. Municipalities and tourism operators use this research data, among other purposes, to understand the demographics of individuals interested in their region and in different activities, which they use to make strategic investments in tourism activities. For example, Destination Ontario commissioned research in 2021 to understand the target audiences for 15 categories of tourism experiences, such as spas, museums and food trails. Detailed audience information was compiled for each category, and provided to tourism operators to inform their marketing strategies and optimize their advertising to best reach and appeal to the intended audience.

Of the 11 provincially funded RTOs, seven have paid for access to more timely data from consulting and research firms about the demographics of tourists to specific communities within their region in the past five years (2018/19 to 2022/23). Some of this information can be collected and distributed on a monthly basis, in contrast to the tourist information that the Ministry publishes several years later. In one example, an RTO provided this research to a municipality within its region. This information was used to identify the type of visitor to target for advertising in order to increase the visits during both peak and non-peak periods. During the peak tourism season, understanding the types of individuals that are likely to travel to the region helps design advertising campaigns that attract more visitors with similar interests. Outside of the peak tourism season, the research provided information that can be used to create new experiences to attract different types of tourists to the city.

In our meetings with the executive directors of the RTOs, some have informed us that obtaining additional research is important to tourism operators in their regions and that the operators rely on the RTOs for this. We have found that the types of research RTOs obtain and the amount they spend on it vary significantly. In total, to conduct their own tourism research, about $0.6 million was collectively spent on average each year from 2018/19 to 2022/23 across the 11 RTOs that receive Ministry funding.

Since it is the responsibility of each RTO to get the research it requires, the research obtained varies by region. The frequency and types of research that RTOs get also vary based on available budget and industry needs. Several of the RTOs use some vendors in common, which represents an opportunity to engage vendors at the provincial level to obtain information that multiple RTOs are seeking out individually.

RECOMMENDATION 8

To provide additional research to support tourism organizations in a timely manner, we recommend that the Ministry of Tourism, Culture and Sport:

- assess the types of research and statistics that each regional tourism organization (RTO) obtains or would like to obtain;
- identify whether certain types of research data are useful for all regions and if cost savings can be achieved by obtaining access to this data provincially; and
- obtain access to this data at the provincial level and provide it to the RTOs on a regular (such as annual) basis.

MINISTRY RESPONSE

The Ministry accepts this recommendation and is working with Regional Tourism Organizations (RTOs) on solutions to providing cost-effective and timely research across the province.

For example, in October 2023, the Ministry established a joint Ministry and RTO research working group to review and evaluate data holdings to seek opportunities for more effective use and cost sharing of data in the immediate and longer term.

4.2 Design and Implementation of COVID-19 Tourism Recovery Program Led to Erroneous Payments and Inconsistent Outcomes

4.2.1 Approximately $1.5 Million of COVID-19 Tourism Support Grants Was Paid to Ineligible or Potentially Fraudulent Applicants

Improvements to the design and implementation of the one-time COVID-19 support funding provided through the Ontario Tourism Recovery Program (Tourism Recovery Program; see **Figure 9**) would have distributed its $98.4 million in grants more effectively to meet the program's original objectives to support the tourism businesses that were significant drivers of tourism in their regions. Additionally, they would have reduced the likelihood of approximately $1.5 million being paid to potentially fraudulent applicants and ineligible applicants according to the funding guidelines.

Out of the 570 total recipients of the Tourism Recovery Program, we identified six ineligible applicants out of the 90 applications we reviewed that received funding they should not have according to the program and its application guidelines (about $1.1 million in total). The Ministry identified an additional eight applicants as potentially fraudulent submissions ($460,000). In total, about $1.5 million was paid to these 14 companies out of the $98.4 million total grant program.

Of the six applicants we found that should not have received funding, two applicants were ineligible because they were solely owned by one corporate shareholder that had also applied for funding. According to application guidelines, this ownership structure could apply for the grant only once, on behalf of the entire group. This resulted in a $200,000 overpayment ($100,000 was paid to each ineligible company). The other four ineligible applicants did not experience the required 50% decrease in revenue in 2020 or 2021 when compared to 2019. These four companies collectively received approximately $880,000.

Figure 9: Ontario Tourism Recovery Program, 2021/22

Source of data: Ministry of Tourism, Culture and Sport

Purpose of funding program	To support for-profit, historically successful Ontario tourism businesses that helped drive employment and visits in their regions and were hardest hit by the COVID-19 pandemic.
Annual or one-time	One-time
Funding year(s)	2021/22
Total funding paid	$98.4 million
# of funding recipients	570
Eligible recipients	For-profit businesses in the accommodations, attractions and transportation sectors.
Example of a funding recipient	An amusement park located in Vaughan, Ontario, that historically attracted over 3 million visitors annually, and experienced a revenue decrease of almost 100% from 2019 to 2020. The company received $695,000 to support its operating costs while it was closed and prevented from operating due to COVID-19 pandemic public health restrictions.

For example, one company reported a decrease in revenue of 52% by comparing its 2021 revenue to its 2020 revenue. If this application had been completed correctly, the company would not have been eligible for funding, as its revenue decreased by only 47.63% when comparing 2021 to 2019 results (the required comparable year), and there was no decrease in revenue when comparing 2020 to 2019 as well. The program required 2019 to be the year for comparison because it was the last year not affected by the COVID-19 pandemic. This company received $695,000 as a result of this error. The Ministry indicated that it considered this applicant to be eligible because its fiscal 2020 revenue (year ended March 31, 2020) was appropriate to demonstrate the pre-COVID-19 pandemic impact. The Ministry's reinterpretation of the eligible revenue decrease in this case was an internal decision made when reviewing businesses' eligibility, and it did not publicly communicate this change in the guideline to other applicants or potential applicants.

In another example, an applicant made an adjustment to its reported revenue that was not consistent for both years being compared. The program guidelines required that total revenue be reduced by non-eligible items such as interest income before calculating whether the revenue decrease reached the 50% threshold. One motel decreased the 2021 revenue it reported in its application by the amount of its food sales to show a 50.02% decrease compared to 2019, but it did not remove food sales from its 2019 total revenue. According to the Ministry's program guidelines, food sales should not be removed in the revenue calculation for either year compared. If the applicant's food sales had been properly included in 2021 revenue, the applicant would have had only a 41.53% revenue decrease, making it ineligible for funding. In reviewing this application, the Ministry did not identify this difference even though the company's reported total revenue did not match the financial information it submitted, which should have led to additional review. This company received approximately $66,000 under this funding program despite not meeting the eligibility criteria.

The Ministry informed us that it would further review the ineligible recipients identified and determine whether to seek repayment.

In addition to the six ineligible applicants we identified that received funding from the Tourism Recovery Program, the Ministry flagged eight other submissions as potentially fraudulent. This was determined after the Ministry started an investigation when a business, which the Ministry reached out to as it had been an applicant to the program, informed the Ministry that it had not actually applied to the program. In total, $460,000 was distributed to the eight companies associated with potentially fraudulent submissions.

These potentially fraudulent applicants were able to receive funding by using incorrect information as part of their applications. While the Ministry had implemented some automated checks, such as comparing the legal business name to the Canada Revenue Agency Business Number, these were not as vigorous as those used in other programs. For example, the federal government's wage subsidy program had automated and manual checks that included comparing employee remuneration information to historical filings with the Canada Revenue Agency. The Ministry has identified this as a best practice for future program design.

RECOMMENDATION 9

To confirm the accuracy of applications and data reported by businesses for funding programs, we recommend that the Ministry of Tourism, Culture and Sport:

- provide training to staff that review the funding applications, focusing on verifying the accuracy of reported financial information against supporting documents, where eligibility is determined using financial data;
- assess the cost-effectiveness of collecting repayments from ineligible applicants, and collect repayment where appropriate; and
- reduce the potential for fraud by verifying applicant information against additional sources of data, such as tax information obtained from the Canada Revenue Agency, when funding programs require submission of financial data, where applicable.

MINISTRY RESPONSE

The Ministry accepts this recommendation and will collaborate with its partners to develop and deliver the required financial training for programs where eligibility is determined using financial data. We will also assess the cost-effectiveness of collecting repayments from ineligible applicants and collect repayment where appropriate.

This recommendation will help further improve the Ministry's delivery of future funding programs, including the development of program criteria, evaluation measures and repayment processes.

The Ministry will consult with the Ministry of Finance regarding the feasibility and applicability of accessing relevant tax data information for program administration.

4.2.2 Design of Tourism Recovery Program Did Not Meet Program Objectives

We noted that while the Tourism Recovery Program was designed to support businesses that were historically profitable and employed larger numbers of people, ultimate program funding decisions did not take this into account. Additionally, about one-quarter of the approximately $98 million in funding that was distributed as part of the Tourism Recovery Program went to 28 groups of companies. This was due to a program design that allowed businesses with multiple owners to receive more funding than similar businesses with only one corporate owner.

Program Funding Was Awarded to Businesses That Were Not Aligned with the Original Program Objectives

The Tourism Recovery Program was initially designed to support historically successful tourism businesses that drive employment and visits in their regions. The Ministry developed a process to score each applicant based on how well it matched these requirements. However, this score ultimately had no impact on whether an applicant received funding or how much it received. Those that better fit the program objectives ultimately had their potential funding reduced, compared to those that did not fit the original funding objectives as closely.

In the application process, the Tourism Recovery Program was described as a competitive funding program to assist businesses that were significant drivers of their regional tourism economies. Factors that the Ministry considered for determining how a business qualified under this condition included the business's demonstrated historical profitability, the number of jobs generated by the business in Ontario and the number of visitors to the business each year. After the application period closed, the Ministry reviewed the applications and, contrary to how it had publicly described the program, it awarded funding to all eligible applicants (that is, eligible businesses that had a 50% or greater decrease in revenue), regardless of the scores awarded under the previous criteria.

We noted that the assessed scores for the 570 funding recipients ranged from seven to 84 out of 100. For example, for the five businesses that scored the lowest (10 or lower), the applicants had historically received fewer than 300 visitors annually and had few employees (less than $50,000 in total salaries and wages paid annually). These five companies received about $120,000 in total but did not meet the original program objectives.

The Ministry informed us that this change in approach from a competitive process was based on direction from the Minister of Tourism, Culture and Sport (Minister) to award funding to as many eligible businesses that were impacted by the pandemic as possible. With the revised decision to award funding to all applicants that experienced a 50% or greater revenue decrease, more businesses received funding than was initially planned. However, this also resulted in eligible applicants receiving less funding than what they would have received under the original program guidelines, since the Tourism Recovery Program had more eligible applicants than the program's $100 million budget could support.

As a result of not applying the scoring criteria for funding decisions and receiving more applicants than the program could fund, the Ministry reduced the amount of funding that certain recipients would receive. Recipients were grouped into four tiers based on the size of their business, as defined by their expenditure on salaries and wages in 2019 (see **Figure 10** for details of the tiers and the initial and revised funding formula for each). Businesses that fell into the two largest tiers (Tier 1, with salaries over $4 million, and Tier 2, with salaries between $2 million and $4 million) had their funding reduced by 30.5% compared to the original program design. For these two tiers, instead of applicants receiving funding equal

Figure 10: Funding Formula for Ontario Tourism Recovery Program

Source of data: Ministry of Tourism, Culture and Sport

Tier	Initial Funding Amount (lower of)		Revised Final Funding Amount (lower of)	
Tier 1: > $4,000,000 salaries and wages	**20%** of revenue loss*	$1,000,000	**13.9%** of revenue loss* (eligible funding reduced by 30.5%)	$695,000
Tier 2: $2,000,000–$4,000,000 salaries and wages		$500,000		$347,500
Tier 3: $1,300,000–$1,999,999 salaries and wages		$250,000	**20%** of revenue loss* (no change from initial program details)	$250,000
Tier 4: < $1,300,000 salaries and wages		$100,000		$100,000

* Revenue loss is calculated by comparing applicants' 2020 or 2021 revenue to their fiscal 2019 revenue.

to 20% of their revenue loss (up to a maximum of $1 million and $500,000, respectively), they received 13.9% of their revenue loss (up to a maximum of $695,000 and $347,500, respectively). These two tiers of applicants generally scored higher on the assessment criteria (on average, Tier 1 applicants scored 71 and Tier 2 scored 62) than businesses in the other two tiers (on average, Tier 3 applicants scored 58 and Tier 4 applicants scored 39), so the recipients that had their funding reduced were deemed to be those more aligned with the program's funding objectives, as they generally attracted more visitors and contributed to more jobs in Ontario.

RECOMMENDATION 10

So that funding decisions for any ongoing or future funding programs align with the programs' design and objectives, we recommend that the Ministry of Tourism, Culture and Sport (Ministry):

- conduct an analysis of existing funding programs to determine whether funding recipients and/or projects have achieved the intended program objectives;
- using the results of the program analysis, develop scoring criteria that can be used to determine which funding recipient is aligned with the program objectives for each competitive funding program that the Ministry is delivering; and
- apply the scoring criteria consistently across all applicants to decide whether funding is awarded to a recipient and the amount of funding awarded.

MINISTRY RESPONSE

The Ministry accepts this recommendation and will continue to work and ensure that funded projects meet program criteria and are evaluated in a consistent manner.

The Ministry will review its existing funding program evaluation templates to ensure that the scoring method supports stated program objectives and priorities, and make any improvements deemed necessary.

The Ministry will continue to develop training for consistent scoring of applications and provide funding recommendations to support high-scoring applicants.

Similar Tourism Businesses Received a Different Number of Grants Based on Different Ownership Structures

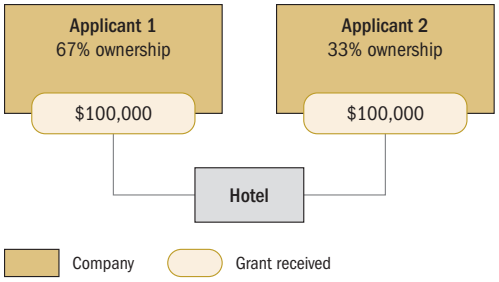
The design of the Tourism Recovery Program and application criteria resulted in similar businesses receiving different amounts of funding based solely on differences in their ownership structures. The Ministry's design of the funding program required all businesses to apply individually, except for businesses that were fully owned (100%) by another corporation, in which case they were required to submit one application as a group. The Ministry considered that the accommodations industry frequently included common ownership structures for multiple distinct companies, and determined that it would accept separate applications from companies structured this way. This meant that if two corporations jointly owned three companies, they could apply for three grants, whereas one corporation that owned three companies could apply for only one.

We found that 94 of the 570 recipients (about 16%) were related to one of 28 distinct groups of companies. Companies within each group shared the same management and/or owners. These 28 groups received $22.3 million, or about 23% of total approved funding with this program. Common examples of these groups of applicants include hotel operators that owned more than one hotel property, each of which was incorporated as a separate company and which applied for funding individually. Ultimately, the accommodation sector received $59 million, or 60% of the total funding under the Tourism Recovery Program (see **Appendix 9** for a breakdown of Tourism Recovery Program funding by sector).

We found the following examples of companies that received a different number of grants based on how the application was submitted. Even though all applicants followed the program's rules, the program design resulted in inconsistent funding decisions.

Figure 11: Pictorial Representation of a Group (Group 1) That Received Total Funding of $200,000 from the Ontario Tourism Recovery Program

Prepared by the Office of the Auditor General of Ontario



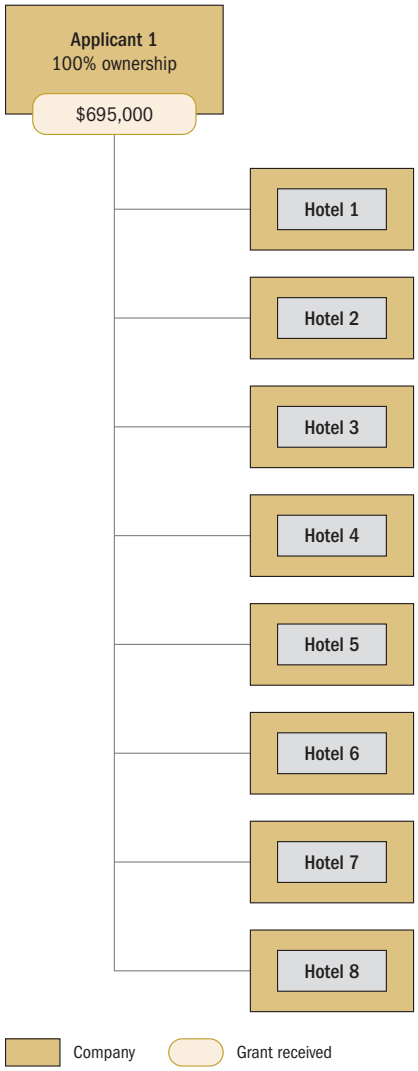


Figure 12: Pictorial Representation of a Group (Group 2) That Received Total Funding of $695,000 from the Ontario Tourism Recovery Program

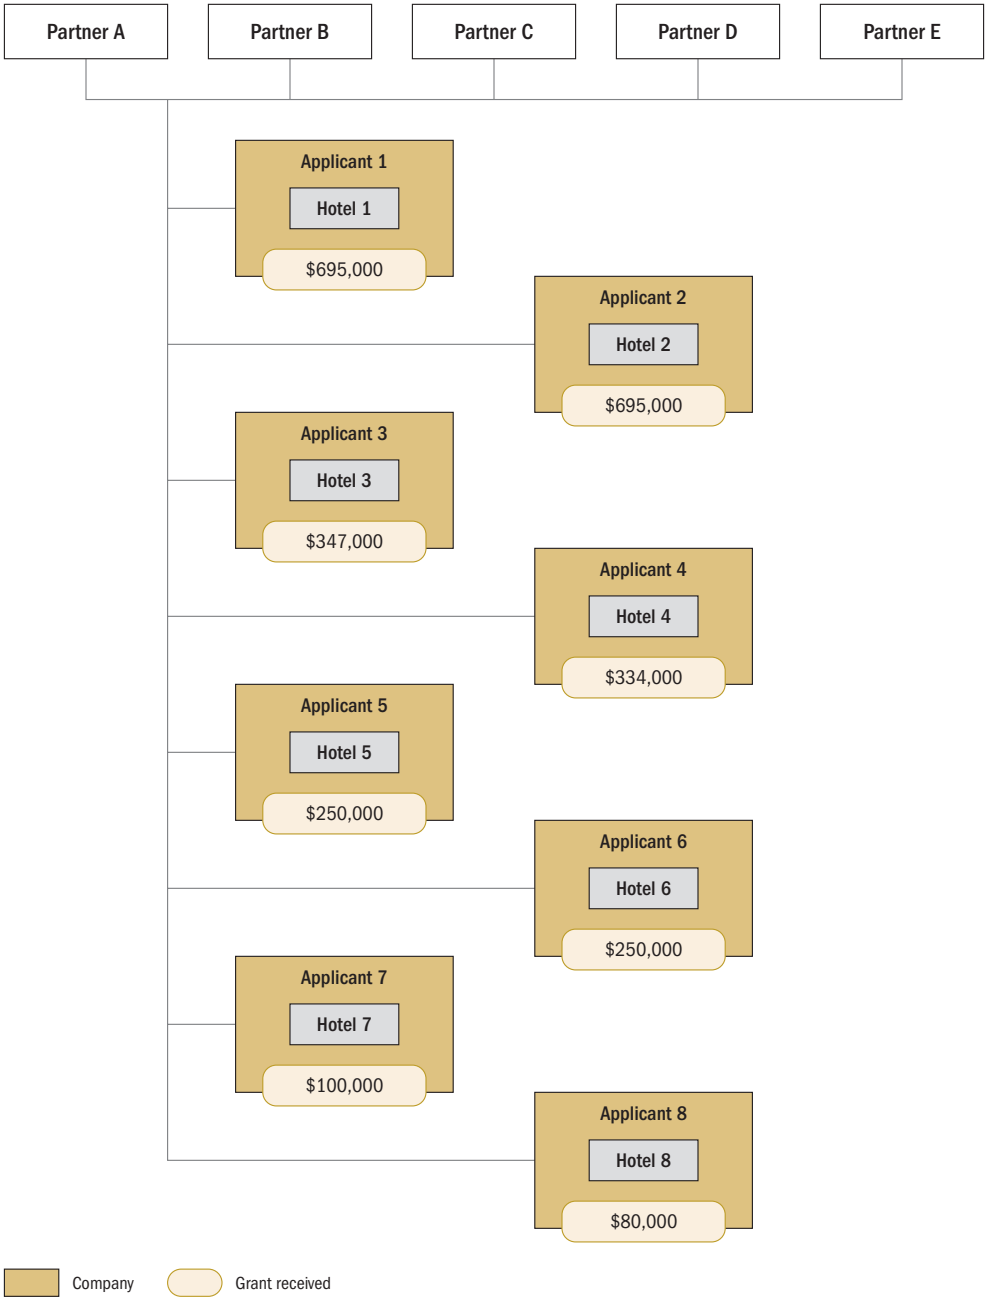
Prepared by the Office of the Auditor General of Ontario



Note: This applicant had more than 20 wholly owned subsidiaries, but only eight have been included for the purposes of this illustration.

- Group 1 (ownership structure illustrated in **Figure 11**) consists of two companies, each receiving a grant of $100,000, for $200,000 in total. These two companies jointly own one hotel property, divided 67% and 33% between them. The first company submitted an application based on its 67% of the hotel's revenue, and was entitled to $100,000, the maximum amount of funding for a Tier 4 applicant (see **Figure 10**). The second company based its application on its 33% of the same hotel's revenue and similarly was entitled to $100,000, the maximum funding amount for a Tier 4 applicant. Both companies submitted applications with the identical hotel name, address and historical number of visitors, differing only in each company's financial statement (67% versus 33% of the operations). If the hotel itself had been incorporated or fully owned by one company, as a Tier 4 applicant it would be eligible for $100,000 of funding, instead of the $200,000 that was paid to the two companies.
- Group 2 (ownership structure illustrated in **Figure 12**) consists of one company that received the maximum $695,000 of funding as a Tier 1 applicant. This company fully owned many subsidiaries that operate in the hotel and tourism sector. On behalf of all its subsidiaries, this parent company received one grant for its application that included the operations of over 20 hotels that experienced a revenue decrease of more than 50% combined. If these subsidiaries had two shareholders instead of one, they would have been able to apply for separate grants for each of the hotels that operated as separate subsidiaries. While we did not have the individual data of each company, based on information submitted by the group we estimated that at a minimum, the group could have received approximately $2.8 million in grant funding had its subsidiaries been allowed to apply separately.

- Group 3 (ownership structure illustrated in **Figure 13**) consists of eight companies, each receiving one grant, for a total of approximately $2.75 million. Each of these companies owned and operated one hotel, eight in total for this group, with the group of hotels sharing the same senior management. As well, from the financial information provided, these companies had many common owners or partners that controlled the companies as a group. This group

Figure 13: Pictorial Representation of a Group (Group 3) That Received Total Funding of $2,751,000 from the Ontario Tourism Recovery Program

Prepared by the Office of the Auditor General of Ontario

Note: There are more than five common partners in this group and not all had ownership of every applicant, but the group shares common senior management. Only five partners have been included for illustration purposes.

received multiple grants because each hotel applied as a separate corporation rather than as a group, which was allowed under the program design. If this group had one corporate owner rather than several (as with Group 2 shown in **Figure 12**), it would have been eligible for only one grant of $695,000.

Even though these three groups of companies operate in a sector (hotels) where the businesses are similar, the program design allowed for inconsistency in how they were required to apply. We found that other grant funding programs that provided business support during the pandemic, such as the Ontario Tourism and Travel Small Business Support Grant, considered affiliated companies as one group: eligible applicants could submit only one combined application for the affiliated group. The Ministry informed us that, other than requiring wholly owned companies to apply as one group, it did not require other affiliated companies to make one joint application because the definition of "affiliated" in past funding programs had caused confusion among applicants. By allowing differing grants to companies based solely on whether the business was solely owned or had multiple owners, the Ministry introduced other complexities for the review process and inconsistency in how much funding was provided to each business compared to the program's original objectives.

Further, as part of applications to the Tourism Recovery Program, the Ministry requested that applicants provide a listing only of shareholders that had over 25% ownership in the company. Other than providing the names of individuals or businesses that owned the company, the applicant did not need to provide important details such as ownership percentage of each owner. Even when the applicant listed only one shareholder, it was not always clear it had only this one shareholder, since the remaining shareholders could have held less than 25% ownership each. Since 100% ownership was a defined criterion in the application form, in order to reduce the risk of fraud or error in the information provided by applicants, the Ministry would have needed to obtain more complete information to facilitate an accurate review of the applications.

Considering that the Tourism Recovery Program was meant to help as many businesses that were significantly impacted by the COVID-19 pandemic as possible, particularly after the program changed from awarding grants to businesses that best fit the Ministry's assessment criteria (as discussed earlier in **Section 4.2.2**), the program design ultimately led to funding decisions that did not fully match the objectives of this program.

RECOMMENDATION 11

To establish and verify funding programs' eligibility criteria so that the criteria better meet the Ministry of Tourism, Culture and Sport's (Ministry) program objectives, particularly where funding for organizations may differ based on ownership and/or management structure, we recommend that the Ministry:

- consider whether it is appropriate for any funding programs' criteria to allow for different funding to be awarded to applicants based solely on their ownership and/or management structure, and document the rationale where it is deemed appropriate; and
- where the funding programs' criteria incorporate different funding to organizations based on their ownership and/or management structure, review whether the Ministry's process for assessing applications has included adequate verification of the information submitted on corporate structures and ownership, and improve the verification process where necessary (such as by requiring applicants to report detailed director and shareholder information and provide corporate documents to verify this information, or by using tax information from the Canada Revenue Agency to verify affiliated corporations).

MINISTRY RESPONSE

The Ministry accepts this recommendation and will work to clarify program criteria to ensure that ownership structures are effectively addressed and

verified when designing programs and reviewing applications going forward.

4.3 Two Similar Annual Funding Programs Do Not Have Clear Objectives, Leading to Duplication of Effort and Ineffective Distribution of Funding

The Ministry has two annual funding programs—the Tourism Economic Development and Recovery Fund (Economic Development and Recovery Fund) and the Pan-Regional Fund—that fund a broad range of tourism projects. Details of the funds are summarized in **Figure 14** and **Figure 15**, respectively. The Economic Development and Recovery Fund's purpose is to support innovative tourism projects and investment, or build the capacity of Ontario's tourism industry. This can include funding the cost of developing strategic and marketing plans, and advancing specific tourism ideas, projects and programs. Similarly, the Pan-Regional Fund is intended to fund tourism and destination development projects that benefit more than one region within Ontario. This can include funding tourism organizations to develop new tourism products and experiences.

Our audit reviewed 21 (out of 65) Economic Development and Recovery Fund recipients and three (out of 14) Pan-Regional Fund recipients between 2020/21 and 2022/23. The Economic Development and Recovery Fund and Pan-Regional Fund have overlapping program objectives, and also overlap with the responsibilities of the provincially funded RTOs. Yet projects are approved on a project-by-project basis without consideration for projects already funded by the other fund, or whether certain projects could be better supported in partnership with the RTOs and the existing funding that other organizations received or receive. As

Figure 14: Tourism Economic Development and Recovery Fund, 2020/21–2022/23

Source of data: Ministry of Tourism, Culture and Sport

Purpose of funding program	To support non-capital projects that encourage the development of new tourism products and tourism investment, or build the capacity of Ontario's tourism industry.
Annual or one-time	Annual
Funding year(s)	2020/21–2022/23
Total funding paid	• Ranged from $0.4 million to $1.5 million annually. • $2.4 million of total funding, 2020/21–2022/23.
# of projects funded	• Ranged from 18 to 28 annually. • 65 projects funded in total, 2020/21–2022/23.
Eligible recipients	Municipalities and destination marketing organizations, Indigenous organizations, Ontario tourism industry associations, not-for-profit organizations with a clear tourism focus, and for-profit tourism organizations.
Example of a funding recipient	Funding to a for-profit tourism business to build a new sugar shack facility and develop an agri-tourism experience to attract tourists. Funding was used for wages, landscape design, development and implementation of the new tourism experience, and retail and supply chain development.

Note: The Tourism Economic Development and Recovery Fund started in 2020/21, but was based on a previous funding program (Tourism Development Fund) that began in 2008. The program objectives are similar, but eligible organizations and project types were expanded for the Tourism Economic Development and Recovery Fund. The program closed in August 2022, and in August 2023, was replaced by the Tourism Development Fund. Program eligibility was modified for the 2023/24 funding year.

Figure 15: Pan-Regional Fund, 2013/14–Present

Source of data: Ministry of Tourism, Culture and Sport

Purpose of funding program	To support tourism and experience development that benefit more than one region in Ontario (pan-regional).
Annual or one-time	Annual
Funding year(s)	2013/14–present (continuing)
Total funding paid	• Ranged from $0.5 million to $1.1 million annually. • $6.6 million of total funding, 2013/14–2022/23.
# of projects funded	• Ranged from 2 to 5 annually. • 32 projects funded in total, 2013/14–2022/23.
Eligible recipients	No specific guidelines available,* but historically has provided funding to tourism associations and not-for-profit tourism organizations.
Example of a funding recipient	Funding to an Indigenous tourism association to develop culturally authentic tourism products and experiences, build strategic partnerships across the province, and conduct a campaign to promote tourism as a career for Indigenous youth.

* While specific guidelines for the funding program were not created, the broad guidelines for the Pan-Regional Fund contained in the 2013 approval note for the program include the following:
- Funding agreements are one-time and are not meant to be year-over-year, and the projects should provide benefits to multiple regions or across the province.
- RTOs are expected to fund pan-regional projects out of their current business plans and allocations.

a result, the funding recipients are not required to work together on complementary projects or projects with similar objectives, although this would promote greater collaboration and more efficient use of program funds.

We noted examples where funding from these two programs was given to sector associations in the tourism industry to partner with organizations to create new tourism experiences. At the same time, tourism operators that were part of those associations applied for and received separate Ministry funding to develop tourism experiences without being required to collaborate with these associations. (See **Appendix 13** for a summary of the examples we identified.) Greater collaboration would have promoted the pooling of resources and knowledge so that funding could be used more effectively by the tourism operators to complete their projects.

When the Ministry completed an internal review of these two funding programs in 2022, it identified the overlap between the two programs and with other Ministry funding as an area for improvement. Following this review, the Ministry made some changes to the programs for 2023/24 (such as a better defined application process), but further improvements can be made to improve the effectiveness of the funding programs by reducing the overlap between the funding programs and promoting more collaboration between recipients.

Cultural and Historic Itineraries: Indigenous Tourism Experiences

One tourism association, Indigenous Tourism Ontario, received $1.6 million from the Pan-Regional Fund between 2016/17 and 2022/23. Indigenous Tourism Ontario is a non-profit, membership-based organization that supports the growth of Indigenous tourism by providing advocacy as well as support and expertise directly to operators. With this funding, Indigenous Tourism Ontario was expected to develop partnerships, including partnerships with RTOs and Indigenous businesses, to create new itineraries centred on Indigenous experiences.

During the same funding period, in 2022/23, a tourism business applied to the Economic Development and Recovery Fund to start an Indigenous cultural and historic experiences bus tour. The application indicated no confirmed financial support from Indigenous Tourism Ontario or the RTO in the region where it operates. The tour operator received $10,000 from the Ministry for research, product development and project management to develop its idea. The recipient was not required to start a new tourism experience with this funding, as its idea was only in the exploratory phase, so the Ministry's investment may not result in any growth in tourism businesses or number of tourists.

In the funding agreement, the Ministry also did not require the tour operator to work with Indigenous Tourism Ontario or an RTO on this idea. Both of these organizations regularly work with other tourism businesses on new ideas to grow tourism and even receive Ministry funding to create similar partnerships to develop new experiences to attract visitors. Partnerships would have provided the tour operator with more expertise and guidance, in addition to the financial support that it received.

Route Champlain/Eastern Ontario: Francophone Tourism Experiences

Another tourism association, La Société Économique de l'Ontario (SÉO), also received Ministry funding through the Pan-Regional Fund. SÉO is a not-for-profit organization that promotes economic development in Ontario's Francophone communities. SÉO received $1.1 million in total funding from 2015/16 to 2022/23. Most of this funding was for the development of Route Champlain and to create tourism products around this area, which is located in eastern Ontario near the Ontario-Quebec border and attracts a Francophone community.

In 2021/22, a Francophone tourism not-for-profit organization also received $20,000 from the Economic Development and Recovery Fund. The funding was to support the completion of a feasibility study for the development of a Francophone theme park in the Prescott and Russell area, which is located close to Route Champlain. The feasibility study looked at other publicly available experiences related to Franco-Ontarian heritage and pioneer villages, and concluded that the development of the theme park would attract a new audience and benefit tourism in the underdeveloped Prescott and Russell area. It would also provide benefits to other nearby well-developed tourism hubs, such as Route Champlain, as it would increase the number of new visitors to the area. The study recommended that this project should move forward. In the funding agreement, the Ministry did not require the organization to collaborate with SÉO in conducting this study, even though SÉO has received funding for developing similar Francophone tourism experiences in recent years.

The recipients of the Pan-Regional Fund, such as Indigenous Tourism Ontario and SÉO, are not required to report back on the outcomes of their partnership activities and stakeholder engagement during the year, such as how these contributed to tourism activities, and the growth in the number of visitors or visitor spending in Ontario (also discussed further in **Section 4.1.3**). In contrast, RTOs, which receive annual funding from the Ministry, are required to report a list of all the partners they have supported in the year, the funding the RTO contributed along with the matched partner funding, and a description of the activities supported or developed with the partnership funds. This specific reporting of partnership activities undertaken in the year outlines to the Ministry how its funding was used and which stakeholders were engaged in the year. These are not made clear in the current reports by Pan-Regional Fund recipients.

More Effective Support for Early-Stage Tourism Projects Delivered by Other Organizations

In addition to funding from the RTOs, businesses and not-for-profit organizations in the tourism sector have other alternatives to the Ministry's Economic Development and Recovery Fund to obtain support to develop their early-stage tourism projects and businesses. For example, the Tourism Innovation Lab is a not-for-profit initiative that receives funding through government grants and also through partnerships with RTOs, DMOs

and other organizations, to help successful applicants start up their new tourism ideas and businesses. The Tourism Innovation Lab provides start-up funding, often $3,000 to $5,000, to successful applicants. This is less than some of the Ministry's Economic Development and Recovery Fund grants, but the Tourism Innovation Lab also provides mentorship to participating individuals and businesses to develop their ideas and connects them to experienced tourism operators, industry experts and other business support resources. This is in contrast to the Economic Development and Recovery Fund, which provides one-time funding that can range from $5,000 to $70,000, but with which the Ministry provides no further mentoring or advice to ensure the project's success. For some of the tourism development projects that the Economic Development and Recovery Fund has supported, other funding and support options may be more suitable, such as through the Tourism Innovation Lab or partnerships with RTOs, so that the fund could use its limited resources to make a greater impact in other ways, such as having more funding available to attract private investment to the tourism sector (as discussed in **Section 4.1.5**).

RECOMMENDATION 12

So that funding decisions made by the Ministry of Tourism, Culture and Sport (Ministry) take into consideration other similar organizations that have already received Ministry funding for similar projects, and to improve collaboration in the tourism sector, we recommend that the Ministry:

- assess whether it has previously funded similar projects when reviewing applications for funding, and require funding recipients to collaborate with others that have similar objectives;
- require sector associations that receive Ministry funding to provide detailed reports on their stakeholder engagement, including details of partnerships similar to the partnership attestations completed by regional tourism organizations (RTOs), with detailed information on how these activities contributed to the growth of tourism in the province; and
- assess how early-stage tourism projects and businesses can be more effectively supported, such as through a province-wide program similar to the Tourism Innovation Lab or through the RTOs, and determine if changes are needed to funding program eligibility criteria to assist these tourism projects.

MINISTRY RESPONSE

The Ministry accepts this recommendation and will continue to work to reduce overlap and inefficiencies in program application and delivery. The Ministry will consider opportunities when reviewing funding applications to promote collaboration with other projects that have similar objectives, and improve reporting requirements from tourism sector associations that are expected to develop partnerships with the Ministry funding they receive. The Ministry will assess opportunities to better support the development of new tourism products.

4.3.1 Pan-Regional Fund Is Not Publicly Advertised, and Awarded Projects Do Not Meet the Original Program Criteria, Resulting in Duplication with Other Funding Programs

The Pan-Regional Fund was established in 2013/14 with $1.5 million of funding allocated to support tourism projects that benefit more than one region in Ontario. More than half of the projects that have received its funding since 2013/14 did not meet one of the program's original criteria for funding, as they were funded for consecutive years, even though the fund was intended to provide funding for only one year. Since it was established, the funding program has not been publicly advertised and there is no formal application process.

RTOs were made aware of this funding in 2013 when the fund was first established and they were provided with broad information on the types of projects that would qualify. Information about the program is not available on the Ministry's website or Transfer Payment Ontario (Ontario's grant system) website,

and announcements are generally not made regarding applications being open or which recipients are awarded funding.

Since 2013, tourism stakeholders may have become aware of this funding program through the RTOs or the Ministry. Stakeholders send their proposals for tourism projects to the Ministry to be reviewed by Ministry staff, who then determine whether to award funding. Once a funding decision is made, a recommendation is submitted to the Minister for final approval. However, without a formal application process, there are no defined criteria that the Ministry uses to evaluate the applications. Aside from the Ministry's approval note in 2013 when the funding program was first established, there is no program guide outlining its objectives and mandate, unlike the Ministry's other annual funding programs.

The broad guidelines for the Pan-Regional Fund contained in the 2013 approval note include the following:

- Funding agreements are one-time and are not meant to be year-over-year, and the projects should provide benefits to multiple regions or across the province.
- RTOs are expected to fund pan-regional projects out of their current business plans and allocations.

Since its inception, the Pan-Regional Fund has supported projects that do not align with the purpose of this program. Some of these overlap with the RTOs' original purpose and current annual funding allocations. For example, in 2021/22, one RTO received $130,000 under the fund to create an Ontario-wide LGBTQ+ tourism product and experience development strategy, and another $160,000 in 2022/23 to deliver this strategy and provide training, partnerships and marketing, in collaboration with four other RTOs. All other RTOs were already expected to collaborate with regions across the province as part of their mandate and through their annual Ministry funding. This was recognized in the initial design of the Pan-Regional Fund, where the Ministry had explicitly indicated that RTOs were expected to continue to fund pan-regional projects out of their business plans and annual RTO funding allocations. However, this RTO was given $290,000 in total to accomplish the purpose for which it is already funded.

Between 2013/14 and 2022/23, 21 of the fund's 32 approvals were to organizations that received funding in consecutive years. This is contrary to the original purpose and program design that specified that the Pan-Regional Fund was for one-time funding agreements. **Appendix 14** lists all funded organizations since 2013, including those that received funding for consecutive years.

The Ministry's internal review of this funding program in 2022 also identified as areas of improvement the lack of a public announcement to open the program for applications, the overlap in scope with RTOs, and the multi-year projects funded. The Ministry is considering potential changes to this funding program in the future.

RECOMMENDATION 13

To improve the effectiveness of the Pan-Regional Fund and establish objectives and outcomes for it, we recommend that the Ministry of Tourism, Culture and Sport:

- develop and publish a program guide for the Pan-Regional Fund that includes the purpose of the funding, expected program outcomes, eligible organizations, application instructions and performance measures; and
- establish a process for receiving applications and apply standard criteria for reviewing the applications to make funding decisions.

MINISTRY RESPONSE

The Ministry accepts this recommendation and is working to implement new approaches for funding key projects in the tourism sector in the next fiscal year. It will include public program guides, eligibility requirements, performance measures and standardized processes for decisions.

4.3.2 Economic Development and Recovery Fund Performance Measures Are Not Specific to Individual Projects and the Reporting Process Is Inadequate to Properly Assess Results after the First Year of the Project

The Ministry has established standard performance measures for all funding recipients of the Economic Development and Recovery Fund to report the results achieved. However, since the Ministry funds a broad range of projects through this one program, the standard performance measures are not always suitable to the type of project. As well, some funded projects may not achieve measurable results for attracting more tourists within the required reporting time frame, usually about one year after funding was provided. See **Figure 16** for a summary of projects funded through the Economic Development and Recovery Fund between 2020/21 and 2022/23.

The Ministry's standard performance measures are:

- increase in number of visitors from over 40 kilometres away (those travelling over 40 kilometres are considered tourists and not locals);
- increase in visitor spending;
- number of jobs created or retained;
- number of businesses/individuals who received training or information; and
- number of new products created or experiences created.

Funding recipients are required to report on these performance measures in their final report to the Ministry to demonstrate how they used the funding and what results they achieved. The final report is generally required to be submitted within one year of the funding agreement being signed, or at most within 18 months.

Some of the projects that received funding include research on new tourism experiences, development of a strategic plan to grow tourism in specific cities, and developing engineering and design plans for a new attraction. These recipients do not have results to report on many of the standard performance measures—such as the number of tourists or tourist spending, jobs and products created—since no new tourism experience has been developed at the time of reporting. Therefore, the Ministry does not obtain

1. In 2020/21, included in the total projects and funding are multi-year projects that have funding paid over two years. This includes five projects with $200,500 of funding paid in 2020/21, relating to approvals from 2019/20. Another six multi-year projects were approved in 2020/21 and paid in 2020/21 and 2021/22, representing $131,300 and $161,000, respectively.
2. In 2021/22, five of the 19 approved projects are multi-year projects ($196,000) with funds distributed in 2021/22 ($106,000) and 2022/23 ($90,000).

appropriate information in the final report to assess the outcomes of the strategic plan, feasibility study or the development of other tourism experiences that it helped fund, or an understanding of how these activities contributed to the tourism activity in the region or province.

In the agreements with recipients of this fund, the Ministry states that it can, at its discretion, follow up with the recipient at two years and five years after project completion to collect data on the performance measures. However, since the program began in 2020/21, the Ministry informed us that two-year performance data had not been requested from any of the nine recipients with longer-term projects (out of 28 total recipients) that were funded in 2020/21 and thus could have been followed up with. The Ministry followed up with the nine recipients in July 2023 for their two-year performance measures, after our Office requested this information.

The projects that we requested additional information for were those relating to strategic plans, feasibility studies or the development of tourism experiences. These types of projects would be expected to have tourism outcomes beyond the initial funding period, such as the number of new visitors once the tourism experience was established and operating, or after the development and implementation of a strategic plan. The Ministry noted the following reasons why a two-year follow-up was not initially completed:

- One of the funded projects was delayed, so the two-year mark was not considered the appropriate time to collect performance results; the Ministry plans to follow up at a later date.
- For eight projects, the Ministry determined that the recipient had provided adequate information in its final report so no follow-up was required. However, we noted three examples where the final report did not include the results of all the performance measures required in its funding agreement with the Ministry. For example, funding was provided to a municipality to create a tourism sector and marketing strategic plan, which includes creating new tourism experiences. At the end of the funding period, the municipality reported that no new tourism products and experiences were created. The Ministry did not request an update from this municipality at the two-year mark to assess further progress on the strategic plan until July 2023, subsequent to our Office requesting the information.

Going forward, to conduct two- and five-year follow-ups of funded projects, the Ministry indicated that it would reach out to recipients to obtain reports as needed, and Ministry staff planned to track the future reporting dates in a calendar. During our audit, in July 2023, the Ministry started to implement a process in Transfer Payment Ontario, the Province's grant funding system, to track projects that require a follow-up and to send out automatic system messages to recipients requesting updated performance measures.

RECOMMENDATION 14

To improve tracking of performance measures, outcomes and impact on tourism and the economy of projects funded through the Tourism Development Fund (formerly called the Tourism Economic Development and Recovery Fund), we recommend that the Ministry of Tourism, Culture and Sport (Ministry):

- review performance measures required from new funding recipients to ensure that they are relevant to the type of project being funded and the outcomes expected; and
- develop formal criteria to determine the types of projects where the Ministry requires two- and five-year follow-ups and specify this information in the application guide and funding agreements, along with the recently added process of sending automated messages in the Transfer Payment Ontario system.

MINISTRY RESPONSE

The Ministry accepts this recommendation and remains focused on aligning performance measurements with the program objectives for the Tourism Development Fund.

The Ministry will continue to work to improve processes for recipients and provide more guidance on performance measurements and report-back requirements. Through these improvements, the Ministry will aim to collect better data to assess the impacts of its funding program.

4.4 Delay in Funding Decisions Hampered the Operations of Tourism Organizations and Effectiveness of Funding Delivered

4.4.1 Late Funding Approvals by Ministry Led to Cancelled Festivals and Events

The Ministry receives applications for its Reconnect Ontario program (see **Figure 17** for a description of the program, now known as Experience Ontario) annually, but does not deliver its funding notifications in time for all the successful applicants to go ahead with their events. With the 2022/23 Reconnect Ontario program (events held between April 1, 2022 and March 31, 2023), organizers cancelled seven events because they received notification from the Ministry that they were approved for funding too late to hold the event. These organizers did not receive their approved Ministry funding as they were unable to plan their events without earlier confirmed Ministry support.

Of the 823 total applications for Reconnect Ontario in 2022/23, 29 event organizers withdrew from the program. We reviewed these applications and found that seven applicants cancelled their events because funding notification came too late. This includes one event that had applied in February 2022 for an event planned for May 2022. This event was expected to generate $1.3 million in tourist spending. This organizer did not receive notification of approval for the $185,000 requested until July 2022, too late to hold this seasonal event. An additional three event organizers did not cancel their events but instead planned them on a smaller scale than originally intended, assuming that the delay meant they would not receive the support requested. As a result of not being notified in a timely manner, they withdrew from the program. This includes one organizer who said that it was no longer possible to stage the event at the size originally planned once the funding announcement finally arrived.

Figure 17: Reconnect Ontario[1] and Marquee Event Fund Programs, 2019/20–Present

Source of data: Ministry of Tourism, Culture and Sport

Purpose of funding program	To support festivals and events to attract visitors to Ontario with local experiences and generate increased tourism spending.
Annual or one-time	Annual
Funding year(s)	2007–present (continuing)
Total funding paid[2]	• Ranged from $15.1 million to $39.0 million annually for 2019/20–2022/23. • $112.4 million of total funding, 2019/20–2022/23.
# of events and festivals funded[2]	• Ranged from 265 to 522 events annually for 2019/20–2022/23. • 1,549 events and festivals funded in total, 2019/20–2022/23.
Eligible recipients	Ontario-based entities that have been in existence since January of the year prior to the start of the funding period. For example, for the April 1, 2022 to March 31, 2023 funding period, the entity must have been incorporated since January 1, 2021 or before. Sole proprietors and partnerships are not eligible, as well as federal or provincial governments and/or their agencies.
Example of a funding recipient	Funding to a not-for-profit organization to hold a Pride Festival that attracts visitors locally and abroad, with activities such as performances, panels, exhibitions, street fair, and a parade.

1. Program was called Celebrate Ontario until mid-2020/21, then changed to Reconnect Festival and Event Program, and in 2022/23 became Reconnect Ontario. For 2023/24, the program name changed to Experience Ontario. Minor changes to the program occurred over these years to fit the changing needs of events and festivals, such as funding criteria to address the impact of the COVID-19 pandemic.
2. Includes those funded as Marquee Events, which are major (national or international) festivals or events with larger operating budgets (over $1 million) that do not occur on an annual or bi-annual basis. For example, the 2023 Tim Hortons Brier (Canadian men's curling championship) received Marquee Events funding and was held in London, Ontario.

Applications for the 2022/23 Reconnect Ontario program were open to the public from January 6, 2022 to February 2, 2022. The Ministry notified applicants of its funding decisions after it had completed its review of all applications received, rather than prioritizing reviews and approvals for events with an earlier start date. We noted that three of the affected applicants that had to cancel their events had planned them early in the Ministry's funding year, which began April 1, 2022. Of the 10 event organizers that withdrew from the program due to late notification from the Ministry, six (including the three who cancelled events) had planned their events to start earlier than the funding announcement on July 28, 2022, which came more than five months after the application period closed. These events were planned to start between May 2022 and July 1, 2022.

The late approvals impacted tourism operators when they were organizing events and festivals to attract tourists to their regions. The Ministry identified the delay in providing funding notifications to applicants as an area of improvement in its 2022 internal efficiency review of Reconnect Ontario. It noted that many events do not have the capacity to proceed without assured funding, and smaller and not-for-profit event organizers need to know if they have been granted funding before they can proceed with their planning. After this internal review, however, the 2023/24 Experience Ontario program still had similar funding notification delays, with recipients receiving funding letters on July 28, 2023, three months after the application period closed on April 28, 2023.

RECOMMENDATION 15

So that Experience Ontario (formerly Reconnect Ontario) funding program notifications are communicated to event organizers prior to the date of their events, we recommend that the Ministry of Tourism, Culture and Sport prioritize application reviews and approvals based on event dates and, in particular, prioritize events held in the first quarter of the fiscal year funding is being sought for.

MINISTRY RESPONSE

The Ministry accepts this recommendation and will work to prioritize and negotiate transfer payment agreements based on when events are taking place.

4.4.2 Delay in Tourism Development Funding Does Not Allow Enough Time for Recipients to Properly Complete Projects

The Ministry's grant programs generally require the recipients to use the funding for eligible expenditures by March 31, the Ministry's fiscal year-end, regardless of when funding was approved and communicated to recipients. This is applicable to the Ministry's Tourism Economic Development and Recovery Fund (available between 2020/21 and 2022/23), which became the Tourism Development Fund starting in 2023/24 (see **Figure 14** for a description of the program). Common projects funded include the development of specific tourism experiences and strategic plans (see **Figure 16** for examples of projects funded through the Economic Development and Recovery Fund). With many of these projects, the recipients (often municipalities or not-for-profit organizations) require adequate time to plan, procure and execute on their ideas. By the time that the Ministry accepts applications and approves projects, not enough time is provided for recipients to complete their projects by March 31, the end of the funding period.

In October 2020, a municipality submitted an application to improve its harbourfront to attract more tourists. Four months later, in January 2021, the Ministry informed the municipality that it was approved for funding in 2020/21 (to be used by March 31, 2021). The municipality notified the Ministry that it could not use this funding in time, as it would require approvals from other funding partners to complete the project, and so could not complete this project in time. The Ministry and the municipality subsequently agreed to funding in 2021/22 for this project.

In August 2023, the Ministry began accepting applications for the Tourism Development Fund.

Stakeholders expressed concerns to us that the timing was not feasible to properly complete their projects. One municipality expressed interest in the funding program, as it was looking to create an action plan to grow tourism at its waterfront. The municipality would need to follow its required procurement processes with this project by engaging a consultant, which typically takes six weeks. After that, it could engage with the community and stakeholders for proper planning to finally develop its action plan. Given that the application period was scheduled to close in September 2023, and funding decisions are often communicated four months after the application period (as with the prior years of the funding program), the municipality expressed concerns that it would not be able to properly complete the project by March 31, 2024, and chose not to apply for the funding.

With this tourism development funding, the Ministry's goal is to support projects that increase tourist visits and spending by creating new tourism experiences, increasing private-sector investment and supporting the tourism industry in new investment. Potential applicants require more time to effectively complete these projects than the Ministry's funding schedule allows, especially to follow the processes required by the municipality and their stakeholders.

RECOMMENDATION 16

So that the Tourism Development Fund provides interested applicants with more time to complete their proposed projects, we recommend that the Ministry of Tourism, Culture and Sport accept applications for the funding program earlier, such as prior to the beginning of the funding period.

MINISTRY RESPONSE

The Ministry accepts this recommendation and will continue to work toward informing applicants of decisions and updates in a timely manner.

In 2023, the Tourism Development Fund adopted a set intake and deadline period versus the previous continuous intake, allowing the Ministry to review applications by a specified deadline.

For future versions of the Tourism Development Fund programs, the Ministry is striving to accept funding applications earlier by aiming to release the program in February or March (which is prior to the funding period) so that successful applicants have the optimum time to complete their projects within the fiscal allotment in the following year (from April to March).

4.4.3 Ministry's Tourism Recovery Program Took over a Year to Deliver Funding to Tourism Businesses

The Tourism Recovery Program (see **Figure 9** for a description of the program) was originally announced in March 2021 as part of the government's 2021/22 Budget and was to provide $100 million of funding to tourism businesses that had experienced significant revenue losses from the COVID-19 pandemic. However, applications did not open until October 2021 and funding recipients were not notified whether their applications were approved until March 31, 2022. This was the last day that they could use the funding, since the funding program required that eligible expenses be incurred between April 1, 2021 and March 31, 2022. No extension was made to the period in which the funding could be used.

This timing contrasts with British Columbia's Major Anchor Attraction Program, which provided one-time funding to major anchor attractions and tour bus companies that service tourism attractions, to help them operate at minimal levels until it was safer to travel and gather again. This funding was first announced in BC's Budget 2021 in April 2021 (similar to Ontario's initial announcement in the 2021 Budget). Eligible tourism organizations could apply between May and June 2021, with a total of $36.8 million in funding provided to grant recipients in July 2021—within two months of the initial announcement. In contrast, Ontario made its announcement in March 2021, opened applications

in October 2021, communicated funding decisions in March 2022, and ultimately paid out funding starting in May 2022—14 months after the initial announcement.

The Ministry informed us that after the initial program announcement, it had to design the eligibility criteria and application requirements, including a website that was used to accept applications through Transfer Payment Ontario (the grant payment website). At the same time, the Ministry reviewed other COVID-19 support programs that were being released by the federal and provincial governments to determine which ones applied to the tourism sector. It then designed the Tourism Recovery Program to include businesses that were significantly impacted by the pandemic but were not eligible for other grant programs. This caused some of the delay, resulting in the Ministry finally accepting applications starting in October 2021. After the application period closed in November 2021, the Ministry learned that there were more applicants than the program had budgeted for, which required further changes to the funding decisions and amounts (see **Section 4.2.2** and **Figure 10**); this caused further delays, with funding notifications being sent to successful applicants on March 31, 2022. In our discussions with tourism stakeholders, we were told that the delay in notification impacted tourism businesses' operating decisions during the pandemic. Some seasonal businesses were not able to fully use the funds by March 31, 2022, and some businesses cancelled or scaled down their planned special events, as they were unsure the funding would be available to support their costs.

RECOMMENDATION 17

So that the timing of tourism program funding is made clear to applicants to these programs, we recommend that the Ministry of Tourism, Culture and Sport:

- inform applicants of when funding decisions are expected to be made as part of the application process; and
- communicate updates when established timelines have not been met.

MINISTRY RESPONSE

The Ministry accepts this recommendation and will continue to work toward informing applicants of funding decisions and provide updates in a timely manner.

Appendix 1: Number of Tourists to Ontario and Tourist Receipts Annually by Place of Origin, 2011–2021

Source of data: Ministry of Tourism, Culture and Sport

	Place of Origin									
	Ontario		Rest of Canada		United States		Other International		Total	
Year	# of Tourists (million)	$ Tourist Receipts[1] ($ billion)	# of Tourists (million)	$ Tourist Receipts ($ billion)	# of Tourists (million)	$ Tourist Receipts ($ billion)	# of Tourists (million)	$ Tourist Receipts ($ billion)	# of Tourists (million)	$ Tourist Receipts ($ billion)
2011	118.3	18.3	7.0	2.2	11.5	3.1	2.2	2.9	139.0	26.5
2012	120.6	19.5	6.7	2.4	11.7	3.3	2.2	2.9	141.2	28.1
2013	**122.1**	19.2	6.1	2.2	10.6	3.1	2.0	4.0	140.8	28.5
2014	120.7	19.2	6.0	2.1	10.4	3.3	2.4	5.2	139.5	29.8
2015	121.4	20.4	6.5	2.4	11.4	3.7	2.6	5.8	141.9	32.3
2016	121.9	21.0	7.1	2.5	12.4	4.6	2.7	6.0	**144.1**	34.1
2017	120.2	21.7	**7.4**	2.8	12.3	4.8	3.0	**6.8**	142.9	36.1
2018[2]	109.0	23.1	7.0	**3.3**	12.6	5.0	3.2	5.3	131.8	36.7
2019	108.0	**23.6**	7.2	3.2	**12.9**	**5.2**	**3.7**	6.0	131.8	**38.0**
2020[3]	72.7	11.1	2.9	0.9	2.1	0.7	0.5	0.9	78.2	13.6
2021[3]	73.4	13.0	3.5	1.7	1.8	0.8	0.5	0.9	79.2	16.4

Note: **Bolded** numbers represent greatest amount for the place of origin between the years presented.

1. See **Appendix 2** for a complete explanation of how tourist receipts are calculated (includes all spending by tourists in Ontario).
2. In 2018, there was a change in methodology of how the travel surveys were conducted by Statistics Canada to collect tourism data. For example, to collect domestic tourism data, a new online survey was started to ask Canadians about their travel spending in the year, as opposed to the prior telephone travel survey that respondents were invited to complete following a different telephone survey of their participation in the workforce. This impacted the reach and response rate of the survey, so the data prior to 2018 is not comparable to data for the years after.
3. The COVID-19 pandemic interrupted Statistics Canada's travel survey collection operations, and therefore data for 2020 and 2021 includes travel estimates produced by Statistics Canada.

Appendix 2: Calculation of Tourism Receipts in Ontario

Source of data: Ministry of Tourism, Culture and Sport (Ministry)

Tourist[1] spending	Tourist spending data[2] is compiled by the Ministry. Tourist spending is itemized into categories for transportation, accommodation, food and beverage, recreation/entertainment, and retail/other.
+	
Spending by non-Ontario residents in Ontario, while passing through Ontario	Spending data[2] of non-Ontarians while they are in Ontario, on their way to visit other provinces or countries.
+	
Spending by Ontarians on Canadian fares for trips outside Canada	Spending data[2] of Ontarians who travel internationally. Only the Canadian fares paid for US or overseas trips are included (i.e., no fares related to trips within Canada, nor fares paid in the US or overseas).
+	
Spending by Ontarians on transport to other provinces with no corresponding visit in Ontario	Spending data[2] of Ontarians travelling within Canada, when spending was incurred within Ontario.
+	
Profits of travel arrangement firms located in Ontario	• Total revenue and cost of goods sold by travel agencies and tour operators is collected by Statistics Canada through the Travel Arrangements Survey. The Ministry calculates the net profit from this information to arrive at the total commissions generated from tourism-related activities. • Amounts spent by tourists on travel arrangements (included in tourist spending) is removed to avoid double counting of that sum in this category.
=	
Tourism Receipts	Spending of tourists in Ontario as well as spending in Ontario for trips outside the province, combined with profits from Ontario travel arrangement firms.

1. A tourist is defined as anyone who travels 40 km or more to a destination for anything other than work or school, going to appointments, or shopping as part of regular activity.
2. Tourism spending data is collected by Statistics Canada through the National Travel Survey and the Visitor Travel Survey. Canadian residents (through the National Travel Survey) and international visitors to Canada (through the Visitor Travel Survey) are surveyed for details of their travel, including amount incurred on different types of expenditures.

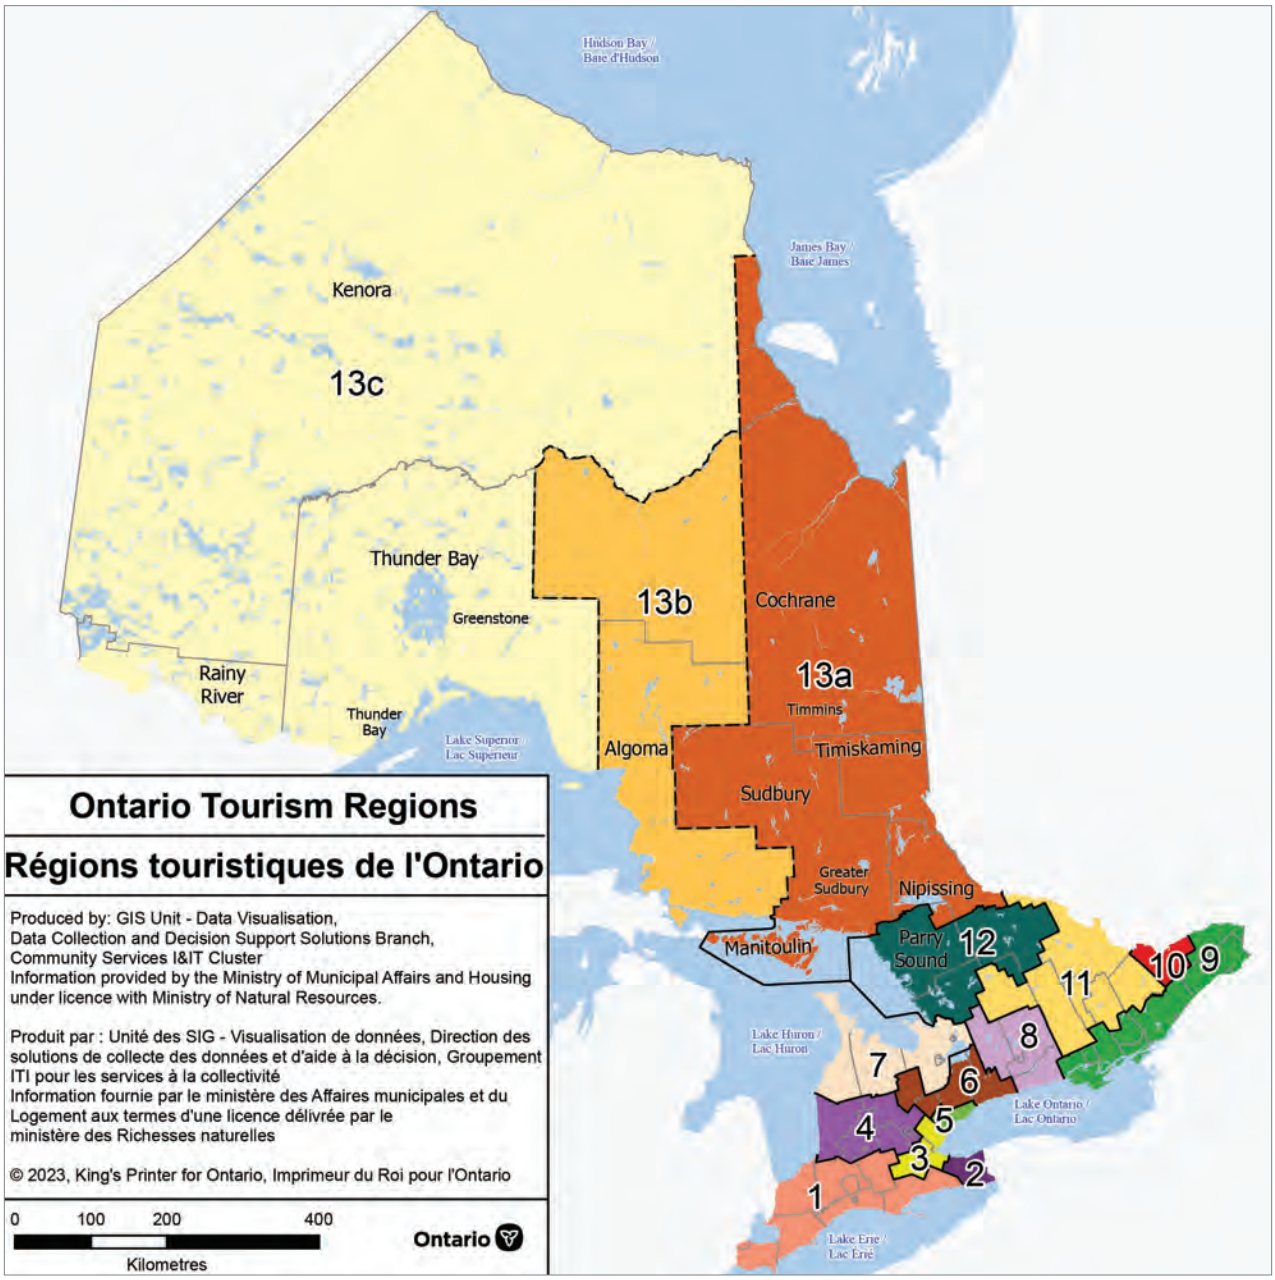
– percentage growth in GDP and/or percentage growth in jobs between 2014 and 2019 was larger than Ontario's over the same time period.

1. Statistics Canada does not release the provincial and territorial tourism data annually.
2. Percent change is based on actual numbers, not the rounded numbers that appear in the table.
3. Only the direct GDP impact is included in this figure. This differs from the total GDP impact that Ontario estimates tourism contributes to the provincial economy ($36.8 billion in 2019), which includes the indirect and induced impact of re-spending within the economy.

Appendix 4: Ontario Travel Information Centre Locations, August 2023*



Source of data: Destination Ontario

* In October 2021, the Travel Information Centre in St. Catharines was closed, and in April 2023, the Sarnia location was closed. Both centres operated on a year-round basis.

Appendix 5a: Ontario Tourism Regions

Source of data: Ministry of Tourism, Culture and Sport

Region 1: Southwest Ontario
Region 2: Niagara Canada
Region 3: Hamilton, Halton and Brant
Region 4: Huron, Perth, Waterloo and Wellington
Region 5: Greater Toronto Area
Region 6: York, Durham and Headwaters
Region 7: Bruce Peninsula, Southern Georgian Bay and Lake Simcoe
Region 8: Kawartha Northumberland
Region 9: Southeastern Ontario
Region 10: Ottawa and countryside
Region 11: Haliburton Highlands to Ottawa Valley
Region 12: Muskoka, Parry Sound and Algonquin Park
Region 13a*: Northeastern Ontario
Region 13b*: Sault Ste. Marie – Algoma
Region 13c*: Northwest Ontario

* Region 13 is split into three sub-regions due to its large geographic area. Each sub-region receives its own base funding, but all three sub-regions are managed by one regional tourism organization.

Appendix 5b: Ontario Tourism Regions (Southern Ontario)

Source of data: Ministry of Tourism, Culture and Sport

Region 1: Southwest Ontario
Region 2: Niagara Canada
Region 3: Hamilton, Halton and Brant
Region 4: Huron, Perth, Waterloo and Wellington
Region 5: Greater Toronto Area
Region 6: York, Durham and Headwaters
Region 7: Bruce Peninsula, Southern Georgian Bay and Lake Simcoe
Region 8: Kawartha Northumberland
Region 9: Southeastern Ontario
Region 10: Ottawa and countryside
Region 11: Haliburton Highlands to Ottawa Valley
Region 12: Muskoka, Parry Sound and Algonquin Park
Region 13a*: Northeastern Ontario
Region 13b*: Sault St. Marie – Algoma
Region 13c*: Northwest Ontario

* Region 13 is split into three sub-regions due to its large geographic area. Each sub-region receives its own base funding, but all three sub-regions are managed by one regional tourism organization.

Appendix 6: Ministry of Tourism, Culture and Sport's Funding to Regional Tourism Organizations, 2018/19–2022/23 ($ million)

Source of data: Ministry of Tourism, Culture and Sport

Region		2018/19	2019/20	2020/21	2021/22	2022/23
1	Southwest Ontario	1.9	1.5	1.5	1.5	1.5
2	Niagara Canada	4.0	3.2	3.2	3.2	3.2
3	Hamilton, Halton and Brant	1.3	1.1	1.1	1.1	1.1
4	Huron, Perth, Waterloo and Wellington	1.4	1.2	1.2	1.2	1.2

13*	Northeastern Ontario, Sault Ste. Marie – Algoma, Northwest Ontario	4.9	3.9	3.9	3.9	3.9
Total		**36.6**	**23.0**	**19.1**	**34.1**	**19.1**

* Region 13 is split into three sub-regions due to its large geographic area. Each sub-region receives its own base funding, but all three sub-regions are managed by one regional tourism organization. Total funding to all three sub-regions is presented together.

Appendix 7: Ministry of Tourism, Culture and Sport's (Ministry's) Action Plan for Economic and Social Recovery, December 2020

Source of data: Ministry of Tourism, Culture and Sport

#	Recommended Action Item	Description
1.	**Redevelop Ontario Place as a world-class, year-round destination**	To encourage investment and attract visitors, redevelop Ontario Place to include sport and entertainment landmarks, public spaces and parks, recreational facilities and trails.
2.	**Build back stronger in our communities**	Invest in the Ontario Trillium Foundation to support community tourism, heritage and culture not-for-profits to sustain short-term operations and create new attractions and events, and to fund municipalities and other not-for profit organizations to make infrastructure investments in sport and recreation facilities to meet local community needs.
3.	**Recognize the contributions of Ontarians**	Make changes to the Ontario Volunteer Service Award to recognize volunteer contributions of Ontarians.
4.	**Broaden Ontario's volunteer base**	Work with the volunteer sector to support the whole-of-government approach in creating a Provincial Emergency Volunteer Unit to recruit volunteers from diverse backgrounds that can help during an emergency.
5.	**Promote safety and excellence in sport**	Support amateur sport partners in key opportunities and instill confidence in parents of a safe-to-play environment for children and youths to be active in sports.
6.	**Restore confidence and strengthen inclusivity in sport, culture, volunteerism and tourism**	Work with sport organizations, arts and cultural institutions and tourism operators to ensure training for staff to deliver safe and quality experiences is available to ultimately deliver unique, authentic tourism experiences and restore confidence in Ontarians to resume these activities.
7.	**Compete for global festivals, events and conferences**	Make strategic investment in festivals, celebrations and sport hosting events, including increasing the capacity for sport hosting to expand the types of events that Ontario attracts.
8.	**Strengthen Ontario's commitment to the creative industries**	Invest in Canadian content, increase film-friendly locations, support the development of crews and talent, and maintain the stability of the cultural media tax credits provided by the Ministry.
9.	**Create regional equity in film and television production**	Work with the film sector to develop a strategy to identify film-friendly locations and build incentives for productions in the underrepresented eastern and southwestern Ontario regions.
10.	**Develop/redevelop skills in creative, tourism and hospitality industries**	Work with the Ministry of Labour, Training and Skills Development and Ministry of Colleges and Universities to reskill those with tourism jobs that were impacted by the pandemic and create training opportunities for growth.
11.	**Capitalize on emerging creative industries markets**	Engage with the digital media and video game sector to help tourism and culture industries enhance their capacity and provide digital experiences to audiences and customers.

#	Recommended Action Item	Description
12.	**Protect Ontario's core cultural institutions**	Provide one-time funding support to the Ontario Arts Council to cover operating losses during the COVID-19 pandemic and prepare for resumption of full programming.
13.	**Reconnect Ontarians**	Offer a travel incentive to Ontarians to encourage local tourism to connect Ontarians to each other and their communities.
14.	**Develop a year-round, globally competitive suite of products**	Led by Destination Ontario and the regional tourism organizations, work with tourism operators to create new experiences that lead to year-round tourism in Ontario.
15.	**Open Ontario up for business and visitors**	Work with Metro Toronto Convention Centre and Ottawa Convention Centre (Shaw Centre) to attract business travel and conventions to Ontario, and modernize the Ontario Travel Information Centres to promote tourism to customers.

Appendix 8: The 10 Recommendations of the Tourism Economic Recovery Ministerial Task Force, June 2021

Source of data: Ministry of Tourism, Culture and Sport

#	Recommendation	Description
1.	**Emphasize safety in everything we do**	When safe to travel, have government and public health officials change messaging from "stay home" to "safe to travel" to instill consumer confidence.
2.	**Give Ontarians an incentive to get out of the home and make new local memories**	Provide a travel incentive to encourage Ontarians to support local businesses in their community with a simultaneous "year of the staycation" campaign.
3.	**Encourage and excite Ontarians to experience Ontario through New "Yours to Discover" days**	Inspire a co-ordinated effort from the whole industry to generate excitement and incent travel on select days to discover Ontario.
4.	**Provide increased stability and opportunities to tourism businesses and organizations**	Introduce multi-year operating funding programs, or expand existing festival and event programs, to assist operators of attractions, sporting events, cultural events and festivals with economic recovery and drive tourism in the medium to long term.
5.	**Bring back conventions and business events to Ontario**	Establish a multi-year Conventions and Business Events Support Fund to support and remain competitive in the business and leisure travel market.
6.	**Make it easier for people to find the packages, products and destinations that suit their budgets, schedules and needs**	Provide direct industry support to create products, attractions and experiences that appeal to everyone and are accessible to all travellers.
7.	**Reduce the amount of time tourism businesses spend on red tape so they can spend more time delivering unforgettable experiences**	Take a cross-ministry approach to collaborate with other ministries to responsibly loosen alcohol laws and review the Municipal Accommodation Tax to optimize revenue generation for the tourism industry.
8.	**Make nature and outdoor experiences part of the province's solution to physical and mental health challenges**	Promote outdoor activities and connect this to the physical and mental benefits that individuals can gain, especially from the increased interest in connecting with the outdoors and nature during the pandemic.
9.	**Create "bite-sized" mobile and scalable experiences during the transition period to a full reopening**	Before Ontario fully reopens, support scalable, mobile experiences, festivals and events (such as roadshow events) before full-scale events can resume.
10.	**Showcase the best of Ontario through packaged itineraries and trails**	Using research and analytics, create well-branded itineraries of existing trails (such as nature, culinary, cycling) to generate interest in new markets and encourage travel across all regions in Ontario.

Appendix 9: Ontario Tourism Recovery Program Funding Recipients by Sector

Source of data: Ministry of Tourism, Culture and Sport

Sector and Business Type	# of Recipients	Total Paid ($)	% of Total Paid
Accommodations			
Hotels, motels, inns and lodges	169	47,732,432	48

Appendix 10: Audit Criteria

Prepared by the Office of the Auditor General of Ontario

1.	The Ministry of Tourism, Culture and Sport's (Ministry's) long-term strategy and supports for the tourism industry are clear, measurable and effective in achieving economic benefits for Ontario.
2.	The Ministry, Destination Ontario and regional tourism organizations work together effectively to support the tourism industry through their mandate, roles and responsibilities, information sharing and co-ordination with each other and stakeholders.
3.	Funding program eligibility criteria were clearly designed and consistently applied to achieve the programs' objectives.
4.	Funding was distributed to eligible recipients in a timely manner.
5.	Reporting requirements from funding recipients were appropriate for the Ministry to conduct an evaluation of the program's impact and outcomes in achieving the objectives, and the evaluation was completed in a timely manner.
6.	Meaningful tourism research and statistics are reported by the Ministry to support the tourism industry in developing strategic and operating decisions and to inform the public.

Appendix 11: Ministry of Tourism, Culture and Sport's (Ministry's) 2016 Tourism Action Plan

Source of data: Ministry of Tourism, Culture and Sport (Ministry)

#	Action Area	Ministry's Planned Actions
1.	Product and Experience Development	Work across government and with partners to develop new lead-generation strategies and a targeted global outreach approach to sell Ontario as a place to invest in tourism.
2.		Use Ontario's attractions to strengthen Ontario's value proposition and strategically target new investment.
3.		Work with the economic development community and across government to explore a business retention and expansion service for the tourism industry.
4.	Tourism Workforce Development	Support the Tourism Industry Association of Ontario's campaign to promote tourism as a career, and encourage stakeholders to work together to implement industry recommendations from the Ontario Tourism Workforce Development Strategy developed by the Tourism Industry Association of Ontario and Ontario Tourism Education Corporation.
5.	Marketing Strategically	Continue to engage with stakeholders to encourage collaboration in marketing decisions to enhance consistency of branding and messaging, and avoid duplication.
6.	Advancing the Tourism Sector	Host an annual Minister's Forum in different regions of the province with tourism industry leaders, operators and stakeholders to provide an opportunity to share progress, innovative ideas and research, and build partnerships.
7.		Review the Ministry's funding programs (including festivals and events grant program, tourism development funding, and regional tourism organizations) to streamline applications and improve alignment to better support communities.
8.		Identify opportunities to advance multicultural, Francophone and Indigenous-led tourism in Ontario by collaborating across government and with industry partners.
9.		Improve regulatory environment for the tourism sector by working across government to address regulatory burdens.
10.	Making Evidence-Based Decisions	Partner with government departments across Canada to share tools and information relating to tourism data collection, evaluation and modelling, and pilot a new survey to collect data from international travellers.
11.		Establish a tourism research community of practice to increase access to and understanding of tourism-related data.
12.		Update the Tourism Regional Economic Impact Model platform to enhance the user experience and develop a more efficient process for updating information to support more evidence-based decision-making.

Appendix 12: Number of Tourists by Region, 2013–2020

Source of data: Ministry of Tourism, Culture and Sport

Region		2013	2014	2015	2016	2017	2013–17 Change	2018[1]	2019	2020

– years a decrease in visitors compared to the prior year.

1. In 2018, there was a change in methodology of how the travel surveys were conducted by Statistics Canada to collect tourism data. For example, to collect domestic tourism data, a new online survey was started to ask Canadians about their travel spending in the year, as opposed to the prior telephone travel survey that respondents were invited to complete following a different telephone survey of their participation in the workforce. This impacted the reach and response rate of the survey, so the data prior to 2018 is not comparable to data for the years after.
2. Total number of visitors by region is different from the total number of visitors to Ontario (**Appendix 1**). This is because a visitor to Ontario may visit multiple regions, which results in the total number of visitors by region being higher than the total number of visitors to Ontario.
3. In 2020, the number of visitors by region was lower than the total visitors in Ontario (about 78 million; see **Appendix 1**) because regional survey data was not collected from March to June 2020 when the National Travel Survey was suspended during the COVID-19 pandemic. Additionally, the 2020 number of visitors includes only domestic visitors. The Visitor Travel Survey (surveying international visitors) was suspended for the year as a result of the COVID-19 pandemic.

Appendix 13: Examples of Projects with Similar Aims That Received Separate Ministry of Tourism, Culture and Sport (Ministry) Funding with No Collaboration Required*

Prepared by the Office of the Auditor General of Ontario

Cultural and Historic Itineraries: Indigenous Tourism Experiences		
	Tourism Association	**Tourism Business**
Organization type	Not-for-profit, membership-based tourism association supporting growth of Indigenous tourism in Ontario.	For-profit tour operator (for example, providing bus tours).
Funding program	Pan-Regional Fund	Tourism Economic Development and Recovery Fund
Funding awarded	$1.6 million from 2016/17 to 2022/23.	$10,000 in 2022/23.
Description of project funded	Develop partnerships, including with regional tourism organizations (RTOs) and its association members, to develop new tourism products and experiences. For example, in 2022/23, this specifically included partnerships to create new itineraries centred on Indigenous experiences.	Research, product development and project management for the development of a new Indigenous Cultural and Historic Experiences bus tour.
Required partnerships	Regional tourism organizations, Indigenous businesses, industry associations.	None.

Route Champlain/Eastern Ontario: Francophone Tourism Experiences		
	Tourism Association	**Tourism Business**
Organization type	Not-for-profit tourism association supporting economic development in Francophone communities.	Not-for-profit Francophone tourism organization.
Funding program	Pan-Regional Fund	Tourism Economic Development and Recovery Fund
Funding awarded	$1.1 million from 2015/16 to 2022/23.	$20,000 in 2021/22.
Description of project funded	Development of Route Champlain (located between Ontario and Quebec) to attract tourism for the large Francophone community in the area. This includes funding to develop a strategic plan and business model, establish partnerships between Route Champlain and nearby tourism organizations, create bilingual tourism products and itineraries, and partnerships with stakeholders such as RTOs.	Conduct a feasibility study for the development of a Francophone theme park in the Prescott and Russell area (located in eastern Ontario, bordering Quebec and close to Route Champlain). Study looked at other publicly available experiences related to Franco-Ontario heritage and pioneer villages and concluded that the development of the theme park would attract a new audience and benefit tourism in the underdeveloped Prescott and Russell area, but also benefit other nearby well-developed tourism hubs (such as Route Champlain), as it would increase new visitors to the area.
Required partnerships	Tourism operators located near Route Champlain, regional tourism organizations and destination marketing organizations, industry associations.	None.

* The tourism associations that received Ministry grants had an expectation to develop partnerships, but the Ministry provided separate funding to tourism organizations to develop similar tourism experiences without requiring collaboration between the two entities.

– funding provided to an organization for consecutive years, which should have made the application ineligible according to the original program design.

* In 2013/14, the Tourism Industry Association of Ontario was approved for a total of $170,000 over two years (2013/14 and 2014/15).

Ministry of Public and Business Service Delivery

Travel Industry Council of Ontario

1.0 Summary

The Travel Industry Council of Ontario (TICO) was created by the provincial government in 1997 as a not-for-profit designated administrative authority to regulate travel agents and travel wholesalers in Ontario. TICO is responsible for administering and enforcing the Ontario *Travel Industry Act, 2002* (Act), and its mission is to regulate consumer protection by promoting awareness, education and compliance as part of the efficient and effective regulation of Ontario's travel industry.

TICO is self-funded and overseen by the Ministry of Public and Business Service Delivery (Ministry), which monitors TICO's performance to ensure it is meeting its mandate. In 2019/20, the last fiscal year before the pandemic, TICO reported total revenue of $5.3 million.

Every travel agent and wholesaler with a physical location in Ontario who sells travel services provided by another party must be registered with TICO. As of February 2023, there were 1,701 travel agents and 295 travel wholesalers registered with TICO (together referred to as "registrants").

To ensure that travel agents and wholesalers comply with legislative requirements, TICO undertakes regulatory activities that include inspections and investigations of registrants, and taking enforcement action against those that breach legislative requirements. TICO also attempts to mediate and resolve complaints it receives from consumers about the actions of its registrants, and undertakes efforts to improve awareness of consumer rights and available protections when purchasing travel services from a registrant.

The Act also establishes the requirement for the Travel Industry Compensation Fund (Compensation Fund), which is administered and managed by TICO, and financed by registrants. The Fund is used to reimburse eligible customers who purchased travel services through TICO registrants and subsequently suffered financial losses related to travel services paid for but not received due to the bankruptcy or insolvency of a registrant or an end supplier airline or cruise line.

Our value-for-money audit found that while the travel industry has changed significantly since 1997, TICO's structure and responsibilities have remained largely unchanged. We compared TICO to travel regulators with similar regulatory requirements and found that other jurisdictions utilized consumer protection organizations or broader government organizations whose mandate included significantly more than just regulating sellers of travel. We also found that the majority of Canadian provinces and most US states do not have travel regulators or specific travel seller regulations at all. As well, we found that the Australian government repealed the country's travel seller regulations in 2014 because it determined that due to changes in the travel industry and other existing consumer protections, they were no longer necessary.

Our audit also found that TICO's cost to administer the Compensation Fund may outweigh the benefits it provides to consumers. TICO's estimated annual cost to

administer the Fund for 2022/23 of $1 million is nearly three times more than the average of $350,000 in compensation paid from the Fund to consumers on average over the last 10 years.

As well, using TICO's own recent estimate for its updated fee model for allocating TICO's expenses to the Compensation Fund, we calculated that since 1997 TICO used an estimated $31 million from the Fund to cover its own operating costs.

Significant concerns identified in our audit include:

- **TICO could not demonstrate the justification for holding as much as $2 million in security deposits from registrants.** Under the Act's regulation, TICO is required to collect a $10,000 security deposit from each new registrant. Once the registrant has filed two consecutive financial statements with TICO, TICO is obligated to repay the security deposit if the Registrar has no concerns regarding the registrant's compliance with the Act or its regulation. As of March 31, 2023, we found that 58% of the registrant deposits TICO was holding, which totalled $2 million, were from registrants who had filed at least two consecutive financial statements. On average, these deposits had been held by TICO for approximately seven years. We found that TICO did not have a process to regularly assess whether registrants qualify to have their security deposit returned. In our review of a sample of 20 deposits from active registrants who were eligible to have their deposits returned, we found that in 13, or 65%, of the cases no concerns were documented that would justify continuing to hold the deposits.
- **TICO's registrant risk rating system was not used to effectively oversee registrants.** We identified several issues with how TICO assigns, calculates and utilizes its risk rating system to inform registrant oversight activities. For instance, as of March 2023, TICO had not assigned a risk rating to 37% of registrants. In addition, TICO's compliance policy had no established guidelines for how the risk rating should be used to drive compliance and enforcement activities.
- **30% of TICO registrants had not received a compliance inspection in the last 10 years.** As of March 2023, 30% of the 1,684 registered travel agencies and wholesalers had not been inspected by TICO to assess their compliance with requirements in the last 10 years, including 44 registrants who had not received a compliance inspection for more than 20 years. We also found that TICO has not established how frequently registrants should be inspected based on their assigned level of risk. TICO's inspections of registrants often identify non-compliance. Over the last five years, 32% of compliance inspections conducted by TICO identified instances of non-compliance with the Act and its regulation.
- **The Ministry and TICO have not established a disciplinary process for registrants.** We found that TICO and the Ministry have not developed a mandatory code of ethics for registrants and a corresponding discipline committee that could impose fines and require registrants to fund educational courses for employees in response to violations of such a code. We reviewed a sample of complaints and found that many related to issues that were not covered under the Act but could be covered under a code of ethics, including for example failing to demonstrate reasonable knowledge of the travel services being sold, and failing to protect the best interests of clients. In contrast to TICO, we noted that both the Ontario Motor Vehicle Industry Council and the Real Estate Council of Ontario, which are also delegated administrative authorities, have discipline committees that enforce a code of ethics.
- **TICO did not know whether complaints involving violations of the Act were referred for enforcement action.** We found that TICO did not track the outcomes of the complaints it handles in its information system, including whether they were resolved, whether they

potentially violated the Act and its regulation, or whether they were referred for further investigation or enforcement action. We reviewed a sample of 40 complaint files relating to 15 registrants against whom TICO had received the highest number of complaints over the five years from 2017/18 to 2021/22, and found that 13, or 33%, of the 40 complaints involved potential violations of the Act and its regulation by registrants that were not referred for investigation or enforcement action as required by TICO's complaint-handling policy when potential violations are identified.

- **TICO has used an estimated $31.3 million from the Compensation Fund since 1997 to cover its own operating costs.** TICO has routinely used the Compensation Fund to cover its own operating costs, even though legislative requirements allow only reasonable expenses related to the Fund to be paid from the Fund. We analyzed the Fund's balance, and calculated that from 1997/98 to 2022/23, TICO would have charged the Fund approximately $19.4 million to cover its costs of administering the Fund. Instead, we found that TICO charged the Fund an additional $31.3 million that it used to cover TICO's operating expenses.
- **The cost to administer the Compensation Fund may outweigh the benefits it provides consumers.** Over the 10 years from 2013/14 to 2022/23, TICO's registrants booked over $133 billion in travel services for consumers. Over this same period, we found that, on average, the Fund paid approximately $350,000 in compensation to consumers annually, or less than 0.003% of annual travel services booked by TICO's registrants. TICO's estimated annual cost for 2022/23 to administer the Fund of $1 million is nearly three times more than the $350,000 in compensation paid from the Fund to consumers on average over the last 10 years.
- **TICO had been unable to address gaps in key competencies among Board members.** We noted that TICO developed a Board competency matrix in 2018 consisting of 15 competencies that TICO considers critical to achieving its mandate. TICO has also assessed Board member competencies each year since 2018 to identify areas of weakness. We found that even though the vast majority of TICO's Board members had been replaced since 2018, TICO had been unable to close gaps in four of the 15 key competencies on its matrix: legal, risk management, technology, and human resources.
- **Almost half of Ontarians surveyed who were involved in travel planning for their household were unaware of TICO.** Over the last five years, only 51% of Ontarians that were involved in travel planning indicated that they were either "definitely" or "somewhat" aware of TICO. In addition, only 31% of respondents indicated they were aware of the Compensation Fund. To increase consumer awareness, TICO developed a brochure for consumers with information regarding its regulatory role, registrant requirements, protections available under the Act, and Compensation Fund coverage. However, there is no requirement for registrants to distribute the brochure to consumers. In a survey of registrants conducted by TICO in 2023, only 7% of registrants said they were providing the brochure to all of their customers, and only 13% indicated they were providing the brochure to most customers.
- **The Ministry did not collect sufficient information to monitor and assess TICO's performance in meeting its mandate.** For example, TICO did not have performance indicators and targets that it reported to the Ministry to assess the degree to which it operates on a cost-recovery basis, a requirement under its Administrative Agreement with the Minister. We also found that performance indicators had not been established, or were insufficient, to monitor TICO's operational performance in several key areas where our audit identified operational issues, including in the areas of inspections, security deposits, and complaint-handling.

This report contains 16 recommendations, with 32 action items, to address our audit findings.

Overall Conclusion

Our audit concluded that TICO did not have processes to consistently administer the *Travel Industry Act, 2002* effectively in order to register and regulate travel agents and wholesalers, and to protect consumers when purchasing travel services through a travel agent or wholesaler. TICO, for example, could not demonstrate that it effectively discharged its responsibilities under the Act to mediate and resolve complaints because it does not track the outcomes of the complaints it handles, including whether they were resolved or potentially violated the Act and its regulation, and whether they were referred for further investigation or enforcement action. In addition, we found that TICO's oversight and enforcement activities were not always risk-based. Specifically, TICO had not assigned a risk rating to 37% of its registrants, and it had not established guidelines for how a registrant's risk rating should be used to drive TICO's compliance and enforcement activities.

We also found that TICO was not in alignment with key provisions of the Act and its regulation. The regulator could not demonstrate the justification for holding as much as $2 million in security deposits from registrants who may be eligible to have their deposits returned. On average, these deposits had been held by TICO for approximately seven years. Under the Act's regulation, once the registrant has filed two consecutive financial statements with TICO, if TICO's Registrar has no concerns regarding the registrant's compliance with the Act or its regulation, TICO is obligated to repay the security deposit to the registrant. Further, although the Act and its regulation allow only reasonable expenses that are related to the Compensation Fund to be paid from the Fund, we estimated that since 1997, TICO used over $31 million from the Fund to cover its own operating costs.

Our audit also concluded that TICO was not fully effective in publicly reporting on its administration of the Act. For example, TICO does not include detailed compliance and enforcement information relating to registrants on its public directory, such as violations of the Act or details of enforcement action taken by TICO so that consumers can make more informed decisions about the travel agents they do business with.

Finally, our audit concluded that the Ministry's oversight processes to ensure that TICO effectively administers the Act and fulfils its mandate were not fully effective. For example, we found that performance indicators had not been established, or were insufficient, to monitor TICO's operational performance in several key areas where our audit identified operational issues, including in the areas of inspections, security deposits, and complaint-handling. In addition, the Ministry had not reviewed whether TICO's structure and assigned responsibilities as a regulator were an efficient and cost-effective way to administer and enforce the Act.

TICO OVERALL RESPONSE

The Travel Industry Council of Ontario (TICO) appreciates the recommendations of the Office of the Auditor General of Ontario and the insights and opportunities presented for improvement. TICO is also thankful for the collaborative and productive relationship with the Ministry of Public and Business Service Delivery (Ministry).

TICO's Board, management and the entire team remain steadfast to the obligations and responsibilities reflected in the *Travel Industry Act, 2002*. As one of the first Delegated Administrative Authorities created in 1997, TICO strives to evolve into a modern and progressive regulator, facilitating a marketplace where consumers are confident in their

travel purchases, and travel businesses operate within a trusted and level playing field.

Regardless of the type of travel, all consumers should be provided with the information required to make sound travel purchase decisions. TICO also serves a significant role ensuring Ontario's travel retailers and wholesalers are compliant with provincial travel laws.

The Auditor General's report will assist TICO in enhancing its processes across registration, inspections, complaints, and the administration of security deposits.

TICO acknowledges that further work and solutions are necessary to gather relevant data to enhance risk-based processes, reporting, and solutions.

TICO strives to be innovative and acutely focused on its consumer and registrant awareness initiatives. In a large province, TICO must carefully leverage its resources to reach consumers.

TICO also appreciates the recommendations concerning the industry-financed Compensation Fund and the organization's overall consumer protection mandate. TICO remains open to working with the Ministry and other stakeholders to consider the future travel consumer protection framework for Ontario, always in the public interest. These recommendations align with TICO's goal of always providing and evolving its value proposition to stakeholders.

The pandemic represented a devastating period for Ontario's travel industry. With the travel industry recovery accelerating, there is a clear opportunity for TICO to embrace these recommendations and implement strategies in support of a strong travel consumer protection framework that effectively advances the public interest.

MINISTRY OVERALL RESPONSE

The Ministry of Public and Business Service Delivery (Ministry) would like to thank the Auditor General and his staff for their work on the audit and recommendations. The Ministry welcomes feedback on how the Travel Industry Council of Ontario (TICO) is performing and the Auditor General's recommendations on how to strengthen TICO's operations and the Ministry's oversight of TICO.

The Ministry recognizes the importance of TICO fulfilling its responsibilities to administer and enforce the *Travel Industry Act, 2002* (Act) in a manner that protects consumers.

The Ministry notes that the Auditor General has recommended that the Ministry:

- conduct a comprehensive review of the Act and its regulation, and of TICO's existing mandate, structure and responsibilities; and
- based on that review, propose regulatory updates to make Ontario's regulatory framework more efficient and effective.

In response, the Ministry will carefully consider the observations and recommendations made by the Auditor General, which will inform a proposal for government consideration to undertake a review of the Act and TICO. The Ministry will also analyze the results from TICO's fee and Compensation Fund review process, including stakeholder feedback received in fall 2023, as part of this process. The Ministry will develop an implementation plan, including timelines, which considers this key recommendation, as appropriate.

For those recommendations directed to TICO that are not linked to a potential review of the Act or TICO, the Ministry will request that TICO provide an implementation plan that outlines the specific steps that it plans to take to implement each recommendation. The Ministry will closely monitor and track TICO's progress in addressing the recommendations.

2.0 Background

2.1 Overview of the Travel Industry Council of Ontario

In 1997, the government of Ontario created the Travel Industry Council of Ontario (TICO), a not-for-profit administrative authority under the *Safety and Consumer Statutes Administration Act, 1996*, to regulate travel agents and travel wholesalers in Ontario (together referred to as "registrants"). TICO is responsible for administering and enforcing the Ontario *Travel Industry Act, 2002* (Act). Its mission is to regulate consumer protection by promoting awareness, education and compliance as part of the efficient and effective regulation of Ontario's travel industry.

Every travel agent and wholesaler with a physical location in Ontario that sells travel services provided by another party must be registered with TICO. As of February 2023, there were 1,701 travel agents and 295 travel wholesalers registered with TICO.

TICO primarily funds its operations by collecting registration and other fees from registrants. The organization does not typically receive government funding. However, in response to the COVID-19 pandemic, TICO received temporary operating funding from the Ministry of Public and Business Service Delivery (Ministry) and waived registrant fees from the 2020/21 fiscal year through 2022/23 to provide some relief to registrants. In 2019/20, the last fiscal year before the pandemic, TICO reported total revenue of $5.3 million.

TICO is accountable to the Ministry, which oversees TICO and monitors its performance to ensure it is meeting its mandate. TICO's Board of Directors is accountable for TICO's performance to the Minister of Public and Business Service Delivery (Minister) through the Board Chair.

2.2 Roles and Responsibilities

TICO undertakes a number of activities to administer and enforce the *Travel Industry Act, 2002*, and fulfil its mandate, including:

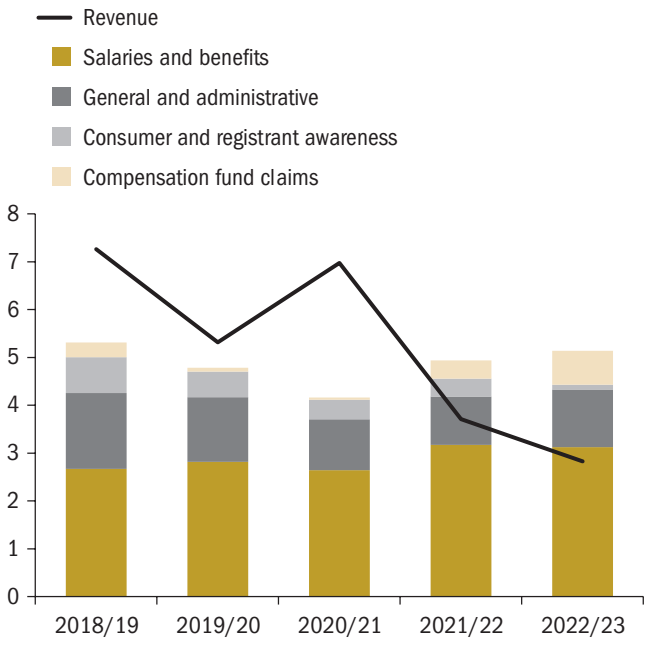
- registration of travel agents and travel wholesalers (see **Section 2.4**);
- conducting inspections of registrants (see **Section 2.5.1**);
- conducting investigations of suspected breaches of the Act (see **Section 2.5.2**);
- taking enforcement action against registrants when complaints, inspections or investigations identify that they have not complied with legislative provisions (see **Section 2.6**);
- resolving complaints from consumers against registrants or TICO, and complaints from registrants against TICO (see **Section 2.7**);
- administering the Travel Industry Compensation Fund (Compensation Fund), which reimburses eligible customers who paid for, but did not receive, travel services because of the bankruptcy or insolvency of a registrant or end-supplier airline or cruise line (see **Section 2.8**); and
- promoting consumer and public awareness of TICO's mandate and consumer protections available under the Act.

As of June 2023, TICO employed 28 full time-equivalent employees, whose responsibilities include processing registration applications, conducting inspections and investigations, resolving complaints, and responding to inquiries from the public and registrants. See **Appendix 1** for an overview of TICO's organizational structure.

TICO was previously governed by an 11-member Board of Directors comprised of seven industry members appointed or elected by travel industry associations and registrants, and four members appointed by the Minister. **Appendix 2** lists TICO's 11 Board members and their affiliations as of June 2023. As described in **Section 4.4.1**, in August and September 2023, at the conclusion of our audit work, the composition of TICO's Board was modified, reducing it to nine members, a maximum of three of which can be representatives of the travel industry and registrants.

Figure 1: TICO Expenses, 2018/19–2022/23 ($ million)

Source of data: Travel Industry Council of Ontario



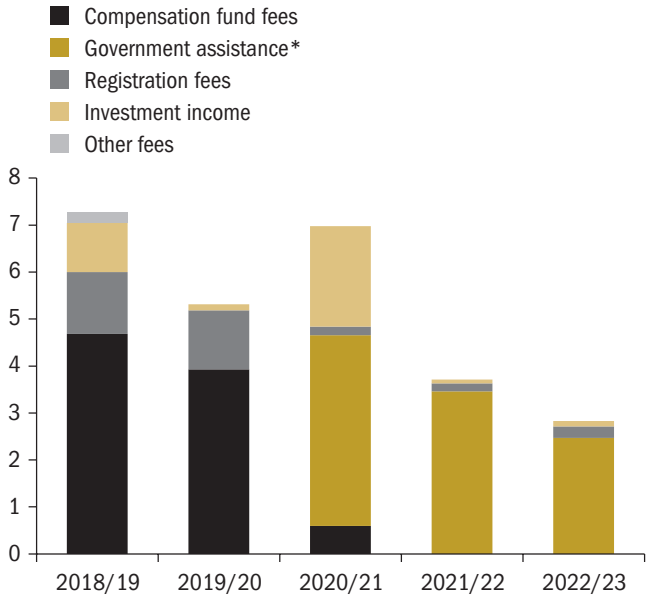


Figure 2: TICO Revenues, 2018/19–2022/23 ($ million)

Source of data: Travel Industry Council of Ontario

* In response to the COVID-19 pandemic, TICO received temporary operating funding from the Ministry and waived registrant fees from the 2020/21 fiscal year through 2022/23 to provide some relief to registrants.

2.3 Revenue and Expenditures

Figure 1 shows TICO's key expenditures over the five years from 2018/19 to 2022/23. About 60% of TICO's expenditures over this period related to the salaries and benefits of its employees. During the same period TICO also spent $2.2 million, or 9%, on consumer and registrant awareness initiatives such as media advertisements.

TICO is a not-for-profit organization that funds its operations by collecting fees from registrants for the services it provides. However, to support the struggling travel and tourism industry during the COVID-19 pandemic, the Ministry provided temporary operating funding to TICO between the 2020/21 and 2022/23 fiscal years so that TICO could continue to operate and fulfil its consumer protection mandate, and waive registration renewal and Compensation Fund fees for registrants. As shown in **Figure 2**, TICO received $4.1 million, $3.5 million, and $2.5 million from the Ministry in 2020/21, 2021/22, and 2022/23, respectively. For 2023/24, TICO returned to a cost-recovery fee structure, as required under the Administrative Agreement between TICO and the Minister.

As shown in **Figure 2**, prior to 2020/21, over 60% of TICO's revenue was generated through fees charged to registrants for the Compensation Fund, and about 20% was from registration fees. As shown in **Figure 3**, TICO charges registrants an initial registration fee based on the number of offices a travel agent or wholesaler has, an annual registration renewal fee based on Ontario gross sales and number of branch offices, and a Compensation Fund fee based on sales made in Ontario.

2.4 Registration of Travel Agents and Wholesalers

Every travel agent and wholesaler with a physical location in Ontario that sells travel services provided by another party must be registered with TICO. Under the Act, travel services are defined as transportation or sleeping accommodation for use by a traveller,

tourist, or sightseer, or other services combined with those transportation or sleeping accommodations.

Figure 4 outlines the process for determining whether registration with TICO is required. **Figure 5** provides a

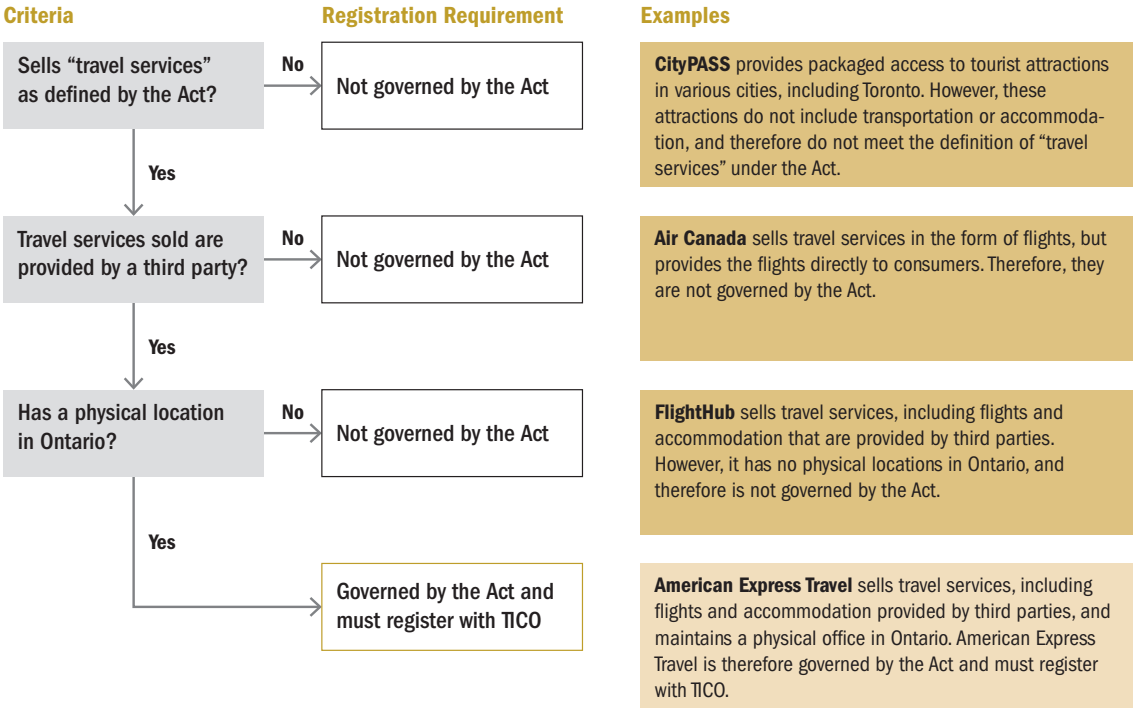

Figure 3: TICO Fee Schedule

		Fee Charged	Frequency
Initial Registration Fee			
Head office		$3,000	One-time
Branch office		$800	One-time
Renewal Fees by Ontario Gross Sales			
< $2 million		$300	Annual
$2–$5 million		$600	Annual
$5–$10 million		$900	Annual
$10–$50 million		$1,200	Annual
> $50 million		$1,800	Annual
Renewal Fees by Branch			
Branch office (per branch)		$300	Annual
Compensation Fund			
Compensation fund fee	Greater of $25, or 25 cents per $1,000 Ontario gross sales		Semi-annual

Figure 4: Registration Criteria and Examples

Prepared by the Office of the Auditor General of Ontario

description of the two types of registration categories and the related application requirements.

As of February 2023, there were 1,701 registered travel agents (comprised of 1,394 head offices and 307 branch offices) in Ontario and 295 registered travel wholesalers (comprised of 290 head offices and five branch offices). **Figure 6** shows the percentage of TICO registrants by Ontario gross sales at the time of their most recent registration renewal.

Figure 5: Registration Types and Related Requirements

Source of data: Travel Industry Council of Ontario

Type of Registration	Applicant Requirements for Registration
Travel Agent: A party with a physical location in Ontario that sells travel services to consumers that are provided by another party.	• application fee (see **Figure 3**); • a resumé and letters of reference from previous employers; • a designated supervisor/manager, who must have a minimum of three years of travel industry experience and must hold the TICO supervisor/manager certification (described in **Section 2.4**); • a commercially zoned business address or, if operating from a dwelling, a letter of approval from the local municipality; • at least one officer or director who is a resident of Canada; • opening pro forma balance sheet or current financial statements indicating a positive working capital; • security deposit of $10,000; • confirmation of trust accounts (i.e., a letter from a financial institution in Ontario); • disclosures of all particulars regarding any bankruptcies, judgments, and discharges; and • criminal-record check for each owner, officer, director, shareholder and designated manager named on the application.
Wholesaler: A party with a physical location in Ontario that acquires the rights to travel services for the purpose of resale to a travel agent, or that carries on the business of dealing with travel agents or travel wholesalers to sell travel services provided by another party.	• all of the same requirements listed for travel agents above; • a business/marketing plan; and • written approval from TICO's Registrar prior to entering into any risk contracts with air carriers (e.g., bulk purchases of airline seats).

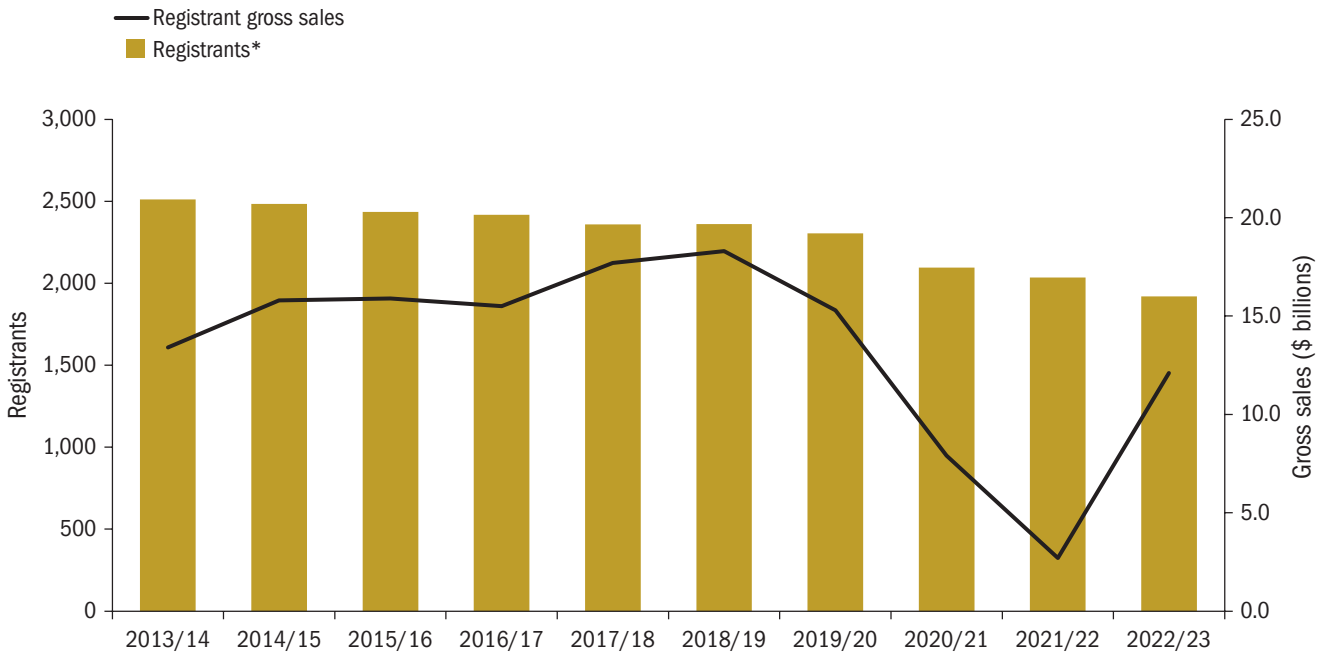

Figure 6: Percentage of Registrants by Ontario Gross Sales at Most Recent Renewal, March 31, 2023

Source of data: Travel Industry Council of Ontario

Ontario Gross Sales	Registrants (%)
< $2 million	72
$2–$5 million	14
$5–$10 million	7
$10–$50 million	5
> $50 million	2

Figure 7: Registrant Count and Ontario Gross Sales of Registrants, 2013/14–2022/23

Source of data: Travel Industry Council of Ontario

* Registrant count as of March 31 of each year.

Figure 7 shows the number of registrants and their Ontario gross sales reported to TICO. As the chart illustrates, in the period prior to the COVID-19 pandemic, the number of registrants was in a slow but steady decline, while the gross sales reported by registrants had actually increased significantly from 2013/14 to 2018/19. This is consistent with the increase in travel and tourism seen in Canada and worldwide.

As shown in **Figure 7**, the COVID-19 pandemic, which began near the end of fiscal year 2019/20, has had a significant impact on the industry. From 2013/14 to 2018/19, the number of registrants decreased by 6%, while registrant gross sales increased by 37%. In contrast, between 2018/19 and 2021/22, the number of registrants decreased by 14% while registrant gross sales declined by 85%, from $18.3 billion to just $2.7 billion. Registrants saw a significant rebound in sales in 2022/23 as the industry began to recover from the pandemic, reaching $12.1 billion, or 66%, of sales prior to the pandemic in 2018/19, while the number of registrants continued to decline.

TICO registrants sell a significant portion of the travel services booked by Ontarians. The $18.3 billion in gross sales reported by registrants in 2018/19 (the last full year before the pandemic) is 48% of the approximately $38.3 billion that Ontario residents spent while travelling in calendar year 2019, according to Statistics Canada's National Travel Survey.

Registrant Employee Certification Requirements

TICO does not have the authority under the Act to register or regulate individual employees of registrants such as salespeople. However, the regulation under the Act does require that travel agents ensure that any employees or contractors who sell travel services to consumers obtain TICO's Travel Counsellor certification. Every travel agent office is also required to have at least one supervisor/manager who, in addition to holding a Travel Counsellor certification, must obtain TICO's Supervisor/Manager certification. Both certifications are obtained by completing an online self-study program and exam. Details of each certification are outlined in **Figure 8.**

Figure 8: Travel Counsellor and Supervisor/Manager Certification Requirements

Source of data: Travel Industry Council of Ontario

	Travel Counsellor	Supervisor/Manager
Prerequisite	None	Travel Counsellor certification
Exam length	90 minutes	60 minutes
Exam questions	50 multiple choice	30 multiple choice
Average passing score	70%	70%
Self-study program topics	• Ontario's *Travel Industry Act, 2002* • TICO's role in the travel industry • Registrant obligations—before the sale • Registrant obligations—after the sale and before customer travels • Travel Industry Compensation Fund	• Registration requirements • Financial and record-keeping requirements • Complaints • Investigations and offences

2.5 Inspections and Investigations

2.5.1 Inspections of Travel Agents and Wholesalers

TICO conducts inspections of travel agents and wholesalers to ensure its registrants conduct business in accordance with the Act and Ontario Regulation 26/05 (regulation), and remain entitled to registration. TICO's compliance team consists of one manager, five inspectors, and an analyst who report to the Chief Operating Officer. Under the Act, TICO's inspectors have unrestricted access to inspect a registrant's business premises, documents, and records (including financial records, past transactions, and bank statements). TICO also assigns a risk rating of low, medium or high to its registrants based on the outcome of a registrant's on-site inspection. **Figure 9** describes the types and timing of inspections conducted by TICO.

Depending on the severity of the issues found, the inspector, at their discretion, can perform a follow-up inspection to verify if the registrant has corrected the identified compliance violations. In cases where an inspector identifies severe compliance violations, the inspector is required to bring the matter to the Chief Operating Officer for review, and the registrant may face a subsequent investigation (described in **Section 2.5.2**) or be subject to further enforcement action (described in **Section 2.6**), including charges under the Act and/or a proposal to revoke or suspend their registration.

Over the last five years, TICO conducted a total of 1,490 inspections. **Figure 10** shows the number of inspections that TICO has conducted in each of the past five years by inspection type.

In addition to inspections, TICO performs a review of each registrant's financial statements annually for compliance with the Act and its regulation. As deemed necessary, TICO also performs remote reviews of registrant compliance with non-financial requirements of the Act and its regulation, such as whether registrant invoices meet disclosure requirements or whether registrant advertising is misleading.

2.5.2 Investigations of Registrants and Non-Registrants

TICO can investigate individuals who act as travel agents or wholesalers in Ontario but fail to register, as well as registrants who have committed or are alleged to have committed violations of the Act and its regulation. While it is not uncommon for TICO to identify that a registrant has violated the Act or its regulation, TICO can revoke or suspend the registration of registrants with more serious or repeated violations and refer the matter to TICO's investigations team for further inquiry. Such violations include mishandling of consumer deposits, dishonest conduct, misappropriation of assets (such as consumer trust funds) and misleading business practices. Investigations that confirm serious

Figure 9: Registrant Inspection Types

Source of data: Travel Industry Council of Ontario

Type	Timing	Scope
Compliance inspection	When deemed necessary	Compliance inspections are conducted in response to issues such as: • concerns identified during registration renewal; • medium or high registrant risk ratings; and • concerns raised through the complaints process.
New registrant inspection	Within six months of registration	The purpose of this inspection is to: • educate new registrants about their obligations under the Act; • verify the registrant's location and display of TICO registration; and • review accounting records, with a focus on trust accounts.
Closure inspection	Within 30 days of closure	These inspections are conducted to ensure terminated, lapsed or suspended registrants are no longer operating. Closure inspections include visiting the registrant's location(s) and searching the Web to confirm operations have ceased or have been suspended.

Figure 10: Number of Inspections Conducted by Type, 2018/19–2022/23

Source of data: Travel Industry Council of Ontario

Inspection	2018/19	2019/20	2020/21	2021/22	2022/23	Total
On-site compliance inspections	180	196	10	12	105	**503**
Remote inspections*	–	8	259	154	59	**480**
New registrant inspections	88	69	–	–	32	**189**
Closure inspections	103	111	2	1	101	**318**
Total	**371**	**384**	**271**	**167**	**297**	**1,490**

* During the COVID-19 pandemic, TICO suspended all on-site inspections. Remote inspections were conducted with a more limited scope. TICO has since resumed conducting full, on-site inspections.

violations of the Act and its regulation can result in enforcement action (described in **Section 2.6**) that can include laying provincial offences charges with penalties of up to two years in prison, and a fine of up to $50,000 for individuals or $250,000 for corporations.

TICO has one investigator who is appointed as a Provincial Offences Officer under the *Provincial Offences Act*. Investigations are initiated as a result of information received from various sources, including referrals from internal departments, such as Compliance and the Compensation Fund program. Complaints from a consumer or registrant can also trigger an investigation. TICO's Chief Operating Officer reviews the preliminary information of the allegation and issues a written order to the Provincial Offences Officer to initiate the investigation. As shown in **Figure 11,** TICO conducted 47 investigations from 2018/19 to 2022/23. Almost two-thirds of these investigations involved investigating whether non-registered entities were actually required to register.

2.6 Enforcement Action

TICO can take various enforcement actions when violations of the Act and its regulation are identified through its inspections and investigations. **Figure 12** lists the type of enforcement action that TICO can take in response to violations.

Figure 11: Investigations Conducted by TICO, 2018/19–2022/23

Source of data: Travel Industry Council of Ontario

Type	2018/19	2019/20	2020/21	2021/22	2022/23	Total
Non-registrant	9	3	1	7	10	**30**
Registrant	3	5	1	3	5	**17**
Total	**12**	**8**	**2**	**10**	**15**	**47**

Figure 12: Types of Enforcement Action Available to TICO

Source of data: Travel Industry Council of Ontario

Enforcement Action	Description
Warning letter	TICO sends warning letters to registrants identifying compliance issues, including a deadline date for the registrant to correct the issue.
Inspections Findings Reports	Inspections Findings Reports are issued to registrants at the conclusion of an inspection outlining the compliance violations noted during the inspection. The registrant is required to sign the report and correct the violations.
Conditions on registration	TICO can impose conditions on a travel agency or wholesaler's registration. For example, it can require the registrant to: • take TICO education webinars; • provide additional security above the $10,000 minimum at initial registration; and • provide monthly trust reconciliations to demonstrate compliance with trust requirements.
Notice of Proposal to revoke or suspend registration	In cases involving a registrant with significant violations against the Act and its regulation, the Registrar has the ability to issue a Notice of Proposal to refuse or suspend registration. Registrants have the right to appeal the proposal to the Licence Appeal Tribunal (LAT), an independent quasi-judicial agency in Tribunals Ontario.
Immediate temporary suspension	In rare but serious cases, the Registrar can issue an immediate 15-day suspension of a registrant. This suspension is used to prevent a registrant who has received a notice to revoke or suspend registration from operating during the appeals process to LAT, as appeals must be made in front of LAT within 15 days.
Provincial offence charges	TICO's Investigator, who is also a Provincial Offences Officer, has the authority to lay charges and prosecute offences in Provincial Court against registrants and non-registrants for breaches of the Act and its regulation. The maximum penalty for an individual who is convicted of an offence under the Act is a fine of $50,000 and/or imprisonment of two years less a day. The maximum fine for a corporation is $250,000.
Bank freeze orders	To protect consumer deposits, TICO can issue an order to freeze the bank accounts of current or former registrants, or non-registrants who sold travel services.
Order of registrar regarding false advertising	The registrar can issue an order to remove, retract or amend false, misleading or deceptive advertising by a registrant.

Figure 13 shows the number of enforcement actions TICO has taken by type from 2018/19 to 2022/23.

2.7 Complaint-Handling

TICO's legislated responsibilities include addressing complaints it receives about the actions of its registrants. A complaint to TICO can be initiated online, or by email, mail or telephone. Registrants are required to provide information about the complaint if requested to do so by TICO. The steps TICO takes to address complaints are outlined in **Figure 14**.

When handling a complaint, the Act allows TICO to attempt to mediate or resolve the complaint between the parties. However, TICO does not have the authority to settle a dispute, or to impose a settlement through the complaints process. In the last five years, TICO closed 1,241 complaints against registrants. **Figure 15** shows the number of complaints handled by TICO in each of the last five years.

Figure 13: TICO Enforcement Actions 2018/19–2022/23

Source of data: Travel Industry Council of Ontario

	2018/19	2019/20	2020/21	2021/22	2022/23	Total
Conditions placed on registration	8	2	3	0	23	**36**
Registration suspensions	1	–	2	1	4	**8**
Registration revocations	7	10	1	7	17	**42**
Persons/organizations convicted of provincial offences*	8	7	3	2	4	**24**

* Trial scheduling was unavailable at provincial offences courts for parts of 2020/21 and 2021/22 due to COVID-19 restrictions, limiting the number of convictions obtained by TICO.

Figure 14: Steps in TICO's Complaints Handling Process

Source of data: Travel Industry Council of Ontario

Step	Description
1. Determine whether the complaint involves possible violation of the *Travel Industry Act, 2002* and its regulation	Complaints that involve possible violation of the Act and its regulation are referred for review to the Inspections/Compliance team, or potentially to Investigations, depending on evidence and severity. Referrals are handled separately to the complaints process.
2. Encourage the complainant to first contact the registrant in an attempt to reach an equitable resolution	Before accepting a complaint, TICO asks consumers to put their complaint in writing to the registrant, explaining why they are not satisfied and how the matter could be resolved to their satisfaction.
3. If the consumer is unable to resolve their complaint directly with the registrant, open a formal complaint	TICO will send a complaint form to the consumer, which must be completed and returned to TICO with all supporting documentation.
4. Contact the registrant	TICO will provide the registrant with a copy of the complaint, quote the applicable sections of the Act and regulation, and request a written reply about the registrant's position on the matter.
5. Close the complaint file	TICO will close the complaint when either a mutual settlement is reached, or when a mutual settlement cannot be reached. In instances where a settlement cannot be reached, TICO advises consumers that they may wish to seek legal counsel and/or pursue their complaint through the legal system.

Figure 15: Complaints Closed, Restitution Collected, and Average Closure Time, 2018/19–2022/23

Source of data: Travel Industry Council of Ontario

	2018/19	2019/20	2020/21	2021/22	2022/23	Total
Number of complaints closed	154	139	605[1]	139	204	**1,241**
Restitution collected from registrants[2]	$77,892	$71,102	$3,112,251[1]	$156,953	$353,682	**$3,771,880**
Average turnaround time for complaints closed (in days)	30	43	55	55	59	

1. TICO experienced a significant increase in the number of complaints it handled as a result of travel restrictions during the COVID-19 pandemic.
2. Restitution includes money returned to consumers, or the dollar value of travel credits received by consumers.

If a complaint alleges more serious violations of the Act and its regulation, TICO may escalate the complaint for enforcement action (described in **Section 2.6**), including laying charges against the registrant, and/or proposing to revoke or suspend their registration. Such violations by the registrant include the following instances:

- false, misleading or deceptive representation of travel services being offered to consumers;
- withholding refunds or travel credits owed to the consumer;
- suspected fraudulent activity by the registrant in a transaction with the consumer;
- charging fees that were not disclosed to the consumer at the time of booking; and
- deducting commissions lost if a trip is cancelled, or charging fees and penalties not disclosed at time of booking from refundable amounts to the consumer.

2.8 The Travel Industry Compensation Fund

Under the Act's regulation, TICO is required to administer, manage and maintain the Travel Industry Compensation Fund (Compensation Fund) to reimburse eligible customers who purchased travel services through a TICO-registered travel agent and subsequently suffered financial losses related to travel services paid for but not received due to the bankruptcy or insolvency of a registrant or an end supplier airline or cruise line. A claim must be filed with TICO within six months after the registrant or end supplier ceases to carry on business. Consumers can file two types of claims against the Compensation Fund:

- Standard Claim: A claim for travel services that were paid for but never received as a result of the failure of a travel agency, travel wholesaler, or an airline or cruise line.
- Trip Completion Claim: A claim for reasonable expenses (e.g. the cost of airfare, car hires or other transportation, accommodation and meals) incurred to complete a trip where a customer or another person has begun a trip that cannot be completed because travel services have not been provided as the result of the closure of a TICO registrant.

Consumers are eligible to claim from the Compensation Fund up to a maximum of $5,000 per person. The maximum payout for claims arising out of an event (e.g., multiple customers involving the same travel agency or airline) is $5 million for standard claims alone, and $7 million for standard claims and trip-completion claims combined. The eligible claim amount per person is pro-rated if the total value of claims exceeds these maximums.

The Compensation Fund does not protect consumers who purchase travel services directly from end suppliers (e.g., airlines, hotels, and cruise lines), or from out-of-province travel agents and wholesalers.

Every TICO registrant is required to participate in the Compensation Fund, which is financed in whole by

registered travel agents and wholesalers. Registrants are required to pay the greater of $25, or 25 cents per $1,000 of Ontario gross sales, on a semi-annual basis.

TICO's Board is responsible for managing the Compensation Fund, and making decisions on claims for eligibility and claim amounts, as set out by the Act's regulation. The Board meets at least five times a year to review and make decisions on claims. The Board can incur reasonable expenses to administer, maintain and protect the Fund, including fees for legal, actuarial, audit services, and consumer awareness and education expenses related to the Fund.

3.0 Audit Objective and Scope

The objective of our audit was to assess whether the Travel Industry Council of Ontario (TICO) has effective and efficient processes in place to:

- administer the *Travel Industry Act, 2002* (Act) to register and regulate travel agents and wholesalers, and to protect consumers when purchasing travel services through a travel agent or wholesaler; and
- measure and publicly report on the effectiveness of its administration of the Act.

In addition, our audit assessed whether the Ministry of Public and Business Service Delivery (Ministry) has oversight processes in place so that TICO effectively administers the Act, including effectively registering and regulating travel agents and wholesalers.

Before starting our work, we identified the audit criteria we would use to address our audit objectives. These criteria were established based on a review of applicable legislation, policies and procedures. Senior management at TICO and the Ministry reviewed and agreed with our objective and associated audit criteria as listed in **Appendix 3**.

We conducted our audit between January 2023 and September 2023. We obtained written representation from TICO's management and the Ministry that, effective November 17, 2023 they have provided us with all the information they were aware of that could significantly affect the findings or the conclusion of this report.

Our audit work at TICO was focused on the period covering TICO's previous five fiscal years, from April 1, 2018 to March 31, 2023. However, in some areas we analyzed data going back as far as TICO's inception in 1997. The focus of our audit was on examining TICO's main areas of responsibility:

- registration of travel agents and wholesalers;
- registrant oversight and enforcement;
- managing and administering the Travel Industry Compensation Fund;
- promoting consumer and public awareness of TICO's mandate and consumer protections available under the Act; and
- board governance.

In conducting our work, we interviewed staff at TICO responsible for issuing and renewing registrations to travel agencies and wholesalers, and conducted walkthroughs of the registration process. We also interviewed TICO staff responsible for resolving complaints against registrants, and conducted walkthroughs of the complaint process. We reviewed how they handled complaints, including evidence gathered and restitution secured for complainants.

To aid in our understanding of TICO's enforcement actions, we also interviewed inspectors and the investigator/provincial offences officer, and reviewed past inspection/investigation records on a sample basis. To observe how TICO conducts its inspections, we accompanied TICO inspectors on inspections of registrants between June and September 2023. We obtained access to TICO's information systems to collect and analyze data for registrations, complaints, inspections and investigations.

To evaluate TICO's governance structure, we engaged in discussions with some current members

of TICO's Board of Directors and TICO's Consumer and Industry Advisory Committee. We also reviewed meeting minutes, Board materials, Board member backgrounds, and Board member skills and competencies, including member appointment records.

We engaged in discussions with representatives of the primary stakeholder groups, including the Association of Canadian Travel Agencies (ACTA), the Canadian Association of Tour Operators (CATO), and the Ontario Motor Coach Association (OMCA).

We conducted jurisdictional scans to identify best practices in other jurisdictions including British Columbia, Quebec, the United States, Australia, and the United Kingdom.

The audit also evaluated the Ministry's oversight function of TICO's operations and performance through a review of past communications, evaluations and reports. In addition, we engaged in discussions with key personnel from the Ministry who regularly interact with TICO staff.

We conducted our work and reported on the results of our examination in accordance with the applicable Canadian Standards on Assurance Engagements—Direct Engagements issued by the Auditing and Assurance Standards Board of the Chartered Professional Accountants of Canada. This included obtaining a reasonable level of assurance.

The Office of the Auditor General of Ontario applies Canadian Standards on Quality Management and, as a result, maintains a comprehensive system of quality management that includes documented policies and procedures with respect to compliance with rules of professional conduct, professional standards and applicable legal and regulatory requirements.

We have complied with the independence and other ethical requirements of the Code of Professional Conduct of the Chartered Professional Accountants of Ontario, which are founded on fundamental principles of integrity, objectivity, professional competence and due care, confidentiality and professional behaviour.

4.0 Detailed Audit Observations

4.1 Registration of Travel Agents and Wholesalers

4.1.1 TICO Could Not Demonstrate the Justification for Holding as Much as $2 Million in Security Deposits from Registrants

We found that as of March 31, 2023, the Travel Industry Council of Ontario (TICO) was holding as much as $2 million in security deposits collected from travel agencies and wholesalers at the time of their initial registration. It could not demonstrate the rationale for doing so based on the requirements in the Act's regulation.

Under the Act's regulation, TICO is required to collect a $10,000 security deposit from each new registrant. Once the registrant has filed two consecutive financial statements with TICO, the organization is obligated to repay the security deposit to the registrant within a reasonable amount of time if the Registrar has no concerns regarding the registrant's compliance with the Act or its regulation.

TICO's policy states that the Financial Compliance team should determine "on a regular basis" if the registrant qualifies for return of the security deposit. However, we found that TICO's policy did not include a definition of what constitutes a regular basis, and we found that TICO did not regularly assess whether registrants qualify to have their security deposits returned. We also found that TICO does not track in its information system whether the Registrar has concerns about a registrant that would justify continuing to hold their deposit.

We found that as of March 31, 2023, 58% of the $3.4 million in registrant deposits being held by TICO, or $2 million, was from 184 registrants who had filed at least two consecutive financial statements, and therefore could potentially have their deposits returned. Our analysis also found that:

- on average, the $2 million in security deposits had been held for approximately seven years; and
- $510,000 in security deposits were being held from 48 past registrants who were no longer registered with TICO.

Many of these registrants may be unaware that they may be entitled to have their security deposit returned, or may simply have forgotten, and TICO could not consistently demonstrate it had made efforts to return the funds.

We looked at a sample of 20 deposits from active registrants who had already filed at least two consecutive financial statements and found that in 13, or 65%, of the cases no concerns were documented that justified continuing to hold the deposits.

For approximately three years during the COVID-19 pandemic, TICO made the decision to put a pause on returning registrant security deposits due to concerns that the market would cause many registrants to experience financial difficulties and that, therefore, customer deposits might be lost. However, we noted that the Act's regulation does not appear to allow registrant deposits to be held due to expected changes in market conditions. Instead, the regulation specifically states that deposits are to be returned if the Registrar has no concerns about the registrant's compliance with the Act or its regulation, and therefore holding deposits should be assessed on a case-by-case basis.

RECOMMENDATION 1

So that the Travel Industry Council of Ontario (TICO) complies with the *Travel Industry Act, 2002* (Act) and its regulation, and handles registrant security deposits fairly, we recommend that TICO:

- immediately assess all registrant security deposits held for more than two years, and return all deposits where the Registrar has no concerns over the registrant's compliance with the Act and its regulation;
- establish a reasonable target time frame to review and return registrant security deposits where TICO does not have any concerns about a registrant's compliance with the Act and its regulation; and
- develop and implement a process for reviewing and returning registrant security deposits within the established target time frame.

TICO RESPONSE

The Travel Industry Council of Ontario (TICO) agrees with the Auditor General's recommendation to immediately assess all registrant security deposits held for more than two years. TICO has commenced assessing security deposits for return to registrants, and is in the process of updating its policy to include a reasonable target time frame to review and return registrant security deposits where TICO does not have any concerns about a registrant's compliance with the *Travel Industry Act, 2002* and its regulation. Additionally, TICO has already begun work on developing and implementing systems and process enhancements for reviewing and returning registrant security deposits within the established target time frame, which will also be incorporated in its policy.

4.1.2 TICO Has Not Accurately Measured Application Processing Times, and Applications Were Often Delayed

We found that TICO had only recently started tracking how long it takes to process applications for registration, and that its measurement of processing time ignored several factors under its control that could have impacted how quickly an application was processed. We also found that applications were often delayed because they were submitted without all the required information (discussed in **Section 2.4**), and that TICO had limited controls in place to prevent the submission of incomplete applications.

In its 2022 Business Plan, TICO formalized its target to process applications within 30 days of receiving all required documentation from the applicant, and began measuring this processing time as of July 2022. Prior to this, TICO did not track the date it had

received all required documentation from the applicant. TICO reported in its 2022/23 annual report that between July 2022 and the end of the 2022/23 fiscal year on March 31, 2023, it processed 114 applications for registration in an average of 32 days, with 61% of the applications meeting TICO's 30-day target. However, measuring processing times after the receipt of all required documentation does not capture several factors under TICO's control, including:

- how effective TICO is at ensuring applicants are aware of, and include, all the documentation needed in their initial application;
- how long it takes TICO staff to review applications for completeness after they are received;
- how long it takes TICO staff to notify applicants when additional information is required; and
- how quickly TICO staff respond to applicant questions.

We conducted our own analysis of TICO's application processing times using TICO's data showing when applications were opened and closed. Our analysis showed that over the five years from 2018/19 to 2022/23, TICO processed 294 applications for registration in an average of 46 days, with 51% of the applications taking more than 30 days to process, and 18% taking more than 60 days (see **Figure 16)**.

We reviewed a sample of 25 application files that took longer than 30 days to process, and found that due to inconsistencies in when applications were opened in TICO's information systems, the average processing time in **Figure 16** was likely understated. In multiple applications included in our sample, the open date in TICO's system was significantly later than when the application was actually received—over 10 days longer in multiple instances.

Processing applications for registration on a timely basis is important because delays can be costly to applicants. Travel agent and wholesaler applicants are required to include a $3,000 registration fee, as well as a $10,000 security deposit. For smaller travel agencies, such as those that consist of only one individual acting as both the owner and customer-facing agent, this can represent a significant financial investment. Applicants cannot begin selling travel services and recuperating their investment until TICO has approved their application.

Applications for Registration Were Often Sent Incomplete

We reviewed a sample of 25 applications for registration that took longer than 30 days to process, and found that all 25 were initially missing key information or supporting documents required by TICO. Information missing from the sampled applications included financial statements, letters from banks verifying applicants' trust accounts, criminal checks for shareholders, and the names of officers and directors. This resulted in increased time for TICO staff to follow up on and obtain missing information from applicants.

We found that a key reason that applications were incomplete when initially submitted was that the applications are paper-based and could not be submitted electronically. As a result, no controls were in place to prevent an applicant from applying with incomplete information. We also found that TICO's application form did not outline the specific financial information that TICO needs to review and approve an applicant for registration.

Figure 16: TICO New Registrant Application Processing Times, 2018/19–2022/23

Source of data: Travel Industry Council of Ontario

	2018/19	2019/20	2020/21	2021/22	2022/23	5-Year
Number of applications processed	71	62	42	51	68	**294**
Average processing time (in days)	36	36	94	31	45	**46**

Note: Excludes branch office applications.

For example, although TICO requires applicants to have positive working capital (where current assets exceed current liabilities), the application form does not specify what is considered a current asset or current liability. There is no requirement for financial statements submitted with the application for registration to be prepared by an accountant, and applicants compiling financial statement information themselves may not be familiar with what is required. Our review of a sample of 25 applications that took longer than 30 days to process identified that in 20, or 80%, of these cases, applicants either did not submit financial statements, or had to resubmit revised financial statements with the information TICO required to evaluate working capital.

In contrast to TICO, Consumer Protection BC, the organization responsible for licensing travel agents and travel wholesalers in British Columbia, provides a detailed breakdown of the information it requires on its licensing application form to ensure complete and accurate documentation is submitted. For example, Consumer Protection BC highlights specific information it requires to be included on the applicants' balance sheet upon application. This includes highlighting the requirement for applicants to provide details regarding their current assets, current liabilities and equity so that working capital can be evaluated.

RECOMMENDATION 2

So that the Travel Industry Council of Ontario (TICO) can process applications for new travel agent and travel wholesaler registration in a timely manner, we recommend that TICO:

- set targets and measure all components of application-processing times, from when the application is received to when it is closed;
- review and revise its application form so that it is clear to applicants what specific information and supporting documents they are required to provide with their application; and
- perform a cost-benefit analysis of implementing an electronic version of the application process with built-in controls to prevent incomplete applications from being submitted.

TICO RESPONSE

The Travel Industry Council of Ontario (TICO) agrees with the Auditor General's recommendation. TICO will review its registration application process and establish targets and measures for each milestone to achieve greater processing efficiencies and completion in a more timely manner.

TICO has commenced a comprehensive review of its registration application form and accompanying checklist to simplify and provide more clarity about the required supporting documentation and information.

TICO also agrees with the Auditor General's recommendation to conduct a cost/benefit analysis of implementing an online registration process, including innovative built-in controls to prevent incomplete applications from being submitted. The implementation of such a process would decrease the follow-up time required for incomplete applications, increase productivity and turnaround times, and provide an enhanced experience for applicants.

4.1.3 TICO Did Not Verify the Financial Information Submitted by Applicants That It Used to Make Registration Decisions

Although TICO is required to assess whether applicants for registration can meet their financial responsibilities under the Act, we found that TICO did not require applicants to provide supporting documentation or third party-verification for the key financial information they submitted with their application.

TICO assesses whether applicants registering as travel agents or travel wholesalers have sufficient funding to open and operate their business in order to confirm that they can meet all their financial responsibilities under the Act. To make this assessment, TICO requires applicants to submit an opening pro forma balance sheet or current financial statements to confirm the applicant has positive working capital (more short-term assets than short-term liabilities). However, there is no requirement for financial statements submitted with the application for registration

to be audited or reviewed, or to be prepared by an accountant.

Based on our review of a sample of registration applications, we found that TICO did not request supporting documentation to verify the financial information submitted by applicants. We reviewed a sample of 25 registration applications submitted to TICO from 2017/18 to 2021/22 and found that in all cases the financial statements and financial information submitted were not audited or reviewed, limiting the reliance TICO could place on them without obtaining additional supporting documents.

We also found that in 16, or 64%, of these applications, no documentation was provided by the applicant to support the financial information they submitted, and TICO did not request any. For example, in one application we reviewed, TICO approved the registration of an applicant who indicated that they held $1.84 million in assets, including $1.54 million in cash. However, no supporting documentation such as bank statements were provided by the applicant, and no effort was made by TICO to verify these amounts. We noted that in nine, or 36%, of the applications we reviewed, where applicants included additional documentation to support the financial information they submitted, applicants did so voluntarily, without being requested to do so by TICO.

In contrast, we found that the agency responsible for oversight of travel agents in Quebec, the Office de la protection du consommateur, gains assurance over the financial information submitted by applicants by requiring the submission of financial statements—including an opening balance sheet showing working capital of at least $5,000—which have been:

- prepared by an external accountant who is a member of a professional order of accountants recognized in Canada; and
- audited or reviewed.

Increased scrutiny of financial information submitted by applicants can reduce the financial risk of registrants. We found that almost all enforcement actions taken by TICO against registrants from 2018/19 to 2022/23 were related to concerns, violations or misconduct that were financial in nature. These were discovered through TICO's financial review, inspection, and investigations processes when TICO staff have unrestricted access to financial records and statements. Between 2018/19 and 2022/23, for instance, 38 of 42 of the licences revoked, and 35 out of 36 terms and conditions placed on registrants' licences by TICO, were for financial reasons.

RECOMMENDATION 3

To confirm that applicants seeking to register as travel agents or travel wholesalers can reasonably be expected to be financially responsible in the conduct of their business, as required by the *Travel Industry Act, 2002*, we recommend that the Travel Industry Council of Ontario (TICO) require supporting documentation or third-party verification of key financial information submitted by applicants.

TICO RESPONSE

The Travel Industry Council of Ontario (TICO) agrees with the Auditor General's recommendation. TICO will improve its registration application process by strengthening documentation requirements. TICO expects that doing so will provide greater assurance that a new registration applicant is financially viable and has sufficient funds to operate their business.

TICO will ensure that new financial documentation requirements are clearly communicated on its registration application forms and related materials. TICO's Registration Department has already commenced its review of this initiative. In the interim, until a new policy, process and system enhancements are in place, TICO is requesting additional supporting documentation, such as bank statements, on all new registration applications to provide greater assurance.

4.2 Registrant Oversight and Enforcement

4.2.1 TICO's Risk Rating System Was Not Used to Effectively Oversee Registrants

We reviewed TICO's risk rating system for registrants and found that the regulator was not effectively using the ratings to inform its registrant oversight activities. These ratings are an important tool that allow regulators to focus their limited financial and human resources on the oversight of the highest-risk registrants.

TICO implemented a risk rating system in 2012 to assign a risk rating of low, medium or high to each registrant. TICO calculates registrant risk ratings during registrant on-site compliance inspections (described in **Section 2.5.1**). However, we found that as of March 2023, 622 of 1,684 registrants, or 37%, did not have an assigned risk rating. We identified the following significant concerns about how TICO calculates and uses registrant risk ratings:

- One of the factors that TICO staff consider when selecting registrants for compliance inspection is the registrant's risk rating. However, the only time TICO calculates a registrant's risk rating is during such a compliance inspection. As discussed in **Section 4.2.2,** we found that a significant number of registrants have not received a compliance inspection since the risk rating system was implemented in 2012. As a result, registrants who do not have an assigned risk rating are also less likely to be selected for inspection.
- Even when TICO inspected registrants, we found that TICO did not always assign registrants a risk rating. Our analysis identified that 118, or 19%, of the 622 registrants that did not have an assigned risk rating had received a compliance inspection by TICO since the risk rating system was established.
- TICO's compliance policy had no established guidelines detailing how the risk rating should be used to drive compliance and enforcement activities. We found that 30% of registrants assessed as high risk as of March 2023 had not received a compliance inspection in the previous five years.

TICO's Risk Rating System Did Not Consider Key Non-Financial Factors

We found that TICO's risk rating system was overwhelmingly based on financial factors affecting a registrant, such as record-keeping, financial health indicators, financial statement filing and disclosures, and processes for making deposits and reconciling trust accounts. Of the 26 factors TICO's registrant risk rating system considered, 21 were financial in nature. We noted that TICO's risk rating system did not include several key non-financial factors that we would typically expect a regulator to consider, such as a registrant's violations of the Act, and enforcement action taken against a registrant. **Figure 17** lists the five non-financial factors included in the registrant risk rating, and examples of relevant non-financial factors that were not included.

RECOMMENDATION 4

So that the Travel Industry Council of Ontario (TICO) effectively oversees the travel agents and travel wholesalers it registers (registrants), we recommend that TICO:

- review and update its risk rating system for registrants to include an assessment of additional non-financial factors, including the results of past registrant inspections and registrant violations of legislative requirements;
- assign every registrant a risk rating;
- establish a policy for how frequently it should update registrant risk ratings; and
- create guidelines for using registrant risk ratings to guide oversight activities.

Figure 17: Non-Financial Factors Included and Excluded in TICO's Registrant Risk Rating

Source of data: Travel Industry Council of Ontario

Non-Financial Factors Included
• Two or more negative trends—such as closure of branches or high management turnover—noted during the most recent inspection
• Significant customer complaints
• Loss of an important customer or travel counsellor
• Business concentration (greater than 50%) in one market or customer segment
• No manager on site (does not include normal leave such as vacation)
Examples of Non-Financial Factors Excluded
• Recent changes in ownership
• Length of time since previous registrant inspection
• Previous registrant violations of the Act and/or enforcement action taken by TICO
• Employment history or previous misconduct of salespeople or supervisors/managers employed by the registrant
• Management-to-staff ratio
• Years in operation

TICO RESPONSE

The Travel Industry Council of Ontario (TICO) agrees with the Auditor General's recommendation. TICO will take steps to enhance its risk rating assessment process for registrants. This will include adding additional non-financial factors, such as the results and risk rating of past inspections, previous violations and/or enforcement action, and consider environmental and global risks associated with businesses that specialize in specific types of travel and/or destinations.

TICO will complete a risk assessment and assign a risk rating for all registrants and establish corresponding policies and guidelines as to how frequently a registrant's risk rating should be reviewed.

In addition, with the use of technology, TICO will establish the capability to complete an overall comprehensive risk analysis of its registrants to direct TICO's oversight and enforcement activities including a review of capacity and competencies required in the future.

TICO believes that leveraging technology to proactively analyze and identify risk will be instrumental in achieving its consumer protection mandate of a trusted marketplace where consumers can be confident in their travel purchases.

4.2.2 30% of TICO Registrants Have Not Had a Compliance Inspection in the Last 10 Years

We found that TICO had not conducted a full, on-site compliance inspection for 30% of registrants in the last 10 years, and that TICO does not have a policy for how often registrants—especially those rated as high risk—should be inspected.

We analyzed TICO's inspection data and found that, as of March 2023, of the 1,684 registered travel agencies and wholesalers:

- 995, or 59%, had not had a compliance inspection by TICO in the last five years;
- of those, 505, or 30%, had not had a compliance inspection in the last 10 years; and
- 44 registrants had not had a compliance inspection for more than 20 years.

TICO's practice is to conduct on-site compliance inspections primarily in response to issues found during annual reviews of registrant financial statements, in reaction to complaints received about

registrants, or based on the registrant's risk rating. However, as described in **Section 4.2.1,** TICO has not assigned a risk rating to 37% of all registrants. We also found that TICO has not established a policy on how frequently they should inspect registrants based on their assigned level of risk. As of March 2023, 30% of the 107 registrants that TICO rated as high risk had not had a compliance inspection in the last five years.

TICO's inspections of registrants often identify non-compliance. Over the last five years, 32% of compliance inspections conducted by TICO identified instances of non-compliance with the Act and its regulation. Some examples of non-compliance include: not depositing customer deposits into the trust account, not always issuing an invoice for sales made to their customers; not following trust accounting requirements and completing a monthly trust reconciliation.

RECOMMENDATION 5

So that the Travel Industry Council of Ontario (TICO) inspects travel agents and travel wholesalers (registrants) based on their risk to consumers and non-compliance with legislative requirements, we recommend that TICO:

- establish a policy on how frequently it should conduct inspections based on each risk rating assigned to registrants (low, medium and high); and
- inspect each registrant in accordance with the registrant's risk rating.

TICO RESPONSE

The Travel Industry Council of Ontario (TICO) agrees with the Auditor General's recommendation. TICO will update its policies and guidelines to include the frequency that TICO should conduct risk-based registrant site inspections. With an improved risk analysis and risk rating process and appropriate resources, TICO's site inspections will be performed at a greater frequency and have a stronger focus on those registrants that pose the greatest potential risk to consumers.

4.2.3 The Ministry and TICO Have Not Established a Disciplinary Process for Registrants

We found that TICO does not have the authority to take disciplinary action against a registrant when there is a clear case of ethical misconduct by a registrant, unless the registrant has violated the Act.

We noted that there are tools available under the Act that if implemented would permit TICO to discipline registrants for ethical violations. Specifically, the Act states:

- the Minister may establish a code of ethics for registrants;
- TICO's Board may establish a discipline committee to determine whether registrants have failed to comply with the code of ethics established by the Minister; and
- the discipline committee may, if it finds the code of ethics has been violated, order disciplinary action including requiring the registrant to fund educational courses for employees, or impose fines of as much as $25,000.

However, TICO and the Ministry have not pursued the development of a mandatory code of ethics and a corresponding discipline committee.

In contrast to TICO, we noted that two provincial delegated administrative authorities—the Ontario Motor Vehicle Industry Council (OMVIC), which regulates motor vehicle dealers and salespersons, and the Real Estate Council of Ontario (RECO), which regulates real estate brokerages, brokers and salespersons—both had discipline committees that enforce a code of ethics. In cases where OMVIC and RECO's discipline committees find that registrants have violated their code of ethics, they can issue fines and order registrants to take educational courses.

We noted that OMVIC and RECO also publicly posted a summary of registrant disciplinary hearings and their outcomes on their respective websites. The codes of ethics enforced by both OMVIC and RECO include requirements relating to fairness, honesty and integrity in conducting business, disclosure of information, and demonstrating reasonable knowledge, skill,

judgment and competence of registrants in providing services.

Ethical misconduct can be identified through a variety of methods, including inspections, investigations, and the complaints process. However, we noted TICO's inspection, investigation, and complaint data did not contain sufficient detail to identify how often registrants were committing misconduct that could be regulated by a code of ethics. In a review of a sample of complaints, we found many complaints related to issues that were not covered under the Act could be covered under a code of ethics, such as failing to provide courteous and responsive service, failing to demonstrate reasonable knowledge of the travel services being sold, and failing to protect the best interests of clients.

RECOMMENDATION 6

So that the Travel Industry Council of Ontario (TICO) can take disciplinary action against registrants for misconduct that falls outside of the current scope of the *Travel Industry Act, 2002*, we recommend TICO work with the Ministry of Public and Business Service Delivery to:

- create a mandatory code of ethics for registrants; and
- establish a discipline committee and related processes for conducting hearings to determine when registrants have violated the code of ethics, and take disciplinary action when warranted.

TICO RESPONSE

The Travel Industry Council of Ontario (TICO) agrees with the Auditor General's recommendation that a Code of Ethics and Discipline Committee process for registrants may be beneficial for misconduct that falls outside the *Travel Industry Act, 2002*.

TICO believes a similar framework for individual travel salespersons is a strong way to drive positive consumer protection behavior. A system, processes, and structure that includes hearings, policies and procedures that embrace greater education and awareness, and fines, when necessary, for either registrants or travel salespersons will enhance overall consumer protection. TICO will support the Ministry of Public and Business Service Delivery as it considers whether to move forward with this recommendation, and any related regulatory changes. Independently, TICO will review available tools to address any deficiencies.

MINISTRY RESPONSE

The Ministry of Public and Business Service Delivery (Ministry) thanks the Auditor General for this recommendation.

This recommendation would require regulatory changes under the *Travel Industry Act, 2002* (Act).

Following a proposal for government consideration to undertake a review of the Act and the Travel Industry Council of Ontario (TICO) in response to the Auditor General's **Recommendation 16**, this recommendation and any potential regulatory proposals would be assessed for consideration and decision-making, as appropriate.

4.2.4 TICO Did Not Track Whether Complaints Involving Violations of the Act Were Referred for Investigation or Enforcement Action

We found that TICO did not track the outcomes of the complaints it handles in its information system, including data about whether complaints were resolved, whether they potentially violated the Act and its regulation, and whether they were referred for further investigation or enforcement action. TICO therefore could not evaluate how effective its complaint-handling process was at resolving consumer complaints, obtaining restitution for consumers when warranted, and enforcing the Act and its regulation.

In the five years from 2018/19 to 2022/23, TICO handled 1,241 complaints against its registrants, including instances involving possible violations of the Act and its regulation. After a TICO Complaints Officer has processed a complaint that may involve a potential violation of the Act, they can refer the complaint to the compliance department, investigations, or the

Registrar. However, we found that TICO did not track the outcomes of the complaints it handled in its information system.

We reviewed a sample of 40 complaint files relating to 15 registrants with the highest number of complaints over the five years from 2017/18 to 2021/22. We found that 13 of the 40 complaints, or 33%, involved potential violations of the Act and its regulation and were not referred for investigation or enforcement action as required by TICO's complaint-handling policy when potential violations are identified. Examples of these potential violations include:

- A consumer complained that a registrant failed to advise them that a visa was required to enter their destination country. As a result, the consumer was denied boarding on their booked flight. The Act's regulation states that before entering into an agreement with a customer for travel services, registrants must advise the customer about typical information and travel documents such as passports, visas and affidavits that will be needed for each person for whom travel services are being purchased.
- A consumer complained that a registrant failed to verify that the name on the reservation matched the consumer's passport information, resulting in the consumer being unable to board their flight. The Act's regulation states that a travel agent shall, on receiving a ticket, voucher, itinerary or other document that relates to travel services, ensure that the information contained in it is correct.
- A consumer who purchased a travel package from a registrant found after arriving at the airport that no flight reservation had been made for them, and had to purchase new tickets. In this case, the registrant potentially did not meet the requirements of the Act's regulation to either reimburse the customer, provide comparable alternate travel services that are acceptable to the customer, or provide the customer with a voucher, certificate, coupon or similar document that is acceptable to the customer for future redemption toward travel services.

We also found TICO kept poor records of the complaints it handled in its document management system. All 15 registrants in our sample had instances where complaint information was either incomplete or missing from the file altogether. For example, for two registrants that had received 110 combined complaints in the five years from 2017/18 to 2021/22, TICO did not have any records related to the complaints in its system. For another registrant, about which TICO had received 23 complaints over this same period, TICO had records for only two of these complaints in its document management system.

RECOMMENDATION 7

So that complaints against travel agents and travel wholesalers that warrant further investigation or enforcement action are consistently escalated for such action, we recommend that the Travel Industry Council of Ontario (TICO):

- record the outcome of each complaint in TICO's information system, including whether it was referred for investigation and enforcement action, and the results of the action;
- monitor complaint outcomes and referrals to assess whether they are handled appropriately and in accordance with TICO's complaint-handling policy; and
- create a policy outlining the documentation TICO expects its complaint handlers to record in its document management system, and the timeframe in which it expects all such information to be recorded.

TICO RESPONSE

The Travel Industry Council of Ontario (TICO) agrees with the Auditor General's recommendation to enhance its data and information systems to record and track complaint handling outcomes, specific contraventions identified and referrals to TICO's compliance or investigations departments.

TICO will make system enhancements to track enforcement activities and outcomes against each registrant's record that will allow it to monitor

trends. This will also provide the data intelligence necessary for an enhanced risk analysis and risk rating system. Additional enhancements to data and information systems will include new reporting capabilities to monitor complaint handling processes and referrals to ensure complaint handling policies are followed to achieve appropriate outcomes.

TICO also agrees with the Auditor General's recommendation to update its current policies and procedures to include required online storage of supporting documentation and information obtained during its complaint handling process. The updated policy will clarify supporting documentation needed to preserve and establish timelines for Complaints Officers to store information in TICO's document management system.

4.2.5 TICO Does Not Have the Authority to Regulate Individual Travel Salespeople

We found that individual salespeople employed by travel agents and wholesalers who violated the Act could continue to work in the industry because TICO does not have the authority under the Act to regulate these individuals.

As described in **Section 2.4**, the regulation under the Act requires that travel agents ensure that their employees or contractors obtain TICO's Travel Counsellor certification before they can begin selling travel services to consumers. However, under the Act, because TICO's authority is limited to the regulation of registrants, it does not have the authority to regulate the employees and independent contractors of its registrants. In the five years from 2018/19 to 2022/23, over 18,300 people obtained the Travel Counsellor certification from TICO. But because it does not regulate Travel Counsellors, TICO does not track which registrants are employing them.

We reviewed TICO's complaints and identified instances over the last few years where individual travel salespeople caused significant harm to consumers:

- In 2017/18, consumers complained to TICO about a salesperson employed with a TICO registrant who was accepting cash payments and e-transfers for travel bookings. Instead of depositing the funds into the registrant's trust account (to pay for the bookings), the salesperson kept the cash and used credit cards from different unrelated customers to pay for the bookings.
- Similar to the example above, between 2016/17 and 2018/19, registrants reported to TICO a salesperson that had kept cash payments from customers and paid for the bookings using credit cards from unrelated customers. Although the salesperson was caught and terminated by the registrant who employed them, the salesperson was able to find employment at a different registrant and commit the same offence again. Three separate registrants notified TICO that the salesperson had committed this same offence while employed for them during this time period.

In both examples, TICO had no authority to take enforcement action against the individual, and instead only advised the complainants and registrants to contact the police. Upon learning about these matters, we noted that TICO also referred the cases to police, and made efforts to notify TICO registrants about the conduct of these individuals. However, because they do not track where TICO-certified travel counsellors are employed, TICO could not be sure these individuals were not employed by another registrant.

For similar reasons, TICO cannot prevent former owners, officers, directors, or managers of registrants with a history of serious violations of the Act—including those who had their registration revoked—from working as a salesperson for another registrant. For example, TICO revoked the registration of a travel agency for numerous violations of the Act, including:

- consistently misrepresenting travel services to consumers;
- failing to inform consumers of service charges before selling travel services to them; and
- failing to maintain appropriate trust accounting of all monies received from consumers.

TICO subsequently identified through consumer complaints that the owner of the travel agency was

working as a salesperson for another registered travel agency. We also reviewed multiple examples provided by TICO of individuals who later found employment with a registrant after they were convicted in court for selling travel services to consumers without being registered with TICO as required.

The *Strengthening Protection for Ontario Consumers Act, 2017*, which has received Royal Assent, includes amendments to the *Travel Industry Act, 2002*, including giving TICO the authority to register and regulate individual travel salespersons. However, the amendments to the Act are not yet in force, as required changes to the regulation have not yet been made. In December 2019, the government committed to consulting stakeholders on proposed changes to the regulation to support the amendments. However, the Ministry advised us that this work was paused as a result of the COVID-19 pandemic and focus was placed on the impact to the industry and its recovery. As the industry recovers, the Ministry advised us that it is reassessing potential regulatory changes that were being considered prior to the pandemic.

RECOMMENDATION 8

So that Ontario consumers are protected from travel salespersons with a history of misconduct, we recommend the Travel Industry Council of Ontario (TICO) work with the Ministry of Public and Business Service Delivery to advance amendments to the *Travel Industry Act, 2002*—made under the *Strengthening Protection for Ontario Consumers Act, 2017*, but not yet in force—that would give TICO the authority to register and regulate individual travel salespersons.

TICO RESPONSE

The Travel Industry Council of Ontario (TICO) appreciates the Auditor General's timely recommendation. Individual registration of travel salespersons received Royal Assent in December 2017, with the *Strengthening Protection for Ontario Consumers Act, 2017*. Further work on the supporting regulation was delayed primarily due to the devastation of the travel sector during the pandemic. TICO believes that consumer protection will be enhanced if this legislation comes into force. TICO looks forward to working with the Ministry of Public and Business Service Delivery if it moves forward with this recommendation.

MINISTRY RESPONSE

The Ministry of Public and Business Service Delivery (Ministry) thanks the Auditor General for this recommendation.

This recommendation would require regulatory changes under the *Travel Industry Act, 2002* (Act) to be developed before the legislative amendments could be proclaimed.

In December 2019, the government committed to consulting on proposed changes to the regulation under the Act in 2020, including the regulation of individual travel salespersons.

This work was paused due to the COVID-19 impacts on the travel agent and wholesaler sector. In response to the pandemic, the Ministry focused on implementing regulatory changes that helped reduce the burden on registrants and assisted certain travellers, and provided temporary financial support to relieve registrants' fees and support the Travel Industry Council of Ontario (TICO). As a result of these measures, TICO was able to waive registrants' fees and payments for three consecutive years providing much needed relief to the travel sector as it recovers from the impact of the pandemic.

Following a proposal for government consideration to undertake a review of the Act and TICO in response to the Auditor General's **Recommendation 16**, this recommendation and any potential regulatory proposals would be assessed for consideration and decision-making, as appropriate.

4.3 Travel Industry Compensation Fund

4.3.1 TICO Has Used an Estimated $31 Million from the Compensation Fund Since 1997 to Cover Its Own Operating Costs

We found that since its inception in 1997, TICO has routinely used funds from the Travel Industry Compensation Fund (Compensation Fund) to cover operating costs that cannot reasonably be attributed to the Fund. The regulation under the Act permits payments from the Fund only for reasonable expenses related to its administration, maintenance, and promotion of public awareness of the Fund.

The regulation under the Act states that the Compensation Fund is financed through payments required of all registrants, and investment income earned on the balance. The regulation permits TICO to use the Fund to pay for a reasonable allocation of expenses relating to administering and maintaining the Fund, such as wages, Board expenses, accounting fees, expert advisors, and educational and promotional expenses. The regulation requires the remaining money in the Fund to be held by TICO in trust for the benefit of claimants.

However, we found that TICO has used Compensation Fund fees from registrants and investment income to finance its operations. TICO performed a costing analysis in early 2023 for use in the development of a new fee model that indicated that a reasonable allocation of TICO's overhead costs to administer the Fund was 22% of TICO's annual operating expenses for 2022/23. The estimate considered employee and Board time spent administering the Fund, and an allocation for overhead such as rent, IT resources and consumer awareness spending.

Using TICO's 22% allocation rate, we analyzed the Compensation Fund's balance since TICO's inception, and calculated that between 1997/98 and 2022/23 TICO would have charged the Fund approximately $19.4 million to cover the costs of administering the Fund. Instead, we found that TICO charged the Fund an additional $31.3 million that it used to cover TICO's operating expenses. **Figure 18** provides this calculation.

As discussed in **Section 2.3**, the fees TICO charges registrants include fees for registration and registration renewal. TICO's Administrative Agreement with the Minister requires TICO to set fees on a cost-recovery basis. However, we reviewed TICO's financial history and identified that since its inception in 1997, TICO has never generated sufficient revenue from registrants to cover its operating costs and has relied on funds from the Compensation Fund (which registrants pay into) to make up the shortfall. We found that in some years, TICO used money from the Fund to pay for over 60% of TICO's operating expenses.

We noted that TICO's Administrative Agreement with the Minister allows TICO to adjust its fees so that it can operate on a cost-recovery basis. However, we found that despite consistently failing to generate sufficient revenue from registrants, TICO has not adjusted its registration and registration renewal fees since 2011.

Figure 18: Calculation of Restricted Compensation Fund Money Used for TICO Operations

Source of data: Travel Industry Council of Ontario

Compensation Fund Balance as of April 1, 1997	**$4,475,140**	
Compensation Fund Activity, 1997/98–2022/23		
Fees collected	$61,963,156	
Investment income	$22,398,738	
Claims paid and direct expenses	($15,309,205)	
Overhead allocation – 22% of operating expenses	($19,432,564)	
Calculated Fund Balance as of March 31, 2023	**$54,095,265**	A
Actual Fund Balance as of March 31, 2023	**$22,786,930**	B
Compensation Fund Money Spent on Operations	$31,308,335	A – B

We noted that TICO has acknowledged that its fee structure needs updating. In April 2023, TICO received a report from a third-party consultant it engaged that reviewed its current funding model. TICO informed us that it would be using this report to pursue changes to its fees and fee structure.

RECOMMENDATION 9

So that fees paid by registrants to the Travel Industry Compensation Fund (Compensation Fund) are used to compensate consumers who have suffered a financial loss, we recommend that the Travel Industry Council of Ontario (TICO):

- pay from the Compensation Fund only expenses that can reasonably be attributed to the administration, management, maintenance, and protection of the Fund; and
- revise its fee structure to ensure operating costs are sufficiently funded through registration and other fees charged to registrants.

TICO RESPONSE

The Travel Industry Council of Ontario (TICO) agrees with the Auditor General's recommendation to re-align its funding framework so that operating expenses are funded primarily through registration and other regulatory fees paid by registrants.

TICO has begun the development of a clear and fair allocation methodology between the Compensation Fund and other regulatory activities aligned with the regulation. TICO is nearing completion of a review of its fee structure with the travel sector and is committed to ensuring it generates sufficient operating revenues to fund regulatory operations. TICO will also review its accounting for the Compensation Fund to ensure future revenues and expenses are tracked and reported consistent with the regulation and in a manner that promotes fairness and enhanced transparency for all stakeholders.

4.3.2 The Cost to Administer the Compensation Fund May Outweigh the Benefits it Provides Consumers

Based on our review of the Compensation Fund, we found that on average over the last 10 years, the Fund cost approximately three times more to administer than the amount it has paid out to compensate consumers.

The Compensation Fund was established in 1975. At that time, the majority of travel services purchased by Ontarians were paid for with cash or cheque from a travel agent operating out of a store front. The travel agent would then provide these payments to end suppliers of travel services, such as hotels and airlines, on behalf of the consumer. The handling and holding of significant amounts of customer cash created a risk to consumers that they could lose their payments entirely if a travel agency declared bankruptcy.

The Internet has transformed the way Ontarians book and purchase travel services since 1975. According to TICO's 2018 consumer awareness survey (the most recent year this information was captured), up to 80% of travel bookings were being made online, continuing an upward trend.

In addition, according to a 2017 consumer research study, 93% of travel bookings in Ontario were being made using a credit card. Since the vast majority of travel bookings are being made using a credit card, the risk to consumers if a travel agency declares bankruptcy has been reduced for the following reasons:

- Credit card companies typically have policies offering a "chargeback" feature, which reverses a transaction in the event the cardholder has been wronged and the seller will not provide a refund. Consumers who purchase travel through a credit card may be eligible to receive a chargeback in the event that their travel services are not provided due to failure of a travel agent or end supplier.
- When using a credit card, consumers' payments often flow directly to the end supplier, such as a hotel or airline, bypassing the travel agent, so that the agent is never actually in possession of the funds.

Travel agencies are required to hold any money received from customers in a trust account until the end supplier, such as an airline, is paid.

Few Ontarians Benefit from the Compensation Fund

In the 10 years from 2013/14 to 2022/23, the Compensation Fund paid a total of about $3.5 million in compensation relating to 685 claims, or an average of approximately $350,000 in compensation relating to 69 claims per year.

The 685 approved claims represented a success rate for claimants of just 44% relative to the 1,558 claims filed during the 10 years. One reason for the low value of total compensation provided to claimants, and the low success rate of claims, is that the Compensation Fund was intended to be a payor of last resort. A claimant must meet very specific criteria in order to receive compensation from the Fund. **Figure 19** outlines examples of such criteria.

For instance, TICO requires that consumers exhaust all other possible remedies for reimbursement as part of TICO's claims process, and prove they have not received a reimbursement from another party that may be liable to do so. These conditions have meant many claims have been abandoned. Of the 56% of claims that were not approved from 2013/14 to 2022/23, 49% were abandoned or withdrawn by the applicant, while 7% were denied by TICO.

Figure 19: Eligibility Criteria for Compensation Fund Claims

Source of data: Travel Industry Council of Ontario

Conditions That Must Be Met	Criteria Notes
Consumers must have purchased the travel services from a registered Ontario travel agency.	• Purchases made through travel agencies with no physical location in Ontario are not eligible. • Purchases made directly through end suppliers, such as airlines, are not eligible. • In the case of cessation of an airline or cruise line, consumers are only eligible if they made the booking through a TICO registrant. They are not eligible if they booked directly with the airline or cruise line.
Travel services purchased were not provided.	Consumers who are dissatisfied with travel services are not eligible for compensation, even if they receive different travel services than the ones they booked.
A bankruptcy or insolvency of an Ontario registered travel agent, travel wholesaler or cessation of an airline or cruise line led to the travel services not being provided.	Consumers who paid for but did not receive travel services for any other reason are not eligible—for example, due to weather, a strike, mechanical problems, or other unexpected event.
Travel services were paid for with cash or by cheque, credit card or other similar payment method.	Purchases made using credit card points or travel rewards are not eligible.
If a consumer has travel insurance, they must prove it will not cover their claim.	• TICO directs claimants to contact their insurance company to request a reimbursement. • If no refund is provided, a letter from the insurance company confirming that a refund will not be provided must be submitted to TICO with the claim against the Compensation Fund.
If travel services were purchased with credit card, consumers must prove the credit card company will not provide a chargeback.	• TICO requires claimants who paid by credit card for the travel services that were not provided to contact their credit card company to dispute the charges and request a chargeback (credit /reversal of the charge on their account). • If the credit card company refuses a chargeback, TICO requires claimants to obtain a letter from the credit card company stating that a credit refund will not be provided.

The Cost for TICO to Administer the Fund Has Been Significant

While the Fund has paid $3.5 million in compensation to consumers over the 10 years from 2013/14 to 2022/23, TICO registrants booked over $133 billion in travel services for consumers. We found that the Fund's average annual payout to claimants of $350,000 over the last 10 years was significantly less than it cost to administer the Fund. As described in **Section 4.3.1**, TICO estimated in 2023 that the overhead cost to administer the Fund was 22% of TICO's operating expenses, or approximately $1 million in 2022/23. Based on the 22% estimate, the Compensation Fund costs almost three times more to administer than the amount of compensation that it is paying to consumers.

The Ministry and TICO have undertaken several recent reviews that included examining the scope and benefit of the Fund to consumers, and whether it should be maintained or eliminated, including:

- A review of the *Travel Industry Act, 2002* conducted by the Ministry in 2017 concluded that there was a strong consumer rationale for maintaining the Compensation Fund to help claimants when travel insurance or credit card chargebacks were not available, or when credit cards were not used to pay for travel services, among other things.
- A third-party consultant hired by TICO to review its funding and the Compensation Fund produced a report in April 2023 that recommended maintaining the Fund on the basis that consumer protection is core to TICO's mandate, and that they did not find a compelling case to eliminate the Fund.

We noted that neither of these reviews attempted to quantify the cost of administering the Compensation Fund relative to the value of the actual claims being paid. We noted that Australia discontinued a similar travel compensation fund in 2014 after a review commissioned by the Australian Department of the Treasury found that:

- consumers were increasingly purchasing travel services online and directly from end suppliers;
- the administration of the Australian fund was significantly more expensive than the average value of the claims paid;
- Australian consumers were largely unaware of the fund or the protection it offered; and
- consumers could also rely on credit card chargebacks or travel insurance to receive reimbursement.

We noted that just two Canadian provinces, Quebec and British Columbia, operate similar travel compensation funds. Our review of the United States, Australia and the United Kingdom found that the UK operated a similar fund for travel agents who sell air travel, and it appeared California was the only US state operating a similar fund.

RECOMMENDATION 10

So that the Travel Industry Compensation Fund (Compensation Fund) is providing value-for-money for the travel industry and consumers, we recommend the Travel Industry Council of Ontario work with the Ministry of Public and Business Service Delivery (Ministry) to study and determine whether significant risk to consumers still exists to justify the cost of maintaining and administering the Compensation Fund, and whether the Fund can provide a positive net benefit.

TICO RESPONSE

The Travel Industry Council of Ontario (TICO) appreciates the Auditor General's timely recommendation. The Compensation Fund is at the foundation of TICO's consumer protection framework and has assisted tens of thousands of consumers.

Ontario is a diverse province and marketplace and not all consumers purchase travel via credit cards or have access to other remedies. The Fund represents a final opportunity for consumers to seek reimbursement of travel services not provided under certain conditions when these other remedies are not available or fail.

Notwithstanding that some jurisdictions do not have a similar fund, or have decommissioned a fund previously in existence, many countries have similar funds. TICO has undertaken a significant review of its funding model and fee structure, within the current legislative framework, including the Compensation Fund. Should the Ministry commence a future review, TICO is committed to working with the Ministry and determining the net benefit of the Compensation Fund to consumers.

MINISTRY RESPONSE

The Ministry agrees with the Auditor General's recommendation.

The Ministry notes that this recommendation will be addressed with the Auditor General's **Recommendation 16**, which recommends a comprehensive review of the *Travel Industry Act, 2002* (Act) and the Travel Industry Council of Ontario (TICO).

Following a proposal for government consideration to undertake a review of the Act and TICO, any potential regulatory proposals would be assessed for consideration and decision-making, as appropriate.

4.4 TICO's Operations

4.4.1 Although TICO's Role Is to Protect Consumers, Its Board Has Been Dominated by Travel Industry Representatives

Although TICO was established by the Ontario government to administer the Act with the purpose of protecting the public interest, we found that prior to the changes made to the Board's composition in August and September 2023, the vast majority of TICO's Board members were individuals who represented registrants in the travel industry. Because the Board was dominated by industry appointees, we found that TICO also had difficulty filling gaps in Board skills and competency.

At the time of our audit, the TICO bylaw that addressed the composition of the Board prescribed that seven of the 11 directors were to be industry members appointed by industry associations or elected by registrants, as follows:

- two directors appointed by the Association of Canadian Travel Agencies (ACTA);
- two directors appointed by the Canadian Association of Tour Operators (CATO);
- one director appointed by the Ontario Motor Coach Association (OMCA); and
- two directors elected by TICO's registrant members.

The remaining four director positions were to be appointed by the Minister of Public and Business Service Delivery (Minister), who may include representatives of consumer groups, business, government organizations, or such other interest as the Minister determines. As of June 2023, one of the four ministerial appointees was also a travel industry representative. Before that date, eight of TICO's 11 Board members, or 73%, were industry representatives. In addition, TICO's Board Chair, also a ministerial appointee, while not an industry representative at the time they joined the Board, had over 30 years of previous experience in the travel industry, including 18 years of prior experience as a registrant of TICO.

Regulators in Ontario have recently been shifting from industry-dominated boards to boards that focus on required skills, competencies and diverse perspectives:

- Tarion Corporation, a delegated administrative authority which has a mandate to administer the *Ontario New Home Warranties Plan Act*, is governed by a 12-member board that can have no more than four members who are industry representatives.
- In April 2023, the Minister provided orders to the Chair of the Ontario Motor Vehicle Industry Council (OMVIC), the delegated administrative authority that regulates motor vehicle dealers and salespersons, that included that OMVIC ensure that all its board members possess a

positive orientation for proactive consumer protection initiatives, and that no more than 34% of the board members are drawn from the industry.
- The Bereavement Authority of Ontario, a delegated administrative authority that regulates bereavement service providers, has 10 members on its board, four of whom are elected and can have no direct interest in the bereavement sector, and only three of whom must be industry representatives.

On July 25, 2023, after our audit work was substantially complete, TICO's Governance and Human Resources Committee recommended to the Board to adjust the Board's composition. The Board subsequently approved changes that included reducing the number of Board members from 11 to nine, that only three members will be from the travel agent and wholesaler industry, and that industry representatives will no longer be appointed by industry associations but instead will be selected by a Board nominations committee and voted on by registrants.

On August 11, 2023, the Chair of TICO's Board received a letter from the Minister outlining orders to change the composition of TICO's Board. The orders aligned with the motion that the Board passed on July 25, 2023. TICO's revised bylaw reflecting the Board motion and Minister's orders were approved by a vote of its members (registrants) at its Annual General Meeting on September 26, 2023. The revised bylaw establishes TICO's Board composition as follows:

- a maximum of four members appointed by the Minister of Public and Business Service Delivery who may not constitute a majority of the Board;
- a maximum of three members from industry selected by the Board nominations committee and voted on by registrants; and
- the remaining, non-industry members, selected by the Board nominations committee from the general public and voted on by registrants.

At the conclusion of our audit work, the Board's nominations committee had selected both industry and non-industry candidates who were voted on by TICO's registrants to bring TICO's Board composition into alignment with the revised bylaw. As of October 2023, the Board consisted of three members appointed by the Minister, three industry members elected by registrants, and three members from the general public elected by registrants.

Industry Associations Withdrew Board Appointees When Demands Made to the Minister Were Not Met

On July 25, 2023, following a review of TICO's funding model, TICO's Board approved a proposal to change TICO's fee structure aimed at making TICO's operations more sustainable. Anticipating that the Board would approve changes to TICO's fees, ACTA and CATO took the unprecedented action of withdrawing their four combined appointees from TICO's Board. In a joint media release on July 25, 2023, the two industry associations stated they were withdrawing their appointees until they were given the opportunity to meet with the Minister to express their concerns regarding the changes and any potential impacts to registrants.

TICO advised ACTA and CATO that they would have the opportunity to provide feedback on the proposed fee changes during registrant and stakeholder consultations, which are required by the Administrative Agreement between TICO and the Minister. Despite this, ACTA and CATO made the decision to withdraw their appointed Board members, stating they opposed the process and wished to provide input to the Minister before the decision to proceed.

Board members have a fiduciary responsibility to always act in the best interest of TICO. More specifically, members have a Duty of Loyalty, which requires them to place the interests of TICO ahead of all competing interests. Withdrawing appointees until demands are met calls into question whether ACTA- and CATO-appointed Board members could be perceived as acting in the best interests of TICO.

TICO Has Been Unable to Address Gaps in Key Competencies Among Board Members

In 2018, TICO developed and introduced a board competency matrix, and amended its corporate bylaw to include the requirement that all Board members possess at least some of the competencies outlined in the matrix. The matrix consists of 15 competencies

(listed and described in **Appendix 4**) that TICO considers critical to achieving its mandate. Members complete competency self-assessments, and the results of those assessments are analyzed to determine if there are any gaps.

Since the introduction of the board competency matrix in January 2018, TICO Board members have completed five self-assessments evaluating their competency against the matrix. **Figure 20** summarizes the competency gaps identified by TICO based on these self-assessments.

We noted that, as of June 2023, all 11 members of the Board had participated in the most recent self-assessment of Board competency (in September 2022), and that nine Board members were appointed or elected to the Board after the initial self-assessment of Board competency was completed in 2018. Despite identifying gaps in competencies in the Board in 2018, and the fact that the vast majority of the Board is made up of individuals appointed or elected after the initial identification of these gaps, TICO has been unable to appoint directors with four of the missing competencies identified: legal, risk management, technology, and human resources. In addition, after the most recent appointments to the Board, two additional gaps in board experience and financial literacy were identified in the September 2022 assessment.

We noted that TICO's management, as well as the Board Chair, were active in sharing the results of the Board competency assessments, and informing both the Ministry and the three industry associations who appointed Board members (ACTA, CATO and OMCA) of the need to address long-standing gaps in legal, risk management, organizational behaviour, technology, and human resources competencies. In addition, we noted that TICO's Board Chair was active in advising the Ministry that non-industry representatives with diverse backgrounds and a consumer focus were needed from the four ministerial appointments since the remaining seven Board members were appointed

or elected by industry. Despite these requests, in April 2022, the Minister chose to use an open ministerial appointment to reappoint an industry representative. In addition, we noted Ministry briefing notes prepared for the Minister in February 2022 for two candidates who would go on to be appointed to TICO's Board by the Minister made no reference to Board competency gaps identified by TICO, or whether the skills and experience of the proposed candidates might fill those gaps.

RECOMMENDATION 11

So that the Board of Directors of the Travel Industry Council of Ontario (TICO) effectively executes its responsibilities to oversee the travel industry and protect consumers, we recommend that:

- TICO utilize its board competency matrix and assessments to inform nominations to TICO's Board; and
- the Ministry of Public and Business Service Delivery use advice from the Chair of TICO's Board regarding the suggested skills required by the Board to inform the appointment process, which is done at the discretion and pleasure of the Minister.

TICO RESPONSE

The Travel Industry Council of Ontario (TICO) agrees with the Auditor General's recommendation that TICO utilize its Board competency matrix and assessments to enhance and inform nominations to TICO's Board. This will better enable the Board of Directors to effectively execute its responsibilities to oversee the travel industry and protect consumers.

TICO's recently formed Governance and Nominations Committee prioritized the Board competency matrix as a key focus of its application and vetting process for the elected industry and public director positions.

In the recent industry and public director election process in September and October 2023, TICO has been able to reduce gaps in the Board experience, financial literacy, risk management, organizational behavior, technology, and human resources competencies. TICO aims to further enhance its director recruitment and selection processes and welcomes the opportunity to work with the Ministry of Public and Business Service Delivery to ensure that Board members possess the skills necessary to effectively execute their responsibilities.

MINISTRY RESPONSE

The Ministry of Public and Business Service Delivery (Ministry) agrees with the Auditor General's recommendation. The Ministry recognizes the importance of good governance practices.

On August 11, 2023, Minister's orders were issued to the Travel Industry Council of Ontario (TICO) to facilitate a more efficient and effective governance model that places a stronger focus on TICO's consumer protection mandate.

The Ministry will work with TICO to monitor the impact of these governance changes and will have regard to TICO's Board competency matrix when making appointments to TICO's Board.

4.4.2 Half of Ontarians Surveyed Who Were Involved in Travel Planning for Their Household Were Unaware of TICO

Over the last five years, only 51% of Ontarians who were involved in travel planning for their household were aware of TICO, according to TICO surveys.

We reviewed TICO's annual consumer-awareness surveys conducted from 2019 to 2023. To be included in the surveys, respondents needed to answer "Yes" to the opening qualifying question, "Are you someone who leads or shares the travel planning process for your household?" Despite this requirement, only 23% of respondents during this five-year period indicated they were "definitely aware" of TICO, while 28% said they were "somewhat aware" of TICO. Only 31% of respondents indicated they were aware of the Compensation Fund (described in **Section 2.8**). **Figure 21** shows the results of TICO's consumer-awareness surveys over the last five years, as well as TICO's expenditures relating to consumer awareness.

Figure 21: Results of TICO Consumer Awareness Survey and Consumer Awareness Expenditures, 2019–2023 (%)

Source of data: Travel Industry Council of Ontario

	2019	2020	2021	2022	2023	Total
Survey Responses						
Definitely aware of TICO	34	23	26	29	16	**23**
Somewhat aware of TICO	22	26	32	31	25	**28**
Total Aware of TICO	**56**	**49**	**58**	**60**	**41**	**51**
Aware of Compensation Fund	34	n/a*	30	n/a*	31	**31**
TICO Expenditures on Consumer Awareness Initiatives (as of March 31)	**$725,813**	**$517,958**	**$391,253**	**$360,618**	**$90,644**	**$2,086,286**

* Awareness of the Compensation Fund was not included in the 2020 and 2022 surveys.

As shown in **Figure 21**, TICO's external expenditures on consumer awareness, such as advertising and payments to marketing agencies, have declined by 87%, from nearly $726,000 in 2018/19 to less than $91,000 in 2022/23. The most significant year-over-year decline in external expenditures occurred in 2022/23, when TICO made the decision to stop using a third-party marketing agency and bring marketing activities in-house. As a result, TICO reduced spending on consumer-awareness initiatives in 2022/23 by 75% from the previous year. Offsetting this reduced spending somewhat was TICO's application and approval for Google ad grants for non-profits, from which they received $110,000 US worth of advertising on Google websites at no cost. Nevertheless, as shown in **Figure 21**, we found that the sharp decline in expenditures in 2022/23 coincided with a five-year low of just 16% of survey respondents indicating they were "definitely aware" of TICO.

Registrants Are Not Required to Provide Information About TICO to Consumers

A low-cost direct method of making consumers aware of TICO's role as a regulator would be to provide information to consumers at the time they purchase travel services from registrants. As part of its consumer awareness efforts, TICO developed a brochure for consumers with information regarding its regulatory role, registrant requirements, protections available under the Act, and Compensation Fund coverage. While TICO encouraged registrants to provide this information to customers, there was no requirement for them to do so. In a survey of registrants conducted by TICO in 2023, only 7% of registrants said they were providing the brochure to all of their customers, and only 13% indicated they were providing the brochure to most customers.

In comparison, the Tarion Warranty Corporation, the delegated administrative authority that backstops builder warranties on new construction homes, reaches homebuyers directly by requiring all licensed builders to provide homebuyers with an information package that details a builder's warranty obligations, and the protections available if the builder does not honour their warranty at the time the purchase and sale agreement is signed. Tarion also asks homeowners if they were provided with the information package by their builder when they register online with Tarion.

RECOMMENDATION 12

So that consumers purchasing travel services through registered travel agents are aware of the Travel Industry Council of Ontario's (TICO's) role, and the protections available under the *Travel Industry Act, 2002*, we recommend that TICO work with the Ministry of Public and Business Service Delivery (Ministry) to require that, at the time of purchase, registrants provide purchasers of travel services with information brochures that outline TICO's regulatory role and consumer protections available.

TICO RESPONSE

The Travel Industry Council of Ontario (TICO) appreciates the Auditor General's recommendation to ensure consumers are properly informed when making a travel purchase.

Should the Ministry support an amendment to the regulation under the *Travel Industry Act, 2002*, TICO would be pleased to work with the Ministry toward requiring that registrants provide purchasers of travel services with information brochures that outline TICO's regulatory role and consumer protections available at the time of purchase.

MINISTRY RESPONSE

The Ministry thanks the Auditor General for this recommendation.

This recommendation would require regulatory changes under the *Travel Industry Act, 2002* (Act).

Following a proposal for government consideration to undertake a review of the Act and the Travel Industry Council of Ontario (TICO) in response to the Auditor General's **Recommendation 16**, this recommendation and any potential regulatory proposals would be assessed for consideration and decision-making, as appropriate.

4.4.3 TICO Did Not Publish Detailed Compliance and Enforcement History of Registrants

We found that TICO did not include detailed compliance and enforcement information relating to registrants on its public directory, such as violations of the Act or details of enforcement action taken by TICO, so that consumers could make more informed decisions.

TICO has authority under the Act to disclose information about registrants to the public. TICO maintains a public directory on its website that allows consumers to search for information about a registered travel agency or wholesaler. The public directory includes the name of the registrant, contact information, links to their public website, associated trade names, and branch offices.

We noted that TICO provides limited information about registrant non-compliance with the Act and its regulation on its website. TICO only provides a summary of any pending charges or prior convictions for registrants, and decisions by the Licence Appeal Tribunal, a quasi-judicial agency in Tribunals Ontario. This information is provided on a separate page from the directory, with nothing linking consumers to this information from the registrants' directory listing. TICO's website also lists the names of past registrants who had their registration revoked or suspended for non-compliance.

TICO does not include any information about enforcement action taken against current registrants on its public directory. For example, TICO has issued 36 terms and conditions on registrants' registration over the five years from 2018/19 to 2022/23 for violations that include: working capital deficiencies; failure to file financial statements; and trust accounting issues. However, consumers cannot see whether a registrant has had terms and conditions placed on their registration on TICO's public directory so they can use that information to decide if they wish to do business with the registrant.

In contrast, Consumer Protection BC, the agency responsible for oversight of travel agents and travel wholesalers in British Columbia, publishes detailed compliance and enforcement information for all licensees on its website, including:

- all licensing and enforcement decisions, such as licence suspensions, compliance orders and notices of administrative penalties taken against its licensees; and
- full written reasons for enforcement decisions that detail:
  - sections of the Act and/or regulation that have been violated;
  - a detailed chronological order of events related to the violation;

- individuals involved in the violation; and
- reference to any pertinent evidence relied on by the regulator in making the decision.

RECOMMENDATION 13

So that consumers can make more informed decisions about which travel agents they may choose to purchase travel services from, we recommend that the Travel Industry Council of Ontario (TICO) provide detailed compliance and enforcement information about all registrants on its public directory.

TICO RESPONSE

TICO agrees with the Auditor General's recommendation to provide greater transparency to consumers by including detailed compliance and enforcement information about registrants on its online public registrant directory. TICO is committed to enhancing the information and details regarding its compliance and enforcement activities about its registrants on its online public directory.

TICO believes that greater transparency and disclosure to consumers will allow consumers to make better informed decisions when purchasing travel services. This will also provide greater confidence when purchasing travel services from TICO-registered travel agencies and tour operators.

4.4.4 TICO Has Not Used Data Effectively to Inform and Carry Out Its Regulatory Responsibilities

We found that TICO has not consistently collected, reviewed and analyzed available industry-wide travel data to identify trends and inform its regulatory work. We also found that TICO did not collect some key data relating to several of its regulatory functions to enable it to better inform and evaluate the effectiveness of its regulatory functions. Prominent examples include:

- **Registrant Security Deposits:** As described in **Section 4.1.1**, TICO does not track in its information system whether the Registrar has concerns about a registrant that would justify continuing to hold their $10,000 security deposit after the registrant has filed two consecutive financial statements. TICO therefore cannot easily assess which registrant deposits should be reviewed and potentially returned.
- **Applications:** As described in **Section 4.1.2**, TICO does not track in its information system the date of key milestones in the application process, including the date the application was received, when it was assessed for completeness, or when TICO staff notified the applicant that additional information is required. These limitations prevent TICO from accurately evaluating its performance in processing applications on time.
- **Complaints:** As described in **Section 4.2.4**, TICO does not track the outcomes of the complaints it handles in its information system, including whether they were resolved, whether they potentially violated the Act and its regulation, and whether they were referred for further action. TICO therefore cannot evaluate how effective its complaint-handling process is at resolving consumer complaints, obtaining restitution for consumers where warranted, and enforcing the Act and its regulation.
- **Travel Counsellors:** As described in **Section 4.2.5**, TICO does not track where certified Travel Counsellors work. Tracking this information would allow TICO to monitor whether registrants are employing individuals who have a history of misconduct. TICO could use this information to both inform its regulation of registrants, and to alert registrants about individuals they are employing with a history of misconduct in the industry.
- **Market Statistics:** We noted that TICO does not review or analyze available industry-wide statistics related to travel on a consistent basis to identify trends and inform its regulatory oversight. For example, Statistics Canada conducts the National Travel Survey, which collects domestic and international travel information about Canadian residents. The survey includes

information such as trip counts and spending by category of travel—such as commercial travel, accommodation, and vehicle rentals—that can be filtered by province of residence. We found that TICO has not used this type of information to estimate what portion of the Ontario travel market its registrants represent to better understand the reach and scope of its regulatory activities relating to travel in Ontario.

RECOMMENDATION 14

So that it can better inform its regulatory efforts to protect consumers, we recommend the Travel Industry Council of Ontario (TICO):

- conduct a review of data collection across all core regulatory functions to identify areas where additional data would help improve its regulatory efforts;
- update its information systems to capture data identified by this review; and
- obtain and analyze relevant travel market statistics on a regular basis.

TICO RESPONSE

TICO agrees with the Auditor General's recommendation. TICO will enhance its overall data management requirements and capabilities. TICO collects and stores a large dataset from consumers and registrants and is committed to using this data to help improve its regulatory efforts. While TICO does review certain data from various external travel sources, it is not always systematically maintained nor analyzed. TICO is committed to reviewing its data collection, systems, and processes to ensure it collects data it needs, to identify future data requirements, and to eliminate any redundant data. TICO will also explore third-party data sources, including market statistics, in support of its mandate.

4.5 Ministry Oversight

4.5.1 The Ministry Did Not Collect Sufficient Information to Monitor and Assess TICO's Performance in Meeting Its Mandate

We found that the Ministry did not collect sufficient performance information from TICO to effectively monitor whether TICO was meeting its mandate to protect consumers and regulate travel agents.

Under the Administrative Agreement between the Minister and TICO, the Ministry must agree upon performance indicators with TICO. TICO must provide the Minister with performance targets and results for the performance measures approved by the Minister on an annual basis and upon request by the Minister. However, we found that until 2022/23, measurable targets had not been established for many of the performance indicators in place, limiting the Ministry's ability to assess TICO's performance.

In 2022/23, for example, TICO established a target to process all registration applications within 30 days of receiving all required documentation. Similarly, TICO developed a target to handle and resolve all complaints within 30 days of receiving all required information and supporting documentation. TICO also developed a performance indicator for its inspection processes, and set a target to conduct a financial inspection for a minimum of 10% of registrants during the year.

We found, however, that many key aspects of TICO's operations were not covered by performance indicators. For example, there were no performance indicators and targets in place to assess the degree to which TICO operates on a cost-recovery basis, a requirement under the Administrative Agreement. As indicated in **Section 4.3.1,** our audit found that TICO has never generated sufficient revenue from registrants to cover its operating costs, and has used money from the Compensation Fund to finance its operations. Without performance indicators and targets in this area, the Ministry does not have sufficient information to assess the reasonableness of how much of the Compensation Fund money TICO is using to fund its

operational expenses. As described in **Section 4.3.1**, we found that between 1997/98 and 2022/23, TICO charged the Fund an additional $31.3 million to cover its operating expenses above the rate that its recent costing analysis deemed reasonable.

We also found that performance indicators had not been established, or were insufficient, to monitor TICO's operational performance in several other key areas where our audit identified operational issues. For example, indicators were not in place to monitor whether:

- TICO inspects registered travel agents at least once within a specified period, and assigns a risk rating to them accordingly;
- TICO conducts follow-up inspections within a targeted timeframe after non-compliance is identified;
- security deposits collected by TICO are returned to registrants on a timely basis after two consecutive years with no compliance concerns; and
- consumer complaints were handled correctly or resulted in appropriate outcomes.

RECOMMENDATION 15

So that the Ministry of Public and Business Service Delivery (Ministry) can effectively monitor and assess the Travel Industry Council of Ontario's (TICO's) performance in protecting consumers and regulating travel agents and wholesalers, we recommend that the Ministry work with TICO to revise the performance indicators the Ministry uses to include indicators that more closely monitor TICO's operations, including in the areas of inspections, security deposits, complaint-handling and the Travel Industry Compensation Fund.

MINISTRY RESPONSE

The Ministry thanks the Auditor General for this recommendation. The Ministry takes its oversight of TICO seriously, including effectively monitoring and assessing TICO's performance.

The Ministry will work with TICO to revise the indicators, as needed, informed by the Auditor General's recommendation.

TICO RESPONSE

TICO agrees with the recommendation and will work with the Ministry to enhance the performance indicators it reports to the Ministry, so that the Ministry can more effectively monitor TICO's operations.

4.5.2 The Ministry Has Not Reviewed TICO's Structure and Assigned Regulatory Responsibilities

Although the Ministry conducted a review in 2017 of the *Travel Industry Act, 2002*, we found that the Ministry did not consider whether TICO's structure and assigned responsibilities as a regulator were set up in the most efficient way to administer and enforce the Act. We compared TICO to organizations that regulate sellers of travel services outside of Ontario and found that other jurisdictions utilized consumer protection organizations or broader government organizations whose mandate included significantly more than just regulating sellers of travel services. We also found that many jurisdictions did not have specific travel regulations at all. Australia, for instance, repealed the country's travel seller regulations in 2014 because the government determined that the regulations had become outdated due to changes in the travel industry and other consumer-protection programs.

TICO's Mandate to Solely Regulate Third-Party Sellers of Travel Is Unique

We performed a jurisdictional scan of other Canadian Provinces, Australia, the United Kingdom, and the United States and found that among that group TICO was the only organization dedicated solely to the regulation of travel agents and wholesalers. **Figure 22**

summarizes the regulatory responsibilities of the jurisdictions we found with travel seller regulatory regimes that are most similar to TICO—including providing a compensation fund.

As **Figure 22** shows, regulators in British Columbia, Quebec, California and the UK oversee multiple industries or have significant additional responsibilities beyond regulating third-party sellers of travel. We also found that some US states, such as Florida and Hawaii, required travel sellers to register with broader government organizations (the Florida Department of Agriculture and Consumer Services, and Hawaii's Department of Commerce and Consumer Affairs, respectively). However, these states did not maintain a compensation fund.

The requirements under the Act and its regulation that TICO enforces, as well as the regulation of travel sellers in other jurisdictions, tend to focus on financial requirements and financial risk factors, as well as general business practices and consumer protections that are also relevant to other industries. Therefore, there may be an opportunity to improve efficiency and obtain economies of scale by having a regulator that oversees more industries than just travel agents and wholesalers, as other jurisdictions have chosen to do.

Many Jurisdictions Do Not Specifically Regulate Sellers of Travel

The majority of jurisdictions we reviewed did not have specific legislation, regulations or regulators dedicated to third-party sellers of travel services. Instead, travel agents and wholesalers in these jurisdictions are subject to broader business and consumer protection laws.

Our jurisdictional scan found that other than Ontario, BC, and Quebec, the remaining Canadian provinces did not have specific legislation for the regulation of travel sellers. Based on our review, we also found that few US states required registration/licensing of travel agents and wholesalers. For instance, of the 10 most populous US states, only California and Florida registered or licensed travel agents.

In 2014, the Australian government repealed the country's travel seller regulations and the *Travel Agents Act*. As a result, travel agents in Australia are no longer required to hold a licence, and the Travel Compensation Fund, Australia's parallel to the Travel Industry Compensation Fund, is no longer operational. The repeal of travel seller regulations in Australia was informed by a review commissioned by the Department of the Treasury that—in addition to the findings regarding Australia's Travel Compensation Fund discussed in **Section 4.3.2**—found:

- The travel industry had undergone major changes in its operation. Information and choices available to consumers had improved, while vulnerability to consumer protection issues historically present in the market had been reduced.
- Australia's travel agent licensing framework provided little consumer benefit while imposing regulatory cost on business.
- Australia's travel agent licensing framework was administered and enforced at the state level, which did not reflect the national nature of the travel market.
- For the most part, competitive markets underpinned by generic consumer protection rules, some voluntary accreditation and some private measures provided an adequate and appropriate level of consumer protection in the travel industry.
- There was no longer sufficient justification for industry-specific consumer protection regulation in the sector.

Travel Industry Regulation in Ontario Could Benefit from a Comprehensive Review

As noted in **Section 4.3.2**, the travel industry and the way consumers purchase travel services have changed significantly since TICO was established in 1997. The Internet has opened the travel market for Ontarians so that they can easily book directly with travel suppliers or out-of-province travel agents and wholesalers not regulated by TICO. The risk to consumers purchasing travel services through travel agents also has changed. Travel agents are now in possession of less consumer cash, with up to 80% of travel bookings in Ontario being made online, and 93% of travel bookings are

Figure 22: Responsibilities of Comparable Regulators in Other Jurisdictions

Prepared by the Office of the Auditor General of Ontario

Jurisdiction	Regulator	Compensation Fund	Responsibilities
Ontario	Travel Industry Council of Ontario	Yes	Regulation of Travel Agents and Wholesalers
British Columbia	Consumer Protection BC	Yes	**Regulates:** • **Travel Agents** • Motion Picture Theatres, Distributors and Retailers • Telemarketing • Payday Lending • Home Inspectors • Cemetery and Funeral Services • Debt Collection and Bailiffs • Debt Repayment • High Cost Credit Granting
Quebec	Office de la protection du consommateur	Yes	**Regulates, for example:** • **Travel Agents** • Motor Vehicle Sales and Recycling • Motor Vehicle Extended Warranties • Money Lenders • Debt Collection • Debt Settlement • Health Studios
California	California Department of Justice – Office of the Attorney General	Yes*	The Office of the Attorney General of California is responsible for **California's Seller of Travel Program**. More broadly, the Attorney General of California has a range of duties and responsibilities including those related to: • Public Safety and Law Enforcement • Legal Opinions • Research • Civil Rights • Consumer Protection • Environment and Public Health
United Kingdom	Civil Aviation Authority	Yes	The United Kingdom's Civil Aviation Authority oversees the **Air Travel Organisers' Licensing program**, which protects consumers against the insolvency of UK travel businesses who sell air travel for holiday travel. The Civil Aviation Authority's responsibilities also include the regulation of all UK airports, airport security, and airlines, as well as making decisions on changes to UK airspace.

* California's Travel Consumer Restitution Fund is managed by the Travel Consumer Restitution Corporation.

being made using a credit card, with payments often flowing directly to end suppliers.

The Ministry's last detailed review of the Act, in 2017, specifically considered whether there was still a need for specific travel seller regulation in Ontario. It concluded "there remains a strong consumer protection rationale for maintaining travel-industry specific regulatory requirements."

We found, however, that the 2017 review did not consider whether TICO's structure and assigned responsibilities as a regulator were an efficient and cost-effective way to administer and enforce the Act. We also found that the Ministry's review did not include a comparison of TICO's structure and assigned responsibilities to regulators in other jurisdictions.

Our jurisdictional scan of travel seller regulatory regimes identified the following four broad categories for the structure and mandate of regulators (described in more detail above):

1. No specific regulation of travel sellers (Australia and the majority of Canadian provinces and US States).
2. A standalone organization dedicated solely to the regulation of travel agents and wholesalers (Ontario).
3. A standalone broader consumer protection organization with significant additional responsibilities beyond regulating third-party sellers of travel (BC and Quebec).
4. Regulating travel sellers as a responsibility of a broader government organization with significant additional responsibilities (California, UK, Florida, and Hawaii).

We noted that the Ministry had previously committed to developing a plan for another comprehensive review of the Act and consideration of the role of TICO more broadly.

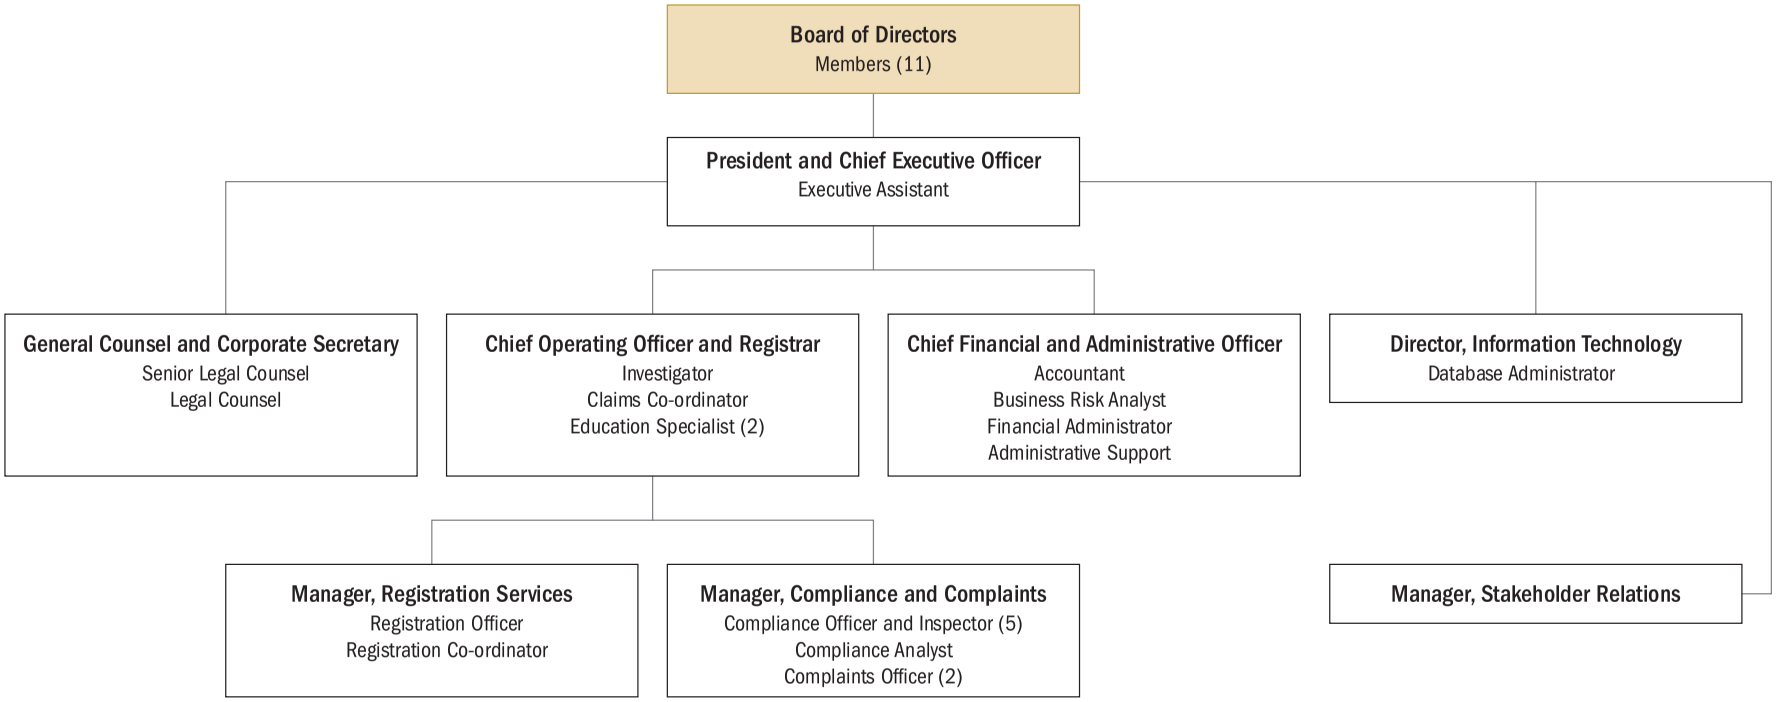
RECOMMENDATION 16

So that the regulatory framework of the travel industry in Ontario is better aligned with the changing industry landscape and associated industry risks to consumers, we recommend that the Ministry of Public and Business Service Delivery (Ministry):

- conduct a comprehensive review that includes a detailed comparison of the *Travel Industry Act, 2002* and its regulation to similar laws in other jurisdictions, as well as a review of the existing mandate, structure and responsibilities of the Travel Industry Council of Ontario (TICO); and
- based on that review, propose regulatory updates to make Ontario's regulatory framework more efficient and effective.

MINISTRY RESPONSE

The Ministry agrees with the Auditor General's recommendation.



The Ministry will carefully consider the observations and recommendations made by the Auditor General in this report to inform a proposal for government consideration to undertake a review of the *Travel Industry Act, 2002* (Act) and the TICO.

The Ministry will also analyze the results from TICO's fee and Compensation Fund review process, including stakeholder feedback received in fall 2023, as part of this process.

The Ministry's proposal for government consideration will take into account this recommendation to enable an effective and efficient approach to the regulation of the travel industry in Ontario.

Appendix 1: TICO Organizational Structure, as of June 2023

Source of data: Travel Industry Council of Ontario

Appendix 2: Members of the Board of Directors, June 2023

Zaid Lama **Evolv Capital Partners** Oakville Appointed by the Minister	**Ted Goldenberg** **Chapman Cultural Tours Ltd.** Richmond Hill Appointed by the Ontario Motor Coach Association	**Mike Foster** **Nexion Travel Group** London Appointed by the Association of Canadian Travel Agencies
Monica Johnstone **Uniglobe Travel Innovations** Mississauga Appointed by the Association of Canadian Travel Agencies	**Nicole Bursey** **Transat Tours Canada** Toronto Appointed by the Canadian Association of Tour Operators	**Joanne Dhue** **Sunwing** Toronto Appointed by the Canadian Association of Tour Operators
Douglas Ellison **Ellison Travel & Tours** Exeter Elected by Registrants	**Robert Townshend** **Total Advantage Travel & Tours** Toronto Elected by Registrants	

Note: In August and September 2023, at the conclusion of our audit work, the composition of TICO's Board was modified, reducing it to nine members. As of October 2023, the Board consisted of three members appointed by the Minister, three industry members elected by registrants, and three members from the general public elected by registrants.

Appendix 3: Audit Criteria

Prepared by the Office of the Auditor General of Ontario

1. Effective processes are in place to address complaints on a timely basis, and compliance or enforcement action is taken where appropriate against registered travel agents and wholesalers, and those required to be registered in accordance with the *Travel Industry Act, 2002* (Act) and its regulation.
2. Timely and effective processes are in place so that travel agents and wholesalers meet their registration and other requirements under the Act and its regulation.
3. Effective and timely inspection and investigation processes are in place to support the Travel Industry Council of Ontario's (TICO's) compliance and enforcement functions so that travel agents and wholesalers comply with the Act and its regulation.
4. Processes are in place to effectively manage human and financial resources to fulfill TICO's mandated responsibilities.
5. Effective processes are in place to administer eligible claims to the Ontario Travel Industry Compensation Fund in accordance with the Act and its regulation and on a timely basis.
6. Systems and processes permit the collection and use of timely and complete information to allow TICO to carry out and publicly report on its mandated responsibilities.
7. An effective governance structure and processes are in place to oversee TICO so that it fulfills its mandated responsibilities.
8. The Ministry has effective processes to oversee TICO, and monitor and address TICO's performance in protecting consumers and regulating travel agents and wholesalers.

Appendix 4: TICO Board Competency Matrix

Source of data: Travel Industry Council of Ontario

Competency	Definition
Industry knowledge and experience	The member has experience with or can demonstrate knowledge or expertise of the travel industry. This may include an understanding of trends, challenges and opportunities, or unique dynamics within the sector that are relevant to TICO.
Consumer knowledge	The member has knowledge of and/or experience with consumer protection frameworks and is dedicated to promoting and protecting the interests of consumers. The member has a good understanding of the drivers behind consumer behaviour and has an appreciation of the insights from behavioural sciences regarding how humans actually behave and make decisions. Understanding consumer behaviours and underlying drivers enables the member to contribute to the enhancement of consumer protection initiatives. In TICO's context, insights into how consumers and registrants behave, including purchase decisions, can assist the organization in making informed decisions that protect the public, promote industry compliance and inform more effective and representative policy decisions for the organization.
Board experience	The member has experience with, or can demonstrate knowledge or expertise in, board matters. The member has a clear understanding of the distinction between the role of the board versus the role of management. Governance experience could be acquired through prior board or committee service or reporting to/or working with a board as an employee, or through an accredited organization (e.g., Institute of Corporate Directors).
Financial literacy	The member has the ability to comprehend TICO's internal and external financial statements, including familiarity with financial reporting requirements for registrants. The member has an understanding of generally accepted accounting principles (GAAP), knowledge and/or equivalent experience with financial planning, budgets and analysis, including an underlying appreciation for financial key performance indicators, risk management and investment portfolio concepts. The member has an understanding of internal controls and general controls within an information technology environment.
Legal	The member has experience in law and compliance and/or experience providing legal/ regulatory advice and guidance within a regulatory organization.
Strategy	The member has the ability to generate and apply strategic thinking in regard to the unique business insights and opportunities of relevance to TICO, as well as the ability to support, promote, and ensure alignment with the organization's vision and values. The member has the ability to understand how an organization must evolve considering internal and external trends and influences.
Risk management	The member has knowledge and experience in enterprise risk management with a practical understanding of operational, environmental and reputational risks. The member has an understanding of the Board's role in the oversight of risk management principles and practices in the context of good corporate governance.
Change management	The member has sound knowledge of and/or experience with change management principles and frameworks. The member has either led major change within a business environment or has provided strategic insight to management to facilitate a significant transition. The member has demonstrated the capacity to adjust and balance priorities to effect change and to provide leadership in adapting goals, plans, systems and processes to respond effectively to business transformations. The member is a change leader and has assisted management in planning, implementing and evaluating transformation strategies to improve organizational performance while respecting existing business culture.

Competency	Definition
Organizational behaviour	The member has the ability to understand a business' internal culture and how that culture may facilitate or hinder productivity in the achievement of organizational goals. Organizational behaviour is the study of human behaviour in organizational settings. It investigates the impact that individuals, groups, and structure have on behaviour within organizations for the purpose of applying such knowledge toward improving an organization's effectiveness.
Technology	The member has information technology experience, with knowledge of current and emerging technologies, current risk and regulatory requirements as they would specifically apply to TICO's strategic, regulatory and operating environment; including information security risk. The member has experience and knowledge in leading or significantly influencing technology infrastructure and/or applications with a solid understanding of emerging technologies, including social networking, artificial intelligence, blockchain, cloud and data analytics.
Communications	The member has the ability to both listen effectively and articulate ideas, opinions, rationales, and comments in a clear, concise manner. This includes accepting accountability for engaging in frank, open and honest discussions, valuing a diversity of opinions and perspectives, with a view to making well-informed decisions and seeking to achieve in-group consensus in the best interest of TICO. The member is comfortable using online communications technology (email, online meetings, conference calls, Web portal, etc.). The member has the ability to listen and communicate effectively—the ability to articulate, be succinct, set the right tone, etc.
Human resources	The member has experience with human resource issues in a corporate environment with relevant knowledge of regulatory requirements, performance management, leadership, development/talent management, succession planning and compensation decision-making, including ensuring alignment between compensation plans and corporate strategy.
Operations	The member has experience with—or is able to demonstrate knowledge or expertise in—sound management and operational business processes and practices. This competency may include an understanding of topics such as managing complex projects, leveraging information technology, planning and measuring performance, and allocating resources to achieve outcomes.
Marketing/public relations	The member has experience with, or can demonstrate knowledge or expertise in, communications, public relations or interacting with the media. This may include knowledge of effective advocacy and public-engagement strategies, developing key messages, crisis communications, or social media and viral marketing.
Government knowledge	The member has an understanding of government structure, mechanics and decision-making processes and/or experience with or knowledge of the delegated administrative authority model. The member has an understanding of the strategic priorities of government and the relationship between those priorities and the work of TICO. The member has knowledge of the political environment and public policy, including how to promote effective government relations.

York University

York University Operations and Capital

1.0 Summary

Established in 1959, York University (York) has over 52,000 students enrolled in degree programs, making it Canada's third-largest university.

York has two campuses in Toronto (Keele and Glendon) and a third scheduled to open in fall 2024, in Markham, Ontario. York is an interdisciplinary research and teaching university, with accessible admission thresholds that provide higher education opportunities to a broader range of students. Historically, the university has built a reputation in liberal arts education and in professional studies such as business, law and education. Fifty-nine percent of students attend one of two faculties: Liberal Arts and Professional Studies, or Health.

Like other Ontario universities, York has faced challenges over the past five fiscal years, including a government-mandated 10% province-wide tuition reduction and freeze that began in 2019/20, and disruptions as a result of the COVID-19 pandemic. At the end of fiscal year 2022/23, York emerged with a positive net asset position amounting to $1.9 billion and was in a sound financial position at the time of our audit.

Even so, there are cautions as the university's in-year surplus amounts have consistently declined over the past five fiscal years. Since 2018/19, in-year surpluses decreased by 87% ($143.5 million) overall, from $164.2 million in 2018/19 to $20.8 million in 2022/23. The change was driven, largely, by a $147.5 million (19.7%) increase in salaries and benefits. Although almost 250 new positions were added, primarily to academic staff and faculty members, tuition revenue and government grant funding remained relatively flat.

The university's financial performance has also been adversely impacted by the in-year deficits realized by many of York's faculties. In 2022/23, six of York's 10 faculties had an in-year deficit ranging from a low of $1.4 million at the Lassonde School of Engineering to a high of $14.5 million at the Faculty of Arts, Media, Performance and Design. Four faculties (Arts, Media, Performance and Design; Glendon College; Environmental and Urban Change; and Education) have run in-year deficits in each of the past five fiscal years.

York fell into the Ministry of Colleges and Universities' medium-risk category on two of the three financial indicators related to debt, consistently over the last five years (2018/19–2022/23), and for the third indicator, for the last two years. York has reached a level of debt that could have negative impacts on the university in future if it is not appropriately monitored and managed. York's debt totalled $600 million, half of which will come due by 2044. We found the university had a repayment plan for that half but not for the remaining amount, due by 2060.

Our audit also assessed key operations, capital decision-making and governance structures at York. The following are our significant findings:

- **York has continued to offer many academic programs with low demand and enrolment, despite continued financial deficits.** Our review of undergraduate program enrolment found that York continued to deliver programs with low enrolments year after year, a major contributor to faculties operating in deficit positions. Across the university in 2023, 23% of undergraduate programs had 20 or fewer students enrolled. Over the past five fiscal years (2018/19–2022/23), enrolment decreased by at least 10% in 58 (43%) of York's 135 undergraduate programs. For example, in Glendon College, 17 (81%) of its 21 undergraduate programs had enrolment go down by at least 10% in the last five years from 2018/19 to 2022/23, while the faculty had in-year deficits in each year over the same period. We noted that, in 2022/23, Glendon had the second-lowest student-to-faculty ratio in the university (16.1 students for each tenure-stream professor, compared to the university average of 31.6). While a lower student-to-faculty ratio enhances the student's experience, it is costlier. The university told us it needed to subsidize some programs and faculties to sustain a range of activities that contributed to fulfilling the university's academic mission, overall reputation, and impact on society and the economy, as well as to meet emerging needs of industries and employers. While there are valid reasons for maintaining certain programs and courses regardless of the demand or required investment, there is an opportunity for York to adjust or restructure its program offerings to improve financial sustainability.
- **York is exposed to the risk of tuition revenue decline, due to its reliance on tuition revenue from a limited number of countries (namely, China and India).** International students accounted for 18% of York's total enrolment and almost half its tuition revenue. Some faculties relied more substantially on international student tuition than others. For example, the university's largest faculty, Liberal Arts and Professional Studies, relied most heavily on international student tuition revenue. In 2022/23, 61% of tuition revenue at that faculty came from international students. Students from India and China totalled 5,062 and represented 57% of all international students enrolled at York. Reliance on only a few nations' students for revenue exposes a university to the risk that external factors, like a global economic downturn or foreign policy shifts, could suddenly and significantly impact its financial health, if international student enrolment from these countries declines. At the time of our audit, for example, relations between Canada and India were frayed due to political tensions and India had suspended visa services, preventing Canadian nationals from obtaining Indian visas. Should reciprocal action be taken by Canada, or Indian students were made to return to India, there could be a significant impact to York. We calculated that York would forego approximately $46.5 million, or almost 8%, of total annual tuition revenue if all of the Indian students currently enrolled at York were made to return to India.
- **York's deferred maintenance backlog has left many of its buildings and infrastructure in increasingly poor condition**. York's deferred maintenance backlog grew 109%, from $459 million to $1.04 billion, between January 2019 and January 2023. The industry norm is for institutions to spend 1.5%–2.5% of the current replacement value of assets on deferred maintenance each year. To achieve this standard, York would need to spend $56–$93 million annually. By contrast, the university spent on average only $18.9 million on deferred maintenance over the past five fiscal years. In September 2022, the Land and Property Committee of the Board developed a five-year plan to manage the backlog, but the committee decided to make

only $22 million available each year. Despite the growing maintenance backlog, we found York had directed substantially more resources toward constructing new capital buildings and expansion projects—$745.3 million over the past five fiscal years compared to $94.7 million on deferred maintenance. This has left both the Keele and Glendon campuses in a state of critical disrepair.

- **York did not prepare full business cases for major capital projects before proceeding with them, including fully assessing the financial viability of those projects.** We reviewed seven major capital projects and found that in four of them, with total costs of $206.2 million, no financial evaluation at all had been undertaken. For example, there was no assessment of the expected income to be generated from these investments over the long-term, or the length of time required to recover the funds to be spent. For three other major capital projects we reviewed, there was a partial and problematic financial analysis. To illustrate, a new campus in the City of Markham was under construction during our audit and was expected to cost $260.5 million when completed in fall 2024. The university had conducted a profitability forecast; however, the analysis did not consider how long it would take to recover the initial capital cost of $260.5 million to construct the building. Based on York's financial profitability projections, we calculated that it would recover its initial capital investment in 2038/39.
- **Increase in size of senior administration despite stable enrolment and tuition revenue.** Between 2018/19 and 2022/23, the university experienced minimal increases in full-time equivalent (FTE) enrolment of 0.3%, a 1.2% increase in combined domestic and international tuition revenue (including government grants), and a 3% increase in total revenue. Yet, over the same time period, the size of the senior administration team increased by 37% and the amount of related compensation (salary, benefits, bonuses and stipends) increased by 47%. This was due primarily to the creation of an additional Vice-President (VP) position and several Assistant Vice-President (AVP) positions, resulting in total compensation for each group increasing by 48% and 73%, respectively. A VP was added with the creation of York's new Equity, People and Culture Division, while the number of AVP positions grew from 14 to 25, combined with a 20% average salary increase over five years. With the exception of approval granted by the Board for the VP and three AVP positions with the establishment of the Equity, People and Culture Division, the Board did not review and approve the other new AVP positions, and was not provided information on their impact and changes to the senior administration structure. The reasons for the new AVP positions included re-classifications for retention purposes, and restructuring and expanding university departments and functions.
- **York's results were lower on many performance indicators, such as those related to its graduates' academic and employment success, compared to other Ontario universities.** While York achieved most of the Ministry-established targets for 2022/23 as stipulated in its Strategic Mandate Agreement, it missed its target (and performed below the provincial average) for attracting research revenue from private-sector sources. York also performed below the provincial average in graduation rate; graduate employment rate in a related field; graduate employment earnings; community local impact on student enrolment; research funding and capacity (that is, the ability to secure federal research grants); and experiential learning. Further, when compared to similar Ontario universities, York's 2022/23 results were below the average in all metrics, with the exception of Institutional Strength/Focus—the proportion of enrolment in an institution's defined program areas of strength.

This report contains 13 recommendations, with 29 action items, to address our audit findings.

Overall Conclusion

Our audit concluded that York University was financially sustainable, with a positive net asset balance of $1.9 billion at the end of fiscal year 2022/23. However, the university did experience declining in-year financial surpluses during the 2018/19–2022/23 period, led by relatively flat enrolment and tuition revenue and increasing faculty and staff salaries and benefits. The majority of York's faculties (six of 10) have been operating with expenses that exceed their revenues. Restructuring its program offerings is one way for York to potentially improve its financial sustainability.

We concluded that York focused on capital expansion while neglecting a growing deferred maintenance backlog, which totalled over $1 billion by the end of 2022/23. The capital expansion was financed largely by debt, through a series of 40-year debentures. York has now reached its capacity for debt, thereby limiting future capital projects, as well as the potential to reduce its deferred maintenance. York's debt repayment plan, beginning in 2042, includes payment for only half the total debt. As well, comprehensive business cases need to be consistently prepared for all major capital projects to inform the Board of Governors as to whether a project warrants financial investment.

In 2022/23, international students represented 18% of the student population at York and accounted for 49% of the university's tuition revenue. Like other post-secondary institutions in Ontario, York has grown financially dependent on international students from China and India. This dependence poses significant financial risk to the university should an unforeseen event occur and international student enrolment from these countries declines.

Finally, although York has achieved its targets for all but one of the Ministry of Colleges and Universities' key performance indicators, including those in the Strategic Mandate Agreement between York and the Province, the university's performance lags behind the provincial average for comparable universities in key metrics such as graduation rate, graduation employment rate in a related field and graduate employment earnings.

OVERALL YORK UNIVERSITY RESPONSE

York University appreciates the work of the Auditor General and his staff and thanks them for their collaborative approach to undertaking this audit. The *York University Act* attributes specific responsibilities to the President and each body in our bicameral system of governance. Our mandate is reflected in our mission and vision, guiding our access strategy to increase the percentage of students with university education, program development to meet societal needs, research and innovation activities, and strategic partnerships. While we are committed to continually strengthening our outcomes based on agreed-upon targets, comparisons to institutions with different histories and mandates will have limitations.

York anticipated many of the recommendations of the Auditor General, and we look forward to exploring opportunities to further codify the initiatives already underway. Our growth in areas of science, technology, entrepreneurship, engineering, and health, requires ongoing refinement of capital and deferred maintenance plans to ensure that we maximize the realization of our University Academic Plan in a financially sustainable way.

These efforts are important given the decrease in tuition in 2019/20 and the subsequent tuition freeze, which, as noted in the audit report, resulted in an estimated revenue loss of approximately $335 million. Compounding this situation is the increase of new regulations and responsibilities, ranging from sexual violence prevention, Indigenous and equity initiatives, to sustainability and carbon reductions. This context necessitates our continued focus on attracting an increasingly diverse and global population of international students.

2.0 Background

2.1 Overview

Ontario's universities aim to ensure that students get a high-quality education and skills needed to get good jobs and provide Ontario's businesses with a skilled workforce and the talent they need to thrive and prosper. Universities also aim to advance society through the research that they conduct.

York University (York) was established in 1959 under the *York University Act* in response to the growth in Toronto's metropolitan area.

Today, York is the third-largest university in Canada based on enrolment, after the University of Toronto and the University of British Columbia. With over 52,000 students, including about 9,000 international students from 182 countries, it has one of Canada's largest and most diverse student populations.

York is an interdisciplinary research and teaching university, offering degrees in 10 faculties. The three faculties of Liberal Arts and Professional Studies, Health, and the Schulich School of Business made up 68% of degrees granted in the five-year period 2017/18–2021/22. **Figure 1** provides York's institutional profile.

York has two Toronto campuses and is scheduled to open a third campus in Markham, Ontario, in fall 2024. Almost 97% of students (51,200) are enrolled in programs at the university's Keele campus, located in North York. The Glendon campus, located in midtown Toronto, offers primarily liberal arts programs in both French and English to about 1,600 students.

Across these campuses, York employs over 5,000 full-time faculty and staff and an additional 2,400 part-time academic and administrative staff. Seventy-five percent of both full-time and part-time staff are members of the university's 14 unions (eight representing academic staff and six representing non-academic staff). Additionally, York employs 3,680 students in part-time positions (such as tutors, mentors, assistants and university ambassadors) and in its ancillary operations (such as the bookstore and athletic centre).

Figure 1: Profile of York University, 2022/23

Prepared by the Office of the Auditor General of Ontario

Established		March 26, 1959
Main campus		Keele Campus
# of campuses		2[1]
Faculties		10
Undergraduate programs		135
Graduate programs		121
FTE[2] students enrolled (domestic and international)		47,031
International students enrolled (head count)		8,832
Graduation rate[3]		70.7%
Total revenue in 2022/23		$1.3 billion
Ministry operating grant for 2022/23		$302 million
Average undergraduate tuition for all programs	Domestic students	$7,245
	International students	$32,962
Average graduate tuition for all programs	Domestic students	$6,648
	International students	$29,959

1. The Keele and Glendon campuses are both located in Toronto. A third campus in Markham is scheduled to open in fall 2024.
2. A full-time equivalent (FTE) measure attempts to standardize a student's actual course load against the normal course load for a full-time student.
3. Refers to the 2014 student cohort that graduated by 2021.

2.1.1 Organizational Structure of York University

Like most Ontario universities, York University's governance structure is bicameral; it has a Board of Governors (Board) and a Senate, both of which derive their distinct powers from the *York University Act*.

York's Board and the President oversee the operational and financial management of the university. The Board of Governors is considered the corporate and/or legal entity with authority to make bylaws, resolutions and regulations. The Board has legal responsibility and authority over the conduct, management and control of property, revenues, expenses, business and other operations, whereas the Senate is responsible for decision-making about educational policy, with the Board's approval.

See **Appendix 1** for York University's organizational chart.

Board Composition and Appointment Process

The maximum membership for the Board is 32 members, comprising 24 (75%) external members who are chosen by the Board members themselves and eight (25%) internal members, including the President, Chancellor and six other members, chosen by stakeholder groups within the university, such as the Student Senator Caucus or Senate. Members chosen by the stakeholder groups are, for example, professors, students or non-academic staff who bring in various perspectives—although their fiduciary duty is to the university overall. At the time of our audit, there were 25 members and seven vacancies on the board. The Board has an additional 33 honorary members who are entitled to attend Board meetings but do not have voting rights.

See **Appendix 2** for the membership of the Board of Governors and **Appendix 3** for a listing and description of Board committees.

Senate Composition and Operations

York's Senate is responsible for the academic policy of the University. Its powers include setting standards for admission, establishing and modifying programs, determining graduation requirements, university academic planning, regulating examinations and, along with the approval of the Board, establishing new academic units and endowing research and teaching chairs.

The Senate includes appointed and elected members, including ex-officio members. The maximum allowable size of the Senate is 169 members. At the time of our audit, it was composed of 159 members, including faculty members (94), students (22), ex-officio members (22), committee chairs (5) and others (16).

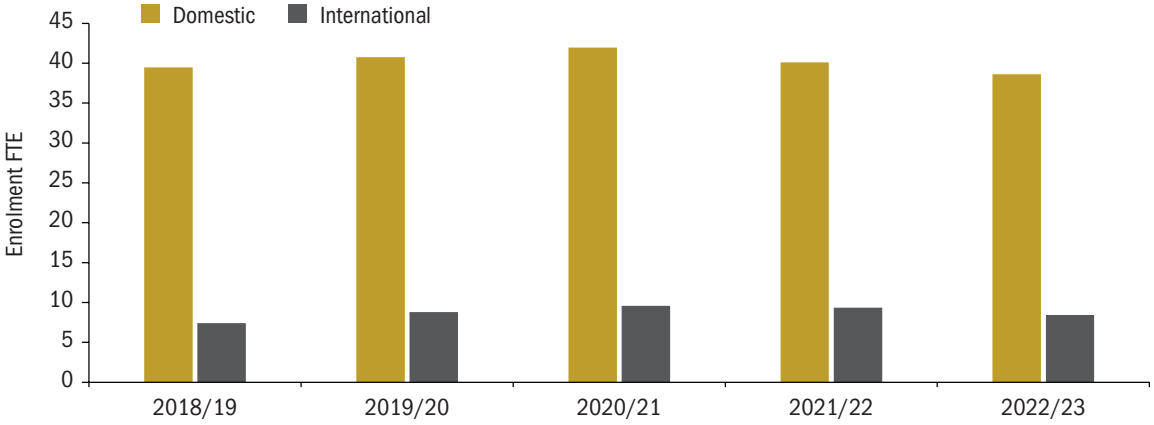
See **Appendix 3** for a listing and description of committees used by the Senate to fulfill its mandate.

York University Development Corporation (YUDC)

York University Development Corporation (YUDC) is a wholly owned subsidiary of York University and provides real estate property advisory, development and management services to the university. YUDC also owns and manages York Lanes, a commercial building on campus with a retail mall and office complex. The York Lanes land site is leased from the university under a 65-year lease.

Over the past five fiscal years ending in 2022/23, YUDC earned $28.6 million in revenue. The majority (71%) of that revenue related to rental income from tenants at York Lanes (that is, non-related parties), while the remainder (29%) was income from the university (that is, a related party) for consulting and other project services provided by YUDC. Over the same time period, YUDC paid third-party service providers about $3 million for services such as legal, land-use planning and urban design, procurement advisory, architectural design, and civil engineering. About 35% ($1.1 million) of these payments was for legal services. See **Appendix 4** for YUDC's latest balance sheet and income statement.

YUDC's Board of Directors is composed of seven members: three work in the university's administration and four are private-sector business leaders (three of these are presently serving or have served on the York University Board of Governors).



2.1.2 Enrolment and Tuition

Enrolment at York University in 2022/23 totalled 52,791 students, or 47,031 in full-time-equivalent (FTE) students, which refers to students taking a full-time course load of five courses. Part-time or non-standard enrolment can be captured in terms of a student's proportion of a full-time course load in each term. Domestic students represented 82% of FTE enrolment at York and international students represented 18% of FTE enrolment. **Figure 2** shows the five-year trend in total enrolment and a breakdown of domestic and international FTE students over the five fiscal years from 2018/19 to 2022/23.

Figure 3 provides a breakdown of enrolment by faculty. York University has 10 faculties, and almost 60% of FTE students are enrolled in two of those faculties—the Faculty of Liberal Arts and Professional Studies and the Faculty of Health.

Figure 2: Breakdown of Domestic and International FTE Students at York University, 2018/19–2022/23* (000)

Source of data: York University

* In 2019/2020 and 2020/2021, most courses were offered virtually due to the COVID-19 pandemic. This resulted in more students returning to studies or continuing their studies, and it also resulted in students registering at a higher course load than they may have previously.

Figure 3: Full-Time-Equivalent Student Enrolment by Faculty, 2022/23

Source of data: York University

Faculty		# of FTEs	% Enrolment
1	Liberal Arts and Professional Studies	17,660	38
	Liberal Arts	11,484	25
	Professional Studies*	6,176	13
2	Health	9,724	21
3	Engineering (Lassonde)	4,449	10
4	Science	4,211	9
5	Business (Schulich)	2,924	6
6	Arts, Media, Performance and Design	2,537	5
7	Education	2,076	4
8	Glendon	1,396	3
9	Law (Osgoode)	1,403	3
10	Environmental and Urban Change	651	1
Total Enrolment		**47,031**	**100**

* Professional Studies includes programs in commerce, information technology, accounting, human resources, social work, and disaster and emergency management.

Figure 4: Average Domestic and International Tuition Fee by Faculty, 2022/23*

Source of data: York University

Faculty	Domestic ($)	International ($)
Undergraduate		
Law (Osgoode)	24,802	38,023
Business (Schulich)	8,647	34,219
Engineering (Lassonde)	8,641	30,727
Liberal Arts and Professional Studies	6,776	33,518
Arts, Media, Performance and Design	6,402	32,680
Education	6,118	32,756
Environmental and Urban Change	6,118	32,756
Health	6,118	32,756
Science	6,118	32,756
Glendon	6,118	32,756
Average for undergraduate	**7,245**	**32,962**
Graduate		
Business (Schulich)	28,044	52,678
Graduate Studies	3,718	17,152
Average for graduate	**6,648**	**29,959**

* Tuition fee averages are weighted based on proportional FTE enrolment data for 2022/23.

Tuition Fees

On January 17, 2019, the Ontario government announced a 10% reduction in post-secondary tuition fees beginning in 2019/20, which it extended each year through the end of 2023/24, with limited fee increases for only domestic out-of-province students of 3% in 2021/22 and 5% in 2022/23 and 2023/24. The tuition reduction and tuition freeze did not apply to international students, as international tuition rates are not regulated by the Province.

In 2022/23, tuition fees at York averaged $7,245 for undergraduate domestic students. In comparison, the average undergraduate tuition fee that year across all Ontario universities for domestic students was $7,920.

For international students, 2022/23 fees at York averaged $32,962 per undergraduate, a 24% increase over the average from 2018/19. In comparison, the average tuition fee in 2022/23 across all Ontario universities for undergraduate international students was $45,242, which was 29% higher than tuition for such students in 2018/19.

In an effort to attract international undergraduate students to stay on for graduate studies, since 2018/19, York has increased its graduate school tuition fees by only 9%, a much lower rate of increase than the 21% average increase at other Ontario universities. See **Figure 4** for domestic and international tuition fees by faculty for York.

The Ministry of Colleges and Universities had established a panel to provide advice and recommendations on a long-term tuition fee policy for all Ontario universities that considers access to and quality of the learning experience. In November 2023, the panel recommended a 5% tuition fee increase, effective September 2024, and annual increases of at least 2% thereafter. The panel also recommended a 10% increase in funding per student by the Ministry, with 2% annual increases thereafter. At the time of our audit, the Ministry had not made a decision on the panel's recommendations.

2.2 Funding and Financial Information

2.2.1 Financial Position
